Neither was *Greet* less famous for religious Ceremonies, being esteemed the place where *Jupiter* was born, and brought up by the *Corybantes* or *Dactyl* Priests of *Cybele*, in a Cave of the Mountain *Ida*, which they so named after that of *Phrygia*, whence they came. They had also a Tradition, that *Jupiter* was buried there, and shew'd his Tomb. Here (k) *Pythagoras* address'd himself to the Priests of *Morgus*, one of the *Idean Dactyl*, who purify'd him with the *Ceraunian Stone*, [so called, in that it is conceived to be a piece of *Jupiter's* Thunderbolt, and therefore perhaps used by his Priests.] In the morning he lay stretch'd forth upon his face by the Seaside; at night by a River, Crown'd with a Wreath, made of the Wooll of a black Lamb.

(l) Porphy. p. 11.
(m) Laert.

He also apply'd himself to the *Cretan Epimenides*, that Eminent Somnifer, as *Apuleius* calls him. (l) He went [(m) down] with him into the *Idean Cave*, wrapt in black Wooll, and stay'd there three times nine days, according to the Custom; and to *Jupiter*, and saw the Throne which is made yearly there for him, and writ an Epigram upon his Tomb, beginning thus:

Here I am deceas'd I yes, whom Iove they call.

(n) Laert.

Thus was he (n) initiated into all religious rites, as well *Grecian* as *Barbarian*.

CHAP. VIII.

How he went to Olympia and Phlius.

(a) Fal. Max.

(a) A Fter he had made enquiry into the Laws and Customs of *Greet* and *Lacedemon*, he went down to the Olympicks Games; and having given a proof of his multiplicitious Knowledge, to the Admiration of all *Greece*, being demanded what his Appellation was, he answer'd, That he was not *Sophos*, Wise; (for excellent men had already possess'd that Name) but, *Philosophos*, A lover of Wisdom.

(b) Laert. in Proem.

But (b) some relate this, as done at *Sicyon*, in Discourse with *Leon*, Tyrant of that place; others at *Pblus*, distant from *Sicyon* a hundred Furlongs. Of the latter are (c) *Heraclides*, in his Book of the breathless Woman; and (d) *Socrates* in his Successions. The Testimony of *Heraclides* is thus delivered by (e) *Cicero*. He went (as is reported) to *Pblus*, and discours'd upon some things learnedly and copiously with *Leo* Prince of the *Pblians*. *Leo* admiring his Wit and Eloquence, demanded in what Art he did most confide? He answered, That he knew no Art, but was a Philosopher. *Leo* wondering at the Novelty of the Name, asked, Who were Philosophers, and what difference there is between them and others? *Pythagoras* answered, That human Life seem'd to resemble that publick Convention, which is celebrated with the Pomp and Games of all *Greece*. For, as there some by bodily Exercises aim at the Glory and Nobility of a Crown; others are led away by Gain in Buying or Selling; But there is a certain

(c) Laert. in Proem.

(d) Laert. xij. Pyth.

(e) Tigent. quest. 5.

kind of Persons, and that those of the better quality, who seek neither applause nor gain, but come to behold, and curiously observe what is done, and how. So we coming out of another Life and Nature, into this Life, as out of some City into the full throng of a Publick Meeting, some serve Glory, others Riches: Only some few there are, who despising all things else, studiously enquire into the Nature of things. These he called Enquirers after Wisdom, that is, Philosophers.

Thus, whereas Learning before was called *Sophia*, Wisdom; and the Professors thereof, *Sophoi*, Wise-men, (as *Thales* and the rest, of whom we treated in the first Book) *Pythagoras*, by a more modest Appellation, named it *Philosophy*, *Love of Wisdom*; and its Professors, *Philosophers*; conceiving the Attribute of Wise not to belong to Men, but to God only; that which is properly termed Wisdom, being far above human Capacity. (f) For tho' the frame of the whole Heaven, and the Stars which are carried about in it, if we consider their order, is fair; yet is it such, but by Participation of the primary Intelligible, who is a Nature of Numbers and Proportions, diffusing it self through the Universe, according to which, all these things are ordered together, and adorn'd decently. Wisdom therefore is a true Knowledge, conversant about those fair things which are first, and Divine, and Incommixt, and always the same; by Participation whereof, we may call other things Fair. But Philosophy is an Imitation of that Science, which likewise is an excellent Knowledge, and did assist towards the Reformation of Mankind.

(f) Jam. cap.

CHAP. IX.

How he lived at Samus.

(a) HAVING been a diligent Auditor and Disciple of all these, he returned home, and earnestly addic'ted himself to enquiry after such things as he had omitted; and first, [as soon as he returned to *Ionia*] (saith *Antiphan*, cited by (b) *Porphyrius*, repeated and enlarged by *Jamblicus*) he built [in his Country] within the City, a School, which even yet is called the Semicircle of *Pythagoras*, in which the *Samians*, when they would consult about publick Affairs, Assemble; chusing to enquire after things Honest, Just, and Advantageous in that place, which he, who took care of them all, had erected. Without the City he made a Cave, proper for his Study of Philosophy, in which he lived for the most part Day and Night, [and discours'd with his Friends] and made enquiry into the most useful part of Mathematicks, taking the same course as *Minos* Son of *Jupiter*. And so far did he surpass all whom he taught, that they for the smallest Theorems were reputed great Persons.

(a) Jam. cap. 5. pag. 40.

(b) Pag. 6.

Pythagoras now perfected the Science of the Celestial Bodies, and over-run it, with all Demonstrations Arithmetical and Geometrical. Nor this only, but he became much more admir'd for the Things he performed afterwards; for Philosophy had now received a great Increase, and all *Greece* began to admire him; and the best

best and most studious Persons, for his sake, resorted to *Samus*, desiring to participate of his Institutions.

C H A P. X.

His Voyage to Italy.

Jamb. cap. 5, 6. (for these also are all distinct.)
BUT *Pythagoras* being engaged by his Country-men in all Embassies, and constrained to be interested in their publick Negotiations, and perceiving that if he should comply with the Laws of his Country, and continue there, it would be hard for him to study Philosophy; for which Reason, all former Philosophers ended their Lives in foreign Countries. Weighing all these considerations, and to avoid civil Employments; or, as others say, declining the negligence of Learning, which at that time possessed the *Samians*, departed into *Italy*, preferring that place before his Country, which contained most Persons, fervently desirous of Learning.

But before we speak of his Actions in *Italy*, it will be requisite, as well to settle the time of his coming, as the State of that Country, as it was at that time. It was a received Opinion amongst the more Ancient, but less Learned, *Romans*, That *Pythagoras* was Contemporary with King *Numa*. The occasion of that Tradition might perhaps arise from those Books, which were found in the Sepulcher of *Numa*, 805 years after his Death, as *Antius Valerius*, cited by (a) Decad. 4. lib. ult. (b) Lib. 13. cap. 13. *(a) Livy*; and *Cassius Hemina*, by *(b) Pliny*, relate; and supposed to contain Pythagorical Philosophy. But that Opinion is long since refuted, by the more Learned *Romans* and *Grecians*, *Cicero*, *Titus Livius*, *Dionysius Halicarnassensis*, *Plutarch*, and others.

They who have looked more strictly into the time of *Pythagoras*, seem to follow two different Accounts. *Jamblichus* saith, That he lived in *Egypt* 22 years, That he was carried from thence by *Cambyfes*, That he lived in *Babylon* 12 years, That from thence he returned to *Samus*, being 56 years old; That from *Samus* he went into *Italy* in the 62d Olympiad, *Eryxidas*, a *Chalcidian*, being Victor at the Olympick Games: From whence it follows, that he went into *Egypt* about the third year of the 53d Olympiad; and that he was Born the second year of the 48th Olympiad; and that it was the 52d Olympiad, when he, in the 18th year of his Age, heard *Thales*, *Pherecydes* and *Anaximander*. This account seems to be followed by *Laertius*, *Porphyrius*, *Themistius*, *Suidas*, (from *Laertius*) and others, who affirm, he went from *Samus* into *Italy*, at what time *Polycrates* was Tyrant of *Samus*, conceiving it unfit for a Philosopher to live under such a Government: For by (c) Excerpt. Vales. p. 241. (d) Strom. *(c) Diodorus*, *Pythagoras* is acknowledged in the 61st Olympiad, *Thericles* being Archon; by *(d) Clemens Alexandrinus*, about the 62d Olympiad, under *Polycrates*; and in the second year of the 64th Olympiad, *Polycrates* was betrayed and put to Death by *Oroetas*. This Account *Antiochus* also seems to follow, who reckons from the time of *Pythagoras* to the Death of *Epicurus* 312 years. *Epicurus* died in the second year of the 127th

Olympiad; the 312th year upwards, is the first of the 49th Olympiad. Neither is *Livy* much different from this Computation, who makes him to come into *Italy*, *Servio Tullio regnante*, who died about a year or two before. And this Account might be the occasion of making him live to 90 years, as *Laertius* saith many do; and to 104 years, as the nameless Author of his Life in *Photius*, the year of his Death being according to *Eusebius*, the fourth of the 70th Olympiad.

But this Account may, with good Reason, be question'd; for if it be granted, (as by *Jamblichus* himself, and other good Authorities it is affirmed) that *Pythagoras* was in *Egypt* when *Cambyfes* subdu'd it, and that he was carried away Captive by him into *Babylon*, the time of his going into *Italy* must of necessity be much later; for *Cambyfes* invaded *Egypt* in the fifth year of his Reign, which is the third year of the 63d Olympiad, and the 223d year of *Nobonassar*, of which there is no question in Chronology. For that the seventh year of *Cambyfes* is known to be the 225th year of *Nobonassar*; because *Ptolomy* in his (e) Lib. 5. cap. 4. *Almegist* relates an Astronomical Observation, of a Lunar Eclipse at *Babylon*, on the 17th day of the Month *Pharenoth*, according to the *Egyptians*, which is with us the 16th of *July*, one hour before Midnight. From whence now it follows, that if he lived 22 years in *Egypt*, that then he went thither in the third year of the 58th Olympiad, and that if he staid in *Babylon* twelve years, he went into *Italy* about the end of the 66th Olympiad; and that if he were then 56 years old, he was not Born before the first year of the 53d Olympiad. And according to this Account, they who make him to live but 70 or 80 years; do not much differ in the time of his Death from them, who, according to the other Account, make him live so much longer; for they who give him most years, do not make him to dye later, but to be Born sooner.

This Account they seem to follow, who affirm, (f) Diod. in excerpt. Vales. pag. 241. *(f)* he went from *Samus* to *Italy*, for that he could not brook *Syloson* the Brother of *Polycrates*, on whom (being a private Person, after his Brother's Death) *Darius Hystaspis* afterward bestow'd the Tyranny of *Samus*, in requital of a Garment which *Syloson* had given him, before he came to the Empire. And thus perhaps is (g) Lib. 14. *(g) Strabo* to be understood, who saith, *Pythagoras, as they reported, in the time of Polycrates, seeing the Tyranny begun, forsook the City, and went from thence to Egypt and Babylon, out of Love to Learning; and returning home, and seeing that the Tyranny continued still, he went into Italy, where he ended his days.* By this Continuation of the Tyranny, seems to be meant the Reign of *Syloson*, who Ruled so Cruelly, that many Persons forsook the City, insomuch that it became a Proverb,

*A Region vast
By Syloson laid waste.*

With both these Accounts agree what (h) Tusc. quest. 1. (i) Lib. 17. cap. ult. (k) Lib. 2. be cap. 8. *(h) Cicero* and *(i) Agellius* affirm, concerning his coming into *Italy*, that it was in the Reign of *Tarquinius Superbus*; but to neither can that of *(k) Pliny*

be accommodated, who saith, That *Pythagoras* observed the Nature of the Star Venus about the 42d Olympiad, which was of the City of Rome the 142d year. There must therefore be either an Error in both the Numbers; or, which I rather believe, in *Pliny* himself, occasion'd, perhaps by mistaking *Tarquinius Priscus* (under whom they both fall) for *Tarquinius Superbus*, under whom *Pythagoras* flourished.

Tuf. quest.
lib. 4.

If therefore he came into *Italy* in the Reign of *Tarquinius Superbus*, the opinion of *Cicero* is to be received, that he was there when *Lucius Brutus* freed his Country; and upon the expulsion of *Tarquinius Superbus*, he and *Lucius Collatinus* were made the first Consuls, at which time the Dominion of the Romans extended not any way above six Miles from their City; and the Southern parts of *Italy* were chiefly inhabited by the *Grecians*, who at several times had there planted divers Colonies, whereof we shall only mention those which were more particularly concerned in the Actions of *Pythagoras*.

(b) Solim.

The most Ancient of these is *Metapontum*, seated in the Bay of *Tarentum*, betwixt *Heraclea* and *Tarentum*, built by *Nestor* and the (b) *Pylians*, a People of *Peloponnesus*. Long after were founded;

Catana, a City on the East-side of *Sicily*, betwixt *Messena* and *Syracuse*, Built by a Colony of *Chalcideans*, in the (m) 11th Olympiad.

(m) Euseb.
(n) Euseb.
(o) Strab.

Tarentum in *Italy*, in the (n) 18th Olympiad, Built (o) by the *Parthenians*, who were Children of the *Lacedemonian* Women, Born in the absence of their Husbands, at the *Messanian* Wars; and therefore called *Parthenians* in reproach; which not brooking, they conspired against the *Lacedemonian* People, but being betrayed and banished, came hither.

(p) Euseb.
(q) Strab.

Crotona, a City in the Bay of *Tarentum*, Built in the (p) 19th Olympiad, (q) by a Colony of *Acheans*, under the Conduct of *Miscellus*, by whom named *Crotona*, at the Command of *Hercules*, in memory of *Croto*, his Host, whom having unwittingly Slain, he Buried there; This City, for being Built by the command of *Hercules*, engraved his Figure in their Coins.

Sybaris, a City distant from *Crotona* 200 Furlongs, according to *Strabo's* Account; but, as others conceive, more than twice so much; built at the same time (r) by a Colony of *Troezenians*, (r) *Solim.* under the Conduct of *Iselicens*, betwixt the two Rivers *Crathis* and *Sybaris*.

(s) *Locri* in *Italy*, built the 24th Olympiad, (s) *Euseb.* by the *Locrians*, a People of *Achaia*.

(t) *Agrigentum*, an *Ionian* Colony, built by the (t) *Strab.* *Geloans* (u) 108 years after their own Founda- (u) *Thucyd.* tion. (x) *Gela* was built in the 45th year after (x) *Thucyd.* *Syracusa*; (y) *Syracusa* in the 11th Olympiad: (y) *Euseb.* *Agrigentum* therefore in the 49th.

To these add, of less certain time, *Rhegium* in *Calabria*, built by the *Chalcideans*. *Nimera* and *Tauromenium* in *Sicily*, Colonies of the *Zancleans*. Indeed so generally was the *Pythagorical* Doctrine received in these parts, that (z) *Jambli-* (z) *Cap. 29.* *cus* affirms, All *Italy* was filled with *Philosophical* Persons; and whereas before it was obscure, afterwards by Reason of *Pythagoras*, it was named *Μεγαν Ἑλλάς*, *Magna Græcia*.

CHAP. XI.

His Arrival at Crotona, and upon what Occasion he first became Eminent there.

HE came at first to *Crotona*, the State of which City in particular was this; (a) at the be- (a) *Justin.* ginning, the *Crotonians* joyning with the *Sybarites* and the *Metapontines*, determined to expel the rest of the *Grecians* out of *Italy*. They first took the City *Syris*, and taking it ill that at their besieging *Syris*, the *Locrians* assisted the adverse Party, raised a War against them, related thus by (b) *Justin*: 'The *Locrians* being terrify'd, (b) *Lib. 21.* 'recurr to the *Spartans* for Refuge, and beg their 'aid. They oppress'd with a long War, bad them 'seek help of *Castor* and *Pollux*. Neither did the 'Ambassadors slight the Advice of the Associate 'City, but going into the next Temple, they 'sacrific'd, and implor'd the help of the Gods; 'having offered Victims, and obtained, as they 'thought, what they requested, no less joyful, 'than as if they were to carry the Gods them- 'selves along with them, they made Couches 'for them in the Ship, and by a Fortunate Voy- 'age, bring Comfort, instead of Relief, to their 'Country-men. This known, the *Crotonians* 'also send Ambassadors to the Oracle at *Delphi*, 'praying for Victory, and a happy Success of the 'War. Answer is made, that Enemies must be 'overcome in Vows first, before in Arms. They 'vow'd to *Apollo* the Tents of the Spoil. The 'Locrians understanding the Vow of their Ene- 'mies, and the Answer of the god, Vow'd the 'Ninths, and kept it secret, lest they might be 'out-done in Vowing. Being drawn forth into 'the Field, the *Crotonian* Army consisting of '120000 Soldiers; the *Locrians* beholding how 'small a Number they were, (for they had but '15000) gave over all hope of Victory, and 'unanimously resolved to die; and so great 'Courage did every Man take from Desparati- 'on, that they conceived they should be Con- 'querors, if they did not die unwillingly. But 'whilst they fought to die honourably, they 'overcame more fortunately; neither was there 'any

any other cause of that Victory, than that they despaired of it. Whilst they were in fight, an Eagle never left the *Locrian* Army, but flew about it all the while, until they had gain'd the Victory. In the Wings of the Army also, two young men, armed after a fashion different from all the rest, of extraordinary bigness, on white Horses, in crimson mantles, were seen to fight; and, after the fight, were seen no more. This wonder was increased by the incredible swiftness of fame; for the very same day that this fight hapned in *Italy*, the Victory was reported at *Corinth*, *Athens*, and *Lacedæmon*. After this, the *Crotonians* used no military exercise, nor minded Arms; for they hated what they had taken up unsuccessfully, and would have changed their life into luxury, had it not been for *Pythagoras* the Philosopher. Hitherto *Justine*.

Porph. vit.
Pythag. pag.

As soon as he arriv'd in *Italy*, and came to *Crotona*, *Dicearchus* saith, That upon the coming of a person, who was a great traveller, and excellent, and through a peculiar advantage of nature, prosperously guided by fortune, (for he was of a free presence, tall, graceful in his speech and gesture, and in all things else) the Citizens of *Crotona* were so taken with him, that having won the affections of the old men, who were the Magistrates of the City, and made an excellent and large discourse to the young men; he did the second time, by command from the Magistrates, make an exhortation to the young men, and afterwards to the boys, who came flocking out of the School to hear him; and lastly, to the Women, assembled to that purpose. The occasion and manner mentioned by *Plutarch* and * *Porphyrus*, related thus by † *Jamblichus*.

* *Pag.*
cap. 8.

At this time, walking from *Sybaris* to *Crotona*, upon the Sea-side, he lighted upon some fisher-men; and whilst their Net was yet at the bottom laden, he told them exactly the number of the fishes that they should draw up. And the men undertaking to do whatsoever he should command them, if it fell out accordingly; he required them to turn back again the fishes alive, after they had exactly numbred them; and which is more wonderful, not one of all the number, at that time, of the Fishes, whilst they were out of the water, died; he being present, and giving the Fishermen the price of the Fish, he departed to *Crotona*. But they divulged what was done, and, learning his name of the Boys, declared it to every one; which they hearing, desired to see the stranger, which was opportune to him; for he was of such an Aspect, that whosoever saw him could not but admire him, and conceive him to be the person that he really was.

CHAP. XII.

His Oration to the young Men.

Jamb. continch.
|| The beginning of this Oration is in *Laertius* also.

SOME few days after, he went into the publick School, and the young men flocking to him, it is said, that he made discourses to them, wherein he exhorted them to respect their Elders, declaring, That in the World, and in Life, and

in Cities, and in Nature, that which is precedent in time is more honourable than that which is subsequent; as, the East than the West, the Morning than the Evening, the Beginning than the End, Generation than Corruption; moreover, Natives than Strangers. In like manner, in Colonies, the Leader and Planter of Cities, and generally the Gods than Dæmons, Dæmons than Semi-gods, Heroes than Men: And of these (men) the causes of Generation, than the younger. This he said by way of induction, to make them have a greater esteem of their Parents, to whom, he said, they had as much obligation, as a dead man might owe to him that should raise him again to life. Moreover, that it was just to love above all, and never to afflict the first, and those who have done us greatest benefits: But Parents only, by the benefit of Generation, are the first, and Predecessors are the causes of all things that succeed rightly to their Successors; shewing, that they are nothing less beneficial to us than the gods, against whom it is not possible to offend in so doing; and the gods themselves cannot but in justice pardon those, who reverence their Parents equal to them; for it is from them that we learn to worship the Deity; whence *Homer* gives the King of the gods the same stile, calling him, *Father of gods and mortals*. And many other Fabulous Writers have delivered, that the chiefeft of the gods were ambitious to make up the divided love of children, by a new Conjunction of Parents; and for this end, making a new supposition of Father and Mother, *Jupiter* brought forth *Minerva*; *Juno*, *Vulcan*, of a contrary sex to their own, that they might participate of that love which was more remote.

Now all persons granting the judgment of the gods to be strongest, he demonstrated this particularly to the People of *Crotona*, because that *Hercules* was of affinity with them, therefore they ought willingly to obey the injunctions of their Parents, since they understood, that this god, in Obedience to another elder than himself, underwent his labours, and presented to his father, as the Epinicion of his Actions, the Olympick Games.

He declared likewise, that in their conversation to one another they should so behave themselves, that they might hereafter never become enemies to their friends, but might soon become friends to their enemies; as to their friends they should never become enemies, but to their enemies quickly become their friends. And that they should study in their behaviour towards their elders, their reverence towards their parents, and in their love to one another, their community towards their brethren.

Furthermore he discoursed concerning Temperance, saying, That young men should make tryal of their nature at that time, in which they have their desires vigorous. Then he advised them, that it was worth their observation, that this only virtue was convenient both for Children, and Maids, and Women, and old Men, but especially for young Men. Further, this Virtue only declares, that they understand the goods of the Body and the Soul, seeing it preserves health, and a desire of the best Studies.

Z z 2

* This

'This is manifest from the contrary; for the
'Barbarians and the *Grecians* contending about
'Troy, both parties, for the intemperance of one
'Man, fell into extraordinary Calamities; those
'in the War; these in their Voyage home.
'And God appointed ten years, and a thousand
'years, only for the punishment of this Injustice,
'foretelling by Oracle the taking of Troy, and
'the sending of the Virgins by the *Locrians*, to
'the Temple of *Minerva* the *Ilian*,

'He likewise exhorted the young Men to
'love learning, telling them, how absurd it
'were to judge Learning to be the most advan-
'tageous of all things, and to wish for it
'above all things, yet to bestow no time or
'pains in that Exercise: Especially, seeing the
'care of our Bodies is like evil Friends, which
'soon forsake us; but that of Institution, like
'the good, which stay with a Man till Death;
'procuring to some immortal Glory after
'Death.

'He framed many other things, partly out
'of History, partly out of Doctrines, shew-
'ing, that Learning was a common Nobility
'of those, who were first in every kind, for
'their Inventions were the Institutions of the
'rest. Thus is this naturally advantageous,
'that of other commendable things, some it
'is not possible to communicate to another,
'as Strength, Beauty, Health, Courage; some,
'whosoever imparts them to another, cannot
'have them himself, as Riches, Government,
'and the like: But for this, you may receive
'it of another, and yet the giver have nothing
'the less of it. Moreover some, a Man cannot
'gain if he would, he may receive Institution
'if he will: Then he may apply himself to the
'Affairs of his Country, not upon Self-confi-
'dence, but Institution; for by Education, Men
'differ from Beasts, *Greeks* from *Barbarians*,
'Freemen from Slaves, Philosophers from the
'Vulgar. Who have in general this advantage,
'that as of those who run swifter than others,
'there had been seven out of this their own City,
'at one Celebration of the Olympick Games;
'but of such as did excel in Wisdom, there had
'been found but seven in the whole World, and
'in the following times in which he lived, there
'was but one who did excel all others in Philo-
'sophy: For he called himself by that Name,
'(*Philosopher*) instead of *Sophos*, a wise Man.

CHAP. XIII.

His Oration to the Senators.

Jamb. cap. 9. **T**HUS he discoursed to the young Men in the
School; but they relating to their Fathers
what he had said, the Thousand-men sum-
moned *Pythagoras* to the Court, and commend-
ing him for the advice he had given to their
Sons, they commanded him, that if he had any
thing which might benefit the People of *Crotona*,
he should declare it to the Magistrates of the
Commonwealth.

Lib. 8. cap. 18. The *Crotonians* (saith *Valerius Maximus*) did
earnestly entreat him, that he would permit
their Senate, which consisted of a thousand Per-
sons, to use his advice.

'Hereupon he first advised them to build a
Temple to the *Muses*, that they might pre-
serve their present Concord; for these God-
desse^{*} have all the same Appellation, || and
have a reciprocal communication and delight,
chiefly in honours common to them all; and
the *Chorus* of the *Muses* is always one and the
same. Moreover, Concord, Harmony, Rythm,
all those things which procure unanimity, are
comprehended.

'He likewise shewed them, that their power
did not only extend to the excellent, but to the
concord and harmony of Beings.

'Further he said, They ought to conceive,
they received their Countrey as a *depositum* from
their People: Wherefore they ought so to ma-
nage it, as being hereafter to resign up their
trust with a just account to their own Chil-
dren. That this will certainly be, if they be
equal to all their Citizens, and excel other
men in nothing more than in Justice; knowing,
that every place requireth Justice. He shew'd
it out of the Mythology, that *Themis* hath the
same place with *Jupiter*, as *Dice* with *Pluto*, and
Law among Cities; so that he who did any
thing unjustly in things under his charge, seem-
ed to abuse the whole world, [*both above, be-
low, and on Earth.*]

'That it is convenient in Courts of Judicature,
that ^{*}none attest the Gods by Oath, but use to
speak such things, as that he may be believed
without Oath.

'Moreover, That every one should so govern
his Family, as that they should referr themselves
to their own house, as to a Court of Judicature,
and that they should be naturally affectionate to
such as are descended of them, as having only
of all creatures received the sense of this affecti-
on; and that they should converse with the Wo-
man that is partner of their life: For, as some
Men making Contracts with others, write them
in Tables and Pillars; those with Wives, are in
the Children. And that they should endeavour
to be belov'd of those which come from them,
not by Nature, of which they are not the cause,
but by Election; for that kindness is voluntary.

'That they should likewise take care, that they
know no Women but their Wives, and that the
Wives do not adulterate the Race, through the
carelessness and wickedness of their Husbands.

'Further, they must consider, they take the
Wife from the Altar with Libations, as a Vota-
ress, in the sight of the gods, and so to go in
unto her, and that she become, in order and
temperance, a pattern to those that live in the
house with her, and to the Women of the City.

'And that they should see carefully that none
transgress, lest, not fearing the punishments of
Law, such as do unjustly lye hid; but having a
respect to honesty in their carriage, they may be
incited to justice.

'Further, he commanded, That in all their acti-
ons they should avoid Idleness; for there is no
other good, than the opportunity in every action.

'He asserted, that it is the greatest of Injustices,
to separate children and parents from each other.

'That he is to be thought the greatest Person,
who can of himself foresee what is advanta-
geous: The next to whom is he, who by those
things which happen to other Men, observes

what is good for himself. The worst is he, who stays to Learn what is best, by the experience of suffering ill.

He said, That they who are desirous of Glory, shall not do amiss, if they imitate those who are crowned for Running; for they do no harm to their Adversaries, but desire that they themselves may obtain the Victory. And it seemeth Magistrates not to be rigid to those who contradict them, but to benefit those who obey them.

He likewise exhorted every one that aimed at true Glory, to be indeed such, as he desired to appear to others; for it is not so sacred a thing to be advised by another, as to be praised for what is done; for one is only requisite to Men, the other much more used by the Gods.

In Conclusion he said, That their City chanced to be built by *Hercules*. When he drove [*Gerion's*] Oxen through *Italy*, being injured by *Lacinius*, *Croto* coming to help him; not knowing him by reason of the Night, and thinking him to be one of his Eneinics, he slew him; and then promising at his Grave, that he would build a City which should bear his Name, if ever he came to be a God; in gratitude for his kindness, he said, it behoved them to govern their Commonwealth justly.

They hearing this, Built a Temple to the Muses, and put away the Concubines which they used to keep; and entreated him to Discourse severally in the Temple of *Pythian Apollo* to the Boys, and in the Temple of * *Juno* to the Women.

CHAP. XIV.

His Oration to the Boys.

HE being perswaded by them, discoursed to the Boys in this manner; That they should neither begin Contumelies, nor return them to the Reproachers.

And concerning *modestia*, (Institution) which is of the same Name as the time of their Youth, he commanded them diligently to pursue it; adding, That to a well disposed Youth, it is easie to preserve honesty throughout all his Life; but to him that is not well disposed, it is hard at that time to continue it, but more difficult from an ill beginning to run to the end.

Moreover he declared, That they are most beloved of the Gods, and for that reason in times of Death, they are sent forth to pray to the Gods for Rain, as if the Deity would soonest hear them. And they only being always sanctified, had leave to live in the Temple.

For the same Reason, the Gods that are most kind to Men, *Apollo* and *Cupid*, are by all Painters represented, as having that Age (of Boys.) It is likewise acknowledged, that the crowned Games were instituted for the sake of Boys; the *Pythian*, upon the Conquest of *Pytho* by a Boy; that in *Nemea*, for a Boy likewise; and that in *Isthmus*, upon the Death of *Archemorus* and *Melicertus*.

Besides all this, at the building of the City *Croto*, *Apollo* told the Leader of the Colony, That he would give him a Progeny, if he conducted his Colony to *Italy*; whence they ought to reflect, that *Apollo* hath a particular Providence for that Generation; and over Youth, even all the Gods. Wherefore they ought to study to be worthy of their Love, and employ themselves in hearing, that they may be able to speak. Moreover, if they would live to be old themselves, they should obey their Elders, and not contradict them; for by that means they will become esteemed worthy, not to be injured by those that are younger than themselves.

CHAP. XV.

His Oration to the Women.

IT is said, That he discoursed to the Women concerning Sacrifices; first, that As when another Man were to pray for them, they would have him to be Honest and Good, because the Gods hearken to such Men; in like manner ought they above all things so to behave themselves, as that they may indeed have the Gods attentive to their Prayers.

Next, That they must present the Gods with such things, as they themselves make with their own hands; and without the help of Servants, offer them at the Altar; as Cakes, Wax and Incense: But that they present not the Deity with Slaughter and Death; nor that they offer so much at one time, as if they were never to come thither again.

As concerning their Conversation towards their Husbands, he commanded them to consider, that Fathers did yield to their Daughters, that their Husbands should be more beloved by them than their Parents. Wherefore it is fit, that either they contradict their Husbands in nothing, or then think they have the Victory, when they are over-ruled by them.

Moreover he spared that celebrated Apophthegm concerning Coition, That for her who riseth from her own Husband, it is lawful to go to the Temples the same day; but for her who riseth from him that is not her Husband, never.

He exhorted them likewise, throughout their whole life to speak well of others, and to take care that others speak well of them, and that they destroy not that good report which is given; nor confute those Mythographers, who (seeing the Justice of Women, in respect that they lend their Garments without witness, when any hath need of them, and that they made no Bargains and Engagements) feigned three Women who made use of one Eye amongst them, because of their readiness to communicate. Which if apply'd to Men, as if when one had received any thing, he should restore presently, or communicate to his Neighbour, every one would say, there is no such thing, it being contrary to their Nature.

Further, he who is said to be the wisest of all Persons, who disposed the Language of Men, and invented all Names, whether he were a God, or a Dæmon, or some divine Man, upon

confi-

consideration, because the female Sex is most addicted to Piety) made every degree of Age synonymous with some God, and called the unmarried Woman, *Core*; her who is given to Man, * *Nympha*; her who hath Children, *Mother*; her who hath Childrens Children, in the Dorick Dialect, *Maja*; to which respect of their Devotion) it agrees, that the Oracles at *Dodona* and *Delphi*, are delivered by Women.

* So supply the Text from Laertius, who cites something to the same purpose out of Timæus. *Korè* is a Name of Proserpina; *Nymphen*, Bride, relates to the Nymphs; *Mήτηρ*, to Cybele, mother of the Gods; *Μαία*, to *Maja*, mother of Mercury.

Having thus commended their Devotion, he converted his Discourse to speak of Decency of Habit, that none should presume to wear any sumptuous Cloaths, but offer them all at *Juno's* Temple (which amounted to) many millions of Garments.

He is reported also to have said thus, That throughout the Country of the *Crotoniates*, the Virtue of a Man towards his Wife was much celebrated. *Ulysses*, refusing Immortality at *Calypso's* hands, rather than to forsake *Penelope*. Let it be the part of the Wives to express their virtuous Loyalty towards their Husbands, that this praise may be Reciprocal.

CHAP. XVI.

His Institution of a Sect in Private and Publick.

Jamb. cap. 12. *Porphy. p. 12.* BY this Discourse, *Pythagoras* gained no small Honour and Esteem in *Crotona*, and by means of that City, throughout all *Italy*.

Jamb. cap. 6. At the first Oration which he made in *Crotona*, he attracted many Followers, insomuch that it is said, he gained six hundred Persons, who were by him not only won to the Philosophy which he profest, but following his Rules, became, as we call it, *Cenobii*; and these were they who studied Philosophy. [They did put their Estates into one common Stock, and kept Silence five years, only hearing his Discourses, but not seeing him, until they were fully proved, and then they became of his Family, and were admitted to him.] There were the same six hundred Persons, who, *Laertius* saith, came to his nocturnal *Acroasis*, (perhaps meaning the Lectures through a Skreen during their Probation, for he adds) if any of them were thought worthy to see him, they wrote of it to their Friends, as having obtain'd a great matter. This Society *Laertius* calls, his *System*, (which *Cassiodorus* interprets, Colledge) *Agellius*, his Family.

Jamb. cap. 6. Besides these, there were many Auditors, called *Acosmatics*, whereof he gained [as (a) *Nicomachus* relates] two thousand by one Oration, which he made at his first coming into *Italy*, who [that they might not live from home] erected a large *Homaceion*, [which *Clemens Alexandrinus* interprets to be the same as *Ecclesia*, Church, with us] whereinto were admitted also Boys and Women; and built Cities, and inhabited all that part of *Italy* which is called *Magna Græcia*, and received Laws and Statutes from him as divine Precepts, without which they did not any thing; they lived together unanimously, praised by all, and applauded as happy by such as lived round about them.

Thus *Pythagoras* distinguished those whom he admitted, according to their several merits;

for it was not fit that all should partake alike, being not of a like Nature; nor fit that some should receive all the Learning, others none, for that would have been contrary to his Community of all, and to his Equality. He therefore, of the Discourses which he made, communicated to every one that part which was proper for him, and distributed his Learning so, as that it might benefit every one according to his Capacity; and observing the Rules of Justice, in giving to every one that share of the Discourse which they deserved; calling, upon this account, some *Pythagoreans* (those of the *System*) some *Pythagorites*, (those of the *Homaceion*) as we call some *Atticks*, some *Atticists*. Dividing them thus aptly into two Names, he appointed one part to be *genuine*, the other he ordered to be Imitators of them. As to the *Pythagoreans* he decreed, that all their Estates should be in common, and that they should lead their whole Lives together in Community; but the others he ordered to keep their Estates to themselves, yet to meet together. Thus was this Succession of both Parties constituted by *Pythagoras*. The Discipline which was observed by the more Genuine, the *Pythagoreans*, we shall remit, together with his Doctrine, to the end of his Life.

CHAP. XVII.

His Authority in Civil Affairs.

Jamb. cap. 7. *Porphy. p. 14.* *and from him* *Jamb. cap. 7.* WHATSOEVER Cities in his Travels through *Italy* and *Sicily*, he found subjected to one another, (whereof some had been so of a long time, others of late) he infused into them a Resentment of Liberty by his Disciples, of whom he had some out of every City, he restored them to Liberty. Thus he freed *Crotona*, *Sybaris*, *Catana*, *Rhegium*, *Himera*, *Agrigentum*, *Tauromenium*, and some others, to whom he sent Laws by *Charondas* the *Catanean*, and *Zaleucus* the *Locrian*, by means whereof they lasted a long time well governed, and were deservedly envied by their Neighbours. He wholly took away Dissention, not only from among his Disciples, and their Successors for many Ages after, but also from all the Cities of *Italy* and *Sicily*, both intestine and external Dissention. For he did frequently pronounce to all manner of Persons every where, whether many or few, an Apophthegm, with resembles a monitory Oracle of God, which was a kind of Epitome or Recapitulation of all that he taught. The Apophthegm was thus, *That we ought to avoid with our utmost endeavour, and to amputate with Fire and Sword, and all other means from the Body, Sickness; from the Soul, Ignorance; from the Belly, Luxury; from a City, Sedition; from a Family, Discord; from all Things, Excess.* By which he did indulgently put every one in mind of his best Doctrines.

Yet is he reported to have been the occasion of the War between the *Sybarites* and the *Crotonians*, which ended in the total Subversion of the *Sybarites*; the manner is thus related by *Diodorus*, *Siculus* and *Jamblichus*.

* When the *Grecians* built *Sybaris* in *Italy*, it soon came to pass, that through the goodness of the Soil, [tho' *Athenens* deny it to be Fertile] † *the*

the City became in a short time very rich; for being seated betwixt two Rivers, *Crathis* and *Sybaris*, (from which it took its name) and the Citizens possessing a large Country, they soon gathered together great Riches; and admitting many to be free of their Country, they arrived to such height, that they seemed far to excel all the rest of the inhabitants of *Italy*. [* But so luxurious that they become infamous even to a proverb; and no less addicted to all other vices, insomuch that they, out of insolence, put to death thirty Ambassadors of the *Crotonians*, and threw their bodies from the walls to be devoured by beasts.] The City was so populous, that it contained no less than 300000 persons. At that time *Telys* was chief Magistrate, who, accusing the greatest men, procured of the *Sybarites* to banish 500 of the richest Citizens, and to confiscate their goods. These banished men went to *Crotona*, and there (after the manner of Suppliants) fled to the Altars erected in the Forum. Hereupon *Telys* sent Ambassadors to the *Crotonians*, to declare, that they should either deliver up the banished men, or expect war. [These *Sybarite*-Ambassadors had been instrumental in the murder of some friends of *Pythagoras*, perhaps some of the thirty *Crotonians* whom they slew.] Amongst them, one there was, who had killed some of them with his own hands; another was son to one of the same murderers, who was dead. Moreover, he was of those kinds of persons, who, being oppressed with want, stir up sedition, that they may take occasion thereby to fall on the goods of others. These *Sybarites* came to *Pythagoras*, and blamed him; and one of them (which was he that had a hand himself in the death of his friends) demanding a reason of his reproof, he said, That he did not give Laws. Whereupon they accused him, as if he had made himself *Apollo*, and especially for that before, upon a question being asked, Why these things were so, he asked him that propounded the question, Whether, when *Apollo* delivered his Oracles, he would require him to render a reason? The other deriding, as he thought, those discourses, in which *Pythagoras* declared the return of the Soul, and telling him, That when he went into the other world, he would give him a Letter to carry to his Father, and desired him to bring an Answer of it when he came back. I shall not, replied *Pythagoras*, go to the place of the wicked, where murderers are punished. The Ambassadors having thus reviled him, and he going to the Sea-side, and washing himself, many following him, one of those who advised the *Crotonians*, said, When he had sufficiently spoken against all the other things that they did, at last he accused them especially, for offering to oppose and abuse *Pythagoras*, of whom when heretofore, as fables report, beasts could speak, no one of them durst ever speak an ill word. *Diodorus* saith, that a Council being called, and it being put to the question, Whether they should deliver up the *Italotes* to the *Sybarites*, or undergo a War with an enemy more powerful than themselves? The Senate and People made some doubt, and the People first inclined to the delivery of the Suppliants, rather than endure the War. But afterwards, *Pythagoras*

the Philosopher advising them to protect the Suppliants, they changed their opinion, and determined to fight in their defence. The *Sybarites* came into the Field, with an Army of three hundred thousand; the *Crotonians* had but one hundred thousand. They were led by *Milo* the Wrestler, who at the first onset himself put to flight that wing of the Army which was opposite to him; for he was of invincible strength. This man having Courage answerable to his Strength, had been six times Victor at the Olympick Games, and when he began this Fight, was crowned with Olympick Wreaths, wearing, like *Hercules*, a Lion's Skin, and a Club, and obtaining the Victory for his Country-men, was much admired by them. [The *Crotonians* likewise made use of a Stratagem, whereby they got the day: * The *Sybarites* were so much addicted to Luxury, that they taught their Horses to dance at Feasts. This the *Crotonians* knowing, (as *Aristotle* relates) in the midst of the Fight, they commanded some Pipers, whom, to that purpose, they had brought along with them, to play dancing Tunes. The Horses, as soon as they heard the Musick, not only fell a dancing, but carried their Riders violently over to their Enemies.] Thus the *Sybarites* being put to Flight, the *Crotonians* spared none that they took, but put all to the Sword, whereby the greater part of the Army was slain, and the City, after a dishonourable surrender, laid waste. This, according to *Diodorus*, happened 63 years before the second of the 83d Olympiad, which falls upon the first year of the 68th Olympiad.

Agrigentum was by his means freed from the Tyranny of *Phalaris*, in this manner: † When † *Pythagoras* was detained by *Phalaris*, a most cruel Tyrant, [* with whom he stayed six Months] and *Abaris* the *Hyperborean*, a wife Person, came to converse with him, and asked him Questions, particularly concerning sacred Rites, Images, Divine Worship, Providence of the Gods, as well of those in Heaven, as conversant about the Earth, and such like demands; *Pythagoras*, as being highly inspired, answered him with much Truth and Perswasion, in so much as he drew the Standers by to his Opinion. Whereupon *Phalaris* seeing the People taken with him, was angry with *Abaris* for praising *Pythagoras*. He grew fierce against *Pythagoras* himself, and at last came to that height, as to speak all Blasphemies against the Gods, as were possible for such a kind of Person. But *Abaris* acknowledged himself thankful to *Pythagoras* for these things. He learned next of him, that all things depend upon Heaven, and are disposed of from thence, which he collected, as from many other things, so especially from the efficacy of Sacrifices. Far therefore was he from thinking, that *Pythagoras*, who taught him these things, was a deceiver, but he rather admir'd him, as a Person supernaturally inspir'd. *Phalaris*, in answer hereunto, deny'd plainly and openly all things that were done in sacred Rites. Whereupon *Abaris* transferred his Discourse from these things, to such as appear manifestly to all Men, and by the Divine Operations which are in all Extremities; as in extraordinary Wars, and

and in incurable Diseases, Destruction of Fruit, Transmission of Pestilence from Country to Country. By these difficult irremediable Causes, he endeavoured to prove, that there is a Divine Providence, which over-ruleth all human Hope and Power. But *Phalaris* impudently opposed it. Hereupon *Pythagoras*, knowing that that Day would be fatal to *Phalaris*, spoke very freely; and looking upon *Abaris*, said, That there is a passage from Heaven to the Aerial and Terrestrial parts; and did likewise Discourse scientifically, concerning the dependance of all things upon Heaven, and did irrefragably demonstrate the free Power of the Soul, and proceeded to shew the perfect Operation of the Reason, and of the Mind. Then he spoke boldly concerning Tyranny, and all excess of Fortune, all Injustice, all Covetousness, strongly maintaining that they are all nothing worth. After this, he made a Divine Exhortation concerning the best Life, and made a resolute Opposition against the worst, and did most plainly deliver the Doctrine, concerning the Power and Passions of the Soul; and which was more than all these, he demonstrated, that the Gods are not the causes of Ills; and that Diseases and Passions are Seeds of the Intemperance of the Body; and reprehended *Mythographers* and *Poets* for such things as they had falsely delivered; and sharply reprov'd *Phalaris*, and shewed what the Power of Heaven is, and how great, by its Operations. As concerning Infliction of Punishment by Law, he gave many instances thereof, and clearly shewed the difference betwixt Man, and other living Creatures. He likewise scientifically discoursed concerning intrinsic and enunciative Reason, and concerning the Mind, and the Knowledge proceeding from it, with many other moral Documents dependent thereon. He treated of what things are useful in Life, making an Exhortation to the pursuit of the useful, and dehorting from the hurtful; and that which is most of all, he made a distinction between the things done according to Fate, and according to the Mind, and of those which are done according to Necessity, and according to Decree. Moreover he discoursed concerning *Demons*, and the Immortality of the Soul, much and wisely; whereof we shall have occasion to speak elsewhere, and shew, that these things do conferr most to fortitude, seeing that he himself in the midst of all Dangers, did with a constant mind discourse Philosophy, and arm himself against Fortune; as also for that he slighted and contemned the Person that attempted to hurt him, and despised the fear of Death, and all human Contingencies, nor was he at that instant any thing concerned for them. Indeed (continues *Jamblichus*) it is manifest, that he was nothing troubled with the fear of Death, but had a far more noble design, the freeing of *Sicily* from the Oppression of Tyranny. That it was he who did it, is manifest from the Oracle of *Apollo*, which declared, That *Phalaris*, when his Subjects grew better and more Unanimous, should lose his Authority; which they did at the coming of *Pythagoras*, through his Exhortations and Instructions. But a clearer Evidence hereof is from the time: For that very day that *Phalaris*

went about to bring *Pythagoras* and *Albaris* into danger of Death, he was himself Slain. The manner thus related by **Tzetzes*: It chanced that a Hawk pursued a great flight of Pigeons; which *Phalaris* seeing, said to those that stood by him, Behold, Friends, how much an ignoble Fear can do; for if but one of all these Pigeons would turn again, it would presently give a stop to the Pursuer. This Speech an old Man that was present no sooner heard, when taking up a Stone he threw it at *Phalaris*; and the rest following his Example, did the like. Some say they stoned him to Death; others, that they put him into Chains, and wrapt him in a sheet of Lead, wherein he died miserably.

To the *Locrians*, besides *Charondas* and *Zeleucus*, already mentioned, he sent † *Timarus* † *Jamb. p. 103. and 154.* also, to make Laws for them.

To the *Rheginenses* he sent upon the same Employment * *Theatetus*, *Helicaen*, *Aristocrates* * *Jamb. p. 103.* and *Phytius*.

Thus, as † *Porphyrius* saith, *Pythagoras* and † *Page 36.* his Friends were a long time so much admired in *Italy*, that many Cities committed themselves to be governed by them.

CHAP. XVIII.

Wonders related of Him.

IF we may credit (saith (a) *Porphyrius*, and (a) *Page 15.* from him (b) *Jamblichus*) what is related of (b) *Cap. 13.* him, by ancient and creditable Authors, his Commands had an Influence even upon irrational Creatures, for he laid hold of the *Daunian* Bear, which did much hurt to the People thereabout, and having stroaked her awhile, and given her Maza and Fruits, and Sworn her, that She never more touch any living Creature, he let her go. She straightway hid her self in the Hills and Woods, and from thenceforward never assaulted any living Creature.

Seeing an Ox at *Tarentum* in a Pasture, where- *Porphy. pag. 16. Jamb. cap.* in grew several things, cropping green Beans, he came to the Neat-herd, and counselled him to speak to the Ox, that he should abstain from the Beans. But the Neat-herd mocking him, and saying, He could not speak the Language of Oxen; he himself went to him, and whispering in the Ear of the Ox, he not only refrained immediately from Beans at that time, but from thenceforward would never touch any, and lived many years after about *Juno's* Temple at *Tarentum*, till he was very old; and was called the sacred Ox, eating such Meats as every one gave him.

An Eagle flying over his head at the Olympick *Porphy. pag. 16. Jamb. cap.* Games, as he was by chance discoursing to his Friends concerning *Auguries* and *Omens*, and divine Signs, and that there are some messages from the Gods to such Men as have true Piety towards them; He is said [(c) by certain Words to (c) *Plin. lib. 10.* have stopt here, and] to have caused her to come down; and after he had stroaked her awhile, he let her go again. This perhaps was that white Eagle, which *Jamblichus* reports he stroaked at *Croto*, and She endured it quietly. For the *Crotonians* instituted Games, which they called *Olympick*, in Emulation of the *Grecians*.

† Pag. 18.

A River (which † *Porphyrius* calls *Caucasus*, *Apollonius* Πόταμον κατὰ Σαμόν; *Laertius* and *Famblichus*, *Nessus*; *Ælian*, *Cofu*; *St. Cyril*, *Causus*) as he passed over it, with many of his Friends, spoke to him, and said with a plain clear voice, χαῖρε Πυθαγόρα. Hail *Pythagoras*.

Porph. pag. 18.
Jamb.

In one and the same day, almost all affirm, that he was present at *Metapontum* in *Italy*, and at *Tauromenium* in *Sicily*, with the Friends which he had in both places, and discoursed to them in a publick Convention, when as the places are distant many *Stadia* by Sea and Land, and many days journeys asunder. *Apollonius* relates this, as done at *Croto* and *Metapontum*.

Plut. in Numa.
Laert.

Porph. p. 18.

At the publick Solemnity of the Olympick Games, he stood up and shewed his golden thigh; as he did in private to *Abaris*, to confirm him in the opinion, that he was *Hyperborean Apollo*, whose Priest *Abaris* was.

Porph. p. 18.

A Ship coming into the Harbour, and his Friends wishing they had the goods that were in it: Then (saith *Pythagoras*) you will have a dead body: And when the Ship came at them, they found in it the Body of a dead Man.

Jamb. cap.

To one who much desired to hear him, he said, That he would not discourse until some sign appeared. Not long after, one coming to bring News of the Death of a white Bear in *Caulonia*, he prevented him, and related it first.

Anon. de vita
Pyth. apud
Phil.
† Laert.

They affirm he foretold many things, and that they came to pass; insomuch that † *Aristippus* the *Cyrenean*, in his Book of Physiologick, saith, He was named *Pythagoras*, from speaking things as true as *Pythian Apollo*. He foretold an Earthquake by the Water which he tasted out of a Well; and foretold, That a Ship, which was then under sail with a pleasant gale, should be cast away.

At *Sybaris* he took in his hand a Serpent of deadly biting, and let it go again. And at *Tyrrenia* he took a little Serpent, and biting it, kill'd it with his Teeth.

Porph. p. 18, 19.

A thousand other more wonderful and Divine things are related constantly, and with full agreement of him; so that, to speak freely, more was never attributed to any, nor was any more eminent. For his Predictions of Earthquakes most certain are remembred, and his immediate chasing away of the Pestilence, and his suppression of violent Winds and Hail, and his calming of Storms, as well in Rivers as upon the Sea, for the ease and safe passage of his Friends, from whom *Empedocles*, and *Epimenides*, and *Abaris* learning it, often performed the like, which their Poems plainly attest. Besides, *Empedocles* was surnamed *Alexanemos*, the chaser away of Winds; *Epimenides*, *Cathartes*, the Lustrator; *Abaris*, *Æthrobates*, the Walker in the Air; for, riding upon an Arrow of *Hyperborean Apollo*, which was given him, he was carried in the Air over Rivers and Seas, and inaccessible places, which some believed to have been done by *Pythagoras*, when he discoursed with his Friends at *Metapontum* and *Tauromenium* upon the same Day.

In Nubes.
pag. 169.

To these add his trick with a Looking-glass, as the Scholiast of *Aristophanes* calls it, who describes it thus: The Moon being in the Full, he wrote whatsoever he pleased in blood upon a Looking-glass, and telling it first to the other party, stood

behind him, holding the Letters towards the Moon; whereby he who stood betwixt him and the Moon, looking steadfastly upon her, read all the Letters which were written in the Looking-glass in the Moon, as if they were written in her.

But these things, some, even of the Ancients, have imputed to Goetick Magick, as *Timon*, who terms him, *τῶνισ*, a Magician; others, to imposture, as appears by this Relation of *Heraclides*, and the Scholiast of *Apollonius*: † When he came into *Italy*, he made a Vault under ground, and charged his Mother [* to give out that he was dead, and] to set down in a Table-book all things that hapned, expressing the times punctually. Then he went down [and shut himself up in the Vault], and his Mother did as he ordered her, until such time as he came up again. After a while *Pythagoras* came up, lean and withered; and coming into the Congregation, declared, That he was returned from the *Inferi*, and related to them what was done there; and told them many prodigious Stories concerning the *Palingenesie*, and the things of the *Inferi*; telling the living news of their dead friends, with whom, he said, he met in the *Inferi*. † *Hieronymus* relates, That he saw there the Soul of *Hesiod* bound with Brafs to a Pilar, shrieking; and that of *Homer* hung up on a Tree, encompassed by Serpents, for the Fables which he had raised concerning the gods: Those likewise tormented who used not the company of their own Wives. For this he was much honoured by the *Crotonians*. They being much moved at what he said, wept and lamented, and hereupon conceived such an esteem of *Pythagoras*, as being a Divine Person, that they sent their Wives to him to be instructed in his Doctrine, which Women were called *Pythagoreans*. Thus *Hermippus*. The Scholiast adds, [Hereby he raised an Opinion concerning himself, That, before the Trojan War, he was *Æthalides*, the Son of *Mercury*; then *Euphorbus*, then *Hermotimus*, then † *Pyrrhus*, a † *Delian*; lastly, *Pythagoras*.] And, as *Laertius* saith, in his Writings he reported of himself, That he had come from the *Inferi* to Men, 207 years since. Of this more in his Doctrine, *Part. 2. Chap. 5. Sect. 10.*

CHAP. XIX.

His Death.

THE time of *Pythagoras* his Death hath been formerly touched; it was, according to *Eusebius*, in the Fourth year of the 70th Olympiad, after he had lived, as † *Justin* saith, at *Crotona* 20 years. The occasion is differently related. *Laertius* thus.

† *Lib. 20.*

Pythagoras died in this manner: As he sat in counsel together with his Friends, in the House of *Milo*, it happened that the House was set on fire by one who did it out of Envy, because he was not admitted. Some affirm, the *Crotonians* did it out of fear of being reduced to a Tyranny. *Pythagoras* running away, was overtaken; coming to a Place full of Beans, he made a stop, saying, It is better to be taken, than to tread; and better to be killed, than to

pia.

speak. So the pursuers slew him. In the same manner died most of his Disciples, about Forty in number; some few only escaped, of whom were *Archytas* the *Tarentine*, and *Lysis*, of whom we spake before. *Dicaearchus* saith, That *Pythagoras* fled to the Temple of the Muses at *Metapontum*, and died † for want of Food, having lived there forty days without eating. *Heracledes*, in his Epitome of the Lives of *Satyrus*, relates, That having buried *Pherecydes*, he returned to *Italy*, where finding the Faction of *Cyclo* (prevalent), he departed to *Metapontum*, and there starved himself, not willing to live any longer. *Hermippus* saith, That the *Agrigentines* and *Syracusians* warring against one another, *Pythagoras*, with his Friends, went to the *Agrigentines*, and was Head of them: But they being vanquished, and he flying to a field of Beans, was there slain; the rest (being thirty-five) were burn'd at *Tarentum*, for intermeddling with the Governors and Rule of the Commonwealth.

Jamblichus, from *Aristoxenus*, and others, gives a more particular account: There were (saith he) some, who oppugned these Men, and rose up against them. That this Conspiracy happened in the absence of *Pythagoras*, is acknowledged by all; but they disagree concerning his Journey: Some say, he was gone to *Pherecydes*, the *Syrian*; others, to *Metapontum*. The Causes of this Conspiracy are diversly related also; one is said to have proceeded from the Men, who were called *Cylonians*, thus: *Cylo*, a *Crotonian*, who, in Race, and Honour, and Wealth, excelled all the rest of the Citizens, but otherwise of a harsh, violent, turbulent, and tyrannical Humour, was exceedingly desirous to participate of the *Pythagorick* Institution; and coming to *Pythagoras*, who was now very old, he was repulsed for the Reasons aforesaid. Hereupon there arose a great Contest, *Cylo* and his Friends opposing *Pythagoras* and his Friends: And so eager and violent was the Malice of *Cylo* and his party, that it extended even to the last of the *Pythagoreans*. *Pythagoras* therefore for this reason departed to *Metapontum*, where it is said that he died. The *Cylonians* (so called) continued to exercise their hatred and enmity towards the *Pythagoreans*: For a while, the integrity of the *Pythagoreans*, and the kindness of the Cities (which was so great as to be governed by them) was prevalent; but at last they so plotted against the Men, as that surprizing them, assembled in the House of *Milo*, at *Crotona*, consulting about Military Affairs, they burned them all, except two, *Archippus* and *Lysis*, who being youthful and strong, escaped out of doors. This falling out, and the Cities not taking any notice of the misfortune, the *Pythagoreans* gave over their business. This happened from two Causes, as well by reason of the unconcernment of the Cities (for they had no regard of the Murder, to punish the Authors thereof) as by reason of the Death of the most excellent Persons, two only of them were saved, both *Tarentines*; of whom, *Archippus* retired to *Tarentum*; but *Lysis*, out of hatred of the neglect they had received from the Cities, departed into *Greece*, and lived at *Achaia* in *Peloponnesus*: Thence, upon a particular design, he removed to *Thebes*, where *Epimanondas* heard him, and cal-

led him Father: There he died. The rest of the *Pythagoreans*, all but *Archytas* the *Tarentine*, forsook *Italy*, and assembling at *Rhegium*, they lived there together. But in progress of time the management of publick Affairs decayed. The most eminent of these were *Phanto*, and *Echecrates*, and *Polymnastus*, and *Diocles* (both *Phliasians*), and *Xenophilus*, a *Chalcidean* of *Chalcis* in *Thrace*; these preserved the Customs and Doctrines from the beginning, but with the Sect it self at last they were wholly extinguished. This is related by *Aristoxenus*.

Nicomachus agreeth in all things with this Relation, except in that he saith, This Insurrection happened at what time *Pythagoras* was gone to *Delus*, to visit *Pherecydes*, who was sick of a *Phthiriasis*; then were they stoned and burned by the *Italiotes*, and cast forth without burial. Hitherto *Jamblichus*.

With these also agreeth the Relation of *Neanthes*, thus delivered by † *Porphyrius*.

† Pag. 374

Pythagoras and his Friends having been a long time so much admired in *Italy*, that many Cities committed themselves to them, at last they became envied, and a Conspiracy was made against them in this manner: *Cylo*, a *Crotonian* (who, in Extract, Nobility, and Wealth, exceeded all the rest of the Citizens, but otherwise was of a violent, rigid, and tyrannical Disposition, and one that made use of the multitude of his Friends to compass his unjust ends) as he esteemed himself worthy of all excellent things, so most particularly to partake of the *Pythagorick* Philosophy; he came to *Pythagoras*, and much extolled himself, and desired his Conversation. But *Pythagoras* presently observing the Nature and Manners of the Person, and perceiving by the signs which he observed in the bodies of such as came to him, what kind of disposition he was of, bad him depart, and go about his business. Hereat *Cylo* was not a little troubled, taking it for a great affront, being of himself a person of a rough violent Spirit. Therefore calling his Friends together, he began to accuse *Pythagoras*, and to conspire against him and his Disciples. Whereupon, as some relate, the Friends of *Pythagoras* being gathered together in the House of *Milo* the Wrestler, *Pythagoras* himself being absent (for he was gone to *Delus*, to visit *Pherecydes* the *Syrian*, formerly his Master, who was desperately fallen sick of a *Phthiriasis*, and to attend on him), they set the House on fire, and burned and stoned them all, except two who escaped the fire, *Archippus* and *Lysis*, as *Neanthes* relates, of whom, *Lysis* went into *Greece*, to *Epymanondas*, whose Master he had formerly been.

But *Dicaearchus*, and other more accurate Authors affirm, That *Pythagoras* himself was there present when this Conspiracy was perpetrated, for *Pherecydes* died before he left *Samus*. Of his Friends, Forty being gathered together, were beset in a House, most of them going dispersedly to the City, were slain. *Pythagoras*, his Friends being taken, first escaped to the *Caulonian* Haven, thence went to the *Locrians*. The *Locrians*, sent some old men to the borders of their Countrey, who gave him this answer; We have heard, *Pythagoras*, that thou art a person wise, and of great worth; but

but we have nothing in our Laws that is reprehensible, and therefore we will endeavour to preserve them. Go to some other place, taking of us whatsoever you have need of. Hereupon leaving the City of the *Locrians*, he sailed to *Tarentum*, where receiving the same entertainment he had at *Crato*, he went to *Metapontum*, for great Seditions were raised against him in every part, which are remembered by the Inhabitants at this day, who recount the Seditions against the *Pythagoreans*, as they call them; for all that Faction, which sided with *Pythagoras* were called *Pythagoreans*. In the *Metapontine* Faction, *Pythagoras* is said to have died, flying to the Temple of the Muses, and staying there forty days, through want of necessaries.

Others relate, That when the house wherein his Friends used to meet, was fired, his Friends threw themselves into the fire, to make a way for their Master, spreading their Bodies like a bridge upon the fire; and that *Pythagoras*, escaping out of the burning, destitute of all his Friends, for grief ended his days.

With these Men, oppressed with this Calamity, failed their Knowledge also, which till then they had preserved secret and concealed, except some things difficult to be understood, which the Auditors that lived without (*the Skreen*), repeated by heart. *Lyfis* and *Archippus* escaping, and as many as were at that time in other parts, preserved some little sparks of Philosophy, obscure and difficult to be found out; for being now left alone, and much grieved at the perpetration of that wickedness, fearing lest the Name of Philosophy should be quite extinguish'd amongst Men, and that for this reason the gods would be angry with them, they made some summary Commentaries; and having reduc'd the Writings of the Ancients, and those which they remembered, into one Body, every one left them in the place where they died, charging their Sons, Daughters, and Wives, that they should not communicate them to any out of their own Family. Thus privately continuing it successively to their Successors, they observed it a long time. And for this reason, saith *Nicomachus*, we conjecture, that they did purposely avoid friendship with Strangers; and for many Ages they preserved a faithful constant friendship amongst themselves.

† Porph. p. 36.

† *Moderatus* saith, That this (Pythagorick Philosophy) came at last to be extinguished, first, because it was ænigmatical; next, because their Writings were in the *Dorick* Dialect, which is obscure, by which means, the Doctrines delivered in it were not understood, being spurious and misapprehended, because (moreover) they who publish'd them were not *Pythagoreans*. Besides, *Plato*, *Aristotle*, *Speusippus*, *Aristoxenus*, and *Xenocrates*, as the *Pythagoreans* affirm, vented the best of them, as their own, changing only some few things in them; but the more vulgar and trivial, and whatsoever was afterwards invented by envious and calumnious persons, to cast a contempt upon the *Pythagorean* School, they collected and delivered as proper to that Sect.

Jamb. cap. 35.
pag. 211.

But forasmuch as *Apollonius* gives a different Account of these things, and adds many things which have not yet been spoken, let us give

his Narration also concerning the Insurrection against the *Pythagoreans*. He (therefore) saith, That the *Pythagoreans* were envied from their very Childhood; for the People, as long as *Pythagoras* discoursed with all that came to him, loved him exceedingly; but when he apply'd himself only to his Disciples, they undervalued him. That he should admit Strangers, they well enough suffered: But that the Natives of the Countrey should attribute so much to him, they took very ill, and suspected their meetings to be Contrivements against them. Besides, the Young Men being of the best rank and estate, it came to pass, that after a while, they were not only the chief Persons in their own Families, but governed even the whole City, they becoming many, as to a Society, (for they were above three hundred Persons) but being a small part as to the City, which was not ordered according to their Manners and Institutions. Notwithstanding, as long as they possessed the place they were in only, and *Pythagoras* lived there, the City followed the Original Government thereof, though much perplexed, and watching an opportunity for change. But after they had reduced *Sybaris*, and that he departed, and they distributed the conquered Countrey into Colonies, as they pleased; at length, the concealed hatred broke forth, and the multitude began to quarrel with them. The Leaders of this dissention were those who were nearest ally'd to the *Pythagoreans*. Many things that had past, grieved them, according as they were particularly affected; but one of the greatest was, that he only should be thought capable of disrespect. For the *Pythagoreans* used never to name *Pythagoras*; but whilst he lived, they called him, *Divine*; after Death, *the Man*: As *Homer* introduceth *Æneas* mentioning *Ulysses*.

*I to pronounce his Name, though absent,
fear;
So great is my respect, and he so dear.*

In like manner, not to rise out of bed, after the Sun's up, nor to wear a Ring, whereon the Image of God is engraved; but to observe the Sun, that they may adore his rising; and not to wear a Ring, lest they might chance to have it on at a Funeral, or carry it into any unclean place. Likewise, not to do any thing without premeditation, nor any thing whereof they could not give a good account; but that in the Morning they should consider what they were to do, and at Night they should make a recollection thereof, as well to ponder the things themselves, as to exercise the Memory. Likewise, if any one of that Community had appointed to meet another in any place, he should stay there Day and Night until the other came. The *Pythagoreans* likewise accustomed themselves to be mindful of what is said, and to speak nothing rashly. But above all things, as an inviolable Precept, to be kept even until Death, he advised them not to reproach; but always to use good Words, as at Sacrifices. These things much displeased all in

A a a 2

general;

general, as I said, forasmuch as they admitted men to be educated in this singularity amongst them. But, in that they reached forth the hands to *Pythagoreans* only, and not to any of their own Family, except their Parents: Likewise, in that they had their Estates in common, wholly alienated from their own Domestic: Hereat their Allies were much displeased. And they beginning the dissention, the rest readily joyned themselves, and engaged in it. And at the same time, *Hippasus*, and *Diodorus*, and *Theages* saying, That it was fit every one should partake of the publick Government and Convention; and that the Magistrates being chosen by lot, ought to give an Account. But on the other side, the *Pythagoreans*, *Alcimachus*, and *Dimachus*, and *Meto*, and *Democedes*, opposing it, and forbidding that the Government of the Countrey should be abrogated; these taking the part of the Commons, got the better. But afterwards, many of the common People understanding that there was a division in the publick Convention, *Cylo* and *Nino*, Orators, framed an Accusation against them; the first was one of the best quality; the other of the vulgar sort. To this effect, a long discourse being made by *Cylo*, the other continued it, pretending that he had found out the greatest Secrets of the *Pythagoreans*. But indeed having forged and writ such things, as thereby he might chiefly traduce them; and having delivered the Book to a Notary, bad him read it: The Title was, *The Sacred Discourse*: The Sum whereof this: *That Friends ought to be revered as the Gods themselves, but all other Men tyranniz'd over like Beasts. That the same Sentence of Pythagoras himself reduced to Verse, was thus rehearsed by his Disciples*:

Friends equal with the gods he did respect,
All others (as of no account) neglect.

And that he chiefly praised Homer, for saying, *Παιμένα λαόν*, the Shepherd of the People, for that he tacitely imply'd, that the rest of Mankind were but Beasts. That he affected Oligarchy, and was an Enemy to unmarried Persons, as those who had been Chief in Election of Magistrates by lot. That he affected Tyranny, in as much as he saith, *It is better to be a Bull, though but one day, than an Ox all our life time.* That he praised the Laws and Customs of other People, and commanded, *That whatsoever was decreed by them, should be used.* In fine, he declared, *That their Philosophy was a conspiracy against the People, and advised them, that they should not hearken to the Voice of their consultations, but rather think of forbidding them to meet in counsel at all, if they alledged, That they had a settled Assembly, consisting of a Thousand Voices.* Wherefore it was not fit that they should, as far as in them lay, give ear to prohibited Persons, and permit them to speak; but to esteem their right hand which they held from them hostile, when they should offer to put in a stone for voting, conceiving it an unworthy thing, that three hundred thousand Men, who all lived about the River Tetrals,

should be oppressed by Seditions, and overcome by the thousand part of them in that City. This calumny so much exasperated the hearers, that some few days after, as they were sacrificing in the Temple of *Pythian Apollo*, they ran in tumultuously to do violence to them. But the *Pythagoreans* being informed beforehand thereof, fled to the publick Hall. *Democedes*, with the Young Men, went to *Platea*; but they dissolving the Laws, used Decrees, whereby accusing *Democedes* of stirring up the Young Men to Tyranny, they proclaimed, That whosoever did kill him, should have in recompence Three Talents. And there being a Fight, wherein he, by the means of *Theages*, was overcome, they gave him Three Talents out of the publick Treasury. But there arising many misfortunes in the City and Countrey, the banished Persons being called to Judgment, and the Examination thereof being committed to Three Cities, *Tarentum*, *Metapontum* and *Caulon*, they that were put in Commission, thought good (as appears by the *Crotonian* Records) to banish them. So they banished the whole Generation, saying, That the Children ought not to be separated from their Parents, and seiz'd their Estates. But after many years, *Dimachus* and his Friends being slain in another Fight, and *Litago* also, who was head of this Faction, they took compassion on them, and resolved to call home those who were left. Wherefore sending for their Ambassadors from *Achaia*, they made an agreement with the banished Men by them, and hung up the Copies of their Oaths in the Temple of *Delphi*. The *Pythagoreans* who returned, were about Threescore, besides those who were very aged, of whom some addicted themselves to Medicine, and cured the sick, and so became Masters of that which is called Method. Those who were restored, grew into great favour with the People, at that time in which it was proverbially said, in opposition to those who violate the Laws, *These are not under the Government of Nino.*

CHAP. XX.

His Person and Virtues.

HIS Person (a) *Jamblichus* describes to have (a) Cap. 2. p. been in his Youth extraordinary beautiful, 31. called, The fair-hair'd *Samian*; (b) and at 56 (b) Cap. 5. p. years of age, of a more comely and divine presence. (c) *Laertius* saith, He is reported to have (c) Pag. been of a most awful aspect, insomuch as his Disciples thought him Hyperborean Apollo: Adding, That (d) *Timon* takes notice of the awfulness of (d) Pag. 550. his presence in his *Silli*, though he alledg'd it in disparagement of him.

*Pythagoras skill'd in the Goetick Laws,
Who courts by grave discourse humane applause.*

So great an impression it made upon those with whom he conversed, that a Young Man being sharply reprehended by him, immediately went and hanged himself. Whereupon
Pythagoras

Pythagoras ever after forbore to reprove any Person.

(e) *Athen. Deipn.* 10. (f) *Ibid.* (e) *Lycon*, in the Life of *Pythagoras*, saith, That he used a spare Diet: (f) *Athenaus*, That he drunk very little, and lived so moderately, that he was often content only with Honey.

(g) *Porphy.* (g) *By his moderate Diet, he preserved his Body in the same constant state, not sometimes sick, sometimes well, sometimes fat, sometimes lean. It appeared by his Countenance, that the same Constancy was in his Soul also. He was not subject to Joy (as Cicero likewise observes) or Grief, no Man ever saw him rejoyce or mourn.* * Neither did any ever see him *alvum exonerantem*, *coen-tem*, or drunk. He refrained wholly from derision, and assentation, and scoffs, and detractions. He never punished any in Anger, neither Servant nor free Person.

(h) *Laert.* see also *Jamb. cap. 21.* (i) *Alia. var. Hist.* 12, 22. (h) *He wore a white and clean Stole, (or Gown) and used white woollen Blankets, for as yet linnen was not known in those parts, and (i) a gold Crown and Breeches.*

(k) *Porph.* (k) *Diogenes* discoursing of his Daily Conversation, saith, He had Morning Exercitations at his own House, composing his own Soul to the Lyre, and singing some old Pæans of *Thales*. He likewise sung some Verses of *Homer* and *Hesiod*, whereby he rendred his Mind more sedate. Moreover, he used some Dances, which he conceived to conduce to Agility and Bodily Health. His Walks he used not with many, promiscuously, but with Two or Three, in the Temples or Groves, making choice of such places as were most pleasant, and remote from noise.

(l) *Jamb. cap. 30. pag. 153.* (l) *Having purchased the Estate of Alcæus, who, after his Embassy to Lacedæmon, died, he was no less admired for his Oeconomy than Philosophy.*

(m) *Plut. in Numa.* Besides this *Pythagoras* the Philosopher, there were many others of the same Name, the most ancient a (m) *Laconian*, Contemporary with King *Numa*.

Laertius reckons Four, all about the same time, or at least not long distant from one another; for, (besides the Philosopher) there was one a *Crotonian*, a tyrannical person; another a *Phli-Asian*, *σωμασμητής ἀλειπτής*, (*Exercitator*, as (n) *Pliny* renders it) one that professed to teach Corporeal Exercises, and to diet and order the Body for them. This seems to be the same *Py-*

(o) *Jamb. c. 6. pag. 40.* (o) *Son of Eratocles, who writ Aleip-rick Commentaries, and advised the Wrestlers, instead of Figs to eat Flesh; both which are ascribed by some to Pythagoras the Philosopher. The Third a Lacinthian, to whom are ascribed the Doctrines of Philosophy, which it was lawful to divulge, and the proverbial αὐτὸς ἔφα; both which were proper to Pythagoras the Philosopher. Some reckon another Pythagoras of Rhegium, a Statuary, who invented Rythm and Symmetry, and another of Samus, a Statuary also, (perhaps the same whom (p) Pliny placeth in the 67th Olympiad) and another, an Orator, of no Reputation; another, a Physician, who writ of σφάλαν, the Sea-Onyon, (ascribed by * *Pliny* to the Philosopher) and concerning *Homer*; and another, the History of the *Doreans*, as *Dionysius* relates. Hi-*

(q) *Suid.* (q) *Pythagoras* the *Ephesian*, who

lived before *Cyrus*; another of the same Name, (r) *Præfect* under *Ptolemy*; a Third, a (s) (i) *Plin.* 37. 2. (s) *Plin.* 34. 8.

Painter.

CHAP. XXI.

His Wife, Children, Servants.

HE took to Wife *Theano*. Some affirm, she was a (a) *Crotonian*; but (b) *Porphyrius*, a (a) *Suid.* in *Theano*. *Cretan*, Daughter of *Pythanax*, or (c) *Pythanax*. (b) *Pag.* After the Death of *Pythagoras*, she took upon her (c) *Suid.* the Tuition of their Children, and the (d) *Go-* (d) *Theodoret.* vernment of the School, (e) marrying *Aristæus*, *de princip. adv. gent. Serm. 2.* who succeeded him in that Dignity. *Laertius* (e) *Jamb. cap. ult.* saith, *There were some Writings extant under her Name; whereof Suidas instanceth, Philosophical Commentaries, Apophthegms, and a Poem in Hexameter Verse.* Of her Apophthegms are remembered these: (f) Being demanded how soon, after (f) *Laert.* Coition, a Woman is pure, she answered, *If with her own Husband, at the same instant; if with a strange Person, never.* She advised every Woman, when she goeth to bed to her Husband, to put off her Modesty with her Cloaths, and when she riseth, to put it on again with them. Being asked (upon occasion perhaps of some ambiguous word) ποῖα; which of the two she meant? She answered, *That for which I am called a Woman.* To one, admiring her Beauty, and saying, *How white an Arm!* She answered, *But not common.* *Laertius*, who affirms, she was Daughter to *Brontinus*, a *Crotonian*, adds, That, according to some, *Theano* was Wife to *Brontinus*, and Disciple to *Pythagoras*. And with this Second, it seems, the former was frequently confounded, as particularly in the first of the precedent Apophthegms, which *Jamblichus* affirms to have been spoken by *Theano*, the Wife of *Brontinus*, though attributed by some (of whom is *Laertius*) to *Theano*, the Wife of *Pythagoras*.

(g) Of his Sons by *Theano* are remembered (g) *Suid.* *Telauges* and *Mnesarchus*: *Mnesarchus* seems to be the same whom (h) *Plutarch* calls *Mamer-* (h) *In Numa.* *cus*; for both these Names are given to the Father of *Pythagoras*, from whom that of his Son, doubtless, was derived. (i) By some he seems (i) *Suid.* in *Pythag.* to be called *Damo*, if there be no mistake occasion'd by *Pythagoras* his Daughter, of the same Name. These Two, *Telauges* and *Mnesarchus*, were, upon their Father's Death, bred up under their Mother *Theano*, and afterwards governed the School, as *Jamblichus* attests of *Mnesarchus*, *Laertius* of *Telauges*, who adds, That he taught *Empedocles*, as some conceive, and *Hippobotus* cites, out of *Empedocles* himself, this:

(k) *Noble Telauges from Theano sprung, And great Pythagoras——*

(k) Perhaps *Τηλαυγες, καὶ τὸν Πυθαγόρα,* &c.

But of *Telauges* there is no Writing extant. Thus *Laertius*, who yet elsewhere cites an Epistle of *Telauges* to *Philolaus*. And *Jamblichus* affirms, That some ascribed to him the Sacred Discourse, which went under the Name of *Pythagoras*.

To

To these two Sons, add, (upon the authority of (1) *Diuris* the *Samian*, in his second Book of Hours) *Arimnestus*, Master to *Democritus*, who returning from banishment, suspended a brazen Tablet in the Temple of *Juno*, the Diameter whereof was nigh two cubits, bearing this Inscription.

*Me Arimnestus, who much learning trac'd,
Pythagoras beloved Son here plac'd.*

His Daughters were *Sara*, *Muya*, *Arignota*, (whose Pythagorical Writings *Porphyrius* mentioneth as extant in his time) and (m) *Damo*: With her, *Pythagoras* left his Writings at his death, charging her not to communicate them to any that were not within the Family. Whereupon she, though she might have had much money for the Books, would not accept it, preferring poverty, with obedience to her Father's command, before riches. One of his Daughters *Pythagoras* gave in Marriage to *Meno* of *Crotona*, whom he had educated so well, that when a Virgin, she went foremost in the company of the Virgins; and when a Wife, foremost among the married Women. The *Crotonians* made of her House a Temple to *Ceres*: The street they called *Museum*.

Of his Servants are particularly remembred two, *Astræus* and *Zamolxis*: Of the first, thus (n) *Diogenes*, in his Treatise of incredible things beyond *Thule*; *Mnesarchus* being a *Tyrrhenian*, by extract of those *Tyrrhenians* who inhabited *Lemnus*, *Imber* and *Scyrus*, went from thence, and travelled to many Countries and Cities, found an Infant lying under a large tall Poplar, and coming to it, he perceiv'd that it lay with the face towards the sky, looking steadfastly upon the Sun without winking. In its mouth was put a little slender Reed like a Pipe. And seeing, to his great wonder, that the Child was nourished with the drops that distill'd from the Tree, he took the Child away, believing it to be of a Divine race. This Child when he grew up, was entertain'd by *Androcles*, a native of that Country, who adopted him into his own Family, and committed the management of his affairs to his trust. *Mnesarchus* afterwards growing very rich, brought up the Child, naming him *Astræus*, together with his own three Sons, *Eunostrus*, *Tyrrhenus*, and *Pythagoras*: Which boy, as I said, *Androcles* being yet very young, adopted his Son. He put the Boy to a Lutenist, a Wrestler, and a Painter; but as soon he was grown up, he sent him to *Miletus* to *Anaximander*, to learn Geometry and Astronomy. *Mnesarchus* gave *Astræus* to *Pythagoras*, who receiving him, and considering his Physiognomy, and examining the motions and restings of his Body, instructed him. For he first found out the way of discerning the nature of every Man; neither did he entertain any as his Friend or Disciple, before he had examined by Physiognomy his Disposition.

He had likewise another Servant whom he entertained in *Thrace*, named *Zamolxis*, for that as soon as he was born, they wrapped him in a Bear's skin, which skin the *Thracians* call *Zalmus*; whom *Pythagoras* affecting, instructed in sublime Speculations, and concerning sacred Rites, and the Worship of the Gods. Some affirm, he was called *Thales*. The Barbarians worshipped him instead of *Hercules*. *Dionysiphanes* saith, he

was servant to *Pythagoras*, and falling into the hands of Thieves, and being branded by them, when *Pythagoras* was disturbed by seditious factions, and banished, he bound his forehead about because of the scars. Some say, that the name *Zamolxis* signifies a strange Person. Hitherto *Diogenes*. To this *Zamolxis* (saith *Laertius*) the *Getes* Sacrifice, as *Herodotus* relates, conceiving him to be *Saturn*. But (o) *Herodotus* having delivered the Tradition of the *Grecians*, (that he served *Pythagoras* at *Samus*, bought out his Freedom at a great rate, and returning to his Country, reformed their manners) concludes with his own Opinion, that *Zamolxis* lived many years before *Pythagoras*.

CHAP. XXII.

His Writings.

SOME there are who hold, that *Pythagoras* left not any thing in Writing; of this Opinion are (a) *Plutarch*, (b) *Josephus*, (c) *Lucian*, (d) *Porphyrius*, (e) *Ruffinus*, and others: But (f) *Laertius* saith, that all such as affirm he wrote nothing, do but jest; for *Heraclitus* the Natural Philosopher said expressly of him, *Pythagoras* Son of *Mnesarchus* was skilful in History above all Men; and selecting those Writings, made up his own wisdom, and variety of learning and art. To which citation perhaps, (g) *Clemens Alexandrinus* refers, who saith, *Heraclitus* being later than *Pythagoras*, mentioneth him in his Writings. The Books attributed to him are these.

in a good sense; *Greg. Naz. adv. Jul. Orat. 3. ἐπεὶ καὶ ὅτι μιμεῖσθαι μὴ λυγόνται ὅς ἀνθρώπων τινὰ δελεασμάτων μὴ τοὶ κακοτεχνῶς πεινυμένων τέτοις καὶ ἐλίσκονται*, the Text being so to be restored. (g) *Strom.*

(b) Three Treatises, *Pædæutick*, *Politick*, *Physick*, to which *Laertius* refers the foresaid Testimony of *Heraclitus*, forasmuch as *Pythagoras*, in the beginning of his Physick Treatise, saith, *No, by the air which I breathe; no, by the water which I drink, I shall not (i) bear the blame of this Discourse.*

(k) Six Treatises, reckoned by *Heraclides*, Son of *Serapion*, in his Epitome of *Solion*, thus; One concerning the Universe in Verse. The second intitled, *The sacred Discourse*, beginning thus:

Young Men in silence entertain all these.

[To the same perhaps belongs this;

Wretched, thrice wretched, Beans forbear to eat,
Your Parents heads as well may be your meat.

(l) And this cited by *Eustachius*;

Which way to *Orcus* souls descend; which way
Return, and the Sun's chearful light survey.]

The third, of the Soul. The fourth, of Piety. The fifth, *Helothales*, Father of *Epicharmus*. The sixth, *Crotona*, and others.

Two Treatises, a Discourse concerning Nature, and another concerning the gods; (m) both which

(o) Lib. 2.

(b) Orig. Judaic. lib. 1.
(c) De Lap. in Salut.

(d) Porph. Epist. adv. Ruffin.

(f) Κακοτεχνῶν, artes callidas & vasa. So is κακοτεχνῶν sometimes taken.

(i) The Interpreters both otherwise.

(k) Laert.

(l) In Iliad. 2.

(m) Jamh. cap.

which he in a short time taught *Abaris* the *Hyperborean*. The first may possibly be the same with the *Physical Treatise*, mentioned by *Laertius*; the other, as *Jamblichus* saith, is intituled also, *The Sacred Discourse*, [but it is not the same with that *Sacred Discourse*, which *Heraclides* ascribes to him; for that was in Verse, this in Prose] as being collected out of the most mystical places of *Orpheus*, written either by *Pythagoras*, as most hold; or, as some eminent and creditable persons of that School assert, by *Telauges*, out of the Commentaries left by *Pythagoras* with *Damo* his Daughter, Sister of *Telauges*, which after her death they report to have been given to *Bitale*, Daughter of *Damo*, and to *Telauges* Son of *Pythagoras*, Husband to *Bitale*. What *Jamblichus* cites out of this work, see hereafter in the Doctrine of *Pythagoras*; it is cited also by (n) *Hierocles*, *Syrianus*, and others.

An Oration to *Abaris*, mentioned by *Proclus*.
Orpheus, a Poem, as *Ion* the Chian (*in triagmis*)
(affirms. *Laert.*)
The *Scopiads*, beginning thus, Μὴ δ' αὖδ' ὀ μὴ δ' ἔνι.
(*Laert.*)
Hymns, out of which *Proclus* brings these Verses.

— Sacred Number springs
From th' uncorrupted Monad, and proceeds
To the Divine Tetracties, she who breeds
All; and assigns the proper bounds to all,
Whom we the pure immortal Decad call.

(o) De Origin. *Arithmetick*, mention'd by (o) *Isidore*, who affirms, He was the first that writ upon this subject amongst the Grecians, which was afterward more copiously composed by *Nicomachus*.

(p) *Chil. i. 58.* *Prognosticks*, of which thus (p) *Tzetzes*.

Pythagoras Samian, *Mnesarchus* Son,
Not only knew what would by fate be done,
But even for those who futures would perceive,
He of *Prognosticks* several Books did leave.

(q) *Lib. 24. c. 17.* Of the Magical Virtues of Herbs, frequently cited by (q) *Pliny*, who saith, That though some ascribe it to *Cleomporus* a Physician; yet pertinacious fame and antiquity vindicate it to *Pythagoras*; and this very thing gives authority to the Volumes, that if any other thought his pains worthy the name of that Person, which that *Cleomporus* did, who can believe? Seeing that he hath put forth other things in his own name. To this work seems to belong that Volume, which *Pythagoras* wrote concerning the Sea-Onion, cited also by *Pliny*; but by *Laertius* ascribed to another *Pythagoras* a Physician.

The *Golden Verses* of *Pythagoras*, or, as others, of the *Pythagoreans*. But indeed their Author, as *Suidas* saith, is not certainly known, though some ascribe them to him. Of these is (r) *Proclus*, who styles him, *Father of the Golden Verses*. Even the Verses themselves seem to confirm it, there being amongst them some, which *Pythagoras* is known to have repeated to his Disciples, by the Testimonies of *Laertius*, *Porphyrus*, and others.

(r) In *Timeo*, lib. 3.

Nor suffer sleep at night to close thy eyes,
Till thrice thy acts that day thou hast o're-run;
How slipt? what deeds? what duty left undone?

Others, (as (s) *Chrysippus*) attribute them to his Disciples; some particularly to *Lysis* the *Tarentine*; some to *Philolaus*. *St. Hierom* conceives that the Sentences and Doctrines were of *Pythagoras*, but reduced to verse succinctly by *Archippus* and *Lysides* his Disciples, who had their Schools in *Greek*, and at *Thebes*, and having the precepts of their Master by heart, made use of their own ingenuity instead of Books. Or they might be compiled by *Epicarmus*, of whom *Jamblichus* saith, (t) coming to *Syracusa* in the reign of *Hiero*, he forbore to profess Philosophy openly, but did reduce the opinions of the *Pythagoreans* into Verse, thereby in sportive manner venting the Doctrine of *Pythagoras*.

Epistles; of which are extant two only, one to *Anaximenes*, the other to *Hiero*.

Pythagoras to Anaximenes.

AND thou, O best of Men, if thou didst not excel *Pythagoras* in extract and honour, wouldst have left *Milerus*; but now the honour of this Country detains thee, and would also detain me, were I like *Anaximenes*. But if you who are the most considerable Persons should forsake the Cities, their glory would be lost, and they become more infested by the *Medes*. Neither is it fit to be always busied in *Astrology*, but better to take care of our Country. Even I myself bestow not all my time in Study, but sometimes in the Wars, wherein the *Italians* are engaged one against another.

This Epistle seems to have been written in answer to that of *Anaximenes* to *Pythagoras*, already produc'd in the Life of *Anaximenes*.

Pythagoras to Hiero.

MY life is secure and quiet, but yours will no way suit with me: A moderate and self-denying person, needs not a *Sicilian Table*. *Pythagoras*, wheresoever he comes, hath all things sufficient for the day; but to serve a Lord is heavy and intolerable for one unaccustomed to it. *Αὐτάρκτης*, self-sufficiency, is a great and safe thing, for it hath none that envies or conspires against it; whence that life seemeth to come nearest God. A good habit is not acquired by venereal pleasures, nor high feeding; but by indigence, which leadeth to Virtue; Various and intemperate pleasures enslave the souls of weak persons, but especially those which you enjoy, inasmuch as you have given your self over to them; for you are carried in suspense, and cannot be safe, because your reason opposeth not it self to those things which are pernicious. Therefore write not *Pythagoras* to live with you; for Physicians will not fall sick to bear their patients company.

These are mentioned as the genuine Writings of *Pythagoras*; others there were accounted spurious, as,

The *Mystick Discourse*, which (saith *Laertius*) they affirm to have been written by *Hippasus*, in detraction from *Pythagoras*.

(u) Many Writings of *Asto*, a *Crotonian*, were likewise ascribed to *Pythagoras*; as were also, (u) *Laert.*

(x) *Aliprick Commentaries*, written indeed by (x) *Jamblichus*, another of that name, Son of *Eratocles*.

The

(x) Cap.

The Dialect used by *Pythagoras* and his Disciples, was the Dorick, which some conceive chosen by them as the most excellent, as *Metrodorus*, cited by (y) *Jamblichus*; *Epicharmus* (saith he) and before him *Pythagoras*, took the Dorick, the best of Dialects, as it is also the best musical Harmony; for the Ionick and Æolick partake of the Chromatick, the Attick is much more participant of the Chromatick; but the Dorick Dialect is Enarmonick, consisting of full sounding Letters. The Antiquity of the Dorick Dialect is testified by the Fable: For *Nereus* married *Doris*, Daughter of the Ocean, whom they feign to have had Fifty; of whom, one was the Mother of *Achilles*. Some (saith he) affirm, That *Deucalion*, Son of *Prometheus*, and of *Pyrrha*, Daughter of *Epimetheus*, begot *Dorus*; he, *Hellen*; he, *Æolus*. But in the *Babylonian* Sacred Records, *Hellen* is said to be the Son of *Jupiter*, and that *Hellen* begot *Dorus*, and *Xanthus*, and *Æolus*, by whose direction he went to *Rhodes*. Now it is not easie to speak exactly concerning the Ancients to those of later times, yet is it acknowledged by both these stories, That the *Dorick* is the most ancient of these Dialects. Next which the *Æolick*, so named from *Æolus*. The Third the *Ionick*, derived from *Io*, Son of *Xanthus*. The Fourth the *Attick*, founded by *Crensa*, Daughter of *Erechtheus*, so named Three Ages after the rest, according to the *Thracians*, and the Rape of *Orithuia*, which many Histories declare. *Orpheus* also, the most ancient of Poets, used the *Dorick* Dialect.

(z) Jambl. cap. pag.

(a) Lib. 6.

But perhaps the true Reason is, because it was the Dialect of the Countrey. For the *Pythagoreans* (z) admonished all Persons to use the Language of their own Countrey, what *Grecians* soever came into their Community; for to speak a strange Language, they approved not. The *Dorick* Dialect was common throughout *Magna Grecia*. *Crotona* and *Sybaris* were Colonies of the *Achaans*, *Syracuse* of the *Corinthians*; both which were originally *Dorick*, as being of *Peloponnesus*; (a) *Thucydides* alledgeth this as a Motive which induced the *Athenians* to war with the *Sicilians*, lest being *Doreans*, they should at some time or other assist the *Doreans*, by reason of their Affinity; and, being a Colony of the *Peloponnesians*, should joyn with the *Peloponnesians*. Hence, to the Stranger, in *Theocritus* his *Adoniazuzæ*, reproving the *Syracusan* Women thus,

(b) Mr. Sherburn.

(b) *Peace foolish babbling Women, leave your prate;*

Your wide-mouth'd Dorick here is out of date.

One of them answers,

Gup, whence are you? what is our talk to thee?

Correct your Maids, not us of Sicilie.

I would you knew't, we are from Corinth sprung;

As was Bellerophon, our Mother-tongue

Peloponnesian is, nor is it scorn

That they speak Dorick who are Dorick-born.

For (saith the Scholiast) the *Syracusians* were

originally *Corinthians*: *Peloponnesus* was inhabited by the *Doreans*, together with the *Heraclidae*.

C H A P. XXIII.

His Disciples.

Many were the Persons, who from several parts resorted to *Pythagoras*, to be his Disciples, and lived with him in that Condition. Of these there were (as (a) *Aristoxenus* relates) (a) *Perph. Leucanians*, *Messapians*, (or, as *Laertius*, *Peucetians*) and *Romans*.

(b) *Simichus*, Tyrant of the *Centoropians*, [a (b) *Perph.* People of *Sicily*, the Town it self being called *Centorpa*] having heard him, laid down his Command, and distributed his Riches, part to his Sister, part to his Citizens.

(c) *Abaris* also of *Scythia*, a *Hyperborean*, came (c) *Jam. cap.* hither, who being unacquainted with the *Greek* Language, and not initiated, and withal advanced into Years, *Pythagoras* would not introduce him by various Theorems; but instead of the silence, and the long attention, and other trials, he made him presently fit to receive his Doctrines, and taught him in a short time to understand those Two Books concerning Nature, and concerning the Gods. For *Abaris* now in years, came from the *Hyperboreans*, a Priest of *Apollo* there, and converting the wisest things concerning Religion, from *Greece* to his own Countrey, that he might lay up the collected Gold to his God's use, in his Temple among the *Hyperboreans*; but coming by the way into *Italy*, and seeing *Pythagoras*, and likening him to the God whose Priest he was, and believing he was no other, not a man like him, but very *Apollo* himself, both by his Gravity, and by some Marks and Tokens which he knew, he gave *Pythagoras* an Arrow which he brought from the Temple, as necessary for his Journey, through so many different Contingencies, and such a long Travel: For riding upon that, and so passing over places that were otherwise impassible, as Rivers, Lakes, Marshes, Mountains, and the like, and coming to any place, as they say, he made Purifications, and expelled Pestilences and Storms from those Cities that desired his assistance. We are informed, that *Lacedæmon* being purged by him, never had the Pestilence afterwards, whereas it was formerly very subject to that sickness, by reason of want of free passage of the Air (the *Taygetan* Mountains, amongst which it is built, penning it up: For those Hills lye above it, as *Gnossus* to *Crete*) and other such Signs of the power of *Abaris* are reported. But *Pythagoras* accepting the Arrow, and not looking strangely upon it, or asking the cause why he gave it him; but, as if he were himself the true God, taking *Abaris* aside, he showed him his golden Thigh, as an assured mark that he was not mistaken, and then reckoning every particular of all those that were in the Temple, that he did not guess amiss, and adding, That he came for the benefit of men, and for this reason was in man's shape, that they might not be astonished at one so far above them, and so fly his Doctrine. And he commanded him to stay there, and to joyn with him in instructing them who came to him: And as for the Gold which

For xxiii perhaps read xxvii.

which he had gathered for his God, he commanded him to give it to those whom he had assembled; insomuch that he actually confirmed the Sentence, *All things are common amongst Friends*. *Abaris* thus staying with him (as we said), he gave him the Epitome of Physiology and Theology, and instead of the Art of guessing by Sacrifices, he taught him that kind of Prognostick which is by Numbers, as thinking that more Sacred and Divine, and more agreeable to the Celestial Numbers of the Gods. And other Doctrines he taught *Abaris*, such as were proper for him.

(e) *Stab. lib. 6.*
page 263.

(e) *Milo* of *Crotona*, the most eminent Wrestler of those times, was Disciple to *Pythagoras*: He, when in the Hall of the Colledge a Pillar begun to yeild, went under it, and by that means saved all the Scholars, and at last got away himself; and it is probable that this confidence in his great strength was the occasion of his Death. For they report that as he was going through a thick Wood far from any way, finding a great Tree with Wedges in it, he set his Hands and Feet to it, trying to reive it asunder; whereupon the Wedges fell out, and he being caught, became a Prey to the Wild Beasts. In his House it was, that the *Pythagoreans* were surprized and burned by the *Cylonians*.

(f) *Joseph.*
contra Appi-
on. lib. 11.

(f) *Calliphon* of *Crotona*, is mentioned by *Hermippus*, as an intimate Friend of *Pythagoras*, who reported, when *Calliphon* was dead, That his Soul was continually present with him, and that the Soul commanded him that he should not pass the place where his As fell; and that he should abstain from impure Water, and avoid ill-speaking.

We only mention these here, as being most particularly interested in the Relation of *Pythagoras* his Life: A more perfect Account of the rest, receive in the following Catalogue.

CHAP. XXIV.

The Succession of his School.

Jamb. cap. ult.

THE Successor of *Pythagoras* is by all acknowledged to have been *ARISTÆUS*, Son of *Damophon*, a *Crotonian*, who lived in the time of *Pythagoras*, Seven Generations above *Plato*: Neither did he succeed in the School only, but in breeding the Children of *Pythagoras*, and in the Marriage of *Theano*, for his eminent understanding of his Opinions; for he is said to have taught the Doctrine of *Pythagoras* Forty Years together lacking one, living in all, near an Hundred; he assigned the School to *Aristæus*, as being the oldest.

Next him, *MNESARCHUS*, Son of *Pythagoras*.

He delivered it to *BULAGORAS*, in whose time the City of *Crotona* was sacked.

Him Succeeded *TIDAS*, a *Crotonian*, returning from travel which he began before the War, but he died with grief for the Calamity of his Countrey; whereas it was a common thing to others, when they were very old, to free themselves from the fetters of the Body.

Afterwards they took one of the *Lucanians*, saved by some strangers, to be President of the School, to whom came *DIODORUS* the *Aspendian*, who was taken by reason of the scarcity of Men in their Colledge.

As *Heraclea*, *CLINIAS* and *PHILOLAUS*.

At *Metapontum*, *THEORIDES* and *EURYTUS*.

At *Tarentum*, *ARCHYTAS*.

Of the External *Acroaticks* was *Epicharmus*, but not of the Colledge. Coming to *Syracusa*, in the time of the Tyranny of *Hieron*, he forbore publicly to profess Philosophy; but he reduced the Opinions of those Men, (the *Pythagoreans*) into Verse, sportively divulging the abstruse Doctrines of *Pythagoras*.

Of the *Pythagoreans* it is likely that many were obscure; the Names of such as were eminent, are these;

Crotonians.

Hyppostatus, *Dymas*, *Ægon*, *Æmon*, *Silius*, *Cleosthenes*, *Agelax*, *Episylus*, *Phyciadas*, *Ecpphanus*, *Timæus*, *Buthius*, *Eratus*, *Itanaus*, *Phodippus*, *Bryas*, *Evander*, *Millias*, *Antimedes*, *Ægeas*, *Leophron*, *Agylax*, *Onatus*, *Hypposthenes*, *Cleophron*, *Alcmaon*, *Damocles*, *Milon*, *Meton*.

Metapontines.

Brontinus, *Parmiscus*, *Arestadas*, *Leo*, *Damaromenos*, *Æneas*, *Chilas*, *Melissas*, *Aristeas*, *Laphaon*, *Evander*, *Agésidamus*, *Xenocides*, *Euriphemus*, *Aristomenes*, *Agésarchus*, *Alcias*, *Xenophantes*, *Thraseos*, *Arytus*, *Epiphron*, *Eiriscus*, *Megisteas*, *Leocydes*, *Thrasymides*, *Euphemus*, *Proclus*, *Antimedes*, *Lacritus*, *Damotages*, *Pyrrhon*, *Rhexibius*, *Alopecus*, *Astylus*, *Dacydas*, *Aliochus*, *Lacrates*, *Glucinus*.

Agrigentine.

Empedocles.

Velian.

Pamenides.

Tarentines.

Philolaus, *Arytus*, *Archytas*, *Theodorus*, *Aristippus*, *Lycon*, *Estieus*, *Polemarchus*, *Astear*, *Canias*, *Cleon*, *Eurymedon*, *Arceas*, *Clinagoras*, *Archippus*, *Zopyrus*, *Euthynus*, *Dicaarchus*, *Philonides*, *Phrontidas*, *Lysis*, *Lysibius*, *Dinocrates*, *Echecrates*, *Paetion*, *Acusiladas*, *Iccus*, *Pisicrates*, *Clearatus*, *Lconteus*, *Phrinichus*, *Simicheas*, *Aristoclideas*, *Clinias*, *Abroteles*, *Piserydus*, *Briax*, *Evander*, *Archemachus*, *Mimnomachus*, *Achmonidas*, *Sicas*, *Caraphantidas*.

Sybarites.

Metopus, *Hippasus*, *Proxenus*, *Evanor*, *Deanax*, *Menestius*, *Diocles*, *Empedus*, *Timasius*, *Polemaus*, *Evæus*, *Tyrseus*.

Parians.

Ætius, *Phenecles*, *Dexirheus*, *Alcimachus*, *Dinarchus*, *Meton*, *Timeus*, *Timesianax*, *Amcerus*, *Eumaridias*.

Locrians.

Gyptius, *Xenon*, *Philodamus*, *Euclides*, *Adicus*,
B b b Sthe.

Sthenonidas, Sosistratus, Euthynus, Zaleucus, Timares.

Posidonians.

Athamas, Simus, Proxenus, Cranius, Mayes, Bathylaus, Phedo.

Lucanians.

Ocellus and Ocyllus (Brethren), Oresander, Cerambus, Dardaneus, Malias.

Ægeans.

Hippomedon, Timosthenes, Euclthon, Thrasydamus, Crito, Polydor.

Laconians.

Antocharidas, Cleanor, Eurycratius.

Hyperborean.

Abaris.

Rhegians.

Aristides, Demosthenes, Aristocrates, Phytius, Helicaon, Mnesibulus, Hipparchides, Athosion, Euthycles, Opsimus.

Selinuntian.

Colas.

Syracufians.

Leptines, Phintias, Damon.

Samians.

Melissus, Lacon, Archippus, Glorippus, Heloris, Hippon.

Caulonians.

Callibrotus, Dicon, Nastas, Drymon, Xentas.

Phliasians.

Diocles, Ecbecrates, Polymnestus, Phanton.

Sicyonians.

Paliades, Demon, Sosistratus, Sosthenes.

Cyrenæans.

Præcrus, Melanippus, Aristangelus, Theodorus.

Cyzicenes.

Pythodorus, Hypposthenes, Butheus, Xenophilus.

Catanæan.

Charondas.

Corinthian.

Lyfiades.

Tyrrhene.

Chrysippus.

Athenian.

Nausitheus.

Of Pontus.

Neocritus, Lyrarnius.

In all, 208.

The Pythagorean Women eminent, are,
Tymicha, Wife of *Millius* the Crotonian.
Philtes, Daughter of *Leophron*, a Crotonian,
 Sister of *Bindacus*.
Oecelo and *Eccelo*, of *Luca*.
Chilonis, Daughter of *Chilo* the Lacedæmonian.
Theano, Wife of *Brontinus* the Metapontine.
Muya, Wife of *Milo* the Crotonian.
Lasthenia of *Arcadia*, Daughter of *Abroteles*
 the Tarentine.
Echecrates, a Phliasian.
Tyrseus of *Sybaris*.
Pysirronde of *Tarentum*, Daughter of *Nistiades*.
Salacera.
Bio of *Argos*.
Babelyma of *Argos*.
Cleachma, Sister of *Antocharides*, a Lacedæ-
 monian.
 In all, 15. Thus *Jamblichus*.

Laertius saith, His System (or, as *Cassiodorus*,
 Colledge) continued for Nineteen Generations;
 for the last of the Pythagoreans (whom *Aristo-*
xenus saw) were *Xenophilus* the Chalcidean of
Thrace, and *Phanton* a Phliasian, and *Echecrates*,
 and *Diocles*, and *Polymnestus*, who also were
 Phliasians. They heard *Philolaus* and *Eurytus*,
 both of *Tarentum*.

T H E

Discipline and Doctrine

O F

P Y T H A G O R A S.

C H A P. I.

The great Authority and Esteem of Pythagoras amongst his Disciples.

PYTHAGORAS, to render his Disciples capable of Philosophy, perpar'd them by a Discipline so strict and severe, as might seem incredible to have been undergone by free persons, were it not founded upon the great Authority and Reputation which he had amongst them.

(a) *Jamb. c. 28.*
p. 131.

(b) *Pag. 132.*

(a) The Credit of their Opinions they conceived to be this, That he who first communicated them was no ordinary Person, but a God; and one of these Acousmata is, Who Pythagoras was: for they say, He was *Hyperborean Apollo*. (b) In confirmation hereof, they instance those Wonders related in his Life, and the like, which being acknowledged to be true, and it being impossible they should all be performed by one Man, they conceive it manifest, that these Relations are to be ascribed, not to a Humane Person, but to something above Mankind. This they acknowledge; for amongst them there is a saying, That,

(c) *Two-footed Man, and Bird*
Is, and another Third.

(c) Read *Si-*
tes. See Ety-
mologic magni.

(d) *Jamb. c.*
6. p. 44.

by which Third they meant Pythagoras. And (d) Aristotle, in his Book of Pythagorick Philosophy, relates, That such a Division as this was preserved by the Pythagoreans, amongst their ineffable Secrets. Of Rational Animals, one kind is God; another, Man; a third between both these, Pythagoras.

(e) *Jamb. c. 6.*
p. 43.

(e) They esteemed Pythagoras in the next place to the Gods, as some good Genius indulgent to Mankind: some affirming, that he was *Pythian*; others, *Hyperborean Apollo*; some, one of those *Genii* which dwell in the Moon; others, one of the Celestial Deities, appearing at that time in a humane shape, for the benefit and direction of Mortal Life, that he might communicate the wholesome Illumination of Beatitude and Philosophy to Mortal Nature; than which, a

greater good can never come, nor shall ever come, which is given by the Gods through the means of this Pythagoras. Whence to this day the Proverb of the Fair-hair'd *Samian* is used for a most reverend person.

(f) *Porphyrius* saith, They reckon'd him amongst the Gods; and therefore whensoever they went to deliver to others any excellent thing, out of the Secrets of his Philosophy, whence many Physical Conclusions might be deduced, then they swore by the *Tetractys*, and calling Pythagoras, as some God, to witness, said, (f) *Pag. 18.*

Who the Tetractys to our Souls expresseth,
Eternal Nature's Fountain I attest.

(g) Which Oath they used, as forbearing, through Reverence, to name him; for they were very sparing in using the Name of any God. (g) *Jamb. caps.*
pag. 138.

So great indeed was the respect they bare him, That (b) it was not lawful for any one to doubt of what he said, nor to question him further concerning it; but they did acquiesce in all things that he deliver'd, as if they were Oracles. And when he went abroad to Cities, it was reported, He went not to teach, but to cure. (b) *Ælian.*
var. hist. 4. 27.

Hence it came to pass, That (i) when they asserted any thing in dispute, if they were questioned why it was so, they used to answer, *Ipse dixit*, He said it, which He was Pythagoras. This (i) *Cic. nat.*
deor. lib. 1.
(k) *αὐτὸς ἔφα* was amongst them the first and greatest of Doctrines, his Judgment being a Reason free from, and above all Examination and Censure. (k) *Greg. Naz.*
Orac. 3.

C H A P. II.

The two sorts of Auditors: and first of the Exoterick, how he explored them.

THE Auditors of Pythagoras (such I mean as belonged to the family) were of two sorts, Exoterick and Esoterick: the Exotericks were those who were under probation, which if they well performed, they were admitted to be Esotericks. For, of those who came to Pythagoras, he admitted not every one, but only those whom he liked: first, upon choice; and next, by tryal.

(a) Jamb. c. 34. (a) The Pythagoreans are said to have been averse from those who sell learning, and open their souls like the gates of an Inn, to every one that comes to them; and if they find not a vent or sale in this manner, then they run into Cities, and ransack the Gymnasia, and exact a reward from dishonourable persons: Whereas Pythagoras hid much of his speeches, so as they who were purely initiated might plainly understand them. But the rest, as Homer said of Tantalus, grieve, for that being in the midst of learning, they cannot taste of it. Moreover, they said, That they who for hire teach such as come to them, are meaner than Statuaries and Chariot-makers; for, a Statuary, when he (b) would

(b) Apul. in Apolog. lib. 1. cites this sentence of Pythagoras.

(c) Jamb. c. 17. (c) When (therefore) any friends came to him, and desired to learn of him, he admitted them not, till he had made tryal and judgment of them. First, he enquired how they did heretofore converse with their parents and friends; next, he observed their unseasonable laughters, and unnecessary silence or discourse. Moreover, what their inclinations were, (d) whether possessed with passion and intemperance, whether prone to anger or unchaste desires, or contentious, or ambitious, and how they behaved themselves in contention and friendship.

Jamb. c. 17. As likewise what friends those were, with whom they were intimate, and their conversation with them, and in whose society they spent the greatest part of the day; likewise upon what occasions they joyed and grieved.

(f) Jamb. c. 20. (f) Moreover he considered their presence and their gait, and the whole motion of their body: and, physiognomizing them by the symptoms, he discovered by manifest signs the occult dispositions of their souls. For, (g) he first studied that Science concerning men, thereby discovering of what disposition everyone was; neither did he admit any into his friendship and acquaintance, before he had physiognomized the man what he were. This word

(h) Lib. 1. c. 4. (h) Agellius, upon the same occasion) signifieth to make enquiry into the manners of some, by some kind of conjecture of the wit by the face and countenance, and by the air and habit of the whole body.

(i) Jamb. c. 20. (i) If upon exact observation of all these particulars, he found them to be of good dispositions, then he examined whether they had good manners, and were docile; first, whether they could readily and ingeniously follow that which he told them; next, whether they had any love to those things which they heard. For he considered what disposition they were of as to being made gentle, this he called *ναῖστος*; for he accounted roughness an enemy to his way of teaching,

because it is attended by impatience, intemperance, anger, obtuseness, confusion, dishonour, and the like; but mildness and gentleness by their contraries.

Likewise (k) in making the first tryal of them, (k) Jamb. cap. he considered, whether they could *ἐχρησθῆναι*, (for pag. 95, that was the word he used) and examined, whether if they could learn that which they heard, they were able to be silent, and to keep it to themselves.

C H A P. III.

Purificative Institution by sufferings.

(a) THE chiefest scope which Pythagoras proposed (a) Porph. was to deliver and free the mind from the engagements and fetters, in which it is confin'd from her first infancy; without which freedom, none can learn any thing sound or true, nor can perceive by what that which is unsound in sense operates. For, the mind (according to him) seeth all, and heareth all, the rest are deaf and blind.

This he performed by many exercises which he appointed for purification of the mind, and for the probation of such as came to him, which endured five years before they were admitted.

(b) If upon this examination (which we declared (b) Jamb. c. 17. he judged any person capable, he then re-mitted him three years to be despised, making a test of his constancy and true love to learning, and whether he were sufficiently instructed as to despise glory, to contemn honour, and the like.

(c) He conceived it in general requisite, that they should take much labour and pains, for the acquisition of Arts and Sciences; and to that end he appointed for them some torments of cauterising and incision to be performed by fire and steel, which none that were of an ill inclination would undergo.

C H A P. IV.

Silence.

(a) MOREOVER, he enjoined those that came to him Silence for five years, making tryal how firmly they would behave themselves in the most difficult of all continencies; for such is the government of the tongue, as is manifest from those who have divulged mysteries.

This *πεντηετής σιωπή*, a quinquennial silence, was called *ἐχεμύθεια*, (and sometimes, but less frequently *ἐχεμύσος*) (b) *ἀπὸ τοῦ ἐχέειν ἐν ἑαυτῷ τὸ λόγον*, from keeping our speech within our selves.

The reason of this silence was, (c) That the soul might be converted into her self from external things, and from the irrational passions in her, and from the body even unto her own life, which is to live for ever. Or, as (d) Clemens Alexandrinus expresseth it, That his disciples, being diverted from sensible things, might seek God with a pure mind. Hence (e) Lucian to the demand, how Pythagoras could reduce men to the remembrance of the things which they had formerly known, (for he held Science to be only Reminiscence) makes him answer, First, by long quiet and silence, speaking nothing for five whole years.

Yet

(f) Lib. I. c. 4. Yet (f) *Agellus* affirms, That he appointed not the same length of silence to all, but several to several persons, according to their particular capacities. And *Apuleius*, That for the graver sort of persons, this taciturnity was moderated by a shorter space; but the more talkative were punished, as it were, by exile from speech five years.

(g) *Agel. ibid.* (g) He who kept silence, heard what was said by others, but was not allowed either to question, if he understood not, or to write down what he heard. None kept silence less than two years. *Agellus* adds, That these within the time of silence and hearing, were called *Acoustici*. But when they had learned these things the most difficult of all, to hold their peace, and to hear, and were now grown learned in silence, which they called *ἐχεμύθειαν*, then they were allowed to speak, and to question, and to write what they heard, and what they conceived. At this time they were called *Mathematici*, from those Arts which they then began to learn and to meditate. Thus *Agellus*, how rightly, I question; for *Mathematici* and *Acoustici* were distinctive appellations of the *Pythagoreans* not in probation, but after admission, as we shall see hereafter.

(h) *Florid.* Thus, (h) *Apuleius* saith, He taught nothing to his disciple before silence; and with him, the first meditation, for one that meant to be a wise man, was, wholly to restrain the tongue of words, those words which the Poets call Winged, to pluck off the fears, and to confine them within the walls of our teeth. This, I say, was the first rudiment of wisdom, to learn to meditate, and to unlearn to talk.

C H A P. V.

Abstinence, Temperance, and other ways of Purification.

(a) *Jamb. c. 16. p. 74.* (a) Moreover, he commanded them to abstain from all things that had life, and from certain other meats also which obstruct the clearness of the understanding, (b) and for the same end (*viz.* in order to the inquisition and the apprehension of the most difficult Theorems) he likewise commanded them to abstain from wine, to eat little, to sleep little; a careless contempt of honour, riches, and the like; an unfeigned respect towards kindred, sincere equality and kindness towards such as were of the same age, and a propensity to further the younger without envy.

(c) *Jamb. ibid.* (c) In fine, he procured to his Disciples a conversation with the gods by visions and dreams, which never happen to a soul disturbed with anger or pleasure, or any other unbecoming transportation, or with impurity and a rigid ignorance of all these. He cleansed, and purified the soul divinely from all these, and inkindled the divine part in her, and preserved her, and directed in her that intellectual divine eye which is better, (d) as *Plato* saith) than a thousand eyes of flesh, for by the help of this only, Truth is apprehended; after this manner he procured purification of the Intellect: And such was his form of Institution as to those things:

(e) *Excerpt. Valef. p. 245.* (e) *Diodorus* saith, they had an exercise of temperance after this manner; there being prepared and set before them all sorts of delicate food, they looked upon it a good while, and after that their appetites were fully provoked by the sight thereof, they commanded it to be taken off, [(f) and given

to the servants] they themselves going away without dining; (this they did, saith *Jamblichus*) to punish their appetite.

C H A P. VI.

Community of Estates.

IN this time, all that they had (that is their whole estate) was made common [(a) put together (a) *Jamb. c. 17* and made one.] They brought forth, saith (b) *Agellus* (b) *Laert.* *lius*, whatsoever they had of stock or money, and constituted an inseparable Society, as being that ancient way of association, which truly is termed *κοινωνία* (c) This was given up to such of the disciples, as were appointed for that purpose, and were called *Politici & Oeconomici*, as being persons fit to govern a family, and to give Laws.

This was conformable to the precepts of *Pythagoras* (as (d) *Timaeus* affirms) first *κοινὴ τῶ φίλων* (d) *Jamb.* *εἶναι*, All common amongst friends; and, *φιλότης ἰσότης*, friendship, equality; (e) and, esteem nothing (e) *Laert.* your own. By this means (f) he exterminated all (f) *Jamb.* propriety, and increased community even to their last possessions, as being causes of dissention and trouble; for all things were common amongst them, no man had a propriety to any thing.

But what *Agellus* terms an *inseparable Society*, is to be understood only conditionally, provided that they disliked not at any time this community: for, whosoever did so, (g) took again his own (g) *Laert.* estate, and more than that which he brought into the community, and departed.

C H A P. VII.

Admission or Rejection.

(a) THEY who appeared worthy to participate (a) *Jamb. c. 17* of his doctrines, judging by their lives and moderation, after their five years silence, were made *Esotericks*, and were admitted to hear *Pythagoras* within the Screen, and to see him; but before that time they heard him discourse, being on the outside of the Screen, and not seeing him, giving a long time experiment of their proper manners by Hearing only. But if they were rejected, they received their estate double, and a tomb was made by the Disciples, as if they had been dead; for so all that were about *Pythagoras* spoke of them, and when they met them, behaved themselves towards them, as if they had been some other persons, but the men themselves they said were dead.

C H A P. VIII.

Distinction.

(a) WHATSOEVER he discoursed to those that (a) *Porph. p. 24* came to him, he declared either plainly or symbolically (for he had a twofold form of teaching;) and of those who came to him, some were called *Mathematici*, others *Acoustici*. The *Mathematici* were those who learnt the fuller and more exactly elaborate reason of Science. The *Acoustici* they, who heard only the chief heads of learning, without more exact explication.

Thus

(b) Jamb. c.
12. p. 54.

Thus (b) as there were two kinds of Philosophy, so were there two sorts of those who studied Philosophy. The *Acousmatici* did confess that the *Mathematici* were *Pythagoreans*; but the *Mathe-*
matici did not acknowledge that the *Acousmatici* were *Pythagoreans*; for they had their learning, not from *Pythagoras*, but from *Hippasus*; who, some say, was of *Crotona*, others of *Metapontium*.

The Philosophy of the *Acousmatici* consists of Doctrines without demonstrations and reasons, but that, So it must be done, and the like, which they were to observe as so many Divine Doctrines, and they did esteem those amongst them the wisest, who had most of these *Acousmata*. Now all these *Acousmata* were divided into three kinds; some tell, *what something is*, others tell, *what is most such a thing*; the third sort tell, *what is to be done, and what not*. Those that tell *what a thing is*, are of this kind, as What is the Island of the Blessed? The Sun? the Moon? What is the Oracle at *Delphi*? the *Tetractys*? What is the Musick of the *Syrens*?

Those which tell *what is most*, as, *What is most just? To sacrifice. What is the wisest? Number; and in the next place that which gave names to things. What is the wisest amongst us? Medicine. What the most beautiful? Harmony. What the most powerful? Reason. What the best? Beatitude. What the truest? That men are wicked.* For which (they say) he commended *Hippodamas*, a Poet of *Salamis*, who said,

O Gods! whence are you? How so good? so blest?
O Men! whence are you? How with ill possesst?

These and such like are the *Acousmata* of this kind; for every one of these telleth, What is most. The same it is with that which is called the wisdom of the Seven Sages, for they enquired not what is good, but what is most good; not what is difficult, but what is most difficult, which is to know our selves; not what is facile, but what is most facile, which is the custom of Nations. Those *Acousmata* seem to follow this kind of wisdom, for those Sages were before *Pythagoras*. The *Acousmata* which tell *what is to be done, or what is not to be done*, are thus, *As that we ought to beget children, for we must leave behind us such as may serve the Gods in our room; or, that we ought to put off the right shoe first; or, that we ought not to go in the common Road, and the like.* Such were the *Acousmata*; but those which have most said upon them, are concerning sacrifices, at what times, and after what manner they are to be performed, and concerning removal from our place of habitation, and concerning Sepulture, how we must bury the Dead, for some whereof there is a reason given. As, *that we ought to get children, that we may leave in our room another servant of the Gods.* But of others there is no reason: and, in some, that which follows the precept seems to be allied to the words, but in others is wholly distant, as, *that we ought not to break bread, because it conduceth to judgment in Hell.* But the reasons that are applied to these, are not *Pythagorean*, but given by some other who studied *Pythagorean* Learning, endeavouring to apply some probable conjecture to them: As of the last mentioned, That Bread is not to be broken; some say, He who gathers together, ought not to dissolve. For anciently all Friends used after

a barbarous manner to meet at one Loaf; others, That you must not give so bad an omen, as when you are going about any thing, to break it off.

But there was one *Hippomedon*, an (c) *Agri-* (c) For ἀγρῶν, a *Pythagorean* of the *Acousmatick* rank, who said, That *Pythagoras* gave reasons and demonstrations of all these things; but because they were delivered by Tradition through many, and those still growing more idle, that the Reasons were taken away, and the Problems only left. Now the Mathematical *Pythagoreans* grant all this to be true, but the occasion of the difference they say was this: *Pythagoras* went from *Ionia*, and *Samus*, in the time of *Policrates*'s reign, to *Italy*, which was then in a flourishing condition, where the chiefest persons of the Cities became conversant with him. To the most ancient of these, and such as had least leisure, (because they were taken up with publick employments, so that it would be very hard for them to learn Mathematicks and Demonstrations) he discouraged barely, conceiving it did nothing less advantage them; even without the causes, to know what they had to do: as Patients, not enquiring why such things are prescribed them, nevertheless obtain health. But to the younger, who were able to act and learn, he imparted by Demonstrations and Mathematicks. The *Mathe-*
matici professed that they came from these; the *Acousmatici*, from the others, chiefly from *Hippasus*, who was one of the *Pythagoreans*. But because he published [their doctrine] and first wrote of the Sphear of twelve Pentagones, he died in the Sea as an impious person, not obtaining the fame at which he aimed.

CHAP. IX.

How they disposed the Day.

(a) WE shall next speak concerning those (a) Jamb. cap. 20. pag. 97. and cap. 21. for the chapters are here also confounded. things which he taught them in the day; for, according to his directions, thus did they who were taught by him. These men performed their morning walks by themselves, and in such places where they might be exceeding quiet and retired, where were Temples, and Groves, and other delightful places; for they thought it was not fit they should speak with any one, till they had first compos'd their Souls, and fitted their Intellect, and that such quiet was requisite for the composure of their Intellect; for, as soon as they arose, to intrude among the people, they thought a tumultuous thing. Therefore all the *Pythagoreans* ever made choice of the most sacred places.

After their morning walk, they came to one another, chiefly in the Temples, or in some such places. They made use of these times for doctrines, and disciplines, and rectifications of their manners.

After they had studied a while, they went to their morning exercises; the greater part used to anoint themselves, and run races; the fewer, to wrestle in Orchards and in Groves; some, by throwing sledges, or by grappling hands, to make tryal of their strength; chusing such exercises

exercises as they judged most convenient for them.

At Dinner they used Bread and Honey. Wine after meals they drunk not. The time after Dinner they employ'd in Political affairs, as well foreign as domestick, according to the injunction of their Laws; for they endeavoured to manage every thing in the afternoons. As soon as the evening came, they betook themselves again, not singly, as in their morning walks, but two or three walked together, repeating the Doctrines they had learnt, and exercising themselves in virtuous employments. After their walks, they used baths and washing; having washed, they met together to eat; but they did not eat together more than ten Persons. As soon as they who were to come together were met, they used libations, and sacrifices of meal and frankincense. Then they went to supper, that they might end it before the Sun were set. They used Wine, and Maza, and Bread, and Broth, and Herbs, both raw and boiled: They likewise set before them the flesh of such beasts as used to be sacrificed. They seldom eat Broths of Fish, because some of them are, in some respects, very hurtful; likewise (seldom) the Flesh of such Creatures as use not to hurt Mankind. After Supper, they offered libations, then had lectures. Their custom was, that the youngest amongst them should read, and the eldest should, as President, order what and how he should read. When they were to depart, he who filled the Wine poured forth to them in libation; and during the libation, the eldest of them declared these things, That none should hurt or kill a domestick plant or fruit; besides, that they should speak well, and think reverently of the gods, dæmons, and heroes; likewise to think well of Parents and Benefactors; to assist Law, and oppose Rebellion. This said, every one departed to his house.

(b) For *ἱματίων*, perhaps read *ἱματίων*. Yet *Laertius* expressly saith, that linnen was not as yet used in those parts.

They wore a white and clean garment; they had also coverlets white and clean of (b) linnen, for they used not any of skins, because they approved not the exercise of Hunting. These were the Traditions that were delivered to that society of Men, partly concerning diet, [of which hereafter more particularly] partly concerning the course of life.

CHAP. X.

How they examined their actions morning and evening.

(a) *Jam. cap.* These and all other actions of the day, they contriv'd in the morning before they rose, and examined at night before they slept, thus, by a twofold act, exercising the memory. (a) They conceived that it was requisite to retain and preserve in memory all which they learnt, and that lessons and doctrines should be so far acquired, as until they are able to remember what they have learnt, for that is it which they ought to know, and bear in mind. For this reason they cherished memory much, and exercised it, and took great care of it; and in learning they gave not over, until they had gotten their lesson perfectly by heart. A Pythagorean rose not out of bed, before he had called to mind the actions of the day past, which

recollection he performed in this manner: He endeavour'd to call to mind what he first, as soon as he rose, either had heard, or given in charge to his servants; and what in the second place, and what in the third, and so on in the same order. And then for his going forth, whom he met first, whom next; and what discourses he had with the first, what with the second, what with the third, and so of the rest; for he endeavour'd to repeat in memory all that hapned throughout the whole day, in order as it hapned: And if at their up-rising they had more leisure, then after the same manner they endeavour'd to recollect all that hapned to them for three days before. Thus they chiefly exercised the memory; for they conceived, that (b) nothing conduces more to science, experience, and prudence, than to remember many things.

(b) From *Jamblichus* restore *Diodorus*, in *Excerpt. Val.* pag. 245.

reading *ἡ δὲ ὁ μὲν ἔχον πρὸς ὁμιλίαν καὶ φρόνησιν, ἢ δὲ ἡ πᾶν τὸν ἔμπετον εἶναι, τὸ δὲ ὁμιλῆσαι πολλὰ μνημονεύειν.*

This was conformable to the Institution of Pythagoras; for, (c) He advised to have regard chiefly to two times, that when we went to sleep, and that when we rose from sleep; at each of these we ought to consider, what actions are past, and what to come. Of the past, we ought to require an account of our selves; of the future, we ought to have a providential care. Wherefore he advised every one to repeat to himself these verses [(d) (d) *Laert.* so soon as he came home, or] before he slept.

Nor suffer sleep at night to close thine eyes,
Till thrice thy acts that day thou hast o're-run,
How slipt? what deeds? what duty left undone?

And before they arose, these:

As soon as e're thou wak'st, in order lay
The actions to be done that following day.

To this effect *Ausonius* hath a Pythagorical *Acroasis*, as he terms it.

A good wise person, such as hardly one
Of many thousands to Apollo known,
He his own judge strictly himself surveys,
Nor minds the Noble's or the Common's ways:
But, like the World it self, is smooth and round,
In all his polish'd frame no blemish found.
He thinks how long Cancer the day extends,
And Capricorn the night: Himself perpend
In a just ballance, that no flaw there be,
Nothing exuberant, but that all agree;
Within that all be solid, nothing by
A hollow sound betray vacuity.
Nor suffer sleep to seize his eyes, before
All acts of that long day be bath run o're;
What things were mist, what done in time, what
Why here respect, or reason there forgot; (not;
Why kept the worse opinion? When reliev'd
A beggar; why with broken passion griev'd;
What wish'd which had been better not desir'd;
Why profit before honesty requir'd?
If any by some speech or look offended,
Why nature more than discipline attended?
All words and deeds thus searcht from morn to
He sorrows for the ill, rewards the right. (night,

CHAP.

C H A P. XI.

Secrecy.

BESIDES the Quinquennial silence, *πενταετής ἐχεμυθία*, of the *Pythagoreans*, whilst they were Exotericks, there was another, termed *παντελὴς ἐχεμυθία*, a perpetual or compleat silence, (or secrecy) proper to the Esotericks, not amongst one another, but towards all such as were not of their Society.

(a) *Jamb. cap. pag.*

(a) The principal and most efficacious of their Doctrines they all kept ever amongst themselves; as not to be spoken, with exact *Echemythia* towards extraneous persons, continuing them unwritten and preserv'd only by Memory to their Successors, to whom they delivered them as Mysteries of the Gods; by which means, nothing of any moment came abroad from them. What had been taught and learnt a long time, was only known within the walls; and if at any time there were any extraneous, and as I may say, profane persons amongst them, the Men (so commonly were the *Pythagoreans* termed) signify'd their meaning to one another by Symbols.

(b) *Jamb. cap. 17. pag. 80.*

(b) Hence *Lysis* reproving *Hipparchus*, for communicating the discourse to uninitiated persons, void of Mathematicks and Theory, saith, They report, that you teach Philosophy in publick to all that come, which *Pythagoras* would not do, as you, *Hipparchus*, learnt with much pains. But you took no heed after you had tasted (O noble person) the *Sicilian* delicacies, which you ought not to have tasted a second time. If you are changed, I shall rejoyce; if not, you are dead to me; for he said, We ought to remember, that it is pious, according to the direction of divine and human exhortations, that the goods of wisdom ought not to be communicated to those, whose soul is not purify'd so much as in dream. For it is not lawful to bestow on every one that which was acquired with so much labour, nor to reveal the mysteries of the *Eleusian* Goddeses, to profane persons; for they who do both these, are alike unjust and irreligious. It is good to consider within our selves, how much time was employ'd in taking away the spots that were in our breasts, that after five-years we might be made capable of his discourses. For as Dyers first wash and wring out the cloaths they intend do dye, that they may take the dye so as that it can never be

washed out, or taken away; in like manner the Divine prepared those who were inclined to Philosophy, lest he might be deceived by those, of whom he hoped that they would prove good and honest. For he used no adulterate learning, nor the nets wherewith many of the Sophists intangle the young men; but he was skilful in things divine and human: Whereas they, under the pretence of his Doctrine, do many strange things, inveigling the young men unbeseemingly, and as they meet them, whereby they render their Auditors rough and rash. For they infuse free Theorems and Discourses, into manners that are not free but disordered. As if into a deep Well full of dirt and mire, we should put clear transparent water, it troubles the dirt, and spoils the water: The same is it, as to those who teach and are taught; for, about the minds and hearts of such as are not initiated, there grows thick and tall coverts, which darken all modesty, and meekness, and reason, hindring it from increasing there. Hence spring all kinds of ills, growing up, and hindring the reason, and not suffering it to look out. I will first name their Mothers, Intemperance and Avarice, both exceeding fruitful. From Intemperance spring up unlawful marriages, lust, and drunkenness, and perdition, and unnatural pleasures, and certain vehement appetites leading to death and ruin; for some have been so violently carried away with pleasures, that they have not refrained from their own Mothers and Daughters; but violating the Commonwealth, and the Laws, tyrannically imprison Men, and carrying about their (c) *Fails* (or Stocks) violently hurry them to destruction. From Avarice proceed rapines, thefts, parricides, sacrileges, poisonings, and whatsoever is allied to these. It behoves therefore first, to cut away the matter wherein these vices are bred, with fire and sword, and all arts of discipline, purifying and freeing the reason from these evils; and then to plant something that is good in it. Thus *Lysis*. Neither is that expression, [If you are not changed, you are dead to me] to be understood simply: For this *Hipparchus*, (d) because he communicated, and publickly set forth by writing, the *Pythagorick* Doctrines, was expelled the School, and a Tomb was made for him, as if he were dead, (according to the custom (e) formerly mentioned.) So strict were the *Pythagoreans* in observance of this Secrecy.

THE

THE DOCTRINE OF PYTHAGORAS.

C H A P. I.

Sciences preparative to Philosophy.

(a) *Porph. vit.*
Pyth. pag. 31.

THE mind being purify'd [by Discipline (a)] ought to be applied to things that are beneficial; these he procured by some contrived ways, bringing it by degrees to the contemplation of eternal incorporeal things, which are ever in the same state; beginning orderly from the most minute, lest by the suddenness of the change it should be diverted, and withdraw it self through its so great and long gravity of nutriment.

To this end, he first used the Mathematical Sciences, and those Speculations which are intermeditate betwixt Corporeals and Incorporeals, (for they have a Threefold Dimension, like Bodies, but they are impassible like Incorporeals) as Degrees of Preparation to the Contemplation of the things that are; diverting, by an artificial Reason, the Eyes of the Mind from corporeal things. (which never are permanent in the same manner and estate) never so little to a desire of aliment; by means whereof, introducing the contemplation of things that are, he rendred men truly happy. This use he made of the Mathematical Sciences.

(b) *Dial. cum*
Tryph.

Hence it was, that (b) *Justin Martyr* applying himself to a *Pythagorean*, eminently learned, desirous to be his Disciple, he demanded, whether he were vers'd in Musick, Astronomy, and Geometry: Or do you think, saith he, you may be able to understand any thing that pertains to Beatitude; without having first learned these, which abstract the Soul from Sensibles, preparing and adapting her for her intelligibles? Can you without these contemplate what is honest and what is good? Thus, after a long commendation of these Sciences, he dismiss'd him, for that he had confest himself ignorant of them.

C H A P. II.

Mathematick, its name, parts.

THese Sciences were first termed *Μαθηματικά* by *Pythagoras* upon consideration that all *Μαθησις* (discipline) is Reminiscence, which comes not extrinsically to souls as the phantasies which are formed by sensible objects in the Phantasie; nor are they an advantageous adscititious knowledge, like that which is placed in Opinion; but it is excited from *Phænomena*'s, and perfected intrinsically by the cogitation converted into it self.

(b) The whole science of Mathematicks, the *Pythagoreans* divided into four parts, attributing one to *Multitude*; another to *Magnitude*; and subdividing each of these into two. For *Multitude* either subsists by it self, or is consider'd with respect to another; *Magnitude* either stands still, or is moved. *Arithmetick* contemplates *Multitude* in its self: *Musick* with respect to another: *Geometry*, unmoveable magnitude; *Spherick*, moveable.

These Sciences consider not *Multitude* and *Magnitude* simply, but in each of these that which is determinate: For Sciences consider this abstracted from infinite, that they may not (in vain) attempt in each of these that which is infinite. When therefore the wise persons say thus, we conceive it is not to be understood of that multitude which is in the sensible things themselves, nor of that magnitude which we perceive in bodies, for the contemplation of these I think pertains to Physick, not to Mathematick. But because the Maker of all things took Union, and Division, and Identity, and Alterity, and Station, and Motion to compleat the soul, and framed it of these kinds, as *Timæus* teacheth, we must conceive that the Intellect, consisting according to the diversity thereof, and the division of proportions and multitude, and knowing it self to be both one and many, proposeth numbers

Read ὡς ἔτι καὶ ἐντέλειαν ἀπελείαν γνώσεσι καὶ ἐν καὶ ὄν.

to it self, and produceth them and the Arithmetical knowledge of them. According to the union of multitude and communication with it self, and colligation, it acquircth to it self Mulick: For which reason Arithmetick excels Musick in antiquity, the soul it self being first divided by the Maker, then collected by proportions. And again establishing the operation within it self, according to its station, it produceth Geometry out of it self, and one figure, and the principles of all figures, but according to its motion, Sphærick: for she is moved by circles, but consists always in the same manner according to the causes of those circles, the straight and the circular: And for this reason likewise Geometry is precedent to Sphærick, as Station is to Motion.

But forasmuch as the Soul produced these Sciences, not looking on the excitation of Ideas, which is of infinite power, but upon the boudure of that which is limited (d) in their several kinds, therefore they say that they take infinite from multitude and magnitude, and are conversant only about finite: For the mind hath placed in her self all principles both of multitude and magnitude, because being wholly of like parts within her self, and being one and indivisible, and again divisible, and producing the world of Ideas, it doth participate essential finiteness and infiniteness from the things which it doth understand: But it understands according to that which is finite in them, and not according to the infiniteness of its life. This is the opinion of the *Pythagoreans*, and their division of the four Sciences. Hitherto *Proclus*.

S E C T. I.

Arithmetick.

(a) *Nicom. A-
eudæmonius
εὐδαιμονίας* (to supply the Title, as a pag. 30, 35, 44, 62, 76.) cap. 4. (a) **O**F these four methods, Which is that which ought necessarily to be learned the first, (*viz.* that which is by nature præexistent to the rest and chiefest, being as it were principle, and root, and mother of the rest)? *Arithmetick*: Not only for that it is præexistent before the rest in the Intellect of the efficient God, as an ornative and exemplary reason, according to which the Maker of the Universe caused all things to be made out of matter to its proper end, as after a *περὶ γεννητῆρα* and archetypal pattern: But also because being (b) naturally first generated, it together takes away the rest with it self, but is not taken away with them. Thus Animal is first in nature before Man: For taking away animal, we take away man, but not in taking away man do we take away animal. (Of this *Nicomachus* discourseth more largely.)

(b) Read *περὶ γεννητῆρα* *καταρχήσα*, *συνάρτησις*, &c. *viz.* ἡ ἀειδι-
μηνία.
(c) *Chron.*
(d) *Physic. 2.*
(e) *Chron.*
(f) *Orig. 3. 2.*
(g) *Stob. Phys. 2.*
As concerning Arithmetick, *Timæus* affirms that *Pythagoras* addicted himself chiefly to it: (d) *Stobæus*, that he esteemed it above all others, and brought it to light, reducing it from the use of Trading. (e) Hence *Isidore*, and others, style him the Inventor of Arithmetick, affirming (f) he was the first who writ upon this subject amongst the Græcians, which was afterwards more copiously composed by *Nicomachus*. He studied this Science exceedingly, and so much did he prefer it above all the rest, that he conceived, The ultimate good of man to consist in the most exact Science of Numbers.

C H A P. I.

Number, its kinds; the first kind, Intellectual in the Divine Mind.

(a) **N**umber is of two kinds, the Intellectual, (a) *Nicom. A-
rith.* (or immaterial) and the Sciential. The Intellectual is that (b) *eternal substance* of Number, which *Pythagoras* in his Discourse concerning the Gods asserted to be the principle most providential of all Heaven and Earth, and the nature that is betwixt them. Moreover, it is the root of Divine Beings, and of Gods, and of Demons. This is that which he termed (c) *the principle, fountain, and root of all things*, and defined it to be that which before all things exists in the Divine mind; from which and out of which all things are digested into order, and remain numbred by (d) *an indissoluble series.* (d) *Nicom. A-
rithm. cap. 5.*

For all things which are ordered in the world by nature according to an artificial course in part and in whole, appear to be distinguished and adorned by Providence and the All-creating Mind, according to Number; the Exemplar being established by applying (as the reason of the principle before the impression of things) the number præexistent in the Intellect of God, maker of the world. This only in Intellectual, and wholly immaterial, really a substance according to which as being the most exact artificial reason, all things are perfected, Time, Heaven, Motion, the Stars, and their various revolutions.

C H A P. II.

The other kind of Number, Sciential; its Principles.

Sciential Number is that which *Pythagoras* defines the extension and production into all of the seminal reasons which are in the (a) *Monad, or a heap of Monads, or a progression of multitude, beginning from Monad, and a regression ending in Monad.* (a) *Moderat.
ap. Stob.*

(b) The *Pythagoreans* affirmed the expositive terms, whereby even and odd numbers are understood, to be the principles of [Sciential] Numbers, as of three insensible things, the Triad; of four Insensibles, the Tetrad; and so of other numbers. (b) *Theon. Met.
them. cap. 4.* (c) *Anon. Phil.
vit. Pythag.*

They make a difference betwixt the Monad and One, concerning the Monad to be that which exists in Intellectuals; One, in numbers [or as (d) *Moderatus* expresseth it, *Monad* amongst numbers, One amongst things numbred, one body being divisible into infinite: Thus numbers and things numbred differ, as incorporeals and bodies] in like manner Two is amongst numbers. The Duad is indeterminate; Monad is taken according to equality and measure, Duad according to excess and defect: Mean and measure cannot admit more and less, but excess and defect (seeing that they proceed to infinite) admit it, therefore they call the Duad indeterminate (e) holding Number to be infinite, not that number which is separate and incorporeal, but that which is (f) not separate from sensible things. (e) *Theon. Met.
Phys. 3.* (f) *Arist. Phys.
3, 4.*

C H A P.

C H A P. III.

The Two kinds of Sciential Number, Odd and Even.

(a) *Eustrat. in Ethic. 1. Serv. in Eclog. 8. (b) Nicom. Introd. Arithmet. cap. 6.* (a) **O**F [Sciential] Numbers *Pythagoras* asserted Two Orders, one bounded, Odd, the other infinite, Even. (b) *Even Number*, (according to the *Pythagorick* definition) is that which at once admits division into the greatest and the least; into the greatest Magnitudes, (for halves are the greatest parts) the least in multitude (for Two is the least number) according to the natural opposition of these two kinds. *Odd* is that which cannot suffer this, but is cut into two unequals.

(c) *Themist. in Phys. 3.* (c) Herein the *Pythagoreans* differ from the *Platonists*, in that they hold not all Number to be infinite, but only the Even: for even Number is the cause of section into equal parts, which is infinite, and by its proper Nature generates infinity in those things in which it exists. But it is limited by the Odd; for that being applied to the Even, hinders its dissection into two equal parts.

(d) *Macrobi. Saturn. 1. 13. (e) Serv. in Aen. 3. (f) Plutarch de Rom. pesti. (g) Serv. ad Aen. 3.* (d) Odd Number is said to have been found by *Pythagoras*, and to be of Musculine Virtue, and proper to the Cœlestial Gods ((e) to whom they sacrificed always of that Number,) and to be (f) full and perfect. Even, is indigent and imperfect, and Female, and (g) proper to the subterraneous Deities, to whom they sacrificed Even things.

(h) *Anon in Ptolem. Tert. bibl. lib. 1.* (h) Moreover, whatever is generated of Odd Number is Male, whatsoever of Even is Female; for Even Number is subject to Section and Passion, Odd is void of both, and is efficacious; wherefore they call one the Male, the other the Female. (i) A Number, which ariseth out of the Power and Multiplication of Even and Odd, is called *ἀρρενόθυλος, Hermaphrodite*.

(k) *Plut. de anima. preer.* This Opinion *Pythagoras* seems to have derived from *Zarates*, his Master, (k) who call'd *Duad* the Mother of Number, *Monad* the Father; and therefore they said, that those Numbers which resemble *Monad* (*viz.* the Odd) are the best.

(l) *Simplic. in phys. lib. 3.* (l) Odd Numbers they called *Gnomons*, because being added to Squares, they keep the same Figures; so *Gnomons* do in Geometry.

C H A P. IV.

Symbolical Numbers.

(a) *Porph. p. 32.* (a) **T**HE *Pythagoreans* (saith *Moderatus* of *Gades*, who learnedly comprised their Opinions in Eleven Books) using the Mathematical Sciences as degrees of Preparations to the contemplations of the things that are, were studiously addicted to the business of Numbers, for this reason. Seeing they could not clearly explain the first Forms and Principles in discourse (those being the most difficult to understand and express) had recourse to Numbers for the better explication of their Doctrine, imitating Geometricians, and such as teach to read. For as these

going about to explain Letters and their Powers; recurr to Marks, saying, That these are, as it were, the first Elements of Learning; nevertheless afterwards they tell us, That they are not the Elements, but that the true Elements are known by them. And as the Geometricians, not being able to express Incorporeal Forms in words, have recourse to the Description of Figures, saying, This Δ is a Triangle, not meaning that this which falleth under the sight is a Triangle, but that which hath the same Figure, and which is by the help thereof, and representeth the knowledge of a Triangle to the Mind. The same did the *Pythagoreans* in the first Reasons and Forms; for, seeing they could not in words express incorporeal forms, and first principles, they had recourse to demonstration by Numbers. And thus they called the Reason of Unity, and Identity, and Equality, and the cause of amicable Conspiration, and of Sympathy, and of the Conservation of the Universe, which continueth according to the same, and in the same manner, ONE. For the one which is in particulars, is such united to the parts, and conspiring by participation of the first cause. But the twofold Reason of diversity and inequality, and of every thing that is divisible and in mutation, and exists sometimes one way, sometimes another, they called *DUAD*, for the nature of the *Duad* in particular things is such. These Reasons are not only according to the *Pythagoreans*, and not (acknowledg'd by) others, but we see that other Philosophers also have left certain unitive powers, which comprize all things in the Universe; and amongst them there are certain Reasons of equality, dissimilitude and diversity. Now these Reasons, that the way of teaching might be more perspicuous, he called by the names of *Monad* and *Duad*; but it is all one amongst them if it be called biform, or aqualiform, or diversiform.

The same Reason is in other Numbers, for every one is ranked according to some powers. In the Nature of things exists something which hath beginning, middle and end. To such a form and nature they attributed the number Three, saying, That whatsoever hath a middle is triform; so they called every perfect thing. And if any thing be perfect, they affirm it maketh use of this principle, and is adorned according to it; which, since they could not name otherwise, they made use of the term *Triad* to express it; and when they endeavour to bring us to the knowledge thereof, they lead us to it by the form of this *Triad*. The same in other Numbers.

These therefore are the Reasons, according to which the foresaid Numbers were placed; but these that follow are comprehended under one form and power, which they call *Decad*, q. *Decad*, [from comprehension.] Wherefore they say, that Ten is a perfect number, even the most perfect of all numbers, comprehending in it all difference of Numbers, all Reasons, Species and Proportions. For if the nature of the Universe be defined according to the Reasons and Proportions of Numbers; and that which is produced, and increased, and perfected, proceed according to the Reasons of Numbers; and the *Decad* comprehends every Reason of Number, and every Proportion, and all Species: Why should not Nature it self be termed by the Name of Ten,

the most perfect Number? Hitherto *Moderatus*.

Thus from the symbolical use of numbers proceeded a multiplicitous variety of names, attributed to them by *Pythagoras* and his followers. Of which we shall speak more particularly, beginning with the *Monad*.

C H A P. V.

The Monad.

THE *Monad* is a quantity, which in the decrease of multitude, being deprived of all number, receiveth mansion and station; for below Quantity, *Monad* cannot retreat. The *Monad* therefore seems to be so called, either from standing, or from remaining (*μένειν*) always in the same condition, or from its separation (*μεμονωσθαι*) from multitude.

To the *Monad* are attributed these Names.

Mind, (*Nicom. Phot. Anon. Theolog.*) because the Mind is stable, and every way alike, and hath the preheminance. (*Alex. Aphrod. in Metaph.*)

Hermaphrodite, (*Nicom.*) it is both Male and Female, Odd and Even, (*Macrob. in Somn. Scip. 1. 6.*) it partakes of both Natures; being added to the even, it makes odd, to the odd, even. (*Aristot. in Pythagorico*, cited by *Theon. Smyrn. Mathem. cap. 5.*)

God, because it is the beginning and end of all, it self having neither beginning nor end. (*Macrob.*)

Good, for such is the Nature of one. (*Porphyr. vit. Pyth.*)

Matter, receptacle of all, (*Nicom.*) because it produceth *Duad*. which is properly Matter. (*Anon. Theol.*)

Chaos, *Confusion*, *Contemperation*, *Obscurity*, *Chasme*, *Tartarus*, *Styx*, *Horror*, *Impermission*, *Subterraneous Barathrum*, *Lethe*, *Rigid Virgin*, *Atlas*, *Axis*, *Sume*, *Pyrallios*, *Morpho*. (*Nicom. Anon.*)

Tower of Jupiter, (*Nicom.*) *Custody of Jupiter*, *Throne of Jupiter*, (*Simplic.*) from the great power which the Center hath in the Universe, being able to restrain the general Circular Motion, as if the Custody of the Maker of all things were constituted therein. (*Procl. in Timæum. com. 4.*)

Seminal Reason, (*Nicom.*) because this one only is one to the Retractors, and is alone, and the rest are procreated of it, and it is the only Seminary of all Numbers. (*Mart. Capel. 7.*)

Apollo Prophet. (*Nicom.*)

Prometheus, as being Author of Life. (*Anon. Theol.*)

Geniture, because without it no number hath being. (*Anon. Theol.*)

Substance, (*Theolog.*) because Substance is primary. (*Alex. Aphr. Met. 1.*)

Cause of Truth, *Simple Exemplar*, *Constitution of Symphony*. (*Anon. Theolog.*)

In Greater and Lesser, *Equal*; in Intention and Remission, *Middle*; in Multitude, *Mean*, (*Theolog.*) in Time, *Now*, the present, (*Anon. Theolog.*) because it consists in one part of time

which is always present. (*Macrob. in Somn. 1. 6.*)

Ship, *Chariot*, *Friend*, *Life*, *Beatitude*. (*Anon. Theolog.*)

Form, (or *Species*) because it circumscribes, comprehends, and terminates, (*Anon.*) and because it produceth the rest of the effects. (*Mart. Capel.*)

Jupiter, (*Anon. Procl. in Tim.*) because he is Father and Head of the Gods, (*Mart. Cap.*) whence the Pythagorick Verse:

Hear noble Number, Sire of gods and men.

Love, *Concord*, *Piety*, *Friendship*, because it is so connected, that it cannot be divided into parts. (*Mart. Cap.*)

Protens, as containing all forms. (*Anon.*)

Mnemosyne, (*Anonym.*)

Vesta, or *Fire*, (*Plut. in Numa.*) For the nature of *Monad*, like *Vesta*, is seated in the midst of the World, and keeps that Seat, enclining to no side.

Polyonymous. (*Hesych.*)

C H A P. VI.

The Duad.

THE Names of the *Duad* are these,

Genius, *Evil*, (*Plut. Plac. Phil. 1. 3.*)

Darkness, *Sinister*, *Unequal*, *Unstable*, *Movable*, (*Porphyr. vit. Pythag.*)

Boldness, (*Nicom.*) *Fortitude*, (*Anon.*) *Contention*, (*Plut. de Isid. & Osirid.*) because it proceeds to action, and first separates it self from the *Monad*. (*Anon.*)

Matter, (*Nicom.*) because indefinite; indeterminate *Duad*, proceeds from *Monad* as Matter: The cause of tumour and division. (*Simplic. Phys. 1.*)

Cause of Dissimilars. (*Nicom.*)

Partition betwixt Multitude and Monad. (*Nicom.*)

Equal, because, in composition and permission, this only maketh Equality. (*Nicom.*) Two and two are equal to twice two.

Unequal, *Defect*, *Superfluity*, (*Nicom.*) according to the motion of matter. (*Anon.*)

Only inform, *Indefinite*, *Indeterminate*, (*Nicom.*) because from a Triangle and Triad, Polygons are actually procreated to infinite; in *Monad* they exist all potentially together: But of two right Lines or Angles is made no Figure. (*Anon.*)

Only principle of Purity, yet not even, nor evenly even, nor unevenly even, nor evenly uneven. (*Nicom.*)

Erato, (*Nicom.*) because through love applying it self to *Monad*, as the species it procreated the rest of the effects. (*Anon.*)

Harmony, (*Nicom.*)

Tolerance, (*Nicom.*) because it first underwent separation. (*Anon.*)

Root, but not in act. (*Nicom.*)

Fountain-abounding Ida. (*Nicom.*)

Top, *Phanes*, (*Nicom.*)

Justice, because of its two equal parts. (*Anon. Mart. Cap.*)

Isis,

Isis, Nature, Rhea, Jove's mother, Fountain of distribution, Phrygia, Lydia, Dindymene, Ceres, Eleusinia. (Nicom.)

Diana, (Nicom.) because the Moon takes many Settings from all the fixed Stars, and because she is forked, and called Half-moon. (Anon.)

Love, Distinna, Aeria, Asteria, Disamus, Station, Venus, Dione, Micheia, Cythereia, Ignorance, Ignobility, Falsity, Permission, Alterity, Contention, Diffidence, Fat, Death, (Nicom.) *Impulse.* (Anon.)

Opinion, because it is true and false. (Anon. *Alex. Aphrod. Met. 1. Philop. ibid.*)

Motion, Generation, Mutation, Division, Anon. (Meursius reads *Staxeosis*, *Dijudication*) *Longitude,* (Anon.) or rather, *first Longitude,* (Simplic.) *Augmentation, Composition, Communion.* (Anon.)

Misfortune, Sustentation, because it first suffered separation, (Anon. *Martian.*) *Discord.* (Plut. *de Isid. & Osirid.*)

Imposition, (Hescl.)

Marriage, Juno; Juno, being both Wife and Sister to Jupiter. (Mart. *Capel. Eulog. in Somn. Scip.*)

Soul, from motion hither and thither. (Philop. *Metaph. 1.*)

Science, for all demonstration, and all Credit of Science, and all Syllogism Collects from some things granted, the thing in question, and easily demonstrateth another; the comprehension of which things is Science. (Plut. *de Plac. 1. 3.*)

Maia. (Nicom. apud Phot.)

CHAP. VII.

The Triad.

(a) *Anon. Theolog.* (a) **T**HE Triad is the first number, actually odd, and the first perfect number, and middle, and proportion. It causeth the power of the Monad to proceed to act and extension; it is the first and proper Co-
(b) *Jamb. vit. cap. 28.* cervation of Unities. (b) For which Reason Pythagoras said, *Apollo* gave Oracles from a Tripod; and he advised to offer Libation Three times.

The Names of the Triad are these:

First Latitude, not simply Latitude. (Simp. *de Anim. 1.*)

Saturnia, Latona, Cornucopia, Ophion, Thetis, Harmonia, Hecate, Erana, Charitia, Polhymnia, Pluto, Arctus, Helice. Not descending to the Ocean, *Damatrame, Dioscoria, Metis, Tridume, Triton, President of the Sea, Tritogenia, Achelous, Nautis, Agyiopeza,* (perhaps *εργασια*, as before, *Thetis*) *Curetis, Crateis, Symbenia, Mariadge, Gorgonia, Phorcia, Trifamus, Lydius.* (Nicom.)

Marriage, Friendship, Peace, Concord, (Nicom.) because it collects and unites, not similars, but contraries. (Anon.)

Justice, (Nicom.)

Prudence, Wisdom; because men order the present, foresee the future, and learn Experience by the past. (Anon.)

Piety, (Anon.) *Temperance,* (Anatol.) All Virtues depend upon this number, and proceed from it.

It is the *Mind*; it is cause of *Wisdom and Understanding.* It is *Knowledge* which is most proper to number.

It is the power and composition of all *Musick*, and much more of *Geometry*: It hath all power in *Astronomy*, and the nature and knowledge of *Celestials*, containing and impelling it to the production of substance.

(c) The Cube of this number Pythagoras affirmed to have the power of the *Lunar Circle*, in as much as the Moon goeth round her Orb in 27 days, which the Number Ternio, in Greek Ternas, the Triad gives in its Cube. (c) *Agel. 1. 2*

CHAP. VIII.

The Tetrad.

(a) **T**HE Tetrad was much honoured by the *Pythagoreans*, and (b) esteemed the most perfect number, the (c) primary and primogenious, which they called the Root of all things, and the Fountain of Nature. (a) *Protospath. in Hesiod. die;* (b) *Lucian. pr. laps. in talut. adm.*

(d) The Tetrads are all Intellectual, and have an emergent Order, and (for that Reason) the *Empyrean Præfecture*; they go round about the World; as the *Empyreum* passeth through all. (c) *Irenæus. lib. 1. cap. 1.* (d) *Simplic. ad Phys. 4.*

Even God himself *Pythagoras* expressed by the Tetrad.

(e) How God is a Tetrad, you will clearly find in the Sacred Discourse ascribed to *Pythagoras*, wherein God is the number of numbers. For if all Beings subsist by his eternal Counsel, it is manifest, that number in every species of Beings depends upon their Causes; the first number is there, from thence derived hither: The determinate stop of number is the Decad, for he who would reckon further, must return to 1, 2, 3. and number a second Decad, in like manner a third, to make up 30, and so on, till having numbred the tenth Decad, he comes to a 100. Again, he reckons from a 100. in the same manner, and so may proceed to infinite, by revolution of the Decad. Now the Tetrad is the power of the Decad; for, before we arrive at the perfection of the Decad, we find an united perfection in the Tetrad, the Decad being made up by addition of 1, 2, 3, 4. (e) *Hierocl. in aur. carm.*

Moreover, the Tetrad is an Arithmetical mean betwixt 1 and 7, equally exceeding, and exceeded in number. It wants 3 of 7, and exceeds 1 by 3. Monad, as being the Mother of numbers, contains all their powers within it self. The Hebdomad, as being motherless, and a Virgin, possesseth the second place, in dignity, for it is not made up of any number within the Decad, as 4 is of twice two, 6 of twice 3, 8 of twice 4, 9 of thrice 3, 10 of twice 5. Neither doth it make up any number within the Decad, as 2 makes 4, 3 makes 6, 5 makes 10. But the Tetrad lying betwixt the unbegotten Monad, and the motherless Hebdomad, comprehends all powers, both of the productive and produced numbers; for this of all numbers under 10, is made of a certain number, and makes a certain number; the Duad doubled makes a Tetrad, the Tetrad doubled makes 8.

Be-

Besides, the first solid figure is found in a Tetrad, for a point is correspondent to Monad, a line to Duad, [because drawn from one point to another] a Superficies to Triad, (because it is the most simple of all rectiline figures) but a solid properly agrees with the Tetrad. For the first Pyramis is in a Tetrad, the Base is triangular, so that at the bottom is 3, at the top 1.

Furthermore, the judicative power in things are Four, Mind, Science, Opinion, and Sense; for all Beings are dijudicated either by Mind, or Science, or Opinion, or Sense: [(f) for which Reason Pythagoras affirmed, the Soul of Man to consist of a Tetrad.]

Finally, the Tetrad connects all Beings, of Elements, Numbers, Seasons of the Year, Coarvous Society; neither can we name any thing, which depends not on the Tetradys, as its Root and Principle: For it is, as we said, the maker and cause of all things; intelligible God, Author of Celestial and Sensible Good. The knowledge of these things was delivered to the Pythagoreans by Pythagoras himself. Hitherto Hierocles.

For this Reason the Word Tetradys was used by Pythagoras, and his Disciples, as a great Oath, who likewise, out of respect to their Master, forbearing his Name, did swear by the Person that communicated the Tetradys to them,

Eternal Nature's Fountain I attest,
Who the Tetradys to our Soul exprest.

(g) But Plutarch interprets this Tetradys, (which he saith was also called κόσμος, World) to be 36, which consists of the first four odd numbers, thus:

1	3	5	7	3
2	4	6	8	7
3	5	7	9	11
4	6	8	10	12
5	7	9	11	13
6	8	10	12	14
7	9	11	13	15
8	10	12	14	16
9	11	13	15	17
10	12	14	16	18
11	13	15	17	19
12	14	16	18	20
13	15	17	19	21
14	16	18	20	22
15	17	19	21	23
16	18	20	22	24
17	19	21	23	25
18	20	22	24	26
19	21	23	25	27
20	22	24	26	28
21	23	25	27	29
22	24	26	28	30
23	25	27	29	31
24	26	28	30	32
25	27	29	31	33
26	28	30	32	34
27	29	31	33	35
28	30	32	34	36

The Names of the Tetrad are these;
Another Goddess, Multideity, Pantheos, Fountain of natural Effects. (Nicom.)

Key-keeper of Nature, because the universal Constitution cannot be without it; to these Sciences it conferreth Constitution and Settlement, and reconcileth them: yea, it is Nature it self and Truth. (Nicom.)

Nature of Æolus. (Nicom.) from its various property. (Anon.)

Hercules, Impetuosity, most Strong, Masculine, Ineffeminate, Mercury, Vulcan, Bacchus, Sotias, Maiades, Erinnus, Socus, Dioscorus, Bafarius, Two-mother'd, of Feminine Form, of Virile Performance, Bacchation. (Nicom.)

Harmony. (Nicom.) because it hath a sesquitertia. (Anon.)

Urania the Muse. (Nicom.) World. (Plut.) Body, as a Point is 1, a Line 2, a Superficies 3.

Soul, because it consists of Mind, Science, Opinion and Sense. (Plut. Plac. Phil. 1.3.)

First Profundity, as it is a body. (Simplic. de Anim. 1.)

Justice. The Property of Justice is compensation and Equality. This Number is the first evenly even; and whatsoever is the first in any

kind, is most that thing. This, they said, was the Tetrad, because being quadriate, it is divided into Equals, and is it self equal. (Alex. Aphrod. Metaph. 5.)

CHAP. IX.

The Pentad.

(a) THE Pentad is the first complexion of both kinds of number, even and odd, two and three: Its names these:

Αρεμία, Reconciliation. (Nicom.) because the fifth Element, Æther, is free from the Disturbances of the other four. (Anon.)

Alteration, Light, because it changed that which was separated threefold, into the Identity of its sphere, moving circularly, and ingenerating light. (Anon.)

Justice, (Nicom.) because it divides 10 into two equal parts. (Johan. Port. in Hes.)

The least and top of livelihood. (Nicom.)

Nemesis. (Nicom.) because it distributes conveniently Celestial, Divine, and Natural Elements. (Anon.)

Bubastia. (Nicom.) because worshipp'd at Bubastus in Ægypt. (Anon.)

Venus, Gamelia, Androgynia, Cytherea, Zoneia. (Nicom.) Marriage. (Anon.) because it connects a masculine and feminine number. (Anon. Plut. de Ei delph.) consisting of 2. the first even, and 3. the first odd (Alex. Aphrod. in Metaph. Protoph. in Hesiod.)

Κυκλίζουσα, President of Circles. (Nicom.)

Semi-goddes, (Nicom.) not only as being the half of 10. (which is divine, but for that it is placed in the middle. (Anon.)

Tower of Jupiter.

Didymæa, or Twin. (Nicom.) because it divides 10 into two. (Anon.)

Firm Axis. (Nicom.)

Immortal, Pallas, implying the fifth Essence. (Anon.)

Καρδιακή, Cordial. (Nicom.) from similitude with the heart. (Anon.)

Providence, because it makes unequals equal. (Anon.)

Τετράς, Sound, the fifth being the first diateme. (Plut. de An. procr. e Tim.)

Nature, because multiply'd by it self, it returns into it self. For as Nature receiving Wheat in seed, and introducing many forms by altering and changing it, at last returns it Wheat, at the end of the whole mutation restoring the beginning; so, whilst other numbers multiply'd in themselves, are increased, and end in other numbers, only 5 and 6 multiply'd by themselves, represent, and retain themselves. (Plut. de Ei delph.)

This number represents all superiour and inferior beings; for it is either the supreme God, or the Mind born of God, wherein are contained the Species of all things, or the Soul of the World, which is the Fountain of all Souls, or Celestials, down to us; or it is Terrestrial Nature, and so the Pentad is repleat with all things. (Macrob. in Somn. Scip. 1.6.)

CHAP. X.

The Hexad.

THE Pythagoreans held the number Six to be perfect, respecting (as *Clem. Alexandrinus* conceives) the creation of the World according to the Prophet. The names of the Hexad, are these;

Form of Form, Articulation of the Universe, Maker of the Soul, Harmony; (Nicom.) because it hath the power to ingenerate a vital habit; Whence it is called *Hexad*, ἀπὸ τῆς ἑξέως: and *Harmony*, because all Souls are harmonick, (Anon.)

Ὀυλομέλεια, *perfection of parts*, (Nicom.) or (as Anon.) Ὀλομέλεια. The Pythagoreans called it thus, imitating *Orpheus*, either as being the only number under ten, which is whole and equal in its parts; or because the whole Universe is divided into parts by it. (Anon.)

Venus, (Nicom.) because it procreates harmony: 6, to 12. is a diapason concord; 6, to 9. hemiolas; 6, to 8. epitrites; that is a diatessaron concord: Whence it is named *Venus* who was the Mother of Harmony. (Mart. cap. 7.)

Zōgia, (Nicom.) γάμλια, (Nic.) γάμος, *Marriage*, (Clem. Strom. 5.) because of the mixtion of the first even and first odd. (Plut. de An. procr. Sec. Tim.): For as Marriage procreates by a male and female; so this number is generated of 3. Which is odd and called male, and of 2. which is even and called female; for twice 3, make 6. (Clem. Alexand. Strom. 6.) It produceth Children like the Parents; (Theon. Smyr. Mathem. 45.)

Zōgites, φιλοτησία, (Nicom.) or φιλωσι *Conciliation*, because it conciliates the male and female: (Anon.)

ῥγία, *Health*; (Nicom. Anon.) a triple triangle which being alternately conjoined within  it self constituteth a figure of five lines; they used it as a Symbol to those of their own sect, and called it ῥγία, *Health*. (Lucian. prolaps. in fal. admiff.)

Ἀμύων, *Anvile*; (Nicom.) qu. ἀνέματος, unwearied; because the principal triangles of the mundane Elements have share in it, being each of them Six, if measured by three perpendiculars. (Anon.)

Ἑκατὴβέλεις, being compounded of and as it were ἑκατάσαν, the triad, which is called Hecate, (Anon. Theol.)

Trioditis; from the nature of that Goddess, or because the Hexad first assumes the three motions of intervals, being divided into two parts, each of which is on each side. (Anon.)

Διχρονία, the distribution of all time, of things above the earth, and under the earth, which is done by the Hexad in the Zodiack, or because Time is of the nature of the Triad, consisting of three parts, and the Hexad consists of two Triads. (Anon.)

Persea, Triform (Nicom.)

Amphitrite; (Nicom.) because it hath a Triad on each side. (Anon.)

Neighbour to Justice, (Nicom.) as being nearest to 5. (which is named Justice. (Anon.)

Thalia, the Muse; (Nicom.) because of the harmony of the rest. (Anon.)

Panacea, (Nicom.) in respect to health mentioned already; or *q. Panarceia*, omni-sufficiency, endued with parts sufficient for totality. (Anon.)

Μεσευθός, *Middle-right*, being in the midst betwixt 2, and 10, æquidistant from both. (Clem. Alexandr. Strom. 6.)

World, because the World, as the Hexad, is often seen to consist of contraries by harmony. (Anon.)

CHAP. XIV.

The Heptad.

(a) **T**HE Heptad was so called; qu. σεπτας σεβας, (a) *Nicom.* *septa* ἄξιον, worthy of veneration; for (b) *apud* Phor. *Pythagoras* held this number to be most proper to Religion. (c) He also held, that it is perfect; (d) thence it was, (as the Pythagoreans conceived) that creatures born in the seventh month live. (Anon. Macrob. in Somn. Sc. (b) *Apud* Metam. lib. 11. (c) *Alleg.* *Aphrod.* *Probl.* 2. *Quæst.* 47. (d) *J. I. Pauli* recept. sent. lib. 4. c. 9.)

The names of the Heptad, are these.

Fortune, Occasion; (Nicom.) because it occurs casually and opportunely to every thing. (Anon.) Whatsoever is best amongst sensible things, by which the seasons of the year and their periods, are orderly compleat, participates of the Heptad, (Philo. de die sept.) the Moon having 7 days, measures all time. (Johan. Philop. in Metaphys. 7.)

Ἀμήτωρ, *Motherless, Virgin*, (Hieroc. in aur. car. Nicom.) *Minerva*, as being a Virgin, unmarried, not born of a Mother (odd number,) nor of a Father, (even number;) but out of the Crown or Top of the Father of all, Monad. (Anon. Chalcid. in Tim. Theon. Smyrn. c. 45.)

Mars, Nicom. Anon. Ἀκρόωσις, (Nicom.)

Ageleia, (Nicom.) an epithet of *Minerva* (Helych.)

Ἀστειότης, (Nicom.)

Φυλακίς, *Custody*, (Nicom.) because the Stars which guard the Universe are seven. (Anon.)

Ὀβριμοπάτης, *Tritogenia*, Γλαυκώπις, Ἀλαλκιδένης, Παντενχία, Ἐργάνη, Πολυαρήτη, Ὀυλομέλεια; *Stock of Amalthea, Ægis, Osiris, Dream, Voice, Sound, Clio the Mule, Judgment, Adrastia*. (Anon.)

Τελέσφορος, *leading to the end*; (Anon.) because by it all are led to the end. (Philo. de Mund. opif.)

CHAP. XII.

The Ogdoad.

THE Ogdoad, they said was the first Cube, and the only number evenly even under ten. (Anon.)

The Names of it.

Panarmonia, (Nicom.) because of its excellent convenience. (Anon.)

Cadmea, Mother, Rhea, θηλυπότης, *Cibele, Dindymene*, Πολιάρχος, *Love, Friendship, Council, Prudence, Orcia, Themis, Law*, Ἡλιόμνηνα, *Euterpe the Muse, Ἀσφαλεία, Ἐδρασμα*, (Anon.) *Neptune*. (Plut. de Iiid. & Osirid.)

Justice,

Justice, because it is first resolved into numbers, especially equal. (*Macrob. in Somn. Scip. i. 5.*)

C H A P. XIII.

The Ennead.

THE Ennead is the first square of an odd number. Its names, these:

Ocean, Horizon; because number hath nothing beyond it, but it revolves all within it. (Anon.)

Prometheus, because it suffers no number to out-go it, and justly, being a perfect ternary. (Anon.)

Concord, (Nicom. Anon.) *Perafia*, (Anon.) *Halius*, (Nicom. Anon.) because it doth not permit the consent of number to be dispersed beyond it, but collects it. (Anon.)

Ἀνελμία, because of the revolution to Monad. (Anon.)

Ὀμοίαις, because it is the first odd Triangle, (Anon.)

Vulcan, because to it, as confluence and relation, there is no return. (Anon.)

Juno, because the sphere of the Air hath the ninth place. (Anon.)

Sister and Wife to Jupiter, from conjunction with unity. (Anon.)

Ἐκδορῶ, because there is no shooting beyond it. (Anon.)

Pæan, Nyssæis, Agyica, Ennalios, Agelia, Tritogegenia, Suada, Curetis, Proserpina, Hyperion, Terpsichore the Muse. (Nicom. Anon.)

Τελέσφορος, Τέλειος, because nine months compleat the Infant.

C H A P. XIV.

The Dead.

(a) **T**EN, according to the Pythagoreans, is the greatest number, as well for that it is the Tetractys, as that it comprehends all arithmetical and harmonical proportions. (b) Pythagoras said, that ten is the nature of number: because all Nations, Greeks, and Barbarians, reckon to it; and when they arrive at it, return to the Monad.

Names of the Decad.

World; because according to the Decad, all things are ordered, in general and particular. (Anon.) The Decad comprehends all numbers, the World all forms; (Philop. Metaph. i.) for the same reason termed also Sphere. (Anon.)

Heaven, (Nicom.) because it is the most perfect term of number, as Heaven the receptacle of all things. (Anon.) The Decad being a perfect number, the Pythagoreans desired to apply to it those things which are contained in Heaven, where finding but 9, (the Orbs, the seven Planets, and the Heaven of fixed Stars, with the earth) they added an Antichthon, (another earth opposite to this) and made Ten; by this means they accommodated them to the Decad. (Pachymer. in Metaphys. 3.)

Fate, (Nicom.) because there is no property

neither in numbers nor beings, according to the composition of number, which is not feminally contained in the Decad. (Anon.)

Age, (Nicom.)

Power, (Nicom.) from the command it hath over all other Numbers. (Anon.)

Faith, Necessity, (Anon.)

Atlas; for as *Atlas* is fabled to sustain Heaven with his shoulders, so the Decad all the Spheres, as the Diameter of them all. (Anon.)

Unwearied, God, Phanes, Sun, Urania, Memory, Mnemosyne, (Anon.)

First square, because made of the first four numbers, 1, 2, 3, 4. (Chalcid. in Tim.)

Κλειδῶχος, as the magazine and confinement of all proportions; (Anon.) or, *Κλαδῶχος*, because other numbers branch out of it. (Cedren.)

Παντέλεια, because it perfects all number, comprehends within it self all the nature of even and odd, moved and unmoved, good and ill. (Anon.)

C H A P. XV.

Divination by Numbers.

UPON the near affinity which Pythagoras (following *Orpheus*) conceived to be betwixt the gods and numbers, he collected a kind of Arithmonanty; not practised by himself only, but communicated to his Disciples, as is manifest from (a) *Jamblichus*, who cites this fragment of (a) *Vit. Pyth. the Sacred Discourse*, a Book ascribed to him: *Concerning the gods of Pythagoras, son of Mnesarchus, I learned this when I was initiated at Libeth in Thrace, Aglaophemus administering the rites to me; Orpheus son of Calliope, instructed by his mother, in the Pangean mountain, said, That number is an eternal substance, the most provident principle of the Universe, Heaven, and Earth, and middle Nature; likewise the root of Divine beings, and of gods and demons.*

Hence (saith *Jamblichus*) it is manifest that Pythagoras received of Numbers the determinate essence of the gods, from the traditions of *Orpheus*. By these Numbers he framed a wonderful divination and service of the gods, of nearest affinity to numbers, as may be evinced from hence, (for it is requisite to give an instance for confirmation of what we say,) whereas *Abaris* performed those kind of sacrifices to which he was accustomed, and practised diligently divination, after all the ways of the Barbarians, by Victims, principally of Cocks, (whose entrails they conceived to be most exact for inspection) Pythagoras willing not to take him off from his study of truth, yet to direct him by a safer way, without blood and slaughter, (moreover esteeming the Cock sacred to the Sun) taught him to find out all truth by the science of Arithmetick. Thus *Jamblichus*. (b) And elsewhere he saith, that Pythagoras, instead of the art of divining by sacrifices, taught him that kind of prediction which is by Numbers, as conceiving that to be more sacred and divine, and more agreeable to the celestial numbers of the gods. (b) *Vit. Pyth. cap. 19.*

This hint some have taken to impose upon the world, under the name of Pythagoras, an Orphomantick kind of Arithmetick, assigning particular numbers to the letters of the Alphabet, to the Planets,

(a) *Athenag. apolog. pro. Christ.*
(b) *Plut. plac. i. 3.*

Planets, to the days of the Week, and to the Signs of the Zodiac, thereby resolving questions concerning natiuities, victory, life, or death, journies, prosperity or adversity; as is set down by (c) Flud, who adds, Apollonius hath delivered another way of divination, according to the Pythagorick Doctrine; affirming, that future things may be prognosticated by virtue of a Wheel invented by Pythagoras, whereby is treated of life and death, of fugitives, of litigious business, of victories, of the sex of children unborn, and infinite others of the like kind. But concerning the exposition of the Wheel, and the true position of Numbers, therein the ancient Authors have written very inconstantly, so as the truth of its composition cannot be comprehended otherwise than by conjecture. What ancient Authors he means, I know not; the citation of Apollonius, I doubt to be no less supposititious, than the Wheel it self, which (d) Trithemius and others acknowledge to be an invention of later times.

S E C T. II.

Musick.

(a) Theon.
Smyrn. Math.
cap. 1.

(a) **T**HE Pythagoreans define Musick an apt composition of contraries, and an union of many, and consent of different. For it not only co-ordinates rythms and modulation, but all manner of Systems. Its end is to unite, and aptly conjoin. God is the reconciler of things discordant, and this is his chiefest work according to Musick and Medicine, to reconcile enmities. In Musick, say they, consists the agreement of all things, and Aristocracy of the Universe: For, what is harmony in the world, in a City is good Government, in a Family Temperance.

(b) Porphy. in
Harm. Ptole-
mæ.
(c) Plut. de
Mus. Porph.
in Ptol. Harm.
&c.
(d) Ptolem.
Harmonic. c. 2.

(b) Of many Sects (saith Ptolemæ) that were conversant about harmony, the most eminent were two, the Pythagorick and Aristoxenian; [(c) Pythagoras dijudicated it by reason, Aristoxenus by sense.] (d) The Pythagoreans not crediting the relation of hearing in all those things, wherein it is requisite, adapted reasons to the differences of sounds, contrary to those which are perceived by the senses; so that by this critey (reason) they gave occasion of calumny to such as were of a different opinion.

(e) Ptolemæ
loco citato
apud Porphy.

(e) Hence the Pythagoreans named that which we now call Harmonick, Canonick; not from the Canon or Instrument, as some imagine, but from rectitude, since reason finds out that which is right, by using Harmonical Canons or Rules. Even of all sorts of Instruments, framed by Harmonical Rules, (Pipes, Flutes, and the like) they call the Exercise, Canonick; which although it be not Canonick, yet is so termed, because it is made according to the Reasons and Theorems of Canonick. The Instrument therefore seems to be rather denominated from its Canonick affection. A Canonick in general is a Harmonick; who is conversant by ratiocination, about that which consists of Harmony. Musicians and Harmonicks differ; Musicians are those Harmonicks who begin from sense, but Canonicks are Pythagoreans, who are also called Harmonicks; both sorts are termed by a general name, Musicians.

C H A P. I.

Voice, its kinds.

(a) **O**F human voice, they who are of the (a) Nicom. Pythagorean School, said, That there are Harm. cap. 2. (as of one Genus) two Species. One they properly named Continuous, the other Diastematick, (intermissive) framing appellations from the accidents pertaining to each. The Diastematick they conceived to be that which is sung, and rests upon every note, and manifest the mutation which is in all its parts, which is inconfused, and divided, and disjoined, by the magnitudes which are in the several sounds, as coacervated, but not commixt; the parts of the voice being apply'd mutually to one another, which may easily be separated and distinguished, and are not destroy'd together. Such is the Musical kind of voice, which to the knowing, manifests all sounds, of what magnitude every one participates: For if a man use it not after this manner, he is not said to sing, but to speak.

The other kind they conceived to be Continuous, by which we discourse one to another, and read, and are not constrained to use any manifest distinct tensions of sounds, but connect the discourse, till we have finished that which we intended to speak. For if any man in disputing, or apologizing, or reading, make distinct magnitudes, in the several sounds, taking off, and transferring the voice from one to another, he is not said to read, but to sing.

Human voice having in this manner two parts, they conceived, that there are two places which each in passing possesseth. The place of Continuous voice, which is by nature infinite in magnitude, receiveth its proper term from that, where-with the speaker began, until he ends, that is the place from the beginning of his speech to his conclusive silence, so that the variety thereof is in our power. But the place of Diastematick voice is not in our power, but natural; and this likewise is bound by different effects. The beginning is that which is first heard, the end that which is last pronounced; for from thence we begin to perceive the magnitude of sounds, and their mutual commutations, from whence first our hearing seems to operate; whereas it is possible there may be some more obscure sounds perfected in nature, which we cannot perceive or hear. As for instance, in things weigh'd there are some bodies which seem to have no weight, as Straws, Bran, and the like; but when as by apposition of such bodies, some beginning of ponderosity appears, then we say, They first come within the compass of Statick. So, when a low sound increaseth by degrees, that which first of all may be perceived by the ear, we make the beginning of the place which musical voice requireth.

C H A P. II.

First Musick in the Planets.(a) Nicom.
Harm. cap. 3.(b) Macrob. in
Somn. Scip.
2. 1.

(c) Nicom. ibid.

Macrob. ibid.

Nicom. ibid.

(a) THE names of Sounds, in all probability, were derived from the seven Stars, which move circularly in the Heavens, and compass the earth. (b) The circumagitation of these bodies must of necessity cause a sound; for air being struck from the intervention of the blow, sends forth a noise; Nature her self constraining that the violent collision of two bodies should end in sound.

(c) Now (say the Pythagoreans) all bodies which are carried round with noise, one yielding and gently receding to the other, must necessarily cause sounds different from each other, in the magnitude and swiftness of voice, and in place; which (according to the reason of their proper sounds, or their swiftness, or the orbs of revolutions, in which the impetuous transportation of each is performed) are either more fluctuating, or on the contrary more reluctant. But these three differences of magnitude, celerity, and local distance, are manifestly existent in the Planets, which are constantly with sound circumagitated through the ætherial diffusion; whence every one is called ἀσής, as void of στάσις, station; and ἀείδων, always in course, whence God and Æther are called Θεός and Αἰθήρ.

Moreover the sound which is made by striking the air, induceth into the ear something sweet and musical, or harsh and discordant: for, if a certain observation of numbers moderate the blow it effects a harmony consonant to it self; but if it be temerarious, not governed by measures, there proceeds a troubled unpleasant noise which offends the ear. Now in heaven nothing is produced casually; nothing temerarious, but all things there proceed according to divine Rules and settled Proportions: whence irrefragably is infer'd, that the sounds which proceed from the conversion of the Cælestial Spheres, are musical. For sound necessarily proceeds from motion, and the proportion which is in all divine things causeth the harmony of this sound. This Pythagoras first of all the Greeks conceived in his mind; and understood that the Spheres sounded something concordant, because of the necessity of proportion, which never forsakes Cælestial Beings.

From the motion of Saturn, which is the highest and furthest from us, the gravest sound in the diapason concord, is called Hypate; because ὑψιστος signifieth highest: but from the Lunary, which is the lowest and nearest the earth, neate; for νεατος signifieth lowest. From those which are next these, viz. from the motion of Jupiter who is under Saturn, parypate; and of Venus, who is above the Moon, paraneate. Again, from the middle, which is the Sun's motion, the fourth from each part, mese, which is distant by a diatessaron, in the Heptachord from both extremities, according to the ancient way; as the Sun is the fourth from each extremity of the seven Planets, being in the midst. Again, from those which are nearest the Sun on each side, from Mars who is placed betwixt Jupiter and the Sun, Hypermese, which is likewise termed Lichanus, and from Mercury who is placed betwixt Venus and the Sun, Paramese.

Pythagoras by Musical proportion calleth that

a Tone, by how much the Moon is distant from the Earth: from the Moon to Mercury the half of that space, and from Mercury to Venus almost as much: from Venus to the Sun sesquiple: from the Sun to Mars a Tone, that is as far as the Moon is from the Earth: from Mars to Jupiter half, and from Jupiter to Saturn half, and thence to the Zodiacal sesquiple: thus there are made seven Tones, which they call a Diapason harmony, that is an universal concert: In which Saturn moves in the Dorick mood, Jupiter in the Phrygian, and in the rest the like.

Those sounds which the seven Planets, and the Sphere of fixed Stars, and that which is above us, termed by them Antichthon, make, Pythagoras affirmed to be the Nine Muses: but the composition, and symphony, and as it were connexion of them all, whereof as being eternal and unbegotten, each is a part and portion, he named Mnemosyne.

C H A P. III.

The Octochord.

(a) NOW Pythagoras first of all, (b) left the middle sound by conjunction, being it self compared to the two Extrems, should render only a Diatessaron concert, both to the Neate and to the Hypate: but that we might have greater variety, the two Extrems making the fullest concord each to other, that is to say, the concord of Diapason, which consists in a double proportion. Which inasmuch as it could not be done by two Tetrachords, he added an eighth sound, inserting it betwixt the Mese and Paramese, setting it from the Mese a whole Tone, and from the Paramese a Semitone; so, that which was formerly the Paramese in the Heptachord, is still the third from the Neate, both in name and place; but that which was now inserted is the fourth from the Neate, and hath a concert unto it of Diatessaron, which before the Mese had unto the Hypate; but the Tone between them, that is the Mese, and the inserted, called the Paramese, instead of the former, to which soever Tetrachord it be added, whether to that which is at the Hypate, being of the lower; or to that of the Neate, being of the higher, will render Diapente concord; which is either way a system, consisting both of the Tetrachord it self, and the additional Tone, as the Diapente proportion, (viz. sesquialtera) is found to be a system of sesquialtera, and sesquioctava, the Tone therefore is sesquioctava. (c) Thus the interval of four Chords, and of five, and of both conjoined together, called Diapason, and the Tone inserted between the two Tetrachords, being after this manner apprehended by Pythagoras, were determined to have this proportion in numbers.

C H A P. VI.

The Arithmetical Proportions of Harmony.

(a) PYthagoras is said to have first found out the proportion and concord of Sounds one to another, the Diatessaron in sesquitercia, the Diapente in sesqui-

sesquialtera, the Diapason in duple. The occasi-

(b) De die na- on and manner is related by (b) *Censorinus*, (c) *Boethius*, (d) *Macrobius*, and others; but more exactly by (e) *Nicomachus*, thus:—

(d) In Somn. Being an intense thought, whether he might invent any instrumental help for the Ear, solid and infallible; such as the Sight hath by a compass and a rule, and by a dioptré; or the Touch by a Ballance, or by the invention of measures: As he past by a Smith's shop, by a happy chance he heard the Iron Hammers striking upon the Anvil; and rendring sounds most consonant one to another in all combinations except one. He observed in them these three concords, the Diapason, the Diapente, and the Diatessaron; but that which was between the Diatessaron and the Diapente, he found to be a discord in it self, tho' otherwise useful for the making up of the greater of them, (the Diapente). Apprehending this come to him from God, as a most happy thing, he hasted into a shop, and by various trials, finding the difference of the sounds to be according to the weight of the Hammers, and not according to the force of those who struck, nor according to the fashion of the Hammers, nor according to the turning of the Iron which was in bearing out: Having taken exactly the weight of the Hammers, (f) he went straightway home, and to one beam fastned to the walls, cross from one corner of the room to the other, (lest any difference might arise from thence, or might be suspected to arise from the properties of several beams) tying four strings of the same substance, length, swiftness, and (g) twist, upon each of them he hung a several weight, fastning it at the lower end, and making the length of the strings altogether equal. Then striking the strings by two at a time interchangeably, he found out the aforesaid concords, each in its own combination; for that which was stretched by the greatest weight, in respect of that which was stretched by the least weight, he found to found a Diapason. The greatest weight was of 12 Pound, the least of 6. Thence he determined, that the Diapason did consist in double proportion, which the weights themselves did shew. Next he found, that the greatest to the least but one, which was of eight pound, founded a Diapente, whence he inferred this to consist in the proportion, called, Sesquialtera, in which proportion the weights were one to another. But unto that which was less than it self in weight, yet greater than the rest, being of nine pound, he found it to found a Diatessaron; and discovered, that, proportionably to the weights, this concord was Sesquitertia, which string of nine pound is naturally Sesquialtera to the least, for 9 to 6 is so, (viz. Sesquialtera) as the least but one, which is 8, was to that which had the weight 6, in proportion Sesquitertia; and 12 to 8 is Sesquialtera; and that which is in the middle between Diapente and Diatessaron, whereby Diapente exceeds Diatessaron, is confirmed to be in Sesquioctava proportion, in which 9 is to 8. The system of both was called Diapente, that is, both of the Diapente and Diatessaron joined together, as duple proportion in compounded of Sesquialtera and Sesquitertia; such as are 2. 8. 6. Or on the contrary of Diatessaron and Diapente, as duple proportion is compounded of Sesquitertia and Sesquialtera, as 12. 9. 6. being taken in that order.

(f) Περὶ ἐαυ-
τον ἀπὸ πλά-
γης, Meibomius
otherwise.

(g) Ἰσοεξέλιξις,
which Meibo-
nius, contra-
ry to all MSS.
would change
unnecessarily
into ἰσοεξέ-
λιξις, and ren-
ders æque-
graves.

Applying both his hand and ear to the weights which he had hung on, and by them confirming the proportion of the relations, he did ingeniously transfer the common result of the strings upon the cross beam, to the bridge of an instrument, which he called *Χερδόν*; and as for stretching them proportionably to the weights, he did transfer that to an answerable screwing of the pegs. Making use of this foundation as an infallible rule, he extended the experiment to many kinds of Instruments, Cymbals, Pipes, Flutes, Monochords, Trigons, and the like; and he found, that this conclusion made by numbers was consonant without variation in all. That sound which proceeded from the number 6; he named *Hypate*; that which from the number 8, *Mese*, being Sesquitertia to the other, that from 9, *Paramese*, being a tone sharper than the *Mese*, viz. Sesquioctava; that from 12, *Neate*. And supplying the middle spaces according to the Diatonick kind, with proportionable sounds, he so ordered the Octochord with convenient numbers Duple, Sesquialtera, Sesquitertia, and (the difference of these two last) Sesquioctava.

Thus he found the progress by a natural necessity, from the lowest to the highest, according to the Diatonick kind; from which again he did declare the Chromatick and Enarmonick kinds.

CHAP. V.

The Division of the Diapason, according to the Diatonick kind.

THIS Diatonick kind seems naturally to have these degrees and progresses, hemitone, tone and tone, (half note, whole note and whole note.) This is the system Diatessaron, consisting of two tones, and that which is called a hemitone; and then another tone being inserted, Diapente is made, being a system of three tones and a hemitone. Then in order, after this there being another hemitone, tone and tone, they make another Diatessaron, that is to say, another Sesquitertia. So that in the antienter Heptachord, all fourths from the lowest, found a Diatessaron one to another, the hemitone taking the first, second, and third place, according to the progression in the Tetrachord. But in the Pythagorical Octochord, which is by a conjunction a system of the Tetrachord, and the Pentachord, and that either D d d 2 joint-

joynly of two Tetrachords, or disjoynly of two Tetrachords, separated from one another by a tone, the procellion will begin from the lowest, so that every fifth sound will make Diapente, the hemitone passing into four places, the first, the second, the third, and the fourth.

C H A P. VI.

The Canon of the Monochord.

- (a) *Lact.* (a) **P**ythagoras, as Timaeus saith, found out the Canon of one Chord, that is the rule of the Monochord. (b) *Aristides* relates, that a little before he dyed, he exhorted his friends to play on the Monochord, thereby implying, that the height which is in Musick, is to be received rather by the Intellect through numbers, than by the sense through the ears.
- (c) *Vit. Pyth.* Duris (cited by (c) *Porphyrus*) mentions a brazen Tablet, set up in the Temple of Juno, by *Arminestus* son to Pythagoras, on which were graven, besides other arts, a Musical Canon; which was afterwards taken away by *Simon* a Musician, who arrogated the Canon to himself, and published it as his own.
- (d) *Mathemat.* (d) The division of the Canon, saith *Theon*, is made by the Tetractys in the Decad, which consists of a Monad, a Duad, a Triad, a Tetrad, 1, 2, 3, 4. For it comprehends a Sesquitercia, a Sesquialtera, a Duple, a Triple, and a Quadruple proportion. The Section of the Pythagorical Canon, according to the intention of Pythagoras himself, not as *Erasmosthenes* misunderstood it, or *Thrasyllus*, [whose operation *Theon* sets down] but as *Timaeus* the *Locrean* (whom *Plato* also followeth) to 27. (f) *Nicomachus* mentions, as intending to deliver it in his larger Treatise of Musick. See also (g) *Euclid*, (h) *Aristides*, *Quintilianus*, and others.
- (f) *Manual. Music. lib. 1. p. 24.*
(g) *Sect. Canon.*
(h) *Mus. lib. 3. pag. 116.*

C H A P. VII.

Institution by Musick.

- (a) *Jamb. vit. Pyth. cap. 15.* (a) **C**onceiving, that the first institution of men was to be made by sense, so that a man might see those fair figures and forms, and might hear the most excellent Musick, he first began by teaching Musick by Songs and Rhythms, by which the cures of manners and passions were made, and by which the harmonies of the faculties of their souls were reduced to their primitive dispositions; and cures of distempers both of body and mind were invented by him. And that which was above all these, worthy to be taken notice of, that he made for his disciples those which were called *ἑσπερίαι* and *ἠμαί*, [of Musick] both by weight and by sound, and composed them harmonically, in a strange way making the commixtures of those tones which are called Diatonick, Chromatick, and Enarmonick, by which he changed all the passions of the mind, which were newly raised in them without reason, and which did procure griefs, and angers, and pities, and unseemly loves, and fears, and all kind of desires, and vexations, and appetites, and softnesses, and idlenesses,

and impetuosities, correcting and directing every one of these towards virtue, by convenient harmonies, as by certain effectual medicines. And at night when his disciples went to sleep, he delivered them from all the noises and troubles of the day, and purified the perturbations of their minds, and rendred their sleeps quiet, with good dreams and predictions. And when they rose again from their beds, he freed them from the drowsiness of the night, from faintness and sluggishness, by certain proper Songs, either set to the Lute, or some high Voice. As for himself, he never played on Instrument, or any thing, but he had it within him; and by an unconceivable kind of divinity, he applied his ears and mind unto the harmony of the world, which he alone did understand; and understanding the universal harmony and concent of the Spheres, and those Stars that move in them, which makes a more full and excellent musick than mortals by reason of their motion, which of unequal differing swiftnesses and bignesses overtaking one another, all which are ordered and disposed in a most musical proportion one towards another, beautified with various perfections, wherewith being irrigated, as having likewise orderly the discourse of his mind, as we may say exercising, he framed some representations of these, to exhibit them as much as was possible, imitating (that Musick) chiefly by Instruments, or the Voice alone. For he conceived that to himself only of all upon the earth, were intelligible and audible, the universal sounds, from the natural fountain and root, and thought himself worthy to be taught and to learn, and to be assimilated by desire and imitation to the celestials, one that was organized [in the parts of the body] by the deity which begot him. But it was sufficient for other men, that they, always looking upon him, and such things as they received from him, be benefited by images and examples, as not being able to lay hold on the first clear archetypes of all things: As to them, who cannot look upon the Sun, by reason of its splendor, we shew the Eclipse either in a pond of water, or by some boared pitched thing, or by some dark-coloured glass, fearing the weakness of their eyes, and framing another way of perception, instead of looking on it, to those who love such things, tho' something inferior. This *Empedocles* seemeth to imply concerning his extraordinary and divine constitution above others, when he said:

*'Mongst these was one in things sublimest skill'd,
His mind with all the wealth of learning fill'd.
He sought whatever Sages did invent;
And whilst his thoughts were on this work intent,
All things that are, he easily survey'd,
And search through ten or twenty ages made.*

Intimating by sublimest things; and, He survey'd all things that are; and, The wealth of the mind, and the like, the exquisite and accurate constitution of Pythagoras beyond others, both for body and mind, in seeing, hearing, and understanding.

C H A P. VIII.

Medicine by Musick.

(a) *Jamb. c. 25.* (a) **P**ythagoras conceived, that Musick conduced much to health, if used appositely; for he was accustomed to make use of this purification, not perfunctorily. This he called, *Medicine by Musick*, which kind of Melody he exercised about the Spring-time. He seated him who play'd on the Lute in the midst, and those who could sing sat round about him; and so he playing, they made a consort of some excellent pleasant Verses, wherewith they seemed exhilarated, and decently compos'd.

They likewise at another time made use of Musick as of a Medicine, and there were certain pleasant Verses framed, conducing much against the affections and diseases of the mind, and against the dejections and corrodings of the same. Moreover, he compos'd others against anger and malice, and all such disorders of the mind. There was also another kind of Musick and Song invented, against unlawful desires. He likewise used Dancing. He used no musical instrument but the Lute. Wind-Instruments he conceived to have an ignoble sound, and to be only fit for the common people, but nothing generous.

He likewise made use of the words of Homer and Hesiod, for the rectification of the mind. It is reported, that Pythagoras, by a Spondiack Verse

(b) *Reading* (b) *out of the works* [perhaps of Hesiod, whose Poem bears that title, *ἔργα*] by a Player on the Flute, asswaged the madness of a young man of Tauromenium, who being drunk, and having employed all the night lasciviously with his mistress, was going about to fire the door of his Rival's house; for he was exasperated and enflamed by the Phrygian mood. But Pythagoras, who was at that time busied in observing the Stars, immediately appeased and reclaimed him, by persuading the Piper to change his Air into the Spondiack mood. Whereupon the young man being suddenly compos'd, went quietly home, who but a little before would by no means hear the least exhortation from Pythagoras, but threatened and reviled him. In like manner Empedocles, when a young man drew his sword upon Anchitus, his Host, (for that he had in publick judgment condemned his father to death) and was about to have killed him, straightway changing his Tune, sung out of Homer,

Nepenthe calming anger, easing grief:

and by that means freed Anchitus his Host from death, and the young man from the crime of murder; who from thenceforward became one of his disciples, eminent amongst them.

(c) *See cap.* Moreover the whole School of Pythagoras made that which is called (c) *ἑσπέραι*, and *συνάπται*, by certain Verses suitable thereto, and proper against the contrary affections, profitably diverting the constitutions & dispositions of the mind. For when they went to bed, and resigned themselves to rest, they purified their minds from the troubles and busie noises of the day, by some Songs and proper Verses, whereby they rendred their sleeps pleasant and quiet, and little troubled with dreams, and those dreams which they had were good. In the morning,

when they arose from the common relief of sleep, they expelled drowsiness and sleepiness of the head with other Songs.

Sometimes also without pronouncing Verses, they expelled some affections and diseases, and reduced the sick to health, *ἐκαστοίς*, by charming them. And from hence it is probable, that the word Epode came to be used. After this manner, Pythagoras instituted a most profitable correction of manners and life by Musick. Hitherto *Jamblichus*. All which is ratify'd by other testimonies: That they had Verses against the affections of the mind, grief, anger, lust, is related also by (d) *Seneca*, who saith, that (d) *De ira.* Pythagoras compos'd the troubles of his soul by the Lute. And (e) *Cicero*, That the Pythagoreans (e) *Tusc. quæst.* used to deliver Verses; and some Precepts, and to reduce the mind from intenseness of thoughts to tranquillity, by Songs and Instruments. To which effect, (f) *Ælian* relates of Clinius the Pythagorean, that if at any time he perceived himself inclining to anger, he, before it took full possession of him, play'd upon the Lute; and to those who asked him, Why he did so, answered, Because I am calmed.

That he danced, (g) *Porphyrius* confirms, say- (g) *Pag. 211* ing, He danced some dances, which he conceived to confer agility and health to the body.

That he disallow'd Flutes and Wind Instruments, appears from (h) *Aristides Quintilianus*, who saith, (h) *Lib. 2:* He advis'd his disciples to refrain from permitting their ears to be defiled with the sound of the Flute; but on the contrary, to purifie the irrational impulses of the soul by solemn Songs to the Lute.

That he made use of Homer and Hesiod for rectification of the mind, is thus related by (i) *Porphyrius*; he had morning Exercises at his own house, composing his soul to the Lute, and singing some old Pæans of (k) *Thales*. He likewise sung some Verses of Homer and Hesiod, whereby the mind seemed to be rendred more sedate.

The story of the young man is confirmed by (l) *Ammonius*, by (m) *Cicero*, related thus; When as some young men being drunk, and irritated by the musick of Flutes, would have broken open the door of a modest Matron's house, he had the woman-piper play a Spondiack tune; which as soon as she did, their raging petulancy was allayed by the slowness of the Mood, and solemnness of the Tune. (n) *St. Basil* relates another story to the same purpose, That Pythagoras meeting with some that came from a feast drunk, bid the Piper (the Musician at that feast) to change his Tune, and to play a Dorick Air; wherewith they were so brought to themselves, that they threw away their Garlands, and went home ashamed.

That, evening and morning, they used Musick to compose their minds, is affirmed by many others. (o) *Quintilian*. It was the custom of the Pythagoreans as soon as they waked, to excitate their souls with the Lute, that they might be the readier for action; and before they went to sleep, to soften their minds by it. (p) *Plutarch*. The Musick of the Lute the Pythagoreans used before they went to sleep, thereby charming and composing the passionate and irrational part of the soul. (q) *Censorinus*. Pythagoras, that his mind might be continually seasoned with Divinity, used (as they say) to sing before he went to sleep, and as soon as he waked.

As for the several moods, which, in musical compositions, were observed by the Ancients, for

for moving particular passions; there is a remarkable fragment of *Damon* the Musician, cited

(r) *Mus. lib. 2.* by (r) *Aristides.*
pag. 95.

S E C T. 3.

Geometry.

- (a) Cap. 29. *P*ythagoras (saith (a) *Jamblichus*) is reported to have been much addicted to Geometry; for, amongst the Egyptians [of whom he learned it] there are many Geometrical Problems, the most learned of them having been continually, for many ages of gods and men, necessitated to measure their whole country, by reason of the overflowing and decrease of Nilus; whence it is called Geometry. (b) Some there are who ascribe all Theorems concerning Lines, jointly to the Egyptians and the Chaldeans; and all these, they say, Pythagoras took, and augmenting the Science, explained them accurately to his Disciples. (c) *Proclus* affirms that he first advanced the Geometrical part of Learning into a Liberal Science, considering the Principles more sublimely (than *Thales*, *Anaximander*, and *Hippias*, his predecessors in this study) and perscrutating the Theorems immaterially and intellectually. (d) *Timæus* saith, That he first perfected Geometry; the Elements whereof, (as *Anticlistides* affirms) were invented by *Moeris*. (e) *Aristoxenus*, that he first introduced Measures and Weights amongst the Grecians.

C H A P. I.

Of a Point, Line, Superficies and Solid.

- (a) *Procl. in Euclid. lib. 2. def. 2.* (a) *P*ythagoras asserted a Point to be correspondent in proportion to an unite; a Line, to 2; a Superficies, to 3; a Solid, to 4. (b) The *Pythagoreans* define a point, a *Monad* having position. (c) A line being the Second, and constituted by the first Motion, from indivisible nature, they called *Duad*. (d) A superficies they compared to the Number 3. for that is the first of all causes which are found in figures: for a Circle, which is the Principle of all round figures, occultry compriseth a Triad in center, space, and circumference. But a Triangle, which is the first of all rectiline figures, is manifestly included in a Ternary, and receiveth its form according to that number. (e) Hence the *Pythagoreans* affirm, that the Triangle is simply the Principle of generation, and of the formation of things generable; whereupon *Timæus* saith, that all proportions, as well natural, as of the constitution of Elements, are Triangular, because they are distant by a threefold interval, and are collective of things every way divisible, and variously permutable, and are replenished with Material infinity, and represent the natural conjunctions of bodies dissolved, as Triangles which are comprehended by three right Lines; but they have Angles which collect the multitude of Lines, and give an adventitious Angle and Conjunction to them. With reason therefore did *Philolaus* dedicate the Angle of a Triangle to four Gods, *Saturn*, *Pluto*, *Mars*, *Bac-*

chus, comprehending in these the whole quadripartite Ornament of Elements coming down from Heaven, or from the four quarters of the Zodiack. For *Saturn* constituteth an essence wholly humid and frigid: *Mars* wholly fiery, *Pluto* compriseth all Terrestrial life, *Bacchus* predominates over humid and hot generation, of which Wine is a sign, being humid and hot. All these differ in their operations upon second bodies, but are united to one another, for which reason *Philolaus* collected their Union according to one Angle. But if the differences of Triangles conduce to generation, we must justly acknowledge the Triangle to be the Principle and Author of the constitution of sublunary things, for the right Angle gives them essence, and determines the measure of its being; and the proportion of a rectangle triangle causeth the essence of generable Elements; the obtuse Angle giveth them all distance, the proportion of an obtuse angled triangle augmenteth material forms in magnitude, and in all kinds of mutation; the acute Angle maketh their nature divisible, the proportion of an acute-angled Triangle prepares them to receive divisions into infinite; and simply, the Triangular proportion constituteth the essence of Material bodies, distant and every way divisible: Thus much for Triangles.

(f) Of quadrangular figures, the *Pythagoreans* hold that the square chiefly representeth the divine essence, for by it they principally signify pure and immaculate order; for rectitude imitateth inflexibility, equality firm power; for Motion proceedeth from inequality, rest from equality. The Gods therefore, who are Authors in all things of firm consistence, and pure incontaminate order, and inevitable power; are not improperly represented by the figure of a Square. Moreover, *Philolaus* by another apprehension calleth the Angle of a Square, the Angle of a *Rhea*, *Ceres*, and *Vesta*; for seeing that the Square constituteth the Earth, and is the nearest Element to it, as *Timæus* teacheth, but the earth it self receiveth Genital seeds and Prolifick power from all these gods; he not unaptly compareth the Angle of a Square to all these life-communicating Deities. For some call the Earth and *Ceres* her self *Vesta*; and *Rhea* is said wholly to participate of her, and that in her are all generative causes. Whence *Philolaus* saith, the Angle of a Square by a certain terrestrial power, comprehends one union of these divine kinds.

S E C T. II.

Propositions.

OF the many Geometrical Theorems invented by *Pythagoras*, and his followers, these are particularly known as such.

(a) Only these three Polygons fill up the whole space about a point, The equilateral Triangle, and the Square, and the Hexagone equilateral, and equiangle. The equilateral Triangle must be taken six times, for six two thirds make four right Angles; the Hexagone must be taken thrice, for every sex angular Angle is equal to one right Angle, and one third; the square four times, for every Angle of a Square is right. Therefore six equilateral Triangles joined as the Angles,

compleat four right Angles, as do also three Hexagones and four Squares. But of all other Polygons whatsoever, joined together at the Angles, some exceed four right Angles, others fall short. This Proclus calls a *celebrious Theorem of the Pythagoreans*.

(b) Procl. in Eucl. lib. 4. Prop. 32. Com. 6. (b) Every Triangle hath the internal Angles equal to two right Angles. This Theorem Eudemus the Peripaterick, ascribes to the Pythagoreans; their manner of Demonstration see in Proclus.

(c) Euclid. lib. 1. Prop. (c) In rectangle Triangles the square which is made of the side that subtendeth the right Angle, is equal to the squares which are made of the sides containing the right Angle.

(d) Vitruv. Archit. 9. 1. (d) This Theorem Pythagoras found out; and by it shewed how to make a gnomon or square (which the Carpenters cannot do without much difficulty and uncertainty) not Mechanically, but according to Rule; for if we take three Rulers, one of them being three foot long, the Second four foot, the Third five foot, and put these three so together that they touch one another at the ends in a Triangle, they make a perfect Square: Now if to each of these Rulers be adscribed a Square, that which consisted of three foot will have 9; that which of 4, will have 16; that which of 5, will have 25. So that how many feet the area's of the two lesser squares of three and four make, so many will the square of 5 make.

(e) Laert. (e) Apollodorus the Logistick, and others, relate, that upon the invention of this Theorem, Pythagoras sacrificed a Hecatomb (f) to the Muses, in confirmation whereof they alledge this Epigram,

*That noble Scheme Pythagoras devis'd,
For which a Hecatomb he sacrific'd.*

(g) Non posse su. viv. sec. Epicur. (g) Plutarch saith, it was only an Ox; and even that is questioned by (h) Cicero, as inconsistent with his doctrine, which forbade bloody sacrifices. The more accurate therefore (saith * Prophyrius) say, he sacrificed an Ox made of Flower; or, as (i) Gregory Naziansen, of Clay.

(k) Non posse suaviter vivere. sec. Epicurum. But (k) Plutarch doubts, whether it were for the invention of the forementioned Proposition, that Pythagoras sacrificed an Ox, or for the Problem concerning the Area of a Parabole. Indeed,

(l) Procl. in Eucl. lib. 4. prop. 44. (l) the application of spaces or figures, to lines, is, as Eudemus his followers affirm, an invention of the Pythagorick Muse, Parabole, Hyperbole, Elleipsis. From them the later Writers taking these names, transferr'd them to Conical lines, calling one Parabole, another Hyperbole, another Elleipsis; whereas those ancient divine persons (the Pythagoreans) signified by those names the description of places, applied to a determinate right line. (m) For when a right line being proposed, the space given is wholly adequate to the right line; then, they say, the space is applied, (παρεβάλλειν) but when you make the length of the space greater than that of the right line, then, they say, it exceeds; (ὑπερβάλλειν) but when less, so as the space being described, there is some part of the right line beyond it, then it falls short. (ἐλλείπειν) In this sense Euclid useth Parabole, lib. 1. prop. 44. and Hyperbole and Elleipsis, in the 6th Book.

C H A P. III.

How he collected the Stature of Hercules.

(a) Plutarch in his Treatise, entituled, How great difference there is in the souls and bodies of men, as to ingenuity and strength, relates, that Pythagoras reasoned curiously and subtilly, in finding out and collecting the extraordinary stature and length of Hercules his body: for, it being manifest, that Hercules measured with his feet the running course of Olympian-Jupiter at Pisa, and that he made it 600 feet long; and that all the other running courses in Greece, instituted afterwards by other persons were 600 foot long, yet shorter than this; He easily understood the measure of Hercules his foot, considering that it was proportionably so much longer than that of other men, as the Olympick course was longer than all others. And having comprehended the size of Hercules his foot, he considered what length of body did suit with that measure, according to the natural proportion of all the members one to another; and so collected the consequent, That Hercules was so much taller in body than others, by how much the Olympick course was longer than the rest, which were made after the same number of feet.

S E C T. IV.

Astronomy.

(a) Neither did they superficially consider the speculation of celestial things, in which Pythagoras was exquisite, as appears by these few remains. (a) Jamb. cap. 29. pag. 144.

C H A P. I.

The System of the Spheres.

(a) THE word *κεκλις*, Heaven, is taken three ways; first, for the sphere of fixed Stars; secondly, for all that is betwixt the sphere of fixed Stars and the Moon; lastly, for the whole world, both Heaven and Earth. (a) Anon vit. Pyth. apud Phot.

(b) The anonymous writer of the life of Pythagoras affirms, that he said, there are twelve orders in Heaven, whereof the first and our most is the fixed sphere, next to this is the Star of Saturn, and then the other six Planets, Jupiter, Mars, Venus, Mercury, Sun and Moon; next these, the sphere of Fire, then that of Air, then that of Water, last of all the Earth. (b) Apud Phot.

But they who seem more strictly to follow the mind of Pythagoras and his disciples, averr, They held the celestial spheres to be ten, whereof nine only are visible to us; (the fixed Sphere, the seven Planets, and our Earth) the tenth is Antichthon, an Earth above, or opposite to ours. This Antichthon they (d) added, to make up the number of the moving bodies. For (e) considering, that the affections and proportions of Musick consist in numbers, that all other things appear to be assimilated to numbers, that numbers are the first of all nature, that the elements of numbers are the elements of all beings; They

(d) Plut. Simplic. (e) Aristot.

They asserted, that all Heaven is Harmony and Number, and that the affections and parts of Heaven are correspondent to number: and collecting these, they adapted them to the composition of the whole, wherein if any thing were wanting, they supplied it, that the whole might be alike compacted. As, because the Decad seems to be perfect, and to comprehend the whole nature of numbers, therefore they asserted the Celestial Spheres to be Ten. Now there being Nine only visible to us, hereupon they conceived the Tenth to be *Antichthon*, an Earth opposite to ours.

As concerning the Order and System of these, the Pythagoreans (f) held, That in the middle of the world is fire; or (as (g) Stobæus) in the midst of the Four Elements is the fiery Globe of Unity, (h) which they term *Vesta* and *Monad*. They (saith Simplicius) who understand this thing more intimately, say, that this fire is the procreative, nutritive, and excitative power, which is in the midst of the Earth. But Simplicius himself seems not to have apprehended the right meaning of the Pythagoreans, who by this fire, or fiery Globe of Unity, meant nothing else but the Sun, seated in the midst of the Universe, immovable, about which the other parts of the World are moved. This Opinion Pythagoras seems to have derived from the Egyptians, who Hieroglyphically represented the Sun by a Beetle, (k) because, as the Beetle having formed a Ball of Cow-dung, and lying upon its back, rolls it about from Claw to Claw; so the other parts of the World are moved and rolled by and about the Sun.

That by this immovable fire in the midst of the Universe, they understood not (as (l) Simplicius conceiveth) the Earth, is manifest, forasmuch as they further held, that (m) the Earth is not immovable, nor seated in the midst of the Globe, but suspended, as being (n) one of the Stars carried about the fire which is in the middle, and that thereby it maketh Day and Night. (o) The Reason why the Earth ought not to have the middle place, is, because the most excellent body ought to have the most excellent place: but Fire is more excellent than Earth, and the Center more excellent than all places without it; therefore they conceived, that not the Earth, but the Fire, is placed in the midst. (p) Moreover, because that which is the most excellent of the Universe, ought principally to be preserved, and the middle is such, therefore they term the Fire, *Διὸς φυλακὴν*, the custody of Jupiter.

(q) The same they held of the *Antichthon* also, [viz. That like our Earth it is suspended, as being one of the Stars carried about the Fire, and thereby maketh Day and Night.] By this *Antichthon*, Clemens saith, they understood Heaven: Simplicius, the Moon, as being a kind of ætherial Earth, as well for that it eclipseth the light of the Sun, which is proper to the Earth, as for that it is the bound of Celestials, as the Earth of Sublunaries. But the contrary is manifest, as well from the completing of the number ten, (in respect whereof this *Antichthon* was imagined) as for that they held, (r) it is not visible to us, by reason, that following the motion of this Earth, it is always opposite to, or beneath us, and the bigness of our Earth hinders us from seeing it: And Aristotle affirms there were some who conceived the *Antichthon* to

be the cause why there are more Eclipses of the Moon than of the Sun, which may likewise happen by reason of many other bodies invisible to us.

(s) Laertius, who saith Philolaus was the first (s) In Phil. that conceived the Earth to have a Circular Motion, seems to mean no more, than that he first committed this Opinion of Pythagoras to writing, and first made it publick; for Eusebius expressly affirms, that he committed to writing the dissertations of Pythagoras. His Opinion, as delivered by Plutarch and Stobæus, is exactly the same; for he placed fire in the midst, which he called the *Genius* of the Universe, and the Mansion of Jupiter, and the Mother of Gods, and Altar, and Ward; and Measure of Nature: he conceived that the Ten Celestial Bodies move about it. Heaven, of the sphere of fixed Stars, the five Planets, the Sun, the Moon, the Earth, and lastly the *Antichthon*.

From the same Fountain seems Aristarchus the Samian to have derived this Hypothesis, though some ascribe the invention thereof to him; for he supposed, that (u) the Sun and Planets move not, but that the Earth moveth round about the Sun, which is seated in the middle. (x) Plutarch adds, that Plato in his old age repented for that he had placed the Earth in the midst of the Universe, and not in its proper place. (u) Archimæd. in Avenar. Plut. plac. 3. 13. (x) In Platon. quæst. and in Numa.

This Opinion was of late revived by Nicolaus Copernicus, who considering how inconvenient and troublesome it is to understand, and maintain the motions of the Heavens, and immobility of the Earth, explained it with admirable Ingenuity, after the mind of the Pythagoreans. According to whose Hypothesis, the Sun (as we said) is settled in the midst of the World, immovable: The sphere of fixed Stars in the extremity or outside of the World, immovable also; betwixt these are disposed the Planets, and amongst them the Earth as one of them; the Earth moves both about the Sun, and about his proper Axis. Its diurnal Motion by one revolution, makes a night and a day; its annual motion about the Sun, by one revolution makes a year; so as by reason of his diurnal motion to the East, the Sun and other Stars seem to move to the West; and by reason of its annual motion through the Zodiac, the Earth it self is in one Sign, and the Sun seems to be in the Sign opposite to it: Betwixt the Sun and the Earth they place Mercury and Venus: Betwixt the Earth and the fixed Stars, Mars, Jupiter, and Saturn: The Moon being next the Earth, is continually moved within the great Orb betwixt Venus and Mars, round about the Earth, as its Centre: Its revolution about the Earth is completed in a Month; about the Sun (together with the Earth) in a Year.

CHAP. II.

The Motions of the Planets.

AS concerning the Course and Revolution of the Planets, (a) they affirm the great year to be the Revolution of Saturn; for the rest of the Planets absolve their Periods in a shorter time; but Saturn in no less than Thirty Years, Jupiter in 12 Years, Mars in Two; the Sun [speaking according

(a) Anon. vii. Pyth. apud Phot.

ing to the *Phenomenon*] in One; *Mercury* and *Venus* as the Sun, [or to speak more exactly, *Mercury* in Three Months, *Venus* in Eight] the Moon, as being next the Earth soonest, in a Month.

According to this inequality, appears the motion of the Planets to our sight, by reason that the Eye is out of the Center of the Orb: But in the whole course of Astronomy (saith *Geminus*) are supposed the motions of the Sun, Moon, and five Planets, equal and circular, contrary to the diurnal Revolution of the World. The *Pythagoreans* first applying themselves to these disquisitions, supposed circular and equal motions of the Sun, the Moon, and the five Planets; for they admitted not such irregularity in eternal and divine bodies, that sometimes they should move swifter, sometimes slower, and sometimes stand still (as the stationary Points in the Planets). Neither in any sober, well-tempered person could we admit such irregularity of pace. Indeed, the necessities of life often cause men to move faster or slower; but in the incorruptible Nature of the Stars, there cannot be alledged any cause of swiftness and slowness. Wherefore the *Pythagoreans* proposed this question, how the *Phenomena's* might be salved by circular and equal motions.

(b) Cap. 6. That *Pythagoras* himself observed these Irregularities, and the ways to save them, appears from *Jamblichus*, who saith, (b) he communicated a revelative right knowledge of all manner of motion of the Spheres and Stars; ἐπὶ προόδῳ τε, καὶ ὑπολείψει, καὶ ὁ ἀνωμαλῶν, ἐκκεντροποιητῶν τε, καὶ ἐπικύκλων. Ἐμπροσθοίσις is the anticipation of any Planet, either in respect to some other Planet, or to the fixed Stars. ὑπολείψις is the falling later of any Planet, either in respect to some other Planet, or to the fixed Stars, Ἀνωμαλία, *Inequality*, is, when the same Planet moveth slower and faster, according to its distance from the Sun, in the *Pythagorick Hypothesis*; (or in the *Ptolemaick*, from the Earth) slower in its *Aphelium*, faster in its *Perihelium*.

The two ways of salving these *Phenomena's*, are by *Eccentricity*, or by *Epicycles*; for a *Heliocentric* with an *Epicycle* (as *Eudoxus* first demonstrated) is equipollent to an *Eccentric*. *Eccentricity* is, when the Center of their equal motion is distant from the Center of their apparent motion. Both these (c) *Jamblichus* ascribes to *Pythagoras*, from whom perhaps they were derived to *Eudoxus*, to whose invention (d) others ascribe them.

(c) Loc. cit.
(d) Laert.
Eudox.

C H A P. III.

The Intervals and Harmony of the Spheres.

Pythagoras (saith (a) *Censorinus*) asserted, that (a) *De die natali*. cap. 13. this whole World is made according to musical proportion, and that the seven Planets, betwixt Heaven and the Earth, which govern the Nativities of Mortals, have a harmonious motion, and Intervals correspondent to musical Diastemes, and render various sounds, according to their several heights, so consonant, that they make most sweet melody; but to us inaudible, by reason of the greatness of the noise, which the narrow passage of our Ears is not capable to receive. For, as *Eratosthenes* collected, that the largest Circumference of the Earth is 252000 *Stadia*; so *Pythagoras* declared how many *Stadia* there are betwixt the Earth and every Star. In this measure of the World, we are to understand the *Italic Stadium*, which consists of 625 Feet; for there are others of a different length, as the *Olympick* of 600 Feet, the *Pythick* of 500. From the Earth therefore to the Moon, *Pythagoras* conceived to be about 126000 *Stadia*, and that distance [according to musical proportion] is a Tone; from the Moon to *Mercury* (who is called σίλβων) half as much, as it were a *Hemitone*, from thence to *Phosphorus*, which is the star *Venus*, almost as much, that is, another *Hemitone*; from thence to the Sun twice as much, as it were a Tone and a half. Thus the Sun is distant from the Earth Three Tones and a half, which is called *Diapente*; from the Moon Two and a half, which is *Diateffaron*; from the Sun to *Mars*, who is called Πνεύς, there is the same Interval as from the Earth to the Moon, which makes a Tone; from thence to *Jupiter*, who is called φάειδων, half as much, which makes a *Hemitone*; from thence to the supream Heaven, where the Signs are a *Hemitone* also; so that the Diasteme from the supream Heaven to the Sun is *Diateffaron*, that is, Two Tones and a half: from the same Heaven to top of the Earth six Tones, a *Diapason* concord. Moreover he referred to other Stars many things, which the Masters of Musick treat of, and showed, that all this World is Enarmonick. Thus *Censorinus*. But (b) *Pliny* delivering this Opinion of *Pythagoras*, reckons seven Tones from the Earth to the supream Heaven; for whereas *Censorinus* accounts but a *Hemitone* from *Saturn* to the *Zodiac*, *Pliny* makes it *Sesquiple*.

(b) Lib. 9. cap. 21, 22.

C H A P. IV.

Of the Planet Venus.

(1) Lib. 2.
cap. 8.

(a) **N**EXT the Sun (saith *Pliny*) there is a great Star, called *Venus*, alternately errant, in Names emulating both the Sun and Moon. For, preventing and rising before morning, he takes the Name of *Lucifer*, as another Sun bringing on day; on the other side, shining at Sun-set, it is called *Vesper*, as proroguing light, and performing the Office of the Moon, which its Nature *Pythagoras* the *Samian* first found out, about the *XLII Olympiad*, which was of *Rome* the 147th year. In magnitude it exceeds all the other Stars, and is of so great splendor, that this Star only casts a shadow; whence it hath diversity of Names; some call it *Juno*; others, *Isis*; others, *Mothers of the gods*. By the Nature hereof, all things are generated upon Earth; for, at either ri-

sing, it scattereth prolifick dew, supplying not only the Conceptions of Earth, but likewise stimulating all living Creatures. It performs the Revolution of the *Zodiack* in 348 days, never receding from the Sun more than 46 parts, according to *Timeus*. Thus *Pliny*. That there is a mistake in the time, hath been already shown; but the thing it self is confirmed by *Laertius*, who affirms, *Pythagoras* first said, that *Vesper* and *Lucifer* are the same star; yet elsewhere adds, that some ascribe this to *Parmenides*. But that it was a Doctrine of the *Pythagoreans*, appears from this account given by *Timeus*; the star *Juno* many call *Venus* and *Lucifer*. All persons are not skilful in the Rules of sacred Astronomy, and in the Sciences of rising and setting; for the same star is sometimes *Hesper*, when it followeth the Sun in such manner, that it is conspicuous to us when the Sun is set; and sometimes *Eous*, when it goeth before the Sun, and riseth before Sun-rising.

The Doctrine of Pythagoras.

THE *Pythagoreans* being adorned with these studies of Science, from thence ascended to perfect the Works of the World, and the Principles of Nature.

(b) Jam. cap.
29. pag. 144.

(b) *Pythagoras* first gave the Name to Philosophy, defining it, An Appetition, and Love to Wisdom. *Wisdom* is the Science of Truth in things that are. *Things that are*, he called Immaterial, and Eternals, and sole Agents, which are the Incorporeals; the rest are equivocally called such, by Participation with these, viz. Corporeals, Materials, and Corruptibles, which indeed are not. Now *Wisdom* is the Science of those things which are, but not of those which are equivocally; for Corporeals are not docible, nor admit certain knowledge, being infinite, and not comprehensible by science, and things which (as it were) are not, according to the difference of all things, neither can be rightly described by any definition. Of those whose Nature is such, as that they cannot be known, it is impossible to frame a Science; wherefore neither is it likely, that there can be a love of a Science which is not. But rather of that which is conversant about those things which properly are, and continue always the same, and like themselves, and co-exist always with a true appellation. Upon the knowledge of these followeth that which is of equivocal things, (tho' not sought after) as the science of Particulars follows the science of Universals: For, as *Architas* saith, *They who know Universals well, will plainly see what Particulars are*. Wherefore things that are, are not of one kind only and simply, but of many various kinds, Intelligibles and Incorporeals, whose appellation is *τὰ ὄντα*, things that are. Corporeal things, subject to sense, are those which are by participation of those that are. Concerning all these, he delivered most proper Sciences, leaving nothing unexcused, and delivered also to men the common Sciences, as the de-

monstrative, the definitive, the divisive, as is manifest from the Commentaries of the *Pythagoreans*.

Hereupon he defined Philosophy, (c) the knowledge of things that are, as things that are, and (d) the knowledge of things divine and humane; as also (e) the meditation of death, daily endeavouring to free the soul from the prison of the body; and (f) the resemblance of God as far as is possible for man. (c) Pfell. com. pend. de 5000. (d) Pfell. loc. cit. (e) D. Hieron. adv. Rufin. (f) Stob. serm.

For (g) the scope of Philosophy is to free the mind, (the divine part of the soul) which is planted in us, and to set it at liberty, without which liberty none can learn or perceive any thing solid or true, by the help or benefit of sense; for the mind, according to him, seeth all things, and hears all things; all things else are deaf and blind. (g) Porph. pag. 101.

In order hereunto it is, that Philosophy being of two kinds, Practick and Theoretick; the Practick, according to the method of the *Pythagoreans*, precedes the Theoretick. The Reason receive thus, explain'd by (h) *Hierocles*. (h) In carm.

Philosophy is the purification and perfection of humane life; purification, from material irrationality and the mortal body; perfection, from the recovery of its own excellent life, reducing it to the Divine Resemblance. Virtue and Truth are chiefly able to effect these, that taking away Excess of passions, this (rightly had) inducing the divine form.

First are laid down the Instructions of Practick Virtue; for first we must compose the Irrationality which is in us, and then (so prepar'd) apply our selves to the knowledge of the more divine things. For as it is not possible for the Eye, being full of dirt, and not cleansed, to look upon things very bright; so neither can the Soul, not possessing Virtue, gaze upon the Beauty of Truth. For that which is not pure, is not capable of touching that which is pure. Practick Philosophy produceth Virtue; Theoretick, Truth. As in these Golden Verses (of *Pythagoras*) we find the Practick Philosophy, called Humane Virtue, but the

the Theoretick celebrated as Divine Virtue; when closing the Instructions of Civil Virtue.

*These labour (saith he) study these, and these affect;
To Divine Virtue, these thy steps direct.*

First therefore a Man must be made good, then a God: good the Civil Virtues render a Man, but the Sciences conducing to the Divine Virtue divinise. But to those who ascend, the lesser things precede the greater; for which reason, in the Pythagorical Precepts, the Rules of Virtue are first delivered, teaching us to ascend from the greatest use of Life, to the Divine Resemblance.

* Anon. Phot. * Three ways, say they, man may become better than himself, first by Conversation with the Gods; for it is necessary, that he who addresseth himself to them, at that time, sequester himself from all evil, assimilating himself as near as he can to God: Secondly, by well doing, for that is proper to God, and therein he imitates God: Thirdly, by death; for, if the Soul in this Life, being a little separated from the Body, becometh better, and beginneth to divine in Dreams by Visions and Extralies of Diseases, it will be much better when it shall be wholly separated from the Body.

Hence he affirmed; that (i) the most considerable of all things Humane, is to inform the Soul concerning good and ill; That (k) men have perfect felicity when they have a good Soul, or that (l) the knowledge of the perfection of the Virtues of the Soul is the chief felicity; That (m) every man is appointed by God to know and to contemplate; That (n) Virtue is a Harmony, and so is all good, even God himself; That (o) the End or chief Good is to resemble God: whence he expressly said, Follow God, not visible to the Eye, but intelligible to the Understanding, by the harmony of the World; That (p) the most excellent things given by the gods unto men, are, to speak truth, and to benefit others, [Theoretick and Practick Virtue] and that each of these resembled the Works of God: to this latter *Strabo* alludes, commending those who said, (q) Men imitate the gods most when they benefit others: The former is confirmed by (r) *Porphyrius*, that he advised above all things to speak truth, for that only is able to make Men like to the gods; for God himself, as he learn'd of the *Magi*, who term him *Oromasdes*, in his Body resembles light, in his Soul truth. This is that *Stobaeus*, (*Divinity*) which (s) *Jamblichus* reckons last in his Recapitulation of the Heads of the Pythagorick Philosophy, and is the same with which the Golden Verses conclude, thus,

*Then stript of flesh up to free Ether soar,
A deathless god, divine, mortal no more.*

S E C T. I.

*Practick Philosophy, its parts; and first of
Pedeutick.*

PRACTICK Philosophy seems to have been the Invention of *Pythagoras*; for *Aristotle* affirms

that he first undertook to discourse concerning Virtue; That *Socrates* is generally esteemed the Author thereof, perhaps is only because, as *Aristotle* adds, coming after him he discoursed better and more fully thereupon.

To this part of Philosophy alludes (b) this Sentence of *Pythagoras*; That the discourse of that Philosopher is vain, by which no passion of a man is healed: for as there is no benefit of Medicine, if it expel not diseases out of bodies, so neither of Philosophy, if it expel not ill out of the Soul.

Virtues being of two kinds, *private*, which respect our selves, and *publick*, which have reference to others; *Pythagoras* seems to have comprehended the first under *Pedeutick*, the second under *Politick*. *Laertius* affirms he writ Three Treatises, *Pedeutick*, *Politick*, *Physick*. The Heads of *Pedeutick*, according to the general recapitulation of (c) *Jamblichus*, seem to have been these, *Institution*, *Silence*, *Abstinence from Flesh*, *Fortitude*, *Temperance*, *Sagacity*.

CHAP. I.

Institution, Silence, Abstinence.

CONCERNING Institution, &c. there are these Sentences and Precepts of *Pythagoras*, preserved by *Stobaeus* and others.

(a) We ought to make choice of the best course of life; for Custom will make it pleasant: Wealth is a weak Anchor, Glory a weaker: The Body, Magistracies, Honours, all these are infirm and unable. What are then able Anchors? Wisdom, Magnanimity, Fortitude; these no tempest shakes. This is the Law of God, that Virtue only is solid; all else are but trifles.

(b) To take away bitterness from Wormwood, and liberty from Speech, are both alike.

(c) Endeavour not to conceal thy faults with words, but to amend them by reproof.

(d) It is not so hard to offend; as not to reprove an offending person.

(e) As the sickness of the body, if hid or praised, is not healed, so the soul cherished in its ways, or concealed, is not reformed.

(f) Rejoice more in reprovers than in flatterers: fly from flatterers as Enemies.

(g) We ought either to be silent, or to speak things that are better than silence.

(h) It is better to throw a stone at random, than an idle word.

(i) Comprehend not few things in many words, but many things in few words.

(k) We must faithfully restore to him that entrusts us, the *Depositum*; not only of money, but of words.

(l) Of Opinion, the *Pythagoreans* said thus: It is the part of a man void of understanding, to adhere to all mens Opinions, especially to that which is maintained by the greatest number: for to conceive and judge aright is proper to few, it only belongs to the knowing, who are not many: this power therefore extends not to many. On the other side, it is no less madness, to condemn all Conception and Opinion. Such a person must be unlearned and unrectifiable: for it is necessary, that he who is ignorant learn those things where-

C H A P. IV.

Of the Planet Venus.

(a) Lib. 2.
cap. 8.

(a) **N**EXT the Sun (saith *Pliny*) there is a great Star, called *Venus*, alternately errant, in Names emulating both the Sun and Moon. For, preventing and rising before morning, he takes the Name of *Lucifer*, as another Sun bringing on day; on the other side, shining at Sun-set, it is called *Vesper*, as proroguing light, and performing the Office of the Moon, which its Nature *Pythagoras* the *Samian* first found out, about the XLII Olympiad, which was of *Rome* the 147th year. In magnitude it exceeds all the other Stars, and is of so great splendor, that this Star only casts a shadow; whence it hath diversity of Names; some call it *Juno*; others, *Isis*; others, *Mothers of the gods*. By the Nature hereof, all things are generated upon Earth; for, at either ri-

ling, it scattereth prolifick dew, supplying not only the Conceptions of Earth, but likewise stimulating all living Creatures. It performs the Revolution of the *Zodiack* in 348 days, never receding from the Sun more than 46 parts, according to *Timeus*. Thus *Pliny*. That there is a mistake in the time, hath been already shown; but the thing it self is confirmed by *Laertius*, who affirms, *Pythagoras* first said, that *Vesper* and *Lucifer* are the same star; yet elsewhere adds, that some ascribe this to *Parmenides*. But that it was a Doctrine of the *Pythagoreans*, appears from this account given by *Timeus*; the star *Juno* many call *Venus* and *Lucifer*. All persons are not skilful in the Rules of sacred Astronomy, and in the Sciences of rising and setting; for the same star is sometimes *Hesper*, when it followeth the Sun in such manner, that it is conspicuous to us when the Sun is set; and sometimes *Eous*, when it goeth before the Sun, and riseth before Sun-rising.

The Doctrine of Pythagoras.

C H A P. I.

Philosophy, its Name, Definition, Parts, Method.

(c) Agell. 1. 9.

(b) Jam. cap.
29. pag. 144.

(a) **T**HE *Pythagoreans* being adorned with these studies of Science, from thence attended to perfect the Works of the World, and the Principles of Nature. (b) *Pythagoras* first gave the Name to Philosophy, defining it, An Appetition, and Love to Wisdom. *Wisdom* is the Science of Truth in things that are. *Things that are*, he called Immaterial, and Eternals, and sole Agents, which are the Incorporeals; the rest are equivocally called such, by Participation with these, viz. Corporeals, Materials, and Corruptibles, which indeed are not. Now *Wisdom* is the Science of those things which are, but not of those which are equivocally; for Corporeals are not docible, nor admit certain knowledge, being infinite, and not comprehensible by science, and things which (as it were) are not, according to the difference of all things, neither can be rightly described by any definition. Of those whose Nature is such, as that they cannot be known, it is impossible to frame a Science; wherefore neither is it likely, that there can be a love of a Science which is not. But rather of that which is conversant about those things which properly are, and continue always the same, and like themselves, and co-exist always with a true appellation. Upon the knowledge of these followeth that which is of equivocal things, (tho' not sought after) as the science of Particulars follows the science of Universals: For, as *Architas* saith, *They who know Universals well, will plainly see what Particulars are*. Wherefore things that are, are not of one kind only and simply, but of many various kinds, Intelligibles and Incorporeals, whose appellation is *τὰ βλά, things that are*. Corporeal things, subject to sense, are those which are by participation of those that are. Concerning all these, he delivered most proper Sciences, leaving nothing unexcused, and delivered also to men the common Sciences, as the de-

monstrative, the definitive, the divisive, as is manifest from the Commentaries of the *Pythagoreans*.

Hereupon he defined Philosophy, (c) the knowledge of things that are, as things that are, and (d) the knowledge of things divine and humane; as also (e) the meditation of death, daily endeavouring to free the soul from the prison of the body; and (f) the resemblance of God as far as is possible for man. (c) Pfell. com. pend. de scis. (d) Pfell. loc. cit. (e) D. Hier. adv. Rufin. (f) Stobis. serm.

For (g) the scope of Philosophy is to free the mind, (the divine part of the soul) which is planted in us, and to set it at liberty, without which liberty none can learn or perceive any thing solid or true, by the help or benefit of sense; for the mind, according to him, seeth all things, and hears all things; all things else are deaf and blind. (g) Porph. pag.

In order hereunto it is, that Philosophy being of two kinds, Practick and Theoretick; the Practick, according to the method of the *Pythagoreans*, precedes the Theoretick. The Reason receive thus, explain'd by (h) *Hierocles*.

Philosophy is the purification and perfection of humane life; purification, from material irrationality and the mortal body; perfection, from the recovery of its own excellent life, reducing it to the Divine Resemblance. Virtue and Truth are chiefly able to effect these, that taking away Excess of passions, this (rightly bad) inducing the divine form. (h) Hier. in adv.

First are laid down the Instructions of Practick Virtue; for first we must compose the Irrationality which is in us, and then (so prepar'd) apply our selves to the knowledge of the more divine things. For as it is not possible for the Eye, being full of dirt, and not cleansed, to look upon things very bright; so neither can the Soul, not possessing Virtue, gaze upon the Beauty of Truth. For that which is not pure, is not capable of touching that which is pure. Practick Philosophy produceth Virtue; Theoretick, Truth. As in these Golden Verses (of *Pythagoras*) we find the Practick Philosophy, called Humane Virtue, but the

the Theoretick celebrated as Divine Virtue; when closing the Instructions of Civil Virtue.

*These labour (saith he) study these, and these affect;
To Divine Virtue, these thy steps direct.*

First therefore a Man must be made good, then a God: good the Civil Virtues render a Man, but the Sciences conducing to the Divine Virtue divinifie. But to those who ascend, the lesser things precede the greater; for which reason in the Pythagorical Precepts, the Rules of Virtue are first delivered, teaching us to ascend from the greatest use of Life, to the Divine Resemblance.

* Three ways, say they, man may become better than himself, first by Conversation with the Gods; for it is necessary, that he who addresseth himself to them, at that time, sequester himself from all civil, assimilating himself as near as he can to God: Secondly, by well doing, for that is proper to God, and therein he imitates God: Thirdly, by death; for if the Soul in this Life, being a little separated from the Body, becometh better, and beginneth to divine in Dreams by Visions and Extasies of Diseases, it will be much better when it shall be wholly separated from the Body.

Hence he affirmed; that (i) the most considerable of all things Humane, is to inform the Soul concerning good and ill; That (k) men have perfect felicity when they have a good Soul, or that (l) the knowledge of the perfection of the Virtues of the Soul is the chief felicity; That (m) every man is appointed by God to know and to contemplate; That (n) Virtue is a Harmony, and so is all good, even God himself; That (o) the End or chief Good is to resemble God: whence he expressly said, Follow God, not visible to the Eye, but intelligible to the Understanding, by the harmony of the World; That (p) the most excellent things given by the gods unto men, are, to speak truth, and to benefit others, [Theoretick and Practick Virtue] and that each of these resembled the Works of God: to this latter Strabo alludes, commending those who said, (q) Men imitate the gods most when they benefit others: The former is confirmed by (r) Porphyrius, that he advised above all things to speak truth, for that only is able to make Men like to the gods; for God himself, as he learn'd of the Magi, who term him Oromasdes, in his Body resembles light, in his Soul truth. This is that *Deitas*, (Divinity) which (s) Jamblichus reckons last in his Recapitulation of the Heads of the Pythagorick Philosophy, and is the same with which the Golden Verses conclude, thus,

*Then stript of flesh up to free Æther soar,
A deathless god, divine, mortal no more.*

S E C T. I.

*Practick Philosophy, its parts; and first of
Pædeutick.*

Practick Philosophy seems to have been the Invention of Pythagoras; for Aristotle affirms

that he first undertook to discourse concerning Virtue; That Socrates is generally esteemed the Author thereof, perhaps is only because, as Aristotle adds, coming after him he discoursed better and more fully thereupon.

To this part of Philosophy alludes (b) this Sentence of Pythagoras; That the discourse of that Philosopher is vain, by which no passion of a man is healed: for as there is no benefit of Medicine, if it expel not diseases out of bodies, so neither of Philosophy, if it expel not ill out of the Soul.

Virtues being of two kinds, *private*, which respect our selves, and *publick*, which have reference to others; Pythagoras seems to have comprehended the first under *Pædeutick*, the second under *Politick*. Laertius affirms he writ Three Treatises, *Pædeutick*, *Politick*, *Physick*. The Heads of *Pædeutick*, according to the general recapitulation of (c) Jamblichus, seem to have been these, *Institution*, *Silence*, *Abstinence from Flesh*, *Fortitude*, *Temperance*, *Sagacity*.

CHAP. I.

Institution, Silence, Abstinence.

Concerning Institution, &c. there are these Sentences and Precepts of Pythagoras, preserved by Stobæus and others.

(a) We ought to make choice of the best course of life; for Custom will make it pleasant: Wealth is a weak Anchor, Glory a weaker: The Body, Magistracies, Honours, all these are infirm and unable. What are then able Anchors? Wisdom, Magnanimity, Fortitude; these no tempest shakes. This is the Law of God, that Virtue only is solid; all else are but trifles.

(b) To take away bitterness from Wormwood, and liberty from Speech, are both alike.

(c) Endeavour not to conceal thy faults with words, but to amend them by reproof.

(d) It is not so hard to offend, as not to reprove an offending person.

(e) As the sickness of the body, if hid or praised, is not healed, so the soul cherished in its ways, or concealed, is not reformed.

(f) Rejoice more in reprovers than in flatterers: fly from flatterers as Enemies.

(g) We ought either to be silent, or to speak things that are better than silence.

(h) It is better to throw a stone at random, than an idle word.

(i) Comprehend not few things in many words, but many things in few words.

(k) We must faithfully restore to him that entrusts us, the *Depositum*; not only of money, but of words.

(l) Of Opinion, the Pythagoreans said thus: It is the part of a man void of understanding, to adhere to all mens Opinions, especially to that which is maintained by the greatest number: for to conceive and judge aright is proper to few, it only belongs to the knowing, who are not many: this power therefore extends not to many: On the other side, it is no less madness, to condemn all Conception and Opinion. Such a person must be unlearned and unrectifiable: for it is necessary, that he who is ignorant learn those things where-

of he is ignorant; and that he who learneth, addict and resign himself to his Teacher. In a word, they said, It is necessary, that such young men as would be preserved, should addict themselves to the Conceptions and Opinions of their Elders, and such as lead a good life.

Now in the whole course of humane life, there are certain distinct Ages, which are not temerarily to be connected, for they are expelled by one another, unless a man be well and rightly ordered from his birth. It is requisite therefore, that from the institution of a Child in Goodness, Temperance, and Fortitude, a great part be transmitted to his Youth, when he arrives at that age; likewise of his Youth instituted in Goodness, Fortitude and Temperance, a great part be transmitted to his manly estate. Herein the course ordinarily taken, is ridiculous; for most think, that Children ought to be well ordered, instructed in Temperance, and to abstain from all things odious and undecent; but when they come to be Youths, most leave them to their own management, to do what they please; whereas at that Age they are subject to both sorts of Vices, of Children, and of Men. To shun Study and Order, and to follow Play and Wantonness, the Vice of Childhood is likewise most proper to Youth. Again, vehement Desires, Ambition, and the like, the Affections of Manhood, insinuate into Youth, for which reason, this Age requireth care above all the rest. In fine, a man should never be so given over, as to do whatsoever he pleaseth, but that there should always be some Overseer president over the rest, a legitimate sitting Magistrate, whom every Citizen ought to obey. For a living creature, as soon as ever it is neglected, falls into ill and wickedness.

They affirm, that they often have enquired and examined, for what reason we give Children food at set times, and moderately; the ordinary Answer is, That Order and Moderation are good; their contraries, Disorder and Immoderateness, ill, as is manifest, in as much as to be a Glutton or a Drunkard is esteemed a great reproach. For if none of these were useful and beneficial to us when we arrive at man's estate, it were needless to accustom our selves, whilst Children, to such Order. It is the same in other habits. We see it manifest also in all other kinds of living creatures, which are taught by man from the very beginning, as Whelps, and the like, those things which they are required to practise when they are come to full growth. Thus *Jamblichus*. Of *Silence*, *Abstinence*, and the whole course of his *Institution*, we have formerly treated.

CHAP. II.

Fortitude.

(a) *Jamb. cap.*
32. pag. 189.

(a) THE greatest Argument of the *Pythagoreans* for Fortitude, was, for that they fully persuaded themselves, that of all Humane Chances, nothing ought to happen unexpectedly to any, but that they should expect all things which were not within their own power. Precepts of *Pythagoras*, tending to this Virtue, are these.

(b) *Stob. terra.*

(b) Do those things which you judge to be

good, although after you have done them, you shall be disesteemed; for the vulgar is an ill judge of all good things: As you despise their praise, so despise their dispraise.

(c) He forbade to forsake the protection and station of this life, without the command of our supreme Lord. (c) *Cic. de senect.*

CHAP. III.

Temperance and Continence.

(a) HE often used this Apophthegm to all his Auditors, whether many or few, *We must avoid with our utmost endeavour, and amputate with Fire and Sword, and by all other means, from the Body, Sicknes; from the Soul, Ignorance; from the Belly, Luxury; from a City, Sedition; from a Family, Discord; from all things, Excess.* (a) *Porph. Jamb.*

(b) It is better to live lying on the ground with a settled confidence, than to have a golden bed and be troubled. (b) *Stob. terra.*

(c) Temperance is the strength of the Soul; for it is the light of the Soul clear from Passion. (c) *Stob. s.*

(d) To serve Passions is more grievous than to serve Tyrants. (d) *Stob. ibid.*

(e) It is impossible he can be free, who serves passions, and is governed by them. (e) *Stob. ibid.*

(f) No man is free who doth not command himself. (f) *Stob. ibid.*

(g) The labour of Continence precedes all excellent things. (g) *Stob. 14.*

(h) To possess Continence is the best strength and wealth. (h) *Stob. 17.*

(i) It is better to die, than to cloud the Soul by Intemperance. (i) *Stob. ibid.*

(k) He said, that Drunkenness is a little Madness; or, that it is the study of Madness; or, as *Laertius*, that it is the Canker of the flower of the Mind. (k) *Stob. 18.*

(l) The Voice of the flesh is, No hunger, no thirst, no cold. (l) *Stob. 99.*

(m) He admonished all men to shun Ambition and Vain-glory, because these chiefly excite Envy. (m) *Porph. p. 21.*

(n) He discommended all Excess, saying, that we ought not to exceed a due proportion in labour and food. (n) *Laert.*

(o) We must consider, there are three kinds of things which deserved to be pursued and acquired; the first is of those which are honourable and vertuous; the second, conducing to life; the last, pleasures: not the vulgar enchanting pleasure, for that he allowed not, but the solid and grave, free from blame. For, he said, there are two kinds of pleasure, whereof that which indulgeth to the belly, and to lasciviousness; by profuseness of wealth, he compared to the murderous Songs of the *Syrens*; the other, which consists in things honest and just, as also in the necessities of life, is sweet as well as the first, and withal it is not followed by repentance. Hither perhaps alludes (p) *Clemens*, who saith, *Pythagoras* advised to esteem the Muses sweeter than *Syrens*; teaching, that we should study Learning not with delight; whereby he condemned the other delight of the Mind, which is fallacious. (p) *Strom. 1. p. 294.*

(q) *Pythagoras* seeing one that made himself fat by exercising and eating : (r) *This man* (saith he) *will not cease to make a stricter Prison for himself.*

(f) The *Pythagoreans* exhorted such as came into their Society, to shun Pleasure as much as any thing that ought to be avoided; for nothing so deceives us, and draws into sin, as this passion. In general, as it seems, they endeavoured not to do any thing which might tend to pleasure, this scope being for the most part undecent and hurtful; but that they should aim at what is good and decent, to do what they ought. In the next place, to discern what is convenient and beneficial, it requireth a more than ordinary judgment.

As to that which is called Desire, they said thus: Desire is an Impulsion and appetite of the Soul, either of some repletion, or derogation of some things belonging to sense, or the sensitive affection. This passion is various, and the most multiplicitious of all that belong to man. Of humane desires many are acquired and framed by the persons themselves; wherefore this Passion requireth greatest care and observation, and corporeal Exercises more than ordinary. For the body, when its aliment is evacuated, to desire Repletion, is natural; and again, being repleat, to desire Evacuation, is natural also: But to desire superfluous Aliment, or superfluous and sumptuous Raiment and Lodging, or superfluous and various Household-stuff, and Utensils, and Cups, and Servants, and Herds of Cattel, bred for diet; in a word, of all humane passions, this is most such, that it never is at a stay, but proceeds to infinite. Wherefore from our very Childhood, care must be taken, that we desire such things as are needful, and shun vain and superfluous desires, being undisturbed, and clear from such appetites, and condemning those who deserve contempt, being fettered in their desires.

It is of most concernment to observe the vain, hurtful, superfluous desires of those, who are transported by their Power; there is nothing so absurd, whereto the Souls of such persons, Children, Men and Women, are not transported. The most various is that of Meats, infinite is the multitude of Fruits, infinite of Roots, used by Mankind. Besides this, all sorts of flesh making it their business to find, of terrestrial, volatile, and aquatic creatures, wherewith to satisfy their taste, and all variety of dressing them, with the mixture of all kind of Juices, whereby Mankind is really prophetick and multiform, as to the motion of the Soul; for every several sort of Meat is cause of a peculiar Constitution. Now men behold, that these produce great alteration, as Excess of Wine to such a degree exhilarates; further, causeth frenzy and disorder: But those things which discover not so much their force and efficacy, they are ignorant of, notwithstanding, that whatsoever food we take, is cause of some peculiar constitution. Wherefore it is a great part of Wisdom to know and understand, what kind and quantity of Meat is requisite for Nourishment. This Science was first communicated by *Apollo* and *Pæon*, afterwards by the *Æsculapians*.

Concerning Generation, (t) he said thus: We ought principally to observe that which

is called *πρῆξες*, *precocious*: for neither too forward Plants nor Animals, before the due season, when they are in their full strength. Youths therefore and Virgins ought to be educated in labour, and exercises, and actions conducing to fortitude, using food convenient thereto, and in a laborious, temperant and tolerant life. Of the things in humane life there are many, in which to be late conversant is best; of this kind is Coition. A Youth ought so to be educated, as not to addict himself thereto before twenty years of age; and when arrived at those years, to use it seldom is best, if we esteem a good habit of body; for Intemperance and Good rarely meet in the same person.

They commended the Rites and Laws of the Ancients, in the *Greek Cities*, not to lye with Mothers, or Daughters, or Sisters, nor in a Temple, nor in Publick, for this is evil; and to procure all possible Impediments thereof, is very profitable.

They were of Opinion, That all unnatural ignominious Generations ought to be taken away, and those only preserved which were according to Nature, with Temperance, and Lawful.

They conceived, that such as go about to beget Children, ought to have much providence of their future Issue: The first and greatest providence is, to prepare himself for that action by a temperate healthful Life, not eating too much at unseasonable times, not using such meats as deprave the habits of the body; but above all things, not to perform it when drunk; for they thought that by ill, and discordant, and disturbed temperament, the Seed became adulterate. They also thought him a foolish inconsiderate person, who being desirous of Children, and taking a Wife to that end, should not with utmost study foresee by what means his Issue might be most advantaged. They who love dogs, are very careful of their breed, as of which they shall breed, and when, and accordingly the Whelps prove; the like do they who love birds. But tho' it be well known, that they who breed any other kind of living creature, use their utmost endeavour to procure a generous Race, yet men have no respect to their own Offspring, but beget them inconsiderately, and bring them up negligently. This is the chief and most manifest cause that so many men are evil and wicked, the greater part begetting their Children like Beasts, without any consideration.

Finally, (u) *Pythagoras* discoursing concerning the benefit of venereal pleasures, advised, in the Summer-time to abstain wholly from Coition; in the Winter, to use it but rarely; for it is generally hurtful: but the continual use thereof causeth debility, and is most pernicious. *Laertius* saith, He advised, that in the Winter and Spring it should not be used at all, in Summer and Autumn but sparingly; for at all times it is pernicious and prejudicial to the Health. And being asked, At what time a man should use it? he answered, When he hath a mind to be weaker.

longed to his
Book, de vita
Pythagoræ.

CHAP. IV.

Sagacity and Wisdom.

TO *Wisdom* (the last general head of *Pædeutick*) belong the Sentences of *Pythagoras*.

(a) *Stob.* (a) *The strength, wall, and armour of a wise man is wisdom.*

Call to mind, that most men acknowledge wisdom to be the greatest good, but few endeavour to possess this greatest good.

(b) *Stob.* (b) *The sacrifices of Fools are the food of fire; their Donatives the subsistence of sacrilegious persons.*

(c) *Stob.* (c) *A Horse is not to be guided without a Bridle, nor Riches without Wisdom.*

(d) *Cic. Tusc. 1.* (d) *He conceived the imposition of names on things, to be the highest part of wisdom.*

S E C T. II.

Of Politick, the other part of Practick Philosophy.

(a) *Cap. 6.* **T**H E heads of *Politick* (according to (a) *Jamblichus*) are these; *Common Conversation, Friendship, Worship of the Gods, Piety to the Dead, and Law-making.*

(b) *Jamb. cap.* (b) They hold *Pythagoras* to be the Inventor of all *Politick Discipline*. He used to say, That amongst Beings, nothing is pure, but every thing partakes of some other, as Earth of Fire, Fire of Water and Air. In like manner, honest partakes of dishonest, just of unjust, and the like. Hence it is, that Reason is carried away to either side. There are two motions, one of the Body, the other of the Mind; one irrational, the other elective. *Commonwealths* he compared to a rectangle Triangle, wherein one side consists of Three Parts, the Base of Five, the other side of the mean between them, of four. In the Coincidence of these Lines with one another, and their Squares, we behold delineated the best Form of a Commonwealth, [and of Justice.]

C H A P. I.

Common Conversation.

TO common conversation belong these Maxims of *Pythagoras*.

(a) *Stob.* (a) *A stranger just, is to be preferr'd not only before a Countreyman, but before a Kinsman.*

(b) *Stob.* (b) *Esteem is a great part of good Education, to be able to suffer the want of Education in others.*

(c) *Stob.* (c) *Desire that they who converse with you, should rather respect than fear you: for admiration accompanies respect; hatred, fear.*

(d) *Jamb. cap.* (d) There being a Justice in the mutual conversation of men one towards another; of this also the *Pythagoreans* delivered this manner. There is in the common conversation of Men one opportune, another importune: they differ in di-

versity of Age, and in Dignity, and in nearness of Affinity, and Beneficence, and if there be any thing like these in mutual differences. For there is a kind of Conversation which appeareth, to the younger towards the younger, not to be importune; but, towards the elder, it is importune: for no kind, neither of Anger, nor of menacing, or boldness, but all such kind of importunity ought diligently to be avoided by the younger toward the elder. In like manner is the reason of Dignity; for coming to a person endowed with true Worth and Virtue, it is neither decent nor opportune to speak much, or to commit any of the fore-mentioned things. Like these also are those which concern such as have obliged and deserved well of others.

There is a various and multiplicitous use of Opportunity. For of those that are angry and incensed, some do it opportunely, others importunately: and again, of those who covet, and desire, and have appetite, it may be opportune for some to pursue those things, not for others. The same Reason there is of other affections, and actions, and dispositions, and conversations, and intercessions, and discourses. But Opportunity is of such a Nature, that it is docible, and undeceivable, and capable of act, and generally, and simply, having nothing of all those in it. But the consequents are of such a kind, that they together, decent, and convenient, and the like, attend the Nature of opportunity.

They held that there is a Primacy in every thing, and that every-where there is one thing which is best; in Science, and in Experience, and in Generation; likewise in a Family, and in a City, and in an Army, and in all such like Constitutions: but it is difficult to discern and understand the Nature of the Primacy in all the afore-said things; for in Sciences it is the part of more than ordinary intelligence, by clear intuition, to discern and judge the parts of the thing, which is the Primacy of them. But there is great difference, and almost of the whole and general a hazard, in not rightly taking the Primacy: For, in a word, nothing can afterwards be right, if the true Primacy be not known. The same Manner and Reason is in other kinds of Primacy; for neither can a Family be well governed, where there is not a true Master, and voluntary Government; for it is requisite, that both these be voluntary in the præfecture, as well he who is chief, as those who are subject to him. As Learning is then right, when there is such conformity betwixt the Masters and the Scholars, that they will teach, these will learn; for if either be refractory, it cannot be rightly performed. In this manner he conceived it to be fit for Inferiors to obey Superiors, Disciples their Masters.

C H A P. II.

Friendship.

(a) *P**Pythagoras* evidently demonstrated that there (a) *Jamb.* is a friendship of all unto all; of god's towards men, by piety and religious worship; of doctrines to one another; of the soul to the body; of the rational part to the irrational, by Philosophy and its Theory; of men towards one another; betwixt Countrymen, by right observation of Laws; betwixt

betwixt Strangers, by right Phyfiology; of a Man to his Wife, or Children, or Brethren, and Servants, by unperverted Communion. In a word, of all towards all; moreover of some irrational Creatures, by Justice and natural Affinity and Communion; of the body, in it self mortal, a conciliation and combination of the contrary faculties, by health and wholesome diet, and temperance, in imitation of the good compofure in the Elements. In all thefe, of one and the fame, according to comprehension of the name Friendship, *Pythagoras* is acknowledg'd to be the Inventer and Lawgiver: And fo admirable a Friendship did he deliver to thofe who enquired of him, that, unto this day, (faith *Jamblichus*) we fay of thofe who are intimately joined together by Friendship, *they are of the Pythagoreans*.

We muft add the Institution of *Pythagoras* herein, and the exhortations he ufed to his Difciples. They were advifed to take away all contention, and love of controverfie, out of true friendship: if poffible out of all. But if that be not poffible, at leaft out of that which is our own Country, and generally that towards Elders. Likewise out of that towards Benefactors; for to become Antagonifts, or conteft with fuch, when we are fallen into anger, or fome other paffion, is not confiftent with the prefervation of the amity we have with them. They faid, that in Friendship there ought to be leaft scratches and cuts; and, if any happen, we fhould fly and fubdue anger: It were beft, that both fhould do fo, but chiefly the younger, and that thofe exercifes which they called *παιδαγωγία*, ought to be made from the elder towards the younger, with much commendation and benevolence. That there appear much care and tendernefs in thofe who give the correction; for by this means the correction fhall be profitable. That we do not extirpate Credit out of Friendship, neither in jeft nor in earneft; for it is not eafie to heal the friendship betwixt Men, if once a falfhood hath incurred into the manners of thofe who call themfelves Friends.

That we muft not renounce friendship for adverfity, or any other impotence which happens in life. That renunciation of friendship only is commendable, which is made by reason of fome great wickednefs and mifdemour. But that we muft not take away our friendship from them, unlefs they become abfolutely wicked; and, before we take it off, we muft ingenioufly pause, to try, if by conteftation and fight he may be diverted from this ill habit, and become reftified. We muft fight, not in words, but actions; the fight is lawful and pious. Though difference of power be not a juft ground for one man to fight with another, yet this is a juft ground, even the moft juft that is poffible.

They faid, that to a friendship, that will prove true, are required many definitions and rules; thefe muft be well difcerned, and not confufedly: Moreover, it ought to be accommodated to the difpofition of others, that no converfation be made negligently and vainly, but with refpect and right order: Neither that any paffion be excited vainly, and wickedly, and finfully, as concupifcence, or anger. The fame of the other paffions and habits.

Much more admirable are thofe things which they defined concerning the community of the

divine good, and thofe concerning the unanimity of the mind, and thofe concerning the divine mind. For they mutually exhorted one another, that they fhould not tear afunder the god which is in them. Thus their ftudy of friendship by words and actions, had reference to fome divine temperament, and to union with God, and to unity with the mind, and the divine foul. Thus *Jamblichus*.

(b) He conceived the extremity (or end) of friendship, to be the making one of two. (c) Man ought to be one. This fentence (faith *Clemens*) is myftick. (d) He firft faid, *μὴν φίλων*, and *φίλων ἑστέτε*. (e) Last.

CHAP. III.

Worship of the Gods.

(a) THE principles of worshipping the gods, as propofed by *Pythagoras* and his followers, are thefe.

That all which they determine to be done, aim and tend to the acknowledgment of the Deity: This is the principle, and the whole life of man confifts in this, that he follow God, and this the ground of Philofophy. For men do ridiculous, who feek that which is good anywhere elfe than from the gods. They do as if a man in a Country, govern'd by a King, fhould apply his fervice to fome Citizen of inferior Magiftracy, and neglect the fupream Governour. In the fame manner conceive they that fuch men do; for, fince there is a God, we muft confeff, that good is in his power. Now all, to thofe whom they love and delight in, give good things; and to the contrary to thefe, their contraries. Therefore it is manifef, that fuch things are to be done in which God delights.

Thus he defined particularly of all things. To believe of the Divinity, that it is, and that it is in fuch manner as to mankind; that it over-looks them, and neglects them not; the *Pythagoreans*, taught by him, conceived to be profitable. For we have need of fuch a Government, as we ought not in any thing to contradict; fuch is that which proceeds from the Divinity; for the Divinity is fuch, that it merits the Dominion of all. Man they affirmed to be, rightly fpeaking, a creature reproachful and fickle, as to his appetites, affections, and other paffions; he therefore hath need of fuch government and guidance, from which proceeds moderation and order. Now they conceived, that every one being confcious of the ficklenefs of his own nature, fhould never be forgetful of fanctity, and fervice towards the Divinity; but always have (the Divinity) in their mind. how it overlooks and obferves human life.

In fine, they fay, that *Pythagoras* was an imitator of the Orphean Conftitutions, worshipping the gods, after the manner of *Orpheus*, placed in brazen images, not reprefenting the forms of men, but of the gods themfelves, who comprehending, and forefeeing all things, refemble in nature and form the whole. He declared their purifications and rites, which are called *τελεταί*, having the moft exact knowledge of them.

Moreover they affirm, he made a compofition of the divine Philofophy and Service, part whereof he had learned from the *Orpheans*, part from the

CHAP. IV.

Sagacity and Wisdom.

TO *Wisdom* (the last general head of *Pædeutick*) belong the Sentences of *Pythagoras*.

(a) *Stob.* (a) *The strength, wall, and armour of a wise man is wisdom.*

Call to mind, that most men acknowledge wisdom to be the greatest good, but few endeavour to possess this greatest good.

(b) *Stob.* (b) *The sacrifices of Fools are the food of fire; their Donatives the subsistence of sacrilegious persons.*

(c) *Stob.* (c) *A Horse is not to be guided without a Bridle, nor Riches without Wisdom.*

They held that there is a Primacy in every thing, and that every-where there is one thing which is best; in Science, and in Experience, and in Generation; likewise in a Family, and in a City, and in an Army, and in all such like Constitutions: but it is difficult to discern and understand the Nature of the Primacy in all the afore-said things; for in Sciences it is the part of more than ordinary intelligence, by clear intuition, to discern and judge the parts of the thing, which is the Primacy of them. But there is great difference, and almost of the whole and general a hazard, in not rightly taking the Primacy: For, in a word, nothing can afterwards be right, if the true Primacy be not known. The same Manner and Reason is in other kinds of Primacy; for neither can a Family be well governed, where there is not a true Master, and voluntary Government; for it is requisite, that both these be voluntary in the practice, as well he who is chief, as those who are subject to him. As Learning is then right, when there is such conformity betwixt the Masters and the Scholars, that they will teach, these will learn; for if either be refractory, it cannot be rightly performed. In this manner he conceived it to be fit for Inferiors to obey Superiors, Disciples their Masters.

C H A P. II.

Friendship.

(a) *Jamb.* **P***Pythagoras* evidently demonstrated that there is a friendship of all unto all; of god's towards men, by piety and religious worship; of doctrines to one another; of the soul to the body; of the rational part to the irrational, by Philosophy and its Theory; of men towards one another; betwixt Countrymen, by right observation of Laws; betwixt

betwixt Strangers, by right Physiology; of a Man to his Wife, or Children, or Brethren, and Servants, by unperverted Communion. In a word, of all towards all; moreover of some irrational Creatures, by Justice and natural Affinity and Communion; of the body, in it self mortal, a conciliation and combination of the contrary faculties, by health and wholesome diet, and temperance, in imitation of the good compofure in the Elements. In all these, of one and the same, according to comprehension of the name Friendship, *Pythagoras* is acknowledg'd to be the Inventer and Lawgiver: And so admirable a Friendship did he deliver to those who enquired of him, that, unto this day, (saith *Jamblichus*) we say of those who are intimately joined together by Friendship, *they are of the Pythagoreans*.

We must add the Institution of *Pythagoras* herein, and the exhortations he used to his Disciples. They were advis'd to take away all contention, and love of controverfie, out of true friendship; if possible out of all. But if that be not possible, at least out of that which is our own Country, and generally that towards Elders. Likewise out of that towards Benefactors; for to become Antagonists, or contest with such, when we are fallen into anger, or some other passion, is not consistent with the preservation of the amity we have with them. They said, that in Friendship there ought to be least scratches and cuts; and, if any happen, we should fly and subdue anger: It were best, that both should do so, but chiefly the younger, and that those exercises which they called *παιδαγωγία*, ought to be made from the elder towards the younger, with much commendation and benevolence. That there appear much care and tenderness in those who give the correction; for by this means the correction shall be profitable. That we do not extirpate Credit out of Friendship, neither in jest nor in earnest; for it is not easie to heal the friendship betwixt Men, if once a falshood hath incurred into the manners of those who call themselves Friends.

That we must not renounce friendship for adversity, or any other impotence which happens in life. That renunciation of friendship only is commendable, which is made by reason of some great wickedness and misdemeanour. But that we must not take away our friendship from them, unless they become absolutely wicked; and, before we take it off, we must ingeniously pause, to try, if by contestation and fight he may be diverted from this ill habit, and become rectified. We must fight, not in words, but actions; the fight is lawful and pious. Though difference of power be not a just ground for one man to fight with another, yet this is a just ground, even the most just that is possible.

They said, that to a friendship, that will prove true, are required many definitions and rules; these must be well discerned, and not confusedly: Moreover, it ought to be accommodated to the disposition of others, that no conversation be made negligently and vainly, but with respect and right order; Neither that any passion be excited vainly, and wickedly, and sinfully, as concupiscence, or anger. The same of the other passions and habits.

Much more admirable are those things which they defined concerning the community of the

divine good, and those concerning the unanimity of the mind, and those concerning the divine mind. For they mutually exhorted one another, that they should not tear asunder the god which is in them. Thus their study of friendship by words and actions, had reference to some divine temperament, and to union with God, and to unity with the mind, and the divine soul. Thus *Jamblichus*.

(b) He conceived the extremity (or end) of friendship, to be the making one of two. (c) Man ought to be one. This sentence (saith *Clemens*) is mystick. (d) He first said, *κινῶ φίλον*, and *φίλον ἰσότητα*. (d) *Laert.*

C H A P. III.

Worship of the Gods.

(a) THE principles of worshipping the gods, proposed by *Pythagoras* and his followers, are these.

That all which they determine to be done, aim and tend to the acknowledgment of the Deity: This is the principle, and the whole life of man consists in this, that he follow God, and this the ground of Philosophy. For men do ridiculously, who seek that which is good anywhere else than from the gods. They do as if a man in a Country, govern'd by a King, should apply his service to some Citizen of inferior Magistracy, and neglect the supream Governour. In the same manner conceive they that such men do; for, since there is a God, we must confess, that good is in his power. Now all, to those whom they love and delight in, give good things; and to the contrary to these, their contraries. Therefore it is manifest, that such things are to be done in which God delights.

Thus he defined particularly of all things. To believe of the Divinity, that it is, and that it is in such manner as to mankind; that it overlooks them, and neglects them not; the *Pythagoreans*, taught by him, conceived to be profitable. For we have need of such a Government, as we ought not in any thing to contradict; such is that which proceeds from the Divinity; for the Divinity is such, that it merits the Dominion of all. Man they affirmed to be, rightly speaking, a creature reproachful and fickle, as to his appetites, affections, and other passions; he therefore hath need of such government and guidance, from which proceeds moderation and order. Now they conceived, that every one being conscious of the flikeness of his own nature, should never be forgetful of sanctity, and service towards the Divinity, but always have (the Divinity) in their mind, how it overlooks and observes human life.

In fine, they say, that *Pythagoras* was an imitator of the Orphean Constitutions, worshipping the gods after the manner of *Orpheus*, placed in brazen images, not representing the forms of men, but of the gods themselves, who comprehending and foreseeing all things, resemble in nature and form the whole. He declared their purifications and rites, which are called *καθάρσεις*, having the most exact knowledge of them.

Moreover they affirm, he made a composition of the divine Philosophy and Service, part whereof he had learned from the *Orpheans*, part from the

the *Egyptian* Priests; some from the *Chaldeans* and *Magi*; some from the *Eleusinian* Rites, and those in *Imber*, and *Samo Thracia*, and *Delos*, and the *Celtæ*, and *Iberians*.

Amongst the *Latines* also is read the Sacred Discourse of *Pythagoras*, not to all, but to such as are admitted to the doctrine of excellent things, and are not addicted to ought that is dishonest.

It prescribes, that men offer libation thrice; and *Apollo* gives Oracles from a Tripod, because number first consists in a Triad.

That we must sacrifice to *Venus* on the sixth day, because that is the first common number of the number of universal Nature. Now after all ways, the thing divided in like manner, assumes as well the power of those things which are taken away, as of those which are left.

That to *Hercules* we ought to sacrifice on the eighth day of the Month, in respect of his being born at the end of seven Months.

It saith also, That we ought to enter into a Temple having a pure garment, and in which none hath slept the sleep of slothfulness; black and russet, testifying purity in ratiocinations of equality and justice.

It commanded, that if blood be shed unwillingly in a Temple, that it be either taken up in a dish, or scattered into the Sea; for that is the first element, and most estimable of all creatures.

It saith likewise, that a woman ought not to be brought to bed in a Temple, for it is religious; that the divinity of the soul should be annexed to the body in a Temple.

It commanded, that upon Holy-days we cut not our hair nor pair our nails; intimating, that the increase of our goods ought not to be preferred before the empire of the gods.

That we must not kill a flea in the Temple, because to the Deity we ought not to offer any superfluous things, or vermin; but that the gods are to be worshipped with Cedar, Lawrel, Cypress, and Myrtle, &c.

(b) *Cic. leg. 2.* (b) He said, *Piety and Religion is chiefly conversant in our minds, at such time as we attend the divine rites.*

(c) *Laert.* (c) That the gods and Heroes are not to be worshipped with equal honours, but that the gods must always be worshipped with applause, (or silence at the celebration of their rites) we being white and pure; Heroes, only from noon, [(d) He advised, that such as sacrifice should present themselves to the gods, not in rich, but in white and clean garments; and that not only the body be clear from all blemish, but that they bring also a pure mind.] Purity is acquired by expiations, and bathings, and sprinklings; and by refraining from murder, and adultery, and all pollution; and by abstaining from the flesh of things that die of themselves, and from Mulletts, and Melanures, and Sheep, and Oviparous Creatures, and Beans, and all other things which are commanded by those who have the care of sacred rites.

(e) *Laert.* (e) He permitted not, that any man should pray for himself, because none knoweth what is good for himself.

(f) *Laert.* (f) An Oath is just, and therefore Jupiter is Sir-named *Opus*. (g) He commanded his disciples to be very backward in taking an Oath; but that when they have taken it, they should be very forward and diligent to keep it.

CHAP. IV.

Piety to the Dead.

Pietty to the Dead was a part, not the least, of the *Pythagorick* doctrine: whence *Cicero* speaking of the Immortality of the Soul; *More prevalent with me*, saith he, *is the authority of the Ancients, or our Ancestors, who afforded the dead so religious rites, which certainly they had not done, if they had conceived, that nothing pertains to them; or of those who were in this Country, and instructed Magna Gracia, which now is abolisht, but then flourish'd, with their institutions and precepts.*

(b) *Pythagoras* allowed not the bodies of the dead to be burned, herein imitating the *Magi*, as not willing that any mortal should participate of divine honour. The *Pythagorick* custom, as described by (c) *Pliny*, was, to put the dead into Earthen Barrels, amongst leaves of Myrtle, Olive, and black Poplar.

(d) To accompany the dead at Funerals in white garments, he conceived to be pious; alluding to the simple and first nature, according to number, and the principle of all things.

(e) The *Crotonians* delighting to bury their dead sumptuously, one of the *Pythagoreans* told them, he heard *Pythagoras* discoursing of divine things, thus: The celestial gods respect the affections of the sacrificers, not the greatness of the sacrifice. On the contrary, The terrestrial gods, as to whose share the lesser things belong, delight in banquets, and mournings, and funeral litations, and costly sacrifices; whence *Hades* (the Inferi) from its making choice of entertainment, is named *Pluto*; those who pay honours to him most sparingly, he permitted to continue longest in the upper world; but of those who are excessive in mourning, he bringeth down ever and anon one, that thereby he may receive the honours which are paid in memory of the dead. By this discourse he wrought a belief in his Auditors, that they who do all things moderately upon such adverse occasions, further their own safety; but as for those who bestow excessive charge, they will all die untimely.

(f) They forbore to make Tombs of Cypress, forasmuch as *Jupiter's Scepter* was of that wood; as *Hermippus*, in his second Book of *Pythagoras*, affirms.

CHAP. V.

Reverence of Parents, and Obedience to the Law.

(a) **N**ext to gods and demons, we ought to reverence Parents and the Law, and to render our selves obedient to them, not feignedly, but really. Or, as (b) *Porphyrius*, He commanded to think and to speak reverently of gods and demons, to be kind to parents and benefactors, and to obey the law.

They held (saith (c) *Jamblichus*) that we ought to believe, there is no greater ill than Anarchy; for a man cannot be safe where there is no Governour. They held also, that we ought to persevere in the customs and rites of our own Country, though they be worse than those of other Countries. To revolt easily from settled laws, and to be studious of novelty, they conceived to be neither advantageous nor safe.

(d) See-

(d) *Jamb. cap. pag. 153.* (d) Seeing that contumelies, pride, and contempt of Law, often transport men to unjust actions, he daily exhorted, (e) *that the law should be assisted, and injustice opposed.* To which end he alledged this distinction: The first of ills, which insinuateth into Houses and Cities, is *Pride*; the second, *Contumely*; the third, *Destruction*. Every one therefore ought to expel and extirpate *Pride*, accustoming themselves from their youth to a temperate masculine life, and to be free from slanderous repining, contentious reproaching, and hateful scurrility.

Wickedness disobey the Divine Law, and therefore transgresseth.

A wicked man suffers more torment in his own conscience, than he who is punished in body and whipped.

C H A P. VI.

Law-making.

(a) *Cap.* **M**oreover, (saith (a) *Jamblichus*) he constituted another excellent kind of Justice, the Legislative part, which commandeth that which ought to be done, and forbiddeth that which ought not to be done, which is better than the Judicative part; for this resembles that part of medicine which cureth the sick, but the other suffers them not to fall sick, but takes care afar off of the health of the soul.

(b) *D. Augustin.* (b) *Varro* affirms, that *Pythagoras* delivered this discipline (of governing States) to his Auditors last of all, when they were now learned, now wise, now happy; for he saw so many rough waves therein, that he would not commit it, but to such a one as was able to shun the rocks, or, if all fail'd, might stand himself as a rock amidst those waves.

(c) *Stob.* (c) They who punish not ill persons, would have the good injur'd.

S E C T. 3.

Theoretick Philosophy, its parts; and first of the Science concerning Intelligibles.

WE come next to the Theoretick part, to which more particularly belongs that saying of *Pythagoras*, That by Philosophy he had this advantage, To admire nothing; for, Philosophical discourse takes away wonder, which ariseth from doubt and ignorance, by knowledge and examination of the facility of every thing.

Theoretick Philosophy seems to have been divided by the *Pythagoreans* into two parts; They first (saith (b) *Jamblichus*) delivered the Science of Intelligibles, and the gods; next which, they taught all Physick. To the Science of Intelligibles belong these heads, wherewith (c) *Jamblichus* begins his recapitulation, Of the gods, of heroes, of demons.

C H A P. I.

Of the Supream God.

(a) *Laflant.* **P**ythagoras defined what God is, thus, (a) A mind which commeateth, and is diffused through every part of the World, and through all Nature; from whom all animals that are produced receive life,

(b) God is one. He is not (as some conceive) out of the world, but intire within himself, in a compleat circle surveying all generations. He is the Temperament of all ages, the Agent of his own powers and works, the Principle of all things, one, in heaven luminary, and father of all things; mind and animation of the whole, the motion of all circles.

(c) God (as *Pythagoras* learned of the Magi, who term him *Oromasdes*) in his body resembles Light, in his soul, Truth. (c) *Porph. vit. Pyth.*

(d) He said, that God only is wise. (d) *Clem. A. lex.*

(e) He conceived that the first, (being) God, is neither sensible, nor passible; but invifible, and intelligible. (e) *Plut. in Numa.*

C H A P. II.

Of Gods, Demons, Heroes.

Next to the supreme God, there are three kinds of Intelligibles, Gods, Demons, Heroes; that *Pythagoras* thus distinguished them, is manifest from his (a) precept, that We must in worship prefer Gods before Demons, Heroes before Men: But in (b) *Jamblichus*, he seems either to observe a different method, or to confound the Terms; teaching first of Gods, then of Heroes, last of Demons; which order perhaps is the same with that of the *Golden Verses*, (a) *Laert.* (b) *cap. 6.*

*First, as decreed, th' immortal Gods adore,
Thy Oath keep: next great Heroes, then implore
Terrestrial Demons with due sacrifice.*

By *Terrestrial Demons* seems to be understood (not Princes, as *Hierocles*; but) the Demons themselves, confin'd to several offices upon earth; For,

(c) All the air is full of Souls, which are esteemed Demons and Heroes; from these are sent to men dreams and presages of sickness, and of health; and not only to men, but to sheep also, and to other cattel; to these pertain expiations and averuncations, and all Divinations, Cledons, and the like. (c) *Laert.*

C H A P. III.

Of Fate and Fortune.

(a) **A**LL the parts of the World above the Moon, are governed according to Providence and firm order, and εἰμαρμένη, the Decree of God, which they follow: but those beneath the Moon by four causes, by God, by Fate, by our Election, by Fortune. For instance, to go aboard into a Ship, or not, is in our power: Storms and Tempests to arise out of a calm, is by fortune; for the Ship being under water to be preserved, is by the Providence of God. Of Fate, there are many manners and differences: it differs from Fortune, as having a determination, order, and consequence; but Fortune is spontaneous and casual, as to proceed from a boy to a youth, and orderly to pass through the other degrees of age happens by one manner of Fate. [Here the Text seems deficient.] (a) *Anon. apud Phot.*

F f f

(b) Man

(.) Laert.

(b) Man is of affinity with the God's, by reason that he participates of Heat, wherefore God hath a Providential care of us. There is also *ειμαρμένον*, a Fate of all things in general and in particular, the cause of their administration.

C H A P. IV.

Divination.

(.) Cap. 29.
(b) Jamb.
cap. 28.

Forasmuch as by Demons and Heroes, all Divination is convey'd to men, we shall here add what Pythagoras held and practised therein, Jamblichus saith, that (a) he honoured Divination not the least of the Sciences; (b) for what things are agreeable to God, cannot be known, unless a man hear God himself, or the Gods, or acquire it by divine art. For this reason they diligently studied Divination, as being the only interpretation of the benevolence of the Gods. It is likewise an employment most suitable to those who believe there are Gods: but whoever thinks either, (belief of the Gods, or Divination) a folly, to him the other is such also.

(c) Plut.
Plac.
Phil. lib. 4.

(c) Pythagoras approved all kinds of Divination, except that which is performed by the sacrifice of living Creatures.

(d) Porph.
(e) Laert.

(d) He first used Divination by Frankincense. (e) This was the only burnt-offering by which he divined.

(f) Laert.
(g) Cic. divi.
nat. 1.
(h) Cic. ibid.

(f) He also used Divination by Cleddones, and by Birds, which Cicero confirms, saying, that (g) he would himself be an Augur, and that (h) the Pythagoreans observed not only the voices of the gods, but of men also, which they call Omens. Cleddones are observations of occurrent speeches, collecting from what is accidentally said upon some other occasion, the effect of what is sought: an instance whereof see in the Epigram of Callimachus upon Pittacus.

Life of Pittacus chap.
pag.
cap.

The Interpretation of Dreams, (Porphyrus saith) he learned of the Hebrews: He communicated it also to his Disciples; for Jamblichus relates, he used means to procure them quiet sleeps, with good and prophetick dreams: Out of this respect some conceive it was, that he forbade flatulent and gross meats, for that they obstruct the serenity which is requisite thereto. Such apparitions he held not to be fantastick, but real, (not *ὄναρ* but *ὕπνα*) as is manifest from one who told him, that he dreamed he had talked with his father, (who was dead) and asked him what it portended; Nothing, (saith he) for you did really talk with him; as my speaking now to you portends nothing, no more did that.

Jamb.

Florid. lib. 2.

He was skilful likewise in Judicial Astrology, if we credit Apuleius, who affirms, the Caldeans shewed him the Science of the Stars, the number of the Planets; their Stations, Revolutions, and the various effects of both, in the Nativities of men.

(d) August.
civ.
Dei, lib. 7.
In Iliad. 7.

(d) Varro relates him skilful in Hydromancy, which (saith he) came from Persia, and was practised by Numa, and afterwards by Pythagoras; wherein they used blood, and invocation of Demons. Hither perhaps alludes Eustathius, who saith, the Pythagoreans affirm, that all brass doth sound by some diviner spirit, for which reason a Tripod of that metal is dedicated to Apollo; and when the Winds are all laid, the air calm, and all things else quiet, yet the hollow brass caldrons seem to quake; the same may be the meaning of Pythagoras, when he saith, The

sound which is made by brass, is the voice of the voice of the Demon inclosed in the brass; reading (perhaps) *ἐναπνευμένον*, for so Psellus describes a kind of Hydromancy practised by the Assyrians; They take a bason full of water convenient for the Demons to glide into the bottom: The bason of water seems to make a noise as if it breathed; the water in the bason in substance differs nothing from other water, but through the virtue infused therein by charms is much more excellent, and made more ready to receive a prophetick spirit. This is a particular Demon, Terrestrial, attracted by compositions; as soon as he glideth into the water, he maketh a little sound inarticulate, which denotes his presence; afterwards the water running over, there are certain whispers heard with some prediction of the future: This kind of spirit is very wandring, because it is of the Solar order; and this kind of Demons purposely speak with a low voice, that by reason of the indistinct obscurity of the voice, their lies may be less subject to discovery. Hitherto Psellus.

S E C T. IV.

Physick.

THE general Heads of Physick are these, Of the World, and of all things in the world, of Heaven, and of Earth, and of the Natures betwixt them. Jamb. cap. 6. The defect of the fragments concerning these we shall endeavour to supply, by adding the Treatise of Timæus the Locrian upon the same subject.

C H A P. I.

Principles.

THE most learned of the Naturalists (saith Adv. Math. lib. 9. Sextus Empericus) attributed so great power to Numbers, that they thought them to be the principles and elements of all things. These were the disciples of Pythagoras: For, say they, such as treat of Philosophy aright, imitate those who study a Language; they first examine words, because language consists of words; then, because words consist of syllables, they first consider syllables; and because syllables consist of letters, they first examine letters. In like manner, say the Pythagoreans, Natural Philosophers, when they make enquiry into the Universe, must first examine into what the Universe is resolved.

Now to affirm, that something apparent to sense is the principle of all things, is repugnant to Physick; for whatsoever is apparent to sense, must be compounded of things not apparent; whereas a Principle is not that which consists of any thing, but that of which the thing consists. Therefore things apparent cannot be said to be Principles of the Universe, but those of which things apparent consist, themselves not being apparent.

They who maintain Atomes, or Homoiomeria's or bulks, or intelligible bodies, to be the principles of all things, were partly in the right, partly not: As conceiving the principles to be unapparent, they are in the right; as holding them to be corporeal, they err. For as intelligible unapparent bodies precede the sensible, so most incorpo-

Porph. pag.

incorporeals precede intelligible bodies. The elements of words, are not words; nor of bodies, bodies: but they must either be bodies, or incorporeal; therefore they are wholly incorporeal. Neither can we say, that Atomes are eternal, and therefore, tho' corporeal, the principles of all things; for first, they who assert Homoiome-ria's, and bulks, and leasts, and indivisibles, to be elements, conceive their substance eternal, so as in that respect, Atomes are no more elements than they. Again, tho' it were granted, that Atomes were eternal; yet, as they who conceive the world to be unbegotten, and eternal, enquire by an imaginary way, the principles whereof it first consists; so we (say the *Pythagoreans*) treating of Physick, consider in an imaginary way, of what things these eternal bodies, comprehensible only by reason, consist. Thus the Universe consists either of bodies or incorporeals; we cannot say bodies, for then we must assign other bodies whereof they consist; and so proceeding to infinite, we shall remain without a principle. It rests therefore to affirm, that intelligible bodies consist of incorporeals, which *Epicurus* confesseth, saying, By collection of figure, and magnitude, and resistance, and gravity, is understood a Body.

Yet it is not necessary, that all corporeals pre-existent to bodies, be the elements and first principles of beings. Idea's (according to *Plato*) are incorporeals, pre-existent to bodies, and all generated beings have reference to them; yet they are not the principles of being: for every Idea, singly taken, is said to be one; when we comprehend others with it, they are two, or three, or four. Number therefore is transcendent to their substance, by participation whereof, one, two, or more, are predicated of them. Again, solid figures are conceived in the mind before bodies, as having an incorporeal Nature; yet they are not the principles. Superficies precede them in our imagination, for solids consist of superficies. But neither are superficies the elements of beings, for they consist of lines; lines precede them; numbers precede lines. That which consists of three lines, is called a Triangle; that which of four, a Quadrangle. Even line it self, simply taken, is not conceived without number: but being carried on from one point to another, is conceived in two. As to Numbers, they all fall under the Monad: for the Duad is one Duad, the Triad one Triad, and the Decad one summary of number.

This moved *Pythagoras* to say, That the principle of all things is the Monad; by participation hereof, every being is termed One; and when we reflect on a being in its identity, we consider a Monad: but when it receives addition by alterity, it produceth indeterminate Duad, so called, in distinction from the Arithmetical determinate Duads; by participation whereof all Duads are understood, as Monads by the Monad. Thus there are two principles of beings, the first Monad, and the indeterminate Duad.

That these are indeed the principles of all things, the *Pythagoreans* teach variously. Of beings, (say they) some are understood by difference; others by contrariety; others by relation. By difference, are those which are considered

by themselves, subjected by their proper circumscription; as, a man, a horse, a plant, earth, water, air, fire; each of these is considered absolutely without any. By contrariety, are those which are considered by contrariety of one to the other; as, good and ill; just, unjust; profitable, unprofitable; sacred, profane; pious, impious; moving, fixt; and the like. By relation, those which are considered by relation to others; as, right, left; upwards, downwards; double, half. For right is understood by a relative habit to left, and left by a relative habit to right; upwards to downwards, and downward to upwards; and so of the rest. Those which are understood by contrariety, differ from those that are understood by relation. In contraries, the corruption of the one is the generation of another; as, of health, sickness, motion, and rest. The induction of sickness is the expulsion of health, and the induction of health is the expulsion of sickness; the same in grief and joy, good and ill, and all things of contrary Natures. But the relative exist together, and perish together; for right is nothing, unless there be left; double is nothing, unless we understand the half whereof it is the double: Moreover, in Contraries there is no mean, as between health and sickness, life and death, motion and rest. But betwixt Relatives there is a mean; as betwixt greater and lesser, the mean is equal: betwixt too much and too little, sufficient: betwixt too flat and too sharp, concord.

Above these three kinds, Absolute, Contrary, Relative, there must necessarily be some supream Genus; every Genus is before the Species which are under it. For if the Genus be taken away, the Species are taken away also; but the removal of the Species takes not away the Genus, the Species depending on the Genus, not the Genus on the Species. The transcending Genus of those things which are understood by themselves, (according to the *Pythagoreans*) is the One; as that exists and is considered absolutely, so they. Of contraries, equal and unequal, holds the place of a Genus, for in them is considered the nature of all Contrarieties; as of rest in equality, it admits not intension and remission; of motion inequality, it admits intension and remission. In like manner, natural inequality, it is the instable extremity; preternatural inequality, it admits intension and remission. The same of health and sickness, straightness and crookedness. The relative consists of excess and defect, as their Genus; great and greater, much and more, high and higher, are understood by excess: little and less, low and lower, by defect.

Now forasmuch as Absolutes, Contraries and Relatives, appear to be subordinate to other Genus's, (that is, to One, to Equality, and to Inequality, to Excess and Defect) let us examine, whether those Genus's may be reduc'd to others. Equality is reducible to One, for one is equal in it self; inequality is either in excess or defect; of unequals, one exceeds, the other is deficient: Excess and defect are reducible to the indeterminate Duad; or the first excess and defect is in two, in the excedent and the deficient. Thus the principles of all things appear in the top above all the rest, the first Monad, and the indeterminate Duad.

(b) Man is of affinity with the God's, by reason that he participates of Heat, wherefore God hath a Providential care of us. There is also *εἰμαρμένον*, a Fate of all things in general and in particular, the cause of their administration.

C H A P. IV.

Divination.

As much as by Dæmons and Heroes, all Divination is convey'd to men, we shall here add what Pythagoras held and practised therein, *Jamblichus* saith, that (a) he honoured Divination not the least of the Sciences; (b) for what things are agreeable to God, cannot be known, unless a man hear God himself, or the Gods, or acquire it by divine art. For this reason they diligently studied Divination, as being the only interpretation of the benevolence of the Gods. It is likewise an employment most suitable to those who believe there are Gods: but whoever thinks either, (belief of the Gods, or Divination) a folly, to him the other is such also.

(c) Pythagoras approved all kinds of Divination, except that which is performed by the sacrifice of living Creatures.

(d) He first used Divination by Frankincense. (e) This was the only burnt-offering by which he divined.

(f) He also used Divination by Cledones, and by Birds, which *Cicero* confirms, saying, that (g) he would himself be an Augur, and that (h) the Pythagoreans observed not only the voices of the gods, but of men also, which they call Omens. Cledones are observations of occurrent speeches, collecting from what is accidentally said upon some other occasion, the effect of what is sought: an instance whereof see in the Epigram of *Callimachus* upon *Pittacus*.

The Interpretation of Dreams, (*Porphyrius* saith) he learned of the Hebrews: He communicated it also to his Disciples; for *Jamblichus* relates, he used means to procure them quiet sleeps, with good and prophetick dreams: Out of this respect some conceive it was, that he forbade flatulent and gross meats, for that they obstruct the serenity which is requisite thereto. Such apparitions he held not to be fantastick, but real, (not *ὄρα* but *ὕπνα*) as is manifest from one who told him, that he dreamed he had talked with his father, (who was dead) and asked him what it portended; Nothing, (saith he) for you did really talk with him; as my speaking now to you portends nothing, no more did that.

He was skilful likewise in Judicial Astrology, if we credit *Apuleius*, who affirms, the *Caldeans* shewed him the Science of the Stars, the number of the Planets; their Stations, Revolutions, and the various effects of both, in the Nativities of men.

(d) *Varro* relates him skilful in Hydromancy, which (saith he) came from Persia, and was practised by *Numa*, and afterwards by Pythagoras; wherein they used blood, and invocation of Demons. Hither perhaps alludes *Eustathius*, who saith, the Pythagoreans affirm, that all brass doth sound by some diviner spirit, for which reason a Tripod of that metal is dedicated to *Apollo*; and when the Winds are all laid, the air calm, and all things else quiet, yet the hallow brass caldrons seem to quake; the same may be the meaning of Pythagoras, when he saith, The

sound which is made by brass, is the voice of the voice of the Demon inclosed in the brass; reading (perhaps) *ἐναπειλημένον*, for so *Pfellus* describes a kind of Hydromancy practised by the *Assyrians*; They take a bason full of water convenient for the Demons to glide into the bottom: The bason of water seems to make a noise as if it breath'd; the water in the bason in substance differs nothing from other water, but through the virtue infused therein by charms is much more excellent, and made more ready to receive a prophetick spirit. This is a particular Demon, Terrestrial, attracted by compositions; as soon as he glideth into the water, he maketh a little sound inarticulate, which denotes his presence; afterwards the water running over, there are certain whispers heard with some prediction of the future: This kind of spirit is very wandring, because it is of the Solar order; and this kind of Demons purposely speak with a low voice, that by reason of the indistinct obscurity of the voice, their lies may be less subject to discovery. Hitherto *Pfellus*.

incorporeals precede intelligible bodies. The elements of words, are not words; nor of bodies, bodies: but they must either be bodies, or incorporeal; therefore they are wholly incorporeal. Neither can we say, that Atomes are eternal, and therefore, tho' corporeal, the principles of all things; for first, they who assert Homoiomeria's, and bulks, and leasts, and indivisibles, to be elements, conceive their substance eternal, so as in that respect, Atomes are no more elements than they. Again, tho' it were granted, that Atomes were eternal; yet, as they who conceive the world to be unbegotten, and eternal, enquire by an imaginary way, the principles whereof it first consists; so we (say the *Pythagoreans*) treating of Physick, consider in an imaginary way, of what things these eternal bodies, comprehensible only by reason, consist. Thus the Universe consists either of bodies or incorporeals; we cannot say bodies, for then we must assign other bodies whereof they consist; and so proceeding to infinite, we shall remain without a principle. It rests therefore to affirm, that intelligible bodies consist of incorporeals, which *Epicurus* confesseth, saying, By collection of figure, and magnitude, and resistance, and gravity, is understood a Body.

Yet it is not necessary, that all corporeals pre-existent to bodies, be the elements and first principles of beings. Ideas (according to *Plato*) are incorporeals, pre-existent to bodies, and all generated beings have reference to them; yet they are not the principles of being: for every Idea, singly taken, is said to be one; when we comprehend others with it, they are two, or three, or four. Number therefore is transcendent to their substance, by participation whereof, one, two, or more, are predicated of them. Again, solid figures are conceived in the mind before bodies, as having an incorporeal Nature; yet they are not the principles. Superficies precede them in our imagination, for solids consist of superficies. But neither are superficies the elements of beings, for they consist of lines; lines precede them; numbers precede lines. That which consists of three lines, is called a Triangle; that which of four, a Quadrangle. Even line it self, simply taken, is not conceived without number: but being carried on from one point to another, is conceived in two. As to Numbers, they all fall under the Monad: for the Duad is one Duad, the Triad one Triad, and the Decad one summary of number.

This moved *Pythagoras* to say, That the principle of all things is the Monad; by participation hereof, every being is termed One; and when we reflect on a being in its identity, we consider a Monad: but when it receives addition by alterity, it produceth indeterminate Duad, so called, in distinction from the Arithmetical determinate Duads; by participation whereof all Duads are understood, as Monads by the Monad. Thus there are two principles of beings, the first Monad, and the indeterminate Duad.

That these are indeed the principles of all things, the *Pythagoreans* teach variously. Of beings, (say they) some are understood by difference; others by contrariety: others by relation. By difference, are those which are considered

by themselves, subjected by their proper circumscription; as, a man, a horse, a plant, earth, water, air, fire; each of these is considered absolutely without any. By contrariety, are those which are considered by contrariety of one to the other; as, good and ill; just, unjust; profitable, unprofitable; sacred, profane; pious, impious; moving, fixt; and the like. By relation, those which are considered by relation to others; as, right, left; upwards, downwards; double, half. For right is understood by a relative habit to left, and left by a relative habit to right; upwards to downwards, and downward to upwards; and so of the rest. Those which are understood by contrariety, differ from those that are understood by relation. In contraries, the corruption of the one is the generation of another; as, of health, sickness, motion, and rest. The induction of sickness is the expulsion of health, and the induction of health is the expulsion of sickness; the same in grief and joy, good and ill, and all things of contrary Natures. But the relative exist together, and perish together; for right is nothing, unless there be left; double is nothing, unless we understand the half whereof it is the double. Moreover, in Contraries there is no mean, as between health and sickness, life and death, motion and rest. But betwixt Relatives there is a mean; as betwixt greater and lesser, the mean is equal: betwixt too much and too little, sufficient: betwixt too flat and too sharp, concord.

Above these three kinds, Absolute, Contrary, Relative, there must necessarily be some supreme Genus; every Genus is before the Species which are under it. For if the Genus be taken away, the Species are taken away also; but the removal of the Species takes not away the Genus, the Species depending on the Genus, not the Genus on the Species. The transcending Genus of those things which are understood by themselves, (according to the *Pythagoreans*) is the One; as that exists and is considered absolutely, so they. Of contraries, equal and unequal, holds the place of a Genus, for in them is considered the nature of all Contrarieties; as of rest in equality, it admits not intension and remission; of motion inequality, it admits intension and remission. In like manner, natural inequality, it is the instable extremity; preternatural inequality, it admits intension and remission. The same of health and sickness, straightness and crookedness. The relative consists of excess and defect, as their Genus; great and greater, much and more, high and higher, are understood by excess: little and less, low and lower, by defect.

Now forasmuch as Absolutes, Contraries and Relatives, appear to be subordinate to other Genus's, (that is, to One, to Equality, and to Inequality, to Excess and Defect) let us examine, whether those Genus's may be reduc'd to others. Equality is reducible to One, for one is equal in it self; inequality is either in excess or defect; of unequals, one exceeds, the other is deficient: Excess and defect are reducible to the indeterminate Duad; or the first excess and defect is in two, in the excedent and the deficient. Thus the principles of all things appear in the top above all the rest, the first Monad, and the indeterminate Duad.

Of these is generated the Arithmetical Monad and Duad, from the first Monad, one; from the Monad and the indeterminate Duad, two; the Duad being not yet constituted amongst Numbers; neither was here two, before it was taken out of the indeterminate Duad, of which, together with the Monad, was produced the Duad which is in Numbers. Out of these, in the same manner proceeded the rest of the Numbers, one continually stepping forward, the indeterminate Duad generating two, and extending Numbers to an infinite multitude.

Hereupon they affirm, that, in principles, Monad hath the nature of the efficient cause, Duad of passive matter; and after the same manner, as they produced Numbers, which consists of them, they composed the World also, and all things in it. A Point is correspondent to the Monad; the Monad is indivisible, so is the Point; the Monad is the principle of Numbers, so is the Point of Lines. A Line is correspondent to the Duad, both are considered by transition. A line is length without breadth, extended betwixt two Points. A Superficies corresponds to the Triad; besides length, whereby it was a Duad, it receives a third distance, breadth. Again, setting down three Points, two opposite, the third at the juncture of the lines made by the two, we represent a superficies. The solid figure and the body, as a Pyramid, answer the Tetrad; if we lay down, as before, three points, and set over them another point, behold the Pyramidical form of a solid body, which hath three dimensions, length, breadth, thickness.

Some there are who affirm, that a Body consists of one point, the point by fluxion makes a Line, the Line by fluxion makes a Superficies, the Superficies moved to thickness makes a Body, three ways dimensurable. This Sect of the Pythagoreans differs from the former; they held, that of two principles, the Monad and the Duad were made Numbers, of Numbers were made Points, Lines, Superficies, and Solids: These, that all things come from one point, for of it is made a line, of the line a superficies, of the superficies a body.

Thus are solid Bodies produc'd of Numbers precedent to them. Moreover, of them consist Solids, Fire, Water, Air, Earth, and in a word, the whole World, which is governed according to Harmony, as they affirm again, recurring to Numbers, which comprize the proportions that constitute perfect Harmony. (b) Harmony is a system consisting of three Concords, the Diatessaron, the Diapente, the Diapason; the proportions of these three Concords are found in the first four Numbers, one, two, three, four. The Diatessaron consists in a sesquitertia proportion. The Diapason in sesquialtera, the Diapente in duple; four being sesquitercius to three, (as consisting of three and one third) hath a Diatessaron proportion; three being sesquialter to two (as containing two and its half) a Diapente; four being the double of the Monad of two, a Diapason. The Tetracties affording the analogy of these Concords, which make perfect harmony, according to which all things are governed, they stil'd it,

The root and fountain of eternal Nature.

Moreover, whatsoever is comprehended by man, (say they) either is a body, or incorporeal; but neither of these is comprehended without the notion of Numbers: a body, having a triple dimension, denotes the number three. Besides, of Bodies, some are by connexion, as Ships, Chains, Buildings; others by union, compriz'd under one habit, as Plants, Animals; others by aggregation, as Armies, Herds. All these have numbers, as consisting of plurality. Moreover, of Bodies, some have simple qualities, others multiplicitous, as an Apple, various colour to the sight, juice to the taste, odour to the smell; these also are of the nature of numbers. It is the same of Incorporeals; Time, an incorporeal, is comprehended by number, years, months, days, and hours. The like of a Point, a Line, a Superficies, as we said already.

Likewise to numbers are correspondent both naturals and artificials. We judge every thing by criteries, which are the measures of numbers. If we take away number, we take away the Cubit, which consists of two half cubits, six palms, twenty four digits; we take away the Bushel, the Balance, and all other criteries, which consisting of plurality, are kinds of number. In a word, there is nothing in life without it. All art is a collection of comprehensions, collection implies number; it is therefore rightly said,

—To Number all things reference have.

that is, to dijudicative reason, which is of the same kind with numbers, whereof all consists. Hitherto Sextus.

(c) The sum of all (as by Alexander in his Successions, extracted out of the Pythagorick Commentaries) is this: *the Monad is the principle of all things. From the Monad came the indeterminate Duad, as matter subjected to the cause, Monad; from the Monad and the indeterminate Duad, Numbers; from Numbers, Points; from Points, Lines; from Lines, Superficies; from Superficies Solids; from these solid Bodies, whose Elements are four, Fire, Water, Air, Earth; of all which, transmuted, and totally changed, the World consists.*

CHAP. II.

Of the World.

(a) THE World, or comprehension of all things, Pythagoras called $\kappa\omicron\sigma\mu\theta$, from its order and beauty. (a) *Plut. ph. 2. 1. Stob. phys. 1.*

(b) The World was made by God, (c) in thought, not in time; (d) He gave it a beginning from fire, and the fifth element: for there are five figures of solid bodies, which are termed Mathematical. Earth was made of a Cube, Fire of a Pyramid, Air of an Octaedre, Water of an Icosaedre, the Sphere of the Universe of a Dodcaedre. In these Plato followeth Pythagoras. (b) *Plut. ph. 2. 4. Stob. ph. 1. 1. Plut. ph. 2. 6.*

(e) The World is corruptible in its own nature, for it is sensible and corporeal; but it shall never be corrupted, by reason of the providence and preservation of God. (f) Fate is the cause of the order of the Universe, and all Particulars; (g) Necessity encompasseth the World. (e) *Plut. ph. 2. 4. (f) Laert. 1. 25. (g) Plut. ph. 1. 25.*

(b) The

(b) Sext. Emp. advers. Log. lib. 1.

- (b) The World is animate, intelligible, spherical, enclosing the earth in the midst of it.
- (i) The Pythagoreans affirm, That what is without Heaven is infinite; for (k) beyond the world there is a Vacuum; into which, and out of which, the world respire.
- (l) The right side of the World is the East, whence motion begins; the left is the West.

CHAP. III.

Of the Superior or Ætherial parts of the World.

- (a) Pythagoras first called Heaven *Kosmos*, as being perfect in all kinds of animals, and adorned with all kinds of pulchritude.
- (b) In the fixed Sphere resides the first Cause; whatsoever is next him, that they affirm to be best, and firmly compounded and ordered; that which is furthest from him, the worst. There is a constant order observed as low as the Moon, but all things beneath the Moon are moved promiscuously. For,
- (c) The air, which is diffused about the earth, is unmoved and unwholesome, and all things that are in it are mortal; but the air which is above is perpetually in motion, and pure, and healthful; and all that are in it are immortal, and consequently divine.
- (d) This they call, The Free Æther, (immediately above the Moon:) Æther, as being void of matter, and an eternal body; Free, as not being obnoxious to material disturbances. Hence it followeth, that

The Sun, Moon, and the rest of the Stars, according to Pythagoras, are gods.

The Pythagoreans held, that every Star is a world in the infinite Æther, which containeth Earth, Air, and Æther. This opinion was also held by the followers of Orpheus, that every star is a world.

- (f) The Sun is Spherical, eclipsed by the Moons coming under him.
- (g) The body of the Moon is of a fiery nature; she receives her light from the Sun. (h) The Eclipse of the Moon is a reverberation or obstruction from the Antichthon.
- (i) The Pythagoreans affirm, that the Moon seems earthly, because she is round-about inhabited as our earth; but the creatures are larger and fairer, exceeding us in bigness fifteen times, neither have they any excrements; and their day is so much longer.
- (k) Some of the Pythagoreans affirm, that a Comet is one of the Planets, but appears not in heaven but after a long time, and is near the Sun, as it happens also to Mercury; for, because it recedes but little from the Sun, often when it should appear it is hid, so as it appears not but after a long time. Or, as (l) Plutarch expresth it, A Comet is one of those stars which are not always apparent, but rise after a certain period. (m) Others hold, that it is the reflection of our sight on the Sun, like images in glasses.
- (n) The Rain-bow he asserted to be the splendor of the Sun.

S E C T. IV.

Of the Sublunary parts of the World.

OF the inferior Sublunary parts of the World, the (a) anonymous Pythagorean placeth (a) Apud Phot. first the sphere of Fire, then that of Air, next that of Water; last, that of Earth.

(b) The bodies of all the Elements are round, except that of Fire, which is conical. (b) Plut. plac. 1. 14.

(c) Below the Moon, all things move disorderly; evil therefore necessarily exists about the Region of the Earth; that being settled lowest as the basis of the World, the receptacle of the lowest things. (c) Anon. apud Phot.

(d) The Air, which is diffused about the Earth, is unmoved and unwholesome, and all things in it are mortal. (a) Laert.

(e) There is generation and corruption; for things are produced by alteration, mutation, and resolution of the Elements. Motion is a difference, or alterity in matter. (e) Plut. plac. lib. cap. 23.

(f) In the world there is equally proportioned light and darkness, and heat and cold, and diccity and humidity; which when they are exuberant, the excess of heat causeth Summer; of cold, Winter: when they are equal, then are the best seasons of the year; whereof that which is growing up is the Spring, healthful; that which is decaying is Autumn, unhealthful. Even of the day, the morning is growing up, the evening decaying, and therefore more unwholesome. (f) Laert.

CHAP. V.

Of Living and Animate Creatures.

- (a) There penetrates a beam from the Sun through the Æther, which is cold and dry; (they call the Air cold Æther, and the Sun and humidity gross Æther) this beam penetrates to the Abyss, and thereby all things vivificate; all things live in as much as they participate of heat; (wherefore even plants are *ζῶα*, living Creatures) but all things have not soul; the soul is a portion of Æther of heat and cold, for it participates of cold Æther; the soul differeth from life. She is immortal, because that from which she is taken is immortal. Thus Alexander in his Successions, out of the Commentaries of the Pythagoreans.

CHAP. VI.

Of the Generation of Animate Creatures.

- (a) Animate Creatures are generated of one another by seed, (but of earth nothing can be generated.) Seed is a distillation from the Brain, [of the foam of the most useful part of the blood, the superfluity of the Aliment, as blood and marrow] which being injected τῇ μίτρᾳ, purulent matter, and moisture, and blood, issue from the Brain, whereof Flesh, Nerves, and Bones, and Hair, and the whole Body consists: [the power of Seed is incorporeal as the motive mind; but the effused matter corporeal.] From the vapour comes the Soul and

and sense; it is first compacted and coagulated in 40 days: and being perfected according to harmonical proportions in 7, 9 or 10 months (at the farthest) the Infant is brought forth, having all proportions of life; of which (aptly connected according to the proportions of harmony) it consists; all things happening to it at certain times. Thus Alexander, out of the Pythagorick commentaries; the proportions themselves are more exactly deliver'd by (b) Censorinus; thus.

(b) De die nat.
tal. Cap. 11.

Pythagoras said, that generally there are two kinds of births, one lesser, of 7 months; which comes into the world the 207 day after the conception: the other greater, of 10 months; which is brought forth in the 274 day. The first and lesser is chiefly contained in the number 6: For that which is conceived of the Seed, (as he saith) the 6 first days, is a Milky substance; the next 8 days, Bloody; which 8 with the 6 make the first concord, Diatessaron: The third degree is of 9 days; in which time it is made flesh; these to the first 6 are in sesquialtera proportion, and make the second concord, Diapente: then follow 12 days more in which the body is fully formed; these to the same 6 consist in duple proportion, and make the Diatessaron concord: These four numbers, 6, 8, 9, 12. added together make 35 days; nor without reason is the number 6 the foundation of generation, for the Greeks call it τελειόν, we perfect; because its three parts, $\frac{1}{2}$ and $\frac{1}{3}$ and $\frac{1}{6}$ (that is, 1, 2, and 3.) perfect it; now as the beginnings of the Seed, and that Milky foundation of conception, is first compleated by this number; so this beginning of the Man, now formed, and as it were another foundation of maturity, which is of 35 days, being multiplied by 6, makes 220 days, in which this maturity is fulfilled.

The other (greater) birth, is contained in the greater number 7. And as the beginning of the former is in 6 days, after which the seed is converted into blood; so that of this is in 7. And as there the members of the Infant are formed; so here in (about) 40. These 40 days being multiplied by the first 7, make 280 days, that is, 40 weeks: but forasmuch as the birth happens on the first day of the last week, 6 days are subtracted, and the 274th observed.

(c) Varro de
re rust. lib. 2.
cap. 1. Cen-
sor de die nat.
cap. 4.

(c) He held that Mankind had ever been; and never had beginning.

CHAP. VII.

The Soul, its parts, and first of the irrational part.

(a) Nemes. de
nat. hom.
(b) Plut.
(c) Arist. de
anima 1, 2.

(a) THE power of number being greatest in Nature, Pythagoras defined the Soul,

(b) A self-moving Number.

(c) Of the Pythagoreans some affirm, that the Soul is the notes in the Air; others, that it is that which moves those notes.

(d) The soul is most generally divided into two parts, rational, and irrational, but more especially into three; for the irrational they divide into irascible and desiderative. * These are termed νῆς, φρεν, θυμὸς. Νῆς and θυμὸς are in other living Creatures, φρεν only in man. [Yet]

(e) The soul of all Animate Creatures are rational, even of those which we term irrational,

(d) Plut. plac.
4. 4.

* Luert.

(e) Plut. plac.
20.

but they act not according to reason, because of the ill Temperament of the body, and want of speech, as in Apes and Dogs, λαλῶσι μὴ δ' ἐπι, & φεγγῶσι δὲ. They talk, but cannot speak.

The beginning of the soul, is from the heat of the brain, that part which is in the heart is θυμὸς, but φρένες and νῆς are in the Brain. The senses are distillations from these, the rational part is immortal, the rest mortal. The soul is nourished by blood, and the faculties of the soul are spirits. Both the soul and her faculties are invisible, for Æther is invisible: The fetters of the soul are Veins, Arteries, and Nerves; but when she is strong, and composed within her self, her fetters are Reasons and Actions.

(g) Every sense is derived from its proper Element; sight from Æther, hearing from Air, smelling from Fire, taste from Water, touch from Earth. (g) Stob. phys. 1. pag. 150.

Sense in general, and particularly Sight, is a vapour very hot; and for this reason we are said to see through air, and through water, for the heat pierceth the cold; for if that which is in the eyes were a cold vapour, it would fight with the Air, which is like it, (hot.) In some places he calleth the eyes the gates of the Sun; the same he determined concerning Hearing, and the rest of the Senses.

(i) Sight is the judge of Colours. (k) Colour they call the superficies of a body. The kinds of Colour are Black, White, Red, Pale; or, as the anonymous writer delivers the opinion of Pythagoras) Ten, Black, White, and the rest between them, Yellow, Tawney, Pale, Red, Blew, Green, Bright, Grey. (* l) The differences of Colours are derived from mixtions of the Elements, and in living Creatures from variety of place, and of Air. (i) Anon. phot. (k) Plut. plac. 1. 15. for δὲ δὲ δὲ perhaps δὲ δὲ δὲ.

(m) The image in a mirror is made by reflection of the sight, which being extended to the * brass, and meeting with a thick smooth body, is reperfused, and returns into it self; as when the hand is stretch'd forth, and again brought back to the shoulder. (m) Plut. plac. 4. 14. Of which the Ancients made their Mirrors, see Callim. Hymn.

(n) Hearing, is the judge of Voice, sharp and flat. (o) Voice is incorporeal; for not air, but the figure and superficies of air, by a stroke becomes voice; but no superficies is a body. And tho' it followeth the motion of the body, yet it self hath no body; as when a rod is bent, the superficies suffers nothing, the matter only is bent. (n) Anon. phot. (o) Plut. plac. 4. 20.

(p) Smelling judgeth of Odors, good and ill, and the fix between them, putrid, humid, liquid, venerate. (p) Anon. vii.

Taste judgeth of favors, Sweet, Bitter, and the five between them, for they are in all seven, Sweet, Bitter, Sharp, Acid, Fresh, Salt, Hot.

Touching judgeth many things, Heavy, Light, and those that are between them; Hot, Cold, and those that are between them; Hard, Soft, and those that are between them; Dry, Moist, and those that are between them. The other four Senses are seated in the head only, and confined to their proper Organs; but Touching is diffused through the head, and the whole body, and is common to every sense; but exhibits its judgment most manifestly by the hands.

C H A P. VIII.

Of the Rational Part of the Soul, the Mind.

IN Pythagoras his Definition of the Soul, A self-moving Number, (a) Plutarch saith, he takes Number for Mind. (b) The Mind, *vñs*, is induced into the Soul, *ab extrinseco*, from without, (c) by divine participation, *δέξα μείρα*, (d) delimited of the Universal Divine Mind. For (e) there is a Soul intent and commeanth through the whole Nature of things, from which our Souls are pluck'd. (f) She is immortal, because that, from which she is taken, is immortal; yet not a God, but the work of the eternal God. Thus (g) Pythagoras exceedingly confirmed the Opinion of his Master Pherecides, who first taught, that the Souls of Men are sempiternal.

(h) Our Souls (said he) consist of a Tetrad, Mind, Science, Opinion, Sense: from which proceeds all Art and Science, and by which we ourselves are Rational. The mind therefore is a Monad, for the mind considereth according to a Monad. As for Example; There are many men; these one by one are incomprehensible by Sense, and innumerable, but we understand this, one Man, to which none hath Resemblance; and we understand one Horse, for the Particulars are innumerable. Thus every Genus and Species is according to Monad, wherefore to every one in particular they apply this Definition, A Rational Creature, or, A Neighing Creature. Hence is the mind a Monad, whereby we understand these things. The indeterminate Duad is Science: for all demonstration, and all belief of Science, and likewise all Syllogism from some things granted, inferrs that which is doubted, and easily demonstrateth another thing, the comprehension whereof is Science, therefore it is as the Duad. Opinion is justly a Triad, being of many. Triad implies a multitude, as, *Thrice happy Greeks*—[The rest of the Text is wanting.

(i) The Pythagoreans assert Eight Organs of Knowledge, Sense, Phantasie, Art, Opinion, Prudence, Science, Wisdom, Mind. Of these, we have common with Divine Natures, Art, Prudence, Science, Mind; with Beasts, Sense and Phantasie; only Opinion is proper to us. Sense, is a deceitful knowledge through the Body; Phantasie, a motion in the Soul; Art, a Habit of operating with Reason. We add, *with Reason*, for a Spider also operates, but without Reason. Prudence, is a habit elective of that which is right in things to be done; Science, is a habit of those things which are always the same, and in the same manner; Wisdom, a knowledge of the first cause; Mind, the principle and fountain of all good things.

C H A P. IX.

Of the Transmigration of the Soul.

WHat he delivered to his Auditors (saith) (a) Porphyrius) none can certainly affirm, for there was a great and strict silence observed amongst

them; but the most known are these: First, he said, that the Soul is immortal; then, that it enters into other kinds of living creatures. [Or, as Laertius expresseth it, He first asserted, That the soul passing through the circle of Necessity, lives at several times in different living creatures.] Moreover, that after some periods, the same things that are now generated, are generated again, and that nothing is simply New; and that we ought to esteem all animate creatures to be of the same kind with us. These Doctrines Pythagoras seems to have brought first into Greece. (b) Diodorus Siculus affirms, he learn'd them of the Egyptians: (c) They were the first who asserted, that the Soul of man is immortal, and the Body perishing, it always passeth into another Body; and when it hath run through all things terrestrial, marine, volatile, it again entreth into some generated humane body. Which circuit is completed in three thousand years. This Opinion (adds Herodotus) some of the Greeks have usurped as their own, some more ancient, others later, whose Names knowingly I omit.

Pythagoras, (saith Theodoret) Plato, Plotinus, and the rest of that Sect, acknowledging Souls to be immortal, asserted, That they are preexistent to Bodies; that there is an innumerable company of Souls; that those which transgress, are sent down into bodies, so as being purify'd by such Discipline, they may return to their own place. That those which, whilst they are in bodies, lead a wicked life, are sent down farther into irrational creatures, hereby to receive punishment, and right expiation; the angry and malicious into Serpents, the ravenous into Wolves, the audacious into Lions, the fraudulent into Foxes, and the like.

(e) Upon this ground (as some conceive) it was, that he forbad to eat Flesh: for, (f) We ought to esteem all animal creatures to be of the same kind with us, and (g) to have common right with us, and (h) to be allied (in a manner) to us. Whence a Bean is by Horace stiled, *cognata Pythagoræ*, because he forbad it to be eaten upon the same grounds; (k) for that Men and Beans arose out of the same putrefaction.

This Assertion he defended by many instances, particularly of himself. (l) Heraclides relates, that he said, he had been in former times Æthalides, esteemed the Son of Mercury, [(m) a powerful Orator, who wrote two Treatises, the one mournful, the other pleasant; so that, like Democritus and Heraclitus, he bewailed and derided the instability of life, and was said to die and live from day to day] and that Mercury had him request whatsoever he would, Immortality only excepted. That he desired, that he might preserve the remembrance of all actions, alive and dead: whereupon he remembered all things whilst he lived, and after death retained the same memory. That afterwards he came to be Euphorbus, and was slain by Menelaus. Now Euphorbus said, that he had been in former times Æthalides, and that he had received this gift from Mercury, to know the Migration of the Soul, as it past from one Body to another, and into what Plants and Animals it migrated, and what things his Soul suffered after death, and what other Souls suffered. Euphorbus dying, his soul passed into Hermotimus, who desiring to profess who he was, went to the Branchidæ, and coming into the Temple of Apollo, shewed the shield which Menelaus had hung up there, [but (n) Porphyrius and (o) Jamblichus affirm, it was dedicated

(b) Cited by Euseb. præpar. Evang. 10. (c) Herodot.

(k) Porph.

(l) Laert. (m) Tzet. Chil. 249.

(n) Pag. (o) Cap. (106-

together with other Trojan spoils) to Argive Juno in her Temple at Mycenæ) for he said, That at his return from Troy, he had dedicated that Shield to Apollo, it being then old, and nothing remaining but the Ivory stock. As soon as Hermotimus died, he became Pyrrhus, a Fisherman of Delus; and again remembered all things, how he had been first Æthalides, then Euphorbus, then Hermotimus, and lastly Pyrrhus. When Pyrrhus died he became Pythagoras, and remembered all that we have said. Others relate, that he said, he had been, first, Euphorbus; secondly, Æthalides; thirdly, Hermotimus; fourthly, Pyrrhus; and lastly, Pythagoras.

(p) Agell. 4. 11.

(c) Porph. 7. un. cap. 14.

(p) Clearchus and Dicearchus, that he had been first Euphorbus; then Pyrrhus; then Calliclea; then a beautiful Curtezan, named Alce. (q) For this reason, of all Homer's Verses, he did especially praise these, and set them to the Harp, and often repeat them as his own Epicedium.

As by some hand, a tender Olive set
In a lone place, near a smooth Rivolet.
Fair she shoots up, and, fann'd on every side
By amorous winds, displays her blooming pride;
Until some churlish unexpected gust
Plows up her root, and buries her in dust.
So by Alcides slain Euphorbus lay,
Stretch'd on the ground, his Arms the Victor's

(r) Lib. 15.

Hence in his person, (r) Ovid.

(s) Englished by my Uncle, Mr. Sandys.

(s) O you, whom horrors of cold death affright,
Why fear you Styx? vain names, and endless night,
The dreams of Poets, and feign'd miseries
Of forged Hell? Whether last flames surprize,
Or age devours your bodies, they not grieve,
Nor suffer pains. Our souls for ever live:
Yer evermore their ancient houses leave
To live in new, which them, as guests receive,
In Trojan Wars, I (I remember well)
Euphorbus was, Pantheus son, and fell
By Menelaus Lance: my shield again
At Argos late I saw in Juno's fane.
All alter, nothing finally decays;
Hither and thither still the spirit strays,
Guest to all bodies, out of beasts it flies
To men, from men to beasts, and never dies.
As pliant wax each new impression takes,
Fixt to no form, but still the old forsakes,
Yet is the same: so souls the same abide,
Though various species their reception hide.
Then lest thy greedy belly should destroy
(I prophesie) depressed piety,
Forbear to expulse thy kindreds Ghosts with food
By death procur'd, nor nourish blood with blood.

(t) Porph. p. 17. Jamb. cap. 14.

Neither did he instance himself only, but (t) put many others also in mind of the accidents of their former life, how they had lived, before their souls were confined the second time to the body. This he did (adds (u) Porphyrius) to those, whose souls were rightly purified; such was (x) Millias of Crotona, whom he caused to call to memory, that he had been Midas son of Gordias. Whereupon Millias went to Epire, to perform some Funeral rites, as he appointed.

(u) Pag. 31. (x) Jamb. cap. 28. pag. 132. See also Elian. var. 11 ff.

C H A P. X.

The separate life of the Soul.

(a) THE Soul hath a twofold life, Separate, (a) Stob. phys. and in the Body; her faculties are otherwise in anima, otherwise in animal.

(b) The Soul is incorruptible; for when it goes out of the body, it goes to the Soul of the world, which is of the same kind. (b) Plut. plac. 4. 7.

(c) When she goeth out upon the earth, she walketh in the air like a body. Mercury is the keeper of souls, and for that reason is called Περαιπύδης, and Πυλάγος, and Χθονεύς, because he brings souls out of bodies in the Earth and the Sea; of which, those that are pure, he leadeth into an high place; the impure come not to them, nor to one another, but are bound by the Furies in indissoluble chains. (c) Laert.

(d) The Pythagoreans affirmed, that the souls of the dead neither cast a shadow, nor wink; for that it is the Sun which causeth the shadow. But he who enters there, is by the law of the place deprived of the Sun's light which they signify in that speech. (d) Plut. quæ. græc.

(e) Pythagoras held, that Earthquakes proceed from no other cause, but the meeting of the dead. (e) Ælian. var. hist. 4. 26.

S E C T. V.

Medicine.

TO Physick we shall annex, as its immediate consequent, Medicine. Apuleias affirms, that Pythagoras learnt the Remedies and Cures of Diseases of the Chaldeans. Laertius, that he neglected not Medicine. (a) Ælian, that he studied it accurately. Jamblichus, that the Pythagoreans esteem it not the least of the Sciences. Lastly, (b) Diogenes relates of Pythagoras, that whensoever his friends fell into any indisposition of body, he cured them. (a) Var. hist. 9. 22. (b) Porph.

(c) Health Pythagoras defined, The consistence of a form. Sicknes, The violation of it. (c) Laert.

C H A P. I.

Dietetick.

(a) OF Medicine, the Pythagoreans chiefly applied themselves to the Dietetick part, and were most exact in that; and endeavoured first to understand the proportion, not only of labour, but likewise of food and rest. Then concerning the dressing of such meats, they were almost the first who endeavoured to comment and to define. (a) Jamb. cap. 29. pag. 147. 148.

(b) Forasmuch as Diet doth much conduce to good Institution, being wholesom and regular. Let us examine what he decreed therein. Of meats, he absolutely disallowed such as are flatulent, and disorder the body; on the contrary, he approved and commanded those which confirm and unite the constitution; whence he judged Millets to be a convenient food. (b) Jamb. cap. 24.

But he also wholly forbade such meats as are not used by the gods, because they separate us from the correspondence which we have with them.

Likewise he advised to abstain from such meats as are esteemed sacred, which deserve a respect, and are nothing convenient for the ordinary use of man. What-

c The Pythagorists.
d The Pythagoricks

1941.

But to (e) others, whose life was not extraordinary pure, and sacred, and Philosophical, he prescribed a certain time for Abstinence. To those he decreed, that they should not eat the Heart: That they should not eat the Brain. And these are prohibited to all Pythagoreans; for they are leaders, and, as it were, seats and houses of wisdom and life. But these were consecrated by the nature of the divine word.

*Also to abstain from Beans, for many Reasons, di-
vine and natural, referring to the Soul.*

(g) As concerning the Diet of Pythagoras himself, his Dinner consisted (h) of Honey-Combs, or Honey, his Supper of Bread made of Millet, and [(i) his Opsonium] of boiled or raw Sallads, very seldom of the flesh of sacrificed Victims, and that not promiscuously of every part, (k) [and seldom of Sea-fish.]

Therapeutisch.

Likewise, Coleworts (as (i) Pliny relates) were much commended by Pythagoras. He adds (b) that concerning the white kind of the Fungo, (by the Ro-

mans call'd, Centum-capita) there are many vanities delivered, not only by the Magi, but by the Pythagoreans.

Besides the Pharmaceutick, Pythagoras practised two other ways of cure, one by Musick, the other by Charm. Of the first we have already spoken. Of the second, thus (l) Jamblichus: There is also a way without the singing of birds, by which they expell'd some passions, and sicknesses, (as they say) indeed by Incantation, whence it seems was derived the word *ἐπωδή*, The way of cure by Charm, saith (m) the Greek Etymologist, was of ancient use; whence Homer:

— And staid the black blood by a Charm.

And Pindar, speaking of Æsculapius, ἀμάρων, with soft Charms.

That Pythagoras made use of Epodes, is also af-

firmed by (n) Porphyrius. He allayed, saith he, the passions of the Soul and Body by Rhythms, and Verses, and Epodes. And Diogenes, cited by the same Porphyrius, if his Friends fell into any indisposition of body, he healed them; if they were troubled in mind, he asswaged their Grief, as we said, partly by Charms and Magick Verses, partly by Musick. For he had some Verses proper to the cure of the indispositions of the Body, by singing which, he restored the sick to their former health: He had other Verses that procured forgetfulness of grief, asswaged anger, and suppressed inordinate desires.

Of these Charms we find an instance preserv'd by (o) Pliny, who prescribes, as an Invention of Pythagoras, which seldom fails against Lameness, or Blindness, or the like Accidents, to apply to the part; if on the right side, an uneven number of Vowels of impositive words; if on the left, an even.

The Doctrine of PYTHAGORAS.

CHAP. I.

Pythagoras his Symbolical way of Teaching.

a Porph.
pag.

(a) **P**YTHAGORAS had a twofold-manner of teaching: whatsoever he communicated to his Auditors, was delivered, either plainly or symbolically. Hitherto of the plain way. We come now to the other, the symbolical.

b Jamb.
cap. 89.
pag. 146.

(b) He used by short sentences to vaticinate an infinite multiplicitous signification to his Disciples, after a symbolical manner: no otherwise than Apollo by short Answers exhibits many imperceptible sentences; and Nature her self, by small seeds, most difficult effects. Of this kind is,

— half, is the whole's beginning.

an Apothegm of Pythagoras himself. Neither in that Hemistick only, but in others of the same kind, the most divine Pythagoras wrapped up sparks of truth, for such as could enkindle them, in a short way of speech treasuring up concealed a most copious production of Theory: as in this,

— to number all have reference.

loco. cit.

And again, φιλότις, ἰσότης, Friendship, Equality; and in the word κόσμος, (World, or Heaven) and in the word Philosophy, and in τῶν γυμνασίων, and in that celebrated word Tetraëty. All these, and many more, did Pythagoras invent, for the benefit and rectification of such as conversed with him.

Some things likewise (saith (c) Porphyrius) he spoke in a mystical way symbolically, most of which are collected by Aristotle; as when he called the Sea (d) a tear of Saturn; the two Bears, the hands of Rhea; the Pleides, the Lutes of the Muses; the Planets, the dogs of Proserpina [the (e) eyes, the gates of the Sun.]

(f) He had also another kind of Symbols, as,

Go not over a ballance; that is, Shun avarice, &c. Thus Porphyrius. These are variously recited and interpreted by several Authors; we shall begin with Jamblichus, as being herein of greatest credit.

CHAP. II.

The Symbols of Pythagoras, according to Jamblichus.

(a) **T**HE last way of exhortation to Virtue, and dehortation from Vice, is that by Symbols; one way being proper to the Sect, not communicable to other Institutions; another vulgar and common to them; the third is betwixt both, neither absolutely Publick, nor wholly Pythagorical, nor quite different from either; such are those they term Symbols, of which, as many as deserve commemoration, in our opinion, of the adhortatory form, we shall communicate, and add a suitable interpretation; conceiving that hereby, the exhortation to Philosophy may be more prevalent on those that hear them, than if delivered more at large. And forasmuch as we shall insert some Exoterick solutions, common to all Philosophy, it is to be understood, as different from the meaning of the Pythagoreans. But inasmuch as we shall intermix some of the most particular opinions of the Pythagoreans, consonant to each; this is wholly proper to them, and dissonant from all other Philosophers, but most fit to be alledged. This will insensibly lead us from the Exoterick notions, bringing us to the others, and acquainting us with them. And to the exhortations framed according to this Sect, as a Bridg or Ladder, by

a Jamb.
protrept.
cap. ult.

by which we ascend from a depth to a great height, guiding the minds of those, who addict themselves genuinely thereto. For to this end it was framed, according to imitation of the things already mentioned. For the most ancient, and such as were contemporary with, and disciples to *Pythagoras*, did not compose their writings intelligible, in a common vulgar style, familiar to every one, as if they endeavoured to dictate things readily perceptible by the hearer, but consonant to the silence decreed by *Pythagoras*, concerning divine mysteries, which it was not lawful to speak of before those who were not initiated; and therefore clouded both their mutual discourses and writings by Symbols; which, if not expounded by those that proposed them, by a regular interpretation, appear to the hearers like old wives proverbs, trivial and foolish; [(b) but being rightly explained, and instead of dark, rendered lucid and conspicuous to the vulgar, they discover an admirable sense, no less than the divine Oracle of Pythian *Apollo*, and give a divine inspiration to the Philologists that understand them.] That therefore their benefit may be known, and their adhortative use manifest, we will give the solutions of every Symbol, both after the Exoterick and the Acroatick way, not omitting those things which were preserved in silence, not communicable to uninitiated persons. The Symbols are these:

1. *When you go to the Temple, worship, neither do nor say any thing concerning Life.*
2. *If there be a Temple in your way, go not in, nor not though you pass by the very doors.*
3. *Sacrifice and worship barefoot.*
4. *Decline high-ways, and take the foot-path.*
5. *Abstain from the Melanure, for it belongs to the Terrestrial gods.*
6. *Above all things, govern your tongue, when you follow the gods.*
7. *When the winds blow, worship the noise.*
8. *Cut not fire with a sword.*
9. *Turn away from thy self every edg.*
10. *Help a man to take up a burthen, but not to lay it down.*
11. *Put on the shoe first on the right foot, but the left foot first into the bason.*
12. *Discourse not of Pythagorean things without light.*
13. *Pass not over a pair of Scales.*
14. *Travelling from home, turn not back; for the Furies go back with you.*
15. *Urine not, being turned towards the Sun.*
16. *Wipe not a seat with a Torch.*
17. *A Cock keep, but not sacrifice; for it is consecrated to the Moon and the Sun.*
18. *Sit not upon a Chænix.*
19. *Breed nothing that hath crooked talons.*
20. *Cut not in the way.*
21. *Receive not a Swallow into your house.*
22. *Wear not a Ring.*
23. *Grave not the image of God on a Ring.*
24. *Look not in a glass by candle-light.*
25. *Concerning the gods, disbelieve nothing wonderful, nor Concerning divine Doctrines.*
26. *Be not taken with immoderate laughter.*
27. *At a sacrifice, pare not your nails.*
28. *Lay not hold on every one readily with your right hand.*

29. *When you rise out of bed, disorder the coverlet, and deface the print.*
30. *Eat not the Heart.*
31. *Eat not the Brains.*
32. *Spit upon the cuttings of your hair, and the parings of your nails.*
33. *Receive not an Erythræ.*
34. *Deface the print of a pot in the Ashes.*
35. *Take not a woman that bath gold, to get children of her.*
36. *First honour the figure and steps, a figure and a Tribolus.*
37. *Abstain from Beads.*
38. *Set Mallows, but eat it not.*
39. *Abstain from living creatures.*

C H A P. III.

*An Explication of the Pythagorick Symbols,
by Jamblichus.*

ALL these Symbols are in general adhortative to all virtue; and every one of them in particular conduceth to some particular virtue, and part of Philosophy, and Learning; as the first are adhortative to devotion, and divine knowledge.

S Y M B. I.

FOR this, *When you go to the Temple, worship, neither do nor say any thing concerning life*, observes the Divinity after such manner, as it is in it self, pure and incommixt. He joyns pure to the pure, and takes care, that no worldly business insinuate it self into the divine worship; for they are things wholly different and opposite to one another. Moreover, this conduceth much to Science; for we ought not to bring to the divine Science any such thing as humane consideration, or care of outward life. Thus nothing is hereby commanded, but that divine discourses, and sacred actions, ought not to be intermixt with the instable manners of men.

S Y M B. II.

TO that is consonant the next, *If a Temple lie in your way, go not in, nor though you pass by the very doors*. For if like is delightful to its like, it is manifest that the Gods, having the chiefest essence of all things, ought to have the principal worship: but if any man doth it upon occasion of any other thing, he makes that the second, which is the first and chiefest of all; and by that means he subverts the whole order of worship, and science. The most excellent good, ought not to be ranked in the latter place, as inferior to humane good; neither ought our own affairs to have the place of the chief end and better things, either in our words or thoughts.

S Y M B. III.

THAT which follows is an exhortation to the same; for this, *Sacrifice and worship bare foot*, signifieth one way, that we ought to serve the Gods, and perform their knowledg decently

and moderately, not exceeding the order in the earth. Another way that we ought to perform their service and knowledg, being free without Fetters. This the Symbol commands to be observ'd, not in the body only, but in the acts of the soul, that they be not restrained by passions, nor by the infirmity of the body, nor by our external generation, but all free and ready for communication with the Gods.

S Y M B. IV.

There is another Symbol of this kind, exhorting to the same virtue; *Concerning the gods, disbelieve nothing wonderful, and concerning divine Doctrines.* This rule is religious, and declareth the superlative excellence of the Gods; instructing us, and putting us in mind, that we ought not to estimate the Divine power by our own Judgment. To us who are corporeal, and generated, and corruptible, and transitory, and obnoxious to several diseases, and to narrowness of habitation, and to aggravation of motion towards the Center, and to sleepiness; and to indigence, and to abundance, and to imprudence, and to infirmity, and to impediment of soul, and the like some things will seem difficult, and impossible, yet have we many excellencies by Nature: but we are quite short of the Gods, neither have we the same power, or ability. This Symbol, therefore, chiefly adviseth to knowledge of the Gods, as of those who are able to do all things; whence it admonisheth to *disbelieve nothing concerning the Gods.* There is added, *nor concerning divine Doctrines,* meaning those which are declared by the *Pythagorick* Philosophy; because they being settled by Mathematicks, and Scientifick Speculation will shew by demonstration, strengthened by necessity, that there are true Beings existent void of fallaciousness.

* Perhaps
ἀπιστία
μεν.

These may also exhort to the Science concerning the Gods, and perswade that such a Science is to be acquired, as by which we shall not * disbelieve any thing concerning the Gods: The same may advise to divine Doctrines, and to proceed by Mathematicks; for they only clear the eyes, and are illuminative of all Beings, to him that will behold them; for by participation of Mathematicks, One thing is constituted before all; that we disbelieve not any thing, either concerning the nature of the Gods, or their Essence, or their Power: nor of those *Pythagorical* Doctrines, which seem monstrous to persons, not initiated into Mathematicks: Thus *disbelieve not,* is equivalent to, *acquire and possess* those things, by means whereof you shall not disbelieve; that is Mathematicks, and Scientifick Demonstrations.

S Y M B. V.

THE next Symbol tends (as I conceive) to the same effect; *Declining high-ways, walk in path-ways.* For it commandeth to leave the publick popular course of life, and to pursue that which is separate, and Divine: likewise that we despise the common opinions, and much esteem the private, which are not to be divulged; and to condemn the pleasure which tends towards men; but to value exceedingly that felicity, which is joyned with the divine will: And to

leave humane customs as vulgar; but to apply our selves to the worship of the Gods, which far excels the ordinary course of life. Allied to this, is that which followeth.

S Y M B. VI.

Abstain from the Melanure, for it belongs to the Terrestrial Gods. We shall say more upon it, in our explication of the adhortative Symbols: It adviseth to make choice of the Heavenly Journey, and to adhere to the Intellectual Gods, and to withdraw our selves from Material nature, and to direct our course to that life which is pure, void of matter, and to make use of the best way of Divine worship, and that which is most suitable to the chief deities. These Symbols are adhortative to the knowledge and worship of the Gods.

S Y M B. VII.

THE following Symbols exhort to Wisdom; *Above all things govern your Tongue, following the Gods;* for the first work of Wisdom is to revert our speech into it self, and to accustom it not to pass forth, that it may be perfect within our selves, and in its conversion towards our selves; Moreover *in following the Gods:* for nothing renders the mind so perfect, as when a man, being reverted into himself, followeth the Gods.

S Y M B. VIII.

THIS Symbol likewise, *When the winds blow, worship the noise,* is an exhortation to Divine Wisdom; For it implieth that we ought to love the similitude of Divine Natures and Powers: and when they make a reason suitable to their efficacies, it ought exceedingly to be honoured and revered.

S Y M B. IX.

THE next Symbol, *Cut not fire with a Sword,* exhorts to wisdom; for it excites in us a convenient knowledg, that we ought not to give sharp language to a man full of fire and anger, nor to contest with him; for you may often by words exasperate and trouble a rude and unlearned person. Of this *Heraclius* witnesseth; *To contest with anger (saith he) is hard, for whatsoever it would have done, it will purchase tho at the expence of life.* And he said truly; for many, gratifying their own anger, have exchanged their Souls, and preferred death before them: but from continence of the Tongue, and peacefulness, this happens, that out of contention arises friendship, the wrathful fire being extinguished, and thou thy self wilt appear, not to be void of reason. This Symbol is confirmed by that which followeth.

S Y M B. X.

Turn away from thy self every edge; for towards whomsoever it shall be turned, it will hurt him. This Symbol commandeth to use prudence not anger; for that edge of the mind which we call anger, is void of reason and prudence;

dence; for anger boileth like a pot upon the fire, never dividing the mind to that which is past. You must therefore settle your mind in tranquillity, diverting it from anger, and often preventing your self; as a man maketh brass found, not without touching it. This passion therefore must be suppressed by reason.

S Y M B. XI.

THis, *Help to lay on a burthen, but not to take it off*, adviseth to fortitude; for, whosoever layeth on a burthen, signifieth labour and action; but he who taketh it off, rest and remission. The meaning therefore of the Symbol is this, Be not the cause, either to thy self or any other, of remission of mind, and soft life; for every useful thing is acquired by labour. This Symbol *Pythagoras* called Herculean, as being sealed by his labours; for whilst he lived amongst men, he passed frequently through fire, and many difficulties, shunning idleness. From actions and labour proceeds a right office, but not from sloath.

S Y M B. XII.

THis, *Pluck off your right shoe first, but put your left foot first into the basin*, exhorts to active prudence; that good actions, as right, are to be set round about us; but the ill, as left, to be laid aside and rejected.

S Y M B. XIII.

THis, *Discourse not of Pythagorean things without light*, is chiefly adhortatory, that the mind acquire prudence; for that resembles the light of the mind, which being indefinite, limits and reduceth it, as it were, out of darkness into light; It is therefore chiefly requisite to look upon the mind, as guide of all good actions in life; but in the Pythagorick doctrines, this is most particularly necessary; for it is not possible to understand what they are without light.

S Y M B. XIV.

THis, *Pass not over a balance*, commands to do justly, and above all things, to respect equality and mediocrity, and to know justice, the most perfect Virtue, which compleats the rest, and without which, the rest profit nothing; neither must we know it superficially only, but by Theorems, and scientifick Demonstrations. This knowledge is the work of no Art and Science, but only of the Philosophy of *Pythagoras*, which preferreth Mathematicks before all things else.

S Y M B. XV.

TO the same purpose is this, *Travelling from home, turn not back, for the furies go back with you*. This Symbol exhorteth to Philosophy, and free action about the mind. It likewise manifestly teacheth thus, When thou studieth Philosophy, separate thy self from all corporeal and sensible things, and truly make a meditation of death unto things intelligible, which are always the same, and after the same manner; pro-

ceeding (without turning back) by Mathematicks, conducing thereto. For travel is the change of Place, death is the separation of the Soul from the Body. But we must so study Philosophy, as to make use of the pure mind sincerely, without the acts of corporeal senses. to the comprehension of the truth which in things that are, which is acknowledged to be wisdom. But after you have once applied your self to study Philosophy, turn not back, nor be drawn back to the former corporeal things, in which you were bred up; for you will much repent hereof, being hindered from sacred comprehensions, by the darkness which is in corporeal things. Repentance they call *Ermys*, or *Phry*.

S Y M B. XVI.

THis, *Urine not being turned towards the Sun*, admonisheth, that we offer not to do any bestial action, but to study and practise Philosophy, looking upon Heaven and the Sun; and remember, that in the study of Philosophy, you never bear a low mind, but by the contemplation of heavenly things, ascend to the gods, and to wisdom. And having applied your self to study Philosophy, and to the light of truth that is in it, purifying your self, and converting your self wholly to that design, to Theology, and Physiology, and Astronomy, and Ætiologick, which is above all the rest, do nothing irrational or bestial.

S Y M B. XVII.

THE same meaning is of the next, *Wipe not a seat with a Torch*; for not only because a Torch is purificative, as partaking of much quick fire, like sulphur, it adviseth that this ought not to be defiled, its nature being such, as it dispelleth all things that defile; nor ought we to oppose natural habitude, by defiling that, whose nature is repugnant to defiling. Much less ought we to joyn and mix things proper to wisdom, with those which are proper to animality. For, a Torch, in respect of its brightness, is compared to Philosophy; a Seat, in respect of its lowness, to Animality.

S Y M B. XVIII.

THis, *Breed a Cock, but not sacrifice it; for it is sacred to the Moon and the Sun*; admonisheth us, to nourish and cherish (and not to neglect; so as to suffer them to perish and corrupt) the great evidences of the union, and coagmentation, and sympathy, and conspiracy of the World. It therefore adviseth, to address our selves to contemplation of the Universe, and to Philosophy; for the truth of all things being by nature concealed, and hard to be found out, yet requisite to be sought, and investigated by man, chiefly through Philosophy, (for to do it by any other study is impossible) which receiving some little sparks from nature, blows them up, and makes them greater and more perspicuous by its Doctrines. Philosophy therefore ought to be studied.

S Y M B.

S Y M B. XIX.

THis, *Sit not upon a Chœnix*, may appear to be more Pythagorical, from what was already said; for because aliment is to be measured by corporeity and animality, not by the Chœnix, rest nor, nor lead thy life uninitiated into Philosophy; but applying thy self thereto, take greatest care of that in thee which is most Divine, the Soul; and in the Soul, chiefly the mind, whose aliment is not measured by the Chœnix, but by contemplation and discipline.

S Y M B. XX.

THis, *Breed nothing that hath crooked talons*, adviseth to a thing which is yet more Pythagorical; be free and communicative, and endeavour to make others such also, accustoming thy self to give and receive without grudging or envy; not to take all things insatiably, and to give nothing. For the natural condition of those Fowls, which have crooked talons, is, to receive and snatch readily and quickly, but not easily to let go, or impart to others, by reason of the tenacity of their talons, being crooked, as the nature of Shrimps is such, that they quickly lay hold of a thing, but very hardly part with it, unless they be turned upon their backs. Now we having hands given us by nature, proper to communicate, and straight, not crooked fingers, ought not to imitate those which have crooked talons, unlike us; but rather mutually to communicate to, and participate from, one another, as being excited thereto by those, who first gave names to things, who named the more honourable hand δεξιὰν, the right, not only ἀπὸ τοῦ δεξιᾶται, from receiving; but likewise, ἀπὸ τοῦ δεξιᾶν ὑπέρχεν ἐν τῷ μετὰδεῖναι, from being ready to receive in communicating. We must therefore do justly, and for that reason Philosophise; for Justice is a return and remuneration, exchanging and supplying excess and defect.

S Y M B. XXI.

THis, *Cut not in the way*, that truth is one, falsehood multiplicitous; which is manifest from this, that what every thing is, speaking plainly, is expressed but one way; but what it is not, is expressed infinite ways. Philosophy seems to be a way; it therefore saith, Choose that Philosophy, and that way to Philosophy, in which thou shalt not cut (or divide) nor establish contrary Doctrines, but those which are constituted and confirmed by scientific demonstration, by Mathematicks and contemplation; which is, *Philosophise Pythagorically*. It may be taken also in another sense, forasmuch as that Philosophy which proceeds by corporeals and sensibles, (with which Philosophy the younger sort are satisfied, who conceive, that God, and Qualities, and the Mind, and Virtues, and in a word, all the principal causes of things, are Bodies) is easily subverted and confuted, as appears by the great disagreement amongst them, who go about to say any thing therein. But the Philosophy which is of incorporeals, and intelligibles, and immaterials, and eternal, which are always the same in

themselves, and towards one another, never admitting corruption or alteration, is firmly established, and the cause of irrefragable demonstration. Now this precept adviseth us, when we Philosophise, and perfect the way which is manifest, that we shun the snares and entertainments of corporeals and divisibles, and intimately apply our selves to the substance of incorporeals, which are never unlike themselves, by reason of the truth and stability which they naturally have.

S Y M B. XXII.

THis, *Receive not a Swallow into your house*, adviseth, that you admit not a slothful person (who is not a constant lover of labour, neither will persevere to be a disciple) unto your Doctrines, which require continual labour, and patience, by reason of the variety and intricateness of the several disciplines. He makes use of the swallow to represent sloth, and cutting off times, because this bird comes to us but in one season of the year, and then stays but a short while with us; but is absent from us, and out of our sight, a much longer space.

S Y M B. XXIII.

THis, *Wear not a Ring*, is likewise adhortatory after the *Pythagorick* way, thus: Forasmuch as a Ring encompasseth the finger of the wearer, in nature of a chain, but hath this property, that it pincheth not, nor paineth, but is so fit, as if it naturally belonged to that part; and the body is such a kind of chain to the soul. *Wear not a Ring*, signifies, *Philosophise truly*, and separate your soul from the chain which goeth round about it. For Philosophy is the meditation of death, and separation of the soul from the body. Seriously and earnestly therefore apply your self to the *Pythagorick* Philosophy, which separates the soul, by the mind, from all corporeals, and is conversant about intellectuals and immaterials, by Theoretick doctrines. But unty and loose your sins, and all things that pluck you back and hinder philosophising, diversions of the flesh, excessive eating, unseasonable repletion, which as it were, fetter the body, and continually breed infinite diseases.

S Y M B. XXIV.

THis, *Grave not the image of God in a Ring*, adviseth thus, Philosophise, and, above all things, think, that the gods are incorporeal. This Symbol is, beyond all others, the Seminary of the *Pythagorick* doctrines; of it all things (almost) are fitly adapted, and by it are established to the end. Think not that they use forms that are corporeal, neither that they are received into material substance, fettered (as it were) to the body, like other living beings. The figures engraved in Rings, in the very Ring express a chain, and corporeity, and sensible form, as it were the figure of some animal, perceptible by sight, from which we must absolutely separate the gods, as being eternal and intelligible, and always the same in themselves, and towards one another; as is largely discoursed in the Treatise concerning God.

S Y M B.

S Y M B. XXV.

THis, *Look not in a glass by candle-light*, adviseth more *Pythagorically* thus: Philosophise, pursuing, not the phantasies of sense (which give a kind of light to comprehensions, like a candle, neither natural nor true) but those which procure Science, and are conversant in the mind, by which a most bright purity is constituted in the eye of the soul, of all Notions, and Intelligibles, and the speculation of them, but not of Corporeals and Sensibles; for they are in continual fluxion and mutation, (as hath often been shown) no way stable or existing like themselves, whereby they might uphold a firm and Scientifick comprehension, as the others do.

S Y M B. XXVI.

THis, *Be not seized with immoderate laughter*, sheweth that we should vanquish passions: Put thy self in mind of right reason; be neither blown up in good fortune, nor cast down in bad; admitting no thought of change in either. He named *Laughter* above all other passions, because that is most apparently shown in the face it self; perhaps also, because this is proper to man only of all living creatures; whence some define man, A risible living Creature. This precept shows that we ought to take humanity only, as it were in our way, like guests; but to acquire the imitation of God, as far as we are able; by Philosophising, secretly withdrawing our selves from the property of men, and preferring the rational before the risible, in distinction from other Creatures.

S Y M B. XXVII.

THis, *At a Sacrifice pare not your nails*, is adhortative to friendship: for of Domesticks and Allies, some being nearly relatd to us, as Brothers, Children, Parents, are like our Limbs and Parts, which cannot be taken away without much pain and maim: others who are allied to us at a great distance, as the Children of Uncles, or of Cousins, or their Children, or such like, resemble those parts which may be cut off without pain, as Hair, Nails, and the like. Intending therefore to signify those Allies, whom, by reason of this distance, we at other times neglect, he useth the word *nails*, saying, Cast not those quite away; but, in Sacrifices, (though at other times neglected) carry them along with you, and renew your Domestick familiarity with them.

S Y M B. XXVIII.

THis, *Lay not hold on every one readily with your right hand*, saith, give not your right hand easily, that is, Draw not to you, nor endeavour to draw out improper and uninitiated persons, by giving them your right hand: Moreover, to such as have not been long tried by Disciplines and Doctrines, nor are appoved as worthy to participate of temperance, and of the Quinquennial silence and other Trials, the right hand ought not to be given.

S Y M B. XXIX.

THis, *When you rise out of bed, wrap the coverlets together, and confound the print of your body*; adviseth, that having undertaken to Philosophise, you should acquaint your self with Intellectuals, and Incorporeals: Therefore as soon as you rise from the sleep of Ignorance, and that darkness which resembles night, draw not to your self any corporeal thing, to the light of Philosophy which resembles the day; but blot out of your remembrance all prints of that sleep.

S Y M B. XXX.

THis, *Eat not the heart*, signifieth, that we ought not to tear asunder the unity and conspiration of the whole; Moreover it implieth, Be not envious, but obliging, and communicative: hereupon it exhorted to Philosophise. For of all Arts and Sciences, only Philosophy envieth not the good of others, nor grieveth thereat, nor rejoiceth in the ill of a neighbour; but declareth that all men are by nature allied to one another, and friends, and alike affected, and subjected alike to fortune, and alike ignorant of the future; and therefore commands them to commiserate and love one another, as becomes a Creature, sociable and rational.

S Y M B. XXXI.

Like that, is this, *Eat not the Brain*, for that is the principal instrument of Wisdom; it signifieth therefore that we ought not with reproaches to bite and tear in pieces things well intended, and Doctrines. Those are well intended, which are exactly considered by the principal reason of mind, like to things comprehended by Science; for these are beheld not by the organs of the irrational soul, that is, by the heart and the liver; but by the pure rational part of the soul: wherefore it is a folly to oppose them. This Symbol rather adviseth to worship the fountain of Minds, and next instrument of intellection, by whose means we acquire speculation and Science, and (in a word) all Wisdom, and truly Philosophise; and not to confound and deface the Prints that are therein.

S Y M B. XXXII.

THis, *Spit upon the cuttings of thy Hair, and parings of thy Nails*, saith thus, those things are easily contemned which are born with thee, but are more distant from the Mind; as, on the other side, those are more esteem'd, which are nearer to the mind. So having addicted thy mind to Philosophy, above all, reverence those things which are demonstrated by the soul and mind, without the organs of sense, by speculative Science: But contemn and spit upon those things which are seen without the light of the mind, by the sensitive organs which are born with us: which are not capable of reaching the eternity of the mind.

S Y M B.

S Y M B. XXXIII.

THis, *Receive not an Erythrine*, seems to respect the Etymology of the word; Entertain not an impudent blushing person; nor on the other side one over-bashful, ready to fall back from the mind, and firm intellection; whence is understood also, Be not such your self.

S Y M B. XXXIV.

THis, *Deface the print of a pot in the ashes*, signifieth, that he who applies his mind to Philosophy; must forget the Demonstrations of confusion and grossness, (that is, of corporeals and sensibles) and wholly make use of Demonstrations of Intelligibles; By *ashes* are meant the dust or sand in Mathematical Tables, wherein the Demonstrations and Figures are drawn.

S Y M B. XXXV.

BUt *approach not her to get Children, who hath money*, is not meant of a woman, but of a Sect of Philosophy, which hath in it much corporeity and gravity tending downwards; for of all things in the Earth Gold is the most heavy, and aptest to move towards the Center, which is the property of Corporeal weight: to *approach*, means not only *coition*, but to apply our selves, and to be *assistant*.

S Y M B. XXXVI.

THis, *In the first place honour the figure and the degrees, the figure and the Tribolus*; adviseth to Philosophise, and study Mathematicks not superficially, and by them as by degrees of ascension arrive at our proposed end; but despise those things which others prefer before these; and chiefly reverence the *Italic Philosophy*, which considers Incorporeals in themselves, before the *Ionick*, which first looks upon bodies.

S Y M B. XXXVII.

THis, *Abstain from Beans*, adviseth to beware of every thing that may corrupt our discourse with the gods, and prescience.

S Y M B. XXXVIII.

THis, *Plant Mallows, but eat it not*, signifies that such things are turned with the Sun. *Plant*, that is, Insisting on its nature and application to the Sun, and Sympathy, neither abstain from it, nor wholly adhere to it; but transfer your mind and intellect, and transplant them as it were to plants and herbs of the same kind; and to Animals which are not of the same kind, and to Stones and Rivers, and in a word to all natures, for thou wilt find that which designeth the unity and conspiracy of the World, to be fruitful and full of variety, and admirably copious, as if it sprung from a Mallows root: Therefore not only eat not, nor deface such observations, but on the contrary encrease them, and multiply them, as it were by transplantation.

S Y M B. XXXIX.

THis, *Abstain from living Creatures*, exhorts to Justice, and respect of alliance by a like kind of life, and the like.

By these is explained the Symbolical adhortative form; containing much that is common with the Customs of the Ancients, and Pythagorical. Thus *Jamblichus*.

C H A P. IV.

The same Symbols explained by others.

Most of these Symbols are mentioned also by others, with different explications. The first (a) *Olympiodorus* ascribes to *Philolaus*, delivering it thus, *When you come into a Temple, turn not back.* (b) *Jamblichus*, in the life of *Pythagoras*, cites it in the same words, adding this exposition, *That we ought not to perform divine Rites cursorily and negligently.* (1) In Philolaus. (b) Cap.

Upon the Second, *Adore not the gods, as it were, in passing by*: (c) *Plutarch* saith, *We ought to go from home with that express intent. And for this reason the Cryers used, upon Festival days, to go before the Priests, and commanded the people to forbear working.* (c) In Plutarch.

The same exposition (d) *Jamblichus*, in the life of *Pythagoras*, gives of the Third, *Sacrifice, and go to sacred rites barefoot.* (d) Cap.

To the Fourth, *Concerning the gods, disbelieve nothing wonderful, and concerning divine Doctrines, may be applied to what Jamblichus saith in the life of Pythagoras*: (e) *Many precepts were introduced into the practice of divine rites, forasmuch as they gave firm credit to these things, conceiving them not to be fantastick boasts, but to derive their beginning from some god. All this the Pythagoreans believe to be true, as the fabulous reports concerning Aristæus the Proconnean, and Abaris the Hyperborean, and the like. And they did not only believe all these, but also endeavour themselves to frame many things that seem fabulous, derogating from nothing which relates to the Deity. In all such things he conceived not, that the persons themselves were foolish, but those only who gave no belief to it. For they are not of opinion, that the gods can do some things, others they cannot, as the Sophists imagine; but, that all things are possible. And the same is the beginning of the Verses which they ascribe to *Linus*, but perhaps were made by *Pythagoras*.* (e) Cap. 13.

Hope all things, for to none belongs despair;
All things to God easie and perfect are.

The fifth, *Decline High-ways*, is mentioned by many; only *Laertius* delivers it quite otherwise, *Go not out of the high-way*; but, in the exposition, differs not from the rest, that *we ought not to follow the opinions of the vulgar, which are without judgment, and not indisputable; but those of the few and learned.*

The sixth, *Abstain from the Melanure*, for it belongs to the Terrestrial gods, (f) *Plutarch* interprets, as forbidding to converse with persons black in impiety. *Tryphon*, as forbidding falsehood and lies, which are black in their close. The *Melanure* is a kind of fish, so named from the blackness of its tail. The

(f) De Educ. 13.

The ninth, *Cut not fire with a sword*, is one of those Symbols which are ascribed to Andocides, the Pythagorean. (g) Porphyrius, (h) Plutarch, Laertius, and (i) Athenæus, interpret it, as advising, not to exasperate an angry person, but to give way to him. Fire is anger, the sword contention. St. Basil expounds it of those who attempt an impossibility.

The tenth, Laertius reads thus, *Turn away a sharp sword*; it is generally expounded, *Decline all things dangerous*.

The Eleventh, *Help to lay on a burthen, but not to take it off*, is expounded by Porphyrius, that we ought to further others, not in sluggishness, but in virtue and labour. Or, as Jamblichus, that we ought not to be the cause of another's being idle. Laertius and Olympiodorus cite it thus, *Lay not burthens down together, but take them up together*; expounding it, that we must work together in the course of life, and co-operate with others in actions, tending not to idleness, but to virtue.

The Twelfth, which is cited by Suidas out of Aristophanes, in verse, thus:

*Into the shoe first the right foot,
The left first in the bason put.*

He expounds it not as a Symbol, but a Proverb, of those who perform things dextrously.

The Fourteenth, *Pass not over a ballance*, is generally interpreted by (k) Plutarch, Laertius, (l) Clemens Alexandrinus, Porphyrius, and others, that we ought to esteem Justice, and not to exceed it. Athenæus and Porphyrius expound it, as dehorting from avarice, and advising to pursue equality.

The Fifteenth Laertius delivers thus, *When you go to travel, look not back upon the bounds*. (m) Plutarch thus, *When you come to the borders, return not back*. They both interpret it, that when we are dying, and arrived at the bound or end of our life, we should bear it with an equal mind without grief, not to desire a continuance of the pleasures of this life. So also (n) Porphyrius.

The Sixteenth Laertius reads thus, *Wipe not a seat with Oyl*.

The Seventeenth, Laertius and Suidas deliver thus, *Touch not a white Cock, for it is sacred to the Moon, and a monitor of the hours*.

The Nineteenth, *Sit not upon a Chœnix*, Plutarch and Porphyrius interpret, that we ought not to live idly, but to provide necessaries for the future. For, a Chœnix, according to Laertius and Suidas, is the same which Clearchus calls Hemerotropen, a proportion of food daily spent. But Clemens Alexandrinus interprets it, as advising to consider not the present day, but what the future will bring forth: To be solicitous, not of food, but prepar'd for death.

The Twentieth, *Breed nothing that hath crooked talons*, is ascribed to Andocides the Pythagorean.

The Twenty one, Olympiodorus delivers thus, *Cleave not wood in the way*; whereby, saith he, the Pythagoreans advised; not to disquiet life with excessive cares, and vain solicitude.

The Twenty second, *Entertain not a swallow under your roof*, (o) Plutarch interprets, *Take not unto you an ungrateful and unconstant friend and companion*; for only this bird, of all the lesser kind, is reported to prey upon flesh. (p) Clemens Alexandrinus and Porphyrius interpret it, as forbidding to admit into our society a talkative person, intempe-

rate of speech, who cannot contain what is communicated to him.

The Twenty third, (q) Plutarch alledgeth (q) De thus, *Wear not a strait Ring*; that is, saith he, Educ. lib. Follow a free course of life, and fetter not your self. Or, as St. Hierom, that we live not anxiously, nor put our selves into servitude, or into such a Condition of life, as we cannot free our selves from, when we should have a mind to do it.

The Twenty fourth, *Wear not the picture of the gods in Rings*, (r) Porphyrius expoundeth, Dis- (r) Pag. course not of the gods inconsiderately, or in publick. (s) Jamblichus, in the life of Pythagoras, delivers (s) Cap. 18. it thus, *Wear not the image of God in a Ring, lest it be defiled*; for it is the image of God. (t) Clemens (t) Strom. 5. Alexandrinus affirms the meaning to be, that we ought not to mind Sensibles; but to pass on to Intelligibles.

In the Twenty eighth, *Lay not hold on every one readily with your right hand*. Plutarch omits *πάσιν*, Suidas *πάντα*. It is generally expounded thus, *Be not hasty and precipitate in contracting friendship with any*.

The Twenty ninth, *When you rise out of bed, wrap the coverlet together, and confound the print of your body*; Plutarch referreth it to the modesty and respect due to the bed. (u) Clemens Alexandrinus (u) Strom. 5. saith it signifies, that we ought not in the day-time to call to mind any pleasures, even of dreams which we had in the night. Perhaps also, saith he, it means, that we ought to confound dark phantisie with the light of truth.

The 30th and 31, *Eat not the Heart and the Brain*, (x) Jamblichus, in the life of Pythagoras, (x) cap. 24. saith, he enjoined; forasmuch as these two are the seats of life and knowledg. Porphyrius to the first, and Plutarch to the second, give one interpretation, *Consume not your self with grief, Nor afflict your mind with cares*.

The Thirty second, Laertius delivers contrary to Jamblichus: *Upon the pairing of your nails or cuttings of your hair, neither urine nor tread*.

The Thirty fourth, *Deface the print of a pot in the ashes*; Plutarch and Clemens Alexandrinus expounds, as advising, that upon reconciliation of enmity, we utterly abolish, and leave not the least print or remembrance of anger.

The Thirty sixth concerning the figure and three oboli, seems to have reference to the story related in the sixth Chapter of his life.

Of the Thirty seventh, *Abstain from Beans*, there are alledged many different reasons. (y) (y) Laert. Aristotle saith, He forbade them, for that they resemble αἰδύια, or the gates of the inferi; or, for that they breed worms; [a little sort of Maggots called Midæ] or, for that they resemble the nature of the Universe; or, for that they are Oligarchick, being used in Suffrages. This last reason is confirmed by Plutarch, who explains this Symbol, *Abstain from Suffrages*; which of old were given by Beans. Porphyrius saith, He interdicted Beans, because the first beginning and generation being confused, and many things being commixed, and concrement together, and computrified in the earth by little and little, the generation and discretion broke forth together; and living creatures being produced together with plants, then out of the same putrefaction arose both men and beans; whereof he alledged manifest arguments. For, if any one should chew a bean, and, having minced it small with his teeth, lay it abroad in the warm Sun, and

so leaving it for a little time, return to it, he shall perceive the scent of humane blood. Moreover, if any one at the time when Beans shoot forth the flower, shall take a little of the flower which then is black, and put it into an Earthen vessel, and cover it close, and bury it in the ground ninety days, and at the end thereof take it up, and take off the cover; instead of the Bean, he shall find either the head of an Infant, or *ῥυακὸς αἰδῖον*. The same reason (z) Origen ascribes to Zaratus; from whom perhaps Pythagoras, being his Scholar, received them. Hence it is that Pliny saith, He condemned Beans, because the souls of the Dead are in them. And Porphyrius elsewhere, Because they most partake of the nature of a living creature. Some of whom, as Cicero, say, It was because they disturb the tranquility of the mind. Wherefore to abstain from them, saith Porphyrius, makes our Dreams serene and untroubled. (a) Agellius saith, he meant, from venereal delights. And Plutarch saith, He forbade Beans, because they conduce thereto. On the contrary, (b) Clemens Alexandrinus affirms they were prohibited out of no other reason, than that women feeding on them, became barren.

For the Thirty ninth, Abstain from the flesh of living creatures; the most general reason is, because they are of the same nature and temperament with us, and, in a manner, allied unto us. But of this, formerly.

CHAP. V.

Other Symbols.

TO the foregoing Symbols collected by Jamblichus, may be added these:

Take not up what falls from the Table; meaning, that men should not accustom themselves to eat intemperately. Or, alluding to some religious rite; for, Aristophanes saith, That which falls so, belongs to the Heroes; saying in his Heroes:

Tast not what from the Table falls. (Laert.)

Break not Bread; Divide not friends. Others refer it to the judgment in the Infernal places. Others, that it implieth fear in War. (Laert.)

Set down Salt, in remembrance of Justice; for Salt preserves all things, and is brought out of the purest thing, Water. (Laert.)

Pluck not a Crown; that is, Offend not the Laws, for Laws are the Crown of Cities. (Porphyrius.)

Offer libation to the gods, just to the ears of the cup; signifying, that we ought to worship and celebrate the gods with musick, for that passeth in at the ears. (Porph.) And drink not of that libation. (Jambl. cap. 18. pag. 87.)

Eat not (which are unlawful) generation, augmentation, beginning, end, nor that of which the first basis of all things consists, Meaning, we must abstain from the loins, *σῖσμον αἰδῖον*, marrow, feet, and head of Victims. He called the loins, Basis, because living creatures are settled upon them as their foundation; *σῖσμος ἡ αἰδῖα*, Generation, for without the help of these, no living creature is engendred. Marrow he called Increase, it being the cause of augmentation in living creatures. The beginning, the feet; the

head, the end; which have most power in government of the body. (Porph.)

Eat not Fishes. (Laert.) Some apply this to silence, (Athen. Deipn. Lib. 7.)

Others say, he disproved them, because not used in sacrifice to the gods.

Put not meat in a Chamber-pot; meaning, communicate nothing that is wise to a rude and foolish person. (Plut. de Educ. Lib.)

Sleep not at noon. For at that time the Sun sheweth its greatest force, (Olympiad. in Plat. Phædon.) We ought not to shut our eyes against the light, when it is most manifest.

Quit not your station without the command of your General: Our souls ought to be kept in the body, neither may we forsake this life without special leave from him who gave it us, lest we seem to despise the gift of God. (Cicer. in Cat. and de Repub.)

Roast not what is boiled; that is, change not meekness to anger, (Jambl.)

Heap not up Cypress; Of this wood they conceived the Scepter of Jupiter to be made, (Laert.)

Sacrifice even things to the Celestial deities, odd to the Terrestrial. Of this, already in his Arithmetick.

When it thunders, touch the earth, calling to mind our own mortality: (Jambl.) or, When a King is angry, the offender ought to humble himself.

Eat not sitting in a Chariot. (Plut.) Some expound it, that we ought to eat in quiet; or, that we ought not to give our selves to luxury in a time of business.

Go into the Temple on the right hand, go out on the left. Right and left seem to refer to the Ceremonial numbers; of which, already.

Where blood hath been shed, cover the place with stones; that is, abolish the very remembrance of any war or dissention. (Jambl.)

Hurt not a mild plant. (Laert. Porph.) Some expound it, Harm not the harmless.

Pray aloud; implying, not that God cannot hear such as pray softly, but that our prayers should be just (Clem. Alex. Strom. 4.) such as we need not care who hears.

Sail not on the ground; signifying, that we ought to forbear raising Taxes, and such revenues as are troublesome and unstable. (Clem. Strom. 5.)

Beget Children; For it is our duty to leave behind us such, as may serve the gods in our room. (Jambl. vit. cap. 18.)

Neither dip in a basin, nor wash in a bath. (Jambl. ibid.)

Put not away thy Wife, for she is a suppliant. (Jambl. ibid.)

Counsel nothing but what is best, for Counsel is a sacred thing: (Jambl. ibid.)

Plant not a Palm; (Plut. in Isid. and Osir.)

Lastly, Hither may be referred the Symbolical Letter Y. They said that the course of humane life is like that Letter, for every one arriving at the first state of youth, where the way divides it self into two, stands at a gaze, not knowing which to take; if he meets with a guide that leads to the better, that is, if he learn Philosophy, Oratory, or some honest Art, which may prove beneficial, but cannot be attained without much labour, they affirm that he shall lead an Honourable and plentiful Life. But if not lighting upon such a Master, he takes the left hand way, which seems at first to be the better, and to lead to virtue, that is, if he gives himself over to sloath and

and luxury, which seem pleasant at first to him who is ignorant of true good, he shall ere long lose both his Credit and Estate, and live thence forward ignominiously, and miserably. Thus (a) Lactantius, perhaps alluding to the old Verses.

De vero
cultu, lib.
6. c. p. 31.

The Pythagorick Letter two ways spread,
Shows the two paths in which Mans life is led.
The right hand track to sacred Virtue tends;
Though steep and rough at first, in rest it ends;
The other broad and smooth, but from its Crown,
On rocks the Traveller is tumbled down.
He who to Virtue by harsh toyls aspires,
Subduing pains, worth and renown acquires:
But who seeks slothful luxury, and flies
The labour of great acts, dishonour'd dies.

The GOLDEN VERSES of Pythagoras.

A Summary of the Pythagorick Doctrine is extant in Verse, Entitled, *The Golden Verses of Pythagoras*: or as others, of the *Pythagoreans*. For that, saith Hierocles, as Gold is the best and purest of Metals, so these are the best and most Divine of Verses. They are these.

First, in their ranks, the Immortal Gods adore,
Thy Oath keep; next, great Heroes; then implore
Terrestrial Demons with due sacrifice.

Thy Parents reverence, and near Allies:
Him that is first in Virtue make thy Friend,
And with observance his kind speech attend:
Nor (to thy power) for light faults cast him by,
Thy pow'r is neighbour to Necessity.

These know, and with intemperate care pursue;
But anger, sloth, and luxury subdue.

In sight of others or thy self forbear
What's ill; but of thy self stand most in fear.

Let Justice all thy words and actions sway;
Nor from the even course of Reason stray:

For know, that all men are to die ordain'd,
And riches are as quickly lost as gain'd.

Crosses that happen by divine decree,
(If such thy lot) bear not impatiently.

Yet seek to remedy with all thy care,
And think the Just have not the greatest share.

'Mong' st men, discourses good and bad are spread,
Despise not those, nor be by these misled.

If any some notorious falshood say,
Thou the report with equal Judgment weigh.

Let not mens smother promises invite,
Nor rougher threats from just resolves thee fright.
If ought thou shouldst attempt, first ponder it;
Fools only inconsiderate acts commit;
Nor do what afterwards thou maist repent;
First learn to know the thing on which th' art bent.
Thus thou a life shalt lead with joy repleat.

Nor must thou care of outward health forget.

Such temperance use in exercise and diet,

As may preserve thee in a settled quiet.

Meats unprohibited; nor curious, chuse;

Decline what any other may accuse.

The rash expence of vanity detest,

And sordidness: A mean in all is best.

Hurt not thy self: Before thou act, advise;

Nor suffer sleep at night to close thine eyes,

Till thrice thy acts that day thou hast ore-run;

How slept, what deeds, what duty left undone?

Thus thy account summ'd up from first to last,

Grieve for the Ill, joy for what good hath past.

These study, practise these, and these affect;

To sacred Virtue these thy steps direct.

Eternal Nature's fountain I attest,

Who the Tetractis on our souls imprest:

Before thy mind thou to this study bend,

Invoke the Gods to grant it a good end.

These if thy labour vanquish, thou shalt then

Know the connexure both of Gods and Men;

How every thing proceeds, or by what staid,

And know (as far as fit to be survey'd)

Nature alike throughout; that thou maist learn

Not to hope hopeless things, but all discern;

And know those Wretches whose perverter wills

Drawn down upon their head spontaneous Ills;

Unto the good that's nigh them, deaf and blind:

Some few the cure of these misfortunes find.

This only is the Fate that harms, and rolls,

Through miseries successive, humane souls.

Within is a continual hidden fight,

Which we to shun must study; not excite.

Great Jove! how little trouble should we know,

If thou to all men wouldst their Genius show?

But fear not thou; Men come of heav'nly race,

Taught by diviner Nature what to embrace:

Which if pursu'd, thou all I nam'd shall gain,

And keep thy Soul clear from thy body's stain.

In time of Pray'r and cleansing, meat's deny'd

Abstain from; thy mind's reins let reason guide:

Then strip'd of flesh up to free Ether soar,

A deathless God, Divine, mortal no more.

TIMÆUS the Locrian.

Of the Soul of the World, and of Nature.

Principles.

TIMÆUS, the Locrian, said these things: There are two Principles of all things: the *Mind*, of things effected according to Reason; *Necessity*, of those which are by Violence according to the powers of Bodies. Of these, one is of the nature of good, and is called *God*, and is principle of the best things; the consequent and concausals are reduced to *Necessity*. For all things

are the off-spring of these, *Idæa*, Matter, Sensibles. The first is ungenerated, immovable; permanent, of the nature of Identity; intellectual, the exemplar of things that are made, and immutable. This is *Idæa*. Matter, is the print, mother, nurse, and productrix of the third essence; for, receiving likeness into it self, and being, as it were, characterised by them, it perfects all productions. This Matter he asserted to be

H h h 2

eternal,

eternal, but not immovable, in form of it self, and without figure; but receiving all forms. In bodies it is divisible, and of the nature of Alterity: They call Matter, Place and Religion. These two principles are contrary: Form hath the nature of male and father; Matter, of female and mother; the Third is their off-spring. These being three, are known three ways; *Idæa*, by intellect, according to science; Matter, by spurious ratiocination, not being understood by direct comprehension, but by analogy; their Off-spring, by sense and opinion. Before Heaven was made, we must conceive, that there was *Idæa*, and Matter, and God, the maker of the better, [*viz.* *Idæa*.] Now forasmuch as the elder is better than the younger, and the orderly than the disorderly; God, being good, and seeing Matter receive *Idæa*, and become totally changed, yet disorderly, saw also it was needful to bring it into Order, and from indefinite transmutations, to fix it determinately, that bodies might have proportionate distinctions, and not receive promiscuous variations.

The
World.

Of all this Matter he framed the World, (making it the bound of the nature of Being, since it comprehends all other things) one only-begotten, perfect, animate, and rational, (for these are better than inanimate and irrational) and a spherical body, that being more perfect than other figures. Designing therefore to make the best production, he made this God, generate, not corruptible by any other cause, but by the same God only which compos'd it, if it should please him at any time to dissolve it. But he who is good, will not be carried on to the destruction of the fairest production. Wherefore it is permanent, and being such, incorruptible, unperishable, and blessed. It is the best of productions, being made by the best cause, who looked not upon patterns made by hands, but upon the *Idæa*, the intellectual essence; after which, this being exactly made, is the fairest of all, and not to be demolished. It is perfect, as to sensible things, for the exemplar comprehended in it self all intelligible creatures; left nothing out, it being the perfect bound of Intelligibles, as the World is of Sensibles; which being solid, tactile, and visible, is divided into Earth, Fire, and (betwixt these) Air, and Water. It consists of perfect bodies, which exist intirely in it, so as no part remains beyond it, that the body of the Universe might be self-sufficient, and not liable to dissolution by any external accidents; for there are no other things besides these, and what are contained in them, they being, after the most excellent analogy, connected in equal power, neither predominating over the other in any part, nor being predominated, that whereby some might encrease, others decrease; but it resteth in an indissoluble harmonious concord, according to the best proportion. For there being three bounds, and the intervals distant from each other in the same proportion, the middle is that to the first which the third is to it, and so reciprocal, according to disposure of place and order. But to number these without the help of another thing equal to them, is absolutely impossible. It is well ordered both for figure and motion: As to the first being round, it is every way like it self, and able to contain all other figures. As to its circular motion, it keepeth a perpetual Tenor: for, a sphere only, whether in

rest or in motion, is so adapted to the same place, as that it never ceaseth nor removes; all its parts being equidistant from the Center. Now its outward superficies being exactly smooth, it needs not the weak organs, which are bestow'd on other living creatures, for their accommodation.

The Soul of the World God inkindled in the midst, but diffused beyond it, covering the Universe with it, and tempering it with a temperament of indivisible Form, and divisible Substance, so as these two make one temperament; with which he mingled two Powers, principles of the two motions of Identity and Alterity; which (Soul) being not easily miscible, was not without difficulty contempered.

The Soul
of the
World.

All these proportions are mixed according to harmonical numbers, which proportions he cunningly divided, that it might be known of what, and by what, the Soul consisteth. This Soul God did not ordain (as we affirm) after corporeal substance, (for that which is most honourable, is first both in power and time) but made it before the body; removing one, the first of four Monads, into eight Decads, and three Centuries. Of this, the duple and triple is easily collected, the first being settled. All these, with their complements, and sesquioctaves, will amount to thirty six. The whole sum will be one hundred and fourteen thousand six hundred ninety five. The divisions are one hundred and fourteen thousand six hundred ninety five. After this manner he divided the soul of the Universe.

The Mind only seeth the Eternal God, the Ruler and Father of all things. That which is generated we behold with our eyes, this World, and its parts; the *Ætherial* are twofold, some of the nature of Identity: others, of Alterity. Of these, some extrinsically carry about all that is within them, from East to West, by an universal motion. The rest, being of the motion of Alterity, intrinsically turn about from the West to the East, moved by themselves. They are carried round by accident, with the motion of Identity, having the greatest force in the World. The motion of Alterity, divided according to harmonical proportions, is disposed into seven Circles; the *Moon* being nearest the Earth, performeth her course in a Month; next her, the *Sun* perfects his course in a year. There are two of equal course with the *Sun*, *Mercury*, and the Star *Juno*, which many call *Venus*, and *Lucifer*. All persons not being skilful in the Rules of sacred Astronomy, and the observations of Rising and Setting. The same Star is sometimes *Hesper*, when it so followeth the *Sun*, that it is conspicuous to us when the *Sun* is set: sometimes *Eous*, when it goeth before the *Sun*, and riseth before him. *Lucifer* therefore, many times is the Star *Venus*, when she runs along with the *Sun*: and likewise is many of the fixed Stars and Planets; for any Star of visible magnitude, ushering the *Sun* above the Horizon, foretells day. The other three, *Mars*, *Jupiter*, and *Saturn*, have peculiar velocities, and unequal years: but they compleat their course in certain and comprehensible regularities, and appearances, and occultations, and Eclipses, and Risings, and Settings. They have, besides their *phases*, Rising and Setting in regard of the *Sun*: who maketh day in performing his Course from East to West: night, by Motion from West to East: whilst

The Parts
of the
World.

whilst he is carried about with the Motion of Identity, a year, by his own proper Motion. By these two Motions, the *Sun* performs a double course, one, as being carried about with the general Motion of Heaven, the other by an oblique Motion: One distinguisheth the times of the day and the seasons: The other, by which he is carried about after the rapid Motion of the fixed Stars, at every revolution maketh night day. These are parts of Time called Periods, ordained by God together with the World: for before the World there were no Stars, and consequently neither year nor seasons, by which this generable World is commensurated. This time is the image of that which is ingenerate, called Eternity: for as this Universe was formed after the eternal exemplar of the Ideal World, so was this Time ordained together with the World after its pattern, Eternity.

The Earth being established in the midst, the seat of the gods is the bound of night and day, of rising and setting, according to the Section of Horizons, as they are circumscribed by the sight, and by Section of the Earth. It is the most ancient of all Bodies in the Universe: for Water was not produced without Earth, nor Air without humidity: and Fire cannot subsist without humidity and matter, which it kindles. So that the Earth is settled upon its own weight, as the root and basis of all things. The principle therefore of generated things, as to the subject, is Matter; as to form, *Idæa*. The productions of these are Bodies; Earth, Water, Air, and Fire, whose generation is thus: Every body consists of superficies's; a superficies, of Triangles; of which this is a rectangled equi-crural semiquadrangle; the other unequilateral, having the greater Angle in power, Triple to the lesser. The least Angle in it is one third of a right angle: double to this is the middle Angle, consisting of two thirds, the greatest is a right Angle, sesquialter to the middle, Triple to the least. Now this Triangle is a sesquiquadrangle to an equilateral Triangle, the perpendicular from the Top to the Bottom, being divided into two equal parts; there are therefore in each two rectangled Triangles, but in one the two sides which include the right Angle are equal; in the other, all the three sides are unequal. This figure is called *Scholion*. This semiquadrangle is the principle of which the earth was constituted; for the quadrangle is compounded of these four semiquadrangles. Of the quadrangle is generated the Cube, the firmest and most settled of all bodies, having six sides, eight angles. For this reason Earth is the most heavy body, and unapt for motion, and not transmutable into any other, as being incommunicable with any kind of Triangle, for the Earth only hath a stable principle, which is the semiquadrangle, the element of the other bodies, Fire, Air, and Water: for the semiquadrangle being six times compounded, there ariseth an equilateral Triangle, of which a Pyramid is, with four bases, and four equal Angles is compounded, the form of fire most apt to motion, and of rarest parts. Next, these Octaedron, with eight bases and six Angles, the element of Air. The Third, Icosiedron, of twenty bases, and twelve Angles, the element of Water, being fullest of parts, and heaviest. These being compounded of the same Element,

are transmuted into one another. The Dodecaedron, he made the image of the Universe, as nearest to a Globe. Fire by reason of the rarity of its parts, penetrates all things; Air, all things but Fire; Water, Earth. All things therefore are full, and admit no vacuity. They are carried about by the circumvolution of the Universe, and by reason of their solidity, grate one another, rendring an unintermitted alteration to generation and corruption. These God used in framing the World, tactile by reason of Earth; visible by reason of Fire, the two extremes. By Air and Water, he connected it in a most firm band, proportion capable to contain both it self, and the things that are comprised in it. If then that which is connected be a Superficies, one Medium is sufficient; if a solid, it requires two. To the two Mediums, he adapted the two Extreams, Fire to Air, Air to Water, Water to Earth; and again, Fire to Air, Air to Water, and Water to Earth; and again, as Earth to Water, Water to Air, and Air to Earth; and reciprocally, as Earth to Air, Water to Fire. And forasmuch as all these are equal in power, their proportions are equal likewise. Thus is the World one, and by a happy connexure proportionable. Each of these four Bodies have divers species; the Fire, flame, light, splendor, by reason of the inequality of the Triangles in each of these. The Air is partly clear and dry, partly humid and cloudy. The Water, fluid and concrete, as Snow, Frost, Hail, and Ice. Of Humid, one sort is fluid, as Honey, Oyl; another compact, as Pitch, Wax. Of the compact are two kinds, one fusile, as Gold, Silver, Brass, Tin, Lead; the other frangible, as Sulphur, Bitumen, Nitre, Salt, Allom, and Stones of that kind.

After he had made the World, he proceeded to the production of mortal creatures, that it might be perfect and compleatly wrought according to its pattern. Having contempered and distributed the Soul of Man, by the same proportions and powers, he delivered it over to that Nature which had the power of changing. She succeeding him in the producing mortal transitory creatures, instilled their souls, some from the Moon, some from the Sun, some from the other Stars which wander in the Region of Alterity, excepting one soul in the power of Identity, which he mingled in the rational part, an image of wisdom, to those who make use of good Fate. For of the human soul, one part is rational and intellectual, the other irrational and foolish; of the irrational, the better is of the nature of Identity; the worse, of that of Alterity. Each of these is resident about the Head, that all the other parts of the soul and body may be subservient to it, according to the analogy of the body of the Universe. Of the irrational part, one is irascible, placed about the Heart; the other desirative, about the Liver.

As for the Body, the principle and root of Marrow is in the Brain, wherein is the Hegemonick of the Soul. From the brain issues a defluxion along the spondyles of the back, from whence it is distributed into Seed and generative substance. The bones are the case of the marrow; the flesh is the tegument of the bones, the joynts he connected by nerves for motion. Of the inward parts, some were made for nourishment,

others

Animals.

others for conversation. Of the Motions, those which come from without, and flow into the apprehensive part, are sensible; those which fall not under comprehension, are insensible, whether by reason that the affected bodies are more earthy, or that the motions are weaker. Whatsoever motions change nature, are painful; whatsoever comply with her, are named pleasures.

Of the Senses, God enlightned our sight for contemplation of Celestials, and apprehension of Science. Hearing, he framed perceptive of Discourse and of Musick. Of this, if any be destitute from his birth, he will also be incapable of Speaking. Whence we say, This sense is nearest ally'd to reason. All that are termed affections of bodies, are denominated with reference to the Touch, and their inclinations to a place; for, the Touch dijudicates vital faculties; warm, cold; dry, moist; smooth, rough; yielding, resisting; soft, hard; but heavy and light, the Touch prejudicates, Reason defines by inclination to move to the middle, and from the middle; below, and the middle, they affirm to be the same thing, for the center of a Globe is below, whatsoever is betwixt that and the circumference is above. Heat seems to consist of rare parts, and disgregates bodies; Cold, of more dense parts, and bindeth the pores. The Taste resembles the Touch in concretion and discretion, and in penetration of the pores, and in its objects, which are either harsh or smooth. Those which have an abstersive faculty, stupifying the tongue, are bitter; those which are moderately abstersive, salt; those which inflame and pierce further into the flesh, acid. Contrary to these, are smooth and sweet. The kinds of Odor are not distinct, for they insinuate through narrow pores, which are too solid to be contracted and dilated by putrefaction, and concoction of earth and earthly things. They are sweet or stinking. Voice is a percussion in the air, passing to the soul through the ears, whose pores extend to the Liver. In the ears is a spirit, whose motion is Hearing. Of voice and hearing some are swift, the sharp; some slow, the flat; the mean, are incommensurable. Again, one is much and diffused, the *loud*; another small and contracted, the *low*: one is ordered according to proportions, the *harmonious*; another disorderly and unproportionate, the *inharmonious*. The fourth kind of Sensibles is most various and multiform, termed Visibles, comprising all colours, and innumerable coloured things. The primary colours are four, White, Black, Bright, Purple; the rest are made by commixtion of these. White disperseth the sight, Black contracts it; as Hot diffuseth the touch, Cold contracts it; Bitter contracteth the taste, and Sweet dissipates it.

The bodies of creatures that breathe air, are nourished by aliment, distributed by the veins through the whole frame defluxively, as by channels; and irrigated by the spirit which diffuseth it to the utmost bounds. Respiration is made (there being no vacuity in nature) by influxion, and attraction of the air in the room of that which issueth forth at invisible vents, out of which also sweat evaporates. Now something of it being wasted by the natural heat, it is necessary something be introduced to supply that which was consumed;

otherwise there would be a vacuity, which is impossible: For a living creature could not be restored by perpetual fluxion, and entire, if the body were disjoyn'd by vacuity. The like composition of Organs is likewise in inanimate things, with an analogical respiration; a Cupping-glass and Amber are resemblances of respiration, for the spirits evaporate through the body, and enter again at the mouth and nostrils by respiration; then again, like *Euripus*, it is brought round into the body, which by these effluxions is extended. The cupping-glass, the air being consumed by fire, attracts moisture; the Amber, by emission of spirits, attracts the body that is like to it. All aliment is taken into the body from the root of the heart, and the fountain of the ventricle; if the accession be more than the defluxion, it is termed Growth; if the contrary, Decay. The *Acma* consists in the confine betwixt these two, and is conceived to be the equality of accession and defluxion. When the ligaments of the constitution are dissolv'd, so as there is no passage for the breath, or distribution of Aliment, the Animal dies. There are many things which are pernicious to life, and cause death; whereof one is termed, Sickness. The origines of sickness are the disproportions of the primary faculties: if the simple faculties, Heat, Cold, Humidity, Siccity, abound, or are Deficient, then follow Mutations, and alterations of the blood, by corruption, and depravations of the Consumptive flesh: If according to the changes into Sharp, or Salt, or Acid (humours) the turnings of the Blood, or Consumptions of the flesh be caused; for hence are generated Choler and Flegm. Unwholesome Chyles, and putrefaction of Humours, are inconsiderable except they be deep; but those whose causes lie in the bones, are not easily cur'd; those which arise out of the marrow are painful. The Extremities of Diseases are Wind, Choler, Flegm, increasing and flowing, into places not proper to them, or into the vital parts, for then obtaining a better place, they expel their neighbours, and settle there, and afflicting the bodies, they resolve them into themselves.

These are the Diseases of the Body. Out of these arise many sicknesses of the soul, several of several faculties; of the sensitive, stupidity; of the reminiscent, forgetfulness; of the desiderative, loathing, and excessive appetite; of the Pathetic, wild passions, and furious frensies; of the rational, indocility and indiscretion. The forces of Vice, are pleasures and griefs, desires and fears, raised out of the body, mingled with the soul, and express'd by various names, Loves, Desires, dissolute affections, impetuous Angers, deep Malices, various Longings, inordinate Delights. In a word, to behave our selves amiss as to passions, or to subdue them, is the bound betwixt virtue and vice; for to be excessive in them, or too hard for them, put us in a good or bad condition. To these inclinations the temper of the body may contribute much: if vehement, fervent, or any way extraordinary, it transports us to Melancholy and extravagant lusts. For the parts being overflowed by these defluxions, make the constitution of the body rather hydropical than sound, whence arise sadness, forgetfulness, folly, and consternation. The customs also, whereunto a man hath conformed himself in the City, or Family, where he

was born and bred, conduce much; as also the daily course of life, whether softning or corroborating the soul; for, living abroad; Diet, Exercise, and the manners of those with whom we converse, greatly avail to virtue or vice; and these occasions are derived rather from our Parents, and Elements, than from our selves; for they are not ineffectual, we our selves so easily receding from those * actions which are good.

To the well-being of an Animal, it is requisite that the body have the virtues competent to it, Health, perfect Sense, Strength, and Beauty. The principles of Beauty are a symmetry of the parts amongst themselves, and with the soul; for nature made the body as an instrument, obedient, and accommodate to all the businesses of Life. In like manner, the soul must be ordered to virtues answerable to those; to Temperance, as the body to Health; to Wisdom, as the body to perfect sense; to Fortitude, as the body to strength; to Justice, as the body to beauty. The principles of these are from Nature, their Means and Ends from industry; those of the body are attained by exercise and Medicine; those of the Soul by Institution and Philosophy. For these faculties nourish and strengthen both the soul and body, by Labour, Exercise, and pureness of Diet; these by Medicaments; those instituting the soul by chastisements and reprehensions, for they strengthen it, by exhortation, by exciting the inclination, and enjoyning those things which are expedient for action. The Aleiptick art, and, its nearest ally, Medicine, are design'd for the cure of Bodies, reducing the faculties to the best harmony; they purify the blood, and make the spirits flow freely, so as if any thing unwholesome settle, the vigors of the blood and spirits being thus confirmed, overmaster it. Musick, and its director, Philosophy, ordained by the gods, and by the Laws, for reformation of the soul, inure, compel and persuade the irrational part to obey the rational,

and in the irrational mollifie anger, and quiet desire; so as they neither move nor rest without reason, the mind summoning them either to action or fruition. The bound of Temperance is obedience and fortitude. Now science and venerable Philosophy, purifying the mind from false opinions, bring her to knowledge, and reducing her from great ignorance, raise her to contemplation of Divine things; wherein if a man be conversant with contentedness as to human things, and endeavour in a moderate way of living, he is happy. For he to whom God hath allotted this Estate, is undoubtedly guided to a most happy life. But if a man be stiff and refractory, he shall be pursued by punishment according to the Laws, and those discourses which declare things Celestial and Infernal. For irremissible punishments are prepar'd for the unhappy dead, and many other things, for which I commend the *Ionick* Poet, who makes men religious by ancient fabulous Traditions. For as we cure Bodies with things unwholesome, when the wholesome agree not with them; so we restrain souls with fabulous relations, when they will not be led by the true. Let them then, since there is a necessity for it, talk of these strange punishments, as if souls did transmigrate, those of the effeminate into the bodies of Women, given up to ignominy; of Murtherers, into those of Beasts, for punishment; of the Lascivious, into the forms of Swine; of the light and temerarious, into Birds; of the slothful, and idle, unlearned, and ignorant, into several kinds of Fishes. All these in the second period, *Nemesis* decrees, together with the vindictive and Terrestrial Demons, the overseers of human affairs, to whom God, the disposer of all things, hath committed the administration of the World, replenisht with Gods, Men, and all other living Creatures; all which are formed after the best image, of the ungenerate and eternal *Idæa*.

An Explication of the *Pythagorick* Doctrine.

By * JOHN REUCHLIN.

CHAP. I.

Of Pythagoras his way of Teaching, by Silence and Symbols.

THE Indocible and abstruse tradition of *Mysteries* and *Symbols*, is not to be investigated by acuteness of humane Wit, (which rather affects us with a doubtful fear, than an adherent firmness) it requires ample strength of thinking and believing, and above all things, faith and taciturnity. Whence *Pythagoras* taught nothing (as (b) *Apuleius* saith) to his disciples before silence; it being the first rudiment of contemplative wisdom to learn to meditate, and to unlearn to talk. As if the *Pythagorick* sublimity were of greater worth, than to be comprehended by the talk of Boys. This kind of learning (as other things) *Pythagoras* brought

into Greece from the *Hebrews*, that the disciple being to ask some sublime question, should hold his peace; and being questioned, should only answer *αὐτὸς ἔφα*, He said. Thus the Cabalists answer *אמר חכם* The wise said; and Christians, *πιστεύω*, Believe.

(c) Moreover, all the *Pythagorick* Philosophy (especially that which concerns divine things) is mystical, expressed by *Enigms* and *Symbols*. The reasons, these: First, The Ancients used to deliver wisdom by Allegories; all their Philosophers and Poets are full of Riddles, avoiding, by obscurity, contempt of the vulgar; for the most apt interpreter of things, not preceptible by

by human infirmity, is Fable: *That befits Philosophers, which is declared under the pious veil of Fictions, hidden in honest things, and attired in honest words; for, what is easily found, is but too negligently pursu'd.* Secondly, It sometimes happens, that we cannot express abstruse things without much circumlocution, unless by some short Ænigm. Thirdly, as Generals use Watch-words to distinguish their own Soldiers from others; so it is not improper to communicate to friends some peculiar Symbols, as distinctive marks of a Society. These, among the *Pythagoreans*, were a chain of indissoluble love. (d) *Pythagoras* was studious of friendship; and if he heard of any that used his Symbols, he presently admitted him into his Society. Hereupon all became desirous of them, as well thereby to be acceptable to their Master, as to be known *Pythagoreans*. Lastly, As memorial notes; for, in treating of all things divine and human, the vastness of the subject requires short Symbols, as conducing much to Memory.

*The Triple World.*aPag. 664.
g. Scalich.
can. 4.

(a) **T**HE *Pythagoreans* reduce all *Beings*, subsistent or substant, immediately to *Ideas* which truly are; and those to the *Idea* of *Ideas*. Hereupon they asserted *three Worlds*, whereof the third is infinite, or rather not finite; and that all things consists of Three. *The Pythagoreans* (saith *Aristotle*) affirm that the whole, and all things are terminated by Three: Some are bodies and magnitudes, others keep and inhabit bodies and magnitudes, others are the rulers and origines of the Inhabitants. This we understand of the three Worlds, the Inferior, the Superior, and the Supreme. The Inferior containeth bodies and magnitudes, and their appropriate Intelligence, movers of the Spheres, overseers and guardians of things generable and corruptible, who are said to take care of bodies, each according to the particular task assign'd him; by the Ancients named sometimes *Angels*, sometimes *Gods*, and (in respect of the anxious sollicitude of things whereto they are confin'd) *Demons*.

Next over it, immediately shineth the Superior World; this containeth the superior Powers, incorporeal essences, divine exemplars, the seals of the inferior World, after whose likeness, the faces of all inferior things are formed. These (b) *Pythagoras* calls, *Immortal gods*, as being the principles of things produc'd out of the divine Mind, essential *ἀρχαί*, causes of those forms which dwell in bodies, and inform the compounded substances of the lower World. There are also other gods, incorporeal beings, individual, differing (not by material, but) by formal number; spirits void of matter, simple, unmixed, seated beyond the sensible Heaven, confin'd neither to time nor place, neither suffering age nor transmutation, much less any alteration; In a word, not being affected with any passion, they lead a self-sufficient excellent life, and inhabit Eternity, which is *αἰών ἀει ὄν*, always being, because it always was, is, and shall be intemporally in the divine Mind; yet by the energy of God, it was

b Aur.
caim.

created and placed beyond the convex of the visible Heaven, as being the lucid mansion of the blessed spirits, [whom the *Pythagoreans* believe gods] placed in the highest region of Æther, ævital, invested in the immortal Ævum.

The third World, *Supreme*, containing all other Worlds, is that of the Deity, consisting of one divine Essence, existent before Ævum, for it is the Age of Ages, the præexistent entity and unity of existence, substance, essence, nature.

These three Worlds are called *Receptacles*, in different respects; the first, of *Quantity*; the second, of *Intelligences*; the third, of *Principles*. The first, *circumscriptively*; the second, *definitively*; the third is not received, but receiverh, because it is every where, and is called a receptacle *repletively*.

Through the Superior world is communicated from the *Tetractys* to the inferior, life, and the being (not accidental, but substantial) of every species; to some, clearly; to others, obscurely. This the *Pythagoreans* collect from those words of their Master:

— (c) *the Tetractys to our Souls did send,*

c Cam.

The Fountain of Eternal Nature —

The *Tetractys*, is the *Divine mind* communicating, the *Fountain* is the exemplar *Idea* communicated, and *eternal Nature* is the essential *Idea* of things received. *Idea*, considered as to God, (say they) is his knowledge; as to the sensible World, exemplar; as to it self, *Essence*.

Now as in the Sensible World, the Superior sphere hath an influence on all the spheres beneath it; so in the Intelligible World, not only every superior Chorus of Angels, hath an influence upon all the inferior; but the whole superior world hath an influence upon the whole inferior, whereby all things are reduced according to their capacities, as far as possible, momentary to eternal, inferior to superior. But to the third World, nothing that is merely a Creature can be reduced, incapable in its own nature of that sublimity which is proper only to God.

C H A P. III.

The Supreme World.

(a) **T**HE *Supream World*, being (as we said) that of the Deity, is one divine, continual constant Essence of Sempiternity, poised, (as it were) with immovable weight; not unfitly termed, *παντοκράτωρ ὁ θεός*, the all-governing Throne. It is not confined to Genus, Place, Time or Reason, but is the free unlimited President over all these; infinitely Supreme in Place, Power, Possession, Excellence, above all Essence, Nature, Ævum, Age.

aPag. 666.
g.

This Divine mind, the receptacle of principles, *Pythagoras* symbolically terms *Number*, saying, *Number is the Principle of all things*. (For none can believe so meanly of so wise a Person, as that he should conceive the ordinary Numbers by which we cast account, to be the Principle of all things, which are far from being antecedent to things, for they are consequential accidents) So (b) *Plutarch*, by *Number* *Pythagoras* understands the Mind; a Symbol not improper; in Incorporals nothing more divine than the Mind, in Abstractions nothing more simple than *Number*.

b Plac.
phil.

The

The divine Essence therefore, existent before Ævum and Age, (for it is the Age of Ages) the preëxistent entity and unity of existence, substance, essence, nature, was by *Pythagoras* called *the one*, by *Parmenides* *being*, both upon a like ground; because it is the super-essential Unite and Being, from which, and by which, and through which, and in which, and to which, all things are, and are ordered, and persist, and are contained, and are filled, and are converted.

Of this first *one*, and first *ens*, Aristotle thus; *Plato and the Pythagoreans* (saith he) *hold no other concerning Ens or One, but that this is their Nature, their essence is the same, to be One and a Being.* *Xenophanes* declared this *One* to be God, herein agreeing with *Pythagoras*, (c) who asserted *infinite*, and *one*, and *number*, to be the first Principles of things; by *infinite* signifying the power; for nothing can be imagined before power, which in God is infinite, or rather it is infinite God: in him *esse* and *posse* are not distinct, who containeth the essences, virtues and operations of all producibles. With *Pythagoras* agreeth (d) *Anaxagoras*, saying, *for all things were together*; *Democritus*, *for all things were in power*. This also is the *commixion* of things mentioned by *Empedocles*, and *Anaximander*; not confusedly in *Chaos*, *Erebus*, or *Night*, but distinctly and orderly in *full light*, in the most perfect splendor of the divine light intuitive knowledge, that is the *Idea*, (from *εἰδω γινώσκω*) whose power is being; including all, whether Mental, Rational, Intelligible, Sensible, Vital, Substantial, Adhæssible or Adhæssive; and is not only all things that are, but those that are not: This is no other than the divine Essence, within which (before all things) *one* produced *two*. *Two* is the first number, *one* is the principle of Number, *One* is God; and the production of *two* being within the divine Essence, (for number is constituted of it self, and next *one* is naturally only the number *two*) this *two* must necessarily be God also, for within God is nothing but God. Thus these three, (*One* and *Two*) being the Principle and first, and not exceeding the Essence of God, are indeed one God: for his Essence is not divided by the production of *two* out of *one*. In like manner, it often happens in corporeals, that *one* being moved to *two*, proceeds to *three*, the substance of things continuing; as, in a Tree, of boughs and branches; in Man, the body, arms, and fingers. Of *one* therefore in the Divinity producing, and *two* produced, ariseth a *Trinity*, to which if there be added an essence formally distinct from them, there will be a formal *quaternity*, which is the infinite one and two, the Substance, Perfection, and end of all Number. *One, two, three, four*, by a collective progression make *Ten*; beyond ten there is not any thing. This *Pythagoras* meant, when he asserted the Principle of all things *Tetractis*; he understood God by it; for he swore by it, and seems to have transferr'd the Hebrew Tetragrammaton, into a Greek Symbol.

(c) Thus the most apt Symbol, of the Principles of things, is *one* and *two*; for when we make enquiry into the causes and origine of all things, what sooner occurs than one and two? That which we first behold with our Eyes, is the same, and not another; that which we first conceive in our mind is *Identity* and *Alterity*, *One* and

Two. (*Alomicon*, contemporary with *Pythagoras*) affirmed *two* to be many, which he said were *contraries*, (perhaps the same with *Empedocles*, *ἑξῆς*) yet unconfin'd and indefinite, as *White* and *Black*, *Sweet* and *Bitter*, *Good* and *Evil*, *Great* and *Small*. These multiplicitous diversities the *Pythagoreans* designed by the number *Ten*, as finite and infinite, even and odd, one and many, right and left, male and female, steadfast and moved, straight and crooked, light and darkness, good and ill, square and oblong. These pairs are two, and therefore contrary; they are reduced all into ten, that being the most perfect number, as containing more kinds of numeration than the rest, even, odd; square, cube; long, plain; the first uncompounded, and first compounded, than which nothing is more absolute, since in ten proportions, four cubick numbers are consumed, of which (according to the *Pythagoreans*) all things consist. By this all Nations reckon (not exceeding it) as by the natural account of ten fingers; Heaven it self consists of ten Spheres. *Archytas* includeth all that is, in the number *ten*; in imitation of whom *Aristotle* nameth ten kinds of *Ens*, *Categories*, reducible to two, *Substance* and *Accident*, both springing from one Essence; for *ten* so loves *two*, that from *one* it proceeds to *two*, and by *two* it reverts into *one*. The first *Ternary* is of *one* and *two*, not compounded, but consistent; *one* having no position, makes no composition; an unite whilst an unite hath no position; nor a point whilst a point. There being nothing before *One*, we rightly say, *one* is first; *two* is not compounded of numbers, but a co-ordination of unites only. It is therefore the first number, being the first multitude; not commensurable by any number, but by unite the common measure of all number; for *one, two*, is nothing but *two*; so that the multitude which is called *Triad*, Arithmeticians term the first number uncompounded, the *Dual* being not an uncompounded number, but rather *not-compounded*.

(a) Now the *Triad*, through its propensity to multiply, and communicate its goodness to all creatures, proceeds from power to operation, beholding with a perpetual intuition that fecundity of multitude which is in it, productive (as it were) of number from number, and that essentiality which is one in it, the fountain of all production, the beginning of all progression, the permanence of all immutable substance; it reverts it self into it self, multiplying it self (as it were) by unity and duity, saying, *Once twice two, are four*.

(b) This is the *Tetractys*, the *Idea* of all created things; for all progression is perfected in four. Hence ariseth the *Decad*, the ten most general kinds of all things; *one, two, three, four*, going out of Omnipotency to Energy, (out of power to act) produce *ten*, the half whereof is *five*; now in the midst put *five*, on the right hand the next superior number *six*, on the left hand the next inferior *four*; these added, make *ten*. Again, the next superior *seven*, and the next inferior *three*, make *ten*. Again, the next superior *eight*, and the next inferior *two*, make *ten*. Lastly, *one* and *nine* make *ten*. This *ten* being carried up to *twenty*, comes again to *one*; and soon, in all the Cardinal numbers to a *hundred*: For, as twice one make *two*, thrice one three, four times one four, and so forward; so twice ten makes twenty, thrice ten

c Scyth.
can 11.

thirty, four times ten forty, and so on; the like in a hundred, a thousand, and forward. And because the Decad ariseth out of, and ends in a Monad, the Greeks express ten by *i*, the Hebrews by a Point, which marks (as well amongst the Barbarians, as in Latin) denote one. (c) Hitherto alludes the Pythagorick Symbol, *One, Two*, by *Zaratas* (the Master of Pythagoras) used as the names of propagation; *one*, the father; *two*, the mother; *one and two* (in the divine essence) producing *four*, the *Tetractys*, the *Idæa* of all things, which are consummated in the number Ten. This Pythagoras styles

Eternal Nature's fountain —

no other than the knowledge of things in the divine mind, intellectually operating. From this fountain of eternal Nature, floweth down the Pythagorick Number, *One* and *Two*, which from Eternity, in the fountain of the immense Ocean, was, shall be, or rather always is, plenteously streaming. This one was by the Ancients termed *Zed's*, *Jupiter*; *two*, *Hez's*, *Juno*, wife and sister to *Jupiter*, of whom * *Homer*:

* *Illiad*. 14.

*Golden-thron'd Juno, with eyes full of love,
Beheld her spouse and brother, sacred Jove,
Sitting on th' top of fount-abounding Ide.*

In *Ida* (ἀπὸ τοῦ ἰδέειν, from prescience) *Jupiter* and *Juno* sat as *one* and *two*, in the streaming *Idæa* of the *Tetractys*, whence flow the principles of all things, *Form* and *Matter*.

CHAP. IV.

The Intelligible World.

a Pag.
689. d.

(a) **T**HE *Intelligible World* proceeds out of the Divine mind, after this manner: The *Tetractys* reflecting upon its own essence, (the first *Unite*, productrix of all things) and on its own beginning, (the first product) saith thus, *Once one, twice two*, immediately ariseth a *Tetrad*, having on its top the highest unite, and becomes a *Pyramis*, whose *Base* is a plain *Tetrad*, answerable to a *Superficies*, upon which the radiant light of the divine unity, produceth the form of incorporeal fire, by reason of the descent of *Juno*, (*Matter*) to inferior things. Hence ariseth essential light, not burning, but illuminating. This is the creation of the *middle world*, (which the Hebrews call the *Supream*, the world of the Deity, admitting no comparison.) It is termed *Olympus*, ὀλολαμπεὺς, wholly lucid and repleat with separate forms, where is the seat of the Immortal gods,

— *Deum domus alta*

whose top is *Unity*, wall *Trinity*, superficies *Quaternity*.

Number emanating from the divinity by degrees, declineth to the figure of creatures; instead of the *Tetractys* a *Tetragone*, in each of its angles a point, for so many unites, the unite at the top, which now begins to have position, elevated as much as is possible. Thus the former sides elevated will be four triangles, built upon their quadrangular latitude, and carried on to one high point. This is the *Pyramis* itself, the

Timæus, de
Anima
Mundi.

species of fire, of which a Pyramis, having four bases, and equal angles, is compounded, the most immovable and penetrant form, without matter-essen-

tial separate light, next to God sempiternal life. The work of the Mind is *life*, the work of God is immortality, *eternal life*. God himself is not this created light, but the Author of all light, whereof in the divine Trinity, he containeth a most absolute *Pyramid*, which implieth the vigor of fire. Whence the *Chaldeans* and *Hebrews* affirm, that God is fire. But the *Pyramid* which this divine *Tetractys* produceth, is the fiery light of the immaterial world, of separate intelligences, beyond the visible Heaven, termed αἰὼν, *age*, *eternity*, *æther*. Having overcome these things (saith *Pythagoras*) thou shalt know οὐσαν, the cohabitation of the immortal gods, and mortal men. In which words are imply'd three properties of this middle world, (which he terms the *free Æther*; *free*, as being separated from the power of matter; *Æther*, as receiving ardor from God, and heating all inferiors by an insensible motion) *Condition*, *Chorus*, *Order*.

Condition, it is replenished with forms simple, immaterial, separate, both universal and individual, containing all ideated *Idæa's* of genus's and species, the exemplars imitated in lesser copies, their original being in the divine mind. Thus the world of the Deity is the absolute exemplar, in the intelligible world: the abstract example; and in the sensible world, not example, but contraction of exemplars, as seal, figure, and sealed wax.

Chorus, the infinite joy of the blessed spirits, their immutable delight, styl'd by *Homer* ἀσβεστος γέλως, *inextinguishable laughter*. For what greater pleasure, than to behold the serene aspect of God; and next Him, the *Idæa's* and forms of all things, more purely and transparently, than secondarily in created beings? and to communicate these visions to inferiors, the office of the gods called θεοὶ ἀπὸ τοῦ θεῶς, *from speculation and vision*; Angels, from communicating their visions to others; not that we imagine them equal to the supreme God, who is ineffable. No *Dæmons*, how good soever, are admitted into this *Chorus*; so *Plotinus*, (the most exact follower of the *Pythagorick* Mysteries, as *Porphyrius* and *Longinus* attest.) (b) *The kind of gods we conceive to be void of passion; but to Dæmons we adjoin passions, saying, They are sempiternal in the next degree after the gods. It is better to call none in the intelligible world Dæmon; rather, if a Dæmon be placed there, to esteem him a god.*

b De amari
Deor.

Order, thus explained by *Pythagoras* (c): If thou live according to right reason, grieving for what is ill done, and rejoicing in what is well done, and prayest the gods to perfect thy work:

c Aur.

*Then stript of flesh, up to free Æther soar,
A deathless god, divine, mortal no more.*

This is the order in the acquisition of man's beatitude. The incorporeal Heaven of the middle world, the invisible *Olympus* of the blessed, admits nothing impure; therefore vices are to be shun'd, and virtues to be embrac'd. The preservation of men is by the mercies of God; therefore the Divinity is to be worshipped, and the superior power to be invoked, that they would perfect our work. Lastly, nothing material, corporeal, mixt, is received there. Therefore we must die, and holily put off the body, before we can be admitted to the society of the gods.

CHAP.

CHAP. V.

The Sensible World.

a Pag. 694. f.

(a) **W**E now come down to the *sensible* World. Its exemplar is the world of the Deity, its example the intelligible world of Ideas, the *αὐτομόλον*, subsistence of exemplars in it self. As One is the beginning of the intelligible world; so is Two of the corporeal, which were not corporeal, if it did not consist of these four, point, line, superficies, solidity, after the pattern of the Cube, made by one, two, three, four. One, fixed by position, creates a point; a line, being protracted from one point to another, is made of the number two; a superficies ariseth from three lines; a solid, from four positions, before, behind, upwards, downwards. Two multiplied in it self produceth four; retorted into it self (by saying twice two twice) makes the first Cube. Next five (the Tetragonal Pyramis principle of the intelligible World) is the cube of eight with six sides, architect of the Sensible World. Amongst principles, the Heptad hath no place, being a virgin, producing nothing, and therefore named Pallas. This first cube is a fertile number, the ground of multitude and variety, constituted of Two and of Four. Zaratas termed two the Mother; we the cube that proceedeth from it, Matter, the bottom and foundation of all natural beings, the seat of substantial forms. (b) Timæus, of the Tetragone is generated the Cube, the most settled body, steadfast every way, having six sides, eight angles. The form immers'd in this solid receptacle, is not received loosely, but fixly, and singly it becomes individual and incommunicable, confin'd to time and place, losing its liberty in the servitude of Matter. Thus the two principles of temporal things, the Pyramis and Cube, Form and Matter, flow from one fountain, the Tetragone, whose Idæa is the Tetractys, the divine exemplar.

b De Animi. mundi.

Now there is requisite some third thing to unite these two, Matter and Form, for they flow not into one another spontaneously, or casually; the matter of one thing doth not contingently receive the form of another. When the soul departs out of man, the body becomes not brass or iron, neither is wool made of a stone. There must then be a third thing to unite them, (not privation; privation and power act nothing substantively; nor motion, an accident cannot be the principle of a substance; but) God, as Socrates and Plato acknowledged, saying, There are three principles of things, God, Idæa, and Matter; symbolized before by Pythagoras in these three secret marks, Infinite, One and two; by Infinite, designing God; by Unity, Form; by Alterity, Matter. Infinite in the Supreme world; One, or Identity, in the Intellectual; Two, or Alterity, in the Sensible; for Matter is the mother of Alteration.

Scalich. can. 3.

The Tetragonal bases of these figures joyned together, make a Dodecaedre, the symbol of the Universe. * Alcinous, The Dodecaedre God used in making the Universe, this world. If upon an octangle Cube we erect a Pyramis, by four æqui-crural triangles, it makes a Dodecaedre, wherein the Cube is, as it were, mother, and the Pyramis father. Thus † Timæus, Form hath the nature of male and father; Matter, of female and mother; the compositions are their off-spring.

* Doctor Plat.

† De Animi. mundi.

Of these are produced all thing in this world, by their feminal faculties, which things appear in

a wonderful variety, by reason of the various commensuration of forms to their matter, and the admixtion of innumerable accidents, by excess and defect, discord and amity, motion and rest, impetuosity, and tranquility, rarity and density. Hence arise the Spheres, the Stars, the four Elements, out of which evaporate hot, moist, cold, dry, and all the objects of sense, the transmutation of forms, and variety of colours in several things.

The gods are natural, the gods of gods supernatural; those inhabit the inferior world, these the superior. The gods of gods are most simple and pure, as being no where; they are super-celestial, as being every where, they are with us; here strangers, there natives; never in our world but when sent, Angels, messengers from heaven, appearing in what form they please, kind and beneficial to us. The inferior spirits never ascend to the super-celestial, but are sent sometimes on embassie to us, whence termed Angels, as the others. God himself inhabits the lowest, the highest, and the middlemost, intimately; so that there is no being without God. Moreover the gods of this world are more excellent than the souls of men, though those assist, these inform bodies. Betwixt them, are placed Dæmons and Heroes; Dæmons next the gods, Heroes next souls; mentioned by Pythagoras in his Golden Verses, who assigns to each a peculiar worship.

CHAP. VI.

The state of the Soul after Death.

Rational man is more noble than other creatures, as more divine, not content solely with one operation, (as all other things drawn along by nature, which always acts after the same manner) but endu'd with various gifts, which he useth according to his free will, in respect of which liberty,

Pag. 675.

(b) Men are of heavenly race,
Taught by diviner Nature what to embrace.

b Aur. carm.

By diviner Nature is meant the Intellectual soul; as to intellect, man approaches nigh to God; as to inferior senses, he recedeth from God: Reason teaching us what to imbrace, when it converts it self to the mind, renders us blessed; when perverted by the senses, wretched. For men often straying from the rule of right reason, precipitate themselves into misery, *αὐθαίρετα μίμναι ἔχοντες*, in Pythagoras's word, incurring ills voluntary.

Thus is man placed between Virtue and Vice, like the stalk betwixt the two branches in the Pythagorical Y; or young Hercules, described by Prodicus. As therefore none can be called happy before their death, (as Solon said to Cræsus) so none is to be esteemed unhappy whilst he is in this life: We must expect the last day of a man. If when he hath put off his body, he remaineth burdened with vices, then begins he to be truly miserable. This misery after death, Pythagoras divides into two kinds. The unhappy are either near Beatitude, which though at the present they enjoy not, yet are they not oppressed with extream misery, being hereafter to be delivered from their punishment: Or, wholly distant from Beatitude, in endless infinite pains. Thus there are two mansions in the Inferi, Elizium, possess'd by those that are to ascend into blessedness; and Tartarus, by those who endure infinite torments, *ὁ δὲν ὑποῖα ἐνθάδ' ἐστιν*, (as Plato, imitating Pythagoras, saith)

Xenoph. memor. lib. Herod. lib. Ovid Met.

whence they never come out. But when a man, who hath lived justly, dieth, his soul ascends to the pure Æther, and lives in the happy Ævum with the blessed, as a god with the gods.

Pag 697.f.

Man is the image of the world; he, in many things, metaphorically, receives the name of the world. The mind of man (as the supreme mind) is termed God, by participation; the rational soul, if directed by the mind, it inclines the will to virtue, is termed the good Dæmon or Genius; if by phantasia and ill affections, it draweth the will to vices, the evil Dæmon. Whence Pythagoras desires of God, to keep us from ill, and to show every one the Dæmon he ought to use. Leaving the body, the soul, if defiled with vices, becomes an evil Dæmon: Its life, δυσδαιμονία, infelicity; but if having forsaken vice, it retain a solicitous affection to the good exercises and virtues which it practised in this life, it shall become a good Dæmon, and in the amenity of that world live happily, reflecting with joy upon the good actions it hath done, and retaining the same willingness to the right doing of them. This life is ευδαιμονία, felicity, of which Virgil:

Aur. can m

Æneid. 6.

— the same care

Which heretofore, breathing this vital air,
Of Chariots, Arms, and sleek-skin'd Steeds they
Pursues them now in earth's cold bosom laid. (bad,
These souls the Ancients termed Lemures; of these that which lives in, and takes care of any particular House, is Lar-familiaris; that which for its demerits in this life, wanders up and down in the air, a terror, vain to good men, but to the bad hurtful, is Larva; those which are not certainly known to be Larvæ or Lares, are called Dii manes; Dii, out of reverence, who having performed the course of their lives prudently and justly, died holily.

CHAP. VII.

Of the Pythagorical Transmigration.

Pag. 676.

IT is commonly averred Pythagoras was of opinion, that the souls of men after death informed the bodies of beasts. We cannot imagin this of so knowing a person. This suspicion of this Transmigration, seems rather to have been raised by such, as were partly ignorant, partly envious, of the Pythagorick mysteries, as Timon, Xenophanes, Cratinus, Aristophon, Hermippus, and others, who have ascribed many things to Pythagoras which he never said nor wrote, and have perverted what he did say. (b) He holds, that the substantive unity of one number, is not the unity of another number. That the Monads in the Duad are inconnexive to those in the Triad. That the participate essence of every thing is One, which will not occupate the essence of another thing. No Animal (then) can transmigrate into the life of a different animal; but must continue under the Law of its own nature in its proper office; ὡς τὸ εἶδος εἶδος ἐσυνέχεται, species not being coincident with species. One seal may make many impressions upon several pieces of wax; but one piece of wax cannot bear the form of many seals. * The seal of human form (the image of God) is not permitted to set an impression upon inferior nature, implied by Pythagoras in this Symbol, We must wear the image of God in a Seal-ring. The image of God (man's soul) cannot seal or form the other natures that are near it. So Hermes Trismegistus, Of man, one part is simple, which we

b Scalich.
can. 6.* Scalich.
can. 5.

call, The form of divine similitude. And again, There are two images of God, the World, and Man.

This is the meaning of Pythagoras concerning the transmigration of souls after death, and their descension into life. Others thought the soul educed out of the power of Matter; Pythagoras asserted it infused by God into the body, and therefore before it, not in time, but in purity and dignity. This infusion he termed, The descent of the soul, not understood of its situation, or its motion from the intellectual world through the several spheres of the Elementary, as Proclus and others; but of the natural series or form, the rational soul being the ultimate perfection of human body.

(a) That Pythagoras said, he was in times past Euphorbus, the meaning is this: The Ancients called the inclinations and wills of men their Minds, whence such as are of one study, intention, inclination, motion, and sense, are termed Unanimous. Thus the ancient Philosophers call the motive and sensitive faculty, The Soul. An animate differs from an inanimate (saith Aristotle) chiefly in two things, Motion and Sense. Whosoever therefore are alike affected, and moved by the same object, are said to have the same soul. The Metempsychosis then is nothing else, but equal care, motion, and study of some dead person, appearing in some living person. Thus Pythagoras might arrogate the soul of Euphorbus; Calicles, Hermotimus; Pyrrhus, Pyrandus; Calidona, Alce; as having an inclination to the several excellencies that were in those persons.

a Scalich.
can. 8.

Again, in saying he was Euphorbus, Pythagoras enigmatically taught (not the transmigration of souls, but) the transmutation of bodies out of first matter; which is not only susceptible, but covetous of all forms, continually desiring, never fatigued with any; as, If a Comedy (to use the comparison of Aristotle) should say, I was first a Tragedy, because both Tragedy and Comedy are form'd of the same Letters and Elements. Thus Apollonius, demanding of the Indian Bracmanes, what their opinion was concerning the Soul, Jarchus answered, 'According as Pythagoras delivered to you, we to the Egyptians. Apollonius replies, 'Will you then affirm you were one of the Trojan Captains, as Pythagoras said he was Euphorbus? The Spartan warily askt, 'Whom he thought the most worthy of them? Achilles (saith Apollonius) if we believe Homer. Then Jarchus, 'Look on him as my Progenitor, or πατρὸν σῶμα, progeniting body; for such Pythagoras esteemed Euphorbus.

Pag. 681.

De Genr.
Philos. vit.
Apollon.

Or if he meant Historically, πανίσηυσία, that is, The soul, separate from the body, may by the power of God, be brought again, the same into the same body: The body in which Pythagoras was so often revived, though called by several names, was one and the same, not in quantity, but substance, as the Sea is one and homogenous in it self, yet is here called Ægean, there Ionian; elsewhere, Myrtæan and Colsean; so one man often reneate, is named Æthalides, Euphorbus, Hermotimus, Pyrrhus, and lastly Pythagoras. These Generations he ascribes not to the power of Nature, but to Mercury, God only; none can revive but by the Divine power of God, whom he acknowledgeth, ψυχῶν ὅς θανόν, Animation of all things. He infuseth soul into all men, and being infused, taketh it away; and being taken away, restores it, when, and as often as he pleaseth.

CHAP.

Empedocles.

CHAP. I.

His Country, Parents.

IN the Catalogue of the *Pythagoreans*, we find *Empedocles*, not the least eminent amongst them. He was of *Agrigentum*, the most considerable City, next *Syracuse*, of *Sicily*; built by a Colony (a) of *Geloans*, 108 years after their own foundation. *Gela* was built 45 years after *Syracuse*; *Syracuse* in the 11th Olympiad, *Gela* therefore in the 22d. *Agrigentum* in the 48th. It had its name from the River, and (b) grew in a short while to so vast an increase, that in the time of *Empedocles* it contained 800000 Inhabi-

tants. Eminent it was for many things, but for none so much as the birth of *Empedocles*: Whence *Lucretius*:

(c) *An Agrigentine Citizen 'mongst these
Is chief and principal, Empedocles:
Born on the shore of Sicil's triple bounds,
Which the Ionian in wide bays surrounds.
Laving its cliffs with azure waves, whose force
And rapid current Italy divorce*

c By Mr.
Evelin.

By

By a small strait ; Here's vast Charibdis seat,
 And here the murm'ring Ætna's flames do threat
 To re-inforce once more their dreadful ire,
 And vomit yet again devouring fire ;
 Belching it forth out of his scaly jaws,
 Which he at Heaven in lightning flashes throws.
 Although this Isle for sundry things may seem
 Famous, and many Nations it esteem,
 Renown'd for wealth, and many gallant men ;
 Yet never had it ought more glorious, then
 This Personage, nought more miraculous,
 More holy, or which was more precious.
 His Verse divine, and his Inventions rare ;
 The fruits of that rich breast do so declare
 An universal knowledg, that some doubt
 Whether or no he sprung from human root.

Of his Parentage, Laertius gives this account. Empedocles, as Hippobotus saith, was an Agrigentine, Son of Meto, son of Empedocles, which Timæus confirms in his Sixteenth Book of Histories, saying, that there was one Empedocles an eminent Person, Grandfather to the Poet. Hermippus saith the same. Likewise Heraclides, in his Treatise concerning Islands, affirms that his Grandfather was of a Noble family, and kept Chariot-Horses. And Eratosthenes, in his Olympionicæ, saith, that the Father of Meto was Victor in the 71 Olympiad, upon the testimony of Aristotle. But Apollodorus the Grammarian saith, it was that Empedocles who was son of Meto. Glaucus writes, that he came to the Thurians; at such time as they had newly built their City; and not long after adds, They, who relate that he was banished his Country, and came to Syracuse and fought with the Syracusians against the Athenians, seem to me to be quite mistaken. For either Empedocles at that time was dead, or very old: the latter is not likely, for Aristotle saith, that he and Heraclitus dy'd in the Sixtieth year of their age. But he who won the Race in the Seventy-first Olympiad, was of the same name, as Apollodorus hath set down the time. Satyrus in his Lives, saith, that Empedocles was son of Exænetus, and that he himself had a son named Exænetus; and that in the same Olympiad Empedocles won the Horse-race, and the son was Victor at wrestling, or, as Heraclides, won the Foot-race. But I find in the Commentaries of Favorinus, that in the Olympiac Games, Empedocles sacrific'd an Ox made of honey and flower, and that he had a Brother named Callicratides. But Telauges son of Pythagoras, in his Epistle to Philolaus saith, that Empedocles was son of Archinomus: That he was of Agrigentum in Sicily, he himself professeth in his Lustrations, beginning thus.

*Friends, who in spacious Agrigentum
 dwell, &c.*

Thus much (saith Laertius) of his descent.

CHAP. II.

His Masters.

a Laert.

(a) **T**imæus, in the Ninth book of his History affirms, he heard Pythagoras; adding, that he was taken stealing a dissertation of his, (as Plato also was) and thereupon expelled out

of their Society, and that he mentions Pythagoras in his Verses, saying,

*'Mongst these was one in things sublimest skill'd ;
 His mind with all the wealth of Learning fill'd.*

But some there are who say, he meant this of Parmenides. Neambes relates, that until Philolaus and Empedocles, the Pythagoreans communicated their Discourses; but, after that Empedocles divulged them in his Poems, they made an order not to communicate any thing to an Epick Poet. They say likewise, that Plato was prohibited in the like manner.

But which of the Pythagoreans Empedocles heard, he tells not; the Epistle which goes abroad under the name of Telauges, affirming, Empedocles was Disciple to Hippasus and Brontinus, deserves no credit.

Theophrastus saith, he was an Æmulator and Imitator of Parmenides in his Poetry; for he among other things writ a Discourse concerning Nature.

Hermippus saith he, he was not an Æmulator of Parmenides, but of Xenophanes, with whom he lived and imitated his Poetry, and afterwards applied himself to the Pythagoreans. But Alcidas, in his Physick, relates, that Zeno and Empedocles heard Parmenides at the same time; at last both left him. Zeno went and studied Philosophy by himself; Empedocles went and heard Anaxagoras and Pythagoras; and imitated the one in his gravity of life and deportment; the other in his Physiology.

Empedocles, saith Philostratus, repeated by Suidas, is reported to have followed the Pythagorean Philosophy, which is confirmed by many Verses of his, as this.

Farewell, friends, mortal I shall be no more.

And this,

A Boy I was, then did a Maid become.

Besides the Ox which he made of meal, and sacrificed in Olympia, shews, that he approved the way of Pythagoras.

CHAP. III.

*How he lived amongst the Agrigentines; his
 Power and Authority.*

(a) **N**eamthes relates, that Meto dying, there began a Tyranny: But Empedocles persuaded the Agrigentines to give over sedition, and to endeavour a civil parity; and that he himself being very rich, bestowed Dowries upon many Virgins that had none, and thereupon clothed himself in Purple, and wore a Golden Girdle, as Phavorinus affirms, and a Delphick Crown, and had servants attending on him; his look severe and constant. After this manner he went. And the Citizens that met him paid such respect to him, as if those had been the marks of Regal Authority.

Nevertheless, he was, as Aristotle affirms, very free, and averse from taking any Government upon

upon him; for he refused a Kingdom which was offered him, (as *Xanthus* saith in his Book concerning him) preferring a moderate condition. *Timæus* relates the same, adding the reason of his being Democratically affected; for being invited by one of the Governours, and the company falling to drink, he commanded, that Supper should be brought in. He who had invited him, said, That he staid for the chief Magistrate. As soon as he came, he was made Symposiarch, Master of the Feast, for so it was ordered by him who invited them. He began to discover a tyrannical kind of humour, commanding, either that he should drink, or that it should be poured on his head. *Empedocles* for the present held his peace. But the next day citing them to the Court, he condemned them both to death, the Inviter, and the Symposiarch. Of so great authority was he in the Commonwealth.

Again, when *Acro* the Physician petition'd for a place, to build a Monument for his Father, *Empedocles* stood up and oppos'd it, and discourg'd very largely of Parity; and withal asked, what Epitaph should be inscribed on the Tomb? This:

Ἄκρον ἰντερον ἄκρων ἀκρογανήνον πατρὸς ἄκρου
Κρύπτει κρημνὸς ἄκρος παλίδος ἀκροτάτης.

playing upon his name *Acro*. Others recite the second Verse thus:

Ἀκροτάτης κορυφῆς πύμβου ἀκρογανήνον.

This, some ascribe to *Simonides*.

Afterwards *Empedocles* dissolved the Council of a thousand Senators, and constituted it Triennial; so that it consisted, not only of the rich, but of the ordinary sort.

But *Timæus*, in his first and second Books, (for he often mentions him) saith, that he seems to be of an opinion contrary to the Democracy; sometimes proud and self-conceited in his Poetry, as when he saith,

A deathless god am I, mortal no more.

CHAP. IV.

Wonders related of him.

HE was so excellent, not only in Natural Philosophy, but in Medicine also, that by his skill in both these, he performed many admirable things.

a Laert.

(a) *Timæus* relates, that the *Etesian* winds blowing very strongly, insomuch that they destroy'd the fruits; he gave order, that many Asses should be flead, and bottles made of their skins, and placed on the tops of the hills to receive the blasts; by which means the winds gave over: and upon him was conferred the attribute of *Colusanemos*, or *Alexanemos*, The chaser away of the winds.

Not unlike to this is that which *Plutarch* reports of him, that by stopping up a cleft in a Mountain, out of which there came an unwholesome Southern blast to the Plains, it is con-

ceived, that he drove away the Plague out of that Country.

The same cure he wrought among the *Selinuncians*, by a different means; for they being, as *Diodorus* the *Ephesian* saith, infested by a plague, caused by the noisomeness of the River, whereof the men died, neither could the women be, without much difficulty, delivered; *Empedocles* contrived, and at his own charge convey'd two other Rivers that ran near, into this Channel; by which mixtion, the water became sweet, and the plague ceased.

(d) Another time, a young man drawing a sword upon *Anchitus* his Host, (for that he had in publick judgment condemned his father to death) and being about to have killed him, *Empedocles* prevented it, and immediately changing his Tune, and singing out of *Homer*,

Nepenthe calming anger, easing grief.

freed *Anchitus* his Host from death, and the young man from the crime of murder; who from thenceforward became one of his disciples, eminent amongst them.

(e) *Hermippus* saith, that he cured *Panthea*, a woman of *Agrigentum*, given over by all the Physicians.

But the most memorable cure was that which he performed upon a woman that had lain seven days dead, as *Pliny* terms it; but as *Galen* more exactly out of *Heraclides*, describes it, *breathless, and without pulse, differing in nothing from a dead body, saving that she had a little warmth about the middle parts of her body. The Book of Heraclides was intituled, The breathless woman. And it was a controversy amongst the Physicians that were present, whether she were dead or alive. (g) Heraclides adds, that Empedocles acquainted Pausanias with the whole business, and that the breathless woman could preserve her self thirty days, without breathing or eating. Whence he terms Empedocles both a Physician and a Prophet, confirmed even by his own verses.*

g Laert. Suid.

Friends, who in spacious *Agrigentum* dwell,
Busied in noble high designs, farewell.
A deathless god I am, mortal no more;
Honour'd by all, with Garlands cover'd o're:
Which, 'soon as e're I come to any Town,
Both men and women pay to me renown.
Thousands of men enquire the way to wealth,
Some would divine, others restore to health.

Some there were who ascribe these to *Goetick*. *Magick*. *Satyrus* in his *Lives* relates, that *Gorgias* the *Leontine*, who had been disciple to *Empedocles*, used to say, that he himself had been present with him, when he practis'd *Goetick*; and that *Empedocles*, makes a profession thereof in his Poems, when he saith:

Med'cines to strengthen age, and cure disease,
Thou shalt be taught, for I am skill'd in these;
The wrarh of restless winds thou shalt assuage,
Which blast the corn in their pernicious rage.
And when thou call'st, they shall come back again,
Rain thou shalt change to drought, and drought to rain,
By whose kind moisture trees may sprout and thrive,
And make the dead quit *Pluto*, and revive.

In

In fine, he was so much admired for these things, that when he went to the Olympick Games, the eyes of all men were fixed on him; neither was their discourse of any thing so much as of *Empedocles*.

C H A P. V.

His Death.

HIS death, (saith *Laertius*) is variously reported. *Heraclides* having related the story of the breathless woman, how much *Empedocles* was admired for raising a dead woman to life, adds, that he appointed a Sacrifice in the field of *Pisanius*, and invited thither many of his friends, amongst whom was *Pausanias*. After the feast was done, the company withdrew themselves to rest, but he stir'd not out of the place where he lay at supper. The next morning when they arose, he alone was missing, which giving them occasion to enquire after him of the servants, they said they knew not what was become of him, only one of them said, that about Midnight he heard a great voice, calling *Empedocles*; whereupon rising up, he saw a heavenly light, and a splendor of Torches, but nothing else. They were all amazed at this accident, and *Pausanias* going down, sent forth others to enquire more strictly, but was at last perswaded not to trouble himself any further, saying, that the thing that had fallen out, deserved prayer, and that sacrifice should be made to him as to a god. *Hermippus* saith, that he made the Sacrifice upon the cure he wrought on *Panthea*, and that the Persons invited were eighty.

Hippobolus affirms, that he rose up from his place and went to *Ætna*, where he leaped into the fire, that he might leave behind him an opinion that he was a god; and that afterwards, it was discovered by one of his Sandals, which the fire cast up again, for his Sandals were of Brass. But this report *Pausanias* contradicts.

Diodorus the *Ephesian*, having told how he cured the *Selinuncians* of the Plague, adds, that the *Selinuncians* upon a time feasting by this River, *Empedocles* appeared to them, and they rising up, worshipped him, and prayed to him as a god: which opinion he desiring to continue, cast himself into the fire.

This relation *Timæus* contradicts, affirming, that he departed into *Peloponnesus*, and never return'd; whereby it came to pass, that the manner of his death is not known. He likewise in his fourth Book expressly confutes *Heraclides*, for he proveth that *Pisanius* was a *Syracusan*, and had not any estate or field at *Agrigentum*; that *Pausanias*, upon that report, erected in memory of his friend, either a little Image or Chappel, as to a god, for he was rich. And how, saith he, could he cast himself into the flames of *Ætna*, of which being so far distant, he never makes any mention? Indeed he died in *Peloponnesus*, and it is no wonder that his Tomb is not known, for it hath happened so to many others besides. Thus *Timæus*; adding, that *Heraclides* tells extraordinary things, as amongst the rest, the story of a man that fell out of the Moon.

Hippobolus affirms, that a Statue of *Empedocles* cover'd, which stood first at *Agrigentum*, was afterwards plac'd before the Senate-house at *Rome* uncover'd, being brought thither by the *Romans*. of which saith *Laertius*, there are yet some pictures.

Neanthus relates, that going in his Chariot to a great solemnity at *Messina*, he fell and broke his thigh; of which he died, being seventy seven years old. His Sepulcher is at *Megara*: but in the accompt of his years *Aristotle* differs, who saith he died at sixty. Yet others affirm, he lived to an hundred and nine years of age. He flourished in the 84th Olympiad.

But *Democritus* the *Træzenian* relates, in *Homer's* words, that,

About his neck he knit a rope, and fell
From a high cliff; his soul went down to hell.

In the forementioned Epistle of *Teluges*, it is said, that being exceeding old, he fell into the Sea, and so died. Thus much for his death.

C H A P. VI.

His Writings.

A *Ristotle* in his *Sophist* affirms, that *Empedocles* first found out Rhetorick, *Zeno* Dialectick; and in his Book concerning the Poets, that *Empedocles's* style was *Homeric*, and that he was weighty in his expressions, using Metaphors much, and other Poetical figures; and that having written, among other Poems, the passage of *Xerxes* over the *Hellepont*, and a Hymn to *Apollo*, they were both burnt by a sister, or, as *Hieronimus*, a daughter of his, the Hymn upon mistake; the *Terfian* Poem wittingly, for that it was imperfect. He adds, that he wrote Tragedies also, and Politicks: but *Heraclides*, son of *Scrapion*, ascribes the Tragedies to another. *Hieronimus* saith, he lighted upon forty three of them; *Neanthus*, that he wrote Tragedies when he was young, and that he had a sight of them.

Moreover he wrote Books concerning *Native* and *Lustrations*, which extended to 5000 verses, and a *Medicinal Discourse*, containing six hundred verses.

His *Lustrations*, *Clemens* the Rhapsodist collected, and sung at the Olympick Games, as *Phavorinus* saith in his Commentaries.

C H A P. VII.

His Opinions.

HE held that there are (a) four Elements, ^{a Plat. plac. p. 11.} Fire, Air, Water, Earth; and two principal powers, Amity and Discord; one unitive, ^{1, 3,} the other discreitive: for thus he writes:

To the four roots of all, attention give;
The *Æther* Jove; Juno, by whom we live;
Next these is Pluto; Nectis last, whose eyes
Afford the mortal fountain fresh supplies.

He calls the Heat and Æther, *Jupiter*; the Air, *vital Juno*; the Earth, *Pluto*; the Water, *Nestis*, and the Mortal Fountain, *Laertius* cites it thus:

*White Jove, and vital Juno, Pluto then,
And Nestis giving tears to th' eyes of men.*

The Fire, saith he, he calls *Jupiter*; the Earth, *Juno*; the Air, *Pluto*, the Water, *Nestis*. These are in an incessant mutation, whereby there is such an eternal production of things; whence he adds,

*Sometimes by Friendship all are knit in one;
Sometimes by Discord sever'd and undone.*

h Plut. (b) Before the four Elements, there are certain less fragments, (c) as it were Elements of Elements, of similar parts, and round.

pl. 1. 13. c. 10. Ecl. Phys. 1. 17. d. Plut. (d) The World is one; the World is not the Universe, but a little part of the Universe; the rest is sluggish matter.

e Plut. 1. 30. (e) Nature is nothing but the mixture and separation of the Elements; for so he saith in the first of his Physicks:

*We otherwise; there's no such thing at all
As that which Mortals Death or Nature call.
To Mixture and Discretion all we owe,
On which the names of Nature men bestow.*

f Plut. 2. 1. (f) The World is circumscribed by the circulation of the Sun, and that is the bound of it.

g Plut. 2. 10. (g) The right side of the World is that which is towards the Summer Tropick, the left that which is towards the Winter Tropick.

h Plut. 1. 24. (h) He, as all those who held the World to be made of little bodies, introduced Concretions and Discretions, but deny'd Generation and Corruption, saying, That compounds are not made by quality and alteration, but by quantity and coagmentation.

i Plut. 2. 11. (i) Heaven is solid, being made of air condens'd by fire, like Crystal; it containeth a fiery and aerial nature in both Hemispheres.

k Plut. 2. 13. (k) The Stars are fiery, consisting of that fire which the Æther containing in it self, struck forth in its first secretion.

l Ibid. (l) The fixed Stars are fastned to the Crystal of the Heavens, the Planets are loose.

m Laert. (m) The Sun is a great heap of fire, bigger than the Moon.

n Plut. 2. 20. (n) There are two Suns, one an archetypal

fire in the other Hemisphere of the World, filling this Hemisphere, which is continually opposite to its splendor. As for that which we see, it is the light in that other Hemisphere, replenished with air, mixed with heat; and the same is occasioned by refraction from the Earth, that is more round, entering into the Sun, which is of a Chrystaline nature, and yet is trained and carried away together with the motion of that fire. But to speak more plainly and distinctly, this is as much as to say, The Sun is nothing else, but the reflection of that light of the fire which is about the Earth.

(o) He ascribed the reasons of the Solstices, or Tropicks of the Sun, to the Sphere that containeth him, and hindreth him from passing further; as also to the two Tropicks.

(p) The Moon is in form like a dish.

(q) The Moon is twice as far from the Sun, as she is from the Earth. *o Plut. 2. 23. p Plut. 2. 27. Laert. q Plut. 2. 31. r Plut. 3. 8.*

(r) Winter cometh when the air is predominant in thickness, and is forced upward; Summer, when the fire is in like manner predominant, and is driven downward.

(s) The Sea is the sweat of the Earth, burnt by the Sun, which squeezeth the sweat out of it. *s Plut. 3. 16.*

(t) The soul puts on the several forms of all living creatures, and plants; whence he said of himself:

*A Boy I was, then did a Maid become:
A Plant, Bird, Fish, and in the vast Sea swom.*

(u) The particular senses are affected according to the proportion of their pores and passages, namely, as the proper object of each sense is well disposed and fitted. *u Plut. 4. 9.*

(x) Resemblances in Mirrours come by the means of certain defluxions gathered together, upon the superficies of the Mirrour, and accomplished by the fire that ariseth from the said Mirrour; and withal, transmuteth the air that is before it, into which those fluxions are carried. *x Plut. 4. 14.*

(y) *Plutarch* saith, he mingled the visual images and beams together, calling that which is made thereof, The rays of a compound image. *y Plut. 4. 13.*

(z) Hearing is perform'd by means of a wind within the hollow of the Ear, turned in manner of a screw, fitted and framed of purpose within the Ear, hanging up, and beaten upon in manner of a Bell. *z Plut. 4. 16.*

(a) The Hegemonick is the consistence of the blood. *a Plut. 4. 5.*

EPICCHARMUS.

Laert. **E**PICCHARMUS also heard *Pythagoras*. He was of *Coos*, son of *Philotales*. At three months old; he was carried from *Sicily* to *Megara*, and from thence to *Syracuse*, as he himself saith in his *Commentaries*. On his Image was this Inscription:

*As Stars exceeded by the radiant Sun,
Streams by the Ocean, into which they run;*

*So all by Epicharmus are surpass'd,
On whose head Syracuse this Garland plac'd.*

He wrote *Commentaries*, in which he discoursed Physiologically, and Sententiously, and Medicinally: and added little Notes to his *Commentaries*, by which they are known to be his. He died ninety years old.

ARCHYTAS.

Lact.

ARCHYTAS was of Tarrentum, Son of Mnesagoras, or (as Aristoxenes) of Hestæus. He also heard Pythagoras. This was he, by whose means Plato, when Dionysius had a mind to put him to death, was delivered. He was generally admired for all sorts of Virtue. He was seven times General of his own Country-men, whereas all others were but once, the Law prohibiting, that they should not be oftner. There is extant an Epistle of his to Plato, to this effect.

Archytas to Plato, Health.

IT is well that you are recovered of your sickness; for, besides what you wrote, Damiscus hath informed us so. We took care of the Commentaries, and went to the Lucanians, where we discoursed with the Sons of Ocellus. Part, concerning Laws, and a Kingdom, and Piety, and the Generation of all things, we have; and part we have sent; the rest are not to be found at present: As soon as we find them, you shall have them.

Plato

Plato returned this Answer :

Plato to Archytas, *Ἐὐαγγέλιον*.

THE Commentaries which you sent, we received with much joy, and exceedingly admire the Author, who seems to us to be a person worthy his Ancestors, who were Myræans, some of those Trojans who went with Laomedon, good men, as the story speaks them. As for my Commentaries, concerning which you wrote, they are not polished, but as they are I have sent them; as for the custody of them, we are both agreed, so that I shall need to inquire nothing of you. Farewel.

Aristoxenus saith, He was never worsted in the Field; but once through the envy of others, resign'd his Charge, and then all his Soldiers were taken. It appears by **Horace*, that he perished by Shipwrack, who brings in a Mariner Expostulating with him upon it, thus:

* Lib. 1.
Ob. 28.

Thou the Surveyor of the Sea and Land,
And the innumerable sand,
A little share of these small dusty grains,
Archytas now contains,
Hard by the Marine shore: It nought avail'd,
Since die thou must, I have seal'd
Th' aerial Orbs, or that thy soaring soul
O'erturn the wheeling Pole.

ARCHYTAS Answers,

And so dy'd Pelop's father, at whose Feasts
The gods themselves were guests;
And Tithon, who Aurora entertain'd;
Minos, whom Jove design'd
Admission to his counsels; and again
Dark Tartara detain,
Panthous son, who, by his Target known,
And from the Shrine ta'en down,
Attested, that in Trojan Wars, he breath'd,
And to black death bequeath'd
Nothing but skin and nerves, whom thou wilt yield
In truth and nature skill'd.
But all men to one endless night are led,
And once death's path must tread.
Some are stern Mars's Trophies; Seas become
The greedy Sailor's Tomb.
The fates of young and old together croud,
No head is disallow'd
By merciless Proserpina; and me
Into th' Illyrian Sea
The wind, which doth Orion's Star pursue,
Unruly Auster threw.
But grudge not thou, kind Mariner, to spread
On my unburied head
And bones, some few of these loose sands; so may
Fierce Eurus turn away
Whatever threatens the Hesperian floods,
On the Apulian Woods,
Securing thee from harm; a swelling tyde
Of wealth on every side
Flow on thee, by great Jove and Neptune sent.
Tarentum's President
If thou neglect, thou maist in future age
Thy guiltless sons engage
In this offence, perhaps fate may return
What's due unto thy scorn.

Vengeance may on my poor petition wait,
And thee nought expiate.
The spot is small, as thou sail'st on, thou maist
Dust thrice upon me cast.

He invented Cranes and Screws, and made *Laers.*
a Pigeon of wood that flew; but when she
once rested; could not rise. Of the duplication
of a Cube, I have spoken formerly in the Life
of Plato.

Being angry with a Country-man, he said, *Cic. de*
What would I have done to thee, if I had not *Amic.*
been angry?

He was very modest, and abstained from *Æl. var.*
obscene expressions; and if there were a ne- *Hist.*
cessity of any, he wrote it upon the wall.

He said, That if a man should go to heaven,
and behold the nature of the World, and beau-
ty of the Stars, he would find, that the admi-
ration of them, otherwise the most pleasing
thing in the world, would be very unpleasant
to him, if he had not one to communicate it
unto.

He said, That it is as hard to find a man
without deceit, as a Fish without bones.

He said, That the Judg and Sanctuary is
one; for he who hath received wrong, flies to
both.

He said, That every Commonwealth consists
of three things, the Ruler, the Ruled, and the
Laws: whereof the best ought to command;
the worst, to be commanded.

Cicero, in the person of *Cato*, gives an account *De Senect.*
of an Oration of *Archytas* to this effect: That
there is no pestilence more capital given by na-
ture to men, than corporeal pleasure, by which
they are incited to run head-strong, and un-
bridled on, to enjoy the lust of that greedy
pleasure. Hence proceed betrayings of our
Country; hence, subversions of Common-
wealths; hence, private Treaties with enemies.
In fine, there is no wickedness, no mischief to
the undertaking whereof, this lusting after
pleasure will not impel us: Rapes, Adulteries,
and all such leudness, are provoked by no other
allurements than those of pleasure. And where-
as Nature, or some god, hath not bestowed on
man any thing more excellent than a mind,
there is nothing so contrary to this divine gift,
as pleasure; for, as long as pleasure rules, there
is no place for Temperance, nor can virtue
subsist under the jurisdiction of pleasure. Which
to understand the better, he advised to fancy to
our selves some man, provoked by corporeal
pleasure the greatest imaginable; and he con-
ceived, that no man will doubt, but that as
long as he took joy therein, he could fix his
reason, his mind, his thoughts, upon nothing
else. Wherefore there is nothing so detestable,
nothing so pestilent, as pleasure; for if it be
great and long, it extinguisheth all the light of
the mind.

There were four of this name: the first, this *Laers.*
Philosopher; the second, of *Mutilene*, a Musi-
cian; the third, wrote concerning Agriculture;
the fourth, an Epigrammatick Poet. Some add
the fifth, an Architect.

ALCMÆON.

Laert.

ALCMÆON was of Crotona; he also heard Pythagoras. He was chiefly addicted to Medicine, but studied Physiology also, saying, There are many causes of humane things. Phavorinus thinks him the first that wrote a Physical Dissertation. He asserted, that the Moon hath an eternal nature. He was son of Perithus, as appeareth by the beginning of his Book; Alcmaeon a Crotonian, son of Perithus, saith thus to Brontinus, and Leon, and Bathyllus, of invisible and immortal things, the gods have a certain knowledge; men, conjecture, &c. He asserted the soul to be immortal, and that it moveth perpetually like the Sun.

Plut. pl. phil. 2. 16.

He asserted, that the Planets hold an opposite course to the Fixed Stars, from West to East.

Plut. 4. 16.

We hear by the hollow of the Ear; that resoundeth when the wind entereth into it, because all empty things make a sound.

Plut. 4. 18:

By moisture and warmth in the Tongue, together with the softness thereof, all objects of taste are distinguished.

Plut. pl. 4. 17.

Reason, the principal part of the soul, is

within the Brain, and that by it we smell, drawing in scents and smells by respirations.

Why Mules are barren, see Plut. plac. phil. lib. 5. cap. 14.

The Infant in the Womb feeds by the whole body; for it sucketh and draweth to it, like a sponge, of all the food, that which is good for nourishment. Plut. 5. 16.

The head is first made, as being the seat of reason. Plut. 5. 17.

Sleep is made by the return of blood into the confluent veins: Waking, is the diffusion of the said blood; Death, the utter departure thereof. Plut. 5. 24.

The equal distribution of the faculties of the body, moisture, heat, driness, cold, bitter, sweet, and the rest, is that which maintaineth health; the predominance of any of them causeth sickness, for the predominance of one is the corruption of all the other, and is the cause of indisposition; the efficient, in respect of excessive heat or cold; the material in respect of abundance, or defect of humours; as in some there is want of blood or brain; whereas health is a proportionable contemperation of all these qualities. Plut. 5. 30.

HIPPASUS.

Laert. * De vit. Pythag.

HIPPASUS was a Metapontine, (or as some affirm a Sybarite) a Pythagorean also. * Jamblichus saith he was drown'd in the Sea, a just reward for his impiety, for that he had published the Doctrine of Pythagoras.

Laert.

He asserted that fire is the principle of all things, of which all things are made, and into which all things resolve. All things are made by extinction of this fire: first, the grosser part of it, being contracted, becometh Earth, then the Earth being loosened by the nature of the fire, becomes water; the water exhaled becomes air.

Again, the World and all Bodies shall be dissolved in a conflagration; fire therefore is the principle, for all things were made of it; and the end, because all things are resolved into it.

Likewise he held that there is a determinate time of the mutation of the World, and that the Universe is bounded, and always moved.

Demetrius saith, he left nothing extant in Writing.

There was another of this name, a Lacedaemonian, who wrote five Books of the Lacedaemonian Commonwealth.

PHILOLAUS.

PHILOLAUS was of Crotona, a Pythagorean: of him it was that Plato wrote to Dion, to purchase some Pythagorean Books; he was put to death upon suspicion, that he aimed at the Tyranny.

He asserted, that all things are made by Necessity and Harmony; and was the first that said the Earth moveth circularly; which some ascribe to Hicetus of Syracuse.

He

He wrote one Book, which *Hermippus* (citing some other Author) affirms that *Plato* when he went to *Sicily* to *Dionysius*, purchased of the Kinsmen of *Philolaus*, paying for it forty *Alexandrian* Minæ, and out of it took his *Timæus*. Others say that *Dionysius* gave it him, having taken it from a young man, Disciple to *Philolaus*, whom he freed out of Prison.

Demetrius saith, that *Philolaus* first published a *Pythagorick* Discourse concerning Nature, beginning thus, *Nature, and the whole world, and all things in it, are aptly connected of Infinites and Finites*.

* So read here, and afterward.

Plutarch relates, that after the *Pythagorean* Associations were expelled the Cities, those who kept still together, being assembled in a house at *Metapontum*, the *Cylonians* set the house on fire, and burnt them all except *Philolaus* and *Lysis*, who being young men, strong and active, escaped through the fire. *Philolaus* fled to the *Lucanians*, where some other friends came to him,

who gathering themselves together, overmaster'd the *Cylonians*. But of this formerly, in the life of *Pythagoras*.

He affirmed, that there is a twofold corruption: one while by fire falling from Heaven: another, by water out of the Moon, poured forth by the circumgyration of the Air; the exhalations whereof become the food of the World.

The substance of the Sun is, as it were of glass, receiving the reverberation of all the fire in the world, and transmitting the light thereof to us, as it were through a strainer, as that fiery light in Heaven resembleth the Sun; then that which proceedeth from it, is in form of a mirror: and thirdly, there is a splendor, which by way of reflection from that mirror, is spread upon us; and this we call the Sun, as it were the Image of an Image. *Plut. 2.40.*

The earth moveth round about the fire in an oblique Circle, as the Sun and Moon do. *Plut. 3.13.*

EUDOXUS.

Laert.

EUDOXUS was of *Gnidus*, son of *Aschines*: he was an Astrologer, Geometrician, Physician, and Lawgiver: He learnt Geometry of *Archytas*; Medicine of *Philistio*, the *Sicilian*, as *Callimachus* affirms.

Sotion saith, he heard *Plato* also: for being 23 years old, and in a very mean condition, he was invited by the fame of the Socratick Philosophers to go to *Athens*, with *Theomelon* a Physician that maintained, and much affected him. He lived in the *Pyraeum*, and went up every day to *Athens*, where he heard the Sophists, and return'd. Thus he lived two Months, and then went home; where his friends making a collection of money for him, he travelled to *Aegypt* with *Chrysippus* a Physician, carrying along with him Letters of recommendation from *Agésilas* to *Nectabis*, who recommended him to the Priests. There he lived a year and four months, shaving his Eye-brows; and wrote, as some think, his History of eight years. Thence he went to *Cyzicus*, and to *Propontis*, teaching Philosophy; and to *Mausolus*. At last, having gotten together many Disciples, he return'd to *Athens*, to vex *Plato*, as some conceive, for having formerly rejected him. Some say, that *Plato* making a Feast, he taught him the way of placing his Guests in the figure of a Semicircle.

Nicomachus, son of *Aristotle*, saith, he asserted pleasure to be the chief good.

He was much honoured in his own Country, as appears by the Decree made concerning him. He was very eminent also among the *Greeks*, for he gave Laws to some Cities, and taught them (as *Hermippus* affirms) Astrology and Geometry; and many other excellent things.

He had three Daughters, *Actis*, *Philis*, and *Delphis*. *Eratosthenes* affirms, he wrote *Κυρίων Δια-*

λόγους; but others, that the *Agyptians* wrote them in their own Language, and that *Aristoxenus* translated them into Greek.

From him *Chrysippus* the *Gnidian*, son of *Eri-nous*, received all that he wrote concerning the Gods, and the World, and Meteors.

He left many excellent Writings.

He had a son, *Aristagoras*, father to *Chrysippus*, the Disciple of *Aetilius*.

He flourished in the 103 Olympiad, died 53 years old. When he lived in *Aegypt* with *Ichniaphus*, a *Heliopolitane*, an Ox licked his Garment; whereupon the Priests foretold that he should be very eminent, but not long-liv'd. Thus *Laertius*.

If therefore he lived about the 103 Olympiad, and in the twenty third year of his age heard *Plato*, *Eusebius* seems to be mistaken, who affirms, he flourished in the beginning of the 97 Olympiad, which was seven years after the death of *Socrates*, at what time *Eudoxus* could not have attained any eminence, if he were Disciple to *Plato*, as *Cicero* also affirms he was; *Strabo*, that he went with *Plato* into *Aegypt*; *Suidas*, that he was Contemporary with him.

Of his Writings are mentioned *Oëtaeteres*; see *Censorinus*, de Die Natali, Cap. 18.

Τὴν μεθ' οὗ, cited by *Athenæus*, and others; perhaps the same *Strabo* calls τὴν μετ' αὐτὸν *Εὐδοξοῦ ἱστορίαν*; it consisted of many Books, the Seventh cited by *Stephanus* and *Porphyrus*.

Phænomena; mentioned by the Anonymous Writer of the Life of *Aratus*.

There were others of this Name; (a) one of *Rhodes*, a Historian; another of *Sicily*, a Comick Poet; another of *Gnidus*, a Physician; (b) another of *Cyzicus*. Hitherto of the *Pythagorean* Philosophers. *a Laert. b Strabo. Plin 2.6.7.*

THE
HISTORY of PHILOSOPHY.

The Tenth Part,
Containing the HERACLITIAN Sect.

HERACLITVS.

CHAP. I.

His Country, Parents, Masters.

AS the *Ionick* Sect, which was so named from the place of its Institution, communicated that denomination in general to all the Sects that

were descended from it, though founded in other places: So the *Pythagorean* Sect, being from the Country where it was planted termed
Italic,

Italic, all the Sects that sprung out of it, though some of them had their beginning far from *Italy*, were included under the general notion of *Italic*. Of these there were four; the *Heracitian*, the *Eleatic*, the *Septick* (or *Pyrronian*) and the *Epicurean*.

The Author of the first was *Heracitus*, an (a) *Ephesian*, his Father, by *Laertius*, called *Plyso*, by *Clemens Basso*, by *Suidas Bloss*, or *Pluto*, or (saith he) as others *Heracion*: He had also an Uncle, *Heracleodorus*, whom he mentions in his (b) *Epistles*.

(c) *Aristonymus* saith, That whiles he was yet young, he was the wisest of all men, because he knew that he knew nothing; *Laertius*, that he was admirable from his Childhood; for, whilst he was young, he used to say, that he knew nothing; and when he was grown up, that he knew all things.

Laertius adds, That he heard no man, but profess'd that he himself made inquiry, and sought out all things of himself. But the learned *Cassanbon* justly doubts, That *Laertius* mistakes the meaning of those words, and that they rather refer to a strict enquiry, which he used to make into himself, according to the *Delphian* Motto, *Know thy self*; to which effect, (d) *Plutarch* commends as a memorable saying of his, *I have been seeking out my self*. And *Laertius* himself acknowledgeth, upon the testimony of *Sotion*, that some affirmed, he heard *Xenophanes*; to whom *Suidas* adds, *Hippasus the Pythagorean*.

(e) He flourished about the 69th Olympiad, (f) in the time of *Darius Hystaspis*.

CHAP. II.

How he lived at Ephesus.

Laertius saith, He was of a high spirit, contemning others, as appears by a Book of his (perhaps the Fifth Book of *Politicks*, out of which (g) *Clemens* seems to cite the same Sentence) wherein he saith, "Much Learning instructs not the Mind, for then it would have instructed *Hesiod* and *Pythagoras*, as also *Xenophanes* and *Hecataeus*, for there is but one wise thing; which is to know when to govern all by all: He also said, That *Homer* deserved to be thrown out of the Schools and beaten; as also *Archilochus*."

As a further (h) Argument of the greatness of his Spirit, *Antisthenes* relates, That he gave the Kingdom to his Brother; *Laertius*, That being desired to take upon him the Supreme Power, he slighted it, because the City was prepossess'd with an ill way of Government; and retiring to the Temple of *Diana*, play'd at Dice there with the Boys, saying to the *Ephesians* that stood about him, "Worst of Men, what do you wonder at! Is it not better to do thus, than to govern you?"

Much offended was he with the *Ephesians*, for that they had banished his Friend *Hermodorus*, in whose behalf he reproved them sharply, writing thus; *The Ephesians deserve to die all Children, and to leave their City to Children, for that they cast out Hermodorus, the most excellent amongst them, saying, Let not one of us be more excellent than the rest; and if there be any such, let him go to another place, and live amongst other People.*

Darius (i) King of *Persia*, wrote to the *Ephesians*, to repeal the Banishment of *Hermodorus*, and to restore him to his Patrimony. He wrote also to *Heracitus*, inviting him to come and live with him; the Letter was to this effect:

(k) I King *Darius* salute *Heracitus* the *Ephesian*, a wise Person.

YOU have put forth a Book concerning Nature, hard to be understood and interpreted; but by so much as I understand of it, it seems to promise the Theory of the whole World, and of the things that depend hereon, which consists in Divine Motion; and by many Questions and Doctrines, as well to those who are skilful in the Greek Learning, as to others vers'd in Meteorology, and other Learning, to doubt what is the true meaning of what you have written. King *Darius* therefore, Son of *Hystaspes*, desires to participate of your Learning, and of the Greek Institution. Come as soon as you can to my Presence, and Royal Palace; for the Greeks, for the most part, are not obsequious to wise men, but despise the good things which they deliver. With me you shall have the first place, and daily Honour and Titles; your way of living shall be as noble as your Instructions.

But *Heracitus* refused his offer, returning him this Answer.

Heracitus to *Darius* the King, Son of *Hystaspes*, Health.

ALL men living refrain from Truth and Justice, and pursue Unsatiableness and Vain-glory, by reason of their Folly; but I, having forgot all Evil, and shunning the society of imbred Envy and Pride, will never come to the Kingdom of *Persia*, being contented with a little, according to my own mind.

(l) *Demetrius* affirms, he slighted the *Athenians* also, who had a great respect for him.

He continually bewailed the wicked lives of men, and as often as he came abroad amongst them fell a weeping, considering that all things which are done, are misery.

CHAP. III.

His Retirement.

AT the last, saith *Laertius*, growing into a great hatred of mankind, he retired to the mountains, and lived there, feeding upon Grass and Herbs; the dislike which he had of the *Ephesians* being much exasperated by a disrespect they shewed to him; whence, (m) *Demetrius* affirms, that the *Ephesians* slighting him, he betook himself to a private Life; the occasion is related by himself in two *Epistles* to *Hermodorus*; the first is this,

Heracitus to *Hermodorus*.

BE not angry any longer in your own Cause, *Hermodorus*; *Euthycles*, Son of that *Nychophon* who committed Sacrilege, hath Indicted me of impiety (overcoming me by his ignorance, who am excellent in Wisdom) for that upon the Altar by which I stood, I wrote my Name, making my self, of a Man, a God. Thus I shall be condemned of impiety by the impious. What think you? I shall seem impious to them for dissenting from them in opinion concerning the Gods. If blind Men were to judg of Sight, they would say, that Blindness were Sight: but, O ye ignorant Men, teach us first what God is, that when you declare us to be impious,

impious, you may be believed. Where is God, shut up in Temples? O pious Men, who place God in the dark! It is a reproach to a Man to tell him, he is a Stone; but of God you profess, as a truth and in his commendations, he is born of a Rock. You ignorant people! you know not, that God is not made with Hands, neither hath he any Basis from the beginning, nor hath one Circumference, but the whole World, adorned with living Creatures, Plants and Stars, is his Mansion. But if you your selves are unlearned, let not my Learning be construed impiety. Learn Wisdom, and understand; but you will not, neither do I force you. You grow old with ignorance, and rejoyce in your own Wickedness. *Hercules* was not, as *Homer* bely'd him to be, a Murtherer of Strangers. What was it that Deified him? his own Integrity and Fortitude, by which he perform'd so many Labours. Am not I then, O ye Men, good also? I was mistaken when I asked you; for though you should say the contrary, yet I am good, and have performed many difficult Labours. I have overcome pleasures; I have overcome Riches; I have overcome Ambition; I have master'd Cowardice; I have master'd Flattery: Fear hath nothing to object against me, Drunkenness hath nothing to object against me: Sorrow is afraid of me; Anger is afraid of me; I have won the Garland in Fighting against these Adversaries, a task which was imposed on me by my self, not by *Euristus*. Will you not give over to slander Wisdom, and to press your own Sins and Crimes upon your selves? If you could return to life 500 years hence, you would find *Heraclitus* still alive, but not the least print of your Names. I shall equalize, by reason of my Learning, the lives of Cities and Nations, I shall never be silenc'd. If the City of the *Ephesians* were razed to the Ground, and all their Altars destroy'd, yet will the Souls of Men be the places to preserve my memory. I will also marry *Hebe*, not the *Hebe* of *Hercules*, he will always be with her Himself; mine is another. Vertue hath brought forth many, and bestow'd one upon *Homer*, another upon *Hesiod*, and to every good Man one, which is the renown of his Learning. Am not I wiser than *Eutbycles*, who alone know God? But thou being bold and impious thy self, think'st him God, who is not God: If the Altar of God be not erected, there is not God; but if the Altar of one that is not God be erected, then he is God, as if stones were witnesses of the Gods. His works should bear witness of him, as those of the Sun, Night and Day, bear witness; the four seasons of the year are his witnesses; the whole fruitful Earth is his witness; the Moon is his work, a heavenly testimony.

The other Epistle is this.

To *Hermodorus*.

I Understand that the *Ephesians* are about to make a Law against me, most illegally; for it is not a Law which is made for a single person, but Judgment: the *Ephesians* know not that a Judge is different from a Law-giver, and this is so much the better, for that it is uncertain who shall transgress it: But the Judge seeth before his Eyes the Person that is to suffer. They know,

Hermodorus, that I assisted you in the framing of Laws, and therefore will banish me, but not before they have confuted themselves. They decree, that he who laughs not, and hates mankind, shall depart the City before the Sun rise; this is the Law they would make. There is no Man, *Hermodorus*, but laughs, except *Heraclitus*; and so they banish me. O ye Men! Will ye not learn, why I never laugh? It is not that I hate Men, but their Wickedness; write your Law thus, Who-soever hateth Wickedness, let him depart the City, and I will be the first that shall go, willing to forsake, not my Country, but the malice of my Country-men. Write your decree over again. But if you grant there is Wickedness and Vice amongst the *Ephesians*, and that I hate you for it, why should not I make a juster Law, That they, who through their Wickedness are the occasion that *Heraclitus* never laughs, should depart this life? Or rather let them be fined great Sums, for the loss of Wealth will more afflict you, this is death to you. You have done me wrong in taking away that which God gave me; and banishing me unjustly. Shall I therefore love you? first, for that you have taken all joy away from me, and not ceasing there, oppress me with Laws and Exile; for whilst I live in the City, I am banished from you? With whom do I commit Adulteries? With what company do I commit Murther? with whom am I Drunk? With whom do I joyn in Wickedness? I corrupt none; I injure none; I am alone in the City. You have made it a Desert by your Wickedness. Hath *Heraclitus* made your *Forum* honest? No: but *Heraclitus* would have made you and the whole City good; but you would not. I would do it, and am a Law to others; I am the only Person that ought not to be punished by the City. Do you wonder, that I never laugh? I wonder at you, that you can rejoyce, and do wrong; for those that do unjustly ought to have a sower look. If you would give me an opportunity of laughter, live in peace; and contest not unjustly: You carry Swords in your Tongues, plunder Wealth, ravish women, poison friends, commit sacrilege, betray the Trust the People repose in you, take away Mens Lives by Torture; every Man is full of a several Wickedness. Shall I laugh, when I see Men do these things? Their Garments, Beards and Heads order'd with unnecessary care; a Mother deserted by a wicked Son, or young Men consuming their Patrimony, or a Citizen whose Wife is taken from him, or a Virgin ravish'd, or a Concubine entertained as a Wife, or one impudent young man courted by the whole City, or deadly Poisons by Unguents; or some at Feasts filling their Bellies more with Poison than with Dainties, or the People treating of Publick Affairs in the Theatre? Virtue, more rigid than Vice, would strike me blind, if I should laugh at your Ways. By Musick, Pipes, and Stripes, you are excited to things contrary to all Harmony. Iron, a Metal more proper for Ploughs and Tillage, is fitted for slaughter and death. You injure the Gods, warlike *Minerva*, and *Mars*, surnamed *Enyalios*: Men, raising Armies against Men, covet to kill one another, punish them who forsake the Field, for not being murderous; and honour, as valiant, such as are drunk with blood: But Lyons arm not themselves against one another;

ther; Horses betake not themselves to Swords; the Eagle buckles not a Breast-plate against an Eagle. No other Creatures use Instruments of War, their Limbs are their Weapons. Horns are the Arms of those, Beaks of these, Wings of others; Swiftneſs to ſome; Bigneſs, Smallneſs, Swimming to others; to many their Breath; no irrational Creature uſeth a Sword, but keeps it ſelf within the Laws to which it is deſign'd by Nature; but Man doth not ſo, more blameable, becauſe more underſtanding. You muſt wiſh for an end of your Wars, if you would take me off from this ſeverity. Nor worſe than theſe internal Diſſentions, is your Depopulations of Cities, tormenting aged Perſons, raviſhing Wives, taking away Children from their Mothers and Nurſes, defiling Beds, Vitiating Virgins, abuſing Boys, caſting free perſons into Bonds, demolishing the Temples of the Gods; digging up the Monuments of the Heroes, triumphing in wickedneſs, and offering gratulatory Sacrifices to the Gods for theſe unjuſt actions. About theſe, without laughing, you conteſt in Peace by Argument, and in War with Steel. You force away Juſtice by your Swords. *Hermodorus* is baniſhed for writing Laws; *Heraclitus* is baniſhed for Impiety; the Cities are deſerted of Juſtice, the Deſerts of Injuſtice. The People have built Walls, as Teſtimonies of the wickedneſs of the Inhabitants, ſhutting up your own Lives. You are all fenced with Houſes; there are other walls of wickedneſs, Enemies within you, your own Countrey-men; Enemies without you. Strangers; All Enemies, no Friends. Can I laugh, ſeeing ſo many Enemies? You think the wealth of other men is your own; you think the Wives of other men are your own. You lay the yoke of ſervitude upon free Perſons; you devour the Living; you violate the Laws; you ratifie wickedneſs by a Law; you do violence to all ſuch as conſent not to your Juſtice. Your Laws themſelves convince you of injuſtice; for if they were not, you would go wholly unpunished; whereas now you are a little reſtrained, and, by fear of puniſhment, withheld from the utmoſt injuſtice.

There is a third Epistle of his to the ſame Perſon, expreſſing no leſs diſaffection to the *Ephesians*.

Heraclitus to Hermodorus.

Give me notice, *Hermodorus*, when you intend to go to *Italy*; may the Gods and Demons of that place receive you kindly. I dreamt, that I beheld all the Diadems of the whole World make their addreſs to your Laws, and, ſhutting their mouths after the *Persian* manner, adore them, they being ſeated above all the reſt. The *Ephesians* will adore thee when thou art dead, when thy Laws ſhall bear a general ſway; then neceſſity will force them to uſe them, for God hath taken away the power from them, and they have acknowledg'd themſelves worthy of ſervitude. This I learnt from the more Ancient. All *Asia* is reduced by the King [of *Persia*] and the *Ephesians* are ſpoiled. They are not accuſtomed to true Liberty and Dominion, and now it is very likely will be obedient, if they are commanded to lament and accuſe the Gods for not giving them riches. It is the part of blind

men, not of a good man, to value the goods of Fortune. The Sibyl frequently hinted this, that from *Greece* there ſhould come a wiſe man into *Italy*. The Sibyl knew thee ſo many ages ſince, *Hermodorus*; even then thou wert in being: but the *Ephesians* will not yet ſee him whom Truth acknowledged by the mouth of a Woman divinely inſpir'd. A teſtimony is given of your wiſdom; but the *Ephesians* diſallow the teſtimony of a God: they ſhall ſmart for their insolence, and even now do ſmart for it, having an ill opinion of us alſo. God puniſheth not by taking away riches, he rather allows them to the wicked, as an aggravation of their crimes, that, abounding in wealth, their offences may be more notorious to all men; for poverty is a veil. I wiſh fortune may not forſake you, that all men may ſee your wickedneſs. But farewel they; as for you, acquaint me with the time of your departure, for I would by all means meet you, and diſcourſe with you a little, amongſt other things, concerning Laws. I had committed to writing, but that I thought it fit rather to be conceal'd: nothing is more conceal'd than when one man ſpeaks to another alone, and eſpecially when *Heraclitus* to *Hermodorus*. The ordinary ſort of men differ not from broken Pitches, which can hold nothing, but let it run out by babling. The *Athenians*, being *Autochtones*, knew the nature of men, that being made of earth, they have craſie minds, and therefore inſtituted them in a ſecrecy and ſilence of Myſteries, that they might hold their peace through fear, not out of judgement, and that it might be no longer hard for them to praſtiſe ſilence.

CHAP. IV.

His Sickneſs and Death.

THE dict which he uſed in the Mountains being nothing but Graſs and Herbs, brought him into a Dropſie, whereupon he was conſtrained to return to the City. The account of his ſickneſs receive from himſelf, in * two Epistles * *Epist. Græc.* to *Amphidamas*. The firſt is this.

Heraclitus to Amphidamas.

I Am fallen ſick, *Amphidamas*, of a Dropſie. Whatſoever is in us, if it get the Dominion, it becomes a diſeaſe. Exceſs of heat is a Fever; exceſs of cold, a Paſſie; exceſs of wind, Colick. My diſeaſe comes from exceſs of moiſture. The Soul is ſomething divine, that keeps all theſe in due proportion; the firſt thing is health, nature her ſelf is health; we cannot foreſee what is contrary to nature, but after that it happens. I know the nature of the World, I know that of man; I know diſeaſes, I know health; I will cure my ſelf, I will imitate God, who makes equal the inequalities of the world, committing it to the Sun. *Heraclitus* ſhall not dye of this diſeaſe; the diſeaſe of *Heraclitus* ſhall dye by good direction. In the Universe moiſt things are dried up, hot things are made cold. My wiſdom knoweth the ways of nature; it knows the cure of ſickneſs: but if my body be over-preſs'd, it muſt deſcend to the deſtin'd place; nevertheleſs my Soul ſhall not deſcend, but being a thing immor-

tal, shall fly up on high to Heaven. The ætherial Mansions shall receive me, and I will accuse the *Ephesians*. I shall converse, not with Men, but with Gods; I shall not build Altars to others, but others to me. *Euthycles* shall not charge me with impiety; but I him of malice. They wonder, that *Heraclitus* look'd always sad; they wonder not that men are always wicked. Withhold from your wickedness, and perhaps I shall smile. My sickness is the more gentle to me, for that I am not amongst men, but alone; and perhaps for that my Soul presageth she shall shortly be freed out of this prison, and looking through her shatter'd body, calls to mind her own Country, from whence she came to encompass this transitory mortal body, which to others seems built up of slegm, choler, purulent matter, Blood, Nerves, Bones, and Flesh; for unless passions did contrive pains, we would never go out of it.

The second Epistle was to this effect.

To the Same.

THE Physicians, *Amphidamas*, met together, and were very diligent about the cure of my sickness, but knew neither Art nor Nature; they would have it to be this, and to be that, but knew neither. They did nothing but soften my belly with feeling it, as if it had been a Leather Bottle; yet some of them would have undertaken the cure, but I would not allow it, before I had required an account of the disease, which they could not give me; neither were they too hard for me, but I for them. How, said I, can you be masters of piping, when one that is not a piper hath over-match'd you? I shall cure my self sooner than you can, if you will but teach me how a drought may be made of a shower; but they, not understanding my question, held their peace, and were much at a loss in their own Science. I have known others cured, not by them, but by chance. These men, *Amphidamas*, do wickedly, professing Arts which they have not, and undertaking the cure of that which they understand not, bringing death to men under the pretext and name of Art, doing wrong both to Art and Nature. It is abominable to profess ignorance, but more abominable to profess an Art, of which we are ignorant. What delight take they in lying, but that by deceit they grow rich? It were better for them to beg, for then they would be pitied; but now they are hated for doing wrong, and lying. Other Arts are more fortunate; these are easily confuted, the better more hardly. These were the men that took compassion of me in the City; not a Physician amongst them, but all Cozeners and Impostors, who sell cheats of Art for Money. They kill'd *Heracleodorus*, my Uncle, and took Money for it, and were not able to tell me the cause of my distemper, and how a drought might be made out of an excess of moisture. They are ignorant that God cures the great bodies in the World, reducing their inequality to an even temper; that he makes whole those that are broken, stops such as are falling, gathers the dispersed together into one body, polisheth the deformed, those which are taken, he puts into Custody; those which fly, he pursues, illuminates the dark with his light,

terminates the infinite with certain bounds, gives form to those which have none, gives sight to things void of sense, permeates through all substance, Striking, Composing, Dissolving, Condensing, Diffusing; he dissolveth the dry into moist, he condenseth the loose Air, and continually moveth the things above, setteth those beneath. This is the cure of the sickly World; This I will imitate in my self; to all the rest, I bid farewell.

Thus having demanded of the Physicians *anigmatically*, whether they could of a shower make a drought, they not understanding him, he shut himself up in an Oxe-stall, hoping that the Hydropical humours would be extracted by the warmth of the dung; but that doing him no good, he dyed, having lived 60 years.

Hermippus relates, that he demanded of the Physicians, Whether they could squeeze the water out of the inward parts of his body; which they acknowledging they could not do, he lay'd himself in the Sun, and commanded his Servants to playster him all over with Cow-dung, in which posture he dyed the next day, and was buried in the Forum. *Nearichus* of *Cyzicum* saith, that they could not get off the Cow-dung, and not being known in that condition by the Dogs, they tore him to pieces.

But *Aristo* saith, he was cur'd of this dropsie, and dyed afterwards of some other disease, which *Hippobotus* confirms.

Laertius reckons five of this Name. This Philosopher the first.

The second, a Lyrick Poet, who writ an Encomium of the twelve gods.

The third an Elegiack Poet, of *Halicarnassus*; upon whom *Callimachus* hath an Epigram.

The fourth of *Lesbos*, who writ the Macedonick.

The fifth a Jester. To whom add, mentioned by *Athenæus*, another of *Mitylene*, a Jugler; and lastly, one of *Tarentum*, a Lutenist who, play'd at the marriage of *Alexander*.

It is reported of *Heraclitus* the Philosopher, that he perswaded *Melancomas* a Tyrant to lay down his Crown.

CHAP. V.

His Apothegms.

OF his Apothegms, and moral Sentences, are remembred these: He said, That we ought to take more care to extinguish Contumely, than the Hottest Fire; And that a People ought to fight for their Laws, as well as for their Walls.

Deriding the Sacrifices, whereby they thought that the Gods were pacified; These, saith he, cleanse themselves by polluting themselves with Blood, as if a Man should go into the Dirt to wash himself.

He saith, that he who contemned his Body, and esteemed it more vile than Drofs; yet would take care for the Cure of it, as long as God should command him to use it as an Instrument.

Of all the Discourses that ever I heard, none came so far as to prove, That Wisdom is something separate from all other things; A solitary Man is either a God or a Beast.

Even

Ser. 4. Even the Eyes and Ears of Fools that have rude Minds, are tainted with ill.

Ser. 5. It concerneth every Man to know himself, and to govern himself prudently.

Plut. de Garrul. Being desired by the Citizens, to make some discourse concerning Concord, he went up into the Chair, and taking a Cup full of water, sprinkled some Meal and Penny-royal into it, and having drunk it off, went away; giving them to understand, That Cities might be preserved in Peace and Concord, if the Inhabitants would be content with a little, and not affect costly Superfluities.

Stob. Ser. 18. It is hard to conceal Rudeness at any time, but especially in Wine.

Ser. 17. A Drunken Man reels, and is led by a Child; his Soul is wet, and knows not whither she goeth; a dry Soul is the wisest and best.

Ser. 102. He said, That the Wit of a Man is his Genius.

Laert. Being asked by one, why he held his peace? he answer'd, That you may speak.

Plut. de Pyth. Orac. He said, That the King to whom the Delphian Oracle belongs, neither speaks, nor conceals, but gives signs.

Consol. ad Apollon. It is all one to be living and dead, waking and sleeping, young and old; for each of these alternately changeth into the other.

Clem. Strom. 5. He seem'd to blame Generation, saying, That those who are born will live and dye, or rather rest, and leave behind them Children to dye also.

Strom. 2. Unless a Man hopeth that which is not to be hoped for, he shall not find that which is inscrutable, and hath no passage whereby he may come at it. This, Clemens calls a kind of Paraphrase upon that of the Prophet, (Isa. 6.) *Unless you believe, you shall not understand.*

Strom. 6. Reproving some incredulous Persons, he said, They can neither hear nor speak.

Strom. 2. How can that Light, which never sets, be hidden or obscured, (meaning God?)

Strom. 5. Justice shall seize upon the Framers and Witnesses of false things.

CHAP. VI.

His Writings:

THE Treatise (saith Laertius) which goeth abroad under his Name, is a continued discourse of Nature; it is divided into three Books; One, concerning the *Universe*; the Second, *Politick*; the Third, *Theologicke*. This Book he deposited in the Temple of *Diana*, and, as some affirm, he affected to write obscurely, (whence called *αἰσχυρός*, dark) that he might be read only by the more Learned, and not become contemptible, by being read by the Vulgar; which *Timon* implies, saying,

*'Mongst these the great Confounder did arise,
Dark Heraclitus, he that doth despise
The Multitude—*

And perhaps it conduceth not a little to the obscurity of his Writings, that, through excess of Melancholy, as *Thucophrastus* saith, he began many things, and left them unfinish'd, and many times wrote contrary things.

Aristo relates, that *Euripides* brought this Book of *Heraclitus* to *Socrates* to be read; and asking his opinion of it; "The things, said *Socrates*, which I understand in it, are excellent, and so, I suppose, are those which I understand not; But they require a *Delian Diver*, (one that is able to explain Oracles.) But *Schleus* the Grammarian, citing one *Croto*, saith, That a certain person, named *Crates*, brought this Book first among the Grecians, and said, It required a *Delian Diver*, for only such a one could escape drowning in it. Some entitle it, *The Muscs*; others, *Concerning Nature*; *Diodotus*, *An exact rule to steer Life by*; others, *The Judgment of Manners, the Ornament of one Institution above all.*

Yet *Laertius* gives this judgment of that Treatise, that sometimes he writes so clearly and plainly, that any Man may understand it, and discern the height of his Mind; adding, that his style was very short and sound.

There were many that explain'd and commented upon his Book: of whom were *Antisthenes*, and *Heraclides* of *Pontus*, and *Cleanthes* of *Pontus*, and *Sphaerus* the Stoick; as also *Pausanias*, who was surnamed the *Heraclitus*, and *Nicomedes*, and *Dionysius*; and, of Grammarians, *Diodotus*, who denies the Book concerning *Nature* to be his; but admits that of *Politick*, alledging, that what he said of *Nature*, is only brought in by way of example.

Hieronymus saith, that *Scytbinus*, an *Iambick* Poet, wrote against him in Verse.

CHAP. VII.

His Doctrine.

L Aertius saith, That his Writings gained so great a Reputation, that the Followers of his Sect were, from him, called *Heraclitians*. His Assertions were these:

SECT. I.

That Fire is the Principle of all Things.

H E held, that (a) Fire is the Principle of all things, for of Fire all things are made, and into Fire all things shall resolve; Or, as *Laertius*, That Fire is the Element, and the vicissitude of Fire generates all things by Rarefaction and Condensation, (but he delivers nothing plainly.) That all things are made by contrariety, and the whole flows like a River. That the Universe is bounded, and that there is one World, which was made of Fire; And shall again be set on Fire by certain Periods for ever, and that this is done by Fate. That, of the Contraries, that which conduceth to Generation is named War and Contention; That which to Conflagration, Concord and Peace. That Mutation is a way up and down, and that the World is made by it; For the Fire being condensed, groweth humid, and settles into Water; the Water condensed turns into Earth, this is the way down. Again, the Earth is diffused, of which is made Water; of the Water, almost all things else, meaning the exhalation out of the Sea, this is the way up. That there are made exhalations

a Plut. plac. 1, 3.

from the Earth and from the Sea, some whereof are bright and pure, others dark: the Fire is augmented by the bright, the Water by the rest; but what that is which includes all, he declares not. Hitherto *Laertius*.

b Loc. cit. (b) *Plutarch* delivers it thus: That all things are made by extinction of this Fire; first the grosser part of it being contracted, becometh Earth, then the Earth being loosened by the nature of the Fire, becomes Water; the Water exhaled, becomes Air. Again, the World and all Bodies shall be dissolved in a Conflagration: Fire therefore is the Principle, for all things were made of it; and the End, because all things are resolved into it.

c Strom. This is further explain'd by (c) *Clemens Alexandrinus*, out of the words of *Heraclitus*. That he held, (saith *Clemens*) the Universe to be eternal, is manifest, for that he saith, *the Universe was not made by any, either God or Man, but was, is, and shall be an ever-living Fire, kindling measures, and quenching measures.*

That he held this World was generated, and shall perish, is manifest also from his saying, *The conversions of Fire, first Sea, then the half of Sea, Earth, the Half-prester, meaning, that by the power of that Fire, the Word and God, who governeth all things, turneth by Air into moisture, the seed as it were of the disposer of the World, which he calleth Sea. Of this again is generated Heaven and Earth, and all things that are in them.*

Lastly, how it returns to its first condition, and becomes Fire again, he shews thus. *The Sea is diffused, and measured according to the same proportion as it was first, before it was Earth, the like happens to the other Elements.* Thus *Clemens*.

d Plut. plac. 4 3. Moreover he held, (d) that the soul of the World is an exhalation of the humid parts thereof, and that (e) the essence of Fate is a reason (or proportion) permeating through the Universe, which Fate is an æthereal body, the seed of the generation of all things; for (f) all things are done by Fate.

This opinion (that Fire is the Principle of all things) was asserted also by *Hippasus* the *Pythagorean*; whom *Plutarch*, in the account which he gives of it, joins with *Heraclitus*; and it is probable, that *Heraclitus*, being his Disciple, received it from him.

g Plac. 1. 13. (g) *Plutarch* adds, that he introduced *ἡμίμα τίνω ἐλάττω*, certain sharings, the least of things, and not divisible.

S E C T. 2.

Of the Stars, Sun, Moon, Day, Night, &c.

h Laert. **I**N the World (b) there are certain *Schaphæ*, things in the fashion of Boats, the hollow sides whereof are turned towards us, in which certain shining Exhalations are crowded, which cause flames. These Flames are the Stars, nourished by Exhalations, arising out of the Earth. Of these, the Flame of the Sun is the brightest and hottest, by reason that the other Stars are more distant from the Earth, and therefore shine and heat less.

(i) The Sun is just as big as it seems to be, (k) his Figure like that of a Boat, the hollow part turned downwards. (l) He is in a transparent and unmixed place, (m) (that is, in the purer Air) and keeps a proportionable distance from us, by which means he heateth and shineth more than the Moon. (n) He happens to be Eclipsed by reason of his Boat-like figure, when the hollow thereof is turned upwards, and the convex part downwards towards us.

(o) The Moon is a kind of Earth encompassed with a Mist, (p) in form like a Boat; (q) she is nearest the Earth, and moved in a place that is not pure, the grosser Air. (r) She is Eclipsed, when the hollow part is turned upwards; and the variety of appearances, which she hath in a Month, are caused by the turning of her hollow part upwards by degrees.

(s) Day, Night, Months, Hours, Years, Showers, Winds, and the like, are caused by different Exhalations: for a splendid Exhalation, flaming in the circle of the Sun, makes it Day; the contrary, being predominant, makes it Night; the heat of the splendid increasing, maketh Summer; the moisture of the dark abounding, maketh Winter. Suitably to these he explained the Causes of other things; but of the Earth he said nothing, nor of the *Scaphæ*.

S E C T. 3.

Of the Ebbing and Flowing of the Sea.

THE Ebbing and Flowing of the Sea is caused by the Sun, which stirreth, raiseth and carrieth about with him the most part of the Winds, which coming to blow upon the Ocean, cause the *Atlantick* Sea to swell, and so make the Flux or High-Water; but when the same are allay'd, the Sea falleth low, and so causeth a Reflux and Ebb.

S E C T. 4.

Of living Creatures.

OF the Nature (a) of the Soul, he said, It is so profound, as that it cannot by any means be found out: He only asserted, (b) That it is, as all other things are, an Exhalation; that which is without, and that which is within, being all of one Nature: it is incorporeal and always in fluxion. That it is moved, is evident from its being moved; (c) Of Souls, the dry is the wisest and best.

(d) Man beginneth to be perfect about his second seventh year, at what time the generative vigour beginneth to move: for then Trees begin to be perfect, when they begin to bring forth; for as long as they bear no Fruit, they are immature, and imperfect. Moreover, at that time a Man comes to the knowledge of good and ill, and is capable of being instructed therein.

THE
HISTORY of PHILOSOPHY.

The Eleventh Part,
Containing the ELEATICK Sect.

XENOPHANES.

CHAP. I.

His Life.

THE Eleatick Sect was denominated from
Ela a City of Magna Græcia, founded in
the time of Cyrus by a Colony of Phocæans; of
whom, being besieged by Harpagus, some made
their escape by night, and came into this part of
Italy, where they built a City which they named
Elea-

a Dionys.
Halic.

Elea, Hylea, or Hyela, either from Elea the River of that place, or, as (a) some conceive, in allusion to the Marshes round about it.

Of this City were *Parmenides*, *Zeno*, and *Leucippus*; who being eminent Persons of one Sect, from them the Sect it self was termed *Eleatick*.

b Strom.

But its first Institutor was *Xenophanes*. The *Eleatick Sect*, saith (b) *Clemens*, was begun by *Xenophanes the Colophonian*, who (as *Timæus* affirms) lived in the time of *Hieron King of Sicily*, and of *Epicharmus the Poet*; But *Apollodorus*, that he was born in the fourth Olympiad, and his life extended to the times of *Darius* and *Cyrus*. *Parmenides* was Disciple to *Xenophanes*; *Zeno* to him; then *Leucippus*; then *Democritus*. The Auditors of *Democritus* were *Protagoras the Abderite*, *Metrodorus the Chian*, and *Diogenes the Smyrnan*, whose Disciple was *Anaxarchus*.

c Laert.

(c) *Xenophanes* was (as was said) a *Colophonian*, Son of *Dexius*, or (as *Appollodorus*) of *Orthomenes*, praised by *Timon*; who saith of him,

*Xenophanes, not wholly free from pride,
The fictions of old Homer did deride.*

Being banished his Country, he lived at *Zencle* and *Catana* in *Sicily*. Some affirm, he had no Master; others, that he heard Botho the *Athenian*; others *Archelaus*, [which is least probable, for] he was (as *Sotion* relates) contemporary with *Anaximander*. He wrote in verse *Elegies* and *Iambicks* against *Hesiod* and *Homer*; reprehending what they deliver'd concerning the Gods. He also wrote the building of *Colophon*, and the bringing of the Colony into *Elea* in *Italy*, which consisted of two thousand verses. But (d) *Strabo*, who affirms he writ the *Silli* in verse, seems to have ascribed to him what was indeed written by *Timon the Sceptick*, his mistake perhaps arising from hence, that (e) the second and third books of that Poem were written by way of Dialogue, wherein *Timon* questions *Xenophanes* about every thing, who gives answers to all.

d Lib. 14.

e Laert. in
Timone.

Xenophanes sung his own works. It is farther said, that he asserted doctrines contrary to *Thales* and *Pythagoras*, and somewhat against *Epimenides*. He flourish'd in the 60th Olympiad. *Demetrius Phalereus*, and *Panætius the Stoick* relate, that like *Anaxagoras* he buried his Sons with his own hands. He lived to a great age, for he saith of himself,

*Sixty seven years in Greece I now have told;
And when I came was twenty five years old.*

f De die nat.
cap. 15.

Lucian therefore reckons amiss, affirming he liv'd ninety one years; for this account of sixty seven and twenty five amounts to ninety two. (f) *Censorinus* saith, he lived above a hundred years.

g Laert.

(g) *Empedocles* saying to him, that he could not find a wife man; That may very well be, saith he, for you are not capable to know a wife man.

He was redeemed by *Parmeniscus* and *Orestades*, *Pythagoreans*, as *Phavorinus* relates.

There was another *Xenophanes* of *Lesbus*, an *Iambick-Poet*.

CHAP. II.

His Opinions.

Xenophanes, (b) as *Sotion* affirms, held all things to be incomprehensible, and (i) reproved the arrogance of those persons, who not capable of knowing any thing, durst say, they knew; Nevertheless he did maintain many dogmatical assertions; affirming,

(k) Not all at first the Gods to men reveal'd, But by long search they find out things conceal'd.

Whence it is, that *Timon* the Sceptick calls him *καυσιος*, not wholly free from pride, or dogmatical self-conceit.

He held, that God is one, and incorporeal, eternal, (l) in substance and figure round, no way resembling man; that he is all sight, and all hearing, but breathes not; that he is all things, the mind and wisdom, not generate, but eternal, impassible, immutable, and rational,

(m) Greatest of Gods and men, one God we find, Like mortals not in body, not in mind.

Moreover, (n) he reproved and confuted the fabulous narrations of *Homer* and *Hesiod* concerning the Gods; and (o) the descriptions which the Grecians made of them, as that they are of human form, and subject to humane affections; every one fancying them after their own likeness, the *Æthiopians* black and flat-nos'd, the *Thracians* ruddy and grey-ey'd; and so for their minds or dispositions, the *Barbarians* believed them fierce and cruel, the *Grecians* more mild, yet obnoxious to passions.

Men think the Gods like them begotten were,
And that like them their form, shape, garments are.

(p) That this (God, or) One, is all things; the Universe consists of this eternal One. (q) Whatsoever is, is eternal; for it is impossible that something should be made of nothing. The World is eternal without beginning or end, [as being ingenerate, for] (r) he first asserted, that whatsoever is generated, is corruptible.

(s) That there are infinite Worlds, and these immutable.

(t) That there are four Elements.

(u) That the Stars are made of certain Clouds set on fire, which are extinguish'd every day, and kindled again at night: for the rising and setting of the Stars is nothing else, but their enkindling and extinguishing. (x) As for those lights which appear about ships, (commonly termed *Castor* and *Pollux*) these are little Clouds set on fire, and shining by reason of some motion; and that all Comets, Falling-stars, and the like, are Clouds kindled by motion.

(y) That the Sun consists of a collection of little fires made by a humid exhalation, or that it is a (z) fiery Cloud. (a) That the Eclipse of the Sun is caused by extinction, and that there riseth a new Sun in the East. He further avers, that the Sun hath been Eclipsed for a whole Month together.

(b) That

(*b*) That the Moon is a close compacted Cloud; Cicero (*c*) saith, he held that the is habitable, containing many Cities and Mountains.

(*d*) That the Sun is requisite for the generation of the World and living Creatures, but the Moon of no use thereunto.

(*e*) That there are many Suns and many Moons, according to the several Climates and Zones of the Earth; and that when the Sun goeth sometimes to some part of the Earth unknown to us, he seemeth to be eclipsed; That the Sun goeth forward to infinite, but to us

seemeth to move circularly by reason of the great distance.

(*f*) That the Clouds are a vapour drawn up by the Sun to the Heavens.

(*g*) That the Earth was first founded and rooted as it were in an infinite depth.

(*h*) That the Soul is a Spirit, and that there are many things beneath the mind.

(*i*) Cicero saith, that he was the only Philosopher that believed there were Gods, and yet denied Divination; but (*k*) Plutarch joyns Epicurus with him in this Assertion.

PARMENIDES.

CHAP. I.

His Life.

Parmenides (*a*) was of Elea, son of Pyrethrus; he heard Xenophanes: Theophrastus, in his Epitome, saith, that he heard Anaximander. But tho' he heard Xenophanes, yet he did not follow him. He conversed also with Aminias, and with Dioclates the Pythagorean, (as Sotion saith) a Person indigent, but good and honest, whom he chiefly follow'd, and when he died, built a Temple to him as to an Hero. Parmenides being of a noble family, and rich, he was reduced to privacy of life by Aminias, not by Xenophanes.

He flourished in the 69th Olympiad.

(*b*) Athenæus therefore, not without reason, blames Plato for supposing him contemporary with Socrates.

He is also said to have given Laws to his Countrymen, as Spusippus saith in his Book of Philosophers.

He wrote Philosophy in verse, as did also Hesiod, Xenophanes, and Empedocles.

But Callimachus saith, that he wrote not any Poem.

There was another Parmenides, an Orator, who wrote concerning that Art.

CHAP. II.

His Opinions.

HE (*c*) asserted, that Philosophy is twofold, one according to Truth, the other according to Opinion; wherefore he some where saith,

— All things I would that thou enquire,
As well the heart that doth sweet truth pursue,
As mens opinions, whose beliefs are untrue.

That Reason is the Criterie, and that the Senses are not certain; whence he saith,

Trust not thy self into the various way,
Nor thy rash eye, or ear, or tongue obey;
But poise with reason every Argument.

That (*d*) the Principle of all things is one, and that it is immovable; that One is all, that One is infinite; whatsoever is besides One, is nothing; and consequently nothing; but One is One, therefore, whatsoever is besides One, is nothing; therefore all is One.

(*e*) That hot and cold are the Principles or Elements of things; these he called Fire and Earth; one hath the office of Maker, the other of Matter.

That no things are generated and corrupted, but only seem so to us.

(*f*) That the Moon is of equal brightness with the Sun, yet borroweth her light from him.

(*g*) That the Galaxie is a mixture of dense and rare.

(*h*) He first asserted, that the Earth is round, and seated in the midst; and (*i*) first set out and limited the habitable parts of the Earth, betwixt the cold Zones and the Tropicks.

(*k*) That the Earth is every way equidistant, and evenly poised; so that there is no reason she should incline more to one side than to another; yet is she shaken, but not removed.

(*l*) That men were generated of (*m*) slime, and consist of hot and cold, whereof all things are compounded.

That (contrary to Empedocles) men were first produced in the Northern parts of the World, those being most dense; the first woman in the Southern, those being most rare. That (*o*) Males now are generated on the right side of the Mother; Females, on the left. (*p*) That the Hegemonick is seated in the breast.

(*q*) Phavorinus ascribes to his Invention the Observation, That Vesper and Lucifer are the same Star; others attribute this to Pythagoras.

Phavorinus also saith, (*r*) he used the argument called Achilles, by others ascribed to Zeno.

C H A P. III.

Of *Idea's*.

BUT the Assertion for which he became most eminent, was that of *Ideas*, delivered by Plato in a Dialogue, which he entit'led *Parmenides*, or of *Idea's*; the sum whereof is this:

All is One, and Many; One the *Archetype*, *Idea*; Many the Singulars.

There are *Idea's*, that is, certain common Natures, which include all Singulars, and are the Causes of them, from which they have both their Essence and Name. These are *εἰδή Species*, the Many exist, as they participate of One, in these *Species*.

The *Species* so include all Singulars, as that they may combine them, and difference them; for there is a twofold power of specifick Differences, Compositive and Discretive.

The visible things shew the power of this One; all Singulars are reduced to a One, that is, to their respective Communities; and so particular things can neither subsist nor be apprehended, but in this community of *Species*; therefore the *Species* is one thing, the *Individua* contained in the *Species*, another.

These *Idea's* subsist two ways; in our Minds, as Notions; in Nature, as Causes. In our Minds they exist, as they are variously-comprehended by us, according to divers manifold respects. In Nature they exist, as they are *Idæal* forms, and have the power both of existence and denomination. All Beings are reduced to this unity of *Idea*. Thus are they insensible visible things, and the kinds of them are Similitude, Dissimilitude, Unity, Multitude, Rest, Motion, &c. Things visible are, or are denominated Like, inasmuch as they participate of Similitude, which is the *Idea* of things Like; Great or Little, inasmuch as they participate of the *Idea* of Greatness or Littleness, &c. The like of Man himself. for many Individual Men are such by participation of the *Idea* of Man, (as if we should say Homineity) which hath a permanent Subsistence, whereas particular Men are in perpetual Fluxion and Mutation.

The same power of the one in *Idea's*, is also in things comprehended by discourse: they likewise have a Form subsistent by and of it self; so that to know the nature of Intelligibles, they must be recalled to the unite of *Idea*. For instance; if we would understand the nature of Good things, we must proceed in such manner as that we may arrive at the *Idea* of Good, which is the very Form of Good, whence all things that participate thereof, are, and are called Good. So that there are two distinct things, the Form of things, which subsists of it self, and the Things themselves, sensible or intelligible.

Idea is twofold, *αὐτὸ τὸ καλὸν ὃ ἐστὶ καὶ τὸ ἀγαθόν*, the fair, which is also the good, and all the things which we understand as being *Idea's*; The first is God, the second the *Species* of things in the order of Nature.

As concerning the second *Idea's*, there is a One, that is the foundation of all Singulars; out of which, as from a Thread, the whole Web (as it were) of *Individuum's* is woven.

One and the same *Species* in many Individuals, which exist separately, is wholly together One, and not separate from it self, but whole in it self.

The Many (that is, Singulars) so participate of their *Idea's*, in such manner as that the *Idea's* are not divisible, but preserve their own Essence in themselves, over and above all the Singulars; that is, they have their Essence in themselves, and not in reference to us.

Idea's are notions of the Mind, and subsist in our Mind; yet so, as that primarily, and of themselves, they exist in Nature. So as these Notions subsist no otherwise in our Minds, than as they resemble those eternal Forms of Nature, that is, not as real Beings, but as Similitudes and Images of Beings. So that from these *Idea's*, which subsist of themselves, as a communication is derived to the Notions that are in our Mind; for otherwise, if the *Idea's* themselves, or the whole *Species*, were in our Minds, Notions would not be Notions, and *Ens, non Ens*, forasmuch as the things themselves are variously perceived by several Men.

Besides, there would follow a great confusion and disorder in the things themselves, if there were continually produced new Forms of things at Man's pleasure; which must needs be, if the Mind of Man could form them, and that whatsoever a Man imagined in his Mind, became immediately a *Species*.

Again, by this means, the most excellent Science of all things, that is in God, would be denied to be in Him, whose Mind is the Original of all things; so as it were a great absurdity to attribute to Man, a Mind procreative of *Species*, and to deny it to God, who governs all things.

Therefore *Species* have not their dependance on the Mind of Man; on the contrary, they are unknown to human Nature, or Mankind. The *Genus* and Essence of every thing is of it self, not existing in the Singulars, but the support and foundation of the Singulars.

Moreover, if there were not certain *Species* of things, there would be a great confusion in all Sciences, they being of Universals; for no Man comprehends in his Mind all Individuals; it were infinite and full of disorder to take that course; so that all Philosophy and dissertation would lose the truth and certain knowledge of things: whereas, on the contrary, in all Science, the true course of Learning is to reduce Particulars to their proper *Species*, whence may appear their Nature and Qualities.

Of the Primary Archetypal *Idea*, the Essential Properties; and they are these.

First, It is not Many, (that is, it is not intermingled with generated Beings, of which it is the Original;) for it is void of Parts and Figure, being infinite.

Secondly, It is void of all Motions and Mutation, remaining always immovable and the same.

Thirdly, It is void of all Age and Time, being eternal, neither elder nor younger, nor any way partaking of Time, subject to no circumstances of Time, all things being always present to it.

Fourthly, It partakes not of that Essence by which Singulars are said to be, but communicates the power and faculty of Being to all Singulars, itself

itself being beyond all Essence. Essence is distributed amongst the many of Beings, and is not wanting in any Being whatsoever, neither least nor greatest.

Fifthly, The first *Idea* is so diffused into all things whereto it gives the power and faculty of Being, as that it circumscribes and limits the multiplicity, and almost infinity of Singulars, within the bounds of the *One*: So that the *One*, which of it self is infinite and void of parts, is as it were terminated in Singulars.

Of the secondary *Idæa's* (which are natural Causes, the Works of the primary *Idæa*) the Properties are these.

First, They, as well as the primary *Idæa*, are *One*; for all Singulars comprised within them are determinately reduced to their respective Classes; but in this they differ from the primary *Idæa*, that the *One* in secondary *Idæa's* is truly Finite, having beginning, middle and end.

Secondly, They consist entire in the Singulars, not as deriving their Essence from them, for they exist in the divine mind; yet they are conspicuous in Singulars, as if you would know what is Homeneity, or the *Species* of Man, you must look upon the Singulars of Men, in which the *Species* it self is visible. The secondary *Idæa's* in sensible things are ἐξουσιονόμους, figurate.

Thirdly, The secondary *Idæa's* are the same and another; the same, in Themselves; another, in the Singulars; and consequently both rest and move: Whereas the primary *Idæa* is void of all mutation, amidst the vicissitudes of transient things.

In the order of nature, the *One* in the *Species* is of it self, and derives not its Essence from Singulars, but is self-subsistent, as being a *Species*; by whose power all the Many (i.e. Singulars) subsist.

Fourthly, The others (i.e. Singulars) proceed from the *One*; but the *One*, which is seen in the Others, hath its Essence from a third; that is, Individuals exist by those secondary *Idæa's*, yet so as that the secondary *Idæa's* have from the primary *Idæa* their Essence, and the power by which they give to Singulars a Subsistence.

Fifthly, the secondary *Idæa's* act from contrary Principles, yet so as that those contraries are connected in one rye of similitudes, whence a third thing reflects. To the production of natural things three things concur, two *ἄψεις*, and the third that ties them together; *ἄψεις* are Beings mutually touching one another (that is, the natural things themselves.) The third is the Analogy betwixt the other two, the similitude of their proportions. There can be no *ἄψεις* without two things at the least; nor can they produce any thing without the third, Combination. The *ἄψεις* must be dissimilar, that one and equal may be introduced.

Sixthly, The secondary *Idæa's* are not without time, but what they do, they do in time; whereas (as we said) to the primary *Idæa* all things are present. Natural things exist and perish according to time, but their *Species* or *Idæa's* are constant and permanent.

MELISSUS.

CHAP. I.

His Life.

Laert.

Melissus was a Samian, Son of Ithagenes, he heard Parmenides, and conversed also with Heraclitus, at what time the Ephesians had such a misapprehension of him, as the Abderites had of Democritus. He was a Person conversant in Civil Affairs, and much honoured by his Countrymen, who made him their Admiral, and particularly admired him for his virtue. He flourish'd, according to Apollodorus, about the 84th Olympiad.

His Opinions.

Phys. 1. 1,
2, 3.

HE asserted (as Parmenides) That (a) the Principle of things is *One*, which is immovable; That this *One* is All; That *Ens* is Infinite; arguing thus, That which is made,

hath a Principle, therefore that which is not made hath no Principle: But the Universe, or that which is, is not made, therefore it hath no Principle, and therefore no End; Therefore it is Infinite, therefore *One*, for there cannot be more Infinites; therefore immovable, for it occupies all things, and hath not any thing whereby it may be moved.

(b) That the Universe is infinite and immutable, and immovable, and one like it self, and full. (c) He proved that it is immovable thus; because, if it were moved, there must necessarily be a Vacuum, but there is not a Vacuum amongst Beings.

(d) That there is not Motion, but that it only seems to be; And (e) that things are not generated and corrupted, but only seem so to us.

(f) As for the Gods, he said, That we ought not to assert any thing concerning them, forasmuch as we have not any knowledge of them.

His Life.

^a Laert.
^b The
Text
seems to
require to
be thus
supplied.

(^a) **Z**eno was of Elea; Apollodorus saith, he was Son of Pyrethrus; (^b) but Pyrethrus indeed was father to Parmenides. Zeno was by nature Son of Teloutagoras; by adoption, Son of Parmenides, whom he heard and was much beloved of him. Plato saith, he was tall, and calls him the Eleatick Palamedes. He was a Person excellent, as well for Philosophy as Politicks; his Writings being full of much Learning.

^c Lib. 3.
^c 3.

(^c) Valerius Maximus saith, he forsook his own Country, where he could not enjoy security and freedom, and went to Agrigentum, which at that time was oppressed with miserable servitude, out of a confidence, that by his own wit and courage, he might deliver the People there from the savage tyranny of the Tyrant Phalaris; and perceiving, that he was carried on more by a customary way of rule, than sound Counsel, he excited in the young men of the City, a desire to free their Country: which being discovered to the Tyrant, he called the People together into the Forum, and began to torture him several ways, demanding of him, Who were privy to the conspiracy, besides himself? Zeno would not disclose them, but names one that was most in favour with the Tyrant, and reproving the Agrigentines for their cowardice and timidity, raised such a sudden courage in them, that they immediately fell upon the Tyrant, and stoned him to death. Thus not a suppliant Prayer, nor pitiful Crying out, but the valiant Exhortation of an old Man, stretch'd upon the Rack, chang'd the minds and fortune of the whole City.

^d Laert.

But others relate this after a different manner. (^d) Satyrus in his Epitome of Heraclides, saith, that conspiring against Nearchus, or, as others, Diomedon, a Tyrant, he was taken, and being question'd concerning the Conspirators, and the Arms he had convey'd into Lipara, he named all such as were friends to the Tyrant, as privy to the Plot, that thereby he might leave him destitute of Assistants; and further, telling him that he had something to speak in his ear, he bit him by the ear, and would not let go his hold, till they run him thorough, suffering in the same manner as Aristogiton, who slew Hipparchus the Tyrant of Athens. Demetrius affirms, he bit off his Nose; Antisthenes relates, that having named all the Tyrant's Friends, and being demanded by him, Whether there were any more? answered, Yes, Thou, that art the destruction of the City. And then turning to the standers by, said, I wonder at your Cowardice, that you can endure to be slaves to a

Tyrant, only through fear of suffering what I now suffer; which said, he bit off his Tongue, and spit it in the Tyrant's Face: whereupon the Citizens unanimously fell upon the Tyrant and stoned him. These relate the story after this manner; but Hermippus saith, he was bray'd to death in a stone-Mortar.

Besides his other Virtues, he had a magnanimous contempt of great Persons, as well as Heraclides, and therefore preferred his own Country Elea, first named Hyela, a Colony of the Phoceans, a little Town, only for that it brought forth honest Men, before the pride and glory of the Athenians, never travelling thither, but living for the most part at home.

It is reported of him, that being reviled, he appeared much troubled at it, answering one that reproved him for it, If I should be pleased with reproaches, I could not delight in praises.

He flourished in the 79th Olympiad.

C H A P. II.

His Invention of a Dialectick.

Aristotle (cited by Laertius, and (^a) Sextus Empiricus) affirms, that Zeno Eleates was the Inventer of Dialectick, as Parmenides of Rhetorick; which (^b) Galen likewise confirms, saying, Zeno is remembered as Author of the Eleatick Philosophy. But the names of Eleatick or Dialectick seem to have been later; for, as (^c) Laertius describes the succession of it, Euclid [who was of Megara] learning the Parmenidean Philosophy, his Disciples were called Megaricks, afterwards Eleaticks, lastly Dialecticks; which name Dionysius the Carthaginian first gave them, for that they made dissertations by way of Question and Answer; that by the Parmenidean Philosophy, he means no other than Dialectick, may be evinc'd from Sextus Empiricus, who alledgeth, that Parmenides seemeth not to have been ignorant of Dialecticks, for that, as Aristotle conceives, Zeno, his Disciple, invented it. Hence perhaps may Cicero be explain'd, who, for this reason seems to include the Eleatick Philosophers, under the title of (^d) Megaricks, who had, saith he, a noble Discipline, of which as I find it written, the Prince (or Author) was Xenophanes lately mentioned. Then did Parmenides and Zeno follow him; so they were named Eleatick Philosophers, from these. Afterwards Euclid, Disciple of Socrates, a Megarian, from whom the same were called Megaricks; who held, That only to be good, which is one and the same, and like, and always. These also borrowed much from Plato, being called, from Menedemus, Eretricks, for that he was an Eretrian. Thus Cicero.

CHAP. III.

His Opinions.

HE held, (a) That it is impossible, that if there be any thing, it can be generated, or made; asserting this of God: For it is necessary, that whatsoever is generated, is generated either of things like, or of things unlike; but neither of these is possible: For a thing like may as well generate its like, as be generated of it, forasmuch as amongst things aqual and alike, all things are in a like respect to one another. But neither can an unlike be generated of a like; for whether a stronger be made of a weaker, or a greater of a lesser, or a worse of a better; or on the contrary, the better be made of the worse, of a *non Ens* will be made something, which can no way be. For this Reason, He asserted God to be Eternal: And if God be that which is the most excellent of all things, it is requisite, saith he, That he be *One*; for if there were two or more, he could by no means be the most excellent of all, forasmuch as every God of them, being like him, would be such as he. Now God, and the power of God is such, as that it governs, but is not governed; it governs all things, so that if there were any thing better than he, he could not be God. If therefore there were many, and of these some were better, others worse, they could not be Gods, for God cannot be inferior, or subjected, or governed. Neither if they were equal, could God be more excellent than all things else; for what is equal must neither be better nor worse than that to which it is equal; therefore if there be a God, and He be such, this God must be *Onely One*; otherwise he could not do all things that he would; because, if there were more, the one could not be of absolute power. Now God being one, he further affirms, That he is every way like himself, as to seeing, and hearing, and all other senses; for otherwise, the parts of God would not be most excellent, but exceeded by one another, which is impossible. Now being every way alike, he must be round, for he must not be partly of one fashion, partly of another. Thus being eternal, and one, and round, he is neither finite

nor infinite; infinite he is not, for that hath neither middle, nor beginning, nor end, nor any other part, but an *Ens* cannot be such as is a *non Ens*. If there were many, they would bound one another; but *One* is neither like to a *non Ens*, nor to many, for *One* hath nothing whereby it may be bounded. Moreover, God being such an *One*, is neither moved nor immovable, for that which is immovable is *non Ens*. Neither can any thing pass into it, nor it into another. Again, the Things which are moved are more than one; for a Thing must be moved into another; now if that which is not, is not moved, forasmuch as that which is not, is nowhere; and those things which are moved, must be more than one; hence he affirmeth, That those which are moved are two, or more than one; and that *non Ens* rests, for it is immovable, but *One* neither rests nor moveth, forasmuch as it is neither *non Ens*, nor many. Thus he asserted, That God is Eternal, and One, and Like, and Round; neither Infinite, nor Finite; neither Quiescent, nor Movable.

(b) Moreover he asserted, That there are many Worlds; that there is no *Vacuum*; That the Nature of all things consists of Hot and Moist, and Cold and Dry, mutually interchanged; That Man was made of Earth, and his Soul contempered of those Four, neither of them being predominant.

(c) Against Place he argued thus; If every *Ens* be in a Place, there must be a Place of that Place, and so to Infinite. c Arist. Phys. 6.

Against Motion, he alledged four Arguments: The first, that Nothing is moved; for whatsoever makes a Progression, must come to the Middle, before it comes to the End. The second is that which is termed *Achilles*, that a slow Thing will never be overtaken by a swift; for the thing which followeth must necessarily come to the place from which that which went before departed, therefore that which went before makes a continual Progression as well as the other. The third, if every thing rests when it is in its just place, and, in every moment, every thing is in its just place, an Arrow flying is immovable. The fourth, that if Things were moved, as for Example, if equal Bulks were moved, one from the Beginning of the Race, another from the Middle, alike swiftly, it would come to pass, that the Half of Time would be equal to the Whole.

LEUCIPPUS.

Laert.

Leuippus was of Elea, or, as some say, an Abderite, or, as others, a Melian: He heard Zeno.

His Assertions are thus delivered by *Laertius*; That all things are Infinite, and transmuted into one another; That the Universe is *Vacuum* and Full, (that is, little Bodies, or Atoms.) That the Worlds are made by the falling of these Bodies into the *Vacuum*, and intangling with one another, from which Motion, by Coagumentation of them, the Stars were made. That the Sun is moved in a greater Circle about the Moon. That the Earth is moved about the Centre, and is in figure like a Drum. He first asserted Atoms to be the Principles of all things. This is the Sum of his Doctrine, the Particulars these.

He held, that the Universe, as we said, is Infinite; one part of it is Full, the other Vacuous; these are the Elements of which infinite Worlds are made, and resolve into them. The Worlds were generated after this manner: Out of the Infinite there were carried, by a kind of Abscission (from the rest) into a great *Vacuum* many Bodies of all sorts of Figures, which being crouded up together, caused a Circumgyration; by which means hitting against one another, and rolling about all manner of ways, those which were alike, separated themselves from the rest, and joined with their equal like; but being of equal weight, and not able, by reason of their multitude, to move round; those of them which were rare, leaped forth to the exterior *Vacuum*, the rest stayed together, and entangled them-

selves by running one within another, and made a first Compound round. This was like a kind of Membrane or skin containing all kinds of Bodies, which Bodies moving round about the middle, the Membrane that enclosed them became more thin, there flowing together continually more Bodies unto those in the middle, and engaging themselves in their motion. By this means was the Earth made, those which went to the middle being settled together. Moreover, the outer Circumference or Membrane, as it were, was continually increased by the accession of new Bodies from without, and, as it turned about, got hold of all that came at it. Some of these, entangling with one another, first made a Humid, and, as it were, a dirty kind of Mass; but being dried in their motion together with the whole, and afterwards enkindled, the Stars were made of them. The outmost is the Orb of the Sun, that of the Moon is next the Earth, the rest are betwixt these; the Stars are kindled or set on fire by the swiftness of their motion, the Sun by the Stars, the Moon borrows a little fire from the Sun. The Sun and Moon happen to be eclipsed, by reason that the Earth inclines towards the South; the Northern Parts are continually oppress'd with Snow and Frost; the Sun is seldom eclipsed, the Moon continually, because their Orbs are not equal. In the same manner as the World was made, it increased, will diminish, and perish, by a certain kind of necessity. Hitherto *Laertius*. What is more to be said of his Opinions, we shall insert amongst those of *Democritus*, who borrowed most of them

DEMOCRITUS.

THE
HISTORY of PHILOSOPHY.

DEMOCRITVS.

CHAP. I.

His Country, Parents, Brethren, Time.

^a Laert. ^b Laert. **D**emocritus (*a*) is by some supposed to have been a *Milesian*; but the more general Opinion is, that (*b*) he was of *Abdera* a Town of *Thrace*, noted for the (*c*) simplicity of the Inhabitants, which grew even to a Proverb. He was of a Noble Family (*d*), being descended from the Brother

Cap. 21.

Brother of Hercules. His Father is by (a) some called *Hegesistratus*; by others *Athenocritus*; by others (b) *Damasippus*. *Democritus* was the youngest of three Sons; the other two, (c) *Herodotus* and *Damasus*, or (as (d) *Suidas*) *Damastees*.

(e) *Democritus* was born (according to *Apollodorus* in his *Chronology*) in the 80th. Olympiad; which is confirmed by what (f) he saith of himself in his little *Diascosmus*, that he was young when *Anaxagoras* was old, being forty Years younger than he. *Anaxagoras* was born in the first year of the 70th. Olympiad; the 40th. year after it, exclusively, falleth upon the first of the 80th. Olympiad, *Thrasylus* therefore is not to be followed, (g) who affirms, he was born in the third year of the 77th. Olympiad, being a year elder than *Socrates*.

(b) *Pliny* and (i) *Agellius* affirm he flourished chiefly in the time of the Peloponnesian War; *Pliny* saith, after the building of Rome 300 years; *Agellius*, 323 years; by which it appears that he was contemporary, as *Agellius* adds, with *Socrates*, and perhaps (as *Laertius*) with *Achelaus* the Disciple of *Socrates*, and with *Oenipodes*, for he mentions him, as likewise the opinion of *Zeno* and *Parmenides* concerning One, as Persons most eminent in his time, and *Protagoras* the Abderite, whom all acknowledge (saith he) to have been in the time of *Socrates*. That he is said to have written his little *Diascosmus* 730 years after the taking of *Troy*, agrees with this account. For, according to *Eratosthenes*, from the taking of *Troy* to the first Olympiad are 407 years, to which add 323. years (to make up 730.) and it falls upon the 84th. Olympiad.

CHAP. II.

His first Education and Masters.

k Lib.

l Lib. 8.

m Laert.

n Laert.
o Laert.

Democritus, (saith (k) *Valerius Maximus*) may well be reckoned amongst the rich, for his Father was able to entertain the Army of *Xerxes*. *Laertius* adds, from the testimony of *Herodotus*, that the King in requital left with him some Magi and Chaldeans, referring perhaps to (l) that Text of *Herodotus*, where he relates, that *Xerxes*, in his return to Asia, came to Abdera, and was entertained by the Abderites, and bestowed on them a golden Simeter, and the Tiara imbroidered with Gold; and, as the People there affirm, this was the first place where he untied his zone, since he fled from Athens (which I believe not) so great was his fear. Abdera is nearer to the Hellespont than the Bay of Strymon, so that he took Shipping from hence. Thus *Herodotus*. From these Magi and Chaldeans, *Democritus* first received Learning, (m) of whom, whilst yet a Boy, he learnt Theology and Astronomy.

(n) He next applied himself to *Leucippus*. (o) Some affirm, he was Disciple also to *Anaxagoras*; but *Phavorinus*, in his various History, relates, that *Democritus* said of *Anaxagoras*, that those opinions which he delivered concerning the Sun and Moon, were not his, but more Ancient, and that he stole them. He likewise undervalued his Assertions concerning the Fabrick of the Universe, and the Mind; How then (saith *Phavorinus*) was he, as some hold, his Disciple?

No less doubted is the report of his going to Athens, where (p) *Valerius Maximus* saith, he dwelt many years, making use of every moment of time, towards the perception and exercise of Learning. He lived unknown in that City, as he himself attests in one of his Books. *Laertius* adds, he kept himself undiscov'ed, out of a contempt of Glory; and knew *Socrates*, but was not known to him; whereupon he said of himself, "I went to Athens, and no man knew me. If the *Revels* (saith *Thrasylus*) be a genuine Dialogue of *Plato*, this is the Anonymous Person there, who, besides the two who were busted concerning *Oenipodes* and *Anaxagoras*, discourseth concerning Philosophy with *Socrates*, (q) to whom he said that a Philosopher resembles a Pentatylus, (a Person skilful in five exercises) and indeed he was, (continues *Thrasylus*) a Pentatylus in Philosophy, for he was skilful in Physick, Ethick, Mathematick, the liberal Sciences, and all Arts. But *Demetrius Phalereus*, in his *Apology* for *Socrates*, saith, he never went to Athens; and this (saith *Laertius*) is far greater, that he could despise so eminent a City, desiring rather to give honour to a place, than to receive it from a place.

More certain it is, that he heard some Pythagorean Philosopher. (r) *Thrasylus* affirms, that he mixed the Pythagoreans, and mention'd even *Pythagoras* himself, admiring him in a Treatise bearing his Name. He seems to have taken all from him, and might be thought to have heard him, but that the times agree not. But *Glaucus* of Rhegium, who lived at the same time, affirms, he heard one of the Pythagoreans. *Apollodorus* of Cyzicus conceives him to have been contemporary with *Philolaus*. (s) *Duris*, that he heard *Arimnastus*, Son of *Pythagoras*.

So studious was he even from his youth, that (t) *Demetrius* affirms, "he retir'd to a little Summer-house belonging to the Orchard, and shut himself up; and on a time his Father bringing thither an Ox to be sacrific'd, and tying it there, he knew nothing of it a good while, until his Father rou'd him up, and told him the Business concerning the Ox."

CHAP. III.

His Travels.

His Father dying, the three Brothers divided the Estate. (u) *Democritus*, the youngest, made choice of that part which consisted in Money, as being, though the least share, yet the most convenient for Travel. And notwithstanding it was the least, yet were they jealous of him, as if he had an intention to defraud them. *Demetrius* affirms, his Portion amounted to an hundred Talents, and that he spent it all, not gave it (as *Valerius Maximus* relates) to his Country. Hence is it that *Cicero* saith, he neglected his Patrimony, left his Father's untill'd, seeking nothing else but a happy Life.

(x) *Laertius* (citing *Demetrius*, and *Antisthenes*) relates, that he travelled to Egypt to the Priests, to learn Geometry, to Persia to the Chaldeans, and went to the Red-Sea; some affirm, he conversed with the Gymnosophists in India, and travell'd to Ethiopia, and (y) learnt the several Wisdoms of each of these Nations: (z) With the Egyptians he lived (as he himself affirms) 80 years.

For these things (saith (a) *Ælian*) *Theophrastus* commends him, because by his Travels he collected better things than either *Menelaus* or *Achilles*; for they went up and down no otherwise than like *Phœnician Merchants*; they gathered money, and that was the occasion of their Travels by Sea and Land. Not without reason therefore was it, that he said of himself, (b) Of any Man in my time, I have been the greatest Traveller, and made the furthest Enquiries, and seen most variety of Air and Earth, and heard the most Learned Persons; and in making Demonstrations by Lines, none yet have gone beyond me, no not those *Ægyptians*, who are called *Arpedonaptæ*.

CHAP. IV.

How he lived at Abder, after his return from Travel, and governed there.

Laertius saith, that at his return from Travel he was in a very mean condition, having spent all his Estate; whereupon his Brother *Damasus* (in regard of his indigence) received him kindly, and maintain'd him. But after that he had foretold some things, which fell out accordingly, people from thenceforward, honour'd him as a God: moreover, there being a Law, that whosoever had consumed his patrimony, should not be allow'd burial in his own Country: *Antisthenes* relates, that to prevent being liable to some envious Persons and Sycophants, he read to the people his Book entituled the great *Diacosmus*, which was the most excellent of all his Writings, and for it was rewarded with 500. Talents; and not only so, but with brazen Statues also. Hitherto *Laertius*.

Of these Predictions, (a) *Pliny* gives two instances. It is reported, saith he, that *Democritus*, who first understood and demonstrated the correspondence betwixt Heaven and Earth, the most wealthy of the Citizens despising this his pains, foreseeing a future dearth of Olives, from the future rising of *Pleiades*, (after the same manner as we have mentioned, and shall declare more fully hereafter) with extraordinary profit, by reason of the expectation of Olives, bought up all the Olives in that Country, to the admiration of all those, who knew he chiefly affected Poverty, and the quiet of Learning. But as soon as the reason appeared, together with the great gain of money, he restor'd the Bargain to the anxious and greedy repentance of the Owners, contenting himself to have thus proved, that he could easily be Rich, whensoever he pleased.

The other is this: (b) His Brother *Damasus* being employ'd about Reaping in an extraordinary hot day, he desired him to let the rest of the Corn alone, and to Cock that which was already Reaped as fast as he could: within few hours, a terrible Tempest ratifi'd his Prediction. (c) *Clemens* adds, that he foretold it by some Stars; and that they, giving credit to him, cock'd their Crop, for, it being Summer, (d) it was not yet Ined in the Barn; but the rest lost theirs by the great and unexpected Rain. (e) By these (and the like) Predictions, he gained so great esteem amongst the People, that from thenceforward they honoured him as a God; *Clemens* saith, they called him *σοφία*, Wisdom; *Ælian*, Philosophy; as *Protagoras* was termed *Λόγος*, Discourse. (f) So much indeed was he reverence'd

for his extraordinary Wisdom, that they conferred the Supreme Government of *Abdera* upon him.

CHAP. V.

His Retirement.

BUT being naturally more inclined to contemplation, than delighted with publick honours and employments, he withdrew himself from them, and (a) "endeavoured, as *Antisthenes* a *Laert.* relates, to make several Tryals of Phantasies (meaning the impressions of things appearing to the Phantasy, not the Phantasy it self) "often "living alone, and in Sepulchres. (b) *Lucian* b *Lucian* adds, "that shutting himself up in a Tomb with- "out the Gates of the City, he continued there "writing and composing Night and Day: And "that some young Men intending to deride and "fright him, attired themselves like Ghosts, in "black Garments, with Vizards like Deaths- "heads, and came about him dancing and skip- "ping, whereat he was nothing moved, nor "would so much as look on them, but continu- "ed to write; Leave fooling, saith he; So firm- "ly, did he believe, that Souls are nothing after "they are out of the Bodies.

Such places he made choice of, as were most conducing to contemplation, by reason of their Solitude and Darkness. And (c) *Agellius* reports, c *Lib.* "out of the Monuments of the Greek History "now not extant, that for the same reason he "put out his own Eyes, because he conceived "the cogitations and meditations of his Mind, "in contemplating the reasons of Nature, would "be more vigorous and exact, if free from the "allurements of Sight, and impediments of the "Eyes: which act, together with the manner "whereby he easily procured Blindness, by a most "subtle ingeniousness, *Laberius* described; feign- "ing another cause of his voluntary Blindness, "converting it to his own purpose.

Democritus, the *Abderite*, well skill'd
In natural Philosophy, a Shield
Plac'd to *Hyperion's* rising opposite, (sight;
And with the Sun's beams thus put out his
That bad and impious Men he might not see,
Triumphant in their full prosperity.

The former Reason given by *Agellius* (that he might study Philosophy the better) is alledg'd also by (d) *Cicero*, *Plutarch*, and others. d *Tust.* "For though, saith *Cicero*, having lost his Eyes "he could not discern Black and White, yet could "he Good and Ill, Just and Unjust, Honest and "Dishonest, Profitable and Unprofitable, Great "and Little; he might live happy without the "variety of Colours, but he could not without "the knowledge of things. Thus he concei- "ved, that the acuteness of the mind was ob- "structed by the sight of the Eyes. (e) *Ter-* e *Apolog.* tullian alledgeth another Reason, because he could adv. gent. "not lock on Women without inordinate desires. But *Cicero* (f) elsewhere speaks doubtfully concern- f *De finib.* ing the truth of the thing it self; and not with- 5. out reason, since the contrary appears manifest by this following Narration.

CHAP.

CHAP. VI.

*His Communication with Hippocrates.*a Epist.
Græc.

Democritus (a) thus neglecting all outward things, living Day and Night privately in Caves and solitary places, the *Abderites* imagined that he was melancholy even to Madness; which suspicion was confirmed by his continual Laughing upon all occasions whatsoever. Hereupon they sent *Amelesagoras*, one of the chief Persons of their City to *Hippocrates*, that most eminent Physician who lived at *Cos*, with this Epistle.

The Senate and People of Abdera to Hippocrates, Health.

Our City, *Hippocrates*, is in very great danger, together with that Person, who, we hoped, would ever have been a great Ornament to it. But now, O the Gods! it is much to be feared, that we shall only be capable of envying others, since he, through extraordinary Learning and Study, by which he gained it, is fallen sick, so as it is much to be feared, that if *Democritus* become mad, our City *Abdera* will become desolate; for, wholly forgetting himself, watching Day and Night, laughing at all things Little and Great, and esteeming them as nothing, he after this manner leadeth his whole Life. One marries a Wife; another Trades; another Pleads; another performs the Office of Magistrate; goeth on Embassy, is chosen Officer by the People, is put down, falls sick, is wounded, dies; he laughs at all these, beholding some to look discontented, others pleas'd. Moreover, he enquireth what is done in the Infernal places, and writes of them, and affirms the Air to be full of Images, and that he understands the Language of Birds, and often rising in the Night singeth to himself, and saith, That he sometimes travels into the Infinity of Things, and that there are innumerable *Democritus's* like him; thus, together with his Mind, he destroyeth his Body. These are the Things which we fear, *Hippocrates*; These are those which trouble us. Come therefore quickly, and preserve us by your Advice; And despise us not, for we are not inconsiderable; And if you restore him, you shall not fail either of Money or Fame: and though you prefer Learning before Wealth, yet accept of the latter, which shall be offered to you in great abundance.

To restore *Democritus* to health, if our City, were all of Gold, we would give it; We think our Laws, *Hippocrates*, are sick; Come then, Best of Men, and cure a most excellent Person; Thou wilt not come as a Physician, but as a Founder of all *Ionia*, to encompass us with a sacred Wall. Thou wilt cure not a Man, but a City, a languishing Senate, and prevent its Dissolution, thus becoming our Lawgiver, Judge, Magistrate, and Preserver. To this purpose we expect thee, *Hippocrates*; all these (if you come) you will be to us. It is not a single obscure City, but all *Greece*, which beseecheth thee to preserve the Body of Wisdom. Imagine that Learning Her self comes on this Embassy to Thee, begging, that Thou wilt free Her

from this danger. Wisdom certainly is nearly allied to every one, but especially to us who dwell so near Her. Know for certain, that the next Age will own it self much obliged to Thee, if thou desert not *Democritus*, for the Truth which he is capable of communicating to all. Thou art allied to *Æsculapius* by thy Family, and by thy Art; he is descended from the Brother of *Hercules*, from whom came *Abderus*, whose name, as you have heard, our City bears; wherefore even to him will the cure of *Democritus* be acceptable. Since therefore, *Hippocrates*, you see a whole People, and a most excellent Person falling into Madness, hasten we beseech you to us. It is strange, that the exuberance of Good should become a Disease; *Democritus*, by how much he excelled others in acuteness of Wisdom, is now in so much the more danger of falling mad, whilst the ordinary unlearned People of *Abdera* enjoy their Wits as formerly; and even they, who before were esteemed foolish, are now most capable to discern the indisposition of the wisest Person. Come therefore, and bring along with you *Æsculapius*, and *Epione*, the Daughter of *Hercules*, and her Children, who went in the Expedition against *Troy*; bring with you the Receipts and Remedies against Sickness; the Earth plentifully affords Fruits, Roots, Herbs, and Flowers to cure Madness, and never more happily than now, for the recovery of *Democritus*. Farewel.

Hippocrates returned this Answer.

Hippocrates to the Senate of Abdera, Health.

Your Countryman, *Amelesagoras* arrived at *Cos* the same day on which with us was Celebrated the Susception of the Rod, which, as you know, is an annual Convention, and great Solemnity amongst us, held at a Cypress Tree, which are born by those who are particularly consecrated to the God.

But finding both by the Words and Countenance of *Amelesagoras*, that your Business required much haste, I read your Letter, and much wondred to find your City no less troubled for one Man, than if the whole City were but one Man. Happy indeed are the People who know, that wise Men are their Defence; not Walls or Bulwarks, but the sound Judgments of wise Persons. I conceive, that Arts are the dispensations of the Gods; Men the works of Nature: and be not angry, ye Men of *Abdera*, if I conceive, that it is not you, but Nature her self which calls me to preserve her work, which is in danger of failing.

Wherefore, obeying that which is the invitation of Nature and of the Gods, rather than yours, I shall make haste to cure the Sickness of *Democritus*, if it be a Sickness, and not, as I hope, an Error in you. And it would be yet a greater Testimony of your Good-will, if you were troubled only upon suspicion. Neither Nature nor the Gods have promised me any thing for my coming, and therefore (Men of *Abdera*) do not you force any thing upon me, but suffer the works of a free Art to be free. They who take Rewards compel Sciences to servitude, and make them Slaves, bereaving them of

of their former freedom. Besides, it is impossible that such may dissemble, in a great disease, and deny in a little; and when they have promised, not come; and come, when they are not sent for. Miserable indeed is Human Life, for that the unsatiate desire of Wealth continually invades it, as a Winter-Wind. I wish that all Physicians would rather joyn together to cure it of this Disease, which is worse than Madness, notwithstanding it is thought happy, but indeed a pestilential Sickness. All distempers of the Mind, are, as I conceive, High-madness, for they stir up in the Reason strange Opinions and Fantasies, which Reason must be purify'd and cur'd by Virtue. As for me, if at all I made it my design to be Rich, I would not, ye men of *Abdera*, come to you for ten Talents, but would rather have gone to the great King of *Persia*, where there are vast Cities full of all kind of wealth, there I would have practis'd Physick. But I refused to cure a Nation which are Enemies to *Greece*, and, to the best of my power, have my self oppos'd the *Barbarians*. I thought it a dishonour to accept of the wealth of a King, Foe to our Country, by which means I might become a destroyer of *Greece*. To get Wealth by all means, is not to be Rich; the Rites of Virtue are sacred and just. Do you not think it an equal offence to cure our Enemies, as to take Money for the cure of our Friends? But this is not my Custom; I raise not Gain out of Sickness; nor did wish, when I heard that *Democritus* was Mad, that it might prove so indeed; if he be Well, he is a Friend; if he happen to be cured of his Sickness, more a Friend. I understand that *Democritus* is a person of firm and settled parts, the Ornament of your City.

In order to this Voyage, he sent to his Friend *Dionysius*, that he would take care of his Family in his absence; to *Damagetus*, that he would provide a Ship for him; to *Craterus*, that he would furnish him with Simples. The day before he arriv'd at *Abdera*, he dreamt that *Æsculapius* appear'd to him, and told him, that he would have no need of his assistance, but only of the direction of a woman, whom he brought along with him; and having presented her to him, departed. The Woman promised, that she would meet him on the morrow at *Democritus's* house; he asked her Name, she told him she was called *Truth*; and, pointing to another Woman that followed her, added, that her Name was *Opinion*, and that she lived with the *Abderites*. This was the Dream of *Hippocrates*. How he was received the next day at *Abdera*, he gives this account to his Friend *Damagetus*.

To *Damagetus*, Health.

It was, as I conjectur'd, *Damagetus*: *Democritus*, is not mad, but is extraordinary Wise, and hath taught us Wisdom, and by us all men. I have sent back, with many thanks, the *Æsculapian* Ship, on the Prow whereof, to the Picture of the *Sun*, may be added *Health*, for we made a quick Voyage, and arriv'd the same day that I had sent word I would be there at *Abdera*. I found all the people flocking together at the Gate, in expectation, as it should seem, of our coming;

not only the Men, but the Women, the Old, the Young; and by *Jove*, the very Children; so much were they troubled at the Madness of *Democritus*, who, at that time, was seriously employ'd in Philosophy. As soon as they saw me, they seem'd a little to be comforted, and to have some hope. *Philopœmen* offer'd to conduct me to my Lodging, as all of them likewise desired; but I told them, "Men of *Abdera*, I will do nothing till I have seen *Democritus*; which as soon as they heard, they applauded and rejoyc'd, and brought me immediately along the *Forum*; some following, others running before, crying out, Great King *Jupiter*, help, heal; I advis'd them to be of comfort, for that it being the season of the *Etesian* Winds, I was confident that there was not any Sickness that would continue long; and in saying thus, on I went. The House was not far, nor indeed the City; we went to it, it being next the Walls, whither they brought me quietly. Behind the Tower there was a high Hill, very full of tall Poplars, from whence we beheld the habitation of *Democritus*. *Democritus* himself sat under a thick, but low, Plaine-Tree, in a thick Gown, all alone, squalid, upon a seat of Stone, wan and lean, with a long Beard, at his right hand ran a little Brook down the Hill, upon the Hill there was a Temple consecrated, as it should seem, to the Muses, encompass'd round about with Vines, which grew there naturally. He sat very composedly, having a Book upon his knees, and round about him lay other Books, and the Bodies of many living Creatures dissected. Sometimes he wrote hastily, sometimes paused, seeming to revolve things within himself. Soon after he rose up and walk'd, and looked intently into the dissected Creatures; then laid down again, and return'd to his seat. The *Abderites*, standing about me, and hardly refraining from Tears, said, "You see, *Hippocrates*, the life of *Democritus*, how mad he is, and knoweth not either what he would have, or what he doth. One of them, that would have given me a farther description of his Madness, on the sudden fell a sobbing, and howled like a Woman at the death of her son, and then began to lament like a Traveller robb'd of his Goods: which *Democritus* hearing, sometimes smiled, sometimes laugh'd, not writing any longer, but often shaking his head. "Men of *Abdera*, (said I) stay you here, whilst I go nigher to him, that by hearing him speak, and observing his Constitution, I may judge the truth of his Distemper; and in so saying, I went gently down: the place was very steep, so that I could hardly keep my self from falling. At such time as I came nigh him, it hapn'd, that he was writing something as in a Rapture, earnestly; whereupon I made a stand, waiting when he would give over. It was not long ere he did so; and seeing me coming towards him, said, "Hail, Stranger; I answer'd, "Hail also, *Democritus*, the Wisest of Men. He, as I imagine, a little troubled that he had not saluted me by Name, reply'd, "What may I call you? for my Ignorance of your Name is the Reason that I styl'd you, Stranger. "My Name, said I, is *Hippocrates*, a Physician. "You are, reply'd he, the glory of the *Æsculapians*,
N n n

"pains, the fame of whose Worth, and know-
 "lege in Physick, is arriv'd as far as to me. What
 "Business hath brought you hither? but first sit
 "down. This seat you see, is pleasant, green,
 "and soft, better than high Thrones, which are
 "subject to the envy of Fortune. As soon as I
 "was set, Is it a publick or private business, *said*
 "*he*, which brought you hither? Tell me free-
 "ly, and we shall to our utmost power assist you.
 "I answered, It is for your sake that I come hi-
 "ther, to be acquainted with you, a wise Per-
 "son, the occasion being afforded me by an Em-
 "bassy from your Country. He reply'd, Then
 "let my House entertain you.

Having thus made Trial of him several ways,
 and not finding any thing of madness in him,
 "You know, *said I*, *Philopamen*, one of this
 "Town. Exceeding well, *answer'd he*; you
 "mean the Son of *Damon*? He lives near the
 "*Hermæan* Fountain. The same, *repl'd I*; he
 "hath been my old Acquaintance, and received
 "me for his Guest. But you, *Democritus*, I in-
 "treat to afford me a better entertainment, and
 "first tell me, What it is that you are writing?
 "He after a little pause *answer'd*, Concerning
 "Madness. Good *Jupiter*, *said I*, you write
 "seasonably against the City! What City, *Hip-
 "pocrates*, *answer'd he*? I replied, that I only
 "spoke at random. But what is this that you
 "write of Madness? What else, *said he*, but,
 "What it is, and how it comes to be ingendred
 "in Man, and How it may be cured. These
 "Creatures which you behold, I have dissected
 "for that end; not as *hating* the Works of the
 "Gods, but to make inquiry into the nature and
 "seat of Choler; for you know, that where
 "this abounds too much, it most commonly cau-
 "seth Madness in Men. It is in every Nature,
 "but in some less, in others more; its excess
 "causeth diseases, as being a matter partly
 "good, partly bad. By *Jove*, *said I*, *Democritus*,
 "you speak truly and wisely; and I judge you
 "happy, who can enjoy such quiet, as I can-
 "not partake of. And why cannot you, *said*
 "*he*? I *answer'd*, because either Travel, or
 "Children, or Estate, or Sickneses, or Deaths,
 "or Servants, or Marriages, or the like, inter-
 "cept my leisure.

Hereupon he fell into his usual passion, and
 laugh'd a while exceedingly, giving over dis-
 course. "Why, *said I*, *Democritus*, do you
 "laugh? Whether is it, that I have spoken well
 "or ill? Hereat he laugh'd more than before,
 which the *Abderites*, who stood aloof off, seeing,
 some beat their own Heads, others their Fore-
 heads, others tore their Hair; for as they after-
 wards said, they observ'd him to laugh at that
 time more than ever he had done. "*Democri-
 "tus*, Thou best of wise men, *continued I*, I de-
 "fire to know the reason of this Passion, where-
 "in that which I said seems ridiculous? That if
 "it proves such, I may reform it, but if other-
 "wise, that you may desist from this unseaso-
 "nable Laughter. "By *Hercules*, *said he*, if you
 "can convince me, *Hippocrates*, you will per-
 "form a Cure greater than any you have yet
 "done. "And why, *said I*, should you not be
 "convinced? Know you not, that you do ab-
 "surdly in laughing at the Death of a Man, or
 "at Sicknes, or Madness, or Murder, or any

thing that is worse than these; and on the
 "other side at Marriages, at Assemblies, at the
 "Birth of Infants, at Solemn Rites, at Magi-
 "stracies, at Honours, and generally at every
 "thing that hath the Name of Good? At those
 "things which deserve to be pitied, you laugh;
 "and at those things for which we should re-
 "joyce, you laugh also; insomuch that you
 "seem not to put any difference betwixt Good
 "and Bad. Then *he*, You say well, *Hippocrates*,
 "but you are not acquainted with the reason of
 "my Laughing, which as soon as you know, I
 "am confident, you will prefer it before the
 "Cause for which you came hither, and carry
 "it along with you as a Medicine to your Coun-
 "try, thereby improving both your self and
 "others: and in requital of it, perhaps will
 "think your self obliged to teach me Physick,
 "when you shall understand what pains all
 "Men take for things that deserve not pains,
 "but are of no value, and consume their Lives
 "unprofitably in pursuit of things that deserve
 "only to be laugh'd at. What, *said I*, Is all
 "the World sick, and knows it not? If so, they
 "can send no whither for help; for what is
 "beyond it? *He repl'd*, There are infinite
 "Worlds, O *Hippocrates*! Have not so mean an
 "esteem of the Riches of Nature. Teach me
 "this, *said I*, *Democritus*, at some other time:
 "for I am afraid, that if you begin to talk of
 "this Infinity, you will fall again into your Fit
 "of Laughter; but now, tell me the Reason,
 "why you Laugh at the accidents of Life.

Then, looking stedfastly upon me, "You
 "think, *said he*, there are two things, which
 "occasion my Laughter, Good and Ill, where-
 "as indeed I laugh but at one thing, Man, full
 "of Folly, destitute of right Actions, playing
 "the Child in all his Designs, undergoing great
 "Toils for no Benefit, travelling to the ends of
 "the Earth, and sounding bottomless Depths,
 "to get Silver and Gold, never ceasing to hoard
 "them up, and with their store increasing his
 "own Troubles, lest, if he should want them,
 "he might be thought not happy. He digs in-
 "to the Bowels of the Earth, by the hands of
 "Slaves, whereof some are buried by the Earth
 "falling upon them, others dwell there, as if it
 "were their Native Soil, searching for Gold and
 "Silver, sifting one Sand from another, cut-
 "ting and tearing their Mother-Earth, which
 "they both admire and tread on. How ridi-
 "culous is this, that they should love that part
 "of the Earth that lies hid, and contemn that
 "which lieth open unto them? Some buy Dogs,
 "others Horses; some delight in having large
 "Possessions, which they may call their own,
 "and would command many others, when they
 "are not able to command themselves. They
 "marry Wives, and in a short time put them
 "away; they love, and then hate; they take
 "delight in their Children, and when they are
 "grown up, disinherit them; They War, and
 "despise Quiet; they conspire against Kings;
 "they murder Men; they dig the Earth to
 "find Silver; with the Silver, which they have
 "found, they buy Land; what the Land which
 "they have bought yields, of Corn, or Fruits,
 "they sell, and receive Silver again. To what
 "changes and mischances are they subject?
 "When

"When they have not Riches, they desire them;
 "when they have, they hide or scatter them; I
 "laugh at their ill-designed Actions, I laugh at
 "their Misfortunes. They violate the Laws of
 "Truth, by Contention and Enmity with one
 "another; Brethren, Parents, and Country-
 "men, fight and kill one another for those Pos-
 "sessions, of which, after Death, none of them
 "can be Masters. They pursue an unjust course
 "of Life; they despise the poverty of Their
 "Friends and Country; Mean and Inanimate
 "things they account for Riches; they will part
 "with a whole Estate to purchase Statues, be-
 "cause the Statues seem to speak, but those who
 "speak indeed they hate. They affect things
 "hard to be got; they, who dwell in the Con-
 "tinent, covet the things of the Sea; they
 "who dwell in the Islands, the things of the
 "Continent, perverting all things to their own
 "depraved desires. In War they praise Valour,
 "whilst they are daily subdued by Luxury, A-
 "varice, and all Passions, and in the course of
 "his Life every man is a *Thersites*. Why did
 "you, *Hippocrates*, reprove my Laughter? No
 "Man laughs at his own Madness, but at the
 "Madness of another. They who think them-
 "selves to be Sober, laugh at those who seem
 "to them to be Drunk; some laugh at Lovers,
 "whilst they themselves are sick of a worse di-
 "stemper; some, at those who travel by Sea;
 "others, at those who follow Husbandry, for
 "they agree not with one another, neither in
 "Arts nor Actions. All this, *said I, Democri-
 tus*, is true, neither is there any Argument
 "that may better prove the unhappy Estate of
 "Man: but these Actions are prescribed by Ne-
 "cessity, by reason of the government of Families,
 "the building of Ships, and other civil Offices,
 "wherein a Man must necessarily be employ'd,
 "for Nature did not produce him to the end
 "he might rest Idle. Again, Height of Am-
 "bition causeth many Men to go astray, who
 "aim at all things, as if there were nothing
 "amiss in them, not being able to foresee the
 "darkness that attends them. For, *Democritus*,
 "what Man is there, that when he marries,
 "thinks of Divorce or Death? Who is there,
 "that whilst he bringeth up his Children, think-
 "eth of losing them? The like in Husbandry,
 "Navigation, Dominion, and all other Offices
 "of Life. No Man foresees that it may go
 "amiss with him, but every one flatters him-
 "self with hopes of good success, and does not
 "look upon the worst. Why therefore is this
 "ridiculous?

Democritus replied, "You are yet far from
 "understanding me, *Hippocrates*, neither per-
 "ceive, through want of knowledge, the bounds
 "of Indisturbance and Perturbation. For if
 "they did order these things prudently, they
 "might be easily discharged of them, and
 "evade my Laughter; whereas now they are
 "blind as to the Offices of Life, and, with
 "Minds void of reason, are carried on by in-
 "ordinate Appetites. It were enough to make
 "them wise, if they would but consider the
 "mutability of all things, how they wheel
 "about continually, and are suddenly changed;
 "whereas they looking upon these, as if they

"were firm and settled, fall into many incon-
 "veniencies and troubles, and coveting things
 "harmful, they tumble headlong into many
 "Miseries. But if a Man would rightly con-
 "sider and weigh in his mind all things that
 "he attempts, understanding himself and his
 "own Abilities, he would not let his desire
 "run to Infinite, but follow Nature, out of
 "whose store all are plentifully nourished and
 "supplied. As a fat Body is in greatest danger
 "of sickness, so an high Estate is in greatest
 "danger of falling; great minds are known in
 "Extremities. Some there are, who, taking
 "no warning at that which hapneth to others,
 "perish by their own ill Actions, minding things
 "Manifest no more than as if they were not
 "Manifest, whereas yet they have a large Pre-
 "cedent by which to guide their Life, of things
 "done and not done, by which we ought to
 "foresee the future. This is the occasion of
 "my Laughter, Foolish Men punished by their
 "own Wickedness, Covetousness, Lust, En-
 "mity, Treachery, Conspiracy, Envy. It is
 "a hard thing to give a name to many of these
 "ills, they being innumerable, and practised
 "so closely. Their Behaviour, as to Virtue, is
 "yet worse; they affect Lies, they follow Plea-
 "sure, disobeying the Laws; my Laughter con-
 "demns their Inconsiderateness, who neither
 "see nor hear, whereas the Sense of Man only,
 "of all others, is able to foresee Futures. They
 "hate all Things, and then again apply them-
 "selves to them; they condemn Navigation,
 "and then they put to Sea; condemn Husban-
 "dry, and then fall a Ploughing; they put
 "away their Wives, and then marry others;
 "they bury their Children, and beget more,
 "and bring them up; they wish to live long,
 "and when old Age comes, are grieved at it;
 "never remaining constant in any Estate what-
 "soever. Kings and Princes commend a pri-
 "vate Life; private Persons, a publick; he that
 "ruleth a State, praiseth the Tradesman's life,
 "as free from danger; the Tradesman his, as
 "full of Honour and Power. For they regard
 "not the direct, sincere and smooth way of
 "Vertue, in which none of them will endure
 "to walk; but they take crooked and rough
 "Paths, some falling down, others running
 "themselves out of breath to overtake others.
 "Some are guided by incontinence to the Beds
 "of their Neighbours; others are Sick of a
 "Consumption through unsatiate Avarice; some
 "by Ambition carried up into the Air, and by
 "their own wickedness thrown down headlong.
 "They pluck down, and then they build; they
 "do good, and oblige others, and then, repent-
 "ing of it, break the laws of Friendship, and
 "do wrong, and fall at enmity, and fight with
 "their nearest Relations; of all which, Avarice
 "is the cause. Wherein do they differ from
 "Children that play, whose Minds, being
 "void of Judgment, are pleased with every thing
 "they light on? In their Desires they differ not
 "much from brute Beasts, only the Beasts are
 "contented with that which is enough. What
 "Lyon is there, that hides Gold under ground?
 "What Bull fights for more than he needs?
 "What Leopard is unsatiately greedy? The
 "Wolf, when he hath devoured as much as

" serves for his necessary nourishment, gives
 " over. But whole Nights and Days, put to-
 " gether, are not enough for Men to feast and
 " riot. All brute Beasts have their yearly set-
 " times of Coition, and then leave; but Man
 " is continually transported with Lust. How
 " can I, *Hippocrates*, but laugh at him that la-
 " ments the loss of his Goods? And especially,
 " if without regard to Dangers, he travels over
 " Precipices, and on the Sea; how can I for-
 " bear to laugh exceedingly? Shall I not laugh
 " at him, who drowns a Ship by lading it with
 " rich Marchandize, and then blames the Sea
 " for drowning it? If I seem wrongfully to
 " laugh at these, there is at least in them some-
 " thing that deserves to be lamented. These
 " stand not in need of the Physick or Medi-
 " cines of your Predecessors *Æsculapius*, who,
 " preserving Men, was himself requited with
 " Thunder. Do you not see, that I also am
 " partly guilty of Madness, who, to enquire in-
 " to the causes of Madness, dissect these several
 " living Creatures, whereas indeed I ought to
 " search for it in Man himself? Do you not see,
 " that the whole World is full of Inhumanity,
 " stuffed as it were with infinite hatred against
 " Man himself? All Man is from his very Birth
 " a disease: when first born he is useless, and
 " sues for relief from others; when he grows up,
 " foolish, wanting Instruction; at full growth,
 " wicked; in his decaying Age, miserable,
 " toying throughout all his time imprudently;
 " such is he from the Womb. Some being of
 " furious angry dispositions, are continually en-
 " gaged in Broils, others in Adulteries and
 " Rapes, others in Drunkenness; others in co-
 " vetting the Goods of their Neighbours; others
 " in consuming their own; so that if the Walls
 " of all Houses were transparent, we should
 " behold some Eating, others Vomiting, others
 " Wrongfully Beaten, others mixing Poisons,
 " others Conspiring, others Casting Accounts,
 " others Rejoycing, others Weeping, others
 " Plotting against their Friends, others Raving
 " mad with Ambition. Some actions there are
 " more remote within the Soul, some young,
 " some old, suing, denying, poor, rich, star-
 " ved, luxurious, sordid, imprison'd, murder'd,
 " buried, despising what they Enjoy, and aiming
 " at what they have not; impudent, niggard-
 " ly, insatiate, vain-glorious; some setting
 " their minds on Horses, others on Men, others
 " on Dogs, others on Stone or Wood; some
 " affect Embassy, others the Command of Ar-
 " mies, others sacred Rites; some wear Crowns,
 " others Armour; some fight at Sea, others at
 " Land, others Till the Ground, some plead in
 " the Forum, others act on the Theatre, every
 " one is severally employ'd; some affect Plea-
 " sure and Intemperance, others Rest and
 " Idleness, how then can I but laugh at their
 " Lives? And it is to be feared, that your Art
 " of Physick will nothing please them, for In-
 " temperance makes them froward, and they
 " esteem Wisdom madness, and I doubt much
 " that many things in your Art are openly re-
 " proached, either through Envy or Ingratitude;
 " for the Sick, as soon as they are cured, ascribe
 " the Cause either to the Gods, or to Chance;
 " and many are of such a disposition, as to hate

" those that have obliged them, and can hardly
 " refrain from being angry if they need their
 " help; many also, being themselves ignorant,
 " prefer Ignorance before Science; Fools give
 " their Suffrages, neither will the Sick commend,
 " nor they who are of the same Art give their
 " approbation, through Envy. And it cannot
 " be, but that you must have suffered wrong in
 " this kind, for I know very well, that you
 " have been often treated unworthily, and re-
 " proached by Malice and Envy.

There is no knowledge nor attestation of
 Truth in saying this; he smiled and seemed to
 put on a Divine Look, casting off that which
 he had before. " *Then I, Excellent Democritus,*
 " I shall carry back with me to *Cos* the great
 " Gifts of your Hospitality, full of your wise
 " Instructions. I shall return to proclaim your
 " Praises, for that you have made enquiry into
 " humane nature, and understood it; I shall go
 " away cured in Mind, it being requisite that
 " I take care for the Cure of the Bodies of others.
 " To morrow, and afterwards, we shall meet
 " here again.

Which said, I arose, and he readily accom-
 panied me. A man came to him, from whence
 I know not, to whom he delivered his Books.
 When I came to the *Abderites*, who all this while
 stayed for me; " Men of *Abdera*, said I, I re-
 " turn you many Thanks for the Message you
 " sent me, for I have seen *Democritus*, the wisest
 " of Men, who only is able to reduce men to
 " sound understanding. This (*Damagetus*) is
 " all, which I had to relate unto you with joy,
 " concerning *Democritus*. Farewel.

This Account *Hippocrates* gives of *Democritus*; neither did their Acquaintance and Friendship end here, but continued after the departure of *Hippocrates* to *Cos*, as appears by the Correspondence of two Letters betwixt them. The first, from *Democritus* to *Hippocrates*, in these words.

You came to us, *Hippocrates*, as to give *Hellebore* to a mad Man, at the instigation of foolish People, who think Study madness; I was at that time busied in writing concerning the Fa-
 brick of the World, and the Poles and the Stars of Heaven; as soon as you understood the nature of these things, how excellently they are framed, and how far from madness, you commended my Employment, and condemned Them as stupid and mad. All those things which pass to us through the Air by Images, and are seen in the World, and succeed one another, my Mind, making a scrutiny into these, hath clearly found out the Nature of them, and brought it to light, witness the Books that I have written. You ought not therefore, *Hippocrates*, to converse with such men, whose Minds are wavering and unconstant; For if, as those men desired, you had given me *Hellebore*, as being mad, you had, of Wife, made me Mad indeed, the Guilt whereof would have lain upon your Art; for *Hellebore*, administred to Sound Persons, clouds their Understandings; but to the Mad it doth good. I believe, that if you had found me not writing, but lying down or walking, revolving things in my mind, sometimes laughing, and

and not minding such Friends as came to me, but wholly taken up with Contemplation of something, you would have inferred from what you beheld, that I was Mad. A Physician therefore must not judge of the Affections or Passions by the sight only, but by the Actions themselves, and observe, whether they are in their Beginning, or in the Middle, or in the End, and to consider the difference of Time and Age, before he undertake to cure the Body; for by all these, the Disease will be discovered.

To which Hippocrates return'd this Answer.

In the art of Physick, that which happens Successfully, men for the most part commend not, but commonly ascribe to the Gods; but if any thing happen amiss in it, so as that the Patient dieth, they let the Gods alone, and accuse the Physician. And indeed, I perceive, that I gain more blame than credit by my art; for, tho' now very old, I have not yet arrived at the height of Medicine, neither did *Æsculapius* himself who invented it, as appears in that he many times dissents from those who have written hereupon. Your Letter to us condemns the administration of Hellebore; I was sent for indeed, *Democritus*, to cure a Mad-man, neither at that time could I guess in what condition you were: But as soon as I had conversed with you, I knew you to be far from madness, and worthy of all respect. I acknowledged you to be the most excellent Interpreter of Nature, and the World; and judged that you were sent for me, mad, and to stand in need of Physick. But since this Accident hath begot an acquaintance betwixt us, you will not do amiss in writing oftner, and in communicating your works to me. I have sent you a Treatise concerning the use of Hellebore. Farewel.

Hence it is, that some held *Hippocrates* to have been the Disciple of *Democritus*, as *Cornelius Celsus* affirms; indeed, that *Hippocrates* learnt much Philosophy of him, as well by his Discourse, as communication of his Writings, is manifest from the precedent *Epistles*.

CHAP. VII.

His Death.

HE (a) lived to a great age; *Laertius* saith, above 100. years; *Pblegon* and *Lucian* more expressly, 104. (b) *Censorinus*, 108. (c) *Hipparchus*, 109. *Laertius* saith, he died of Age; *Pblegon*, for want of food; the manner related thus by *Hermippus*. Being very old, and drawing nigh his end, his Sister was extremely troubled, that he should dye within the time of the Festival of *Ceres*; but he bad her be of good comfort, and bring him every day some hot Bread, which holding to his nose, he prolonged his life, till the days of the Festival were past, which were three: and then without any pain gave up the Ghost, (d) and was buried at the publick Charge.

CHAP. VIII.

His Writings.

T *Hraſylus*, (a) who disposed the Writings of a *Laert.* *Plato* according to *Tetralogies*, digested also those of *Democritus* into order; thus,

ETHICK.

Pythagoras.
Of the Disposition of a wise man.
Of the things that are in the Inferi, to which perhaps the *Abderites* alluded in their Epistle to *Hippocrates*.
Tritogenia; that all human things consist of Three.
Of Goodness, or Virtue.
Amalibæa's Horn.
Of Tranquility of mind.
Commentaries, or, of Houses, Oeconomical.
Felicity (εὐδαιμονία) not extant in the time of *Thraſylus*.

PHYSICK.

The great *Diacosmus*, consisting of 12 Books, *Theophrastus* ascribes it to *Leucippus*: but *Antisthenes* affirms, *Democritus* recited it in publick as his own; and as His is it cited by *Epicurus*, in his Epistle to *Herodotus*. To this Work it was perhaps, that *Cicero* alludes, saying, *What shall I say of Democritus? Whom can we compare with him, who durst begin thus, Hæc loquor de Universis? He excepts nothing, whereof he professeth not to treat; for what can be beyond all things?*

The little *Diacosmus*.
Of the Planets; in which Treatise he proved that there are more than Seven.
Of Nature, the first.
Of the Nature of Man, or of flesh; the second, dedicated to *Hippocrates*.
Of the Mind. Of the Senses; these two, some put together, and entitled, *Of the soul*.
Of Sapours.
Of Colours.
Of Different figures (ἑσπεύει.)
Of the reciprocation of figures This and the fore-going Treatise, perhaps tended to shew the nature of Qualities, which according to him arise from the various disposure of Atoms, according to their particular figures.
Κεῖνσις, or *Of the mixtures of the things aforesaid*.
Of an Image, or, Of foresight.
Of Pestilences (*Gassendus* reads μετ' λογικῶν, *Of Logické*.) Canon. 1, 2, 3.
Of Effluviations.

EXTRAORDINARY.

Celestial Causes.
Aerial Causes.
(b) *Plain superficial Causes*; perhaps, what things are made of plain Atoms; for that which immediately followeth, is opposite to it.
Causes of Fire, and things in Fire, these consist of round Atoms.
Causes of Sounds.

A discourse of Phrygia.

Of the Fever and Cough in sickness.

Chernica, or Problems. Perhaps the same which

(d) Pliny terms Chiocineta, (e) Vitruvius, Chironiton, adding, that in it he made use of a ring, and drew the figures of the experiments in wax and red-lead.

The rest (faith Thrasyllus) that go under his name, and partly made out of his Writings, partly acknowledged to be the Writings of other men. Of which

kind perhaps in his Book of the virtue of herbs, mentioned by (f) Pliny, and that of (g) Commentaries upon Apollonices, Capridenes, and Dardanians, from whence he argues Democritus to have been skilful in Magick: But (h) Agellius much blames him for ascribing to Democritus such prodigious fables.

(i) Aristoxenus affirms, that Plato had an intent to have burned all the writings of Democritus, and for that end had made a Collection of a great many of them: but was diverted by Amyclas and Clinias, Pythagoreans.

C H A P. IX.

Physick.

HE compleated the Eleatick Sect, and brought it to Perfection, insisting upon and improving the Principles of those that went before, but most particularly those of LEUCIPPUS. His Assertions, these.

S E C T. I.

Of the Principles of things, Atoms and Vacuum.

THE Principles of all things are Atoms (a) (solid (b), full) and Vacuum, (c) where of one is Ens, the other Non-ens. (d) Ens is full and solid; Non-ens is Vacuous and rare; Ens participates no more of Being than doth Non-ens, nor of Body more than doth Vacuum, These are the causes and matter of beings.

(e) Bodies must either consist of Atoms, or of nothing; for if every body be divisible, let us suppose it actually divided, and then there will remain either Atoms or nothing; but of nothing, nothing is made, and nothing goes away into nothing.

(f) Neither of these Principles is made of the other, but the common body it self is the Principle of all things, differing only in magnitude and the figure of its parts.

They are both infinite: Atoms (g) in number, Vacuum in Magitude.

(b) The Properties of Atoms are two, Figure and Magnitude; (i) as to Figure, they are infinite; (k) Angulous, not-angulous, strait, round; (l) some are smooth, others rugged; some pointed, some crooked, and as it were hooked.

As to their Magnitude, (m) they are by reason of their littleness, indivisible; (n) by reason of their solidity, indivisible, (o) impassible, and unalterable.

To these two Properties ascribed to Atoms by Democritus (p) Plutarch faith, that Epicurus added a third, weight; but (q) Aristotle affirms, that Democritus held one Atom to be heavier than another, according as it exceeded that other in bigness.

Of all other qualities they are destitute; having neither native whiteness, nor blackness, nor sweetness, nor bitterness, nor heat, nor cold, nor any other quality.

(r) Cicero, who calls Democritus the Inventor and Author of this assertion of Atoms, elsewhere ascribes it to Leucippus, adding, that (s) Democritus herein followed him, but was far more full in the rest. But neither seems it to have been invented by Leucippus, for Posidonius the Stoick ascribes it to Moschus a Phœnecian; whom Strabo affirms to have lived before the Trojan War. But perhaps the Eleatick Philosophers derived it from Pythagoras: of which opinion (t) Aristotle

These (a) Atoms, of first bodies, are continually moved in the infinite (b) Vacuum, in which there is neither high, nor low, nor middle, nor last, nor extrem.

This motion had not any beginning, but was from all eternity.

(c) This motion is but of one kind, oblique. Herein Epicurus dissents from him, asserting a two fold motion, direct, and declining.

The little bodies being carried in this region or space, are entangled with one another, or hit against one another, or rebound, or separate, or associate with one another, by whose concussions and complications all things are made. Thus (d) whatsoever is, or is made, is or is made by natural weights or motions.

Thus (e) all things are done by a necessity, the rapid motion of the Atoms (which he called necessity) being the cause of the production of all things.

(f) This necessity is fate, and justice, and the providence which made the World, which is no other than (g) the resistance, lation, and percussion of matter.

S E C T. III.

Of the Generation, Corruption, Alteration, and Qualities of compounds.

a Arist.
Metaph. 1,
4.

b Ibid.

c Arist. de
gen. & cor.
1. 2.

d Ibid.

The (a) Elements (as we said) or Principles of all things are two, Full, and Vacuum. One is Ens, the other non Ens; the full and solid is Ens, the Vacuum and rare, non Ens. Ens participates not more of being, than non Ens, nor a body more than Vacuum. These are the causes and matter of beings.

And (b) as they who assert a subject to be one, in substance, various as to its affections, make rare and dense to be the Principles of those affections; in like manner, they (Leucippus and Democritus) affirm, that the differences are the causes of all the rest. These differences they hold to be three, figure, order, and position; for they say that Ens differs only *ῥυσμῶ* and *διαδιγῇ*, and *τεταπῇ*. *ῥυσμῶ* is figure, *διαδιγῇ* order, *τεταπῇ* position: A. and N. differ in figure; A. N. and N. A. in order; Z. and N. in position.

Thus (c) they suppose figures of which they make Alteration and Generation: Generation and Corruption, by Congregation and Segregation (of Atoms;) Alteration, by Order and Position.

Now (d) forasmuch as they conceived, that what is apparent to sense is true, seeing that apparent things are contrary to one another, and infinite in number, they conceived that there are infinite figures, (of Atoms) so

that by several transmutations of the compound, the same thing seemeth contrary to another, and so another thing; and by immixture of some small thing to be transmutated, and to appear quite different; and being transmutated, one thing to appear to be quite another thing; for a Comedy and Tragedy are made of the same Letters.

Hence it is, that (e) Plutarch and others affirm, he did reject Qualities, asserting that colour is *νόμος*, white *νόμος*, sweet *νόμος*, hot *νόμος*, cold *νόμος*, and all other qualities; *νόμος* is here commonly expounded (after the usual acception of the word) lege esse, to be by law. (f) Magnenus interprets it, that by a certain Law and proportion betwixt the Agent and Patient, the same thing is sweet to one, which is bitter to another. (g) The learned Gassendus, Metaphorically, that as the justice, injustice, decency, indecency, laudability, culpability, &c. of human actions, depend on the constitutions of Laws; so the whiteness, blackness, sweetness, bitterness, heat, cold, &c. of natural things, depend on the various positions and ordinations of Atoms. Whence you see (saith he) how in Laertius is to be understood, *Ἀρχαὶ ἓν ὅν ὅλων ἀτόμους ἢ κενόν, τὰ δ' ἅλλα πάντα νομοῖται*, That Atoms and Vacuum are the principles of all things, *cetera omnia lege sancti*. Thus Gassendus.

But *νόμος*, which (as Suidas saith) is *πολυδύναμος λέξις*, a word of various significations, seems here to be taken in opposition to *ἐπὶ*, in which sense Laertius explicates it by *νομοῖται*, (from whence it seems derived) and *νομοῖται* by *δοξάζεσθαι*, for so perhaps should the Text be distinguish'd, *τὰ δ' ἅλλα πάντα νομοῖται δοξάζεσθαι*, *cetera omnia censeri vel existimari*, the later being only a Gloss and exposition of the former. So that in the sense of Democritus, (who affected a particular use of words, as appears by *ῥυσμῶς*, *διαδιγῇ*, *τεταπῇ*, *συρ* &c.) *νόμος* is no other than *δόξα*. Thus he seems to have opposed *ἐπὶ* and *νόμος*, as the Schools *Ens reale* and *rationis*; as if he should say, there is nothing really existent but Atoms and Vacuum, all things else are only *quoad nos*, viz. in opinion. This may be further confirmed by a noted place of (b) Gallen, who dilates upon it in this manner.

The first Element of things is void of Quality, having not in its own nature whiteness, nor blackness, nor sweetness, nor bitterness, nor heat, nor cold, nor any other quality; colour is (*νόμος*) in opinion, bitterness is in opinion, sweetness is in opinion; but Atoms and Vacuum are indeed, saith Democritus, conceiving that all sensible Qualities are made by the concussion of Atoms, according as they are, as to us, who have the sense of them; but that nothing is by nature white, or yellow, or red, or bitter, or sweet. By *νόμος* he means as it were *νομισ*, by opinion, and as to us; not in the nature of the things themselves, for that on the other side he calls *ἐπὶ*, making the word from *ἐπὶ*, which signifies True. The whole meaning of the sentence is this, Men do opinionate or think (*νομίζεσθαι*) that white is something, and black, and sweet, and bitter; but truly and indeed (*ἐν*) One, and (*μυθεῖν*) Nothing are all. All Atoms are little bodies, void

h lib. 1. d.
Elem. cap.
1.

“ void of Qualities, Vacuum is a region or space
 “ in which all these bodies are carried upwards
 “ and downwards everlastingly, or are intangled
 “ within one another, or hit against one ano-
 “ ther, or rebound, or separate from, or asso-
 “ ciate with one another, whereby they make
 “ all compounds, and especially our bodies,
 “ and their passions and senses. *Hitherto Galen.*

i *Aristot.*
gen. 1. 7.

Democritus (i) alone, contrary to the rest of the Philosophers, Asserted, that the Agent and the Patient must be the same and like; for he conceived it not to be possible, that things different and divers can suffer from one another: and if any different things act upon one another, this happens to them not as being different, but as they have something in them that is the same.

k *Arist. de*
calo. 4. 6.

Broad (k) iron swims on the Water, because the atoms of heat, which ascend out of the Water, uphold the broad atoms even of things that are weighty; but the narrow slide down, because these which resist them are but few. But then, objects he, This will be done much more in the Air; whereto he Answers, that the *Soun* is not carried one way, meaning by *Soun* the motion of bodies ascending.

plac. 2. 15.

There (a) are infinite Worlds in the infinite space, according to all circumstances; (b) some of which are not only like to one another, but every way so perfectly and absolutely equal, that there is no difference betwixt them. (c) These all are generated and corrupted.

The World is (d) inanimate (e), round, (f) compassed about with a coat, as it were, interwoven with Stars.

(g) The atoms being (as we said) rapidly carried through the Universe; by this means all things were made, Fire, Water, (h) Air, Earth.

To (i) the fire, He and *Leucippus* ascribed a round figure; but Air, Water, and the rest, he distinguished only by greatness and littleness, because their nature is the Pan-spermia, or universal dissemination of the Elements or Atoms.

SECT. V.

Of the Heavens.

THE (a) Sun and Moon consist of smooth little bodies which are carried round. (b) *Plutarch* affirms, He held, with *Anaxagoras*, that the Sun is a burning plate or stone; *Laertius* adds, he said of *Anaxagoras*, that those opinions which he delivered concerning the Sun and Moon, were not his, but more ancient, and that he had stolen them.

(c) He conceived the Sun to be very big; for, adds *Cicero*, he was exceeding skilful in Geometry.

(d) The Moon is a fiery Firmament; containing Plains, Mountains, Valleys.

(e) He placed the Stars in this order; first, the fixed Stars, then the Planets, then the Sun, *Lucifer*, and the Moon.

(f) All the Stars move from East to West. (g) Those which are nearest to the Earth are less apt to be carried about by the rapid revolution of Heaven. Whence it comes to pass, that the Sun and the inferior Stars, especially the Moon, move much slower than the rest.

(h) He held, as *Anaxagoras*, that Comets are the co-appearance of Planets, which coming near one another seem to be all one.

SECT. VI.

Of Air, Earth, Water.

When (a) in a narrow Vacuum there are many little bodies, there followeth wind; and contrary, the Air is quiet and calm, when in a great Vacuum there are but a few little bodies. For as in a Market-place or street, as long as the people are but few, they walk without any trouble, but when they run into some narrow place, they jostle and quarrel with one another; so in this space which encompasseth us, when many bodies crowd into one place, they must necessarily jostle one another, and be thrust forward, and driven back, and entangled, and squeezed, of which is made the Wind, when they which contested yield; and, having been long tossed up and down uncertainly, shrink; but when a few bodies stir up and down in a large space, they can neither drive, nor be driven impetuously.

(b) The Earth at first wandered up and down, as well by reason of its smallness as lightness; but in time growing thick and heavy, it settled down immovable. (c) Its breadth is the cause of its settledness, for (d) [it is of the fashion of a dish, hollow in the midst, and] it divides not but covers the Air, which is beneath it, as appears in broad bodies, which are not easily stirred by the Winds, but stick fast; Thus doth the Earth, by reason of its breadth, to the Air; and the Air, not having a place whereto it might go, sufficient to receive it, resteth underneath, as water within vessels which cover it. That the Air can uphold a great weight, they demonstrate many ways.

(e) Now by reason that this Air is weaker towards the South, the Earth, as it groweth and increaseth bendeth to that side; for the Northern parts are intemperate, the Southern temperate, whence they produce more and fairer fruits.

(f) He imputeth the cause of Earthquakes to water: for (g) the Earth being full of water, and receiving to it much rain-water, this causeth the Earthquake: For, there coming more, because it is not able to receive it, forcing its caverns, it maketh it shake, and being dried and attracted into empty places from the more full, in its passage causeth that motion.

(h) The Sea continually decreaseth, and at last will dry up.

(i) The overflowing of *Nilus* is caused by the melting and diffusion of the Snow in the Northern parts under the Summer Tropick; from the vapours, Clouds are condensed, which being driven towards the South, and to *Aegypt*, by the Etesian winds, they are dissolved into great and vehement showers, wherewith are filled as well the Lakes, as the River *Nilus*.

SECT.

S E C T. VII.

Of the generation of living Creatures.

MEN (*a*) were first generated of water and mud; from which opinion Epicurus little differs.

(*b*) The distinction of sexes, Male and Female, is made (*c*) in the womb, not by reason of heat or cold, but according to that party of the Two, whose seed proceeding from the part which distinguisheth Male and Female, is predominant; or of that party whose seed first takes up the place.

(*d*) The Infant in the womb is nourished at the mouth, wherefore as soon as it is born, it layeth the mouth to the dug.

S E C T. VIII.

Of the Soul.

DEMOCRITUS (*a*) held, That the Soul is a kind of Fire and Heat; (*b*) for there being infinite Figures of Atoms, he saith, the round make Fire, and the Soul, because that figure is most capable to permeate through the Universe; and to move the rest, the soul it self being moved also. Thus he and Leucippus held the Soul to be that which giveth motion to living Creatures. Hence it comes to pass, that respiration is the bound of Life, for when that which encompasseth the Bodies, compresseth them, and squeezeth out those Figures which give motion to living Creatures, forasmuch as they never rest, there is a relief by the coming in of others of the same kind through Respiration; for this hinders those which are in the Animals from being squeezed out, they driving forward together that which compresseth and fastneth. All Animals [*c* breathe, and they] live as long as they can do thus.

(*d*) The Soul is corruptible; and perisheth with the Body.

(*e*) The Soul hath Two parts; the rational, seated in the Breast; the irrational, diffused through the whole Body: but (*f*) the Soul and Mind are all one.

(*g*) There are more than five Senses of irrational Animals, God and Wise Men.

(*h*) Sensation and Intellection are made by the insinuation of Images from without, which flow from solid Bodies and certain Figures. (*i*) So the Image in a Looking-glass is made also.

He conceived, as Aristotle saith, that all Sensibles are Tangibles, that all Sensation is caused by a touch or stroke upon the Organ; and further affirmed, that (*k*) Whiteness is smoothness, [the Light being reflected from a smooth Superficies upon the Eye, exhibits a white colour.] (*l*) Blackness is Roughness; [the same light reflected from a rough Superficies, exhibits Blackness;] in like manner (*m*) He referred Savours to Figure; (*n*) the round Atoms, and such as are of a bulk suitable, [to the contexture of the Organ] make a sweet Savor; the great, a fower; the Multangular and Nothing round, a harsh; the Acute, Conical, Crooked, not slender nor round, a sharp; the Round, slender, angular, crooked, an acrimonious; the Angular distorted equicrural, a Salt;

the Round, light distorted small, a bitter; the slender round small, a fat or luscious.

(*o*) The Mind is the same with the Soul, consisting of smooth little Bodies. (*p*) The Hegemonick is seated in the whole Head, (*q*) Cogitation is made by concurrence of Images; (*r*) so also are Dreams.

S E C T. IX.

Of the Gods.

DEMOCRITUS (saith (*a*) Cicero,) in my opinion, wavers, and seems uncertain, concerning the nature of the Gods; for sometimes he conceives, that there are Images indued with Divinity in the Universe; sometimes he calleth the Principles and Minds in the same Universe, God; sometimes animate Images, which use either to profit or to harm us; sometimes certain vast Images, so great, that they extrinsically embrace the whole World.

(*b*) Sextus Empiricus delivers his Opinion thus: There are certain Images which come to Men, some of which do good, others hurt; whence he wisheth, that he might light upon good Images; these are large and extraordinary vast, not easily perishable, nor absolutely unperishable. They foretel events to Men by Discourse and Speech, the Antients having received an Impression of these in their Fantasies, from thence imagined that there is a God, whereas besides these there is no God, or a Nature that is not subject to Dissolution.

(*c*) He approved the Pre-sention of future things, that is Divination; and Conceived, that (*d*) the Antients did wisely institute, that the entrails of sacrificed Victims should be looked into; from the Constitution and Colour whereof may be perceived signs of Health or Pestilence; sometimes also what Dearth or Plenty shall follow.

C H A P. X.

Ethick.

HE (*a*) asserted, the chief end or good to be εὐδαιμονία: not placing it in Pleasure, as some have misunderstood him; but in a serene, secure state of Mind, not distracted with any fear, or superstition, or any other passion.

Of his Moral Sentences these have been preserved by Stobaeus and others.

'Tis easy wickedness to circumvent:
For whilst on gain alone it is intent,
It blindly strays, and any way is bent.

It is easy to praise what we ought not, and ill to blame; but both are signs of a depraved disposition.

Wisdom not admiring any thing, merits all things, being most Honourable.

The bounds of profitable and unprofitable wisdom are, pleasant and unpleasant.

It is the work of Prudence to prevent an injury; of Indolence, when done, not to revenge it.

There ariseth a great delight from beholding good actions.

Ser. 4. From good things arise ill to Men, if they know not how to manage or hear the good.

Ser. 5. To yield to the Law, the Magistrate, and a wife Person, is decent.

Ibid. Temperance augments things that are pleasant, and maketh the pleasure it self greater.

Ser. 6. Sleeps in the day signifieth either distemper of the Body, or grief of the Mind, or sloth, or dulness.

Ibid. Coition is a short Apoplexy; One man is struck out of another.

Ser. 7. Not he only is valiant who vanquisheth his Enemy, but he also who subdueth Pleasure; yet some there are, who Command Cities, and are slaves to Women.

Ser. 9. It is good not only to do no harm, but not so much as to will it.

Ser. 10. Where ill Actions acquire Wealth, the Infamy is the greater.

Ibid. Hope of ill gain is the beginning of loss.

Ser. 12. We ought to speak Truth where it is best.

Ser. 17. It is better to blame our own faults, than those of others.

Ibid. Freedom of Speech is proper to generosity, but the difference of occasions render it dangerous.

Ser. 14. To praise good things is good, but to praise the ill is proper to a counterfeit deceitful Soul.

Ser. 17. He is well disposed who grieves not for what he hath not, and rejoiceth for what he hath.

Ibid. Of pleasant things, those which we have most seldome, delight most.

Ibid. If a Man exceeds moderation, the sweetest things prove the most bitter.

Ibid. He is valiant who vanquisheth, not Enemies only, but pleasures.

Ibid. They who indulge to the pleasures of the Belly, consuming the time in eating, drinking, or wantonness; in all these there are short pleasures, which last as long as they are eating and drinking, but many griefs: For they are in a continual desire of these things, and when they have obtain'd them, the pleasure passeth away, and there is nothing in them but a momentary titillation; the pleasure is short, and they soon need the same again.

Ser. 20. To resist Anger is difficult, but to vanquish it is proper to an understanding Person.

Ser. 22. He who contends with his Superior, ends in Infamy.

Ser. 28. Wicked Men, after they have escaped the danger, keep not the Oaths which they had made in their extremity.

Ser. 29. More are made good by Exercitation, than by Nature.

Ibid. All Labours are sweeter than Rest, when Men obtain that for which they labour; but if a Man be frustrate of his designs, there is one remedy, if all things are alike troublesome and difficult.

Ser. 31. Neither say nor do ill, though alone; learn to stand more in awe of thy self than of others.

Ser. 36. It is a defrauding of others, to desire to speak all, and to hear nothing.

Ser. 37. A Man must either be good, or seem such.

Ibid. They whose Manners are orderly, their Life is orderly.

Ibid. A good Man cares not for the reproofs of ill Men.

Ibid. The Laws would not have prohibited every

Man from living according to his own Will, if one were not injurious to another, for Envy causeth the beginning of Sedition.

To live in foreign Countries teacheth Frugality; Maza, and a grassy Bed are sweet Cures of Hunger and Labour. Ser. 32.

Every Country is pervious to a wise Man; for the whole World is the Country of a wise Soul. Ibid.

The Law requires, that the Life of Man should do good to others; this may be done if they will suffer, for it declares its own Virtue to the Obedient. Ser. 41.

Civil War hurts both Parties; the harm is equal to the Victor, and to the Vanquished. Ibid.

By Concord, besides other great things, War may be undertaken by Cities; without it, not. Ibid.

It is better for the Unwise to be Governed, than to Govern. Ser. 42.

It is justice to do those things which ought to be done; Injustice not to do them, but to decline them. Ibid.

As concerning the killing and not killing of Animals, the business stands thus, Those who do, or would do injury, he who killeth is blameless; nay, such ought rather to be killed, than not.

We ought to kill all that do Injury and Injustices; and he who kills them, ought to have, throughout the whole World, esteem and privilege of his Desire, and justice, and Courage, and Possession. Ibid.

As it is written concerning Beasts and Serpents, that are in enmity with us, so also in my Opinion may we do with Men. According to the Laws of our Country, an Enemy may be kill'd in any part of the World, where no Law forbiddeth it; but Law forbiddeth sometimes, and they have sacred Rites, Covenants, and Oaths. Ser. Ibid.

Any Man that either kills with his own hand, or causeth to be killed by Command or Vote, a Thief, is to be esteemed innocent. Ibid.

It is a grievous thing to be ruled by a worse Person. Ibid.

They who suffer Injuries are to be defended to the utmost, and not to be despised; for this is just and good, the other unjust and ill. Ser. 43.

They who commit any thing deserving Banishment, or Bonds, or any other punishment, ought not to be acquitted, but condemned; if any Man should acquit them either for Gain or Favour, he doth unjustly. Ser. 44.

He hath the greatest part of Justice and Virtue, who Honors those that are Worthy. Ser. 45.

Stand not more in awe of other Men than of thy Self; nor commit more offences, though no Man were to know it, than if all Men: Imprint this Rule in thy Mind; and do no ill. Ser. 46.

Men are more mindful of Wrongs than of Benefits, and it is but just it should be so: as he who restores a *Depositum*, deserves no Commendation; but he who detains it, Blame and Punishment. The same case it is in a Ruler, who is chosen not to do ill, but good.

To be naturally fitted for Command, is proper to the most excellent Persons. Ser. 47.

Boldness is the beginning of an Action, the end is guided by Fortune. Ser. 48.

Make use of Servants, as of the parts of your own

Ser. 61. own Body ; appoint to each a several Office.
-She that is belov'd, easily forgiveth the Of-
fence of her Lover.

Ibid. A Woman is sharper-witted for mischief than
a Man.

Ser. 62. To speak little, becomes a Woman ; plain At-
tire adorns her.

Ibid. To obey a Woman is the greatest Ignominy
to a Man.

Ser. 74. I approve not the having of Children ; for I
see the troubles of them are many and great ;
the Comforts and Pleasures few and small.

Ibid. A rich Man, in my opinion, shall do well to
adopt the Son of some Friend ; for, by this
means, he may have such a one as he hath a mind
to ; for he may chuse where he pleaseth, and
take such a one as may best agree with him.
There is a great difference betwixt these two ;
he who Adopts a Son, hath the liberty to make
choice out of many that are good, and will
please him ; he that begets one, runs the hazard
whether he will prove such, or no.

Ibid. The begetting of Children seemeth to come
from a most ancient Institution, and instinct of
Nature, as is manifest even from brute Beasts,
who beget young ones, though without hopes
of receiving any advantage by them ; As soon as
they are brought forth, they feed and bring
them up, and are solicitous for them even in
the least things ; and if they come to any hurt,
they grieve at it. Such is the disposition of all
Animals ; how much more of Man, who hopes
for a benefit from his Off-spring.

Ser. 84. The excellency of Sheep consisteth in being
fat ; of Men, in being virtuous.

Ser. 90. As of Wounds, the worst is that which Gan-
grenes : so, of the Diseases of the Mind, is in-
fatiate Avarice.

Ser. 92. A prudent use of Money conduceth to the
practice of liberality and relief of others ; he
that useth Money foolishly, makes it the Prey
of all Men.

Ibid. To get Money, is not ill ; but to get it un-
justly, is the worst of ills.

Ser. 95. Poverty and Riches are the Names of Want
and Sufficiency : He who wants, ought not to
be called Rich ; nor He who wants not, Poor.

Ibid. If you desire many things, many things will
seem but a few.

Ibid. To desire little, makes Poverty equal with
Riches.

Ser. 96. Good things are hardly obtained by those
that seek after them ; the ill come without
seeking.

Ibid. We must consider that the Life of Man is
brittle, and momentary, involved in many
troubles.

Ser. 101. He is happy who is chearful, though posses-
sing little ; he unhappy who is troubled, amidst
much wealth.

Ibid. He that will lead a secure quiet life, must not
engage himself in many things, neither publick
nor private ; nor attempt any thing above his
own Ability and Nature ; but have such regard
to himself, that he decline any exuberance of
Fortune that is offer'd him, assuming no more

than he is well able to bear ; for the conveni-
ence of what we enjoy is more excellent than
the largeness of it.

A publick calamity is greater than a private, Ser. 102.
for it affords no hope of relief.

The hopes of Wise Men may come to pass, Ser. 109.
but those of Fools are impossible.

The hopes of Fools are beyond reason. Ibid.

They who rejoyce in the misfortunes of their Ser. 111.
Neighbours, know not that Fortune is common
to all, and that they have not a Propriety in
joy.

Strength and Beauty are the Goods of the Ser. 112.
Body ; Temperance and Prudence the Crown
of old Age.

It is certain, that the Old Man was once Ibid.
young ; but whether the Young Man shall ever
come to be Old, is uncertain. A good thing
that is compleat, is better than that which is to
come, it being uncertain.

Old Age is a universal imperfection ; it hath Ser. 115.
all things, and yet wants all things.

Some Men, not understanding the nature of Ser. 119.
moral Dissolution, and being conscious of their
own ill actions in Life, are, during the whole
course of their Lives, miserably distracted with
Fears, fancying and feigning to themselves ma-
ny things that are false, as if they were to hap-
pen after death.

(c) He held, that from publick Offices, and
the favour of great Persons, accrue many Or-
naments which grace and set off this Life.

(d) He said, that Nature thrust down Truth,
and hid her quite in the bottom.

(e) He said, that none can be a great Poet
without Madness.

To his Moral Sentences may be added, what
is related of him by (f) *Julian* the Emperor,
That not being able by Discourse to comfort
Darius, who was extremely afflicted at the death
of his beautiful Wife, he promised him to re-
store her to Life, if he would supply him with
such things as were requisite for performance
thereof. *Darius* bad him not spare any thing,
which he thought might help him to bring it to
pass : Soon after he came to *Darius* and told him,
that he had furnished him with all things
except only one, which he could not get, but
that He, who was King of all *Asia* might haply
procure it with little difficulty. *Darius* demand-
ing what it was, that no Man could get but the
King himself ? *Democritus* told him, that if he
could write on her Tomb the Names of three
Persons that have never grieved, she would re-
turn to Life. *Darius* perplexed hereat, there
being no Man to whom some occasion of Grief
hath not happened ; *Democritus*, after his usual
manner laughed, saying, Can you then, the
most unreasonable of all Men, Weep with such
confidence, as if you were the only Person that
ever suffer'd affliction, and yet are not able to
find out, through all the ages of Mankind, one
Person that hath not received some particular
Cross ?

PROTAGORAS.

CHAP. I.

His Country, Father, and the occasion upon which he studied Philosophy.

Laert.

Protagoras, was an Abderite, Son of Artemon; or as Apollodorus and Dinon, of Mæandrius; but Eupolis saith, he was a Teian.

He was first a Porter, as Epicurus relates, and by that occasion came into favour with Democritus: Being young, saith Agellius, he was constrained, for his sustenance, to take upon him the Office of a Porter; and, from some places adjoining, carried burthens of Wood to Abdera, of which City he was. Democritus, who was also of the same City, a person eminent for his Virtue and Philosophy, going abroad into the fields, saw him coming nimbly along loaden with one of his usual burthens; and when he came near him, observing that the Wood was neatly placed, and handsomly bound up, spoke to him to rest himself a little; which he did, and Democritus, in the mean time, took great notice of the bundle, that it was tyed up as it were Geometrically. He asked him, who put his Wood in that order? and he answering, that it was he himself had done it; Democritus desired him to untie it, and put it into the same order again; which he did. Democritus admiring the ingenuity of a person wholly void of Learning; Young man, saith he, seeing you have the wit to know how to do well, there are better and greater things which you may do with me, and immediately carrying him home, kept and maintained him, and made him that which afterwards he was.

CHAP. II.

His Opinions, and Writings.

Laert.

HE first said, That every thing hath two reasons or arguments, one contrary to the other; which way of arguing, he first used.

He began one of his Books thus; *Man is μέτρον ὅτων ὄντων μέτρον, the measure of all things: of beings as they are; of not beings, as they are not.* By μέτρον he means the critery, by ὄτων ὄντων, ὅτων ὄντων, of things; which is as much as to say, Man is the Critery of all things, of Beings as they are, of not Beings as they are not. Hereupon he asserts the Phænomena's to be particular to every one.

He saith, that Matter is fluid, and being in perpetual fluxion, appositions are made instead of substractions; and the senses are transmuted and changed, according to the several ages and constitutions of the body.

He saith also, the reason (or powers) of all Phænomena's are subjected in Matter; so that Matter in it self, is all things which it appears unto all. But men at different times perceive

things different, by reason of their different habits. He whose Constitution is sound, of the things which are in Matter, perceiveth those which are capable of appearing to such persons; They who are otherwise disposed, perceive the things which are capable of appearing to persons of a contrary Constitution. The same reason there is in the difference of ages, in sleeping and waking, and in all kinds of habits. Man therefore is the Critery of things that are; for all things, which appear to men, are; those which appear not to any man, are not.

He held, that the Soul is nothing more than the senses, as Plato in his *Timæus* affirms; and that all things are true.

Another of his Books he began thus; *Of the Gods I know nothing, neither that they are, nor that they are not; for there are many things which hinder us from this knowledge, the blindness and shortness of human life.* For the beginning of this Book he was banish'd by the Athenians, and his Books burnt in the open Market-place. After that they had been diligently exacted of all that had any of them, by the publick Cryer.

He was the first that took a hundred Minæ for a gratuity. He, and Prodicus the Teian, got Money by reciting Orations in publick.

He first defined the parts of time, and explained the power of opportunity, and instituted disputations by way of contest; and proposed sophisms to the disputants, slipping besides the sense and playing upon the word, introducing the light, superficial, eristick way, whence Timon saith of him,

Protagoras, well in contention read.

He first abrogated the Socratick way of disputation, and first examined the argument of *Antisthenes*, whereby he endeavours to demonstrate, that it could not be contradicted, as Plato saith in his *Euthydemus*; and first produced Epicheirems against Positions.

He first divided an Oration into four parts, Request, Interrogation, Answer, Command: Some say into seven; Narration, Interrogation, Answer, Command, Enuntiation, Request, Appellation; which parts he called the foundations of Orations. But, as *Alcidamas*, four; Affirmation, Negation, Interrogation, Appellation.

He first recited his discourse concerning the Gods (the beginning whereof we formerly mentioned) at Athens, in the House of *Euripides*, or, as some say, of *Megaclides*: Others say, in the *Lyceum*, and that *Archagoras*, his Disciple, Son of *Theodorus* spoke it for him. He was accused by *Pythodorus*, Son of *Polyzelus*, one of the 400 Senators; but *Aristotle* saith, that *Evathlus* accused him.

His

His Writings which are now extant, saith *Laertius*, are these ;

- The Eristick Art.*
- Of Wrestling.*
- Of Mathematicks.*
- Of Politicks.*
- Of Ambition.*
- Of Vertues.*
- Of Settlement of Government.*
- Of the things in the Inferi.*
- Of the things that are done amiss by men.*
- Preceptory.*
- Judgment upon reward.*
- Antilogicks. 2.*

These were His Books. *Plato* wrote a Dialogue, and intituled it by his Name.

C H A P. III.

His Death.

P*Hilochorus* relates, that, as he was sailing to *Sicily*, the Ship wherein he went was cast away ; and this, he saith, is confirmed by *Eurypides* in his *Ixion*. Others relate, that he dyed by the way, having attained to ninety years ; *Apollodorus* saith, to 70. and that he had been a Sophist forty years ; and that he flourish'd about the 74th Olympiad. *Laertius* hath this Epigram upon him.

*And thee, Protagoras, flying, they say,
From Athens, death did seize on by the way ;
Thou might'st escape from Pallas and her Town,
But Pluto would not lose what was his own.*

ANAXARCHUS.

Laert.

A*Naxarchus* was an *Abderite* ; he heard *Diomenes* of *Smyrna* ; or, as others, *Metrodorus* of *Chios*, who said he did not know so much as this, that he knew nothing. *Metrodorus*, as some say, heard *Nessus* a *Cbian* ; as others, *Democritus*. *Anaxarchus* lived with *Alexander*, and flourish'd about the 110th Olympiad, and was a great Enemy to *Nicoreon* King of *Cyprus* ; insomuch that *Alexander* at a Feast demanding what he thought of the entertainment ? he Answered, All things, great King, are very Magnificent ; only there is wanting the head of some Satrapa, reflecting upon *Nicoreon*. After the King's death, *Nicoreon* bearing this Injury in mind, laid hold of *Anaxarchus*, (who against his will was cast upon the shore of *Cyprus*) and caused him to be put into a Mortar, and pounded with Iron Pestles : whilst he, despising the pain, often repeated this celebrated Speech, Pound the case of *Anaxarchus*, *Anaxarchus* himself you hurt not. Hereupon the Tyrant commanding them to cut out his Tongue, he bit it off, and spit it in his Face.

He, from his Apathy and the Tranquillity of his life, had the attribute of fortunate bestow'd on him. He likewise had an excellent faculty in reducing others to Moderation ; as he reformed *Alexander*, who would conceit himself a God, by pointing to his finger when it bled, and saying, This is Blood, and not

—*The juice that from immortal Gods doth flow.*
Yet *Plutarch* relates, that *Alexander* himself said this to his friends.

Another time, *Anaxarchus* drinking to him, pointed to the Cup, saying,

A mortal hand one of the Gods shall wound.
When *Alexander* came near *Babylon*, the *Chaldeans* dissuaded him from entering the City, affirming, that if he did, it would be fatal to him ; whereupon he passed by, and went to *Bursia*, a City on the other side of *Euphrates*. But *Anaxarchus* and other Greeks perswaded him by Philosophical reasons to contemn the predictions of the Magi as false and uncertain ; whose advice he following, brought back his Army to *Babylon*, where he died.

THE HISTORY of PHILOSOPHY.

The Twelfth Part,
Containing the SCEPTICK Sect.

PYRRHO.

CHAP. I.

His Country, Parentage, Time, Masters.

OUT of *Elia* there sprung another Sect, no less Eminent than the former, its Author was (a) *Pyrrho*, an *Elia*n. His Father, as *Diocles* affirms, was named *Plistarchus*, of ob-

scure and mean Quality, for such (b) *Antigo-* b *Lant.*
nus relates *Pyrrho* himself at first to have been; his Sister *Philista*, a Midwife.

Suidas

Suidas saith, He was in the time of *Philip* King of *Macedon*, about the 101 Olympiad: But this seems rather to have reference to the time of his Birth, than to that wherein he flourished; for *Anaxarchus* (his Master) was Contemporary with *Alexander* the Son of *Philip*, and is, by *Laertius*, said to have flourished in the 110th Olympiad; for which reason perhaps it is, that *Suidas* adds, *And thence forward*. (c) He was first (as *Apollodorus* relates) a Painter; *Aristocles* saith, An ill one; But (d) *Antigonus* affirms, That in the *Gymnasium* at *Elis*, was preserved a very good piece of his doing, representing Torch-bearers.

(e) Afterwards (saith *Apollodorus*) he applied himself to Philosophy. *Aristocles* saith, he lighted upon some Writings of *Democritus*. *Alexander* in his Successions, That he heard *Dryso* Son of *Stilpo*, whom *Suidas* terms *Bryso*, adding, He was Disciple to *Glinomachus*, a Dialectick, Contemporary with *Stilpo*.

(f) Next he addicted himself to *Alexander*, Disciple of *Metrodorus* the Chian, whose Master was *Metrodorus* the Abderite.

(g) Afterwards he heard *Anaxarchus*, [the Abderite] whom he followed every where, inso-much as he conversed with the *Gymnosophists* in *India*, and with the *Magi*.

CHAP. II.

His Institution of a Sect.

HE seemeth (saith (a) *Ascanius* the Abderite) to have found out a noble way of Philosophizing, introducing Incomprehension, and the way of Suspension. For he asserted nothing, neither honest nor dishonest, just nor unjust, and so of every thing. That there is nothing indeed such, but that Men do all things by Law and Custom; That in every thing, this is not rather than that.

(b) This was called the *Zetetic* Philosophy, from its continual enquiry after Truth; *Sceptick*, from its continual Inspection, and never finding; *Ephectick*, from the Affection which follows upon this Inquisition, Suspension; *Aporetick*, from doubting of all dogmatical Opinions; (c) *Pyrrhonian*, from *Pyrrho*. But *Theodosius*, in his *Sceptick* Summary, saith, That the *Sceptick* Philosophy ought not to be called *Pyrrhonian*: For if the motion of another's Intellect be incomprehensible to us, we cannot know how *Pyrrho* was affected; and, not knowing it, we cannot be called *Pyrrhonians*. Besides, neither was *Pyrrho* the first that found out *Scepticism*, to assert no Doctrine. It should rather be called, like the course of *Pyrrho*. Thus *Theodosius*.

On the other side, *Numenius*, (and he only, as *Laertius* observes) affirmed, That *Pyrrho* dogmatizeth; But of this more hereafter.

CHAP. III.

His Manner of Life.

CONFORMABLE (a) hereunto was his manner of Life; he shunned nothing, nor took any

heed, but went straight on upon every thing; Chariots, if it so hapned, Precipices, Dogs, and the like, not turning out of the way, nor having any regard to Sense, being saved, as *Antigonus* saith, by his Friends that followed him. But *Aenesidemus* affirms, That though he discoursed Philosophically upon Suspension, yet all his Actions were not inconsiderate.

(b) He used to walk forth solitary, seldom shewing himself to those of his Family. This he did upon hearing a certain *Indian* reproach *Anaxarchus* for teaching, That no Man but himself was Good, and yet in the mean time he frequented the Courts of Princes.

(c) He was always in the same state, inso-much that if any Man in the midst of his Discourse went away, he nevertheless continu'd his Discourse till he had ended it. Though in his Youth he were fickle, he took many Journies, never telling any whither he went, and chose such Company as he pleased.

(d) *Anaxarchus*, falling into a Ditch, he went on, not offering to help him; which when some blamed, *Anaxarchus* himself commended his Indifference and want of Compunction.

(e) Being found talking to himself, and demanded, Why he did so? I study, saith he, how to be good.

(f) In Arguments he was slighted by none, forasmuch as he had an extraordinary way of speaking to the Question; with which he took *Nausiphanes*, being a very young Man. He said, that his Affection ought to be *Pyrrhonian*, his Words his own. *Epicurus*, often admiring the Conversation of *Pyrrho*, continually question'd him concerning himself; so much was he honor'd by his Country, as that they made him chief Priest, and, for his sake, made a Decree of Immunity for all Philosophers. He had many that imitated his Unconcernedness, whence *Timon* saith of him in his *Pytho*, and *Silli*;

*How learn'd'st thou (aged Pyrrho) to untie
The slavish bands of empty Sophistry?
The Air of Greece thou mind'st not, nor to know
Whence things are made, and into what they go.*

And again in *Indalmis*,

*Pyrrho I long to be inform'd by Thee,
How Thou, a Man, liv'd'st like a Deity?*

Diocles (cited by *Laertius*) affirms the *Athenians* made him free of their City, for killing *Cotis* the *Thracian*; But this, as the learned *Causabon* hath observed, seems to be a mistake, occasion'd by the nearness of the Names; for it was *Pytho*, Disciple to *Plato*, who slew *Cotis*, as is manifest from *Plutarch*.

(g) *Eratosthenes* relates, That he lived piously with his Sister, and often carried to Market Birds; or, as it hapned, Pigs to sell, and managed his Household-Affairs with the like indifference, inso-much as he is reported to have washed a Sow.

(h) But as once *Phylis*, his Sister, was sacrificing, who being disappointed by a Friend, who promised to give her things for the Sacrifice, she to herself was constrain'd to buy them; he

he was very angry, and fell out with her for it; whereupon one of his Friends saying, "That his Actions were not answerable to his Discourse, nor such as his profession of Apathy, or Indifference, required; He answer'd, *Indifference is not to be shewn towards Women.*

i Arist. and Laert. (i) On a time, a Dog flying upon him, he was troubled at it, [and got to a Tree] for which they who were by, deriding him, and cavilling at it, he said, "It is hard to put off Man quite, yet we must first strive as far as possible, with action against things, and if not so with reason."

k Laert. (k) They say, that upon occasion of some Wound, he underwent corrosive Medicines, Incision and Cauterising. His greatness of Courage is attested by Timon.

Philo the Athenian, who was his Disciple, saith, He mentioned Democritus with greatest respect, and next him Homer with much admiration, continually saying,

Just like the race of Leaves, is that of Men; and for that he compared Men to Flies, and Birds. He used also to repeat these Verses,

*But dye, my Friend, why should'st thou thus lament?
Patroclus dy'd too, who Thee far out-went.*

And all things whatsoever that declar'd the Inconstancy, Vanity, and Childishness of Mankind.

Posidonius relates of him, That, being at Sea in a Storm, his Companions dejected, he, with a quiet mind, shewed them a Pig feeding in the

Ship, saying, *A wise Man ought to be fild in such Indisturbance.*

CHAP. IV.

His Death, and Disciples.

HE (a) dyed 90 years old, (b) leaving nothing behing him in writing.

(c) Of his Disciples, some were very eminent, of which number were these,

Eurylochus, of whom is related this Extravagance: On a time he was so far transported with Fury, that, snatching up the Spit with the Meat upon it, he pursued the Cook into the Forum: And at *Elis*, being weary of those that disputed with him, he threw off his Cloke, and swam cross the River *Alpheus*. He was a great Enemy to the *Sophists*, as *Timon* saith.

Philo, [an Athenian] who frequently talked to himself; whence *Timon* of him.

*Of private, talking with himself alone,
Not minding Glory, or Contention.*

Hecataeus of *Abdera*.

Timon, the *Phliasian*, who writ the *Silli*.

Nausiphanes, a *Teian*, whom, they say, *Epicurus* heard.

These all were called *Pyrrhonians* from their Master; *Aporcticks*, and *Scepticks*, and *Ephecticks*, and *Zeteticks*, from their (as it were) Doctrine.

THE
HISTORY of PHILOSOPHY.

TIMON.

CHAP. I.

His Life.

A Pollonides the Nicean, in his First Book of Commentaries upon the *Silli*, Dedicated to Tiberius Cæsar, saith, that the Father of Timon

was named *Timarchus*, by Country a *Phliasian*; and that *Timon*, whilst in his Youth, taught to Dance; but afterward changing his Mind, he
P p p took

took a Journey to Megara, to see Stilpo, and having had conversation a while with him, returned home and Married. Then he went to Thebes to see Pyrrho, taking his wife along with him, who, during the time of his being there bore him Sons; the Elder he called Xanthus, whom he taught Physick, and left him his Successor in the course of Life he himself had led.

Sotion in his Tenth Book affirms, he was very eminent. Wanting necessary Provisions, he went to the Hellespont, and Propontis, and professing Philosophy at Chalcodon, was exceedingly honour'd. From thence having now gotten a good stock, he went to Athens, and lived there to his end, except that once he made a short journey to Thebes. He was known to Antigonus the King, and Ptolemæus Philadelphus, as he himself attests in his Iambicks.

He was, as Antigonus saith, a lover of Wine, and gave himself much diversion from Philosophical Studies, as appears by his Writings.

He took much delight in Gardens and Solitude, as Antigonus reports; whereupon Hieronymus the Peripatetick said, That as the Scythians shoot both when they fly and when they pursue; so of Philosophers, some get Disciples by running after them, others by running from them, as Timon.

He was of an acute apprehension; and quick in deriding; a great lover of Writing, very skilful in Composing Poetical Fables, and Drama's. In his Tragedies he had much of Homer, and of Alexander. When Servants or Dogs disturb'd him, he gave over, aiming above all things at a quiet life.

Aratus demanding of him by what means he might procure an uncorrupt Copy of Homer? he answer'd, If you can light upon old Copies, not those that have been lately corrected.

His own Poems were thrown up and down, confusedly, and many times torn; insomuch as when Zopyrus the Orator read something of his, he made it up out of his own Memory; but when he came to the midst, there was a great gap, which he was ignorant of.

He was so indifferent, that he observed no time for Dinner.

Seeing Arcefilaus walking amongst Flatterers, He said, What do you here, where we Freeman are?

Of those who judge by the Senses, and Mind, he continually said, Attagas and Numinus are met.

b Laert. (b) He often used to sport after this manner; To one that admired all things, *Why then, saith he, dost thou not admire, that we, being but three, have four Eyes*; for he, and Dioscorides his Disciple, had each of them but one Eye, [(c) whence he used to call himself Cyclops] the other to whom he spoke had two. And on a time, being demanded by Arcefilaus, Why he came from Thebes to Athens, he said, *That I might laugh to see you fly*. But though in his Silli he abused Arcefilaus, yet in his Treatise entituled, *The inward Banquet of Arcefilaus*, he commends him.

CHAP. II.

His Death and Writings.

HE Died almost 90 years of age, as Antigonus, and Sotion in his 11th Book affirm.

There was another Timon, the Man-bater; of whom, see Lucian and Suidas.

He writ Poems, and Verses, and Tragedies, and Satyrs, Comical Drama's 30. and Tragical 60. and Silli and Cinædi. There were also several Writings of his in Prose, amounting to 20000 Paragraphs.

Of his Silli there are Three Books, in which, as a Sceptick, he reproached and derided all the Dogmatists: The First written in his own Person, in a continued way. The Second and Third by way of Dialogue. He questioned Xenophanes the Colophonæan about every thing, who answers to all. In the Second, He Treats of the more Ancient; In the Third, of the Later Philosophers, whence some entitle it the Epilogue. The First Book contains the same things, only delivered in another way, the Poem having but One Person. It begins thus;

Now busy Sophists all, come follow me.

CHAP. III.

Succession of the School.

ALTHOUGH, as Disciples of Timon, are mentioned by Laertius, Xanthus his Son, and Dioscorides; and, by Suidas, Pyrrho a Phlæasian, Son of Timarchus; yet (a) Monodotus affirms, a Laert. "That Timon had no Successor, but that the Institution was intermitted, until Ptolemy a Cyrenæan renew'd it; whose Auditors (according to Hippobotus and Sotion) were Dioscorides a Cyprian, Niolobus a Rhodian, Euphranor a Seleucian, and Praxylus of Treas, who was of so seduced a constancy, that being accused of Treason, he chose rather to undergo the punishment unjustly, than to plead to his Countrymen.

"Eubulus an Alexandrian, heard Euphranor; him, Ptolemy; him, Sarpedon and Heraclides, Disciple to Heraclides was Enefidernus a Gnossian, [who flourished, as Aristocles saith, at Alexandria] he wrote eight Books of Pyrrhonian Discourses. Him, Zeuxippus of Polis heard; Him, Zeuxis, surnamed Γωνιότης; him, Antiochus, a Laodicean of Lycus; him, Menodotus of Nicomedia, an Empirical Physician, and Theodas of Laodicea, Disciple to Menodotus was Herodotus of Tarsis, Son of Aricus; to Herodotus, Sextus Empiricus, whose Ten Books of Sceptick Philosophy are extant, and other excellent Treatises. [This Sextus may probably be esteemed that Sextus Chæronensis, Nephew of Plutarch, whom Marcus Aurelius the Emperor so honoured, that he admitted him to sit in Judicature with him] Disciple to Sextus was Saturninus a Cybænæan, who was also surnamed Empiricus. Hitherto Laertius.

Having

Having spoken of the Author of the *Sceptick* Philosophy, and its Succession, our Method leads us to set forth the Doctrine itself; which being already excellently handled by *Sextus Empiricus*, I think it would be more for the Reader's advantage, to have it delivered in his Words than in my own. The Treatise, I confess, may seem long; and indeed I had some Thoughts of abridging it: But when I considered, how difficult it were to prune it, as to please all Persons, and that itself was intended but as a Summary; and that if it had been my case to have received it from some other hand, I should rather have desired to have it entire, of what length

soever, than mangled even by a skilful Artist: I hope I shall be excused, if I so deal with the Reader, as I should desire to have been dealt withal my self. Neither can I suppose it will be unpleasant to those, who have been conversant in the more severe and knotty Disquisitions of the Schools; for the Author is Learned and Acute, even beyond the Subject he handles, and hath many passages of the Antients, which are not elsewhere to be had. But if any who have accustomed themselves only to lighter Studies, shall think it tedious, it is no great pains to turn over some Leaves, and see if they can find something else more acceptable.

A Summary of SCEPTICISM.

Sexti Empirici, Pyrrhoneæ Hypotyposes.

THE FIRST BOOK.

CHAP. I.

The Three Differences of Philosophers in General.

IT is likely, that they who seek, must either find, or deny that they have or can find, or persevere in the enquiry. Hence (it may be) some of those who profess Philosophy, declare, they have found the truth; others hold it impossible to be found; others still enquire. They who suppose they have found it, are called *Dogmatists*; such are the *Peripateticks*, the *Epicureans*, the *Stoicks*, and others; they who think it incomprehensible, are *Clitomachus*, *Carneades*, and other *Academicks*; they who still enquire, are the *Scepticks*. So as there seemeth to be three kinds of Philosophy, *Dogmatick*, *Academick*, *Sceptick*. The two first we leave to others, intending a summary of the *Sceptick*: professing before-hand, that we are not sure any thing we say is absolutely so; as we affirm; but we shall plainly discourse on every thing, as it appeareth to us for the present.

CHAP. II.

The Parts of Scepticism.

OF *Sceptick* Philosophy there are two parts, *General* and *Special*; The general is that, wherein we explain the Character of *Scepticism*, declaring (1) the Signification of it; (2) the Principles; (3) the Reasons; (4) the Criterie, (or Instrument of Judication;) (5) the End; (6) the Common-places of Suspension; (7) how the *Sceptical* Phrases are to be understood; (8) the difference of *Scepticism* from those Philosophies that are most like it.

The *Special* is that, wherein we contradict every part of that which is called Philosophy. But first of the *General*.

CHAP. III.

The Names of Scepticism.

THE *Sceptick* Institution is called also *Zetetic*, (*Inquisitive*) from the Act of Enquiring; *Ephæctick*, (*Suspensive*) from the Affection rais'd by enquiry after things; *Aporetick* (*Dubitative*) either (as some say) from doubting of, and seeking after all things, or from being in doubt whether to assent or deny; *Pyrrhonian*, in as much as *Pyrrho* delivered it to us more substantially and clearly than those before him.

CHAP. IV.

What Scepticism is.

Scepticism is a faculty opposing *Phænomena's* (Appearances) and *Intelligibles*, all manner of ways; whereby we proceed through the *Æquivalence* of contrary Things and Speeches, first to Suspension, then to Indisturbance.

We call it a *Faculty*, from the power thereof; by *Phænomena's* we understand Sensibles, which we oppose to *Intelligibles*. These words, all manner of ways, may be referred to *Faculty*, taking the word *Faculty*, (or *Power*) simply. (a) It may likewise be applied to the opposition betwixt *Phænomena's* and *Intelligibles*, since we oppose them several ways, *Phænomena's* to *Phænomena's*, or *Intelligibles* to *Intelligibles*, or

One to the Other. Wherefore, to include all Oppositions, we say, *all manner of ways*. Or, all manner of ways, of *Phænomena's* and *Intelligibles*, not enquiring how *Phænomena's* seem, or how *Intelligibles* are understood, but taking them simply. By *contrary Speeches*, we mean not only Affirmation and Negation, but simply those which are repugnant. *Equivalence* we call an equality as to Belief or Unbelief; so as neither of the repugnant Speeches is preferred as more credible than the other. *Suspension* is a settlement of the Intellect, whereby we neither affirm nor deny any thing. *Indisturbance* is a composure and tranquility of Mind: how *Indisturbance* is induced by *Suspension*, we shall discourse when we come to speak of the End.

A *Pyrrhonian* Philosopher is wholly addicted to the *Sceptick* Institution; for he is such an one as participates of this Faculty.

CHAP. V.

The Principles of Scepticism.

THe final Cause (*End* or *Aim*) of *Scepticism* we hold to be, Hope of *Indisturbance*: for Man's Mind being troubled at the unsettledness in things, and doubting what to assent unto, enquireth what is true and what false, that by determination thereof it may be quiet. But the chief ground of *Scepticism*, is, *that to every Reason there is an opposite Reason equivalent*, which makes us forbear to dogmatize.

CHAP. VI.

Whether the Sceptick dogmatizeth, and hath a Sect, and treats of Physick.

WE say, *The Sceptick doth not dogmatize*: not understanding *Dogma* as some do in the general acceptation, an assent to any thing (for the *Sceptick* assenteth to those Affections [or Impressions] which are necessarily induced by Phantasie, as (being hot or cold) he will not say, *I think I am not heated or cool'd*; but we say, he doth not dogmatize in their sense who take *Dogma*, for an Assent to any of those non-manifest things which are enquired into by Sciences. For a *Pyrrhonian* Philosopher assents to nothing that is not manifest: neither doth he dogmatize when he pronounceth the *Sceptick* Phrases concerning things not manifest, as, *Nothing rather*, or, *I assert nothing*, or any of the rest, of which hereafter. For he who dogmatizeth, asserteth the thing, which he is said to dogmatize, to be such; but a *Sceptick* useth these expressions not as positive, for he conceiveth that this Proposition, *All things are false*, (amongst the rest) declareth it self also to be false; in like manner this, *Nothing is true*; so this, *Nothing rather*, (amongst others) implies itself is nothing rather to be credited; so as (together with the rest) it circumscribeth it self. The same we hold concerning the rest of the *Sceptick* Phrases. Now if he who dogmatizeth, asserteth that which he dogmatizeth to be such; but the *Sceptick* delivers his expressions in such manner as they

may be circumscribed by themselves, he cannot be said to dogmatize. Moreover, in these Expressions he speaketh that which appeareth to him, and declareth how he is affected, without engaging his Opinion, (or Judgment) but ascertaining nothing concerning external objects.

The same course we observe, being demanded *Whether the Sceptick hath a Sect*; If a Man understand *Sect*, to be an inclination to many *Dogma's* or *Tenents*, which have a mutual consequence, and likewise *Phænomena's*, and take *Dogma* to be an assent to something not manifest; we say he hath not a *Sect*. But taking *Sect* to be an Institution, which according to the *Phænomenon*, adhereth to some kind of Reason, that Reason shewing how to live rightly (meaning rightly, not only according to Virtue, but more simply, and tending to Suspension of Assent) we say, he hath a *Sect*; for we follow some certain reason according to the *Phænomenon*, which sheweth how to live according to the Rites, Laws, and institutes of our Country, and our own Affections.

The like we say to those who enquire, *Whether the Sceptick treats of Physick*; as to Assent grounded on a firm belief of any Physical dogm, we have nothing to do with Physick: But, as to equal opposition of all Speeches, even in Physick, we obtain *Indisturbance*, and thus also we deliver the *Logick* and *Ethick* parts of that which is called Philosophy.

CHAP. VII.

Whether the Scepticks take away Phænomena's.

THEY who say, *the Scepticks take away Phænomena's*, seem not to understand what we have said: For we subvert not those *Patheticks* in Phantasy, which force us against our Wills to an Assent, (as we said before) Such are *Phænomena's*; For, when we enquire whether the Subject be such as it appears, we grant that it appears; but we enquire (not of the *Phænomenon*, but) of that which is said concerning the *Phænomenon*. For instance, Honey seemeth to us to be Sweet; this we grant, for we find it such to our Sense; but whether Sweet come within the reach of Reason, we doubt: this is not the *Phænomenon*, but that which is said concerning the *Phænomenon*. Moreover, when we raise questions concerning the *Phænomenon*, we endeavour not to subvert the *Phænomena's* (these we presuppose) but only to discover the Temerity of the Dogmatists. For if reason be so fallacious, that it almost takes away *Phænomena's* from our Eyes, how can we but mistrust it in things not manifest, rather then precipitately follow it?

CHAP. VIII.

The Criterie of Scepticism.

THAT we acquisce in *Phænomena's*, is manifest from what we say concerning the Criterie of the *Sceptick* Institution. *Criterie* is understood two ways; One is, that whereby we believe a Thing so be, or not be, (of this hereafter,

after, when we come to refel the opinions of others concerning it;) the *other* is of Action, whereby we judge in the course of Life what things are to be done, what not; this last is that of which we now speak. We say the Criterie of *Scepticism* is the *Phænomenon*; so call we Phantastie in power; for when it proceeds to Persuasion and coactive Passion, it is not questionable. As to the appearance, whether the subject be such or such, perhaps none doubteth; but whether it be such as it appeareth, is questioned. Thus acquiescing in *Phænomena's*, we live (without engaging Opinions or Judgments) according to the ordinary course of life, in regard we cannot be free from acting [as we may from assenting.]

This course of Life seems to be four-fold; conversant partly in *natural Instruction*, partly in the *Impulsion of Passions*, partly in *giving Laws and Customs*, partly in *teaching Arts*. In *Natural Instruction*, by which we are naturally endued with Sense, and Intellect; in *Impulsion of Passions*, as Hunger leads us to meat, Thirst to drink; in *giving Laws and Customs*, by which we learn that to live Vertuously is Good, to live Viciously, ill; in *teaching Arts*, by which we are not idle in those Arts which we receive. All this we say, without engaging our Opinion (or judgment.)

CHAP. IX.

The end of Scepticism.

IT follows that we treat of the *End of Scepticism*. The End is, *That for which all things are acted or contemplated, but it self is not for any other; or the last of things appetible*. We say that the End of the *Sceptick* is ἀναξέλια, *Indisturbance*, in whatsoever belongs to Opinion, and μέτριον, *Moderation*, in whatsoever belongs to Compulsion. For beginning to study Philosophy, that he may discern and comprehend which Phantasies are True, which false, and by that means not to be disquieted, he lights upon an equivalent Contrariety, of which not being able to judge, he suspends; and whilst he is accidentally in this Suspence, there follows it an Indisturbance as to things Opinionative: For he who is of Opinion there is something Good or Bad in its own nature, is continually disturbed; when those things which seem to him good, are not present, he imagineth himself (a) tormented with things Ill in their own nature, and pursueth that he conceives to be Good; which having obtained, he falleth into more Troubles. For being unreasonably and immoderately transported, and fearing a change, he useth all endeavour that he may not lose those things which he conceives Good. Whereas he who defines nothing concerning Things naturally Good or Bad, neither flyeth nor pursueth any thing eagerly, so that he remains undisturbed.

Thus it happens to the *Sceptick*, as to *Apelles* the Painter, who having drawn a Horse, and trying to Paint his Fome, it succeeded so ill, that in Despair he threw the Sponge, wherewith he used to blot out Colours, at the Picture; which lighting upon the place, made an exact representation of Fome. In like manner, the

Scepticks hoped to obtain Indisturbance by judging of the Unsettledness in *Phænomena's* and Intelligibles; which not being able to do, they suspended, and whilst they were in Suspence, as it were accidentally, Indisturbance overtook them, as a Shadow follows the Body.

Yet we conceive not the *Sceptick* to be absolutely free from trouble; we grant, he is troubled by external Impulsions, he suffers Cold, Thirst, and the like. But in these, the ordinary sort of men are doubly Affected, first with the Passions themselves; and again, no less that these things are naturally ill, whereas the *Sceptick*, taking away the opinion that they are naturally ill, undergoes them more moderately. Hence we say, that the *Sceptick's* end is, in Opinionatives, Indisturbance; in Impulsives, Moderation; to which some eminent *Scepticks* add *Suspension in disquisitives*.

CHAP. X.

The general Ways (or Places) of Scepticism.

IN Disturbance following Suspension, it is requisite that we declare how we attain Suspension.

It ariseth, (to speak generally) from the opposition of things; we oppose either *Phænomena's* to *Phænomena's*, or *Intelligibles* to *Intelligibles*, or the former to the latter. *Phænomena's* to *Phænomena's*, as when we say, the same Tower seemeth afar off, round; near, square: *Intelligibles* to *Intelligibles*, as when to him, who from the order of the Celestial Bodies, argues, there is a Providence, we oppose, that Good Men are often Unfortunate; Bad Men, Fortunate, and thence infer, there is no Providence: *Intelligibles* to *Phænomena's*, as *Anaxagoras*, to *Snow is white*, opposed that *Water is Snow concrete*; but Water is black, therefore Snow is black.

Again, we sometimes oppose things *Present* to the *Present*, as those we last instanced; sometimes the *Present* to the *Past*, or the *Future*, as when an Argument is proposed, which we are not able to resolve, we say; 'As before the Author of the 'Sect, to which you addict your self, was born, 'the reason thereof did not seem sound, and yet 'the thing was the same in nature; so it is likely, that a Reason (or Argument) contrary to 'this which you have alledged, may be substantiated in Nature, and not yet appear to us; 'wherefore we ought not to assent to any Argument, how convincing soever it seems.

To shew these oppositions more exactly, I will lay down the common places by which Suspension is collected, not asserting any thing of their Number or Power; for it is possible, they may be of no force, or more in Number than we reckon.

CHAP. XI.

The ten Common places of Suspension.

THE ancient *Scepticks* have delivered ten Moods, whence Suspension seems to be collected, which they call also *Reasons* and (a) *Places*.

a Reading perhaps πῶτος, for so Laert. reads πῶτος.

a Perhaps πῶτος - δῆλον.

Places. They are these; the First, from the *variety of living Creatures*; the Second, from the *difference of Men*; the Third, from the *difference of the Organs of sense*; the Fourth, from *Circumstances*; the Fifth, from *Positions, and Distances, and Places*; the Sixth, from *Commissions*; the Seventh, from *the quantities and constitutions of Subjects*; the Eighth, from *Relations*; the Ninth, from *rare Accidents*: the Tenth, from *Institutions, Customs, Laws, Fabulous Perswasions, and Dogmatical Opinions*.

This is the Order which we lay down; but there are three moods which comprehend the rest; First, from the thing *judging*; Secondly, from the thing *judged*; Thirdly from *both*. Under that of the thing judging, are comprehended the first *four*, the thing judging is either an Animal, or a Man, or Sense, or in some circumstance; under the thing judged, the *Seventh*, and the *Tenth*; under that which consists of both, the *Fifth*, the *Sixth*, the *Eighth*, and the *Ninth*. Again, these three are comprehended in the Mood of *Relations*; so as the most *general* is, that of *Relations*; the *Special*, the other three, under which are comprehended the ten. Thus much we probably hold as to their Number; now as concerning their Power.

C H A P. XII.

The first Common-place.

THe first Common-place we hold to be that whereby, *through the difference of living Creatures*, Phantasies not the same are derived from them. This we collect both from the difference of their *Generations*, and from the difference of the *Constitutions* of their Bodies. Of their *Generations*, because of living Creatures, some have their Being *without Coition*; others *by Coition*. Of those which are produced *without Coition*, some come of Fire, as the Crickets in Chimneys; some of *Corrupted Water*, as Gnats; some of *sour Wine*, as Snipes; some of *Earth*, whereof some of *Slime*, as Frogs; some of *Dirt*, as Worms; some of *Ashes*, as Beetles; some of *Plants*, as Caterpillars; some of *Fruits*, as Maggots; some of *putrify'd Animals*, as of *Bulls*, Bees; and of *Horses*, Wasps.

Of those which are produced *by Coition*, some are begotten by creatures of the *same Species*, such are the greatest part; others by Creatures of *different Species*, as Mules. Again, of living Creatures, some are brought forth *alive*, as Man; others come from *Eggs*, as Birds; some from a *lump* of Flesh, as Bears: It is therefore probable, that the Dissimilitudes and Differences of these Generations effect great Antipathies, receiving thereby contrary Temperament, Discordance, and Repugnance.

Moreover the *difference of several parts* of the Body (especially of those which Nature made for Judgment and Sense) may cause a great repugnance of Phantasies, according to the diversity of living Creatures. Those things which to us seem White, they who have the *Yellow Jaundice* affirm to be Yellow, and they who have a *Hyphosphagme* in their Eyes, Red. As therefore, of living Creatures, some have Eyes Blood-red, others Whitish, others of other Colours, it is

likely they perceive Colours after different manners. Even to us, if we gaze a while upon the Sun, and immediately after look upon a Book, the Letters will seem of Gold, and as if they moved round.

Forasmuch also, as some living Creatures have naturally a certain *Brightness* in their Eyes, and emit from them a quick rare light, so as they can see in the Night, we think it probable, that External Objects incur not into *their* Sense, like what they seem to *ours*.

Again, Juglers, by anointing Candles with a Liquor made of the rust of Brass, or with the Blood of the Fish *Sepia*, cause the Standers-by to seem either of the Colour of Brass, or Black, by that little insperction of Unguent; Much more (a) likely is it, that the humours, mixed in the Eyes of living Creatures, being different, they have different Phantasies, from the same Object.

a M. S. ἐνλογεῖται. ἐστίν.

Again, if we pinch the Eye, the Forms and Figures of visible things seem *long* and *narrow*: It is therefore likely, that all living Creatures which have Eye-balls oblique and narrow (as Goats, Cats, and the like) have a peculiar phantasia of Objects, different from those which have round Balls.

Looking-glasses, according to their several Forms, sometimes represent the Object *less*, as when they are concave; sometimes *oblong* and *narrow*, as the convex; some there are that represent the head of the beholder *downward*, and his feet *upward*. As therefore of the Organs of Sight, some are extuberant, some hollow, some plain; it is likely the Phantasies are different, and that Dogs, Fishes, Lions, Men, Lobsters, behold not things as great, or in the same Form, as they are in themselves; but according to the various Impressions which the sight suffereth from the Object.

It is the same in other senses; for how can we say, That Creatures covered with Shells, with Flesh, with Prickles, with Feathers, with Scales, are alike affected as to the Touch? Or, that they which have the hole of their Ear narrow, and they which have it wide; those which have Ears full of hair, and those which have smooth Ears, receive sound alike? Seeing that we our selves, (b) pressing the Ear, hear it different from that which it seems otherwise.

b Perhaps ὁρᾷται. αὐτῶν.

Moreover, the *Smelling* may differ according to the difference of living Creatures; for, since we our selves are affected one way, when we have caught Cold, and are oppress'd with Flegm; another way, when the Parts of, and near the Head, abound with Blood, (disliking those Scents which to others seem sweet, and thinking our selves, as it were, hurt by them:) And since of living Creatures, some are naturally flegmatick, others sanguine; some cholerick, others melancholick, it is possible, that from thence, Scents seem different to them.

The like, as to the *Taste*; some have a Tongue rough and dry, others very moist, (even we our selves having our Tongues drier than ordinary in Feavers, think, that such things as are given us taste earthy, unfavoury, or bitter.) This we suffer, through the different prevalence of Savours in us. Since therefore in living Creatures, the organs of Taste are different, and abound with different Humors; hence they

they may in Taste receive different Phantasies from the same Objects.

For, as Meat digested turns here into Veins, there into Arteries; here into Bone; there into Sinewes, and so of the rest; manifesting a different power, according to the difference of the parts which receive it. And as Water, one and the same specifically, being infused into Trees, here turns into Leaves, there into Boughs; here into Fruit, Figs, Pomgranats, and the rest. And as one and the same blast of a Musitian in a Pipe, here is Flat, there Sharp: and the touch of the hand upon the Lute, makes sometimes a high, sometimes a low sound: so is it likely, that external Objects are differently apprehended, according to the different constitutions of the living Creatures, to which the phantasies occur.

This we learn more evidently from the Appetite, and Aversion of living Creatures. Unguents seem sweet to Men, but to Beetles and Bees are intolerable: Oyl is wholesome to Men, but kills Wasps, and Bees, if sprinkled upon them: Sea-water, to Men, is unpleasant of taste and unwholesome; to Fishes sweet and potable. Swine delight more to wallow in filthy Mire, than in pure Water.

Moreover, of living Creatures, some eat Herbs, some Boughs, some Sperrn, some Flesh, some Milk, some love putrified Meat, some fresh; some raw, some roasted. Generally, what is pleasant to some, is to others unpleasant, distastful, and poysonous; as Hemlock fattens Quails, Henbane Swine; Swine delight also to eat Salamanders, as Stags do Serpents, and Swallows Cantharides: Pismires and Snipes are unpleasant and unwholesome for Men to take down; but the Bear, if he fall sick, recovers his strength by feeding on them. The Viper, if it touch a Bough of a Beach Tree, is taken with a Giddiness; so the Bat, if it touch the Leaf of a Plain-tree; the Elephant flies from the Ram; the Lion from the Cock; Whales, from the crackling of bruised Beans; the Tiger from the sound of a Drum. We might instance many more, but not insist too long hereupon; if the same things are to some pleasant, to others distastful; but pleasant and distastful, consist in Phantasies; then different Phantasies are arrived to several living Creatures, from the same Object. Now if the same things seem different to several Creatures, what the Object appears to us, we can say, but as to what it is in its own Nature, we will suspend; for we are not competent Judges betwixt our own and other Creatures Phantasies, our selves being parties in the difference, and consequently requiring a Judge, rather than being in a capacity of judging.

Again, neither without Demonstration can we prefer our own Phantasies before those of irrational Creatures, nor with Demonstration; for, to prove, that there is no Demonstration, perhaps the Argument or Demonstration will either be apparent to us, or not apparent; if not apparent, we shall not entertain it with belief; but if apparent, seeing the question is concerning (*Phænomena's*) things apparent to living Creatures, and the Demonstration seems apparent to us, who are in the number of living Creatures, the Demonstration it self will be questioned, (forasmuch as it is apparent) whether it

be true. But it is absurd, to endeavour to prove a thing in Question, by a thing which is likewise in Question, for so the same thing shall be Credible and Incredible; Credible as used in Demonstration; Incredible, as requiring to be demonstrated. We shall not therefore find a Demonstration, whereby to prefer our own Phantasies before those of other living Creatures, called Irrational. Now if Phantasies be different, according to the variety of living Creatures, and it be impossible to judge of them, it is necessary we suspend as to the external Objects.

CHAP. XIII.

Whether the Creatures, commonly termed Irrational, have Reason.

WE will (over and above) compare the Creatures termed Irrational, with Men, as to their Phantasie, that we may, after the more serious Reasons, sport with the self-conceited Opinion of the *Dogmatists*. Most of our party confer Irrational Creatures in general, simply with Men; but because the *Dogmatists* cavil hereat, we the better to deride them, will insist only upon one Creature, the Dog, than which none seemeth more contemptible. By this means we shall know, that the Creatures of which we now discourse, are nothing inferior to us, as to credit of *Phænomena's*.

Now that this Creature excelleth us in Sense, is acknowledged by the *Dogmatists*; it is of a much quicker Scent, whereby it pursueth beasts unseen; it discovers them sooner by the Eye than we, and is likewise more acute of Hearing.

Come we therefore to discourse, which is twofold, *Internal* and *Enunciative*. Let us first examine the *Internal*; This, according to (our greatest Adversaries amongst the *Dogmatists*) the *Stoicks*, seemeth to be conversant in these things; in Election of things convenient, and Evitation of their Contraries; in knowledge of the Arts conducing hereto; in comprehension of the Vertues belonging to their nature concerning Passions. Now the Dog, in whom we instance, chuseth things convenient, and flieth the hurtful; he pursueth his Food, and runneth away from the Whip; he hath likewise the Art of acquiring things proper for him. Neither is he destitute of Vertue; Justice being distributive to every one according to their merit; the Dog, who fawneth upon his Friends and Benefactors, and revengeth himself upon his Enemies, by whom he is injur'd, is not void of Justice. And if he hath this Vertue, all the Vertues being linked together, he hath all the rest, which the wisest allow not the ordinary sort of men. We see he is Valiant, in revenging Wrong; Prudent by the testimony of *Homer*; who makes *Ulysses*, not discovered by any of his Friends, owned by *Argus* the Dog; not deceived, either by the alteration in the Body of the Man, swerving from his own comprehensive Phantasie, (which is manifest) he hath in a degree above Man. But, according to *Chrysippus*, (who oppugns irrational Creatures with most eagerness) he partakes of their so much cryed up *Dialectick*; for he saith, When the Dog cometh into a way divided into three, he makes choice of the third by several (a) Indemon-

a What Indemonstrables are, see afterwards, Lib. 2. cap. 13.

strables; for having scented the two ways by which the Beast did not pass, he runs strait upon the third, without scenting it; which is as much (saith the old Philosopher) as to discourse thus; *The Beast passed either this way, or this way, or this way; but neither this way, nor this way, therefore this way.*

Moreover, he apprehends and cures his own Sickness: If a Splinter get into his Foot, he presently strives to get it out, by rubbing his Foot against the Ground, and with his Teeth. If he be Wounded, (Wounds that are kept clean being easily cur'd, the putrid not easily) he continually licks the Hurt. He likewise strictly observes the rule of *Hippocrates*, the Cure of the Foot consisting in rest; he, if hurt in that part, holds it up; and stirs it as little as he can. If he be troubled with ill Humors, he eats Grass; by which means, vomiting up that which disagreed with him, he is cured. Now if this Creature can chuse what is convenient for him, and fly what is inconvenient; if he hath the art of acquiring things proper to him, and can apprehend and cure his own Sickness, and is not void of Virtue, in all which consists the perfection of intrinsecal Discourse, the Dog must be Perfect, as to that. For which Reason as I conceive^(b) some Philosophers chose to be called by name of that Creature.

^b The Cynick.

^c Pythag.

As to *Enunciative* discourse, it is not necessary to examine it; for there are^(c) some Dogmatists who condemn it, as contrary to Virtue; whence they kept silence all the time of their Institution. Besides, though we should suppose a Man to be Dumb, yet none will say, he is void of Discourse, (irrational;) and on the other side, we see many living Creatures which have the speech of Man, as Pyes, and the like. To omit which, though we understand not the Voices of Creatures (termed) Irrational, it is nevertheless likely they discourse among themselves. We understand not the Language of Foreigners, it seems a continued Sound without variety. But we hear that the Voice of the Dog is different; of one kind, when he assaults; of another, when he howls; of another, when he is beaten; of another, when he fawns. In a word, he who examines it curiously, will find a great variety of Voice, not only in this Creature, but in others, according to the diversity of Accidents. So that the Creatures, called Irrational, may justly be said to participate of Enunciative Discourse; and if they come not short of Men, in acuteness of Sense, nor in Intrinsecal Discourse, nor in Enunciative, (though that be not necessary) certainly they are no less creditable, as to Phantasy, than we.

^d Augury.

It is possible, perhaps, to shew the same discourse in all other Creatures; as, who will deny Birds to have a Sagacity, and Enunciative discourse, seeing they know not only things present, but the future, which they declare to such as are able to comprehend it, (amongst many other ways) by^(d) Voice. But this Comparison is added, as I said before, more than necessary, without which, we have sufficiently, I conceive, declared, That our own Phantasies are not to be preferred before the Phantasies of Irrational Creatures. Now if Irrational Creatures are no less creditable than we, in dijudication of Phantasies, and Phantasies are different, according to

the variety of the Creatures; what every object *appeareth* to me, I am able to say; but what it is in itself, (for the Reasons alledged) I Suspend.

C H A P. XIV.

The second Common place.

THe second Common place of Suspension we hold to be, *from the Diversity of Men*; for, though we should grant it were more reasonable to stand to the judgment of Men, than of any other living Creature; yet shall we find so much difference amongst our selves, as may well induce Suspension. Man, they say, consists of two parts, *Soul* and *Body*, in both these we differ one from another; in *Body*, by *Form* and *Constitution*; The Body of a *Scythian* differs in Form from the Body of an *Indian*. This difference ariseth, as we said, from the different prevalence of Humors, and from the different prevalence of Humors arise Phantasies, as we said upon the first ground; whence in Election and Evitation of external things, there is great difference among them. *Indians* delight in some things, we in others; but to delight in several things, argueth a reception of different Phantasies from the same Objects.

We differ also in *Constitution*; there are some who can digest Beef, easier than Anchovies; some, upon drinking of *Lesbian-Wine*, are troubled with Choler. It is reported of an old *Athenian* Woman, That she drank four drams of Hemlock without any hurt; And *Demophon*, *Alexander's* Sewer, whilst he was in the Sunshine, or in a Bath, was cold; in the Shade, was hot. *Athenagoras*, the *Argive*, felt no Pain at the biting of Scorpions, or Phalangies. The People called^(a) *Psylli*, never take Hurt by the biting of Serpents or Asps. ^(b) The *Tintyrice* of *Egypt* take no Hurt by Crocodiles. The *Ethiopians*, that live opposite to *Microe*, along the River *Hydaspes*, eat Scorpions, Snakes, and the like, without danger. *Rufinus* of *Chalcis* when he drunk *Helicore*, never vomited, nor was purged any way by it, but digested it as ordinary drink. *Chrisernus*, the *Herophilian*, if at any time he eat Pepper, was taken with the *Passion of the Heart*, even to hazard of his Life. In *Soterius* the Chyrurgion, the smell of the Fish *Silurus* excited Choler. *Andron* the *Argive* was so little subject to Thirst, that when he travelled through the Deserts of *Lybia*, he did not need Drink. *Tiberius Caesar* saw in the dark. *Aristotle* mentions a^(c) *Thasus*, who thought the Apparition of a Man went always before him. Now there being so great diversity in the Bodies of Men, (it is sufficient that we instance these few, out of the multitude acknowledged by the Dogmatists) it is probable, that Men differ from one another in *Soul* also, for the Body is a kind of Image of the Soul, as the Physiognomy-Science sheweth. But the greatest evidence of the infinite difference of Men, as to Intellect, is the discordance amongst them in Election and Evitation, rightly expressed by the Poets; as *Pindar*,

*Some joy in swift heel'd Comers; some,
In living wantonly at home;
And others on the Ocean roam.*

And

^a Protop. Hist. Mir. 19.
^b The Text is defective; but Francis Mercurius renders it thus, Quia Tintyrice dicuntur, incole, Egypti, inter Crocodilos impune versantur, de vanit. Gent. Lib. 2. cap. 23.
^c Aristophan. Onir.

And the Poet.

In several Actions, several Men delight.

The Tragedians are full of this, as

*If all Men what is good did see
Alike, they would not Disagree.*

And again,

*Alas ! that some Men take delight
In things which grieve another's sight.*

Since therefore Appetition and Aversion consist in Pleasure and Hatred, but Pleasure and Hatred consists in Phantasy; and since the same things are pursued by some, shunned by others; we may infer this Consequence, That they are not alike affected by the same things, otherwise they would all alike desire to shun them. Now if these things affect differently, according to the diversity of Men, there may justly be induced Suspension, since whatever subject appeareth, every one perhaps according to his particular Apprehension may express; but what it is in its own Nature, we cannot assert. For we must either give Credit to all Men, or to some few; if to All, we undertake Impossibilities, and admit Repugnancies; if to some Few, let them tell us, which those Few are, The *Platonists* will say, we must assent to *Plato*; the *Epicureans*, to *Epicurus*; and by their confused Disagreement, reduce us again to Suspension. If any Man alledg, we ought to assent to the greater Number; he argues Childishly, since None can over-run all Men, and examine what every one thinks best; and it is possible that in Countries unknown to us, what things are rare to us, are there frequent; and what happens frequently to us, happens there very seldom. As for instance, in such a Country there are many, who receive no Harm by the Biting of Phalangies, Few who receive Harm thereby. And so in all other Constitutions: wherefore it is also necessary to induce Suspension, by reason of the diversity of Men.

CHAP. XV.

The third Common-place.

FOrasmuch as *Dogmatists* are so self-conceited, as to affirm, That their Judgment in things ought to be preferred before all others; though we know how absurd this Postulation is, (for they are Parties in the Controversie, and having first prejudged themselves, if then they judge *Phænomena's*, even before they begin to judge, they seize on the *Phænomena's* as already judged:) yet that, in our Dispute, fixing the Discourse upon one Man (that wise Man they dream of) we may arrive at Suspension, let us examine the third Common-place.

This we derive from the difference of the Senses. That the Senses differ from one another is manifest. *Pictures* seem to the Eye rising and falling, but not such to the Touch. Many esteem *Honey* pleasant to the Tongue, unpleasant to the Eye; whence it is impossible to say, whether it is simply pleasant, or unpleasant. The like of *Unguents*, they please the Smell, displease the

Taste. *Euphorbium* is hurtful to the Eyes, but not to any other part of the Body: therefore, whether it be simply hurtful to the Body, we cannot say. *Rain-water* is good for the Eyes, but frets the Arteries and Lungs; as *Oyl* doth also, though it smooths the Skin. The *Sea-Tortoise*, applied to the extrem parts of the Body, causeth Numbness, but laid to any other part makes no alteration. Thus, what each of these things is in its own nature, we cannot affirm; but how it appears to others, we may. We might instance more; but, not to insist longer hereon than our design permits, let us say, Every sensible *Phænomenon* seemeth to incur a several way into our Senses, as an Apple smooth, fragrant, sweet, yellow. It is therefore unmanifest, whether it really hath these qualities, or whether it hath but one quality, which seemeth different, according to the diversity of the Senses; or whether it hath many more qualities, some of which incur not to our Senses. For, that it hath but one quality, may be argued from what was said before, concerning the Nutrient of living Creatures, the growth of Trees by Rain, the unequal sound of the breath in Pipes, and other Instruments. It is therefore possible, the Apple may have but one quality, and yet be looked upon as different, by reason of the difference of the Organs of Sense, by which it is apprehended. Again, That it is possible, the Apple may have more qualities than appear to us, we argue thus: Let us suppose a Man, endued from his Birth with Touch, Smell, and Taste; but wanting Sight and Hearing, he will think there is nothing Visible, nothing Audible: So it may be, that we having Five Senses, of all the qualities of an Apple, perceive only those, whereof ourselves have the apprehensive Faculty; yet in the mean time, it may have other qualities, incident to other Organs of Sense, which we have not. Therefore neither can we perceive what their sensible Operations are.

But Nature, may Some object, hath equally commensurated the Senses according to the Sensibles. What Nature? there being so confused a disagreement among the *Dogmatists* concerning her Essence? For if any Man judge what Nature is, if he be one of the Unlearned, he is, according to them, not worthy Credit; if a Philosopher, he is interest'd in the Difference, being one of the Parties to be judged, not the Judge. Now if it be nothing absurd to say, The Apple hath all the qualities we seem to apprehend, and more than these; or, on the contrary, that it hath not even those which incur to our Senses, it will be unmanifest to us, how the Apple is qualited. The same of other Sensibles. And if the Senses comprehend not External Objects, neither can the Intellect comprehend them. Thus Suspension may be induced from External Objects.

CHAP. XVI.

The fourth Common-place.

That as well over-running in our Discourse every Sense, as receding from Sense, and

Q q q

receding

receding from Sense, we may arrive at Suspension, we come to the fourth ground.

This is said to be *from Circumstances*, By *perceptions*, (Circumstances) we understand Dispositions; we say it consists in being according to Nature, (sound;) or *contrary to Nature*, (unsound;) in *Waking* or *Sleeping*, in difference of *Age*, in *Motion* or *Rest*, in *Hate* or *Love*, in *Want* or *Satiety*, in *Drunkenness* or *Thirst*; in *Predispositions*, in *Courage* or *Fear*, in *Joying* or *Grieving*. According as we are Sound or Unsound, things occur variously to us; Frantick, and Divinely-inspired Persons, think they hear Spirits, we not; and those kind of Persons often say, they smell Perfumes of Storax or Frankincense, when we smell none. Again, the same water poured upon any Part that is Inflamed, seems scalding, to us lukewarm: The same Garment to those that have a Hyposphagm in their Eyes, seems bloody, to me not: The same Honey to me is sweet, to those that are troubled with the over-flowing of the Gail, bitter. If any shall alledge, that the admission of some humors, in those who are unsound, excites Phantasies not conformable to their Objects; we answer, Forasmuch as they, who are in health have commixed Humors, those Humors may cause external Objects (which perhaps appear to those who are unsound, such as they are indeed in themselves) to appear to the healthful, such as they are not in themselves. For, to attribute the power of changing Objects to the Humors of the one, and not to those of the other, is vain; since as they who are in health, are according to the nature of the healthful, but contrary to the nature of the sick; so they who are sick, are contrary to the nature of the healthful, and according to the nature of the sick: So that these also are to be credited, as being according to Nature.

From *Sleep* and *Waking* arise also different Phantasies; we have not the same Phantasies sleeping, which we have waking; nor the same waking, which we have sleeping; therefore their existence is not simple, but relative. Thus in Sleep we see things, which when we Wake, are inexistant; not that they are inexistant in themselves, for they exist in sleep, as well as these things which are said to exist when we are awake.

From *different Ages*; the same Air to old Men seems cold, to the youthful temperate; the same meat to old Men heavy, to the young light. So the same voice to some seemeth low, to others loud. In like manner are they, who differing in age, differently incline to desire, or abhor things. Children delight in Whips and Tops; they who come to Man's estate, prefer other things; old Men, others. Whence many be inferr'd, That different Phantasies are derived from the same object, according to the difference of ages.

From *Motion* or *Rest*, things appear unlike; that which seems unmoved to us, while we stand still, when we sail we think it moves.

From *Love* or *Hate*; some abhor Swines flesh, which others eat with much delight. Many that have deformed Mistresses, think them beautiful.

From *Hunger* or *Satiety*: The same meat to an hungry Man, seems pleasant; to a Man that is full, unpleasant.

From *Drunkenness* and *Sobriety*; Things, which when we are sober, we esteem undecent; drunk, seem not such to us.

From *Predispositions*; The same wine to such as have eaten Dates or Figs a little before, seems sowre; to such as have eaten Nuts or Pulse, sweet. The **Parastax* of a Bath warms those that go in, cools those who go out, if they have stay'd any while in it.

From *Courage* or *Fear*; the same thing to a timorous Man seems dreadful, to a Valiant nothing so.

From *Sorrow* and *Joy*; the same things which trouble the sorrowful, delight the joyful.

Now there being so great difference and disproportion of Habits, and Men being constituted sometimes in one Habit, sometimes in another, what every Object seems to any, perhaps it is easie to declare; but what it is, is not, since the difference is indjudicable. For he that judgeth it, either is conversant in one of the forementioned Habits, or in none: To say he is in none, that is, he neither is Well nor Sick, neither moveth nor resteth, nor is of any age, and wholly void of the other habits, is most absurd: On the other side, if being in any of these habits, he judgeth Phantasies, he is himself a Party in the Controverisie, and consequently cannot be a sincere Judge of external Objects, being infected with the habits in which he is. For he who is awake, cannot compare the Phantasies of those who are asleep, with the Phantasies of those who are awake; nor he, who is in health, compare the Phantasies of the sound and the sick: for we sooner assent to such things as are present, and move us, than to things not present.

Moreover, the difference of such Phantasies is indjudicable another way. He that prefers one Phantasie before another, and one circumstance (or habit) before another, either doth it without judgment and demonstration, or upon judgment and demonstration. Not without, for then he is of no credit; nor with, for if he judge Phantasies, he must do it by a Criterie, this Criterie must be either the true or false; if false, neither is it to be credited; if he say it is true, he affirms it, with demonstration or without. If without demonstration, it will be uncreditable; if with demonstration, it is absolutely necessary that the demonstration be true, otherwise neither will that be creditable. He will therefore say, the Demonstration alledged to prove the Judicatory creditable, is true. Whether doth he affirm this, as having judged, or not judged? If not having judged, he is not to be credited; if as having judged, he must acknowledge he hath judged it by a Criterie, of which Criterie we shall require a Demonstration, and then of that Demonstration a Criterie. Thus the Demonstration will continually require a Criterie to confirm it, and the Criterie a Demonstration to shew it is true: Therefore the Demonstration cannot be true, unless a true Criterie precede it; nor can the Criterie be true, unless the Demonstration be first credited. Thus the Criterie and the Demonstration fall into the *Alternate Common-Place*, wherein both will be found not creditable; for either wants credit, till the other afford its assistance to confirm it.

If

* See Ep.
trav. de
chite. 7. lib.
6. cap. 12.

If therefore we cannot prefer one Phantasia before another, neither without a Demonstration and Criterie, nor with them, the Phantasies which different Habits produce, will be indijudicable. Thus Suspension is induc'd from the nature of external Objects.

C H A P. XVII.

The Fifth Common-place.

THE fifth Common place is from *Positions, Distances, and Places*: for through any of these, the same things seem different: the same Walk, to him that is entering into it, seems narrow at the further end; to him who is in the middle, equally broad. The same Ship, at a distance, seems little and fixt; near, great and in motion. The same Tower seems afar off, round; near, square. This for *Distance*.

From *Place*; the light of a Candle in the Sunshine seems dim; in the dark, bright: The same Oar under water, seems broken; above water, straight. An Egg in the Fowl is soft; in the Air, hard. The *Lyncurium* [a stone concrete of the *Lynx* his urine,] in the *Lynx* is humid, in the Air, hard. Coral is soft in the Water, hard in the Air. A voice sounds diversly through a Pipe, through a Flute, and in the open Air.

From *Position*; the same Image, laid flat, seems smooth, but inclining, seems to have Extuberances and Cavities; the Neck of a Pigeon, as it is variously turned, seems to have a different colour.

Since then all *Phænomena's* are seen in some *Place*, at some *Distance*, and in some *Position*, every one of which (as we said) causeth a great alteration in Phantasies, we shall be hereby reduced to Suspension. For he who would prefer one of these Phantasies before another, attempts an impossibility; for if he assert it of them simply, without Demonstration, he shall not be credited; if he would use Demonstration, and acknowledge that Demonstration to be false, he confutes himself: If he say it is true, it will be required he bring a Demonstration to prove it true, and a third to prove the second, because that also must be true, and so to infinite; but to alledge infinite Demonstrations, will be impossible. Therefore one Phantasia cannot be preferred before another by Demonstration. And if the aforesaid Phantasies can neither be judged with Demonstration, nor without it, there must be inferred Suspension; since what every thing seems according to this *Position*, this *Distance*, or in this *Place*, we may indeed affirm; but what in it self it is, (for these Reasons) we cannot.

C A A P. XVIII.

The Sixth Common-Place.

THE Sixth Place is, from *Commissions*: Whence we infer, That no Object incurth into our Sense simply, but together with some other; what this Mission is, as well from the external Object, and from that together with which it is seen, it is perhaps possible to say, what it seems

to us; but what the external Object is, purely in it self, we cannot say: For no external thing incurth into our Sense, purely of itself, but with some other; whence, as I conceive, it seems different to beholders. Our Complexion seems of one Colour in warm air; of another in cold; neither can we say what our colour is naturally, but what it seemeth with these Circumstances. The same voice seems different in a thin Air, and in a thick. Perfumes are of stronger scent in a Bath, or in the warm Sun, than in the Cold; a Body surrounded with Water, is light; with Air, heavy.

Moreover, (setting aside external Commission) even our eyes have in themselves tunics and humors. Visible objects therefore, because we cannot see without these, are not perhaps perceived exactly and purely, for we perceive them with Admission. Hence to those who have the Jaundies, all things seem yellow; to those who have a Hyposphagm, red. And forasmuch as the same voice seemeth different in open and strait places, from what it seems in narrow and crooked; in calm Air, from what it seems in tempestuous; it is probable, we perceive no Voice purely. For our Ears have narrow oblique holes, and are said to be troubled and prepossess'd by vapours from the parts next the Head.

Likewise by our Nostrils, and the Instruments of Taste, when Objects are presented, we perceive their Smell, and Taste, but not purely. Wherefore what external Objects are exactly in themselves, the Senses cannot perceive, by reason of Commissions. Neither can the Intellect, because the Senses, her Guides, err. Perhaps also, the Intellect alters that which it receiveth from the Senses, by intermixing something of its own. For in the parts wherein the Hegemonick, according to the Dogmatists, is placed, we see there are certain humors, as in the Brain, or the Heart, or what part soever they shall place it in. Thus, by this Common-place, seeing that we can determine nothing concerning the Nature of the external Objects, we Suspend.

C H A P. XIX.

The Seventh Common-place.

THE Seventh Place is, from the *Quantities and Constitutions* of Subjects, generally stiled *Compositions*. That we are enforced upon this ground to Suspension concerning the nature of things, is manifest; as, the shaving of Goats-horn seems white, but in the Horn it self black; filings of Silver seem black, but in the whole white; the pieces of the *Tænarian* Stone polish'd seem white, the whole seems yellow; Sands taken singly seem rugged; altogether in a heap, smooth; *Elleboro* eaten young and downy, suffocates, but at full growth it doth not; Wine drunk moderately, strengthens; excessively, weakens: Meat commonly shews a different power, according to the quantity; excess thereof, for the most part, oppresseth the Body with crudities, and Cholerick humors. Now as to these we are able to say, What the thin parts of the Horn seem separated, and what they seem compacted; what the minute parts of Silver, and what the whole consisting of those parts; what a little piece of the *Tænarian*

rian Stone, and what the whole: So likewise in Sands, *Hellebore*, Wine, Meat, we can express what they are relatively; but the nature of the things themselves we cannot, by reason of the difference which happens in composition. Generally, healthful things are hurtful, if we take too much of them; and hurtful things hurt not, if we take but little of them. This is most evident in Medicine; a just measure in their Composition is beneficial; but sometimes, to put in ever so little more or less, is not only not beneficial, but destructive, and often deadly. Thus Quantities and Compositions confound the existence of external Objects, whereby we are justly reduced to Suspension, not being able to affirm any thing of the external Object.

CHAP. XX.

The Eighth Common-Place.

THE Eighth-Place is, *From Relation*; for every thing having relation to some other, what they are simply in their own Nature, we suspend from affirming. (The term [*Is,*] here and elsewhere we use improperly for *Seems*; which is as much as to say, Every thing seems to have relation to some other.) This is said to be two ways; one is to the thing judging, for the External Object appeareth such to the thing judging; the other is to the things which are considered together with it, as Right to Left.

That all things are relative, we argued before, as well to the thing judging; for the appearance of a thing is what it seems to this Animal, to that Man, to such a Sense, to such a Habit: As likewise to the things seen together with it; for every thing appears by such a Commission, such a Manner, such a Composition, such a Quantity, such a Position.

That all things are Relative, may also be argued thus: Whether are different things different from Relatives, or not? If not different, then they are Relatives; if different, since every thing that differs from another is relative, (as implying arelation to that from which it differs) they are relative by difference.

Again, of things, some, according to the Dogmatists, are Supreme Genus's; others, most Special Species; others, Genus's and Species: But all these are Relative, therefore there is nothing that is not Relative.

Moreover they say, that of things, some are manifest, some unmanifest. The manifest (*Phænomena's*) signify the unmanifest; the unmanifest are signify'd by the *Phænomena's*; for they hold *Phænomena's* to be the sight of the unmanifest things; but the significant and the significate are relatives, therefore all things are relative.

Besides, of things, some are like, some unlike; some are equal, others unequal; but these are relatives, therefore all things are relative.

Even he who saith, *All things are not relative*, confirmeth, that they are relative: For by the Arguments wherewith he oppugns us, he sheweth, that this Assertion, *All things are relative*, hath reference only to us, but not to all in general.

Thus all things being relative, what every object is in its own nature we cannot say, but only

what it appears in relation: Whence it follows, that, as to the nature of the things, we suspend.

CHAP. XXI.

The Ninth Common-Place.

THE (a) Ninth-Place is, *from frequent or rare Contingence*, thus deduced: The Sun is certainly much more wonderful than a Comet; yet because one is seen every day, the other seldom, the Comet makes us wonder so much, as to think some strange thing is portended thereby, the Sun not so. But if we should imagine the Sun to appear but seldom, and as soon as he had enlightened all things, presently to withdraw, and leave all in darkness, we should therein find much cause of wonder. Earthquakes trouble us far more at first, than when we are us'd to them. How doth a man admire the Sea at first view? Even corporeal Beauty strikes us much more at the first sight, than after we have been accustomed and acquainted with it. Moreover, things that are scarce are esteemed, the common not esteemed. If Water were hard to be got, how much would it be prized above all things, which we now value at so high rates? If Gold were as common as Stones, who would hoard it up? Since therefore the same things are sometimes esteemed wonderful or precious, sometimes not such, according to their scarcity or commonness, we infer, that, How things seem according to their frequent or rare Contingences, we may perhaps say; but simply, what these external Objects are in themselves, we cannot; and therefore suspend.

CHAP. XXII.

The Tenth Common-Place.

THE Tenth-Place chiefly concerns *Morals*, as being drawn from *Institutions, Customs, Laws, Fabulous Perswasions*, and *Dogmatick Opinions*.

Institution is the election of a course of life, or any other thing, which is done by one or many; as by *Diogenes*, or the *Lacedæmonians*.

Law is a covenant written by the Magistrate, which whosoever transgresseth is punished.

Custom (*ἔθος* or *συνήθεια*, they differ nothing) is the approbation of something by the common consent of many, which he who transgresseth is not punished; as, it is a Law, that we commit not Adultery; a Custom, that we lie not with our Wives in publick.

Fabulous Perswasion is the approbation of feigned things which never were; such are the stories of *Saturn*, which yet some believe true.

Dogmatick Opinion is the approbation of something which seems to be confirmed by some Reason or Demonstration; as that Atoms, Homoiomeria's, Least-parts, or the like, are the Elements of things.

Of these, we oppose sometimes one of the same kind to another of that kind; sometimes one kind to another. For example, Custom to Custom, thus; Some *Ethiopians* paint the skins of their children, we do not so. The *Persians* think it decent to wear Garments stained like Flowers, we think it

it undecent. Some *Indians* lie with their Wives in publick, most people think it unseemly.

Law to Law, thus: Amongst the *Romans*, he who quits his Inheritance doth not quit his Fathers name; amongst the *Rhodians*, he is forced to quit it. At *Tauris* in *Scythia*, there was a Law, That strangers should be sacrific'd to *Diana*; amongst us, it is prohibited to put a Man to death in a Temple.

Institution to Institution; as, that of *Diogenes* to that of *Aristippus*; that of the *Lacedæmonians* to that of the *Italians*.

Fabulous Perswasions to Fabulous Perswasions; as, when we say, that *Jupiter* is sometimes called Father of Men and gods; sometimes the Ocean is so called, as,

Ocean the Sire of gods, Tethys the Mother.

Dogmatick Opinions, one to another; as when we say, Some assert one Element, others infinite; and some hold the Soul to be mortal, others immortal; some hold the World to be governed by Providence, others not.

Again, we oppose *Custom* to something of different kind, as to *Law*; when we say, Adultery is forbidden amongst us, used amongst the *Mas-sagetes*, as a thing indifferent; according to *Eudoxus* the *Gnidian*, in his first Book. It is prohibited amongst us to lie with our Mothers; in *Persia*, nothing so frequent as to marry them. The *Egyptians* marry their Sisters, which we are forbidden by Law.

To *Institution*: as there are very few, who will lie with their Wives in publick; yet *Crates* did so with *Hipparchia*. *Diogenes* wore his upper Coat continually; it is not our use to do so.

To *Fabulous Perswasions*: As it is fabled, That *Saturn* eat his Children; but with us it is a custom to bring up our Children. Again, we use to worship the gods, as good, not subject to ill; but the Poets feign them to be wounded, to envy, and the like.

To *Dogmatick Opinion*: It is a custom with us, to pray to the gods for good things; but *Epicurus* denies the gods take any care of us. Again, *Aristippus* thought it an indifferent thing to wear a Woman's garment, we think it undecent.

We oppose *Institution* to *Law*, thus. There is a Law, that no Man shall strike a Free person; yet Wrestlers strike one another, following the institution of their life. *Homicide* is forbidden, yet *Gladiators* kill one another, upon the same ground.

Fabulous Perswasions to Institution; as when we say, Fables tell us that *Hercules* served *Omphale*, spun, and did other actions of a most effeminate person; but *Hercules* his institution of life was generous.

To *Dogmatick Opinion*; as Wrestlers addicted to the pursuit of Glory, as of a good thing, chuse a laborious kind of life; but many Philosophers assert Glory to be an ill thing.

We oppose *Law* to *Fabulous Perswasion*: as, The Poets introduce the gods committing Adulteries, and the like; but with us, the Law prohibits such things.

To *Dogmatick Opinion*; as, *Chrysippus* holds it a thing indifferent, to lie with Mothers or Sisters; the Law forbids it.

We oppose *Fabulous Perswasions* to *Dogmatick Opinion*. As, the Poets say, *Jupiter* came down on earth to lie with mortal Women; but the Dogmatists think this impossible. Again, the Poets say, that *Jupiter*, through excessive grief for *Sarpedon*, let fall drops of Blood, upon the earth; but it is a Tenent of Philosophers, that the gods are not subject to any Passion. Likewise the Dogmatists take away *Hippocentaures*, instancing them as examples of Inexistency. Many other Presidents might be alledged, but let these suffice.

Now there being so great difference, (as appeareth also by this place) what the Subject is in its own Nature, we cannot say; but only what it seems as to that Institution, this Law, this Custom, &c. Wherefore, upon this ground also we suspend concerning the nature of External Objects.

CHAP. XXIII.

The Five Common-Places.

THE (*) later Scepticks deliver Five Common-Places of Suspension; the First from *Disagreement*; the Second reducing to Infinite; the Third from Relation to something; the Fourth, *Hypothetick*; the Fifth *Alternate*. * Lactantius ascribes these to Agrippa.

The First place, from *disagreement*, is that by which we find an indetermin'd disagreement concerning the thing in the practice of life, and amongst Philosophers; whence, not being able to prove or disprove either side, we are reduced to Suspension.

The second place, from *infinite*, consisteth in this; whatsoever is alledged in proof of the thing proposed, we say requireth something else whereby that may be proved; and that likewise something else, and so to infinite: So that not having a ground whereon to fix our Beginning, we suspend.

The Third, from *Relation*: Of this place, we have treated already.

The Fourth, *Hypothetick*, is when the Dogmatists, perceiving themselves reduc'd to Infinite, begin upon some ground which they prove not, but would have it simply granted without Demonstration.

The Fifth, *Alternate*, is when that by which we should prove a thing, requireth it self to be proved by that thing; then, because we cannot assume either to maintain the other, we suspend.

That all questions may be reduced to these places, we shew briefly thus. Whatsoever is propounded, is either sensible or intelligible; but which soever it be, there is disagreement concerning it. Some hold that sensibles only are true, some that Intelligibles only; others, that some Sensibles, and some Intelligibles. Whether will they say, the controversy is dijudicable, [capable of decision] or indijudicable? if indijudicable, it is fit we suspend; for in things indijudicably repugnant, it is not possible to assert: But if dijudicable, we ask, How it shall be judged? As a Sensible, (for we will first take that for instance) whether by a Sensible or by an Intelligible? If by a Sensible, forasmuch as we disagree concerning Sensibles, even that Sensible will require another for its proof; which other, if it be Sensible,

Sensible, will require another, and so to infinite: But if a Sensible require to be determined by an Intelligible, forasmuch as Intelligibles also are controverted, that (as being Intelligible) will require adjudication and proof; which way shall it be proved? If by an Intelligible, they run, as before, into Infinite. If by a Sensible, forasmuch as Intelligible was assumed for proof of a Sensible, and a Sensible for proof of an Intelligible, the *Alternate common-place* is brought in.

But if, to avoid this, the Disputant would assume something as granted, without demonstrating it, whereby to demonstrate the Consequent, the *hypothetical place* occurs, which is inextricable. For if he be creditable in things which he requires to be granted and supposed, we likewise may be creditable, in requiring their Contraries to be granted. If that be true which he supposeth, he renders it suspicious by supposing (not proving) it; if false, his foundation is unsound. Further, if such a supposition conduce any thing to proof, let him suppose the thing in question, rather than another thing by which he would prove it. If it be absurd to suppose the thing controverted, it is also absurd to suppose the ground upon which we build it. That all Sensibles are *Relatives*, is manifest, for (as such) they relate to those who have Sense. It is therefore evident, that whatsoever Sensible thing is proposed to us, may easily be reduced to one of these five Places.

So likewise we argue concerning Intelligibles. If the Controversie be indjudicable, we shall be allowed to suspend; if dijudicable by an Intelligible, it runs into *Infinite*; if by a Sensible we drive them to the *Alternate place*: For the Sensible being Controverted, as not capable of being judged by itself, because of running into Infinite, will require an Intelligible, as the Intelligible the Sensible. He who hereupon would assume any thing as granted, is as foolish on the other side. Further, an Intelligible is relative, for it is such in reference to the Intelligent; and if it were indeed such as it is named, it would not be controverted. Thus we reduce Intelligibles also to these five Places. Whereupon we are necessitated to suspend our Assent upon any proposition. These are the five Places introduced by the later *Scepticks*, not to exclude the other Ten, but more variously to refel the Temerity of the *Dogmatists*.

CHAP. XXIV.

The Two other Common-Places.

They likewise deliver two Places more of Suspension; for seeing that whatsoever is comprehended, seems to be comprehended (or understood) either *through it self*, or *through some other*; they seem to introduce an absolute Inextricability of all things. That nothing is comprehended *through it self*, they say, is manifest, from the Controversie amongst Natural Philosophers, concerning (I think) all Sensibles and Intelligibles: which Controversie is indjudicable, (not to be determined) by reason that we cannot use either a Sensible or an Intelligible Criterie; for, whichsoever we take, it will be uncreditible, as being controverted.

For the same Reason they conceive that nothing can be comprehended *through some other*; for if that through which it is comprehended, will continually require to be comprehended through some other, they run into the *Alternate place*, or into *Infinite*. But if a man will assume any thing as comprehended through itself, by means whereof he would comprehend some other thing, to this it is repugnant, that nothing can be comprehended through itself, for the reasons before alledged. But how that which is repugnant can be comprehended either through itself, or any other, we doubt, since there appeareth no Criterie of Truth or Comprehension; but without Demonstration, signs are destroy'd, as we shall prove hereafter. Hitherto of the Places of Suspension.

CHAP. XXV.

The Places for Confutation of Ætiologicks.

IN like manner, as we have delivered these places of Suspension, some have laid down others, particularly against Ætiologies, (Allegations of Causes or Reasons) because the Dogmatists please themselves exceedingly therein. *Ænesidemus* delivers eight Places, whereby he conceives all Dogmatick Ætiology may be refelled, as defective.

The *First*, for that the kind of Ætiology, which is conversant in things not apparent, hath not an acknowledged proof from apparent things.

The *Second*, for that there are many great Reasons to induce an Inclination, and but one alledged.

The *Third*, for that of things done orderly, Reasons are given that shew no order.

The *Fourth*, for that taking *Phænomena's* as they are, they think they comprehend things not apparent, as they are likewise; for things not apparent are perhaps effected the same way as *Phænomena's*, perhaps some other peculiar way.

The *Fifth*, for that all (very nigh) give Reasons, according to their own particular supposed Grounds, not according to the general and universally received ways of disputation.

The *Sixth*, for that they often take for granted such things as are easily comprehensible; but omit their Contraries, tho' equally probable.

The *Seventh*, for that they alledge Reasons not only repugnant to *Phænomena's*, but even to their own Suppositions.

The *Eighth*, for that the things which appear, and those which are controverted, being equally dubious, they would prove their opinion concerning doubtful things, by things as doubtful.

He addeth, that it is possible, in Ætiologicks some may err by other places dependent upon these.

But perhaps, the five places of Suspension are sufficient against Ætiologicks. For a man must either alledge a Reason, which agreeth with all Sects of Philosophy, and with *Scepticism*, and with *Phænomenon's*, or not: But to alledge such a Reason is impossible, for all *Phænomena's* and not-apparents disagree; and disagreeing, it will be required, that a cause or reason thereof be given. Now if he alledge a *Phænomenon* for reason of

a *Phænomenon*, or a not-apparent for reason of a not-apparent, he runs into *Infinite*. If he prove one kind by the other, he incurs the *Alternate place*. * If he make a stand any where, or say, that the cause (or reason) is such, as that it consists with the thing by him alledged, he falleth into the place of *Relation*, taking away that which is according to the proper nature of the thing; or if he assume something by way of supposition, we shall disallow it. Thus also may the Temerity of the *Dogmatists* in *Ætiology* be confuted.

C H A P. XXVI.

The Phrases of the Scepticks.

FOrasmuch as in using these places of Suspension, we express ourselves by some particular Phrases, which declare the Sceptical affection, and our own passion, as *Not more*, *Not to be defined*, and the like, it follows, that we treat of these.

Let us begin with this, *Not more*, for which sometimes we say, *Nothing more*; not using (as some conceive) *not more* in particular questions; and *nothing more*, in the general; but both promiscuously. We therefore will treat of them both under one. It is an imperfect expression, as when we say *διπλῆ*, we imply *ἔτι διπλῆ*; and when *πλαίσια*, we imply *πλαίσια ὁδός*; so when we say, *Not more*, it is as much as to say, *Not more this than that*, upwards nor downwards. There are some Scepticks, who for the Interrogation *ἢ*, use *ἢ*, *Which more, this or that?* taking *ἢ*, casually, as if they should say, *διὰ ἢ*, *Why more this than that?* Interrogations are commonly used for * Axioms, as,

* What Axioms are, see in the doctrine of the Stoicks.

To what Man is the Wife of Jove unknown? and Axioms for Interrogations, as, *I would know where Dion dwells?* and, *I demand for what cause a Port is admir'd.* Menander useth *ἢ* for *διὰ ἢ*, as, *Τὴ γὰρ ἐγὼ καταλείπομεν.*

This Phrase, *Not more this than that*, declareth likewise our affection, by which we are brought, by reason of the equivalence of contrary things, to *ἀπρέψια*; we mean *Equivalence*, in that which appeareth probable to us. Contraries are those which generally oppugn one another; *Ἀπρέψια* is an inclining to neither. Now this Phrase, *Not more*, though it seem to imply assent or denial, we use not that manner, but indifferently and improperly, either by way of question, or for *I know not to which of these I should assent, and to which I should not assent.* But being required to declare what seemeth to us, we use the Phrase by which we declare it indifferently. Know likewise, that when we say, *Not more*, we assert not that the doubt is true, but only express what appeareth to us.

The next is *Aphasia*; *Phasis* is taken two ways, generally and particularly: generally for any speech, declaring assertion or denial, as, *It is day*, *It is not day*: particularly, for Assertion only; in which acception, the Negatives are not called *φάσεις*. *Aphasia* therefore is a renunciation of *Phasis*, in the general signification, which comprehends both Affirmation and Negation. It is that affection by which we neither assert a thing, nor deny it. We assume *Aphasia*, not be-

cause the nature of things is such, as necessarily move it; but declaring, that at present we are thus affected, as to these or those questions. Always remember, that we neither assert nor deny any thing unapparent, but yield to those which move us pathetically, and necessarily compel us to assent.

These Phrases, *τίχα ἢ ἔτι τίχα*, *ἔστι ἢ ἐν ἔστι*, *ἐνδέχεται ἢ ἐν ἐνδέχεται*, *Perhaps*, and *Not Perhaps*, we use for, *perhaps it is*, *perhaps it is not*. Thus, for brevity, we take, *not perhaps*, for, *perhaps it is not*. Here again we contest not about words, nor enquire what they naturally signify, but take them indifferently. These Phrases declare an *Aphasia*, for he who saith, *Perhaps it is*, implies its contrary to be as probable, because he assents not that this is. The same of the rest.

Ἐπὶ ἄλλω, *I suspend*, we take for, *I cannot say whether I ought to believe or disbelieve the thing proposed*, declaring, That the things seem equal to us, as to Belief and Unbelief; whether they are equal in themselves, we assert not, but speak of the *Phænomenon*, as it incurs into our Sense. *Ἐποχῇ*, *Suspension*, is so called, *ἀπὸ τοῦ ἐπὶ ἔχειν τὴν διάνοιαν*, *from the mind's being held in Suspense*, betwixt asserting and denying, through equivalence of the thing questioned. The same we say concerning,

Οὐδὲν δεῖζω, *I determine nothing*; *δεῖζω*, we conceive to be, not simply to speak a thing, but to pronounce an unmanifest thing with assent. Thus perhaps the Sceptick will be found to determine nothing, not so much as this, *I determine nothing*. For it is not a Dogmatical Opinion: (that is, an assent to something not manifest) but a Phrase declaring our affection. When therefore the Sceptick saith, *I determine nothing*, he meaneth, *I am so affected at the present, as not dogmatically to assert or deny any of the things controverted.* This he saith, as expressing how they appear to him, not pronouncing it enunciatively with perswasion.

Ἀεὶσις is a passion of the mind, whereby we neither assert nor deny things dogmatically controverted, that is, not-manifest. When therefore the Sceptick saith, *All are undefinable*, he taketh *are* for *appear* so to him; he saith *all*, not *beings*, but those *not manifest*, controverted by the *Dogmatists*. *Indefinable*, that is, *Not to be preferred before their Contraries, or common repugnants, by belief or disbelief.* And as he who saith, *Ambulo*, implieth, *Ego ambulo*; so he who saith, *All things are indefinite*, implieth, *as to us, or, as it seemeth to me.* The Meaning therefore is this, *All things controverted by the Dogmatists appear so to me, as that I think none of them more worthy belief than its contrary.*

The same is our meaning when we say, *All are incomprehensible*; we take [*all*] in the same sense, and imply [*to me*]; as if we should say, *All things controverted among the Dogmatists seem to me incomprehensible.* We affirm not, they are incomprehensible in their own nature, but declare our own affection, that we conceive we understand them not, by reason of the equivalence of Contraries.

Likewise the Phrase, *ἀκαταληπτόν*, and *ἐκκαταληπτόν*, declares our own affection, by which the Sceptick, for the present, neither asserts nor denies any of the things not-manifest that are in Controversie. This is evident from what hath been said upon the other Phrases.

When

When we say, *To every Speech an equal Speech is opposite*, we mean, to every Speech that we have examined. *Speech*, we take not simply, but for that which asserteth something dogmatically, that is, of a thing not manifest, not only by premises and conclusion, but any other way. *Equal*, we take not simply, but as to belief and disbelief. *Is opposite*, we take generally for is repugnant, implying, as I think. When therefore we say, *To every Speech, there is an equal Speech opposite*; the meaning is, *To every Speech that I have examined, which asserteth any thing dogmatically, there seemeth to me to be opposite another Speech, asserting likewise dogmatically, equal to it, for belief or disbelief*. Thus this Expression is not dogmatical, but the signification of an human affection, which is that which appeareth to the person affected. Some there are who pronounce it thus, *To every Speech, to oppose an equal Speech*, laying this down as a Precept, That to every Speech dogmatically asserting any thing, we should oppose the Speech which dogmatically asserteth its contrary. Thus addressing their words to the *Sceptick*, they use the Infinitive for the Imperative, *To oppose*, for, *Let us oppose*. They advis'd the *Sceptick*, not to be deceived by the *Dogmatists*, nor to give over his Inquisition, for the indisturbance which they conceive accompanies those who suspend their assent in every thing, as we said before.

It is not necessary to alledge more of these Phrases, even of these alledged some might have been spared; but take it for a Rule, In all the Sceptical Phrases, we affirm not that the Phrases themselves are true; for we say, that some may be taken away by others, and are circumscribed by those very things of which they are spoken, as purgative Medicines expel not only Humors, but, together with the Humors, themselves out of the Body. Moreover, we say, that we use them not, as properly signifying the thing to which they are applied, but indifferently, or (if they will so call it) improperly; for, it becomes not the *Sceptick* to contest about words. This we may the better do, in that the words are said not to signify any thing purely in themselves, but relatively, and therefore as well in reference to the *Scepticks*. Furthermore, it must be remembered, that we pronounce them not generally of all things, but of the not-manifest, and those which are dogmatically controverted. The *Phænomena* (that which appeareth to us) we declare; but of the nature of the external Object, we affirm nothing. By what hath been said, I conceive, that all Sophisms brought against the Sceptical Phrases, may be resolved.

C H A P. XXVII.

Wherein Scepticism differs from those Philosophical Sects which are most like it; and first wherein it differs from the Philosophy of Heraclitus.

HAVING declared the signification of Scepticism, its Parts, its Criterie, its End, its Places of Suspension, its Phrases, and its Character; it followeth that we explicate briefly, *wherein it differs from those Sects which seem most like it*, that by this means we may the better understand it.

We will begin with the Philosophy of *Heraclitus*. That this differs from our Institution, is evident; for *Heraclitus* asserteth dogmatically concerning many things not-manifest, which (as I said before) we do not. But forasmuch as the followers of *Enesidemus* said, the *Sceptick* Institution is the way to the *Heraclitian* Philosophy, Because that *Contraries appear in the same Thing*, is precedent to *Contraries are in the same Thing*: But the *Scepticks* say, *Contraries appear in the same Thing*, and the *Heraclitians* go on farther, affirming *Contraries are in the same Thing*; We answer, That *Contraries appear in the same Thing*, is not a Doctrine of the *Scepticks*, but a thing evident by Sense, not to the *Scepticks* only, but to all other Philosophers, and Men; as none dare deny, but Honey to the Sound is sweet; to such as have the overflowing of the Gall, bitter. Hereupon, the *Heraclitians* begin from the common Pronotion of men, as we do also, and perhaps other Sects: Wherefore if they had taken this sentence, *There are Contraries in the same thing*, as from this saying, *All are Incomprehensible*, or from, *I determine nothing*, or some other of that kind, perhaps they might collect rightly what they say; but since they have some Principles incident not only to us, but to other Philosophers, and even to the course of Life itself, why should any say, our Institution is preparative to the Philosophy of *Heraclitus*, more than to any other Sect, or to the course of Life itself, seeing all of us use these in common? Neither know I whether the *Sceptical* Institution divert not from the Philosophy of *Heraclitus*, rather than conduce to it; since the *Sceptick* reprehends, as temerarious, all that *Heraclitus* asserted dogmatically, contradicting his *Conflagration*, contradicting also his Tenent, *That there are contraries in the same Thing*; and to every Doctrine of *Heraclitus*, (deriding the temerity of the *Dogmatists*) he saith, *I comprehend not, I determine not*, (as before) which oppugns the *Heraclitians*. But it is absurd to say, That an Institution, which oppugns another, is the way preparative to the Discipline it oppugns. Therefore it is absurd to say, That the *Sceptical* Institution is the way to the *Heraclitian* Philosophy.

C H A P. XXVIII.

Wherein Scepticism differs from the Philosophy of Democritus.

IN the like manner, the Philosophy of *Democritus* is said to be all one with *Scepticism*, in that it seems to use the same matter; for from the appearance of Honey, to some Sweet, to some Bitter, *Democritus* argued, that in itself, it is neither Sweet nor Bitter, and thereupon used to say, *not more*, a *Sceptick*-phrase. But this Phrase, *not more*, is taken by the *Scepticks*, and by the *Democritians*, after a different manner. The *Democritians* signify by it, that *neither is*, but we, that we know not whether both of the *Phænomena's* are, or whether *neither is*: Herein we dissent from them. But far greater is the difference in that *Democritus* saith, *Atoms, and Vacuum, truly are*; That herein, he differs from us, (though he begin with the inequality, and disagreement of *Phænomena's*) I conceive it needful to prove.

C H A P.

C H A P. XXIX.

Wherein Scepticism differs from the Cyrenaick Sect.

SOME affirm the Cyrenaick Sect to be the same with Scepticism, for as much as it holds, that the Affections themselves only are comprehended. Nevertheless it is different from Scepticism; for it holds Pleasure, and a light motion of the Flesh to be the End; we, Indisturbance, to which the End they propose is contrary. For whether Pleasure be present or absent, he who asserts it to be the End, is disturbed, as we said * before. Besides, we suspend only from asserting any thing concerning external Objects; but the Cyrenaicks affirm they are of an incomprehensible Nature.

C H A P. XXX.

Wherein Scepticism differs from the Institution of Protagoras.

PROTAGORAS will have Man to be μέτρον χρημάτων, the measure of all things; of Beings, as they are; of not Beings, as they are not. By μέτρον, he means the Criterie; by χρημάτων, πραγμάτων, of things; which is as much as to say, Man is the Criterie of all things; of Beings, as they are; of not Beings, as they are not. Hereupon, he asserts the Phænomena's to be particular to every one, and thus brings in the relative Common place, whereby he seems to have community with the Pyrrhonians; But he differs from them, as we shall easily find in explicating his Opinion. He saith, Matter is fluid, and being in perpetual Fluxion, Appositions are made instead of Substractions, and the Senses are transmuted and changed, according to the several ages and constitutions of the Body. He saith also, The Reasons (or Powers) of all Phænomena's are subjected in Matter; so that Matter, in it self, is all things which it appears unto all. But Men at different times perceive things different, by reason of their different Habits; He whose Constitution is sound, of the things which are in Matter, perceiveth those which are capable of appearing to such Persons; they who are otherwise disposed, perceive the things which are capable of appearing to Persons of a contrary Constitution. The same Reason there is in the difference of Ages, in Sleeping and Waking, and in all kinds of Habits. Man therefore, according to him, is the Criterie of things that Are; For all things which appear to Men, Are; those which appear not to any Man, Are not. Thus we see, he dogmatically asserted, that Matter is fluid, and that the Reasons of all Phænomena's are subjected in it, wherein we, as being things not manifest, suspend our assent.

C H A P. XXXI.

Wherein Scepticism differs from the Academick Philosophy.

SOME hold the Academick Philosophy to be the same with Scepticism, let us therefore examine it. It is said, there were more than

three Academies; One, the most Ancient, instituted by Plato; the Second, and middle Academy, by Arcefilaus, Disciple of Polemon; the Third, and new Academy, by Carneades and Clitomachus; there are who reckon a Fourth, instituted by Philo, and Charmides; some also a Fifth, by Antiochus. We will begin with the most Ancient. Some hold Plato to be Dogmatick, others Aporematick (dubitative;) others in some things, Dogmatick, in some, Aporematick. For in his Gymnastick Discourses, where Socrates is introduced deriding or disputing with the Sophists, they say he hath a Gymnastick, and Aporematick Character; but when he declareth his own Opinion in the Person of Socrates, Timæus, or the like, a Dogmatist. As for those, who say he is a Dogmatist, or in some things Dogmatick, in others Aporematick, we shall not need to meddle with them; for they acknowledge, that he dissents from us. Whether he be purely Sceptick, we discourse at large in our Hypomnestics; we shall now only examine it briefly, according to Permedotus, and Eusebius, (for they chiefly undertook this Task) who say, that Plato, when he asserted concerning Ideas, or that there is Providence, or that Life joined with Virtue, is to be preferred before Life joined with Vice: If he assent to these as existent, he averreth dogmatically: if he assent as to the more probable, he differs from the Sceptick Character, in preferring one before the other, as to Belief and Disbelief, as is manifest from what hath been said already. Nor though he pronounce things Sceptically in his Gymnasticks, is he therefore a Sceptick, for he who asserteth any one thing dogmatically, or preferreth any Phantasie before another, for Belief, or Disbelief, of a thing not manifest, followeth the Dogmatick Character, as Timon sheweth, speaking of Xenophanes: For (having often commended him, insomuch that he writes his Silli in his Person) he maketh him to complain, and say;

I wish my Soul were subtle, and her Eye
So sharp, as might * both sides at once descry.
Lost in the doubtful way, I long have straid;
Even though (grown old) I had with care essay'd
Every opinion, search'd all Theory,
For unto which could I my mind apply?
All into one resolve, and this one ever
Drawn into one like Nature, doth persevere.

Whence also he calls him εἰσιππος, and not absolutely, ἀππος, void of Pride, thus;

† Xenophanes, not wholly free from Pride,
The fictions of old Homer did deride;
And fram'd a God, * whose Figure doth dissent
From Men; equal each way: Intelligent.

He calls him εἰσιππος, as being not quite ἀππος; and Ὀμηνεπτικὸν ἐμπροσθεν, for that he reproached and blamed the † fabulous way of Homer. Now Xenophanes asserted, besides prænotions (as others also) that the Universe is one, and that God is of the same Nature with all things; that He is Spherical, Impassible, Immutable, and Rational; Whence it is easie to shew that Xenophanes differs from us. Moreover, from what

R r r

we

we said, it is manifest that *Plato*, though of some things he doubt, yet because in others he asserts, concerning the Essence of things not manifest; and of things not manifest, preferreth some before others, is no *Sceptick*.

Those of the *new Academy*, though they say all things are *Incomprehensible*, differ from the *Scepticks*, perhaps in saying that all things are *Incomprehensible*; for they assert this, but the *Sceptick* admits it possible that they may be comprehended. But more apparently they differ from us in the dijudication of Good and Evil. For the *Academicks* say, that something is Good and Ill, not after our manner, but as being persuaded, it is more probable, that what they call Good is Good, than the contrary: Whereas we say not that any thing is Good or Ill, as thinking what we say is probable, but without Opinion, we follow the ordinary course of Life, or otherwise we should do nothing. Moreover we hold Phantasies to be equal, as to Belief and Disbelief; but they, that some are *Credible*, others *Incredible*. The *Credible* also, they subdivide into many kinds, some they hold to be *Credible* only, some to be *Credible* and *Circumcurrent*, some to be *Credible* and *Circumcurrent*, and *Undistracted*; as, a Rope lying loose in a dark Room, a Man receives a *Credible* Phantasia from it, and runs away; another considering it more exactly, and weighing the circumstances, as that it moves not, that it is of such colour, and the like, to him it appears a Rope, according to *Credible* and *Circumcurrent* Phantasia. *Undistracted* Phantasia is after this manner. It is reported that *Hercules* brought *Alceſtis* back from the *Inferi*, after her Death, and shew'd her to *Admetus*. He received a true and *circumcurrent* Phantasia of *Alceſtis*, but remembring she was Dead, his Phantasia was distracted from assent, and inclined to Disbelief. Now the new *Academicks*, before Phantasia which is simply *Credible*, prefer that which is *Credible* and *Circumcurrent*; and before both, that which is *Credible* and *Circumcurrent* and *Undistracted*. For though, both *Academicks* and *Scepticks* say they believe some things; yet herein is a manifest difference between their Philosophies: To believe, is taken several ways; sometimes for not to resist, as a Boy is said to believe his Master; sometimes for assenting to another, with an earnest resolute desire of the thing, as a Prodigal believes him who persuades him to live sumptuously: Now *Carneades* and *Clitomachus* using the word *Believe*, and *Credible*, as with vehement inclination, we only for yielding without propensity to any thing; herein also we differ from them.

We differ likewise from the *new Academy*, as to what belongs to the *End*: They use in the course of Life what is *Credible*, we following Laws, Customs, and natural Affections, live without engaging our Opinion. We might add more instances of the difference between us, if it were not too large for our design.

But *Arcesilaus*, Institutor and President of the *middle Academy* seems to me to participate so much of the *Pyrrhonian* Reasons, as that his Institution and Ours is almost the same. For neither is he found to assert concerning the Existence of Inexistence or any thing, neither doth

he prefer one thing before another for Belief or Disbelief, but in all things he suspends, holding *Suspension* to be the *End*, which, as we said brings us to *Indisturbance*. He likewise holds particular Suspensions to be good, particular Assertions to be ill. But if we may believe what is related of him, they say, at first sight he appears a *Pyrrhonian*, but was indeed a *Dogmatist*; and that making trial, by doubts, of his Disciples, whether they were capable of *Plato's* Doctrine, he was thought to be *Aporetick*, but that to his more ingenious Friends he taught the Doctrine of *Plato*, whence *Aristo* of him;

*Pyrrho behind, Plato before,
And in the middle, Diodore.*

For, though a *Platonick*, he used the *Dialectick* of *Diodorus*.

Plato saith, As to (the *Stoical* Criterie) *comprehensive Phantasia*, things are *incomprehensible*; as to the natures of the things themselves, *comprehensible*. *Antiochus* transferred the *Stoick* Sect into the *Academick*: whence it was said of him, That he taught the *Stoick* Doctrine in the *Academy*, for he shewed, that the *Stoical* Tenents were in *Plato*. Hereby it appears, the *Sceptick* Institution is different from the fourth and fifth *Academy*.

C H A P. XXXII.

Whether Empirical Medicine be the same with Scepticism.

SOME hold *Empirical Medicine* to be the same with the *Sceptick Philosophy*; but we must know, (notwithstanding it holds, that things not-manifest are *incomprehensible*;) it is not the same with *Scepticism*, neither is this Sect fit for a *Sceptick*, who, in my opinion, ought rather to pursue that which is called *Methodick*; which alone, of all the Sects of Medicine, seems to behave it self not temerarily in things not-manifest; nor arrogantly to determine whether they are *comprehensible* or *incomprehensible*; but following *Phænomena's*, it takes from them what seemeth profitable, according to the course of the *Scepticks*. For, as we said before, the common life of a *Sceptick* consists of four parts, conversant in the *Instruction* of Nature, in the *Impulsion* of Passions, in the *Constitutions* of Laws and Customs, and in the *Tradition* of Arts. As a *Sceptick* therefore, by the *Impulsion* of Passions, is brought from Thirst to Drink, from Hunger to Meat, and the like; so a *Methodick* Physician is guided by the Passions to that which is convenient, from Constriction of the Pores to Relaxation, as when we shun the condensation of Cold, by going into the Sun-shine; from Relaxation of the Pores to Constriction, as when sweating immoderately in a Bath, we retire to the cooler Air. That the things contrary to Nature lead him to those that are agreeable to Nature, is manifest even from a Dog, who having got a Thorn in his Foot, endeavours presently to get it out. Not to reckon up every thing, which were to exceed the scope of a Summary, I conceive, that all things said in this manner

manner by the Methodicks, may be referred to the impulsion of our Passions, as well those which are agreeable to Nature, as those which are not. Herein indeed these two Institutions agree, both disclaim Opinion, and both use words indifferently; as the *Sceptick*, *I design nothing, I comprehend nothing*; the *Methodick*, *νοῦνός, διύκειν*, and the like. The word *ἐνδεξις* also he takes without Opinion, for an Action, whereby we are deduced from apparent Passions,

Natural and Prternatural, to those which seem convenient, as I shewed in Thirst and Hunger. The *Methodicks* therefore are nearer ally'd to the *Scepticks* than any other Medicinal Sect, as appears by comparing them. Thus having discoursed of those, which are of nearest resemblance to the *Sceptick* Institution, we conclude the general part of *Scepticism*, and the first Book of our Summary.

OF DIALECTICK.

THE SECOND BOOK.

CHAP. I.

Whether a Sceptick can examine and dispute against Assertions?

HAVING undertaken an inquisition of the Dogmatists, we will briefly, and by way of Summary, examine every part of that which they call Philosophy. But first, let us Answer them who cry, *A Sceptick is not capable to examine or comprehend Dogmatick assertions.* They argue thus, *A Sceptick either comprehends assertions, or not; if he comprehend them, how can he doubt of that, which by his own confession he comprehends? If he doth not comprehend them, he cannot discourse upon that which he comprehends not.* For, *As he who knows not (for example) what is τὸ γὰρ ὁ μέγας μὲν, or, a Theorem by two Topicks, is not able to say any thing of them: So, he who knows not the particular assertion of the Dogmatists, cannot dispute against that, of which he knows nothing; therefore a Sceptick cannot examine or dispute against the assertions of Dogmatists.*

Who argue thus, Let them say, in what sense they use the word [*comprehend*,] whether simply, for to understand without affirming ought, concerning the beings of the things whereon we discourse; or not only to understand, but to grant the being of those things. If they say, *To comprehend, is by discourse to assent to comprehensive phantasia*, forasmuch as comprehensive phantasia proceeds from a thing that hath being, impressed and sealed according to the being thereof, in such manner as cannot be derived from that which hath no being, perhaps even they themselves will not be capable of examining or disputing against that which they comprehend not: As when the *Stoick* disputes against the *Epicurean*, who affirms, that *Substance is divided*; or, that *God orders not the World by providence*; or, that *Pleasure is a good*; Doth he comprehend, or not? If he comprehend, he, in saying these things are, wholly subverts the *Stoick* Doctrine; if he comprehends not, neither can he say any thing against it. The same may be objected to those of all other Sects, when they offer to dispute against Opinions, which they conceive heterodox; so as none of them can dispute against another, upon any pretence whatsoever. Besides, (not to trifle) in a word, all their Dogmatick learning will be subverted, and the *Sceptick* Philosophy firmly established, if it

be granted, that none can dispute of any thing, which is not thus comprehended. For whosoever asserts Dogmatically concerning a thing not certain, asserts, either as having comprehended it, or not; if he hath not comprehended it, what he saith will not be creditable; if he hath comprehended it, he must say, that he did it either through the very thing it self, and by some act incident to it, or by some inquisition and examination. If, through it self by some act incident to it a thing not-manifest be comprehended, it cannot be said to be not-manifest, but equally apparent to all, granted and not controverted. But concerning every thing not-manifest, there is an irreconcilable difference amongst them; wherefore the Dogmatist, who asserts concerning the being of a thing not-manifest, doth not comprehend it through it self, and by an Act incident to it. But, if by some inquisition, how is he capable of enquiring or disputing, before he comprehends the thing it self, according to the hypothesis proposed? For inquisition requiring, that the thing after which we enquire be exactly comprehended; and on the other side, the comprehension of the thing whereof we enquire, requiring first inquisition, by the alternate Common-place of Suspension, it will be impossible for them to enquire and assert Dogmatically, concerning things not-manifest. If they would begin from comprehension, we object, that they must first enquire before they can comprehend; if from inquisition, that they must comprehend before they can enquire. Wherefore they can neither comprehend, nor positively affirm concerning things not-manifest. So that this foolish *Dogmatick-flourish* will be taken away, and, as I conceive, the *Ephectick* Philosophy come in of it self.

Now if they say, They conceive it not necessary, that such comprehension precede inquisition, but simple intellection only; it is not impossible but they, who suspend as to things not-manifest, may dispute also; for the *Sceptick*, as I think, is not excluded from intellection, which ariseth from Phenomena's that occur, and actually affect us. Neither doth this necessarily infer, that intelligibles are existent; for we understand not only things existent, but the in-existent; whence the *Ephectick*, whether enquiring or understanding, continueth in his *Sceptick* Institution. For, that he assents to things

that occur to him by passive phantasie, as they appear to him, is manifest.

Let us now see, whether the Dogmatists themselves are not excluded from Inquisition. It is not Incongruous, that they who confess themselves ignorant of the nature of things, should yet enquire after them, but that they who think they know them exactly should do so; for these are arrived, as they think, at the end of Inquisition, the others still retain the ground of Inquisition, *to think they have not found.* We shall briefly enquire into every part of that which they call Philosophy. And forasmuch as there is great controversy among the Dogmatists, concerning the parts thereof; some asserting one, others two, others three, (which it is to no purpose here to enlarge,) we will explain the opinion of those who seem most perfectly conversant therein, and accommodate our discourse to that.

CHAP. II.

From whence the Inquisition against Dogmatists should begin.

THE Stoicks and some others say, The parts of Philosophy are three, *Logick, Physick, Ethick*; they begin with the Logick, teaching that first (yet there is no little controversy, which of them they should begin withal.) These we shall follow, without engaging our opinion. And because the assertions in these three parts require judgment and a Criterie, and the discourse concerning the Criterie seemeth to belong to Logick, we will begin with the Logical part; and first of the Criterie.

CHAP. III.

Of the Criterie.

WHEREAS they call a Criterie, *that whereby essence and existence (as they say) are judged; as also, that wherein we acquiesce in the course of life:* Our purpose now is to discourse of that which they call, *The Criterie of Truth*; for of Criterie in the other sense, we discoursed formerly* in the first Book.

* Chap. 8.

The Criterie of which we now discourse is taken three ways, *Commonly, Properly, Most properly.* Commonly, for every measure of comprehension; in which sense, Naturals also are called Criteries, as, *Sight.* Properly, for every artificial measure of comprehension; as, *a Ruler, a pair of Compasses.* Most properly, for every artificial measure of comprehension of a thing not manifest; in which sense, those things which belong to the actions of life, are not called Criteries, but the rational only, and those which Dogmatick Philosophers alledge for invention of truth. Our design is, as we said, to discourse of the rational Criterie; and of this also there are three kinds, in which, by which, according to which; as, in which, the man; by which, the sense, or the intellect; according to which, the application of the phantasie, according to which a man attempts to judge by one of the fore-named. This it was necessary first to lay down, for understanding the subject of the question. It remains we confute those, who unadvisedly affirm, they comprehend the Criterie of truth; we will begin with that.

CHAP. IV.

Whether there be any Criterie of Truth.

OF those who have discoursed concerning the Criterie, some hold, that it is, as the Stoicks and others; some, that there is none, as (among the rest) *Xeniades of Corinth*, and *Xenophanes of Colophon*, who saith,

— in every thing opinion's fram'd.

But we suspend, whether there be, or be not.

This controversy they must hold to be either dijudicable, (that is, determinable) or indijudicable, (indeterminable.) If indijudicable, they grant, we ought to suspend in it; if dijudicable, let them say whereby it shall be judged, whenas we have not a Criterie acknowledged by all, neither know we whether there indeed be one, but enquire.

Moreover, to judge this controversy of the Criterie, it is requisite we have a Criterie acknowledged, by which we may judge it; and to have a Criterie acknowledged, it is necessary, that the controversy concerning the Criterie be first judged. The dispute thus incurring the alternate Common place, it cannot be resolved whether there be a Criterie or no. For we grant them not a Criterie by supposition; and if they judge a Criterie by a Criterie, we force them to go on into infinite.

Again, Demonstration requiring a Criterie demonstrated, and the Criterie a Demonstration dijudicated, they fall into the alternate Common-place.

This we conceive sufficient to confute the confidence of the Dogmatists, in what they assert concerning a Criterie. It is not from the purpose to insist longer hereon, and to shew several other ways, whereby they may be confuted; but we shall not mention all their particular opinions herein, (for it cannot be expressed, how much they differ among themselves concerning it; and this would put us out of the right method in our dispute.) Because therefore the Criterie after which we enquire seems threefold, in which, by which, according to which, we shall examine every one of these apart, and shew its incomprehensibility. Thus our discourse will be most Methodical and perfect. We will begin with that in which, for the rest seem in some manner dubious by reason of it.

CHAP. V.

Of the Criterie, in which.

NOW Man, (in my opinion) by what the Dogmatists say, is not only not to be comprehended, but not to be understood; for we hear *Socrates* (in *Plato*) plainly confessing, *he knows not whether he is a man or some other thing.* And when they would declare the notion of man, they first disagree among themselves, next they speak foolishly; for *Democritus* saith, *Man is that which we all know*; by which we cannot know what Man is; for we know a Dog,
and

and according to this, a Dog should be a Man; some men we know not, and therefore they should not be men. But indeed, according to this notion there will be no man at all; for if it be necessary that a man be known by all, there is no man known to all men, and consequently there is no man at all. That we say not this sophistically, but as a consequence to his Doctrine, is apparent; for he holds that, *nothing really exists but Atoms and Vacuum, which (he saith) exist not in Animals only, but in all compounded things*; by these we cannot understand the property of Man; for they are common to all, but there is in these nothing else within our capacity; we have nothing therefore whereby we may distinguish Man from other Creatures, and understand him simply.

Epicurus saith, that *Man is such a kind of figured animate Being*: Now, according to this, seeing Man is only such a kind of Being, as is shewn, (by him, who thus describes him) that person who is not such, as is thus shewn, is not a man: and if a man (in describing Man after this manner) shew a Woman, the Man himself will not be a Man; or if a Woman shew a Man, the Woman will not be of Mankind; The same we may argue from the difference of *circumstances* mention'd in the fourth Common-place of Suspension.

Others say, *a man is an Animal, Rational, Mortal, capable of Understanding and Science*: Now having shewn in the first Common-place of Suspension, that no Animal is irrational, but that all are capable of Understanding and Science, by their own confession, we know not what they mean. Again, the accidents which are inserted into a definition, are meant either actual or potential. If actual, he is no Man who hath not attained perfect Science, and hath not perfect Science or discourse, and is not in the state of death, for that is to be mortal actually. If potential, he who hath perfect reason, and hath attained Understanding and Science, is no man, which were more absurd than the former.

Plato, who will have a man to be *an Animal without feathers, with two feet, with broad nails, capable of political Science*, dares not affirm this positively. For if a man be, * as he holds, one of those things which are generated, but indeed are not: It is impossible (as he acknowledgeth) to affirm positively concerning things that are not. Neither doth Plato himself lay down this position as certain, but discoursing, as he useth, according to the most probable.

But though we should grant, that Man may be understood, we shall nevertheless find that he cannot be comprehended. For we consist of Soul and Body, but neither Soul nor Body (perhaps) can be comprehended, therefore not Man. That *the body is not comprehended*, appears from this; the accidents of a thing are distinct from the thing, to which they are accidents; now when colour, or the like, presents it self to us, the accidents of the Body are presented to us, but not the Body it self. A Body, they say, hath three dimensions; we must therefore, to comprehend the Body, comprehend the length, breadth, and depth; but if this did present it self to us, we might discern silver that is gilt: Therefore the Body cannot be comprehended.

Besides this, a Man shall be found to be in-

comprehensible, because *his soul is incomprehensible*. That his Soul is incomprehensible, is manifest, thus. Of those who have discoursed concerning the Soul, (to omit the great undetermined contest amongst them) some said, that *there is no Soul*, as the Followers of *Dicæarchus* the Messenian; others that *there is*; others *suspended*. This controversy therefore, if the Dogmatists acknowledge to be indijudicable, they grant the incomprehensibility of the Soul; if dijudicable, let them say, by what they judge and determin it. By Sense they cannot, for they hold the Soul to be intelligible; if by Intellect, we object, the Intellect is the most unmanifest thing in the Soul, as they shew, who agree in the Existence of the Soul, but disagree concerning her Intellect. If therefore they would comprehend the Soul, and determin the controversy concerning her by Intellect, they would determin that which is less in controversy, by that which is more in controversy, which is absurd. Therefore neither by Intellect can the question concerning the Soul be judged and determined, therefore by nothing; therefore it is incomprehensible, and consequently, Man cannot be comprehended.

But tho' we should grant, that Man may be comprehended, yet perhaps it cannot be proved, that things should be judged (and determined) by him. For he who saith, that things should be judged by Man, saith it either without demonstration or with demonstration. Not with demonstration, for demonstration ought to be true and adjudged; but, we knowing none, who by the consent of all, is able to judge the demonstration, (for the *Criteria in which* is in question) we are not able to judge the demonstration, and consequently cannot demonstrate the *Criteria in which*, the subject of our discourse. If it be said, that things may be judged by Man without demonstration, it will be incredible, because we have not any thing whereby to ascertain, that the *Criteria in which* is Man. From what shall it be judged, that the *Criteria in which* is Man? For if they say it without judgment and determination, it will not be admitted; if as determined by Man, the question is begged; if, as by any other Creature, how can any such be allow'd, to determin that Man is the *Criteria*? If without determination, it is no credit; if with determination, that *Criteria* must again be judged by some other, to be capable of determining; If by it self, the absurdity continues, for the thing in question is determin'd by the thing in question. If by Man, the *alternate Common-place* comes in. If by any other besides these, we shall again require a *Criteria in which*, and so to infinite. Therefore, we cannot say, things are to be determined by Man.

But if it be granted, that Man ought to determin things; yet seeing there is so great dissention amongst Men, the Dogmatists must agree among themselves, what one Man they ought to follow before they impose it upon us. Otherwise, if,

As long as streams shall flow, and tall Trees bloom,

they are like to disagree upon this, why do they press us so earnestly to assent to any one person?

IF

* So Plato distinguishes often, especially in *Timæus*, where he at large explained *τὸ πρῶτον μὲν αἰεὶ, γινόμενον ὃ ἐκ πῶς ποιεῖ, &c. τὸ γινόμενον μὲν, ὃν δ' ἔχει*.

If say they, We must believe a Wise man; we shall ask, What kind of Wise man, whether an *Epicurean*, or a *Stoick*, or a *Cynick*? They cannot agree Which. If any require us to lay down this Question concerning the Wise man, and simply to believe him who is wiser than all others; first, they will herein also disagree, Who is wiser than the rest; and, tho' they could agree in some one person, acknowledging him wiser than all that are, or ever were, yet neither will he be worthy to be credited; for there being a great, and, almost infinite intension and remission, as to Wisdom, we say, it is possible, there may be another wiser than this Man, whom they hold to be wiser than all, that either are or were. As therefore they require of us to give credit to him, that is said to be wiser than all that are or ever were, in respect of his Wisdom; so, if one comes after him wiser than he, this last is to be believed before him; and whilst this second lives, we may hope for another wiser than he; after whom, another; and so to infinite. Now whether these will agree with one another, no Man knows. So that tho' it were granted, that there is one Man wiser than all that are, or ever were; yet because we cannot affirm, there shall never be any one wiser than he; (for that is uncertain,) we ought always to expect the judgment of that future wisest person, and not assent to him who is wisest at present.

But tho' we should grant, that there is not, was not, nor ever shall be, any person wiser than him whom they suppose, yet neither is it convenient to believe him; for wise persons affect most (in the construction of things) to maintain Paradoxes, making the unsound seem sound and true. When therefore the sagacious person says any thing, we cannot tell whether he speaks it according to the nature of the thing itself, or alledgeth a falsity as if it were a truth, perswading us to believe it, he being wiser than all Men, and therefore we not able to contradict him. Thus ought we not to assent to him, as judging things rightly, because we may imagine, The things which he saith are not true, but represented as such, by the extraordinary advantage he hath over us in sagacity. For these reasons, we ought not in the judgment of things to believe him, who seemeth the most sagacious of all Men.

If any shall say, We ought to believe the agreement of many. We answer, That to do so is foolish; for first, Truth perhaps is rare, and therefore one may be wiser than many. Again, every Criterie hath more adversaries, than those who agree in defence thereof. For all those who maintain any other Criterie whatsoever, oppose them who agree in the defence of one, and are therefore of much greater number than the others. Besides, they who agree, either are in different affections, or in one. In different they are not, at least as to this, for then they would not agree in it. If in one, see in that he who affirmeth any thing, different from this which they agree in, hath one affection, and all they who agree in it have but one; as to the affections which we follow, there is no advantage in the number: Wherefore we ought not to follow many rather than one. As also, because the difference of judgment, as to their

multitude, is incomprehensible, as we shewed from the *fourth Common-place* of Suspension; for there are infinite Men, if we consider them singly, neither are we able to examine the judgments of all, and so to say what the greater part holds, what the fewest. It is therefore in this respect absurd also, to prefer some Judges before others, because of their number. And if the judgment of all in general is not to be followed, neither shall we find any at all by whom things may be judged, tho' we should grant never so much otherwise. Wherefore by all this, the Criterie in which all things are judged, appears to be incomprehensible; and the other Criteries being circumscribed by this, (for each of them is either a part, or a passion, or an action of Man) it followeth, * we need not perhaps speak of them, having here discoursed of them already. But lest we should seem to decline the confutation of every one in particular, we will say something over and above of them; and first of the Criterie called, *By which*.

μὴ λέγ.

C H A P. VI.

Of the Criterie, By which.

Great, almost infinite, is the disagreement amongst the Dogmatists concerning this; but we, observing our first method, shall only say; Forasmuch as, according to them, Man is the Criterie in which things are judged, but he hath nothing by which he can judge (as they all agree) besides Sense and Intellect; if we shew he cannot judge neither by *Sense* alone, nor by *Intellect* alone, nor by both together, we shall compendiously refute all their particular Assertions.

Let us begin with the *Senses*. Whereas some hold, that the affections of the Senses are vain, (and that none of those things which we think that we perceive, are subjected to them.) Others, that all the things by which the Senses think they are moved, are subjected to them. Others, that some of them are subjected to the Senses, others not. We know not to which of these we should assent, for we cannot determine the controversy, neither by Sense, (for the question is, whether that be vainly affected, or comprehend truly) nor by any other; for there is no other Criterie whereby it ought to be determined, (according to the Hypothesis) it will therefore be indeterminable and incomprehensible, whether Sense be vainly affected, or comprehendeth any thing. Whence it followeth, that we ought not to rely wholly upon Sense in the determination of things, when as we cannot say, that it comprehendeth any thing.

But let us grant the Senses to be comprehensive, yet will they be found to be nothing the less uncredible, as to determination concerning external Objects. The Senses are contrarily moved by externals, as the taste by the same Honey is sometimes affected sweetly, sometimes bitterly. The Sight thinketh the same colour sometimes red, sometimes white. Neither doth the smell agree with it self. He who hath some kind of obstructions in the Head, thinketh Unguents not to be sweet; he who hath not, saith they are sweet. Persons Divinely inspired, and Fanatick,

natick, imagine they hear others discoursing with them, whom we hear not. The same water to those who are troubled with an Inflammation seems excessive hot, to others moderately warm. Now whether shall we say, All these phantasies are true, or all false; or some false, some true? To say, that all are false is impossible, for we have not any Criterie uncontroverted, whereby to determine that which we prefer; neither have we any true determined demonstration, seeing that the Criterie of Truth, whereby true demonstration ought to be determined, is still in question. For this reason, he who conceived we ought to give credit to those who are well, and not to those who are not, speaks absurdly; for saying this without demonstration, he shall not be believed; but a true adjudged demonstration, he cannot have, for the reasons alledged.

But though we should grant that the phantasies of those who are well, are creditable, others not; nevertheless it will be found, that external Objects cannot be judged by the Senses only. The Sight, in persons that are well, judgeth the same Tower sometimes to be round, sometimes square; the Taste judgeth the same Meats upon Repletion Sowre, in Hunger pleasant; the Hearing perceiveth the same voice in the night loud, in the day low; the smell, what most Men declare to be stinking, in Tanners commonly denies it; the same touch when we enter a Bath is warmed by the Parastas, when we come out cooled by it. Wherefore seeing the Senses of such as are well, disagree amongst themselves, and their disagreement is indeterminable, (for we have not any thing universally acknowledged, whereby they may be determined) the doubt must necessarily be insolvable. Many other things might be alledged out of the Common places of Suspension. Thus perhaps it is not true, that Sense alone can judge of external Objects.

Let us now come to *Intellect*. They who conceive, that Intellect only is to be followed in the judication of things; First, they cannot demonstrate it to be comprehensible, that there is Intellect; for *Gorgias*, in saying, *There is nothing*, saith, that there is not Intellect. Others assert, *It exists*. How will they determine this controversy? Not by Intellect, (for that were to beg the question) nor by any other; for they say, there is no other (according to the Hypothesis) by which the things may be judged. It remains therefore indeterminable and incomprehensible, whether there be Intellect or not. Whence it followeth, that we ought not to rely upon Intellect only, in the dijudication of things, being itself is not yet comprehended.

But let us admit Intellect to be comprehended, and grant by way of supposition, that it exists; notwithstanding, I say, it cannot determine of things; for if it seeth not it self exactly, but disagreeeth concerning its own Essence, and the manner of its Generation, how then can it exactly comprehend other things? Besides, though we grant Intellect to be capable to determine of things; yet we shall not find how to determine by it. For there being much difference as to Intellect; one Intellect of *Gorgias*, according to which he saith, *Nothing is*; another of

Heraclitus, according to which he saith, *All things are*; another of those who affirm, *Some things are, others are not*: We shall not find any way to dijudicate these differences of Intellects, nor be able to say, This Intellect is to be preferred before that, or that not to be preferred before this. For if we would judge it by any Intellect, we yield to Parties in the difference, and beg the Question: if by any other than by Intellect, we are deceived, because we ought to judge things by Intellect only. Moreover, from what we said upon the Criterie by which, may be demonstrated, that we can neither find a Sagacity exceeding the Sagacity of others: Nor if we could find an Intellect more Sagacious, than any ever had, or have been; yet, (forasmuch as it is uncertain whether there will not be one more Sagacious than it) we ought not to follow it. And though we should suppose an Intellect more Sagacious, than any shall ever be hereafter, yet ought we not to follow him who judgeth by it, lest alledging some false reason, he perswade us by the acuteness of his Wit, that it is True. Therefore neither doth Intellect only judge things.

It remaineth we say, that things are judged by both, which likewise is impossible; for the Senses are so far from guiding the Intellect to comprehension, that they contradict one another. Honey seems sweet to some, bitter to others; *Democritus* held, *it is neither sweet nor bitter*; *Heraclitus*, that *it is both*. 'Tis the same in other Senses, and other Sensibles. So as the Intellect, impelled by the Senses, is constrained to affirm things different and repugnant. But such a kind of Criterie is far from comprehensive.

Moreover, they must say, That they judge things either by all the Senses, and all * Intellects; or, by some. By all, it is impossible; there appearing so great controversy amongst several Senses and Intellects, (likewise the Intellect of *Gorgias* declaring, that *neither the judgment of Sense or Intellect ought to be followed*, the argument will be retorted:) If by some, Who can judge, that we ought to adhere to the Senses, and this Intellect, and not to those, not having an acknowledged Criterie, by which to judge different Senses and Intellects. If we say, that they judge Senses and Intellects by Intellect and Sense, † they beg the question, which is, Whether we can judge by these.

Again, either he judgeth Senses and Intellects by Sense; or Senses and Intellects by Intellect; or Senses by Sense, and Intellects by Intellect; or Intellects by Sense, and Sense by Intellect. If they say, they judge these by Senses or Intellect, they judge not by Sense and Intellect, but by one of them, which they make choice of, and consequently incur the difficulties alledged formerly. If Senses by Sense, and Intellects by Intellect, there being so great repugnance of Senses to Senses, and Intellects to Intellects, which soever they take of the repugnant Senses to judge the rest of the Senses, they beg the question; for they assume part of the difference, as creditable, for dijudication of things equally controverted with it. It is the same in Intellects. If they judge Intellects by Senses, and Senses by Intellects, the alternate Common place occurs, shewing, that to judge Senses we prejudge Intellects, and

* Read here and after, *Διαφοίαις*.

† Betwixt *νεῦσις* & *νοῦς*, there is a breach and defect, in the *M. S.* of *Mr. Casaubon* and *Sir Henry Savile*; which the printed Edition not taking notice of, confounds the sense.

and to examin Intellects we must prejudice Senses. Wherefore seeing that Criteries of one kind cannot be judged by Criteries of the same kind, nor both kinds by one kind, nor reciprocally one kind by the other kind; nor can we prefer Intellect before Intellect, or Sense before Sense; it follows, That we have not any thing whereby to judge. For if we cannot judge by all Senses and Intellects, nor know by which we ought to judge, and by which not to judge, we shall not have any thing by which to judge things. Wherefore there is no Criterie *by which*.

C H A P. VII.

Of the Criterie According to which.

LET us next examine the Criterie *according to which* things are judged. In the first place we may hold that phantasia is unconceivable; for they say *Phantasia is an impression in the Hegemonick part of the Soul*. Seeing therefore that the Soul and the Hegemonick is a Spirit, or something more subtle than Spirit, as they themselves hold; no Man can conceive that there is in himself an impression, either by extubérance and depression, as we see in Scales; or by the wonderfully invented Heteræotick, for he could retain in memory so many Theorems, as make up an Art, because by succeeding Heteræoses, the precedent would be defaced.

But tho' there were such a thing as Phantasia, yet would it be incomprehensible, for it is a passion of the Hegemonick; the Hegemonick, as we shew'd, is not comprehended; therefore neither can we comprehend its affection.

Moreover, tho' we should grant that phantasia is comprehended, yet things cannot be judged according to it; for it doth not (say they) apply it self to externals, and conceive Phantasies in it self, but by the Senses. Now the Senses comprehend not the external objects, but their affections only; For Honey, and my being sweetly affected, are not all one thing; neither is Wormwood the same with my being bitterly affected; they differ. But if the affection differ from the External object, the Phantasia will not be of the External object, but of some other thing different from it. Therefore if the Intellect judge according to the Phantasia, it will judge amiss, and not according to the object; whence it is absurd to say, External objects are judicated according to the Phantasia.

Neither can it be said, that the Soul comprehends sensible objects by sensible affections, because the affections of the Senses are like their External objects; for how can the Intellect know whether the affections of the Senses are like the sensible objects, when as it self meddles not with External objects, neither do the Senses declare the natures of them to her, but only their own affections, as we argued in the *Common places of Suspension*. For as he who knows not Socrates, if he look upon his picture knows not whether it be like Socrates; so that Intellect, beholding the affections of the Senses, but not seeing the External objects themselves, cannot tell whether the affections of the Senses are like their External objects. Therefore neither

by assimilation can it judge those things according to the Phantasia.

But let us grant, that the Phantasia cannot only understand and comprehend, but is able also to judge things of it self, (tho' we have proved the contrary) it follows, that either we must believe all Phantasies, (one whereof saith, that all Phantasies are incredible, by which means the argument will be retorted, that all Phantasies by their own acknowledgment, are not capable to judge things) or if we must believe only some, How shall we judge, Which Phantasies are to be believed, which not? If without Phantasia, then they grant, that Phantasia is not requisite to the judgment of things, in as much as they say they can judge things without it. If with Phantasia, How will they assume that Phantasia by which they mean to judge all other Phantasies? Or again, they will need another Phantasia to judge the Phantasia by which they judge all Phantasies, and another to judge that, and so to infinite; but it is impossible to judge to infinite; therefore it is impossible to find what Phantasies ought to be used as Criteries, what not. Since therefore, which way soever we grant that things ought to be judged according to Phantasies, the argument will be retorted, whether by all, or by some only. We conclude, that Phantasies ought not to be used as Criteries, to judge things.

This may serve for an Answer by way of Summary, to the Criterie *according to which*: But take notice that our purpose is not to prove there is no Criterie of truth existent (for that were Dogmatical) but because the Dogmatists seem probably to have evinced that there is a Criterie of truth, we have proposed arguments that seem probable against them; not that we think them true, or more probable than the contrary; but forasmuch as these arguments, and those of the Dogmatists, seem alike probable, we are driven to Suspension.

C H A P. VIII.

Of True and Truth.

THOUGH we should grant, (by way of supposition) that there is some Criterie of truth, yet will it be useless and vain, if we prove, (even out of what the Dogmatists themselves say) that truth is not, neither can it be. We shew it thus: *True is said to differ from Truth three ways; by Essence, by Constitution, by Power. By Essence, for True is Incorporeal, (as being an axiom and a dicible) but Truth is a Body, as being the enunciative Science of all true things; but Science is the Hegemonick after such a manner, as the fist is the hand after such a manner; but the Hegemonick is a Body, for (according to them) it is a Spirit.*

By Constitution, for True is something simple, as, I discourse; but Truth consists of the knowledge of many True things.

By Power, for Truth adhereth to Science, True doth not absolutely; whence they say that Truth can only be in a wise person, but True in a wicked; for a wicked man may speak something that is True. Thus the Dogmatists.

But

But we continuing our first design, will discourse onely concerning *True*. For *Truth*, which is said to be the *Science of the knowledge of things True*, is included therein. Again, forasmuch as of arguments, some are general by which we take away the substance of *True*; others particular, whereby we shew that *Truth* is neither in speech, nor in a dicible, nor in the motion of the Intellect, we conceive it sufficient to use onely the General. For, as when the foundation of a Wall is taken away, all the superstructures fall; so the subsistence of *True* being taken away, the particular conceits of the Dogmatists are thereby excluded also.

C H A P. IX.

Whether True be something in nature.

THere being a disagreement amongst the Dogmatists concerning *Truth*, (some holding, that *True* is something, others that it is not) the controversie is not capable to be judged. For he who saith, that *True is something*, if he say it without demonstration, will not be credited, because of the disagreement; if he alledge a demonstration, and acknowledge it to be false, he is incredible; if he say, that it is *True*, he runs into the *alternate Common place*. It will be required of him, that he produce a demonstration to demonstrate that to be *True*, and another to prove this, and so to infinite; but it is impossible to demonstrate infinities, therefore it is impossible to know whether *True* be something.

Again, this *something*, which they hold to be the most General of all things, is either *True* or false, or neither *True* nor false, or both *True* and false. If they say, it is false, they confess that all things are false; For as because an Animal is something Animate, therefore every Animal in particular is Animate; in like manner, if this *something*, being the most General of all things, be false, all things in particular will be false and nothing true. Whence also may be inferred that *nothing is false*, for this proposition *all things are false*, this other *something is false*, including all things, will be false. And if something be *True*, all things will be *True*, and consequently nothing will be *True*; for this proposition, *Nothing is true*, will be *True*.

If something be both *True* and false, every thing in particular will be both *True* and false, whence it will follow, that nothing is in its own nature *True*; for that which is *True* in its own nature, cannot by any means be false.

If something be neither *True* nor false, they confess, that all things in particular being said to be neither *True* nor false, are not *True*, and therefore it is not manifest to us whether this be *True*.

Moreover, either things manifest onely are *True*, or onely things not manifest; or of *True* things, some are manifest, others not manifest; But neither of these, as shall be proved; therefore nothing is *True*. If onely things manifest are *True*, they must say that all the manifest are *True*, or some onely; if all, the argument will be retorted, saying it is manifest, that no-

thing is *True*; if some, none can say, without dijudication, *this is True, that false*. If he use a Criterie, he must grant it to be either manifest or unmanifest; not unmanifest, for the manifest onely are now supposed *True*; if manifest, we demand, Which manifest things are *True*, which false? The thing manifest, assumed to judge things manifest, will it self require another Criterie, and that another, and so to infinite; but it is impossible to judge to infinite; therefore it is impossible to comprehend, which manifest things onely are *True*.

He who saith, *onely unmanifest things are True*, holdeth not that all things are *True*, (for he will not say, *that the stars are even and that they are odd, is alike True*) if some, by what shall we judge that these unmanifest things are *True*, those False? Not by any thing manifest, and if by any thing unmanifest, that unmanifest thing will require another to judge, and this another, and so to infinite. Wherefore, neither are onely things unaparent *True*.

It remains, that we say of the *True*, some are manifest, others unmanifest, which also is absurd. For either all things both manifest and unmanifest, are *True*, or some of the manifest, and some of the unmanifest. If all, the argument will be retorted, granting it to be *True*, that *nothing is True*. He likewise grants it to be *True*, *that the Stars are even, and that they are odd*. If of the manifest some onely are *True*, and of the unmanifest some onely, by what shall we judge that of the manifest, these are *True*, these False; if by a thing manifest, we run into infinite: If by an unmanifest, forasmuch as the unmanifest requires dijudication also, By what shall that unmanifest be judged? If by a manifest, the *alternate Common place* occurs; if by an unmanifest, the *Common place of infinite*. The same may be said of the unmanifest, for he who undertakes to judge it by an unmanifest, is forc'd to run into infinite; he who by a manifest, either assuming a manifest, runs into the *Common place of infinite*, or passing to an unmanifest, into the *alternate*. It is therefore false to say, that of the *True* some are manifest, others not manifest.

Now if neither the manifest onely are *True*, nor onely the unmanifest, nor some of the manifest; and some of the unmanifest, then nothing is *True*; and if nothing be *True*, the Criterie conducing to the judgment of *Truth*, would be useless and vaine, tho' we should grant it had a being. Now if we must suspend concerning this question, *whether True be something*, it will follow, that they who say, *Dialectick is the Science of things True, False, and Neuter*, speak rashly; since the Criterie of *Truth* appears to be undeterminable; neither can we affirm any thing, either concerning those things which seem evident as the Dogmatists call them, or concerning the unmanifest; For since the later, (as the Dogmatists conceive) are comprehended by the former, if we are enforced to suspend concerning the Evident, how dare we assert concerning the Unmanifest?

But we shall (over and above) alledge our Arguments against particular things; and forasmuch as these seem to be comprehended by *Sign*, and *Demonstration*, we shall shew that we ought

to suspend our Assent concerning Sign and Demonstration. We will begin with Sign, for Demonstration is a species of Sign.

C H A P. X.

Of Sign.

OF things (according to the Dogmatists) some are manifest, others unmanifest. Of the unmanifest, some are absolutely unmanifest, others unmanifest for a time, others unmanifest by nature. Manifest they hold to be those things which of themselves come into our knowledge, as, it is day. Absolutely unmanifest, those which come not within the reach of our comprehension, as, that the number of the Stars is even. Unmanifest for a time, those which are manifest in their own nature, but by reason of some external circumstances, they are for a time not manifest to us, as the City of Athens is to me at this present. Unmanifest by nature, are those, which have a nature not subject to be manifest to us, as Pores; for these never appear to us of themselves, but are comprehended from some others, as by sweat or the like. Manifest things, say they, require not a sign, (for they are comprehended of themselves) neither those which are absolutely unmanifest, for they are no way to be comprehended; but the unmanifest for a time, and the unmanifest by nature, are comprehended by signs, yet not by the same; the unmanifest for a time, by the Hypomnestick (admonitive) the unmanifest by nature, by the Endictick (indicative.) Of Signes therefore, some are according to them, Hypomnestick, others Endictick. A Hypomnestick sign, they call that which being observed to be together with a significate, evident, as soon as ever the sign evidently incurreth to our sense, tho' the significate appear not, yet it causeth us to remember that which was concomitant to it, tho' at present not evident, as smoak and fire.

* M. S. Cu-
curvond

An Endictick sign, (say they) is that, which is not observed together with an evident * significate, but of its own nature and constitution signifieth that whereof it is a sign; thus the motions of the body are signs of the Soul.

Hereupon they define Sign thus; Sign is a demonstrative axiome, antecedent in a sound connex, defective of that which followeth.

Of these two kinds of signs, we oppose not both, but onely the Enoiectick, as seeming to be forged by the Dogmatists; the Hypomnestick is creditable in the course of life; for whosoever sees smoak, knows that fire is signified; and seeing a scar, saith, it had been a wound. So as we not onely not contradict the common course of life, but maintain it, assenting inopinatively to that in it which is creditable, but opposing what is particularly forged by the Dogmatists. Thus much it was requisite to say for explication of the question. We now proceed to confutation, not endeavouring to shew that the Endictick sign is wholly inexistent, but the apparent equivalence of arguments on both sides, for its existence and inexistence.

C H A P. XI.

Whether there be any Endictick Sign.

A Sign therefore, by what the Dogmatists speak of it, is unintelligible. The Stoicks, who have discoursed with most exactness hereupon, to shew the notion of sign, say, "A Sign is an Axiome antecedent in a sound Connex, defective of that which follows. Axiome, they say, is a Dicible, Self-perfect, Enunciative as it is within it self. A sound Connex is that which beginneth not from true, and endeth in false; for a Connex either beginneth from true, and endeth in true; as, if it is day, it is light; or, it beginneth from false, and endeth in false, as, if the Earth flyeth, the Earth has Wings: Or, it beginneth from true, and endeth in false; as, if the Earth is, the Earth flies: Or it beginneth from false, and endeth in true; as, if the Earth flyeth, the Earth is. Of these, they hold that only to be unsound, which beginneth from true, and endeth in false, the rest are all true. Antecedent they call that, which goeth foremost in a Connex, beginning from true, and ending in true; it is Defective of that which followeth, for in this Connex, If she hath Milk, she hath Conceived; These words, She hath conceived, are declared by those, She hath Milk. Thus they.

Now we first say, That it is uncertain whether there be a Dicible: For seeing that of the Dogmatists, the Epicureans say, there is no Dicible; the Stoicks, that there is; when the Stoicks say, that a Dicible is something, either they use Assertion only, or Demonstration also. If Assertion only, the Epicureans will oppose it with the contrary Assertion, that a Dicible is nothing. If by Demonstration, forasmuch as Demonstration consists of Dicible Axioms, nothing that consists of Dicibles can be assumed to prove that a Dicible is something. For he who allows not a Dicible to be, How will he grant a collection of Dicibles to be? Thus, whosoever shall endeavour by a collection of Dicibles to prove that there is a Dicible, goes about to prove a thing controverted, by a thing controverted. If therefore neither simply, nor by Demonstration it cannot be proved, that there is a Dicible, it is not manifest that there is a Dicible, and consequently that there is an Axiome; for, an Axiome is a Dicible.

Yet, though by way of supposition we should grant, that there is a Dicible; an Axiome will be found notwithstanding to be inexistant, which consists of Dicibles not coexistent with one another. As for example in these, If it is day, it is light, when I say, it is day, I have not yet said it is light; and when I say it is light, I had before said that it is day. If therefore whatsoever is compounded of any thing cannot exist unless its parts coexist with one another, but the parts whereof an Axiome is compounded coexist not with one another, therefore an Axiome will not exist.

But besides all this, a sound Connex will be found to be incomprehensible. For, Philo saith, That is a sound Connex which beginneth not from True and endeth in False, as (it being day and I disputing

disputing) this, *If it is day I dispute.* But Diodorus saith, *That beginning from True it neither could nor can end in False, according to whom that Connexion seemeth to be False, for it being Day, and I being silent, it will begin in True and end in False.* But this is a True one, *If the Elements of things are not indivisible, the Elements of things are indivisible, for beginning always from False (the Elements of things are not indivisible) it will end in True, the Elements of things are indivisible.* But they who introduce Synartesis, say, *That is a sound Connex, when that which is contrary to that which ends in it, is contrary to that which is antecedent in it, according to whom these Connexes which we have instanced are unsound; but this is a True one, If it is day it is day.* They who judge by Emphasis, say, *That is a true Connex whose Consequent is potentially contained in the Antecedent, according to whom this, If it be day it is day, and every reduplicate connex'd Axiome perhaps will be false, for a thing cannot contain it self.* Thus this controversy seems indeterminable, for neither shall we be creditable, if we prefer any of the fore-mentioned Propositions without Demonstration, nor with Demonstration: For the Demonstration seemeth then to be sound, when its conclusion followeth the conjunction of its Sumptions or Premises, as the Consequent the Antecedent. As thus; *If it is day it is light, but it is day, therefore it is light.* But if we demand how the consequence of the consequent to the antecedent shall be judged, they incur the alternate common place; for to demonstrate the Dijudication of the Connex, the Conclusion as we said must follow the Sumptions of the Demonstration. Again, that this may be credited, the Connex and the Consequence ought to be determined, which is absurd. Therefore a sound Connex is incomprehensible.

Likewise the antecedent is undeterminable. For the antecedent, (say they,) is that which goeth foremost, in such a Connex as beginneth from True and endeth in True. Now if it be a sign detective of the Consequent, either the Consequent is manifest or unmanifest; if manifest, it needs no detective, for it will be comprehended together with the other; neither is it a significate, and therefore this is not its sign; if unmanifest, forasmuch as there is an undetermined Controversie concerning things not manifest, which of them is true, which false, and whether any of them be true, it will be unmanifest whether the Connex speak true; whence it followeth, that it is also unmanifest, whether the antecedent in it precede (rightly.)

But besides this, Though there be a significate to the sign, yet it cannot be detective of the Consequent even for this reason, because it is comprehended together with it: For Relatives are comprehended together, as Right cannot be comprehended before Left, as being right in relation to left, not on the contrary Right without Left. The like in all other Relatives; so it is impossible that the sign can be comprehended before the significate; but if the sign be not comprehended before the significate, it cannot be detective of it, the significate being comprehended together with it, and not after it. Thus from their disagreeing Opinions, we may gather that a sign is unintelligible, for they say that it is relative, and detective of the significate to which

it is relative; whence it followeth, That if it be relative to the significate, it must necessarily be comprehended together with the significate, as right with left, upwards with downwards, and the like: But if it be detective of the significate, it is necessary that it be comprehended before it, that, being first known, it may bring us to the notion of the thing which is known by it; but it is impossible to understand a thing which cannot be known but by the fore-knowledge of another thing which cannot be known before it. Therefore it is impossible to understand any thing which is not only relative to, but detective also of, that to which it is relative: But a sign, say they, is both relative to, and detective of the significate, therefore it is impossible to understand the sign.

Moreover, it was a controversy before our time, some affirming, that there is an Endeictick sign, others that there is none; now he who saith that there is an Endeictick sign, either affirmeth it barely without demonstration, or with demonstration. If with bare affirmation, he will not be creditable; if he would demonstrate it, he begs the Question. For the Genus of demonstration being sign, when we question whether there be sign, we question whether there is demonstration, as, if we question whether there be an Animal, we question whether there be a Man, for Man is an Animal; but to demonstrate a thing controverted by a thing controverted, or by it self, is absurd; therefore it cannot be demonstrated that there is a sign. And if it can neither be affirmed simply nor demonstratively, it is impossible to frame a comprehensive enunciation of it. Now if sign be not exactly comprehended, neither can it be said to be significant of any thing, it not being acknowledged it self; therefore there will be no sign. Whence, according to this argument, sign is unexistent and unintelligible.

Again, Signs either are apparent only, or unapparent only, or some apparent, others unapparent; but none of these is true, therefore there is no sign. That signs are not unapparent, is shewn thus. What is unapparent is not manifested by it self, according to the Dogmatists, but occurreth to us through some other; a sign therefore if it be unapparent will require another sign, which also will be unapparent (for according to the proposed Hypothesis, no sign is apparent) and that another, and so to infinite: But it is impossible to take infinite signs, therefore it is impossible to comprehend a sign, it being unapparent. For which reason it will be inexistent, not capable to signify any thing, as to be a sign, because it cannot be comprehended. On the contrary, If all signs are apparent, forasmuch as the sign is relative to the significate, and relatives are comprehended together with one another, the significate being comprehended together with the apparent, will be also apparent. For as right and left incurring to us together, right is not said to be more apparent than left, or left than right; in like manner the sign and the significate being comprehended together, it cannot be said that the sign is more apparent than the significate: But if the significate be apparent, it is not a significate, as not needing any to signify and detect it. Whence taking away right, we take away left also; so

taking away the significate, the sign cannot exist. Thus the Sign will be found to be inexistant, if we say that Signs only are apparent. It remains, we say, that of Signs some are apparent, some unapparent, but this also incurs the same difficulties; for the Significates of apparent Signs will be apparent, as we said, not requiring any thing to signify them, and consequently they will not be Significates. Whence neither will the other be Signs, as signifying nothing; The unmanifest Signs requiring something to detect them. If they say, they are signified by Unmanifest, the Argument running into Infinite, they will be found to be Incomprehensible, and consequently Inexistant, as we said. If by apparent, they will also be apparent, as being comprehended together with their apparent signs, and consequently will also be inexistant, for it is impossible a thing should be by nature apparent and unapparent; but the Signs, of which our discourse is, being supposed unapparent, will be found to be apparent, by retorting the Argument. If therefore neither all Signs be apparent, nor all unapparent; nor some apparent, others unapparent; and that there be nothing more than this, as they acknowledge, what they call Signs will be inexistant. These few Arguments, alledged out of many, may suffice to shew, that there is no Endeictick Sign.

Let us now lay down the Arguments of those who hold a Sign to be, that we may shew the equivalence of contrary Reasons. Either the words alledged against Sign signifie something, or they signifie nothing; if insignificant, How can they take away the existence of Sign? If they signifie what Sign is, they are demonstrative against Sign, or not demonstrative; if not demonstrative, they do not demonstrate that Sign is not; if demonstrative, demonstration being a *Species* of Sign, defective of its conclusion, Sign will be. Whence is argued thus, If Sign be something, there is Sign; and if there be not Sign, there is Sign; for that there is no Sign must be proved by demonstration, which is a Sign. Now either Sign is, or it is not, therefore it is not.

Upon this Argument followeth another in this manner; If there be not some Sign, there is no Sign: and if a Sign be that which the *Dogmatists* hold it to be, it is no Sign; for the Sign of which we discourse, according as it is understood, and as it is relative to, and defective of, the significate, is found to be inexistant, as we shewed before. Now either Sign is, or it is not; therefore it is not.

As concerning the words which are spoken of Sign, let the *Dogmatists* answer, Whether they signifie any thing, or not; if they signifie nothing, they prove not that there is Sign; if they signifie, the Significate followeth them, which is, there is Sign; whence it followeth, as we shewed, that there is Sign, by retorting the Argument. Since therefore Reasons equally probable may be alledged, to prove there is Sign, and that there is not Sign, we ought not to say either rather than the other.

C H A P. XII.

Of Demonstration.

From what hath been said, it is manifest that neither is Demonstration a thing acknowledged. For if we suspend as to sign, and Demonstration be a Sign, we must necessarily suspend as to Demonstration; For we shall find that the Arguments alledged against Sign will serve also against Demonstration: It seemeth to be Relative to, and defective of, its Conclusion, upon which will follow almost all that we alledged against Sign. But if something must be said of Demonstration in particular, I will comprise the Discourse in a narrow compass, first laying down what Demonstration, according to them, is.

‘ Demonstration (as they say) is a Reason which, by Collection of acknowledged (indubitate) Sumptions, detecteth a thing unmanifest. But clear will it seem by this that followeth, Reason (or Argument) is that which consists of Sumptions and a Conclusion; Its Sumptions are said to be the Axioms taken suitably for construction of the conclusion concordantly.

‘ Inference or Conclusion is the Axiom framed out of the two Sumptions, as in this, If it is Day, it is Light; but it is Day, therefore it is Light: Therefore it is Light is the Conclusion, the rest are the Sumptions. Of Reasons, some are conclusive, others not conclusive: Conclusive, when the Connex, beginning from Complication of the Sumptions of the Argument, and concluding in the Inference thereof, is found; as the instanced Reason is Conclusive, because to this Complication of its Sumptions, It is Day; and, if it is Day it is Light; it is consequent, it is Light, in this Connex, if it is Day, and if it is Day, it is Light. Not conclusive are those, which are not after this manner.

‘ Of the Conclusive, some are true, others not true: True, when not only the Connex, as to Complication of the Sumptions and the Inference, is, as we said, found; but the Conclusion, and that which is a Complication of the Sumptions is true, which is the Antecedent, and the Connex. A true Complication is that which hath all true, as, It is Day, and, if it is Day it is Light. Not true, is, when they are not thus; for this Reason, if it is Night, it is dark; but it is Night; therefore it is dark, is indeed Conclusive, because the Connex is found, if it is Night, and, if it is Night it is dark; but it is not true, for the consequent complicate is false, it is Night, and if it is Night it is dark, it containing this falsity, for it is a false complicate whatsoever containeth in it self a falsity. Whence they say, A true reason is that, which, from true Sumptions, inferreth a true Conclusion.

‘ Again, of true Reasons, some are (Apodeictick) Demonstrative, others not Demonstrative. Demonstrative, are those, which, from things manifest, collect something not manifest; not Demonstrative are those which are not so, as this reason, If it be Day it is Light; but it is Day, therefore it is Light, is not demonstrative, for its conclusion, it is light, is manifest. But this, if Sweat pierce through the Skin, there are

are Pores intelligible, but Sweat pierceth through the Skin, therefore there are Pores intelligible, is demonstrative; for its conclusion, therefore there are Pores Intelligible, is unmanifest.

Again, of those which collect something unmanifest, some bring us by the Sumptions to the Conclusion inductively only, others inductively and detectively. Inductively, those which seem to depend upon Belief and Memory, as this; if one tell you, that such a Man shall grow rich, he shall grow rich; but this God (as supposing *Jupiter*) tells you, that such a Man shall grow rich, therefore he shall grow rich. We assent to the conclusion not so much for any necessity of the Sumptions, as for that we believe what the God saith. Others not only inductively, but detectively also lead us to the Conclusion; If Sweat issue through the Skin, Pores are intelligible; but the first, therefore the second; for this, Sweat issueth forth, is detectively of the other, there are Pores; forasmuch as we preconceive, that moisture cannot penetrate through a Body not porous.

Thus Demonstration must be a Reason conclusive and true, and have an unmanifest Conclusion detectively by the power of the Sumptions, and therefore Demonstration is said to be a Reason, having indubitate Sumptions, and by Collection detecting an unmanifest Inference. By this we may understand the Notion of Demonstration.

CHAP. XIII.

Whether there is Demonstration.

That Demonstration is not, may be argued from what they themselves say, by overthrowing every Particular that is included in the Notion. For Example; A Reason or Argument consists of Axioms, but a compound thing cannot exist, unless the things whereof it is compounded coexist one with another (as a Bed, and the like:) But the parts of a Reason are not coexistent one with another; for whilst we are speaking the first Sumption, the other Sumption nor the Inference do not yet exist; and while we are speaking the second, the first is no longer existent, and the Inference exists not yet; and when we pronounce the Inference, the Sumptions are no longer existent. Thus the parts of a Reason are not existent with one another, and therefore the Reason it self seemeth not to exist.

Besides, A conclusive Reason is incomprehensible; for, if it be judged from the consequence of the Connex, but the consequence of the Connex be undeterminably controverted, and perhaps is incomprehensible, (as we shewed in our discourse concerning a Sign;) conclusive Reason will also be incomprehensible.

Moreover the *Dialecticks* say, that A not-conclusive Reason is made, either by Incoherence, or by Defect, or by being in an ill Figure, or by Redundance. By incoherence, when the Sumptions have no coherence with one another, nor with the Inference, as, If it is Day it is Light, but Corn is sold in the Market, therefore *Dion* walks.

By Redundance; when there is found some redundant Sumption superfluous to collection of the Reason, as, If it is day it is light, but it is day, and *Dion* walks, therefore it is light.

By being in an ill Figure; for these are as they call them *Syllogisms*. If it is Day it is Light, but it is Day, therefore it is Light; And If it is not Light it is not Day; But it is not Light, therefore it is not Day. But this is an inconclusive reason, If it is Day it is Light, but it is Day, therefore it is Light; because the Connex promising that its Consequent is in its Antecedent, the Antecedent being assumed, the Consequent is also assumed; and the Antecedent being taken away, the Consequent is also taken away; for if the Antecedent be, the Consequent must be also. But assuming the Consequent, the Antecedent is not always assumed also; for the Connex doth not promise that the Antecedent shall follow upon the Consequent, but only the Consequent upon the Antecedent. Hereupon a Reason, which collects the Consequent from the Connex of the Antecedent, is said to be Syllogistick; and that which from the Connex, and from the contrary of the Consequent collects the contrary of the Antecedent. But that which from the Connex and the Consequent collects the Antecedent, is inconclusive, as we said before. Whence its Sumption being true, it collects a Falsity, if it be spoken in the Night-time by the light of a Candle: for this, If it is Day it is Light, is a true Connex; and so is this Assumption, But it is Light; but the inference, Therefore it is Day, is false.

By defect; a Reason is faulty, when there is omitted something of those which are requisite to Collection of the Conclusion; as this Reason, being, as they conceive, found, Riches are either good or ill, or indifferent; but neither ill nor indifferent, therefore good. This other is unsound by Defect, Riches are either good, or ill, or indifferent; but not ill, therefore good.

Now if I shall shew, that according to them, no difference of inconclusive Reasons can be judged by the Conclusive, I shall have cleared, that the Conclusive Reason is Incomprehensible, and that all their Ostentation in Dialectick is folly. I prove it thus, A Reason Inconclusive by Incoherence, is said to be known from its sumptions, not having any coherence one with another, and with the Conclusion; now forasmuch as the knowledge of coherents must precede the judgment of the Connex, the Connex will be indjudicable, (according to our usual Argument) and consequently so will the Reason, Inconclusive by Incoherence, be also. For he who saith, That a Reason is Inconclusive by Incoherence, if he do it by simple Enunciation, we oppose the contrary Enunciation; if he demonstrate it by a Reason, we shall tell him, he must first demonstrate that Reason to be Conclusive, and afterwards prove the sumptions of a Reason defective by Incoherence, to be Incoherent; but whether his Reason be demonstrative, we cannot know, not having a generally acknowledg'd Judgment of the Connex, whereby to judge, whether the Conclusion cohere with the Complication of the sumptions in the Reason. Therefore we have not whereby to judge the difference betwixt the

the Conclusive Reason, and the Defective by Incoherence.

The same we object to him, who saith, that a Reason is faulty by *being in an ill Figure*: For he that goeth upon this Ground, that there is some Figure ill, will not have acknowledged conclusive Reason, whereby to collect what he saith.

In the same manner may those be confuted, who say, that a Reason is *Inconclusive by defect*; for if the Perfect be indijudicable, the Defective must be so also. Again, he who would prove by some Reason, that there is something wanting to Reason, unless he hath an acknowledged judication of the Connex, whereby he may judge the Coherence of the Reason which he alledgeth, he cannot judicially and rightly say, that the other is defective.

Likewise, that Reason which is said to be faulty by Redundance, is not dijudicable by the Demonstrative; for as to Redundance, even those very Reasons, which the *Stoicks* cry up as *Indemonstrable*, will be found to be inconclusive, which, if they should be taken away, all Dialectick will be overthrown. These are they, which (they say) need not Demonstration to establish them, but by them are demonstrated the other Conclusive Reasons. That these are redundant; will appear plainly if we lay them down and discourse upon them. They dream, 'that there are many Indemonstrables, but asserted chiefly Five, whereto all the rest seem to be referred. The First, from the Connex and the Antecedent, collects the Consequent, as, 'If it is Day it is Light, but it is Day, therefore 'it is Light. The Second, from the Connex and the contrary of the Consequent, collects the contrary of the Antecedent, as, 'If it is 'Day it is Light, but it is not Light, therefore 'it is not Day. The Third, from the negative Complicate, and one of the Parts of the 'Complicate, collects the contrary of the other 'Part, as, 'It is not Day and Night also, but it 'is Day, therefore it is not Night. The Fourth, 'from the Disjunct and one of the Conjuncts, 'collects the contrary of the other, as, 'Either 'it is Day or it is Night, but it is Day, there- 'fore it is not Night. The Fifth, from the 'Disjunct and the contrary of one of the Con- 'juncts, collects the other, as, 'Either it is Day 'or it is Night, but it is not Day, therefore it 'is Night. These are the Reasons which they cry up as Indemonstrable; but they all seem to me Inconclusive, by Redundance. For to begin with the First; Either it is acknowledged [as undoubted] that this part, *it is Day*, followeth upon this other, *it is Light*, which is the Antecedent in this Connex, *if it is Day it is Light*; or, it is not Manifest: If Unmanifest, we shall not allow the Connex as acknowledged; but if it be manifest that if this be, *it is Day*, this other must necessarily be also, *it is Light*, in saying, *it is Day*, we collect the other, *it is Light*, and this Connex, *it is Day, it is Light*, is Redundant.

The same may be said of the *second Indemonstrable*, for either it is possible the Antecedent may be, the Consequent not being, or it is not possible. If possible, it is not a sound Connex; if not possible, as soon as ever the word *Not* is spoken in the Consequent, it declareth the *Not* in

the Antecedent, so as this is a redundant Connex, *It is not Light, therefore it is not Day*.

The same may be said of the *third Indemonstrable*; either it is manifest, that those which are in the Complication cannot possibly coexist, or not manifest; if not manifest, we shall not allow the Negative of the Complication; if manifest, as soon as one is laid down, the other is taken away, whereby the Negative of the Complicate is redundant thus, *It is Day, therefore it is not Night*.

The like we say of the *fourth and fifth Indemonstrables*; either it is manifest, that in the Disjunct one is true, the other false, with perfect opposition, (as the Disjunct promiseth,) or it is not manifest. If unmanifest; we shall not grant the Disjunct; if manifest, as soon as one is laid down, the other is taken away, and one being taken away, it is manifest that the other is, as, *It is Day, therefore it is not Night; It is not Day, therefore it is Night*.

The like may be said of the *Categorick Syllogisms* used chiefly by the *Peripateticks*, such as this, *Just is Honest, Honest is Good, therefore Just is Good*; either it is manifest that Honest is Good, or it is doubted and unmanifest; If unmanifest, it will not be granted upon this Argument, and consequently the *Syllogism* will not convince; if it be manifest, that *whatsoever is Honest is Good*, in saying, it is Honest, is implied, it is Good also; so that this were enough, *Just is Honest, therefore Just is Good*; and the other Sumption, in which *Honest* is said to be *Good*, is redundant. The like in this Reason, *Socrates is a Man, every Man is a living Creature, therefore Socrates is a living Creature*. If it be not manifest in it self, that whatsoever is Man is also a living Creature, the universal first Proposition will not be acknowledged, neither shall we grant it in the Argument. But if from being a Man it followeth, that he is a living Creature, and therefore the first Proposition, *Every Man is a living Creature*, is acknowledged true, then, as soon as ever *Socrates* is said to be a Man, it is imply'd, that he is a living Creature; and therefore the first Proposition is redundant, *Every Man is a living Creature*. The like method may be used against all Categorick Reasons, not to insist longer hereon: Seeing therefore these Reasons whereupon the Dialectick ground their Syllogisms are redundant, as to Redundance all Dialectick will be subverted, we not being able to judge the redundant inconclusive Reasons, from the conclusive, called Syllogisms. And if any will not allow *Monolemma's* Reasons, (that have but one Sumption,) they will not be more creditable than *Antipater*, who allows them.

Thus a true Reason is impossible to be found, as well for the Causes alledged, as because it ought to end in true; for the Conclusion which is said to be true, must be either apparent or unapparent; not apparent, for then it would not require the Sumptions to detect it, it being of it self manifest to us, and no less apparent than the Sumptions themselves; If unapparent, forasmuch as there is an undeterminable Controversie concerning Unapparents, (as was said formerly) it is therefore incomprehensible. Thus the Conclusion of the Reason which they call true, will be incomprehensible, and if that be incompre-

incomprehensible, we shall not know whether that which is collected be true or false, therefore we shall not know, whether the Reason be true or false; and consequently the Reason which they call *true* cannot be found.

Moreover, that Reason which collects a thing unmanifest from a manifest, cannot be found out; for if the Inference follow the Complication from its Sumptions, that which followeth [the consequent] is relative to the antecedent; but relatives are comprehended together with one another, as we said before. If therefore the conclusion be unmanifest, the Sumptions will also be unmanifest: If the Sumptions are manifest, the Conclusion will also be manifest, as being comprehended together with the manifest, (Sumptions) So as nothing unmanifest can be collected from what is manifest. Hereupon the Inference cannot be detected by the Sumptions, whether it be unmanifest and not comprehended, or manifest and not needing detection. Now if *Demonstration* be said to be a Reason according to *Connexion*, that is, *conclusive by some acknowledged true thing, detecting an unmanifest Inference*; and we have proved, that it neither is a Reason nor Conclusive, nor true, nor by some things manifest collecting an unmanifest, nor detective of the Conclusion; it appeareth there is no such thing as Demonstration.

Likewise we shall other-ways find Demonstration to be inexistant and unintelligible: For he who saith, there is Demonstration, asserts either general Demonstration or particular, but neither general nor particular Demonstration are possible, (as we shall prove;) and besides these, there is no other can be understood; therefore no Man can assert Demonstration to be existent.

That there is no general Demonstration, we prove thus. Either it hath Sumptions and an Inference, or it hath not; if it hath not; it is no Demonstration; if it hath, forasmuch as every thing that is demonstrated, and also that which doth demonstrate is particular, it will be a particular demonstration, therefore there is no general demonstration.

But neither is there any particular demonstration. For either they must say, it consists of Sumptions and an Inference, or of Sumptions only, but neither of these, therefore there is no particular demonstration. That which consists of Sumptions and an Inference, is not a demonstration; First, as having one part unmanifest (the Inference) it will be unmanifest, which were absurd; for if the demonstration be unmanifest, it rather will require to be demonstrated by something, than be capable to demonstrate by something. Again, forasmuch as they say, the demonstration is relative to the Inference, and Relatives, as they also say, are different, from one another; the thing demonstrated must be different from the demonstration. If therefore the conclusion be the thing demonstrated, the demonstration will not be understood together with the conclusion. For either the conclusion conferreth something towards demonstrating it self, or no; if it confer, it will be detective of it self; if it confer not, but be redundant, it will be no part of the demonstration, for such a demonstration will but fortifie redundancy. Neither is that which consists of

Sumptions only a demonstration; for, who will say that this, *If it is day it is light, but it is day, it is light*, either is a reason or indeed interreth any thing? Wherefore neither is that which consists of Sumptions only a demonstration; whence it follows, that there is no particular demonstration. Now if there be no particular demonstration nor no general, and besides these is no demonstration intelligible; there cannot be demonstration.

Moreover, the inexistence of demonstration may be proved this way; If there be demonstration, either an apparent detects an apparent, or an unmanifest an unmanifest, or an unmanifest an apparent, or an apparent an unmanifest; but none of these can be understood; it is therefore unintelligible. For if an apparent detect an apparent, the thing detecting will be at once apparent and unmanifest; apparent, or being supposed such; unmanifest, as requiring something to detect it, and not manifestly of it self incurring to us. If an unmanifest an unmanifest, it self will require something to detect it, rather than be capable of detecting another, which is inconsistent with the nature of a demonstration. Neither can an unmanifest be the demonstration of a manifest, nor a manifest of an unmanifest, for this reason, because they are relative. Relatives are comprehended together with one another; if that which is said to be demonstrated be comprehended together with the manifest demonstration, it is manifest it self. Thus the reason will be retorted, and it will not be found, that the manifest can demonstrate the unmanifest. If therefore there be not demonstration, neither of an unmanifest by an unmanifest, nor of an unmanifest by a manifest, nor of a manifest by an unmanifest, and more than these, they say, there is not any, we must say, that demonstration is nothing.

Moreover, there is controversie concerning demonstration; some say, that it is not, as they who hold, that there is none; others, that it is, as most of the Dogmatists; we say *neither rather* that it is, or that it is not. Again, demonstration must necessarily contain some Doctrine, but every Doctrine is controverted, and therefore every Demonstration must be controverted. For if, for example, the demonstration to prove Vacuum being acknowledged, Vacuum also be acknowledged, it is manifest, that they who doubt whether there be Vacuum, doubt also the demonstration thereof. It is the same in all other demonstrated Doctrines. Thus all demonstration is doubted and controverted. Since therefore demonstration is unmanifest, as appears by the controversie concerning it, (for things controverted, inasmuch as controverted, are unmanifest) it is not evident in it self, but must be evinced to us by demonstration. Now an acknowledged indubitate demonstration to prove demonstration, there cannot be (the Question being, Whether there be any demonstration at all?) but if it be controverted and unmanifest, it will require another demonstration, and that another, and so to infinite; but it is impossible to demonstrate Infinites, therefore it is impossible to prove, there is Demonstration.

Neither can it be detected by a sign; for it being questioned whether there be a Sign, and the

the Sign consequently requiring a demonstration of it self, it runs into the *Alternate* common place; the demonstration requiring a sign, the sign a demonstration, which is absurd. Neither can the controversy concerning sign be judged, because dijudication wanteth a Criterie, it being controverted, as we shewed, whether there be a Criterie, and the Criterie consequently requiring a Demonstration to prove that there is a Criterie, it runs again into the *Alternate* place. If therefore neither by Demonstration, nor by Sign, nor by Criterie, it can be proved, that there is Demonstration, and it be not manifest of it self, as we have shewn, it will be incomprehensible whether there be Demonstration; therefore Demonstration is inexistent: For it is understood by demonstrating, but not being comprehended it cannot demonstrate, therefore there will be no Demonstration. This, by way of Summary, may serve against Demonstration.

But the Dogmatists, on the other side, say, The Reasons alledged against Demonstration, either are demonstrative, or not demonstrative; If not demonstrative, they are not able to prove there is no Demonstration; If demonstrative, they themselves, by Retortion, prove the subsistence of Demonstration. Hereupon they argue thus, If there is Demonstration there is Demonstration; if there is not Demonstration there is Demonstration, therefore there is Demonstration. Upon the same grounds they also propose this Reason; That which followeth from contraries, is not only True, but Necessary, but, there is Demonstration, and, there is not Demonstration, are opposite one to another, from both which it followeth, that there is Demonstration, therefore there is Demonstration.

But this may be contradicted, as for Example, if we say thus; Forasmuch as we conceive that there is not any Reason demonstrative, neither do we conceive that the Reasons alledged against Demonstrations are absolutely demonstrative, but that they seem probable to us; but Probables are not necessarily demonstrative, therefore if the Demonstratives are (which we allow not) necessarily true, but true Reasons collect true from true, their Inference is not true, and if not, it is no Demonstration; therefore (by way of Retortion) there is no Demonstration. Besides, as purgative Medicines expel themselves, together with the Humors which they purge, it is possible that these Reasons may exclude themselves, together with those which are said to be Demonstratives. For this is not absurd, seeing that this Sentence, *That there is nothing True*, not only takes away all other things, but it self amongst the rest. Moreover, this Argument (If there be Demonstration there is Demonstration, if there is not Demonstration there is Demonstration, but either there is, or there is not, therefore there is) may many ways be shewn to be Inconclusive; but, for the present, we shall be contented with this Epichorem. If this Connex (If there is Demonstration there is Demonstration,) be not faulty, the contrary of its Consequent (that is, there is not Demonstration) must be repugnant to its Antecedent, there is Demonstration, for that is the Antecedent of the Connex: But, according to them, it

is impossible that a Connex can be found, if it consists of contrary Propositions, for a Connex promisseth, that if its Antecedent be, its Consequent is also; but in Opposites quite contrary, which of them soever is, the other must not be. Therefore if this be a true Connex, If there is Demonstration, there is Demonstration, this other cannot be true, If there is not Demonstration, there is Demonstration

Moreover, If we grant by Supposition, that this is a sound Connex, If there is not Demonstration, there is Demonstration, this part, if there is not Demonstration, may coexist with the other, there is Demonstration: But if it may coexist with it, it cannot be repugnant to it, so that in this Connex, if there is Demonstration, there is Demonstration, the contrary of the Consequent is not repugnant to the Antecedent, therefore it is not sound. Again, If this Connex, which, by way of Concession, is laid down for sound, and this part, there is no Demonstration, be repugnant to that part, there is not Demonstration, neither will this be a good Disjunct, either there is Demonstration, or there is not Demonstration; for a good Disjunct promisseth that one of its parts is true, and that the other is false and repugnant. Or if the Disjunct be found, this, if there is not Demonstration, there is Demonstration, will again be found to be faulty, a Connex consisting of Repugnants. Wherefore the Sumptions in the foresaid Reason are inconsistent, and destroy one another, therefore the Reason is not found. But neither can they shew that something followeth upon Repugnants, not having a Criterie of the Consequents, as we argued before. But this is said over and above. Now if the Reasons for Demonstration be probable, and the Reasons against Demonstration be probable also, we must suspend, saying no more, that there is Demonstration, than that there is not.

CHAP. XIV.

Of Syllogisms.

Concerning those which they call *Syllogisms*, perhaps it were superfluous to discourse, as well for that they are subverted by taking away Demonstration, (for if there be no Demonstration, there is no Demonstrative Reason) as also, forasmuch as what we have already said may serve for Confutation of them, whereas we over and above delivered a Method, to shew, that all the Demonstrative Reasons of the *Stoicks* and *Peripateticks* are inconclusive. But perhaps it would not be amiss to say something in particular concerning these, especially, seeing they have a high conceit of them. But whereas many things might be alledged, to shew, they cannot exist; yet we, pursuing our design of a Summary, will use our first Method.

Let us first speak of Indemonstrables; for if they be taken away, all other Reasons are overthrown, as being by them demonstrated to be Conclusive. Now this Proposition, *Every Man is a living Creature*, is inductively proved by particulars; because from *Socrates's* being a Man, and a living Creature, and so *Plato's* and *Dion's*, and

and every one in particular, it seemeth possible to be proved, that every Man is a living Creature. For if there be but one particular, which seemeth contrary to the rest, the universal Proposition will not be found. As for Example, Although the greatest part of living Creatures move the lower Jaw, only the Crocodile the upper, this Proposition is not true; all living Creatures move the lower Jaw. When therefore they say, *Every Man is a living Creature*, Socrates is a Man, therefore Socrates is a living Creature; intending from this universal Proposition, *Every Man is a living Creature*, to collect this particular Proposition, *therefore Socrates is a living Creature*; this being one of those, by which the universal Proposition was (as I said) inductively proved, they fall into the *Alternate Common Place*, proving the universal Proposition by the Particulars, and the Particular by the Universal. In like manner in this Reason, Socrates is a Man; but no Man is Four-footed, therefore Socrates is not Four-footed. This Proposition, *No Man is Four-footed*, endeavoring to prove inductively by Particulars, and to prove every Particular syllogistically out of this, they run into the *Alternate Common Place* inextricably.

In like manner, let us examine the rest of the Reasons, which the *Peripateticks* call Demonstrable; for this. *If it be Day, it is Light*, they say, is conclusive of this, *it is Light*; and again, this, *it is Light*, together with the other, *It is Day*, is confirmative of this, *If it is Day, it is Light*: For the aforesaid Connex would not be thought sound, if the first part, *It is Light*, were not always coexistent with, *it is Day*. If therefore it must first be comprehended, that when there is Day, there is necessarily Light, for the framing of this Connex, *If it be Day, it is Light*, hence is inferred, that in these, *When it is Day, it is Light*; this Connex, *If it is Day, it is Light*, (as far as concerns the present indemonstrable Reason) proving the coexistence of this, *It is Day*, and of this, *It is Light*; and reciprocally their existence, confirming the Connex here again, by the *Alternate Common Place*. the existence of Reason is subverted.

The same may be said of this Reason, *If it is Day, it is Light*; but it is not Light: therefore it is not Day; For, inasmuch as there cannot be Day without Light, this is conceived to be a sound Connex, *If it be Day, it is Light*; But if we should suppose some Day to be; and Light not to be, it will be said to be a false Connex. Now as to the aforesaid Indemonstrable, that, *If there is not Day, there is not Light*, is collected from this, that, *If there is Day, there is Light*; so as either is requisite to the proof of the other, and incurs the *Alternate Common Place*.

Likewise, Forasmuch as some things are inconsistent one with the other, as Day and Night, and the Negative of the Complicate, (*It is not Day, and it is not Night*), and the Disjunct is thought to be found; but that they are inconsistent, they conceive to be proved by the Negative of the Complicate, and by the Disjunct, saying, *It is not Day and Night; but it is Night, therefore it is not Day*. Or thus, *Either it is Day or Night; but it is Night, therefore it is not Day*. Or, *but it is not Night, therefore it is*

Day. Whence we again argue, that if to Confirmation of the Disjunct, and of the Negation in the Complicate, it be necessary that we first comprehend the Axioms contained in them to be inconsistent; but that they are Inconsistent, seems to be collected from the Disjunct, and the Negative of the Complicate, they run into the *Alternate Common Place*, seeing that we can neither credit the aforesaid Modals, unless we first comprehend the Inconsistence of the Axioms that are in them, nor can affirm their Inconsistence, before we can affirm the Coargution of the Syllogisms which is made by the Modals. Wherefore not having whereupon to ground our Belief first, (they being Reciprocal) we must say, that neither the Third, nor Fourth, nor Fifth, of the Indemonstrables (as far as appeareth by this,) have Subsistence. Thus much for Syllogisms.

CHAP. XV.

Of Induction.

Induction, as I conceive, may easily be overthrown; for, seeing that by it they would prove an Universal from Particulars, either they must do it, as having examined all Particulars, or only some. If some only, the *Induction* will not be valid, it being possible, that some of the omitted Particulars may be found contrary to the Universal Proposition. If they would examine all, they attempt Impossibles, for Particulars are infinite, and undeterminate. Thus it happens, that Induction cannot subsist either way.

CHAP. XVI.

Of Definitions.

Forasmuch as the *Dogmatists* are highly conceited of themselves, as to the framing of Definitions. (which they rank under the Logical part of Philosophy) let us discourse a little hereupon. The *Dogmatists* say, that Definitions conduce to many things, but perhaps all their necessary use may be reduced to two general Heads; they shew that Definitions are necessary, either to Comprehension, or to Instruction. Now if we prove they are useful to neither, we overthrow their vain Labor. We argue thus: If he who knoweth not that which is defined, cannot define that which he knoweth not, and he who knoweth first, and afterwards defineth, comprehends not, by the Definition, that which is defined, but applies the Definition to that which he already comprehends; then Definition is not necessary to the Comprehension of things. And forasmuch as if we would define all things, we cannot define any, because, we shall run into Infinite; and if we say, that some things may be comprehended without Definitions, we shew, that Definitions are not necessary to Comprehension. As those which are not defined are comprehended, so we might comprehend all the rest without Definitions, either we shall define nothing at all, be-

cause of proceeding to Infinite, or we alledge Definitions not necessary.

For the same Reasons shall we find, that neither are they necessary to Instruction: For, as he who first knoweth a thing, knoweth it without Definition; in like manner, he who teacheth it, may teach it without a Definition.

Moreover, from the things defined they judge Definitions, saying, Those are faulty Definitions, which include something which is not in the things defined, either in all, or in some. So as it we say, *A Man is a living Creature, Rational, Immortal*; Or, *A living Creature, Rational, Mortal, Learned*, forasmuch as there is no Man Immortal, and that there are some Men not learned, they say it is a faulty Definition. Therefore Definitions, perhaps, are indijudicable, by reason of the Infinity of the Particulars, by which they ought to be judged. Besides, they cannot make us comprehend and learn the things of which themselves are dijudicated, inasmuch as they are already known and comprehended. Is it not therefore ridiculous to say, That Definitions conduce to Comprehension, or Instruction, or Declaration, when they involve us in such obscurity? As for Example, (to sport a little) If one Man meaning to ask another, Whether he met a Man on Horseback, with a Dog following him, should do it after this manner. *O Living Creature, Rational, Mortal, capable of Intellect and Science, Didst thou not meet a Living Creature, Visible, Broad-nail'd, capable of Political Science, mounted upon a living Creature that hath the faculty of Neighing, leading a four-footed living Creature that hath the faculty of Barking.* Who would not laugh to see a Man, that knows the things themselves, puzzled by their Definitions? We must therefore acknowledge Definitions to be unnecessary, whether it be a Speech, which, by a short Explication, brings us to knowledge of the thing, meant by the words, (which, by what we have said, it appeareth, that it doth not) or whether it be a Speech declaring what a thing is, *α π λ υ θ ο*, or even what they please. For when they go about to shew what Demonstration is, they fall out among themselves irreconcilably, of which, for Brevity's sake, we will not take Notice.

C H A P. XVII.

Of Division.

FOrasmuch as some of the Dogmatists say, That *Dialectick is a Science Syllogistick, Inductive, Definitive*; after our discourse of the *Criteria*, and of *Demonstration*, and of *Syllogisms*, and of *Inductions*, and of *Definition*, we will come to say something of *Division*, conceiving it not to be from our purpose.

They say, That of *Division*, there are four kinds; *Of the Word into Significations*; *Of the Whole into Parts*; *Of the Genus into Species*; *Of the Species into Individuals*. But that there is not a divisive Science of any of these, I think may easily be shewn, by examining them severally.

C H A P. XVIII.

Of the division of a Word into Significations.

THE Sciences they hold to be by Nature, not by Imposition; and justly, for Science must be a thing stable and unmoveable: But those things which are by Imposition, are very subject to Mutation, being varied according to the diversity of Impositions which are in our power. Now forasmuch as words signify by Imposition, and not by Nature, (otherwise all Men would understand all Languages, both *Greeks* and *Barbarians*, besides it is in our power to declare our meaning by other words) how is it possible there should be a divisive Science of the word into Significations? Or how can *Dialectick* be (as some conceive,) the Science of Significant, and Significantates?

C H A P. XIX.

Of Whole, and Part.

CONCERNING *Whole* and *Part*, we shall discourse in that which they call *Physick*; at present, we shall only speak of the division of the *Whole* into its *Parts*. We say thus, When the *Decad* is said to be divided into *One*, and *Two*, and *Three*, and *Four*, it is not divided into these, for as soon as the first part (granting this by the way of supposition) is taken away, (as the *Monad*) there is no longer the *Decad*, but the *Ennead*, a thing quite different from the *Decad*; therefore the subtraction and division of the rest concerns not the *Decad*, but other Numbers according to the several Subtractions.

Let us now see, Whether it be possible to divide the *Whole* into those things, which they say are its *Parts*. If the *Whole* is divided into its *Parts*, the *Parts* before the division either are contained in the *Whole*, or not contained: To use our first Example, the *Decad*; They say, that 9 is one of its *Parts*, for it is divided into 1. and 9. so is 8 also, for it is divided into 8. and 2. So also is 7. and 6. and 5. and 4. and 3. and 2. and 1. Now if all these are contained in the *Decad*, and compounded with it, they making 55. the *Decad* must contain 55. which is absurd. Therefore are not the *Parts*, as they call them, contained in the *Decad*; neither can the *Decad* be divided into them, as a *Whole* into *Parts*, since they are not to be found in it. The same may be objected against *Magnitudes*, as if we should divide a *Magnitude* into ten *Cubits*; perhaps therefore it is not possible to divide the *Whole* into *Parts*.

C H A P. XX.

Of Genus and Species.

IT remains to treat of *Genus* and *Species*, of which elsewhere we shall speak more largely, but now compendiously. If *Genus* and *Species* are *Notions*, the Arguments which we brought against the *Hegemonick*, and *Phantasie*, sub-

vert

vert them; but if they allow them to have a peculiar subsistence, What will they answer to this? If there are *Genus's*, either there are as many as there are *Species*, or there is one common *Species*, or *Genus*, in all those which are called *Species*. If there be as many *Genus's*, as there *Species*, of them there will not be one common *Genus*, which is divided into them; but if it be said, there is one *Genus* in all its *Species*, then every *Species* must participate of the Whole *Genus*, or of Part thereof; but not of the Whole, for it is impossible, for one thing contained at once, in one, and another, to be wholly in one. If of Part only, first, the whole *Genus* will not follow the *Species*, as they conceive it doth, for Man will not be a living Creature, but part of a living Creature, as a substance, but neither animate nor sensible. Again, either all the *Species* will be said to participate of the same Parts of their *Genus*, or some of some Part, others of others. That they should participate of the same is impossible, for the Reason aforesaid. If some of some, others of others, the *Species* will not be like to one another, according to their *Genus*, (which they will not admit) and besides, every *Genus* will be infinite, being divided into infinite, not only as to *Species*, but as to Particulars, in which it is consider'd with those *Species*; for *Dion* is not only said to be a Man, but a living Creature. But if these things be absurd, neither do the *Species* participate of Part of their *Genus*, it being one; but if neither doth every *Species* participate of its *Genus* in Whole, nor in Part, how can one *Genus* be said to be in all its *Species*, so as to be divided into them. None sure can say any thing hereto, unless he frame some kind of Images; and yet even those will be subverted, according to the Sceptical Method, by their own indeterminate consequences.

We shall add this, *Species's* are either such or such, their *Genus's* are either such and such, or they are such and they are not such, or they are neither such nor such. As for Instance; Forasmuch as of these or those, some are Corporeal, others Incorporeal, and some True, others False, and some peradventure White, others Black, and some very Great, others very Little: This word *Thing*, for example, which some say is most general, will either be All, or Some, or Nothing; but if it be absolutely Nothing, neither will it be *Genus*, and so there is an end of the Controversie. If they say it is All, besides that it is impossible it should be so, it must be all the *Species*, and every particular in them. For because an Animal, as they say, is an Animate, Sensitive Substance, therefore each of its *Species* is said to be both a Substance, and Animate, and Sensitive: So if *Genus* be both Body, and Incorporeal, and False and True, and Black and White, and Little and Great, and all the rest, each of its *Species* and particulars will also be All, which we do not find to be so; therefore this also is False. But if it be only some, then that which is the *Genus* of those, will not be the *Genus* of the rest; as if *Thing* be Body, it will not be the *Genus* of Incorporeals; and if living Creature be Rational, not of Irrationals; so that neither will an Incorporeal be a *Thing*, nor Irrational a Creature. Therefore *Genus* is neither such and such, nor such and not such, nor neither such nor

such: And if so, neither is *Genus* any thing at all.

If any shall say, that *Genus* is all Potentially; we answer, that what is any thing Potentially, must be something Actually also; as none can be a *Grammarians* Potentially, if he exist not Actually; now if *Genus* be all things Potentially, we demand of them what it is Actually, and thereupon occur the same inextricable difficulties, for it cannot be all Contraries Actually. Again, neither can it be some Actually, others Potentially, only as a Body Actually, Incorporeal Potentially; for a thing is Potentially, such as it may be Actually, but what is Actually a Body cannot be Actually Incorporeal; so as, for example, If it be a Body actually, it is Incorporeal Potentially, and on the contrary. Wherefore we cannot say that *Genus* is some things Actually, others Potentially, only. Now if Actually it be nothing at all, it exists not; and therefore the *Genus*, which they affirm to be divided into its *Species*, is nothing.

This likewise is worthy consideration, That as because *Alexander* and *Paris* are the same, therefore it is impossible, if it be true that *Alexander* walks, it should be false that *Paris* walks. In like manner, If to be Man, be the same thing in *Theon*, and in *Dion*, this Appellation, *Man*, alleged in the framing of any Axiom will make the Axiom either True or False in both, but this we find not to be so, for when *Dion* sitteth, and *Theon* walleth, this Axiom, *a Man sitteth*, spoken of one, is True; of the other, False; wherefore this Appellation, *Man*, is not common to both, not one and the same in both, but proper to each.

C H A P. XXI.

Of Common Accidents.

THe like may be said of *Common Accidents*. For if one and the same accident belong to *Dion* and *Theon*, for example, *Seeing*; if *Dion* die, and *Theon* survive and see, either they must say, that the sight of *Dion* is not subject to perish, which is absurd, or that the same sight is perished, and not perished, which is irrational also: Therefore the sight of *Theon* is not the same with the sight of *Dion*, therefore proper to each. For if the same Respiration happen to *Dion* and *Theon*, it cannot be that it should be in *Theon*, and not in *Dion*; but one may die and the other survive, therefore it is not the same. But of these; let what we have briefly said suffice.

C H A P. XXII.

Of Sophisms.

IT will not haply be absurd to insist a little upon *Sophisms*, in regard that they who cry up *Dialectick* so much, say, It is necessary for the Solution of them. For, say they, *If it discern Speeches True and False, and Sophisms be false Speeches; it is judicative of these, which corrupt Truth with an apparent likelihood.* Wherefore the *Dialecticks*, as assisting and underpropping the failing course of life, with much labour, teach the Inferences,

and Solutions of Sophisms, saying, *A Sophism is a Reason probable and deceitful; so as it receives an Inference, either False, or like to False, or Uncertain, or otherwise not to be received. False, as in this Sophism,*

*No man giveth a Categorem to be Drunk,
But this, to Drink Worm-wood, is a Categorem,
Therefore, No man giveth Worm-wood to be drunk.*

Like to False, as in this;

*That which could not be, nor cannot be, is not absurd,
But this, a Physician, as a Physician, kills; neither could, nor can be,
Therefore this [Proposition,] a Physician, as a Physician, kills, is not absurd.*

Uncertain, as this;

*I did not ask thee something first, and the Stars are not even in Number,
But I did ask thee something first;
Therefore, the Stars are not even in Number.*

*Not otherwise to be received, as those Speeches which are called Solæcisms, as,
That which thou seest, is,
But thou seest him Mad,
Therefore he is Mad.*

Again,

*That which thou seest, is,
But thou seest many Houses burning,
Therefore many Houses are burning.*

Then they endeavour to shew their Solutions, saying, That 'in the first Sophism, one thing is granted by the Sumptions, another inferred; it is granted that a Categorem is not Drunk, and that to drink Wormwood is a Categorem, but not the Wormwood it self. So that, whereas the Inference ought to be, Therefore no Man drinks this [Categorem,] To drink Wormwood; which is true, it inferreth, Therefore no Man drinketh Wormwood, which is false, and is not collected from the granted Premises.

'As to the Second, It seems to lead to False, (inasmuch as they who mind it not well, doubt whether they ought to assent to it or not,) but it collects Truth, therefore this is not absurd. A Physician, as a Physician, killeth, for no Proposition is absurd; but this, A Physician, as a Physician, killeth, is a Proposition; therefore it is not absurd.

'That which leadeth to Uncertainty, is, they say, of the Nature of reciprocal Reasons; for if nothing were asked before, then the Negative of the Connex were true, the Connex it self being false, because this, [I asked thee something first] which is false, is inserted into it; but after asking, (the Assumption being true, [I asked thee first] by reason the asking was before the Assumption) the Negative of the Connex is false, so that a Conclusion cannot any way be gather'd, the Negative of the Connex being inconsistent with the Assumption.

'The last kind being by Solæcism, (some say,) infers absurdly, and contrary to common sense.

Thus some *Dialecticks* discourse of *Sophisms*, (others otherwise) which may perhaps tickle the Ears of the lighter sort of Persons, but are indeed superfluous, and forged by themselves to no purpose. This perhaps may be observed, from what was said formerly; for we shewed, that neither True nor False can be comprehended, according to the *Dialecticks*, as many other ways, so particularly, by overthrowing Demonstration, and indemonstrable Reasons, the props of their Syllogistick faculty. Many other things might be alledg'd against the Subject in hand, of which we shall only say briefly thus.

Of all those *Sophisms*, which *Dialectick* seems properly to confute, the Solution is unprofitable; but those, the Solution whereof is profitable, it is not within the power of a *Dialectick* to solve, but of those who are conversant in the particular Arts of each several thing. As for instance, If this *Sophism* were propounded to a Physician, 'in the remission of a Disease, there ought to be variety of Diet, and Wine allowed; But on the third day, there usually happens a Remission; Therefore before the third day, there ought to be variety of Diet, and allowance of Wine. A *Dialectick* can say nothing to all this, but the Physician can solve the *Sophism*, knowing that Remission is taken two ways, either of the whole Disease, or for any particular inclination towards amendment. Before the first third day it happens for the most part, that there is a Remission of some particular Intenseness; now we approve not variety of Diet in this Remission, but in the Remission of the whole Disease. Whereupon he will say, That one of the Sumptions of the Argument is disjoyned from the other, viz. that which concerns the whole Disease, from the other which concerns part; Again, to this Argument concerning an intense Feaver, 'Contraries are the remedies of Contraries; but Cold is contrary to the Heat of the Feaver, therefore cold things are convenient for the Cure of it; a *Dialectick* will not know what to say; but the Physician, knowing that some are Affections adherent to the Disease, others Symptoms of those Affections, will answer, that the Question is not to be understood of the Symptoms, (for it usually happens that Heat is encreased by pouring on cold things,) but of the adherent Affectedness, and that Constipation is an adherent Affection, which requires not Condensation, but rather Opening; but the Heat which follows upon it, is not primarily adherent, wherefore that which is Cold is not convenient to be applied. Thus to Sophisms, whose Solution is profitable, the *Dialectick* will not know what to say; but to such as these, 'If thou hast not large Horns, and hast Horns, thou hast not Horns; but thou hast not large Horns, and hast Horns; therefore thou hast not Horns. And, If a thing be moved, either it is moved in the place wherein it is, or in that wherein it is not; but neither in that wherein it is, (For there it rests;) not in that wherein it is not, (for it cannot act, where it is not;) therefore nothing is moved: And, Either that which is generated, or that which is not, but that which is not generated (for is already) not that which it is not; for that which is generated

'rated suffers something, that which is not, suffers not; *Again*, Snow is water congeal'd, but water is black, therefore Snow is black. And a great many such fooleries gathering together, he knits his Brows, and produceth his *Dialectick*, and with a great deal of gravity, endeavours to shews us by Syllogistick Demonstrations, that something is generated, and that something is moved, and that Snow is white, and that we have not Horns; when perhaps, if he did only oppose the evidence of the contrary to them, it would suffice to overthrow their *Theses* by the testimony of their Contraries, which are manifest. Whence a Philosopher, to whom the Argument against Motion was objected, said nothing, but walked. And Men, in the ordinary course of Life, travel by Sea and Land, build Ships and Houses, and beget Children, never minding the Arguments against Motion and Generation. There is also a facet Apothegm of *Erophilus* the Physician, (contemporary with *Diodorus*, who introduc'd into his foolish Logick many sophistical Arguments, as about other things, so particularly concerning Motion,) *Diodorus* having put his Shoulder out of joynt, *Erophilus* coming to set it, derided him, saying, 'Either the Bone slipt out of the place in which it was, or out of that in which it was not; but neither out of that in which it was, nor out of that in which it was not, therefore it is not slipt. So as the *Sophist* was fain to intreat him to let his Arguments alone, and to betake himself to the Cure. For it is sufficient (I conceive) to live experimentally, and inopinatively, according to common observations and assumptions, suspending our assent in all dogmatical Superfluities, and especially those, which are besides the use of life. If therefore *Dialectick* cannot solve those *Sophisms*, whose Solution is useful; and of those which some think it doth solve, the Solution is useless, *Dialectick* is of no benefit in solving *Sophisms*.

Moreover, even from what the *Dialecticks* themselves say, it may be proved, that their Art concerning *Sophisms* is superfluous; they say, That they applied themselves to *Dialectick*, not only to learn what may be gathered from it, but proposing to themselves chiefly, to know how to judge true and false by demonstrative Reasons. Whence they affirm *Dialectick* to be the Science, of True, and False, and Neuters. When therefore they assert that to be a true Reason, which by true Sumptions collects a true Conclusion, as soon as any Reason, which hath a false Conclusion, is brought against us, we shall know it is false, and therefore will not assent to it; for of necessity, the Reason must either be not conclusive, or not have true Sumption, which is manifest from hence. The false Conclusion which is in the Reason, is either consequent to the Connexion made by its Sumption, or not Consequent; if not Consequent, the Reason is not Conclusive; for they say, a Conclusive Reason is that which followeth the Connexion made by its Sumptions; if Consequent, the Connexion, which is made by its Sumptions must necessarily be false, by their own Rules; for they say, False is consequent to False, but not True. Now that a Reason which is neither conclusive nor true, is, according to them, not demonstrable, is manifest from what was formerly said. If therefore a Reason being pro-

pounded, in which there is a false Conclusion, we know even by itself, that it is neither True nor Conclusive, forasmuch as it hath a false Conclusion, we will not assent to it, though we do not know where the Fallacy lies. For, as we believe not the Tricks of Juglers to be true, but know that they deceive, though we know not which way they do it; so neither do we credit false Reasons, which seem true, though we know not which way they are fallacious.

Or because *Sophisms* lead us not only to one Falsity, but to many Absurdities besides, we may argue more generally thus: The Reason proposed either leadeth us to something unexpected, or to something that we must have expected; if to the later, we shall not do absurdly in assenting to it; if to something beyond our expectation, we ought not to assent to an Absurdity rashly, upon a Probability; but they rather ought to withdraw their Reason, which compelleth assent to an absurdity, if they intend not to trifle childishly, but to make a serious enquiry into the Truth, as they profess. For if there be a way leads to some Precipice, we will not run upon the Precipice, because there is a way that leads to it, but rather go out of the way, because of the Precipice; In like manner, if there be a Reason which bringeth us to something, acknowledged to be absurd, we must not assent to the Absurdity, because of the Reason, but reject the Reason because of the Absurdity. When therefore a Reason is objected to us, we will suspend to every Proposition; and then, when the whole Reason is laid down, we will bring in that which appeareth to us. For if the Followers of *Chrysippus*, being *Dogmatists*, upon a *Sorites* proposed, say, They must put a stop to the Progress of the Reason, and suspend their Assent, lest they fall into an Absurdity; certainly we, who are *Scepticks*, and jealous of Absurdities, ought much more to take heed, lest we be betray'd by Sumptions, and therefore suspend upon every one, until we hear the whole Argument. Besides, we, without Opinion, being only informed by the common observations of Life, thus avoid fallacious Reasons: But the *Dogmatists* cannot discern a *Sophism* from a true Reason, seeing they are constrained to judge dogmatically; whether the form of the Reason be conclusive, and whether the Sumptions be true or not; but we have formerly shewn, that they cannot comprehend what Reasons are Conclusive, nor judge Truth in any thing, as having neither a Criterie nor Demonstration, which we proved from their own words. Hence it appears, that the artificial forms of *Sophisms*, so much cry'd up by the *Dialecticks*, are superfluous.

CHAP. XXIII.

Of *Amphibolies*.

WE say the same concerning distinction of *Amphibolies*. For, if *Amphiboly* be a word which signifies two or more things, and words signifie by Imposition, it is fit they be distinguished by Those, who are of the several Arts to which they belong, they having had experience of the positive use of the words, which they applied to the things that they signified; but a

Dis

Dialectick hath not, as in this *Amphiboly*; In the Remission of Diseases, variety of Diet, and Wine is allowed.

Moreover, we see, that in Common Life, even Children distinguish those *Amphibolies*, the distinction whereof seemeth useful to them. For if a Man, having two Servants of the same Name, shall bid a Child, call *Manes*, to him, (let us suppose that to be the name of both) the Child would ask, Which? And if one having several sorts of Wine, shall bid a Child, Fill him some Wine, the Child will ask, Of which Sort? Thus in all things experience of that which is useful introduceth Distinction; but those *Amphibolies*, which come

not within the experience of Life, and are perhaps only in the sayings of the *Dogmatists*, and nothing useful to living without opinion, the *Dialectick* being particularly employ'd in these, will be necessitated even in them to suspend after the *Sceptical* way, according as they are annexed to things uncertain, or incomprehensible, or in-existent. But of these we shall discourse again. Now if any *Dogmatist* attempt to say any thing against this, he confirms the *Sceptick* reason, and by the allegation of Arguments on both sides, and their indeterminable Difference, will settle *Suspension* as to the thing controverted: Having spoken thus much concerning *Amphibolies*, we close our Second Book of *Hypotyposes*.

Of Phylsick.

THE THIRD BOOK.

Hitherto by way of Summary we have spoken of the *Logical* part of Philosophy; we shall observe the same course in examining the *Physical* part, not confuting every particular, but endeavouring to overthrow the more general, wherein the others are comprehended. We will begin with the *Principles*; And forasmuch as the greatest part hold, that some of them are Material, others Efficient, we will first speak of the Efficient, those being said to be Principles more properly than the Material.

CHAP. I.

Of GOD.

Now seeing that most of the Dogmatists hold *God* to be the most Efficient cause, let us first enquire concerning *God*; professing, that, following the course of Life; we say, (without engaging our Judgment) that there are gods, and we worship the gods, and we say, that they have Providence. Only, to confute the temerity of the Dogmatists, we say as followeth.

Of the things which we understand, we ought to consider the Substances, as, whether they are Bodies, or Incorporeal; likewise their Forms. For none can understand a Horse, if he hath not first learnt what the Form of a Horse is. Likewise, that which is understood, must be understood as being somewhere. Now forasmuch as, of the Dogmatists, some say, That *God* is a Body; others, Incorporeal; some, that he hath a Human form; others, not; some, that he is in place; others, that he is not in place; And of those who say, he is in place, some, that he is in the World; others, that he is beyond it. How can we have a notion of *God*, not having an indubitate knowledge of his Substance, nor of his Form, nor of the Place wherein he is. Let them first agree amongst themselves, What *God* is? and then they may represent him to us, and require, that we receive such a notion of *God*; for, while they disagree irreconcilably amongst themselves, we cannot receive any thing from them as undoubtedly true. But, say they, conceive with your self something incorruptible and blessed, and think *God* to be such. This is foolish. For, as he who knoweth not *Dion*, cannot know the Accidents that are competent to him; as *Dion*; so, not knowing the Substance

of *God*, neither can we know his Accidents.

Moreover, let them tell us what is Blessed: Whether that which acts according to Virtue, and hath a providence over the things subordinate to it; or that which is unactive, and neither hath any business it self, nor affords business to any other. For, differing irreconcilably even about this, they shew, that what they call Blessed is not to be found out, and consequently not *God* himself.

But though we should admit the notion of *God*, yet is it necessary we suspend, whether he is, or he is not, even from what the Dogmatists say, because it is not manifest that there is a *God*; for, if that were self-evident, the Dogmatists would have agreed, Who, and What, and Where he is; whereas on the contrary, there is an undeterminable controversy amongst them, whereby we see, that his Being is unmanifest to us, and requireth Demonstration. Now he who saith, that there is a *God*, must either demonstrate it by a thing manifest or by an unmanifest; not by a thing manifest, for if that were manifest which demonstrates there is a *God*, forasmuch as that which demonstrateth is relative to that which is demonstrated, and consequently is comprehended together with it, (as we have formerly proved) that there is a *God* will be manifest also, as being comprehended together with the unmanifest thing that demonstrates it. But this is not manifest, therefore neither can it be demonstrated by a manifest thing.

But neither by an unmanifest, for the unmanifest that should demonstrate there is a *God* will require a Demonstration. If demonstrated by a manifest, it will no longer be unmanifest; but manifest, that there is a *God*. Therefore the unmanifest demonstrative cannot be demonstrated by a manifest. But neither by an unmanifest; for he who saith so, will be driven into *infinite*, we continually requiring a Demonstration of the unmanifest, that is alledged for Demonstration of the thing proposed. Therefore it cannot be demonstrated from any other, that there is a *God*; and if it neither be manifest in it self, nor demonstrable from any other; it will be incomprehensible whether there be a *God*.

Moreover, he who saith there is a *God*, holds either, that he is provident over the things in the world, or not provident. If provident, either over all, or over some. If over all, there would be no ill or wickedness in the World; but all things (as they confess) are full of ill; therefore *God* cannot be said to be provident over

over all. If over some only, Why is He provident over these, and not over those? For either He both will, and can be provident over all; or He will, but cannot; or He can, but will not; or He neither will nor can. If He both will and can, then He would be provident over all; but He is not, as is manifest from what we last alledged; therefore that He both will and can provide over all, is not so. If He will, but cannot, His Power is exceeded by that Cause, which hinders Him from being provident over the things over which He is not provident; but it is absurd, to Imagine God to be weaker than some other. If He can be provident over all, and will not, He may be thought envious: If He neither will nor can, both envious and infirm; which to affirm of God, were impious. Therefore God is not provident over the things of the World; and if He is not provident over them, neither performeth any Work or Effect, none can say by what means He comprehends there is a God, seeing that it neither is manifest in it self, nor comprehended by any Effects. For these Reasons therefore it is Incomprehensible, Whether there be a God or No.

Hence we also argue, That perhaps they who say there is a God, cannot be excused from Impiety; for in affirming, That He is provident over all things, they say, that God is the Author of Evil; and in saying, that He is provident over some, and not over all, they will be forced to confess, That God is either Envious or Infirm; which cannot be said, without manifest Impiety.

CH A P. II.

Of Cause.

BUT that the *Dogmatists*, not being able to extricate themselves out of these difficulties, may not charge us with Blasphemy; we will in general examine *Efficient Cause*, first, endeavouring to lay down the Notion thereof.

From what the *Dogmatists* say, none can understand what *Cause* is. Some hold it to be a Body; others, Incorporeal. It seems to be, according to their most general Opinion, *That by which the Effect is operated*; as the Sun, or the Sun's heat is Cause that the Wax is melted, or Cause of the Liquefaction of the Wax; for even here they differ. Some will have the Cause to be of the Abstract, as Liquefaction; others of the Concrete, as to be Liquefied. Thus, as I said, according to the most general and received Opinion, a Cause is that by which the Effect is operated.

Of these Causes, they hold some to be *Continent* (or *Solitary*;) others, *Con-causal*; others, *Co-operative*. *Solitary* are those, which being present, the Effect is present; and being taken away, the Effect is taken away; and being Diminished, the Effect is Diminished. Thus, the knitting a Halter about the Neck is the cause of Suffocation. *Con-causal* is that which joineth with another *Con-causal*, towards production of the same Effect, thus, Every one of the Oxen that draw the Plough, is cause of the drawing thereof. *Co-operative* is that

which affords Assistance, but very little to the Effect; as when two Men carry a Burthen, and a third helps them a little.

Some say, That things present are impulsive Causes of the future, as the vehement heat of the Sun is of a Feaver; but some will not admit these; for that a Cause, being relative to its Effect, cannot, as Cause, precede it.

CH A P. III.

Whether there be any Cause of a Thing.

IT is probable, there is such a Thing as Cause; For how can Augmentation, Diminution, Generation, Corruption, Motion of natural and spiritual Agents; In a word, the ordering of the whole World be, if not from some Cause, For, If none of these be really such in their own Nature, we must say; That they seem to us, by reason of some Cause, to be such as indeed they are not. Again, All Generations would be promiscuous, if there were no Cause; Horses, of Mice; Elephants, of Pill-mires. At Thebes in Egypt, there would be great showers of Rain and Snow; in the Southern Parts none, unless there were some Cause that produced extraordinary Cold in the Southern Parts, and made the Eastern dry and hot.

Again, he who saith, There is no Cause, is confuted either way: If he say it simply, without a Cause, (or Reason) he is not worthy credit; if upon any Cause, let him shew a Cause why there is no Cause, and by that very reason he will prove that there is a Cause.

That they likewise speak probably who deny Cause, we shall shew, by alledging some Reasons out of many; As thus: It is impossible to understand the Cause, before we comprehend the Effect as its Effect; but neither can we comprehend the Effect of the Cause as its Effect, if we comprehend not the Cause of the Effect as its Cause; for then we seem to know that it is its Effect, when we comprehend the Cause as its Cause. Now if to understand the Cause, it be necessary that we first know the Effect; and to know the Effect (as I said) it be necessary, that we first know the Cause, the *Alternate Common Place* comes in, to shew, that neither of them can be known; not the Cause as Cause, nor the Effect as Effect; for each of them requiring the other to its credit, we shall not know upon which to ground our knowledge first. Wherefore we are not able to assert, that there is any Cause of a Thing.

But though we should grant there is a Cause, yet will it appear to be Incomprehensible, from the Controversies about it. For he who saith, That there is Something Cause of Something, either saith it simply, not moved by any Cause or Reason, or else is moved to this Assent by some Cause. If simply, he will be nothing the more creditable, then he who simply saith, There is no Cause of any Thing. If he alledge any Cause, why he thinks there is a Cause, he endeavoureth to prove that which is in Question by that which is in Question. For the Question being, Whether there be any Cause of a Thing, he takes it for granted that there is a Cause, when

when he alledgeth a Cause; why there is a Cause. Moreover, the Question being concerning the Existence of Cause, if we prove it by any Cause, it will be requisite to alledge another Cause to prove that, and so to Infinite; but to alledge infinite Causes, is impossible. It is therefore impossible to assert, That there is something Cause of another.

Moreover, a Cause produceth the Effect, either when it already is, and exists as Cause, or when it is not a Cause; not the later; and if when it already is, it must first exist, and be a Cause, and then produce the Effect, which is said to be the Effect thereof, the Cause already existing. But Cause being relative to the Effect, it is manifest, that, as Cause, it cannot exist before it. Therefore a Cause, even when it is already a Cause, cannot produce that whereof it is Cause. And if it produceth not any Thing, neither when it is not a Cause, nor when it is a Cause, then there is no Cause at all; for a Cause cannot be understood as Cause, unless it produce something.

Whence some argue also thus; A Cause must exist either together with the Effect, or before it, or after it; now to say, that the Cause begins to exist after the production of the Effect, were ridiculous. Neither can it exist before it, as being understood in relation to it; but Relatives, as Relatives, coexist, and are understood together; but neither can it coexist with the Effect, for if it be its Efficient, and that whatsoever is effected, must be effected by some other that hath a Being, it is necessary, that a Cause first be a Cause before it produce the Effect. Therefore if a Cause exist not either together with, or before, or after the Effect, it exists not at all.

Moreover, the Notion of a Cause may haply be overthrown thus. For if we cannot understand a Cause (forasmuch as it is relative,) before its Effect; and, to understand it, as Cause of the Effect, it be necessary to understand it, as being before the Effect: But it be impossible to understand any thing to be before that, before which we cannot understand any thing to be, then it is impossible to understand that there is Cause.

Hence we argue thus; Forasmuch as the Reasons by which we proved, that there must be a Cause, are probable; and those also are probable on the other side, which prove there is no Cause; and of these Reasons we cannot possibly know, which ought to be preferred, since we neither have a Sign, nor Criterie, nor Demonstration, acknowledged indubitate, (as we shewed formerly.) Therefore we must necessarily suspend, as to the Existence of Cause, saying, That from what the *Dogmatists* affirm of it, it appears *nothing rather to be, than not to be.*

CHAP. IV.

Of Material Principles.

Hitherto of the *Efficient*; we shall next speak briefly of those which are called *Material Principles*. That these are incomprehensible, is manifest, from the disagreement of the *Dogmatists* about them. *Pherecides the Syrian*, asserted Earth to be the Principle of all Things; *Thales*,

the *Milesian*, Water; *Anaximander*, his Disciple, Infinite; *Anaximenes* and *Diogenes Appollionites*, Air; *Hippasus, the Metapontine*, Fire; *Xenophanes, the Colophonian*, Earth and Water; *Enopides, the Chian*, Fire and Air; *Hippo, of Rhegium*, Fire and Water; *Onomacritus*, in his Orphicks, Fire, Water, and Earth; not to speak of Matter void of quality, (which some have prodigiously fancied, but not understood;) the Followers of *Aristotle* (the *Peripateticks*), a circular moving Body consisting of Fire, Air, Water, and Earth; *Democritus* and *Epicurus*, Atoms; *Anaxagoras*, the *Clazomenian*, Homoiomeria's; *Diodorus Cronus*, least and indivisible Bodies; *Heraclides, of Pontus*, and *Afolepiades*, of *Bithynia*, uncompounded Bulks (or little Bodies;) the *Pythagoreans*, Numbers; the *Mathematicians*, the Terms of Bodies; *Strato*, the Naturalist, Qualities.

Such, (or, yet greater) being the Controversy amongst them concerning the Material Principles, we must either assent to all their Opinions, or to some. To all is impossible, for we cannot hold with *Afolepiades*, that they are tangible and qualified, and with *Democritus*, that they are Atoms, and void of quality; and with *Anaxagoras*, who ascribes all sensible qualities to his *Homoiomeria's*. But if we must of our own judgments make choice of some of these Opinions, we must do it either without Demonstration, or with Demonstration. If without Demonstration, it will not be credited; if with Demonstration, that Demonstration must be true. But it will not be granted to be true, unless it be judged and determined by a true Criterie, but the Criterie must be proved to be true by an adjudged Demonstration. If therefore, to prove that which preferreth one Opinion before the rest to be true, it be requisite that its Criterie be demonstrated; and, to demonstrate that the Criterie is true, it be requisite that its Demonstration be first adjudged, it runs into the *Alternate Common Place*, which will suffer the Argument to proceed no further, the Demonstration continually requiring a Criterie; and the Criterie, adjudged Demonstration: But to judge a Criterie by a Criterie, and a Demonstration by a Demonstration, were to run into Infinite. Now if we cannot assent to all Opinions concerning the Elements, nor to some of them, we must necessarily suspend.

This perhaps is sufficient to shew the Incomprehensibility of the Elements and Material Principles. But to refute the *Dogmatists* more fully, we will insist longer hereupon. Their Opinions concerning Elements are so many, that to examine every one in particular is more than our design will allow, but what we shall alledge may serve to confute all: For seeing that in all Controversies concerning the Elements they are held either to be Bodies or Incorporeal, we conceive it sufficient to prove, that both Bodies and Incorporeals are incomprehensible; for thence it will follow, That the Elements must be Incomprehensible.

C H A P. V.

Whether Bodies be incomprehensible?

A Body (some of them say,) is that which (they think) doth, or sufficeth: But according to this notion it is incomprehensible, as we have shewn. For not being able to say whether there be a Cause, we cannot say whether there be a Patient, for the Patient suffers from the Cause; Thus both the Cause and the Patient being incomprehensible, a Body also must be incomprehensible.

Some say, A Body is that which hath a triple dimension and resistance: For a point, (they say) is that which hath no part, a line is a length without breadth: Now when these have received depth also, and resistance, it then becomes the Body we speak of, consisting of length, breadth, depth, and resistance. But these are easily disproved; for, either they must say, that a Body is nothing but these, or that it is something else different from these: * That it is something else different from these, we cannot conceive; for we cannot conceive that there is a Body, where there is not length, breadth, depth, and resistance. But if a Body be these, and we prove that these are not existent, we take away Body; for the Whole, if you take away all its Parts, is taken away also. These may be confuted several ways, of which we shall only alledge this; If there are terms, either they are Lines, or Superficies, or Bodies; if they shall say, that there is Line or Superficies, they must grant that each of them can exist by it self, or is considered only in the Bodies. That a Line or Superficies exists by it self, none perhaps is so foolish as to imagine: If they say, that they exist not by themselves but in the Body: First, they must grant that Bodies are made of them, for then they must first have had a subsistence by themselves, and afterwards concur to the making of a Body. Again, neither do they exist in the things which are called Bodies, as, (to omit other Instances) we shall shew from Contract only: For if the Bodies which are clapt together, touch one another mutually, they must touch mutually by their terms, that is, by their Superficies; But the Superficies touch not each other in whole, for then they would be united one to the other by the act of touching, the touch would confound the substances; so as to divide two things that touch one another, would be a Divulsion. Neither doth a Superficies by some parts touch the Superficies of the Body which is applyed to it, and by others is united to the Body, whose term it is; certainly no Man can consider this to be without depth, and consequently, not a Superficies but a Body; In like manner, if we suppose two Superficies, laid one upon the other, according to their terms or bounds; It follows, that, according to that which is called their length, (that is, according to their lines,) those lines, by which the Superficies are said to touch one another, shall not touch one another totally, for then they would be confounded; Neither doth any one line of them touch, by some parts, the line to which it

is applyed, and by others is united to the Superficies, whose bound it is, for then it would not be without breadth, and consequently no Line: Now if in a Body there is neither Line nor Superficies, there is neither length, breadth, nor depth in a Body.

If any shall say these Terms are Bodies; they may be confuted briefly thus: If length be a Body, it is divided into its three Dimensions, and each of those being a Body, is again divided into its three Dimensions, and so into Infinite. Thus a Body will be of infinite Magnitude, being divided into Infinite; but that is absurd: Therefore the foresaid Dimensions are not Bodies: And if neither Bodies nor Lines, nor Superficies, it may well be conceived that they are not at all.

Resistance likewise is not to be comprehended or understood; for if it might be comprehended, it would be comprehended from the Touch. Now if we shew that the Touch it self is incomprehensible, it will appear that it is impossible to comprehend Resistance; That Touch is incomprehensible, we collect thus; Whatsoever things touch one another, either touch one another mutually by their Parts; or the Whole, the Whole. Not the Whole, the Whole; for that were not to touch, but to be made one; neither the Parts, the Parts; for those Parts, though in respect of their Wholes they are Parts, yet in respect of their own Parts are Wholes, for they have Parts within themselves. But Wholes touch not Wholes, for the reason alledged; and consequently neither do Parts touch Parts; these Parts, in respect of their own Parts, being Wholes. Now, if we cannot comprehend, that Touch may be made either by Whole, or by Parts; Touch must be incomprehensible, and consequently so must a Body; for if it be nothing more than these three Dimensions and Resistance, and we have shewn that each of these is incomprehensible, Body also is incomprehensible. Thus therefore, as to the notion of Body it self, it is incomprehensible, whether there is a Body.

Moreover, of Bodies, say they, some are sensible, others intelligible; these are comprehended by Intellect, those by the Senses. The Senses are simply passible, but the Intellect cometh to the comprehension of intelligible things, through comprehension of Sensibles. If therefore a Body be something, it must either be sensible or intelligible: Sensible it is not, for it seemeth to be comprehended by collection of length, and breadth, and depth, and resistance, and colour, and such like, together with which it is considered; but the Senses they hold to be simply *passive*. If they say, a Body is Intelligible, there must be something in the nature of Sensible things, by which Bodies, being intelligible, may be understood: But there is nothing besides Body and Incorporeal, whereof the Incorporeal is it self intelligible, the Body therefore is not sensible, as we proved; and there not being in the nature of things any Sensible, by which Body might be understood, neither will Body be intelligible; and if neither sensible nor intelligible, and there be nothing besides these, we may say, a Body is nothing. Wherefore opposing these Reasons, which prove there is no Body,

* The Text seems defective, and to be thus supplied out of his Chapter concerning Body, *adversus Mathematicos*. Page 368.

to those which prove that there is a Body, we Suspend.

Now, from the incomprehensibility of Body, will be inferred also, that Incorporeal is Incomprehensible; for privations are understood to be the privations of Habits, as, of Sight, Blindness; of Hearing, Deafness; and the like. Wherefore to comprehend the Privation, we must first comprehend the Habit, whereof it is a Privation; for, he who understands not what Sight is, cannot say, This Man hath not Sight, that is, he is blind. If therefore the Privation of a Body be Incorporeal, and the Habits being incomprehensible, it be impossible to comprehend their Privations; But Body, as we have shewn, is incomprehensible; Incorporeals also will be incomprehensible. For, either it is sensible, or intelligible; if Sensible, it is incomprehensible, by reason of the difference of living Creatures, and of Men, and of Senses, and of Circumstances, and by reason of Commixion, and the like, mentioned in the ten Common-places of Suspension; if Intelligible, there not being granted a comprehension of Sensible things, by which we may be carried to Intelligibles; neither will there be granted a Comprehension of things Intelligible, and consequently not of an Incorporeal. Besides, he who saith, that he comprehends an Incorporeal, must say, that he Comprehends it either by Sense or by Reason; not by Sense, for the Sense seemeth to perceive sensible things, by intromission and insinuation; as the Sight, (whether it be made by a conick impression, or by emission, or immission of Species, or by effusion of Raies and Colours) and the Hearing (whether it be that the Air is struck, or that the parts of the Voice are carried to the Ear, and strike the Sense, so as to cause a preception of the Voice;) likewise Odours to the Nostriis, and Sapours to the Tongue, and tangible things are derived to the touch in the same manner. But Incorporeals are not capable of receiving such impressions, therefore they cannot be comprehended by Sense. But neither by Discourse (or Reason;) for if Discourse be a Dicible and Incorporeal, (as the Stoicks hold) He, who saith Incorporeals are understood by Discourse, begs the Question; For when we demand, Whether an Incorporeal can be comprehended, He, taking Incorporeal simply, would thereby shew the Comprehension of Incorporeals; whereas Discourse itself, if it be Incorporeal, is a part of the thing controverted. How then can any shew that this Incorporeal (Discourse) is comprehended first? If by any Incorporeal, we shall require a demonstration of its Comprehension, and so to Infinite. If by a Body, the comprehension of Bodies is the thing in question. By What then shall we demonstrate, that a Body is comprehended, which is assumed to demonstrate the comprehension of Discourse and Incorporeal? If by a Body, we run into *Infinite*; If by an Incorporeal, we run into the *Alternate common-place*. Thus Discourse being, If Incorporeal, Comprehensible; none can say, that an Incorporeal may be comprehended by it. But if Discourse be a Body, forasmuch as there is Controversie concerning Bodies, whether they are comprehended or not, because of the continual effluxion (as they call

it) of them; in respect whereof, they neither can admit Demonstration, nor are conceived to be; insomuch as *Plato* termeth Bodies, *γινόμενα, ὅτι δὲ ἐκ ποσῶν, Generated, Not being*. Hereupon I doubt which way the Controversie concerning Body determineth, since neither by a Body, nor by an Incorporeal, for the inconveniences alledged. Therefore neither is it possible to comprehend Incorporeals by Discourse, but if they neither incur to Sense, nor are comprehended by Discourse, they cannot be comprehended at all. Now if we can neither assert the existence of a Body, nor of an Incorporeal, we must suspend as to the Elements; and perhaps we must suspend also concerning those things, which are after the Elements; if, of them, some are Corporeal; others, Incorporeal, and both these are controverted. Moreover, seeing we ought to suspend concerning Efficient and Material Principles, for the precedent Reasons, the whole Discourse concerning Principles will be inextricable.

CHAP. VI.

Of Temperament.

BUT, setting this aside, how can they say, that Temperaments are made of the first Elements, whereas there is not any Touch, nor Contact, nor Temperament, nor Mixture at all? That Touch is nothing, we shewed lately, in discoursing concerning the Existence of Bodies. And that Temperament also, from what they say, is not possible, we shall briefly declare. They speak much concerning it, and almost innumerable are the controversies of the Dogmatists about it, so as from the Indjudicableness of the Controversie may be argued the Incomprehensibility of the Subject. To confute them all in particular, would be beyond our Design; this which we shall say, we conceive, may suffice.

All contempered things consist, as they say, of Substance and Qualities. They must therefore either hold, that either the Substances are mingled, and not the Qualities; or the Qualities but not the Substances; or neither with the other; or both with one another. But if neither Substance nor Qualities are mingled one with the other, Temperament will be unintelligible; for how can one Sense be made of the things tempered, if the things tempered be not mingled together, by any of the foresaid ways? If they say, that the Qualities are simply adjacent one to another, but the Substance is mingled; this also is absurd, for we comprehend not Qualities in Temperaments, as separate, but we feel them as made one by the things tempered. If they say, that the Qualities are mingled, but not the Substances; it is impossible, for the subsistence of the Qualities is in the Substance. Wherefore it is ridiculous to say, that the Qualities are separated from their Substances, and so mingled with one another, and the Substances left deprived of their Qualities. It remains to say, that the Qualities and Substances of things tempered pass through one another, and being mingled, make the Temperament, which is

more absurd than the former ; for such a Temperament is impossible. For example, If with Ten pints of Water there be mixed one pint of Hemlock, the Hemlock will be said to be commixed with all the Water ; for if a Man take never so little of this mixture, he will find it full of the power of the Hemlock. Now if the Hemlock be mixed with every part of the Water, and co-extended with it, the whole with the whole, by mutual Permeation of the Substances and Qualities one through another, that so the Temperament may be made ; and things, co-extended with one another in every part, take up equal place, and consequently, are equal to one another, the pint of Hemlock shall be equal to the Ten pints of Water ; so that the mixtion must either be Twenty pints or Two pints, according to this Hypothesis of the manner of Temperament. And again, One pint of Water being put to Twenty pints of Water, according to this Hypothesis, must make the measure either of Forty pints, or of Two only ; because we may either conceive the pint to be Twenty pints, as being co-extended with so many ; or the Twenty pints to be that One, with which they are co-equaliz'd. In like manner, a Man adding but one pint, may argue, that the Twenty pints, which we see, ought to be Twenty thousand, or more, according to this Hypothesis of Temperament, and that the same are but two only ; than which, nothing is more absurd ; Therefore this Hypothesis of Temperament is absurd. Now if Temperament neither be by mixing the Substances only, nor Qualities only, nor both, nor either ; and besides these, nothing can be imagined ; the manner of Temperament, and of all mixtures, is not to be understood. Wherefore if those things which are call'd Elements, are not capable of making Contemperations, neither by touching one another, nor by being blended or mingled, the Physiology of the Dogmatists, as to this thing, is unintelligible.

C H A P. VII.

Of Motion.

BESIDES, what hath been said, the Physiology of the Dogmatists may be conceived to be impossible, by discoursing upon Motions ; for all Commixtions must be made by some Motion of the Elements, and the Efficient Principle. If therefore we prove, that there is no generally acknowledged Species of Motion, it will be manifest, that, though all which we formerly opposed, should, by way of supposition, be granted ; yet that, which the Dogmatists call Physick, serves to no purpose.

C H A P. VIII.

Of Local-Motion.

THEY who seem to have discoursed most exactly of Motion, say, there are six kinds thereof, Local-Motion, Alteration, Augmentation, Diminution, Generation, and Corruption.

We shall examine each of these particularly, beginning with Local-motion. This, according to the Dogmatists, is that, by which that which moveth, passeth from place to place, either according to its Whole, or according to Part ; according to its Whole, as in them who walk ; according to Part, as in a Sphear that moves about its Center ; for the Whole remaineth in the same place, the Parts only change place.

Three, as I conceive, are the principal Controversies concerning Motion. *Bias*, and some other Philosophers, hold that there is Motion ; *Parmenides*, *Melissus*, and others, that there is not Motion ; the Scepticks *nothing rather* that it is, than that it is not. For as to the Phænomena's, it appeareth that there is Motion ; but as to Philosophical Discourse, that there is not. If therefore, upon examination of the Arguments on both sides, we shall find them to be of equal weight, we shall not assent to either. Let us begin with those who hold, that it is.

These insist most upon Evidence : For if they say, there is no Motion, How doth the Sun appear now in the East, anon in the West ? or How doth he make the Seasons of the year, which are according as he is nearer to, or further from us ? Or How do Ships put off from one Port, and reach another far distant ? Or how does he, who denies Motion, go abroad and come home ? These they conceive cannot be answered, and therefore one of the Cynicks, an Argument being propounded to him to take away Motion, made no Answer, but rose up and walk'd, shewing by action and evidence, that there is Motion. Thus they endeavour to silence the contrary Party.

But they who take away the existence of Motion, argue thus. If a thing be moved, it must be moved either by itself, or by some other ; but neither by itself, nor by any other. For that which is said to be moved not by itself, must be moved either by some Cause, or by none, by no Cause they say nothing is done ; if by some Cause, the Cause by which it is moved, will be its Mover, and so they will run into Infinite, according to our usual way of Argument. Again, if that which moveth, effects, and that which effects, is moved, that will also require another to move it, and this a Third, and so to Infinite ; so that Motion shall be without any Principle of first beginning, which is absurd. Therefore every thing that moveth, is not moved by another. But neither by itself ; for every thing that moveth either impelleth forward, or draweth backward ; or upward, or downward : therefore whatsoever moveth itself, must do it after one of these ways. If by Impelling forward, it must be behind itself ; if by drawing back, before itself ; if upwards, below itself ; if downwards, above itself. But for a thing to be either above, or before, or below, or behind itself, is impossible ; it is therefore impossible for any thing to be moved by itself. But if neither by itself, nor by any other, then nothing at all is moved. If any recur to Appetite and Election, we must let him know, that the Question is concerning *that which is in our power*, and that this Question is indeterminable, forasmuch as we have not yet found a Criterium of Truth.

Again,

Again, if a thing be moved, it is either moved in the place in which it is, or in which it is not; but not in the place wherein it is, for if it be in it, it continues in it. Nor in the place in which it is not, for where a thing is not, there it can neither act nor suffer. This was the Argument of *Diodorus Cronus*. But it is answered several ways, of which we shall only alledge those which we conceive to be of greatest force, together with the Judgment which appeareth for the present to us. Some say, that a thing may be moved in the place where it is, for the Sphæars which roll about their Centers are moved, and yet continue in their place. In Answer to whom, the Argument should be transferred to the several parts of the Sphæar, and we must shew by this Argument, it is not moved as to its parts, if we will prove that nothing is moved in the place wherein it is.

The same Answer may be made to those, who say, that a thing moved must touch two places, that wherein it is, and that to which it goes; We shall ask them, seeing, that what is moved is carried from the place wherein it is to another, Whether this be when it is in the first place, or when it is in the second? But whilst it is in the first, it passeth not to another, for it is yet in the first; and when it is not in this, it passeth not out of it: Besides this, the Question is Begged. For in the place wherein it is not, it cannot act; for no Man will grant simply, that it is carried to any place who grants not that it is moved;

Some there are, who distinguish thus: Place is taken two ways, largely, as my House; strictly, as the Air, which encloseth the Superficies of a Body. Now when a thing that is moved, is said to be moved in Place, we mean not Place in the large sense but in the strict. To these may be answered, by subdividing Place largely taken; that in one part thereof, the Body is said to be moved properly, as being its exact Place; in the other, not so, this being the rest of the parts of Place largely taken. Then inferring, that nothing can be moved, neither in the Place wherein it is, nor in the Place wherein it is not, conclude, that neither in Place at large; improperly taken, can any thing be moved. For it consists of two Parts, of that wherein the thing exactly is, and of that in which exactly it is not; in neither of which can any thing be moved, as was proved.

It may be argued also thus: If any thing be moved either it is moved from some part of the space, and then another; or it is moved all at once, over the whole divisible Interval: But neither can any thing be moved from some first part of the space, and then another, not all at once, over the whole divisible Interval, therefore nothing is moved. That nothing is moved from some first part of the space, is manifest from hence; for that, if the Bodies, and the Places, and the Times, in which those Bodies are said to be moved, be divided into Infinite, there will be no Motion; it being impossible to find in Infinites a First, from which First (Part) that which is said to be moved shall be moved. But if the things aforesaid end in an indivisible, and every thing that is moved pass the first divisible Part of its Place, In like manner as the first indivisi-

ble Part of its Time, all things will be of equal Celerity; as the fleetest Horse, and a Tortoise; which is absurder than the former. Therefore Motion is not made from some first part of the space. But neither all at once over the whole divisible Interval: For if apparent things must, as they say, clear things unapparent; when a Man should go the space of a Stadium, it is requisite that he first perform the first part of the Stadium, and then the second, and so the other parts in order. So every thing that is moved according to the First, must first be moved; for if that which is moved be said to pass at once over all the parts of the place, in which it is moved, it will be in all its parts at once; and if one part of the place be cold, another hot; or one black, another white, so much as to qualifie the things that are in it; that which moveth will be at once hot and cold, and black and white. Besides, let them say, how much of the Place at once that which is moved passeth. If they say it is Indefinite, they grant, that something may be moved over the face of the whole Earth at once; if they deny that, let them define the quantity of the place; for to endeavour exactly to define such a place, than which the thing moved cannot pass, at once, any (though never so little) greater distance, besides that it is absurd and ridiculous, will perhaps incur the former inconvenience; for all things will be swift alike, seeing that every thing passeth alike through determinate places. But if they shall say, that what is moved all at once, is moved through a little, but not exactly determinate Place, we shall confound them by a Sorites, continually adding to the supposed Magnitude, another very little Magnitude of Place. For if at any time they make a stand, then they fall into their former determination of the Place, and strange Conceits; but if they admit an increase, we shall force them to Grant, that a thing may be moved all at once over the whole Earth. Wherefore neither are those things which are said to be moved, moved at once over the whole divisible Interval; and if neither all at once, nor from some part, then nothing is moved. This and much more is alledged by those who take away local Motion: But we (not being able to disprove either these Arguments, or the Phenomenon which they follow, who say there is no Motion, as to the opposition betwixt the Phenomenas and the Arguments) suspend, Whether there be Motion or not.

C H A P. IX.

Of Augmentation and Diminution.

UPON the same Ground we suspend as to *Augmentation and Diminution*: For, Evidence seems to prove that they are, but Discourse (or Reason) to overthrow them; As thus. That is augmented, being already an *Ens* and Substant, must be moved further as to quantity (for it any shall say that by Apposition of one thing another is augmented; he speaketh falsely) Since therefore Substance never is at a stand, but always in fluxion, and some are insinuated into others, that which is augmented hath not its first substance with the addition of some other, but a Substance wholly new; As therefore (for Instance,) If there being a piece of Wood three Foot long, some Man putting to it a piece ten Foot long, should say he hath augmented the piece of three Foot, he shall say falsely, (forasmuch as this is wholly another thing from the other:) So in every thing that is said to be augmented, the former matter flowing out, and new matter flowing in, If that be added which is said to be added, none will say that this is Augmentation, but Alteration of the Whole.

The same may be said of Diminution; for how can that which subsists not, be said to be diminished? Besides, If Diminution be made by Detraction, Augmentation by Addition; But neither Detraction nor Addition be any thing, neither is Diminution nor Augmentation any thing.

C H A P. X.

Of Detraction and Addition.

THAT Detraction is Nothing, they argue thus: If Something be detracted from another, either an Equal, is detracted from an Equal, or a Greater from a Lesser, or a Lesser from a Greater: But none of these; therefore Detraction is not possible. That Detraction is not made by any of these ways, is manifest: That which is detracted from another, before it is detracted, must be contained in that from which it is detracted, but an Equal is not contained in a Equal, as Six in Six; for that which containeth, ought to be greater than that which is contained; and that from which something is detracted, ought to be greater than that which is detracted, that after the Detraction there may be something remaining, for herein Detraction seems to differ from quite taking away. Neither is the Greater contained in the Lesser, as Six in Five; that were absurd. Neither is the Lesser contained in the Greater; for if Five were contained in Six, as the fewer in the more, by the same Reason, in Five will be contained Four, and in Four Three, and in Three Two, and in Two One; thus Six shall contain Five, Four, Three, Two, One, which being put together, make Fifteen, which must be contained in Six, if it be granted that the Lesser is contained in the Greater. In like

manner, in the Fifteen which is contained in Six, will be contained Thirty five; and so, by Progression, infinite Numbers: But it is absurd to say, that infinite Numbers are contained in the Number Six; therefore it is absurd to say, that the Lesser is contained in the Greater. If therefore it be requisite, that what is Detracted from another, be contained in the thing from which it is Detracted, but neither Equal is contained in Equal, nor the Greater in the Lesser, nor the Lesser in the Greater; Nothing certainly is Detracted from any Thing.

Again, if Something be Detracted from Something, either the Whole is Detracted from the Whole, or Part from Part or the Whole from the part, or part from the Whole. But to say, That the Whole is Detracted from the Whole or from Part, is absurd; it remains therefore to say, That the Part is Detracted from the Whole, or from Part, which is absurd also. We will instance (not to change our Example in Numbers, as being most perspicuous,) in the Number Ten, and let us suppose One to be subtracted from it. This One cannot be subtracted from the whole Ten, nor from the remaining part of it Nine, as I shall prove; therefore is it not subtracted. For if One be subtracted from the whole Ten, forasmuch as Ten is nothing else but Ten Unites, not any one of the Unites, but a Combination of all, this Unity to be subtracted out of the whole Ten, must be subtracted out of every Unite: But first, from an Unite nothing can be subtracted, for Unites are indivisible, and therefore One cannot be subtracted from Ten in this manner. But if we grant an Unite may be taken from every Unite, an Unite will have Ten parts, and having Ten Parts, will be an Unite; now there being Ten other Parts remaining, from which were subtracted the Ten Parts of that which is called an Unite, those Ten will be Twenty: But it is absurd to say, that One is Ten, and that Ten is Twenty, and that what is Indivisible (according to them) is divided, therefore it is absurd to say, That an Unite is subtracted from the whole Number Ten. But neither is the Unite subtracted from the remaining Number Nine, for that from which a Thing is subtracted remaineth not intire, but the Nine remaineth intire after the Subtraction of the Unite. Besides, the Nine being nothing else but nine Unites, if the Unite be said to be taken away from the Whole, the Nine itself will be taken away; if from a part of the Nine, as from Eight, the same Absurdities will follow: If from an Unite, which is the last, they must say that an Unite, is divisible, which is absurd; therefore the Unite is not subtracted out of the Nine. Now if it neither be subtracted from the whole Ten, nor from a Part thereof, neither can a Part be subtracted from the Whole, nor from a Part. If therefore neither Whole can be subtracted from Whole, nor Part from Whole, nor Whole from Part, nor Part from Part, Nothing is subtracted from another.

Likewise Addition is reckoned by them amongst Things impossible: For say they, That which is added, is either added to itself, or to some Subject præexistent, or to that which consists of both; but none of these is true, therefore

fore nothing is added to another. For Instance, suppose the quantity of four Pints, and thereto let be added one Pint, I demand, To what it is added? To it self it cannot, for that which is added, is diverse from that to which it is added, but nothing is diverse from it self. But neither is it added to that which consists of both, the measure of four Pints and one Pint, for how can any thing be added to that which is not yet? Besides, if to the four Pints, and to the one Pint, be added a Pint, it will make up six Pints, from the quantity of four Pints, and the one Pint, and the additional Pint. Now if to the four Pints only, be added one Pint, forasmuch as that which is coextended with another, must be equal with that to which it is coextended: if one Pint be coextended with four Pints, it will double the quantity of the four Pints, so as the whole measure will be eight Pints, which we see to be otherwise. If therefore that which is said to be added, be neither added to it self, nor to some other Subject, nor to that which consists of both these, and besides these, there be nothing; certainly there is no addition of one thing to another.

C H A P. XI.

Of Transposition.

TRansposition comes within the compass of Addition, and Detraction, and Local Motion, for it is Detraction from one thing, and Addition to another, transiently.

C H A P. XII.

Of Whole and Part.

THE like may be said of Whole and Part, for the Whole seemeth to be made by convention, and addition of the Parts; but by detraction of any one, or more of them, it leaveth to be Whole.

Besides, If there be a Whole, either it is a thing diverse from its Parts, or its Parts are the Whole, but it seems not to be diverse from its Parts; For, the Parts being taken away, nothing remaineth whereby we may think that the Whole is any thing besides them. Now if the Parts are the Whole, the Whole is only a word, and an empty name, but hath no proper subsistence, as Distance is nothing more than things distant, and Contiguity nothing but things contiguous; Therefore the Whole is not any thing. But neither the Parts also; for if there are Parts, either they are Parts of the Whole, or Parts of one another, or each is Part of it self. Not of the Whole, for that is nothing more than the Parts themselves. Besides, the Parts would then be Parts of themselves, because every Part is complete of the Whole. Neither of one another, for a Part seemeth to be contained in that whercof it is a Part, and it were absurd to say, that the Hand (for example) is contained in the Foot. Neither is each of them a Part of it self, for then, as containing, and contained by it self, a thing will be greater, and less than it

self. Now if those which we call Parts, neither be Parts of the Whole, nor of themselves, nor of one another, they are not Parts of any thing, and if Parts of nothing, neither are they Parts, for Relatives are taken away together. This, by way of digression; for we treated of Whole and Part once before.

C H A P. XIII.

Of Alteration.

SOME also deny that there is any Alteration or natural Mutation, (as they term it,) arguing thus. If something be changed, either that which is changed is a Body, or Incorporeal; but neither of these is determinable, therefore Alteration it self is indeterminable. If any thing alter by operating as a Cause, it alters as being the Patient; and the substance of it, as Cause, is subverted, together with which the Patient also is subverted, nor having a thing from which to suffer, therefore nothing is altered.

Moreover, If there be Alteration, it is either of a Being, or of a Not-being; but a Not-being is insubsistent, and can neither suffer nor act, therefore it is not capable of Alteration. If that which is changed be a Being, it is either changed as a Being, or as a Not-being. As a Not-being it is not changed, for Not-beings are not. If it be changed as a Being, it becomes different from a Being, that is, it will not be a Being: But to say that a Being is a Not-being, is absurd. Therefore a Being is not changed. Now if neither a Being be changed, nor a Not-being, and besides these there is nothing, it remains to say, that nothing is changed.

Some argue thus: That which is changed, must be changed in some time, but neither is any thing changed in the time past, nor in the future, nor in the present, (as we shall shew;) therefore nothing is changed. In time past or future, nothing is changed; for neither of these is present, but it is impossible for any thing to act or suffer in a non-existent and not-present time. But neither in the present, for perhaps the present also is in-existent. This *νῦν*, *Now*, is indivisible: But it is impossible to imagine that Iron (for Example) can be changed from hard to soft, or that any other Alteration can be made in indivisible time, for they seem to require Succession. Now if nothing be changed either in the time past, nor in the present, nor in the future, nothing at all is changed.

Moreover, If there be Alteration, † either it is subject to Sense, or to Intellect; not to the Senses, for they receive only single Notions, but Alteration hath a twofold Respect, both to that out of which the Alteration is, and to that into which it is. If they say, It is Intelligible, forasmuch as there is an indeterminable Controversie concerning Intelligibles, as we have already said, we cannot assert the Being of Alteration.

† The Text requires to be supplied to this effect.

C H A P. XIV.

Of Generation, and Corruption.

Generation, and Corruption, are subverted together with Addition, and Detraction, and Alteration; for without these, nothing can be generated, nor corrupted: As for Example. Of the corruption of the Number Ten, say they, is generated the Number Nine, by Subtraction of One; and of Nine corrupted is generated Ten, by addition of One; and Canker, (by alteration) of Brass corrupted; therefore the forenamed Motions being taken away, perhaps it necessarily followeth, that Generation and Corruption are also taken away.

Moreover, some argue thus. If *Socrates* were generated, he was generated either when he was not *Socrates*, or when he was *Socrates*: If when he was, he must have been generated twice; if when he was not, he was, and was not, at the same time. He was, as being generated; he was not, according to the *Hypothesis*. Again, if *Socrates* Dyed, either he Dyed when he Lived, or when he was Dead; not when he Lived, for so the same Person should be both Dead and Alive; neither when he was Dead, for so he should Dye twice. Therefore *Socrates* Died not. By this Argument, upon every thing that is said to be generated, or corrupted, Generation and Corruption may be subverted.

Some argue thus: If there be Generation, that which is generated, is either a Being, or a Not-Being; not a Not-Being, for to that, which is not, nothing can happen, not so much as to be. Neither a Being, for if a Being be generated, it is generated either as it is a Being, or as it is a Not-Being. As it is a Not-Being, it is not generated, and if it be generated as a Being, forasmuch as a thing is generated of something different from it, that which is generated must be different from a Being, that is, a Not-being. Therefore that which is generated shall be a Not-being, which is absurd. Now if neither a Being, nor a Not-being be generated, nothing at all is generated.

Upon the same grounds also nothing is corrupted. For if Something be corrupted, it is either a Being, or a Not-Being; not a Not-Being, for that which is corrupted must suffer Something; not a Being, for either it is corrupted, as continuing in the state of a Being, or as not-continuing. If as continuing in the state of a Being, the same will be at once a Being and a Not-Being; because it is not corrupted as a Not-Being, but as it is a Being; and as it is corrupted, it is different from a Being, and consequently a Not-Being. But it is absurd to say, the same thing is a Being and a Not-Being; therefore a Being is not corrupted whilst it continueth in the state of a Being. But if a Being be corrupted, not whilst it is in the state of a Being, but first reduced to a Not-Being, and afterwards corrupted; it is not a Being, but a Not-Being, that is corrupted; which (as we said before) is impossible. If therefore neither a Being is corrupted, nor a Not-Being, and besides these there is Nothing, Nothing is corrupted. This may serve, by way of Sum-

mary, to say of Motions; whence it followeth, That the Physiologie of the *Dogmatists* is inconsistent, and unintelligible.

C H A P. XV.

Of Rest.

IN like manner some doubt as to the Nature of Rest, saying, That whatsoever Moves, Rests not; but every Body continually Moveth, according to the Opinions of the *Dogmatists*, who say, That Substance is Fluid, and hath continual Evacuations and Recruits; (Whence the *Platonicks* chuse rather to call Bodies, Things generated, than Beings; and *Heraclitus* compared the Mobility of our Matter, to the rapid course of a River.) Therefore no Body rests.

Again, that which is said to rest, seemeth to be contained by the things that are about it; that which is contained suffers, but there is no Patient; for, as we proved before, there is no Cause, therefore nothing Rests. Some argue thus: That which Rests Suffers, that which Suffers is moved; therefore that which is said to Rest is moved, and if moved, it Rests not. Hence also it is manifest, That an Incorporeal Rests not; for if that which Rests Suffers, and to suffer be proper to Bodies, and not to Incorporeals, no Incorporeal either Suffers or Rests; therefore nothing Rests.

Now forasmuch as none of the fore-named are understood without *Place* or *Time*, we must proceed to Disquisition of these; and if we prove, that these Exist not, the others will appear to be Inexistent upon that account also. Let us begin with *Place*.

C H A P. XVI.

Of Place.

Place is taken two ways, Properly, and Improperly; Improperly for Place at large, as a City; Properly, for that in which we are exactly contained. We inquire of Place in the proper exact Sense; some have asserted it, others deny'd it, others suspended. Of these, they who assert it, recur to Evidence: For who is there, say they, who will affirm, there is not Place, when they behold the parts of Place, as, Right, Left; Upwards, Downwards; Before, Behind? and that the same Person is at several Times in several Place? and that where my Master taught, there do I now teach? They argue also, That there is Place, because things are naturally light or heavy; and for that the Antients said, *Chaos was first*; for they hold, That *Chaos* is Place, because it contained all things that were made in it. And if a Body be any thing, say they, so is Place also; for without this, there will be no Body: And if there be a *from which*, there is also an *of which*, and an *in which*, that is, Place. The first is in either, the second therefore in both.

But neither do they who take away Place grant, that the Parts of Place are; for Place is nothing else but it's Parts: And he who asserts that

that Place is, if he takes for granted that It's Parts are, endeavours to make good the thing in Question, by itself. In like manner they do foolishly, who say, That something is in a Place, when as Place itself is absolutely deny'd to be: They take away together with it the existence of Place, which of itself is not granted, and the *of which*, and the *from which*, are proved to be inexistant, as well as Place; and disallow *Hesiod*, as not a competent Judge in Philosophy. And thus overthrowing the Arguments alledged, for the existence of Place; they, with greater subtilty, prove it to be inexistant, converting to their own use those Opinions of the *Dogmatists* concerning Place, which seem of greatest weight; as that of the *Stoicks*, and that of the *Peripateticks*, in this manner: The *Stoicks* say, *Vacuum is that which is capable of being contained by a Being, but is not contained: Or a Distance void of Body: Or a Distance not contained by a Body. But Place is a Distance which is contained by a Being, and is adequate to that which containeth it; they call a Body a Being; the Distance, which is partly contained by the Body, partly not contained, Region.* Whereas others by *Region* understand the Place of a great Body, so as *Place* and *Region* differ in Magnitude. Now it's objected, when they say, *Place is the Distance contained by a Body*; how do they mean it to be a Distance, (or Dimension) whether the Length of a Body, or the Breadth, or the Depth only, or whether all three together? If they mean but one of these, the Place will not be adequate to that whose Place it is. Besides, that which containeth will be part of that which is contained, which were absurd. If all the three Distances, forasmuch as in that which is called Place, there is not *Vacuum*, nor any other Body that hath Dimensions; but that Body which is said to be in the Place, consists not of Distances, (for that is Length, and Breadth, and Depth, Resistance also comes within these) the Body itself will be it's own Place, and that which containeth will be the same with that which is contained, which were absurd. There is not therefore any Distance of the Place, and consequently Place is nothing.

There is also an Argument to this Effect. Forasmuch as in a thing that is said to be in Place, there are not seen double Dimensions, but one Length, and one Breadth, and one Depth; Whether are these Dimensions of the Body only, or of Place, or of both? If of Place only, then the Body will have no proper Length, Breadth, or Depth, and consequently it will not be a Body, which is absurd. If of both, forasmuch as *Vacuum* hath no subsistence besides the Dimensions, and those of the *Vacuum* subjected to the Body; of whatsoever Dimensions the Body consists, of the same will the *Vacuum* consist also. For of the existence of Resistance, nothing can be positively asserted, as we formerly shewed. Now seeing that the Dimensions which belong to the *Vacuum*, and are the same with the *Vacuum*, appear only in the Body, which is visible, the Body will be *Vacuum*, which is absurd. If the Dimensions are of the Body only, then there will be no Dimension of Place, and consequently no Place; if therefore the Dimension of Place be not found by any of the foresaid ways, there is no Place.

This is likewise alledged: When a Body enters into a *Vacuum*, which thereby becomes a Place, either the *Vacuum* suffers, or yields, or is destroyed; but if it suffers, the same will be full and vacuous; if it either yields, being * * Reading moved locally, or is destroy'd by Motion, *Vacuum* will be a Body, for these are proper Affections of a Body. But it is absurd to say, the same is vacuous and full, or that *Vacuum* is a Body; therefore it is absurd to say, that a *Vacuum* may be occupied by a Body, and become Place. Whence it is also found, that *Vacuum* is absolutely inexistant, if it cannot be occupied by a Body, so as to become Place; for *Vacuum* was said to be that, which may be occupied by a Body.

Hereby also is subverted *Region*, for either it is a great Place, or is circumscribed with the Place; but if it be partly occupied by Body, and partly a vacuous distance or dimension, it is taken away with both. This, and much more, is alledged against the Opinion of the *Stoicks* concerning Place, wherein they dissent from others.

But the *Peripateticks* say, that *Place is the term (or inmost Superficies) of that which containeth, inasmuch as it containeth*; so that my Place is the *Superficies* of the air which incloseth my Body: But if this be Place, the same will be and not be; for when a Body is about to go into some Place, forasmuch as nothing can be in that which is not, it is necessary that Place first exist, and then that Body be in it; so that there must be Place, before there can be a Body that is said to be in Place. But inasmuch as Place is made, by accommodating of the *Superficies* of the thing containing, to the thing contained, Place cannot exist before there be a Body in it, and therefore will not have been before. But it is absurd to say, that the same is Something, and is not; therefore Place is not the term of a thing continent, inasmuch as it containeth.

Moreover, If Place be something, it is either Generate or Ingenerate; not Ingenerate, for they say it is made, whilst it is conformed to the Body which is in it; but neither is it Generate, for either when the Body is in Place, then is made the Place, in which that which is in Place, is now said to be; or when it is not in it: But neither when it is in it (for it is already the Place of the Body that is in it) seeing that which containeth is adapted, as they say, to that which is contained, and so becometh Place. But nothing can be adapted round about that which is not in it. Now if Place be neither made when the Body is in it, nor when it is not in it; and besides these, we know not any way, then Place is not generated; but if it be neither Generated nor Ingenerated, it is not at all.

More generally may be argued thus: If there be Place, it is either a Body, or Incorporeal; but both these are doubtful, as we discoursed formerly, therefore Place itself is doubtful. Place is understood with reference to the Body whereof it is Place; but that which is alledged concerning the existence of a Body is uncertain, therefore that which is said of Place. The Place of every particular thing is not eternal,

nal, but if it be said to be Generated, it will be found to be Inexistent. forasmuch as Generation itself is not. Much more might be said, but not to insist longer hereon, we shall, from what hath been said, infer, That the *Scepticks* ought not to assent to any thing, that is said by the *Dogmatists*, concerning Place, but to Suspend.

C H A P. XVII.

Of Time.

THe same we do in the Question concerning Time: For by *Phænomena's*, Time seemeth to be something; but by that which is said of it, it seems to have no Being; for some affirm, That Time is the Interval of the motion of Time, (by Time understanding the World;) others, That it is the motion of the World. *Aristotle*, or, as some, *Plato*, that it is the number of *Prius & Posterius* in motion. *Strato*, or, as some, *Aristotle*, that it is the Measure of Motion and Rest. *Epicurus*, (as *Demetrius* the *Lacedæmonian* saith) that it is an Accident of Accidents, accompanying Days, and Nights, and Hours, and Affections, and Apathies, and Motions, and Rests. As to its Essence, some affirm it is a Body, as the Followers of *Ænesidemus*; for they hold, it differs nothing from Being, and from the first Body; others, that it is Incorporeal. Now therefore, either all these dissonant Opinions are true, or all are false; or some are true, some false. But all cannot be true, for most of them are repugnant to one another; neither will the *Dogmatists* yield that all are false. Besides, if we should grant it to be false, that Time is a Body; and false likewise, that it is Incorporeal, it must immediately be granted, that Time is not at all; for besides these, there can be nothing. Neither is it possible to comprehend which are true, which false, by reason of the equivalence of the Arguments on both sides, and the uncertainty of the Criterion and the Demonstration. For these Reasons therefore, we cannot assert any thing concerning Time. Moreover, seeing that Time exists not without Motion or Rest, if Motion and Rest be taken away, Time also is taken away. Nevertheless, some bring these Arguments against Time:

If Time be, either it is Determinate, or Infinite; if Determinate, it began from some Time, and will end in some Time; and consequently there was once a Time, when Time was not, that is, before it began to be; and there will be a Time, when Time shall not be, that is, when it shall have ceas'd to be, which is absurd; Therefore Time is not Determinate. Now if it be Infinite, forasmuch as one is said to be Past, another Present, another Future; the Future and Present either are or are not; but if they are not, seeing there only remains the Present, than which nothing can be shorter, Time will be Determinate, and consequently there will arise the same difficulties as at first. But if the Past exist, and the Future exist, they must both be Present; but it is absurd to say, That that which is Past and Future is Present, therefore

Time is not Infinite. Now if it be neither Infinite nor Determinate, it is not at all.

Moreover, if Time be, 'tis either Divisible or Indivisible; Indivisible it is not, for it is divided, as they say, into Present, Past, and Future; but neither is it Divisible, for every Divisible is measured by some part of itself, that which measureth being applied to every part of the thing measured, as when we measure a Cubit with a Digit. But Time cannot be measured by any part of itself; for if the Present (for example) measureth the Past, it must be in the Past, and consequently Past; and, if the Future, it must be in the Future, and consequently Future. In like manner the Future, if it measure the others, must be Present and Past; and the Past must be Future and Present, which is a Contradiction; therefore it is not Divisible. Now, if it be neither Divisible nor Indivisible, it is not at all.

Again, Time is said to have three Parts, the Past, the Present, and the Future; of which, the Past and Future are not, (for if the Past and Future were now, each of them would be the Present) neither is the Present also. For if the Present Time be, it is either Indivisible or Divisible; Indivisible it is not, for things that are changed, are said to be changed in present Time; but nothing is changed in indivisible Time, as, I am lothted, or the like. Therefore the present Time is not indivisible. But neither is it divisible; it cannot be divided into Presents; for by reason of the swift fluxion of things in the world, the Present is imperceptibly changed into the Past. Neither is it divided into Past and Future, for then it were inexistent, as having one part no longer existent, the other not yet existent. Whence neither can the Present be the end of the Past, and Beginning of the Future, for so it will be, and not be; it will be, as it is Present; and not be, because its parts are not: Therefore it is not divisible. Now if the Present be neither divisible nor indivisible, it is not at all. But if there be neither Present, nor Past, nor Future, Time is not; for that which consists of what is not, itself is not.

Against Time, is also brought this Argument: If Time is, it is either generate and corruptible, or ingenerate and incorruptible. Ingenerate and incorruptible it is not, for Part is Past, and hath no longer Being: Part is Future, and hath no Being yet: But neither is it generate and corruptible; for things that are generated, are generated of some Being, and Things that are corrupted, are corrupted into some Being, according to the Tenent of the *Dogmatists*. If therefore it be corrupted into the Past, it is corrupted into a Not-Being; and if it be generated of the Future, it is generated of a Not-Being, for neither of these is. But it is absurd to say, that a Thing is generated of a Not-Being, or corrupted into a Not-Being; therefore Time is not generate and corruptible. Now if Time be neither ingenerate and incorruptible, nor generate and corruptible, it is not at all.

Moreover, forasmuch as every thing that is generated, seems to be generated in Time; if Time be generated, it is generated in Time; it is therefore either generated in itself, or one time

time in another : But if in itself, the same will be and not be ; for since that in which any thing is generated, must be pre-existent to that which is generated in it ; Time generated in itself, it is generated, is not yet ; and if it be generated in itself, it is already. Wherefore Time is not generated in itself. But neither is one Time generated in another ; for if the Present be generated in the Future, the Future must be Present ; and if in the Past, the Past. The same may be said of other Times ; therefore one Time is not generated in another. Now if Time be neither generated in itself, nor one Time in another, it is not generate at all. But that it is not ingenerate, we shewed also. Therefore seeing it is neither generate nor ingenerate, it is not at all ; for every Being must either be generate or ingenerate.

C H A P. XVIII.

Of Number.

FORASMUCH as Time seemeth not to be considered without *Number*, it will not be from the purpose, to speak something briefly concerning *Number*. As to common Conversation, we say, without Opinion, that we *Number* something ; and allow it to be said, that *Number* is something : But the superfluous Curiosity of the *Dogmatists* urgeth us to dispute against it. The *Pythagoreans* assert *Numbers* to be the Elements of the World, for they say, that *Phænomena's* must consist of something, but the Elements must be simple, therefore the Elements are unapparent. Now of things unapparent, some are Bodies, as Vapors, and little Bulks ; others Incorporeal, as Figures, and Ideas, and Numbers, of which Bodies are compounded, consisting of Length, Breadth, Depth, Resistance, and Gravity. The Elements therefore are not only unapparent, but Incorporeal. Moreover, *Number* is considered in every Incorporeal, for it is either one, or two, or more ; whence is gathered, that the Elements of all things are Numbers, which are unapparent and incorporeal, and consider'd in all things ; and this not simply, but by the *Monad*, and the * indefinite *Duad*, made by composition of the *Monad*, by participation whereof, all particular *Duads* are *Duads*. Of these are made the other Numbers, which are considered in things numerate, and, they say, frame the World. For the Point is correspondent to the *Monad*, the Line to the *Duad*, (for it is considered, as lying betwixt two Points) the *Superficies* to the *Triad*, (for they say, it is the fluxion of a line into breadth to another point over against it,) The Body of the *Tetrad* to the *Tetrad*, for it is made by elevating the *Superficies* to a point over it. These Fictions they make of Bodies, and of the whole World, which they affirm to be governed according to the harmonical Proportions ; the *Diateffaron* ; which is *Sesquialtera*, as 8 to 6 ; the *Diapente* which is *Sesquialtera*, as 9 to 6 ; and the *Diapason*, which is double, as 12 to 6. These things they dream, asserting *Number* to be something distinct from the things *Numbred*, arguing thus ; If an Ani-

mal be in its own proper respect One, a Plant, not being an Animal, will not be One ; but a Plant is One, therefore an Animal is not One * in its own proper respect, but according to * Inserting something extrinsecal that is considered in it, *κατὰ τὸ ἕκαστον* whereof every thing partakes ; and is made *ἓν* One by it. And if *Number* be the things *numbred*, forasmuch as the things *numbred* are (for example) Men, and Oxen, and Horses, *Number* must be Men, Horses, and Oxen ; and *Number* must be white, and black, and bearded, if the things *numbred* happen to be such ; but this is absurd, therefore *Number* is not the things which are *numbred*, but hath a peculiar existence distinct from them, according to which it is consider'd in the things *Numbred*, and is also an Element.

The *Pythagoreans* having thus collected, that *Number* is not the things *Numbred*, there comes in the insoluble doubt concerning *Number* ; for *Number* is said to be *Number*, therefore is either the things *numbred*, or some extrinsecal thing distinct from them ; but neither is *Number* the things *numbred*, as the *Pythagoreans* have demonstrated ; nor is it any thing distinct from them, as we * shall declare ; therefore * Reading *ἓν* *Number* is nothing. That *Number* is nothing extrinsecal, distinct from the things *numbred*, we shall prove, instancing in the *Monad*, for the better explication hereof. For if the *Monad* be Something in itself, by participation whereof, every thing that participates of it becomes One, either the *Monad* itself is but One, or it is as many as there are things which participate of it ; but if it is One, Whether doth each of those Things which are said to participate of it, participate of the Whole, or of Part thereof ? For if one Man (for example) hath the Whole *Monad*, there will be no more *Monad*, whereof one Horse, or one Dog, or any of those things which we affirm to be One, can communicate. For, supposing one Garment to be amongst many naked Men, if one of them put it on, the rest must remain naked, and without any Garment ; now if every one participates of part thereof, first, a *Monad* will have a part, and consequently Infinite Parts into which it is divided, which were absurd. Again, as a part of the *Monad* (as a *Duad*) is not a *Duad*, so neither will a part of the *Monad* be a *Monad*, and therefore nothing participates of the *Monad* : Therefore there is not one *Monad*, of whose Parts all singulars participate. Now if the *Monads* are equal in number to all numerate things, of which the word One is predicated, by participation of which *Monads* every Particular is said to be One, there will be Infinite *Monads* thus participated. And these either participate of a transcendent *Monad*, or of *Monads* which are of equal Number with them, and are for that reason *Monads* ; or they participate not, but are *Monads*, without any Participation. If these can be *Monads* without Participation, every Sensible Thing may in like manner be One without Participation ; and then the *Monad*, which is considered in itself, is overthrown. But if these *Monads* also are by Participation, either they all participate of One, or there is One peculiar to each ; if all participate

cipate of One, each participates of Part thereof, or of the Whole; whereupon follow the former Absurdities: But if each hath a peculiar to itself, we must consider over each of these another Monad, and over each of those another, and so to Infinite. If therefore to comprehend, that there are some Monads in themselves, by participation whereof every thing that is is One, it be requisite to comprehend infinitely infinite intelligible Monads; but it is impossible to comprehend infinitely infinite intelligible Monads; by consequence it is impossible to assert, that there are certain intelligible Monads, and that every Being is One, being made One by participation of its proper Monad. Therefore it is absurd also to say, there are as many Monads as there are things participant of them. Now if that which is said to be Monad in itself, neither is One, nor so many as are the things which participate of it, there is no such thing as a Monad in itself. In like manner, neither will there be any of the other Numbers in itself; for the same Argument which we have brought against the Monad, will hold against them all. But if Number be neither in itself, as we have shewn; nor Number be the things numbered, as the *Pythagoreans* approved; and besides these there is nothing; we must say, that Number is not.

Moreover, How do they, who conceive Number to be Something extrinsecal, distinct from the Things numbered, affirm, That the Duad is generated of the Monad? For when we add a Monad to another Monad, either Something extrinsecal is added to the Monads, or is subtracted from them, or is neither added nor subtracted; but if nothing be added or subtracted, there will be no Duad. For neither will the Monads, being separate from one another, have a Monad considered as above them, according to their peculiar respects; neither is any thing added to them from without, (nor taken away, according to the *Hypothesis*.) So that the addition of a Monad to a Monad, there being no Addition nor Subtraction from without, will not make a Duad; but if there be Subtraction, there will not only be no Duad, but the Monads themselves will be diminished; and if from without a Duad be added to them, that of the two Monads there may be made a Duad, seeming to be Two they will be Four; for there is first laid down one Monad, and another Monad, to which a Duad from without being added, the number Four is made. It is the same as to all other Numbers, which are said to be made by Composition. If therefore those Numbers which are said to be compounded of transcendent Numbers, are made neither by Subtraction nor Addition, nor without Subtraction and Addition, the generation of that Number, which is said to be by itself, and about numerate things, will be insubsistent. But that the Numbers which are by Composition, are not ingenerate, they themselves declare, affirming, That they are compounded, and made of those which are transcendent, as of the Monad, and indefinite Duad; therefore Number hath not a subsistence of itself. And if Number hath not a Subsistence, neither considered in itself nor in things numbered, Number is not any thing, according

to the superfluous curiosity of the *Dogmatists*. This much may serve for a brief Account, as to that which is called the *Physical Part* of Philosophy.

C H A P. XIX.

Of the Ethical part of Philosophy.

There remains the *Ethical* part, which seemeth conversant about *Goods*, and *Ills*, and *Indifferents*. That therefore we may treat of this also, by way of Summary, we will inquire into the existence of *Goods*, *Ills*, and *Indifferents* having first explained their Notions.

C H A P. XX.

Of Goods, Ills, and Indifferents.

The *Stoicks* say, that *Good* is *Profit*, or, that which differeth not from *Profit*, calling *Profit*, *Virtue*; and virtuous *Action*, that which is not different from *Profit*, a virtuous *Man*, and a *Friend*; for *Virtue* being the *Hegemonick* part of the *Soul*, consistent after such a manner; and virtuous *Action*, being an *Operation* according to *Virtue*, is plainly *Profit*; and a virtuous *Man* and a *Friend*, is not different from *Profit*. For *Profit* is a part of virtuous, as being the *Hegemonick* thereof; now the *Wholes*, they say, are neither the same with their *Parts*, (for a *Man* is not a *hand*;) nor different from their *Parts*, for they subsist not without their *Parts*: Wherefore they say, the *Whole* is not different from its *Parts*, consequently, a virtuous *Man* being the *Whole* in respect of its *Hegemonick* (which they say is *Profit*) is not different from *Profit*.

C H A P. XXI.

That Good is taken Three ways.

Hence, *Good*, they say is taken Three ways: One way, *Good* is said to be that from which *Profit* cometh; this is the most principal, and the *Virtues*: The Second, is that by which *Profit* cometh, as *Virtue* and virtuous *Actions*: The Third, is that which is able to *Profit*, as *Virtue*, and virtuous *Actions*, and a virtuous *Man*, and a *Friend*, and the *Gods*, and good *Dæmons*: Thus the Second Signification includes the first; and the Third, both First and Second.

Some say, *Good* is that which is expetible for itself; Others, that which assisteth to *Felicity*, or compleateth it. *Felicity*, according to the *Stoicks*, is *Εὐατα βίη*, a good current of *Life*.

These things are said to explain the Notion of *Good*; but whether a *Man* saith, *Good* is that which profiteth, or that which is expetible in itself, or that which co-operates towards *Felicity*, he declareth not what *Good* is, but something accident to it, which is frivolous. For the foresaid are either Accident to *Good* only, or to other things also. If to other things also, they are not Characteristicks of *Good*, forasmuch

much as they are made common. If to Good only, we cannot by these understand Good; for as he who understands not what a Horse is, knoweth not what Neighing is, nor can by that come to the Notion of a Horse, if he first light not upon a Horse Neighing: So, he who enquireth what is Good, forasmuch as he knoweth not what Good is, he cannot know what properly and solely belongs to it, that thereby he might come to understand Good itself. For first he must learn the Nature of Good itself, and then understand, that it profiteth, and that it is expetible for itself, and that it is effective of Felicity. But that the foresaid Accidents are not sufficient to declare the Notion and Nature of Good, the *Dogmatists* manifest in Effect. For, that Good profiteth, and that it is expetible, (whence called *ἀγαθόν* qu. *ἀγαγόν*) and effective of Felicity, all perhaps grant: But being demanded, What that is, to which these are Accident? they run into an incredible contest, some saying that it is Virtue, others Pleasure, others Indolence, others something else; whereas, if by the foresaid Definitions it were determined what Good is, they would not fall out among themselves, as ignorant of its Nature. Thus the most Eminent among the *Dogmatists* differ concerning the Notion of Good. They likewise differ about Ill, saying, that Ill is Hurt, or not different from Hurt; others, that which is avoidable for itself; others, that which is effective of Infelicity; whereby perhaps declaring not the Essence of Ill, but some of the things accident to it, they fall into the foresaid Inextricability.

C H A P. XXII.

Of Indifferent.

Indifferent is taken Three ways: First, for that which moveth neither Appetite nor Aversion; as, that the Stars or the Hairs of our Head are of even Number. Secondly, for that which moves the Appetite or Aversion not one more than the other, as in two Tetradrachmes nothing different, when one of them is to be chosen. There is an Appetite to choose one of them, but not this more than that. The Third kind of Indifferent is, that which conduceth neither to Felicity nor Infelicity, as Health, Wealth; for that which sometimes may be used Well, sometimes Ill, this, they say, is Indifferent. Concerning this last chiefly they discourse in Ethicks.

What to conceive of this Notion, is manifest from what we said before from Goods and Ills. They bring us not to the Notion of each of these things; but it is not strange, that they fail in things inexistant. That nothing by Nature is Good, Ill, or Indifferent, some argue thus.

C H A P. XXIII.

Whether there is any thing naturally Good, Ill, or Indifferent.

Fire being Hot by Nature, appeareth to all to be heating; Snow being Cold by Nature, appeareth to all to be cooling; all things

which affect by their Nature, affect all that are according to Nature or well, after the same manner; but none of those which are called Good, affect all Men as Good (as we shall shew) therefore there is nothing Good by Nature. That none of those which are called Goods, affect all Men alike, is manifest; for (to pass by the ordinary People, whereof some think a good habit of Body to be Good; others, venereal Pleasures; others, Eating; others, Drinking; others, Dicing; others, Riches; others, somethings worse than these.) Some Philosophers, as the *Peripateticks* say, There are Three kinds of Goods, some in the Soul, as the Virtues; some in the Body, as Health and the like; others, external, as Friends, Wealth, and the like. The *Stoicks* also affect Three kinds of Goods, some in the Soul, as the Virtues; some external, as a virtuous Man, and a Friend; some, neither in, nor without the Soul, as a virtuous Man as to himself. But those which are in the Body or external, which the *Peripateticks* account Goods, they deny to be Goods. Some there are who hold Pleasure to be a Good; others on the contrary say, it is an Ill: Whence one of the Philosophers cried out, *I had rather be Mad, than be Pleased*. Now if all things, which move (or affect) by Nature, move all Men alike, but by those which are called Goods, all Men are not affected alike, nothing is good by Nature. For neither can we believe all the foresaid Opinions, by Reason of their Repugnance, nor some one of them; for he who saith we must believe this Sect, and not that, seeing he is opposed by the Reasons of the other side, becomes a Party in the Controversy, and will himself need a Judge, but shall not judge others. Now there neither being an acknowledged Criterie, nor a Demonstration, by Reason of the indjudicable Controversy concerning these, he must come to Suspension, and hereupon will not be able to assert what is good by Nature.

Moreover some argue thus. Good is either the desire itself, or that which we desire: The desire itself is not Good, in itself; for then we would not endeavour to obtain that which we desire, lest having obtained it we lose the desire. For example; if to desire Drink were Good, we would not endeavour to get Drink; for, as soon as ever we have obtained it, we leave to desire it. 'Tis the same in Hunger, Love, and the like; therefore the desire is not a thing expetible in itself; rather on the contrary, perhaps troublesome. For he who is Hungry, endeavours to obtain Meat, that he may be freed from the trouble of Hunger; the like doth he who Loves, and he who Thirsts. Neither is that which is desired, the Good itself; for either it is without us, or above us, If without us, either it causeth in us some pleasing Motion, and such a Constitution as we willingly embrace, and consequently is a delightful Affection, or it affects us not at all; but if it be not delightful, it is not Good, nor can incite us to it's Appetition, nor can be any way expetible. If there be ingenerate about us extrinsically some delightful Constitution and Affection, which we willingly embrace, that which is without us, shall not be expetible in itself, but for the Affection which is raised in us through

through it ; but neither about us, for then it must either be about the Body, or about the Soul, or about both. If about the Body only, we cannot know it, for all knowledge they attribute to the Soul, the Body they say in itself is Irrational. Now if it be said to proceed as far as the Soul, it will seem to be expetible to the Comprehension of the Soul, and to it's delightful Affection : For that which is judged to be expetible, is judged (according to them) by the Intellect, not by the Irrational Body. It remains therefore to say, that Good is about the Soul only ; but even this, according to the Grounds of the *Dogmatists*, is impossible ; for perhaps the Soul itself is not existent, or if it exist, it is not (from what they themselves say) comprehended, as we have proved in the discourse concerning the Criterie. But how will we venture to say, that something is produced by nothing, which comprehends it not ?

It comes all this, How do they say that Good is about the Soul ? If *Epicurus* say, That Pleasure is about the Soul, and that the Soul (for so do all things,) consists of Atoms, how Pleasure, and an assent or judgment, that this is expetible and Good, that avoidable and ill, can be in a heap of Atoms, is not possible to be resolved ?

C H H P. XXIV.

What that is, which is called Art about Life.

A Gain, the *Stoicks* say, That the Goods in the Soul are certain Arts, the Virtues. Art, they say, is a System of coexercised Comprehensions ; Comprehensions are made in the Hegemonick. Now, how in the Hegemonick, which, according to them, is a Spirit, there is a storing up of Comprehensions, and a Coacervation of them, so as to make an Art, is not possible to be understood ; forasmuch as the later impression still defaceth the forgoing, since they say it is a Spirit, and moved totally, according to every Impression. For to say that *Plato's* ἀνείδωλο-ποίησις can demonstrate Good, I mean that temperament of divisible and indivisible substance, and of the nature of Alterity and Identity, or Numbers, is meerly to trifle ; whence neither can Good be in the Soul. Now if neither the desire be the Good, nor the extrinsecal Subject which is expetible for itself, nor in the Body, nor in the Soul, as I have proved, there is nothing naturally Good ; and for the same Reasons, neither is there any thing naturally Ill. For those things which to some seem Ill, are pursued by others, for Good, as Lasciviousness, Injustice, Cruelties, Intemperance, and the like. And since if those which are naturally Good, are all alike ; and those which are said to be Ill, affect not all alike, there is nothing Ill naturally.

Neither is there any thing naturally Indifferent, by reason of the Controversie about Indifferents, as for example : The *Stoicks*, of Indifferents, say, That some are preferred, others rejected ; others neither preferred, nor rejected. Preferred are those, which have a sufficient dignity, as health, riches ; rejected, those which have not a sufficient dignity, as poverty, sickness. Neither pre-

ferred nor rejected ; as to stretch, or bend the finger. But some hold, that, of Indifferents none is absolutely preferred or rejected ; for every Indifferent, seemeth sometimes preferred, sometimes rejected, according to various circumstances. For if (say they) a Tyrant plots against the Rich, whilst the Poor are suffered to live quietly, there is none but had rather be poor than rich ; so as Riches in this case will be in the number of the rejected. Thus each of these which are called Indifferents, is by some held to be good, by others to be ill ; but if it were Indifferent by nature, all men would alike conceive it to be Indifferent. Therefore there is nothing Indifferent by Nature. Again, if some shall argue, that Courage is expetible by nature, because Lyons, and Bulls, Cocks, and some Men are naturally inclined to it, we reply, that for the same reason timidity ought to be reckoned amongst things expetible in their own nature ; for Harts, and Hares, and many other Creatures are addicted to it by nature. Even a great part of Mankind are such. For it seldom happens, that a man gives up himself to dye for his Country, or, courageously attempts some bold Action, as being with-held by effeminate timidity ; the greater part of men decline all these. Whence the *Epicureans* conceive it to be proved, that pleasure is expetible in its own nature ; for living Creatures, say they, as soon as they are born, being yet unperverted, desire pleasure, and decline pain. To these may be objected, That whatsoever causeth ill, cannot be good by nature, but pleasure causeth ill, for to all pleasure is annexed pain, which, according to them, is ill in its own nature ; For example : A Drunkard hath pleasure in drinking, a Glutton in eating, a Luxurious person in wantoning ; but these cause Poverty and Sickness, which are painful and ill, as they conceive ; therefore pleasure is not good in its own nature. Besides, that which causeth good, cannot be naturally ill, but pains cause pleasures ; by Labour we attain Science and Riches ; by Labour a Man obtains the Enjoyment of his Love, by Pain is acquired Health ; therefore Labour is not ill naturally. For if Pleasure were good in its own nature, and Labour or Pain ill in its own nature, all Men would be alike affected with them : But we see many Philosophers embrace Labour and Pain, and condemn Pleasure.

In the same manner may they be overthrown, who say, that a Life conjoined with Virtue is good by nature, because some Philosophers have made choice of a voluptuous Life ; so as by the disagreement amongst them, is subverted, that a thing is such or such in its own nature.

It will not perhaps be from our purpose, to propose briefly some more particular opinions of things honest and dishonest, of the lawful and unlawful, Laws, and Customs, and devotion to the Gods, and piety to the dead, and the like ; for by this means we shall find a great difference amongst things to be done, and not to be done. With us ἀρρηνομησία is held dishonest and unlawful ; with the *Germans*, not dishonest, but an allowed custom. Neither did the *Thebans* of old esteem it dishonest ; and *Meriones* the *Cretan*, they say, was so called, by Emphasis of the *Cretan* Nation. Some also refer to this *Achilles's*

les's fervent friendship to *Patroclus*. And no wonder, when the *Cynicks*, and *Zeno* the Citi-
tican, and *Cleanthes*, and *Chrysippus* say, It is an
Indifferent. Again, for a Man to lie with his
Wife in publick, though we esteem it unseemly,
yet some in the *Indies* do not so, for they make
no distinction of places therein; as *Crates*, the
Philosopher, is also said to have done. For
Women to prostitute themselves, with us, is
dishonest, and shameful, but with many of the
Egyptians honourable; for it is said, that those
who have lay'n with many Men, used to wear a
Bracelet about their Ancles as a mark of Ho-
nour. Moreover, amongst them, Virgins be-
fore Marriage gain'd a Dowry by prostituting
themselves. The *Stoicks* say, That it is no
shame to cohabit with a common Woman, or to
be maintained by what she gets. To be stig-
matized, with us, is shameful and dishonou-
rable; but many of the *Egyptians* and *Sarmatians*
stigmatiz'd their Children. For men to
wear Ear-Rings is, with us, accounted sham-
ful; but with some *Barbarians*, as with the *Sy-
rians*, it is a mark of Nobility; insomuch as
some extending this mark of Nobility, bore
holes in the Nostrils of their Children, in which
they hang Rings of Silver or Gold, which
none amongst us do. As neither to wear a Man-
tle stain'd and dy'd with Flowers, for though
the *Persians* esteem this an Ornament, we think
it undecent. When at a Feast made by *Dionysius*
Tyrant of *Sicily* such a kind of Robe was offer-
ed to *Plato*, and to *Aristippus* the Philosophers;
Plato refus'd, saying,

*I will not with a Female Robe myself disgrace,
Who am a Man, and of a Manly Race.*

But *Aristippus* took it, with these words;

*If she come pure, a Bacchanalian Feast
Never corrupts a modest Woman's breast.*

Thus even of the wise Men, to some it seemed
Decent, to others Indecent, With us it is Un-
lawful to marry our Mother, or Sister; but
the *Persians* (and of them the *Magi*, who make
greatest profession of Wisdom) marry their
Mothers, and the *Egyptians* their Sisters, and
all; as the Poet,

Jove to his Wife and Sister Juno, said.

Zeno the Cittican saith, That it is not dishonest,
τὸ μὲν ὅτι καὶ πατέρα καὶ μητέρα καὶ ἀδελφὴν καὶ ἀδελφόν, no more
than if it were to rub any other part of the Bo-
dy. *Chrysippus*, in his Treatise of Policy, asserts,
That the Father may lye with the Daughter,
and the Mother with the Son, and the Brother
with the Sister. But *Plato* more universally saith,
That all Wives ought to be in common. With
us it is detestable, **ἀρετὴν* *Zeno* approves it;
and we are informed that some there are, who
use this Evil as a Good. To eat Man's Flesh
with us is unlawful; whereas amongst the *Bar-
barians* there are whole Nations which use it
as a thing indifferent. What need we instance
Barbarians, when *Tydeus* himself is said to have
eaten the Brains of his Enemy? and the *Stoicks*
say, it is not unfitting to eat not only the Flesh

of other Men, but our own. Moreover to
defile the Altar of God with Blood, with
most People, as with us, is held impious;
but the *Lacedaemonians*, at the Altar of *Ortho-
sia*, and *Diana*, whipp'd themselves cruelly,
so as much Blood run down upon the Altar of
the Goddess. Besides, some sacrifice a Man to
Saturn, as the *Scythians* do Strangers to *Diana*;
but we, on the contrary, think the Temples are
defiled with human Blood. With us, there is
a Law for punishment of Adulterers; but some
hold, that to lie with other Mens Wives, is a
thing Indifferent: Even some Philosophers say,
that, to lie with other Mens Wives, is Indiffe-
rent. With us, Children are bound by Law to
take care for their Parents; the *Scythians*, when
they exceed Threescore years, cut their Throats,
And what wonder, when *Saturn* himself with a
Sickle emasculated his Father; *Jupiter* threw
down *Saturn* into *Tartarus*; *Minerva* joined with
Jupiter, and *Neptune*, to fetter her Father; *Sa-
turn* devoured his own Children. Moreover,
Solon the *Athenian* made a Law concerning in-
dennate persons, whereby any Man was per-
mitted to kill his Son; but with us, the Laws
forbid to kill our Sons. The *Roman* Lawgivers
order the Children to be under the power of
the Parents, and to be their Servants; and the
Children not to be Masters of their own Estates,
but the Parents, until they are manumitted af-
ter the same manner as purchased Slaves. Others
reject this Custom as Tyrannical. There is a
Law to punish Homicides, but *Gladiators*, when
they kill a Man, are many times honoured for
it. The Laws forbid to strike a free Person,
but *Wrestlers*, beating Freemen, sometimes kil-
ling them, are rewarded with Honors and Gar-
lands. The Law commands every Man to have
but one Wife; but amongst the *Thracians* and
Getulians, a People of *Lybia*, every one hath
many. To rob is with us held unlawful and
unjust; but with many of the *Barbarians*, not
so: On the contrary, the *Cilicians* esteem it Ho-
norable; whereupon such as die in Robbing,
they judge worthy of Honor. *Nestor* in the
Poet, after he had kindly received those who
were with *Telemachus*, says

—Do you uncertain stray
As Thieves?

But if to Rob had been dishonorable, he would
not have entertained Persons, that might be sus-
pected for Thieves, with so much Humanity.
Besides, to steal, is, with us, unjust and unlaw-
ful; but those who say *Mercury* is a Thievish
God, do not conceive it unjust; for how can a
God be wicked? Some also say, That the *La-
cedaemonians* punish'd Thieves, not for Stealing,
but for being Faken. A Coward that throws
away his Shield, is in many Countries punished
by Law, (whence the *Lacedaemonian* Woman
giving her a Son a Shield, said to him, **Thou*
Son, or this, or upon this,) but *Archilochus* brags,
that he had thrown away his Shield, and run
away, writing of himself in his Poems thus:

*Either Bring
it home, or,
Be brought
home dead
upon it.

Some

*With *Laerti-*
us, *Ζεφυρηγέτης*.
See the Life of
Diogenes.

*Some Sajan doth perhaps himself adorn
Now with the Shield which once by me was born
And left behind (though sore against my will)
To save my life ———*

The *Amazons* main their Male-Children, that they might not be fit for War, and they themselves underwent all Military Business; whereas we think the contrary to be the best order. The Mother of the Gods admits Eunuchs, which a God would never do, if it were ill by nature, not to be perfectly virile. Thus concerning things just and unjust, and virility, there is great disagreement.

Likewise; concerning Devotion, and the Gods, there is much Controversie; the greater part hold, that there are Gods; but some, that there are none, as the Followers of *Diagoras* the *Melian*, and *Theodorus*, and *Critias* the *Athenian*. Of those who affirm there are Gods, some worship the Gods of their Country, others those which the Sects of Dogmatists have framed; as, *Aristotle* held God to be incorporeal, the boundure of Heaven; the *Stoicks*, a Spirit, penetrating even through things horrible to behold; *Epicurus*, of humane form; *Xenophanes*, an impassible Sphere; some, that he is provident over our Affairs; others, that he is not provident over them; For that which is blessed and incorruptible, saith *Epicurus*, neither hath any trouble itself, nor causeth any to others. Whence also, of those according to life, some say, that there is one God; others, that there are many, and of different forms; so as they run into the opinions of the *Egyptians*, who conceived the God to be faced like Dogs, and formed like Hawks, and Oxen, and Crocodiles, and what not. Whence also there hapned a great difference as to Sacrifices, and the worship of the Gods. Things that are sacred in some Temples, are profane in others; whereas this could not be, if there were any thing sacred or prophane in its own nature. For example, None sacrifice a Swine to *Serapis*, but to *Hercules* and *Æsculapius* they sacrifice them. 'Tis unlawful to sacrifice a Sheep to *Isis*, but to her who is called the Mother of the Gods, and to other Gods, they are sacrificed. To *Saturn* they sacrifice a man, which to most is impious. In *Alexandria* they sacrifice a Cat to *Hero*, a Moth to *Thetis*, which amongst us none do. To *Neptune* a Horse is sacrificed, but to *Apollo* the *Didymeian* especially, this Creature is abominable. To sacrifice Goats to *Diana* is pious, but not to *Æsculapius*. Many others might be alledged, which, for brevity I omit. Now if there were any Sacrifice pious or impious in its own nature, all persons would have the same opinion of it.

Like to these we shall find the things that concern the diet of men, as to worship of the Gods. A Jew or an *Egyptian* Priest will dye, rather than eat Swine's flesh; a *Lybian* thinks it most unlawful to eat the flesh of Sheep; some of the *Syrians*, that of a Pidgeon; others, of Victims; in some Temples, it is lawful to eat Fish; in others unlawful. Of these who amongst the *Egyptians* were thought to be wise, some conceived it abominable to eat the head of a Creature; others, the shoulder; others,

the foot; others, other parts. None eat *Onions*, who are initiated in the Rites of *Cacian Jupiter*, at *Pellusum*. The Priest of *Lybian Venus*, never eats Garlick. In some Temples, they abstain from Mint; in others, from Marjoram; in others, from Smallage. Some affirm it better to eat the heads of our own Parents, than Beans; others hold the eating of these indifferent. We think it abominable to eat the flesh of Dogs, but some among the *Thracians* are reported to feed thereon; perhaps also it was in use amongst the *Grecians*, whence *Diocles*, following the *Æsculapians*, perscribed to some sick persons the flesh of Puppies. There are, who, as I said, eat Man's flesh indifferently, which we think unlawful. Now if these Rules of worship and things unlawful were by nature, all Men would have the like opinion of them.

The same may be said concerning Piety towards the Dead: Some cover the Bodies of the Dead with earth, thinking it impious to shew them to the Sun; The *Egyptians*, drawing out the Entrails, embalm them, and keep them amongst them above ground. Amongst the *Æthiopians* the *Ichthyophagi* throw them into Ponds, to be eaten by the Fishes; the *Hircanians* give them to be devoured by Dogs; some of the *Indians* to Vultures. It is reported, that the *Troglodytes* bring the dead Body to a hillock, tie it head and heels together, and throw stones at it, laughing, with which when they have covered it, they depart. There are some *Barbarians*, who sacrifice and eat those who out-live threescore years; but such as dye young, they bury in the Ground. There are who burn their Dead, of whom, some gathering their Bones, preserve them, others cast them away. The *Persians* it is reported, hang up their Dead, and Embalm them with Nitre, and then wrap Cloaths about them. We see with what Mourning some follow the Dead; some esteem Death horrible, and to be shunned; others, nothing such. *Euripides*,

*If Life be Death who know,
And Death a Life below?*

And *Epicurus* saith, *Death concerns us not. For what is dissolved in insensible, but what wants Sense, concerns us not. They say moreover, If we consist of Soul and Body, and Death be a Dissolution of the Soul and Body, then when we are, Death is not, for we are not dissolved; and when Death is, we are not; for this Composition of Soul and Body consisting no longer, neither are we. Heraclitus saith, That to Live is to Dye, and that whilst we Live we are Dead; for whilst we Live, our Souls are Dead; Buried in us; but when we dye, our Souls revive and live. There are who conceive, that to dye is better than to live; whence Euripides,*

*We New-born Infants rather should lament,
Pitying the miseries to which they'r sent:
But him who Dies, set from all Labours free,
Bear to the Grave with Joy triumphantly.*

To the same effect, is also this?

Of

*Of wretched Mankind, the most happy state
Were never to be Born nor see the day :
Next which, as soon as Born to pass the Gate
Of Pluto, and their Bones in dust to lay.*

We know the Story of *Cleobis* and *Biton*, related by *Herodotus*, concerning the *Argive* Priestesses. It is said, amongst the *Thracians* there are some that mourn over a Child as soon as it is born. Therefore ought not Death to be reckoned amongst things horrible in their own nature, nor Life amongst things good in their own nature? Nor is there any of the fore-mentioned things, such or such in their own nature, but all are such by Opinion and Reference. The same kind of Argument we might deduce from many other things, which, for brevity we omit. And if we cannot immediately instance a contrariety to something, we may say, It is possible, that in some Nations which we know not, there may be a different Opinion. For if we did not (for example) know, that the custom of the *Agyptians* is to marry their Sisters, we might falsely affirm, that it is a thing acknowledged by all, that we ought not to marry our Sisters. In like manner, in such things as have not a difference known to us, it is not fit to affirm, that there is no Controversie concerning them, it being, as I said, possible, that some other Nations which we know not, may hold the contrary.

Hercupon the *Sceptick* observing so great difference of things, suspends as to what is Good or Bad in it's own Nature, or what is absolutely to be done or not to be done; herein declining the temerity of the *Dogmatists*; but he follows the common course of Life without being positive; whence it comes, that in things Opinionative, he remains void of Passion; in things Compulsive, he is moderately affected: As being a Man, sensible, he suffers; but not taking the Opinion, that what he suffers is ill in it's own Nature, he is moderately affected; for to have such an Opinion is worse than the suffering itself, inasmuch as they who suffer the amputation of some Limb or the like, many times bear it well, whilst the standers by, out of an opinion that is ill, faint. For doubtless, he who proposeth to himself that something is good or ill in its own nature, and to be done or not to be done, is troubled many ways. When the things are present, which he conceives ill by nature, he seems to be tormented, and when he possesseth those which seem to him good, through his being exalted in mind for it, and his fear of losing it, and care lest he should fall again into those things which he conceives ill by nature, he is involv'd in no small trouble. For those who say, that Goods cannot be lost, are to be silenced by the Insolubility of the Question. Hence we argue. If what causeth ill be ill, and to be avoided; but the Persuasion, that some things are ill, some good, in their own nature, causeth troubles; then that Persuasion is ill, and to be avoided. Thus much of Goods, Ills, and Indifferents.

C H A P. XXV.

Whether there be an Art about Life.

From what hath been said it is manifest; That there is not an Art about Life; for it there be such an Art, it is conversant in the Contemplation of Goods, Ills, and Indifferents, but these being inexistant, the Art about Life will be inexistant also. Besides, the *Dogmatists* not agreeing concerning this Art about Life, several of them being of several Opinions, they are subject to the Controversie and Argument from *Disagreement*, which we alledged in the Discourse concerning Good.

But though we should suppose all to agree in one Art about Life; as for example, That celebrated Prudence which the *Stoicks* dream of and seem to press more than the rest, many Absurdities will nevertheless follow. For seeing that Prudence is a Virtue, and a wise Man only hath Virtue, the *Stoicks* not being wise, will not have the Art about Life. And seeing, according to them, the Art cannot subsist, there will be no Art about Life, if we follow what they say. For they affirm, *Art to be a System of Comprehensions, Comprehension to be an assent to comprehensive Phantasie*; but comprehensive Phantasie cannot be found, for neither is all Phantasie comprehensive, nor can it be known, what Phantasies are comprehensive, and what not; but needing comprehensive Phantasie to discern what Phantasie is comprehensive, we run into infinite, another comprehensive Phantasie being required, for the discerning of the comprehensive Phantasie which we assumed. The *Stoicks* give such a notion of comprehensive Phantasie, as is not right; for, saying, *comprehensive Phantasie is that which ariseth from a Being, and a Being is that which is able to move comprehensive Phantasie*, they run into the *Alternate Commonplace*. If therefore, that there be an Art about Life, it is first requisite, that there be an Art; and that there be an Art, it is first requisite, that there be Comprehension; and that there be Comprehension, it is first requisite, that there be an Assent to comprehensive Phantasie; but comprehensive Phantasie cannot be found; therefore the Art about Life cannot be found.

Again, every Art seems to be comprehended from those things which it properly delivers; but there is no work proper to that Art which is about Life; for whatsoever work shall be instanced, it will be found common with the Vulgar, as, to honour Parents, to restore a *Depositum*, and the like; therefore there is no Art about Life. Neither, as some maintain, from that which seemeth to be said or done through a prudent habit of mind, can we know what is the work of Wisdom; for a prudent habit of mind itself is incomprehensible, it neither being manifest in and by itself simply, nor by its words, for those are common with the Vulgar. And to say, that we comprehend him who hath the Art about Life, by the equability of his actions, is to speak above human nature, rather to be wished than asserted:

*For every man's endu'd with such a mind,
As several dyes are by the Gods assign'd.*

It remaineth to say, That this Art about Life is comprehended from their Writings; which being many, and all of one kind, we shall instance only some few. The Prince of their Sect, Zeno, in his *Exercitations concerning the Institution of Children*, amongst other things, saith thus, 'To distinguish nothing more or less, Childish or not Childish, Masculine or Feminine; for there is no difference between (manners) Childish and not Childish, Masculine and Feminine, the same become both. *Alfo*, of Piety towards Parents, *he saith*, speaking of Jocasta and Oedipus, That it was not abominable, &c. *With this agrees* Chrylippus, in his *Treatise of Policy*, saying, These things in my Judgment ought to be ordered as they are used not amiss with some, that the Mother should have Children by the Son, and the Father by the Daughter, and the Brother by the Sister. In the same Book he alloweth to eat Man's Flesh; for he saith, If any part be cut off from a Body Living, which is fit for Food, we should not bury it, nor carelessly throw it away, but so consume it, that it may become another part of us; In his Books of Office, treating of the Burial of Parents, he expressly saith, When our Parents are dead, we must provide for them the most simple Tombs; for the Body (no more than Nails, or Teeth, or Hair) pertaining nothing to us, we need not to have any respect or care of it. If the Flesh be sound, it may be converted into Aliment; (in like manner, as if some Limb of our own Body, wear cut off, as the Foot) but if unsound, it is to be buried, or burnt, or thrown away without any regard, as our Nails and Hair. Much more of this kind is said by Philosophers, which they could not have the heart to do, unless they had been brought up among the Cyclopes, and the Lestrigones. Now if they do none of these, but their Actions are common with the vulgar, there is no particular work proper to them, who are thought to have the Art about Life. If therefore it be absolutely necessary, that Arts be comprehended from their proper works; but there is no work proper to the Art about Life, it is not comprehended. Wherefore none can say, that it is existent.

C H A P. XXVI.

Whether there is in Men an Art about Life.

NOW if there be in Men an Art about Life, either it is ingenerate in them by Nature, or acquired by Discipline and Doctrine. If by Nature, either it is ingenerate in them as they are Men, or as they are not Men. Not as they are not Men, for they are Men; If, as they are Men, this wisdom would be in all Men, inasmuch that all Men would be prudent, virtuous, and wise: but the greater part of Men, they say, are evil; therefore the Art which is according to Life is not in them, as they are Men, and therefore not by Nature. Besides, forasmuch as they hold an Art to be a source of unexercised Comprehensions, they seem rather to conceive both

this and other Arts, to be comprehended by Experience and Discipline.

C H A P. XXVII.

Whether the Art about Life can be taught.

NEITHER is it understood by Doctrine and Discipline, for before these are, there must be three things acknowledged; the Thing taught, the Teacher, and He who learneth the manner of Discipline; but none of these are, therefore not the Doctrine.

C H A P. XXVIII.

Whether there be any thing taught.

FOR what is taught, is either true or false. If it be false, it cannot be taught, for that which is false, is not; that which is not, cannot be taught. But neither, if it be said to be true; for, that true is inexistent, we proved in our Discourse concerning the Criterie. If therefore neither false nor true is taught, and besides these there is nothing docible, (for these not being docible, no man will say that things indeterminate are docible) nothing is taught.

Again, that which is taught is either manifest, or unmanifest; if manifest, it needs not be taught, for things manifest are alike manifest to all. If unmanifest, forasmuch as things unmanifest, by Reason of the indijudicable Controversie concerning them, are incomprehensible, they cannot be taught; for how can any man learn, or teach, that which he comprehends not; Now if neither that which is manifest, nor that which is unmanifest is taught, nothing at all is taught.

Besides, that which is taught, is either a Body or Incorporeal; but neither of these, whether manifest or unmanifest, can be taught, for the foresaid Reason; therefore nothing can be taught.

Moreover, either that which is, is taught; or that which is not. If that which is not, be taught, forasmuch as Doctrines are conceived to be of things true, that which is not, will be true, and if true, it will be existent, for Truth, they say, is that which exists, and is opposed to some thing. But it is absurd to say, that which is not, exists, therefore that which exists not, cannot be taught. Neither can a Being be taught. For if a Being be taught, it must either be taught as a Being, or according to some other thing. If, as it is a Being, it is docible, it is a Being and consequently not docible; for Doctrines must be made of things indubitate and indocible, therefore a Being, as a Being, is not docible. But neither according to some other thing, for a Being hath nothing accident to it, which is not a Being. Therefore if a Being be not taught, as it is a Being, neither can it be taught according to any other thing, for whatsoever is accident to it, is a Being. Besides, whether the Being which they say is taught, be manifest, or unmanifest, it appears by the foresaid difficulties to be indocible. Now if neither that which is, nor that which is not, be taught, nothing is taught.

C H A P.

C H A P. XXIX.

Whether there be a Teacher, and a Learner.

BY the foresaid difficulties are also subverted the *Teacher* and the *Learner*; nevertheless, we will question them more particularly. Either the *Artist* teacheth the *Artist*; or the *Ignorant*, the *Ignorant*; or the *Ignorant*, the *Artist*; or the *Artist*, the *Ignorant*. The *Artist* teacheth not the *Artist*, for, both being *Artists*, neither needs Teaching. The *Ignorant* cannot teach the *Ignorant*, no more than the *Blind* can lead the *Blind*. The *Ignorant* cannot teach the *Artist*, that were ridiculous. It remains to say, that the *Artist* teaches the *Ignorant*, which likewise is impossible. For there can be no such thing as an *Artist*, seeing that no *Man* is an *Artist* naturally, and Born such, neither is an *Artist* made of one that is not an *Artist*: For either one *Theorem*, and one *Comprehension* is sufficient to make an *Artist* of him that was not an *Artist*, or not; but if one *Comprehension* can make an *Artist* of him that was not an *Artist*, First, we may say, that *Art* is not a *System* of *Comprehensions*; for he that before knew nothing at all, if he have learnt one *Theorem* of *Art*, may thus be said to be an *Artist*. Next, if any shall say, that he who hath attained some *Theorems* of *Art*, but as yet wanteth one, and therefore being not an *Artist*, shall, as soon as he hath attained that one, be made an *Artist* of a *Not-Artist*, he holds that it is completed by one *Comprehension*. But if he come to particulars, he cannot shew a *Man* that is yet no *Artist*, but shall be an *Artist* as soon as he hath attained one *Theorem* more; for no *Man* can number the *Theorems* of every *Art*, so as having numbred the *Theorems* known, he shall be able to say, how many there are behind to compleat the number of the *Theorems* of the *Art*: Therefore the knowledge of the *Theorem* maketh not a *Man* an *Artist*, who was not an *Artist* before. But if this be true, Forasmuch as a *Man* comprehends not all the *Theorems* of *Arts* together, but one by one, (as must be granted) he who attaineth every *Theorem* of *Art* distinctly by itself, cannot become an *Artist*, for we have shewed, that the knowledge of one *Theorem* cannot make him an *Artist*, who was not an *Artist*; therefore he, who is not an *Artist*, cannot be made an *Artist*. So as from hence it appeareth, that there is no *Artist* at all, and consequently no *Teacher*.

But neither can he who is said to Learn, not being an *Artist*, Learn and Comprehend the *Theorems* of *Art*, whereof he is ignorant: For as he who is blind from his Birth, as being blind, cannot comprehend Colours; nor he who is Deaf from his Birth, Sounds; So neither can he who is not an *Artist*, comprehend the *Theorems* of *Art*, whereof he is ignorant. Otherwise, the same Person might be both an *Artist*, and ignorant of *Art*; Ignorant of the *Art*, for he is supposed to be such; An *Artist*, for he comprehends the *Theorems* of the *Art*. Wherefore neither doth an *Artist* teach him, who is not an *Artist*: Now if neither the *Artist* teacheth the *Artist*; nor the *Ignorant*, the *Ignorant*; nor the

Ignorant, the *Artist*; nor the *Artist*, the *Ignorant*; (and besides these there is nothing) neither is there a *Teacher*, nor a *Learner*; and there being neither a *Teacher* nor a *Learner*, the way of Learning likewise is superfluous.

C H A P. XXX.

Whether there is a Way of Learning.

NEvertheless, against this also are raised Doubts: For the way of Teaching is either by Evidence, or by Discourse; But neither by Evidence, nor by Discourse, as we shall prove; therefore the way of Teaching is inextricable. Learning is not acquired by Evidence; for Evidence is of things shewn, but that which is shewn is apparent to all, that which is apparent, inasmuch as it is apparent, is perceptible by all; that which is commonly perceptible by all, is not to be Learned; therefore nothing is to be Learn'd by Evidence.

But neither is there any thing learnt by Discourse; For Discourse either signifies something, or signifies nothing; but if it signify nothing it teacheth nothing. If it signifies something, it signifies it either by Nature, or Imposition; By Nature it signifies not, for all Men understand not all Men, as *Greeks* *Barbarians*, and *Barbarians* *Greeks*. If it signifieth by Imposition, it is manifest, that the makers of these Words, first comprehending the things to which they accommodated them, understand them, not, as being taught by these Words the things which they knew not, but, as being put in mind of the things which they knew. Now they who have need to learn that which they know not, not knowing to what things the Words are accommodated, will understand nothing at all: Wherefore, there can be no way of Learning. For the *Teacher* ought to insinuate into the *Learner*, an understanding of the *Theorems* of the *Art*, which is to be learnt, that so he, comprehending the Collection of them all, may be made an *Artist*. But *Comprehension*, as we shewed already, is nothing, therefore there cannot be a way of Teaching. Now if there be nothing Taught, nor a *Teacher*, nor a *Learner*, nor a way of Teaching, there will neither be any *Discipline* nor *Doctrine*. These Arguments are in general alledged against *Discipline* and *Doctrine*.

Another difficulty may be raised against that, which is called, The *Art* concerning *Life*. Thus. The thing Taught, that is, *Wisdom*, we have formerly proved insubstantial; The *Teacher* likewise, and *Learner* are insubstantial: For either the *Wise*, teacheth the *Wise*, the *Art* concerning *Life*; or the *Foolish* the *Foolish*; or the *Foolish* the *Wise*; or the *Wise* the *Foolish*; but none of these teacheth another; therefore the *Art* concerning *Life* is not taught. To speak of the rest were superfluous. But if the *Wise* teach the *Foolish* *Wisdom*, and *Wisdom* be the *Science* of *Good*, and *Ill*, and *Indifferent*; the *Foolish*, not having *Wisdom*, will be *Ignorant* of the things *Good*, and *Ill*, and *Indifferent*; and, being *Ignorant* of them, whilst the *Wise* teacheth him.

him things Good, Ill, and Indifferent, he can only hear the Things he saith, but not know them. For if he did understand them whilst he is in his Folly, Folly also might contemplate things Good, Bad, and Indifferent: But according to them, Folly contemplates not these, (otherwise a Foolish Person were Wise) therefore the Foolish understand not by Learning the things said or done by the Wise: but if he understands not, he cannot be taught by him any way, but by Evidence and Discourse, as we said before. Now if that which is called the Art concerning Life, is neither communicated by Learning and Discipline, nor by Nature, it is not to be found out by the Philosophers, who cry it up so much.

C H A P. XXXI.

Whether the Art concerning Life be profitable to him who hath it.

Moreover, though we should grant, that the Art which they dream of concerning Life, may be communicated, yet it will rather appear hurtful and troublesome to those that have it, than beneficial. We will take but one instance for brevity. The Art concerning Life may be profitable to a Wise Man in giving him Continence in Appetition of Good, and Aversion from Ill. For he, whom they call Continent, is said to be such, either for that he hath no Appetition to Ill, nor Aversion from Good; or for that he hath ill Appetitions and Aversions, but masters them by Reason: But as far as he is not in ill Judgments, he is not Continent; for he is not Continent in that which he hath not. And as no Man saith, an Eunuch is Continent in Venereal Pleasures; Or, he who hath no Appetite, Continent in Eating, (for they have not those things, that by Continence might be subdued) in like manner, a Wise Man cannot be said to be Continent, because he hath not in himself the Passion whereof he should be Continent. But if they will say, He is Continent, for that he is in ill Judgments, but overmasters them by Reason: First, they must Grant, that Wisdom hath profited him nothing; forasmuch as he is still in trouble, and needeth help: Next he will be found to be more unfortunate than those, who are said to be bad. For if he hath an Appetite towards any thing, he is wholly disturbed; if he overmasters it with Reason, he con-

taineth the Ill within himself, and thereupon is more troubled than the Ill Person, who suffereth not this; for if he hath an Appetite to any thing, he is troubled; but if he obtain his Desire, the Trouble ceaseth. A Wise Man therefore, either is not Continent as to Wisdom; or if he be, he is of all Men the most unhappy; so that the Art concerning Life affords him not Benefit, but extraordinary Trouble. Now that he, who conceiveth that he hath the Art concerning Life, and thereby knoweth what things are Good and Ill in their own Nature, is exceedingly troubled, as well when the Good are present as when the Ill, we shewed heretofore. We must therefore say, If the subsistence of things Good, Ill, and Indifferent, be not undoubtedly a Knowledge, and the Art concerning Life be perhaps insubsistent also; and though it were granted by supposition to subsist, yet would it bring no profit to those who have it, but on the contrary, great Trouble; the Dogmatists look Superciliously, and take pride in vain, in the Ethical part of that which they call Philosophy. And with this Disputation (not to exceed the limits of a Summary,) we shall close our Third Book of *Pyrrhonian Hypotyposes*, adding only this.

C H A P. XXXII.

Why the Sceptick, sometimes on set purpose, alledgeth weak Arguments.

The Sceptick, by reason of his great Humanity, endeavours with Discourse to remedy, as far as in him lies, the Arrogance and rash Insolence of the Dogmatists. As therefore Physicians, in Corporeal Diseases, have Remedies of different sorts, applying violent to those who are violently sick, but gentle to those whose Disease is more gentle; In like manner, the Arguments proposed by the Sceptick are not all of equal force; but the more solid, which are best able to overthrow the affection of the Dogmatists, he useth against those who are most violently affected therewith, the lighter against those who have it more lightly and superficially; so as that they may be overthrown by lighter probabilities. Whence it happens that the Sceptick, sometimes, alledgeth stronger Probabilities and Arguments; sometimes, on set purpose, weaker, as often perceiving them sufficient to compass his Design,

THE

THE
HISTORY of PHILOSOPHY.

The Thirteenth Part,
Containing the EPICUREAN Sect.

EPICURUS.

CHAP. I.

His Country, Parents, Brethren.

(a) Lib. 10. **E**picurus is by some conceived to have been a Samian; for Timon (in (a) Laertius) saith, he was the last of the Natural Philosophers that came out of Samus. And (b) Constantinus Porphyrogeneta conceives, that he derived his original from Samus, as well as Pythagoras. But the (b) Lib. 1. de Ori-
Themar.

the occasion of this was, for that he passed the first part of his younger years at *Samus*, with his Father and Brethren; for thither came his Father, *Agripeta*, as (c) *Cicero* terms him, (that is, one who claimeth a portion in the division of Lands.) Upon the like ground (d) *Strabo* conceives him a *Lampsacene*, for he lived at *Lampsacum*, and conversed with the chief Persons there. But *Epicurus* indeed was by Country an *Athenian*, as (e) *Laertius*, (f) *Suidas*, and infinite other Writers affirm; whence (g) *Laertius*, about to praise him, begins thus.

*First Ceres-gifts to Hum.m-Indigence,
Perennial Athens did long since dispense,
And Meis disorder'd ways by Laws redrest,
And first our Life with greatest Comfort Flest,
When it produc'd a Person of such Worth, (forth
Whose Breast contain'd, whose Lips all Truth brought*

Now forasmuch as the *Athenian* People, being distinguished by Tribes, were dispersed into τῆς δῆμῳ, the adjacent Towns, which were made free Corporations, even from the time of *Theseus*; *Epicurus* was Born at *Gargettus*, a Town (as (b) *Hesychius* and *Phavorinus* describe it) belonging to the *Agean* Tribe, where (saith (i) *Plutarch*) *Theseus* overcame the *Pallantides*, who conspired against him and *Ageus*; and where *Eurystheus* (as (k) *Stephanus* relates) was buried. For this reason, he is said, by (l) *Laertius* to have been δῆμος Γαργητικός; by (m) *Statius* termed, the *Gargettick Author*, and the *Gargettick old Man*; by (n) *Cicero* (o) *Ælian*, and others, simply the *Gargettian*.

Laertius (p) (out of *Metrodorus*, in his Treatise of Nobility), writes, that *Epicurus* was, of the Family of the *Philaidæ*; the *Philaidæ* were denominated from *Phileus*, the second Son of *Ajax*, who dwelt in *Melite*, and is mentioned by (q) *Plutarch*, who adds, that *Pisistratus* also was of the *Philaidæ*. Of this Family was the Father of *Epicurus*, (according to (r) *Laertius* and others) named *Neocles*, his Mother *Cherestrata*. He is also frequently cited, after the Greek fashion, *Epicurus Neoclis*, sometimes simply termed *Neocles*, as when compared by (s) *Menander* with *Themistocles*, whose Father was named *Neocles* also. I omit, that his Father was (according to (t) *Strabo*) one of the Two thousand Citizens, whom the *Athenians* sent to *Samus* to share the Land by Lots, whither they had before sent *Pericles* and *Sophocles*, who strictly besieged the revolted *Samiens*. I omit also, that he was a Schoolmaster, which (besides *Strabo*) (u) *Cicero* observes, when proceeding to reproach him, *But his little Farm, saith he, not being sufficient to maintain him, as I conceive, he became a Schoolmaster*.

(w) *Suidas* mentions only two Brethren of *Epicurus*, *Neocles* and *Cheredemus*; but (x) *Laertius* (out of *Philodemus* the *Epicurean*) adds a third, *Aristobulus*, whom (y) *Plutarch* sometimes seems to call *Agathobulus*. By what care and Benevolence *Epicurus* gained their Reverence and Affection, is excellently declared by (z) *Plutarch*, who conceives it worthy Admiration, how he came so to win them, and they to be won. That all things died before *Epicurus*, may be inferred from his Will, wherein he ordereth no-

thing, either to them, or of them, as alive; but only appointed a day to be Celebrated for his Brethren in the Month *Posideon*. And though of *Cheredemus* there is no further Testimony, yet of *Aristobulus* it is more apparent from (a) *Adv. Col. 2.* *Plutarch* who writes, that *Epicurus* was wholly taken up about *Metrodorus*, *Polyæmus*, and *Aristobulus*, Tending them in their Sickness, and Mourning for them when they Dyed. But of *Neocles* it is most manifest, from the same (b) *Ibid.* *Plutarch*, relating, that *Epicurus* broke forth into a kind of Joy, mixt with Tears, upon the remembrance of the last Words of *Neocles*. Of how great and painful Sicknesses they died, is sufficiently aggravated by (c) *Plutarch* and (d) *Suidas*. (e) *Ibid.* (f) *Loc. Cit.*

CHAP. II.

The Time of his Birth.

Epicurus was born (as (a) *Laertius* relates (b) *Lib. 10.* out of the Chronology of *Apollodorus*) in the 3d year of the 109th Olympiad, the 7th day of the Month *Gamelion*; at whose Birth, (b) *Pliny* saith, the Moon was Twenty days old. *Hecatombeon* (the First Month) this Year falling in the Summer of the Year 4372. of the *Julian* Period, (now used by Chronologers) it is manifest, that *Gamelion*, the same Year, being the 7th Month from *Hecatombeon*, fell upon the beginning of the year 4373. which was before the ordinary Computation from Christ, 341 compleat Years. Now forasmuch as in *January*, in which Month the beginning of *Gamelion* is observ'd to have fallen, there hapned a new Moon in the Attick Horizon, by the Tables of Celestial Motions, the Fourth Day, in the Morning, (or the Third Day, according to the *Athenians*, who, as (c) *Censorinus* saith, reckon their Day from Sun-set to Sun-set) and therefore the Twentieth day of the Moon, is coincident with the Three and twentieth of *January*; It will follow, that *Epicurus* was Born on the 23 day of *January*, if we suppose the same Form of the Year extended from the time of *Cæsar*, upwards. And this in the old Style, according to which the Cycle of the Sun, or of the Dominical Letters for that Year, (it being Bissextile) was *B. A.* whence the 23 Day of *January* must have been Sunday. But if we suit it with the Gregorian Account, which is Ten days earlier, (now in use with us) we shall find that *Epicurus* was Born on the 2d of *February*, which was Sunday, (for the Dominical Letters must have been *E. D.*) in the Year before Christ, or the Christian Computation, 341. and consequently in the 1974th Year, compleat, before the beginning of *February* this Year, which is from Christ 1634. Some things here must not be pass'd by.

First, That (d) *Laertius* observes *Sofigenes* to have been Archon the same Year, wherein *Epicurus* was Born, and that it was the 7th Year from the death of *Plato*. Moreover, it was the 16th of *Alexander*, for it was, as the same (e) *Laertius* affirms, the Year immediately following that, in which *Aristotle* was sent for to come to him, then 15 Years old. (f) *Lib. 4.*

Secondly,

(f) In Chron. Secondly, That (f) *Eusebius* can hardly be excused from a Mistake, making *Epicurus* to flourish in the 112th Olympiad; for at that time, *Epicurus* scarce had pass'd his Childhood, and *Aristotle* began but to flourish in the *Lycæum*, being returned the foregoing Olympiad out of *Macedonia*, as appears from (g) *Laertius*.

(g) Loc. Cit. Thirdly, That the Error which is crept into (b) *Suidas*, and hath deceived his Interpreter, is not to be allowed, who reports *Epicurus* Born in the 79th Olympiad. I need not take Notice, how much this is inconsistent, not only with other Relations, but even with that which followeth in *Suidas*, where he extends his Life to *Antigonus Gonotas*; I shall only observe, that, for the number of Olympiads, *Suidas* having doubtless set down $\epsilon \theta$, which denote the 109th Olympiad, the end of the ϵ was easily defaced in the Manuscript, so as there remained only θ , by which means of θ , was made the 79th Olympiad.

Fourthly, That it matters not that the *Chronicon Alexandrinum*, *Georgius Sincellus*, and others, speak too largely of the time wherein *Epicurus* flourished, and that we heed not the Errors of some Persons, otherwise very Learned, who make *Aristippus* later than *Epicurus*, and something of the like kind. Let us only observe what (i) *St. Hierom* cites out of *Cicero, pro Gallio*; A Poet is there mentioned, making *Epicurus* and *Socrates* discoursing together, *Whose Times*, saith *Cicero*, we know were disjoyned; not by Years, but Ages.

Fifthly, That the Birth-day of *Epicurus*, taken from *Laertius* and *Pliny*, seems to argue, That amongst the *Athenians* of old, the Civil Months and the Lunary had different Beginnings. This indeed will seem strange, unless we should imagine it may be collected, that the Month *Gamelion* began only from the Full Moon that went before it: For, if we account the 14th day of the Moon to be the 1st of the Month, the 1st of the Moon will fall upon the 7th of the Month. Not to mention that *Epicurus* seems in his Will to appoint his Birth-day to be Celebrated on the First Decad of the days of the Month *Gamelion*, because he was Born in one of them; and then ordaineth something more particularly concerning the 20th of the Moon, for that it was his Birth-day, as we shall relate hereafter. Unless you think it fit to follow the

*This Anonymous Writer is no other than *Sealiger*, whose mistakes for the most part, *Meursius* hath unhappily followed, and taken pains to confute the rest, conceiving him some ancient Author.

* Anonymous Writer, who affirms, *Epicurus* was Born on the 20th Day of *Gamelion*; but I know not whether his Authority should outweigh *Laertius*. Certainly, many Errors, and those very great, have been observed in him, particularly by *Meursius*. I shall not take Notice, that the *Days* of *Gamelion* might perhaps be understood of the 20th of the Moon, hapning within the Month *Gamelion*, from *Cicero*, whose Words we shall cite hereafter. But this by the way.

C H A P. III.

Where he lived in his younger time.

L *Aertius*, (a) out of *Heraclides*, in his Epitome of *Sotion* relates, that a Colony being sent by the *Athenians* to *Samus*; *Epicurus* was bred up there till the 18th year of his Age, in which he went to *Athens*; *Xenocrates* living in the Academy, *Aristotle* at *Chalcis*. (b) *Strabo* adds, that being first brought up, partly at *Samus*, partly at *Teos*, he spent the first part of his Youth at *Athens*, growing up together with *Menander*, the Comick Poet. (c) *Laertius* further relates, That *Alexander* dying, and the *Athenians* being oppressed by *Perdiccas*, he went to *Colophon* to his Father, (about the 23 year of his age) and that he lived awhile there. And adds afterwards out of *Apollodorus*, that from the 32 year of his Age to the 37th he lived partly at *Mitylene*, partly at *Lampsacum*, (whither he made a dangerous Voyage, as (d) *Plutarch* observes.) (e) *Suidas* sets down how much time he bestowed in each of these places, One Year at *Mitylene*, Four at *Lampsacum*. *Laertius* adds, that he returned to *Athens*, when *Anaxicrates* was Archon. Now forasmuch as *Anaxicrates* (who succeeded *Charinus*, in the year of whose Magistracy, as (f) *Seneca* notes, *Epicurus* writ to *Polyænus*) was Archon in the 2d Year of the 118th Olympiad, and consequently the 36th of *Epicurus*'s Age, there must necessarily be here a Metachronism of one Year.

Hitherto of the places where *Epicurus* lived in his younger times, partly learning, partly Teaching, before he settled at *Athens*, where he instituted a Sect.

C H A P. IV.

His Masters.

AS for the Masters which he had, we read, in (a) *Laertius*, that some relate, *Epicurus* was Auditor of *Pamphilus* the Platonick; (b) *Suidas* saith the same; (c) *Cicero* also mentions *Epicurus*, himself acknowledging, that he heard him at *Samus*, but exceedingly slighted his Doctrine. Others also report the same.

Moreover, (d) *Clemens Alexandrinus* and others, report *Nausiphanes* the Pythagorean, Disciple of *Pyrrho*, to have been his Master, though (e) *Sextus Empiricus* writes, That he himself deny'd he had been Disciple to *Nausiphanes*. *Apollodorus*, in his Chronology, reports, That *Epicurus* heard *Lysiphanes* and *Praxiphanes*; but this, saith (f) *Laertius*, he doth not himself acknowledge, in his Epistle to *Euridicus*.

He might indeed have heard *Xenocrates*, and some there are (saith (g) *Cicero*) who think, he did hear him, (as *Demetrius* the *Magnesian* in *Laertius*) but *Epicurus* himself will not allow it.

I would mention *Democrates*, with whom, (b) *Plutarch* saith, *Epicurus* contested about Syllables and Accents; but that I suspect *Democrates* to be falsely read instead of *Democritus*, even from this, that *Plutarch* adds, That *Epicurus* stole all his Opinions from him, which was the common Objection

Objection concerning *Democritus*, as shall be shewn hereafter.

- (f) *Ecl. Phys.* I should mention also *Metrodorus*, whom (k) *Stobaeus* calls, *καλαγυρνῖν*, his Interpreter; *Dofloron*, the Master of *Epicurus*; and should suspect he were the same with him, whom (l) *Solinus* makes contemporary with *Diogenes* the Cynick; did not the Opinion, attributed to him of the Infinity of Worlds, and of Atoms, argue, that this was *Metrodorus* the Chian, Disciple of *Democritus*, whom *Epicurus* might have, not as *Dofloron*, a Teacher by word of Mouth; but as *Dofloron*, a Leader, by Writing.

- Thus also is *Lucian* to be taken, when he saith sportingly, that *Epicurus* was Disciple to *Democritus*, making him to be Disciple of *Aristippus* also, by reason of his Opinion of Pleasure, wherein yet there was a great difference between them, as we shall shew in its due place. But notwithstanding all we have alledged, (m) *Cicero*, *Plutarch*, *Empericus*, and others, write, that *Epicurus* used to boast, That he never had any Master, but was *αὐτοδίδακτος*, his own Teacher, and attained Philosophy by his own Wit and Industry. And though they seem to mention this, not without some disparagement of him, yet it will easily be granted, that he found out many things of himself, since this was that wherein he took most delight at his last end; and withal, seeing he writ so many Books, filled only with his own Sayings, as we shall shew hereafter. And indeed (n) *Athenaeus*, delivering in an Epigram an excellent Sentence of his, concludes, as if *Epicurus* learnt it not from any other, than from the Muses and *Apollo*. Hither also conduce these commendations of *Laertius*:

Dispensing Gifts acquir'd by his own Breast.
And,
He wou'd his Soul to break the narrow Bonds,
Which fetter Nature——

And others of the same kind.

- As for those whom *Epicurus* particularly esteem'd, (o) *Laertius* (citing *Diocles*) affirms, he was chiefly addicted so *Anaxagoras*, (though in some things he contradicted him) and *Arche-laus*, who was Master to *Socrates*. Of *Democritus* we shall speak hereafter. I only add, that *Epicurus* much admiring the conversation of *Pyrrho*, continually question'd his Disciple *Nausiphanes* concerning him; as (p) *Laertius* saith, in the Life of *Pyrrho*.

CHAP. V.

When, and upon what occasion, he addicted himself to Philosophy, and instituted a Sect.

- (1) In *Epic.* *S**uidas* (a) saith, That he began to apply himself to Philosophy in the 12th Year of his Age, which is confirmed by others, who wrote his Life, as (b) *Laertius* relates. But *Epicurus* himself (alleged by the same (c) *Laertius*) attesteth, That he did not addict himself to Philosophy till he was Fourteen Years old. *Hermippus* (in (d) *Laertius*) saith, that, lighting accidentally upon the Books of *Democritus*, he betook himself to Philosophy; but

Apollodorus the Epicurean, in the First Book of the Life of *Epicurus*, affirms, he applied himself to Philosophy upon dislike of the Sophists and Grammarians, for that they could not explain what *Hesiod* meant by *Chaos*. (e) *Sextus* (e) *Adv. Phys. Empiricus* having related this more fully, it will not be amiss to transcribe his Words. Having proposed some Doubts concerning these Verses of *Hesiod*,

First, Chaos, next broad-Breasted Earth was made,
The seat of all——

He adds, and some affirm, That this was the occasion of *Epicurus*'s sudden applying himself to Philosophy; for being yet very young, He asked a Grammarian who read to him [*Chaos* was first made :] Of what was *Chaos* made, if it was first made? The other answering, That it did not belong to him to Teach such things, but to those who were called Philosophers. Then, saith *Epicurus*, I must go to those, for they are the Persons that know the Truth of Beings.

To omit, what some affirm, that he was, as *Hermippus* (f) in *Laertius* relates, before he (f) *Loc. Cit.* addicted himself to Philosophy, a Schoolmaster: And though the (g) *Stoicks*, who were much his (g) *Ibid.* Enemies, reproached him, that with his Father he taught Boys for a small stipend, and that with his Mother he went from House to House reading expiatory Prayers; I observe, that after he had applyed himself to Philosophy, he instituted a School, being Thirty two years old, as (h) *Laertius* relates, and this first (h) *Ibid.* at *Mitylene*, afterwards at *Lampsacum*, as may be collected from the relation of *Suidas*, but had Disciples also from *Colophon*, as (i) *Laertius* re- (i) *Ibid.* lates.

Returning to *Athens* in the 36th, or 37th Year of his Age, He awhile Discours'd (saith (k) (k) *Lib. i.* *Laertius*) of Philosophy in Publick with others, but afterwards instituted a Sect in Private, denominated from him. At first indeed, admiring the Doctrine of *Democritus*, he professed himself a *Democritian*, as *Plutarch* (l) relates; but afterwards, (l) *Ad. Col. i.* for that he changed or added many things, his Followers were from him called *Epicureans*.

CHAP. VI.

His School.

WHereas other Professors of Sects made choice of particular places in *Athens*, as the *Academy*, the *Lycæum*, and the like, he purchas'd a very pleasant Garden, for Four-score *Minæ*, where he lived with his Friends and Disciples, and taught Philosophy. Thus, amongst others, (a) *Laertius* citing *Apollodorus*. (b) *Pliny* (a) *Loc. Cit.* writes, that *Epicurus* first brought into *Athens*, (b) *Lib. 19.* the Custome of having under the name of *Hortus* a Garden, the Delights of Fields and Country Mansions within the City itself, whereas, untill his Time, 'twas not the fashion to have those kinds of Mansions (*Rura*) in Towns.

Hence we may conjecture, that this was the place which (c) *Pausanias* reports to have been called, even in his time, the Gardens, adding, That there was in it a Statue of *Venus*, made by *Alcamenes*, (c) *In Attic.*

Alcarnenes, one of the most eminent things in *Athenis*, (as may be gathered also from (d) *Lucian*) and that the Temple of *Venus*, with the Statue of Celestial *Venus*, did joyn to it. This Garden is often mention'd in the Plural number by (e) *Cicero*, (f) *Juvenal*, and others, and sometimes diminutively, *Hortulus*, as *Virgil*; But, howsoever it be us'd, it is commonly taken for the Sect or Doctrine delivered in that place by *Epicurus* and his Scholars. When *Sextus Empiricus* calls the *Epicureans*, the *Philosophers of the Garden* (as the *Stoicks*, the *Philosophers of the Stoa* or *cloister*,) and *Apollodorus* being in his time the Master of the Garden, was, as *Li-
ertius* affirms, called *ἡγεμὼν* the Garden King.

Besides this Garden, which, with Houses be-
longing to it, joyn'd upon the City, *Epicurus* had a House in *Melite*, which was a Town of the *Ce-
cropian* Tribe, as (g) *Suidas* affirms, inhabited by *Philæus*, one of the Ancestors of *Epicurus*, as was formerly said, having (according to (b) *Phavorinus*) a famous Temple Dedicated to *Hercules*. Hither *Epicurus* sometimes retir'd with his Disciples, and at last bequeath'd it to his Successors, as we shall declare hereafter.

C H A P. VII.

How he lived with his Friends.

Epicurus after his return to *Athenis*, at what time *Anaxicrates* was Archon, went only twice or thrice to *Ionia* to visit his Friends, but lived all the rest of his time at *Athenis*, unmarried, nor would ever forsake his Country, though at that time reduc'd to great extremities, as (a) *Laertius* observes. The worst of which was, when *Demetrius* besieged *Athenis*, about the 44th Year of *Epicurus*'s Age. How great a Famine at that time oppress'd the City is describ'd by (b) *Plutarch*. But it is observable, that having related a Story of the Contest between a Father and his Son, about a dead Mouse which had fallen from the top of a House; He adds, *They say, that Epicurus the Philosopher sustain'd his Friends with Beans, which he shared equally amongst them.*

Epicurus therefore lived all the rest of his time at *Athenis*, together with so many Friends and Disciples, whom he convers'd with, and instruct-
ed, as that whole Cities were not sufficient to contain them (they are the words of (c) *La-
ertius*,) who resorted to him, not only from *Greece* but all other parts, and lived with him in his Gardens, as he cites out of *Apollodorus*; but especially from *Asia*, and particularly from *Lamp-
sacrum*, and from *Egypt*, as may be collected out of (d) *Plutarch*. Of the Temperance and Frugality of his Diet we shall speak hereafter. As to his living with his Friends, it is remarkable what *Diocles*, in *Laertius*, and others, re-
late, That *Epicurus* did not, as *Pythagoras*, who said the Goods of Friends ought to be in com-
mon, appoint them to put their Estates into one joint Stock, (for that imply'd a Distrust, not a Friendship) but that any one upon occasion should be freely supply'd by the rest. This will ap-
pear more manifest hereafter. In the mean

time, we must not omit an eminent piece of (e) (c) *P. De fin. Lib.*
Cicero; Neither (saith he) did *Epicurus* approve
Friendship in Discourse only, but much more
by Life, Actions, and Manners, which how
great a thing it is, the Fables of the Ancients
declare. For amongst the many various Sto-
ries repeated from utmost Antiquity, there
are hardly found three pair of Friends, from
Theseus his Time down to Orestes. But how
many great companies of Friends, and how
unanimously Loving did *Epicurus* keep in one
House, and that very little? Which is done
even unto this day by the *Epicureans*. Thus
Cicero.

Amongst the rest of his Friends, (f) *Laer-
tius* mentions *Polystratus*, who seems to be the same, of whom together with *Hippoclidæ* ano-
ther *Epicurean*, (g) *Valerius Maximus* gives a
strange account. I shall insert the Words of
Valerius, the rather because they will serve to
illustrate part of *Epicurus*'s Will hereafter, con-
cerning Communication of the Goods of his Dis-
ciple: They are these. "Hither may aptly
be referred *Polystratus* and *Hippoclidæ*, Philo-
sophers, who, born the same day, Followers
of the Sect of the same Master, *Epicurus*, joyn-
ed together in the common possession of Es-
tate and Maintenance of that School, died
very old, in the same moment of time. So
equal a Society of Fortune and Friendship,
who thinks not to have been begotten, bred,
and ended, in the bosom of Celestial Concord?
Thus be.

C H A P. VIII.

His Friends and Disciples.

Being now to give a Catalogue of the chief-
est of his Friends and Disciples, we must
not in the first place pass by the Three Brethren
of *Epicurus*, mention'd in the beginning, for
they by his advice studied Philosophy with him,
as *Philodemus* (in (a) *Laertius*) affirms (b) *Plu-
tarch* adds, That they took in the Philosophy of
their Brother, as greedily as if they had been
Divinely inspired, Believing and Professing from
their first Youth, That there was not any Man
wiser than *Epicurus*. The most eminent of the
Three was *Neocles*: He declaring from a Boy,
That his Brother was the wisest of Mortals; ad-
ded, as a wonder, That his Mother could con-
tain so many and so great Atomes, as, by their
Convention, made up such a wise Man; as (c) *Plu-
tarch* relates. Hence it appearing that *Neocles*
followed not any Philosophy of his own, but
that of his Brother, I know not why (d) some
affirm, that he introduced a Sect like that of his
Brother, unless perhaps they ground it upon
that place of (e) *Suidas*, where he saith, that
Neocles writ concerning his Sect. But who sees
not, it may be understood, that he writ con-
cerning the Sect which he himself profess'd, but
was instituted by another, especially for that
there is nothing said any where of the Sect of the
Neoclidæ.

Observe by the way, that this Saying (σαφει-
νῶσας, *Live closely*,) which (f) *Plutarch* op-
pugns, and is brought in (g) amongst the Pro-
verbial sayings.

- Proverbial Speeches) did belong to this Neocles, as the same (b) *Suidas* affirmeth.
- (b) In Neocl. To his Three Brethren, may be added those Three Friends who, (as we read in (i) *Seneca*) became great Persons, through the Conversation of *Epicurus*.
- (i) Epist. 6. *Metrodorus* is to be first nam'd; for he was, as (k) *Cicero* saith, almost another *Epicurus*.
- (k) De fin. Lib. 2. (l) *Strabo* plainly declareth, he was of *Lampsacum*. For whereas *Laertius* seems to say he was an *Athenian*, the place is very corrupt; especially seeing it is manifest he was not an *Athenian*, from this Antithesis of (m) *Cicero*, *How much was Epicurus happier for being in his Country, than Metrodorus for being at Athens*; because *Athens* was not the Country of *Metrodorus*: The Text of (n) *Laertius* is this, "He had many Disciples" but the most eminent were *Metrodorus* *Ἀδυναῖον* and *Timocrates*, and *Sandes* a *Lampsacene*, who "from his first acquaintance with the Man, never left him, &c. For my part I am of opinion, that these words *Ἀδυναῖον*, *ἔτι Τιμοκράτην*, *ἔτι Σάνδεον* should be quite expunged, for if you take them away, the rest joyns together very well; if you admit them, they will not hang together: for it was *Metrodorus* that was indeed a *Lampsacene*, and with whom all the rest that follows agreeth, not *Sandes*, whom, besides other things, it is false, that *Epicurus* should mention in his Will. And though (o) *Cassaubon* conceives, that *Ἀδυναῖον* may be the proper name of a Man, yet is it strange that we hear nothing elsewhere, as well of *Athenæus* as of *Sandes*, as *Epicureans*; Since *Laertius* in this place reckons up his most eminent Disciples; but taking these away, the Three, viz. *Metrodorus*, *Polyæmus*, and *Hermachus* are described in a continued Series; who, as we said, are put together by *Seneca*, as most eminent. As for *Timocrates*, he is mentioned afterwards by the way, when he comes to name *Metrodorus* as his Brother, and seems here to be inserted amiss. The occasion upon which these Names crept into the Text I suspect to be, that perhaps, some Transcriber had noted in the Margent, that what was delivered in the Text was confirmed also by *Athenæus* (Author of the *Deipnosophistæ*: For in him there is something concerning the *Epicureans*) and by *Timocrates* (for he is also cited by *Laertius*;) and by one *Sandes* (perhaps *Suidas*, or some other.) That many things have heretofore been inserted out of the Margents into the Texts themselves, by carelessness of the Transcribers, is most manifest.
- (o) In Not. ad Laert. *Metrodorus* therefore was by Country a *Lampsacene* (not the same with that Friend of *Anaxagoras*, whom (p) *Laertius* mentions of the same Name) born in the 12th Year of *Epicurus*'s age; for, dying in the 53 Year of his age, (the coherence of the Words and Sense makes me think it should be read *Μηλοδωρεῖν ἀγῶνισα*) and that being the 7th before the death of *Epicurus*, who lived to the 72 Year, it is evident, that the Year of his Birth must fall upon the 12th of *Epicurus*'s. From the first time that *Metrodorus* became acquainted with *Epicurus*, (which might happen in the 22 Year of his age, at what time *Epicurus* lived at *Lampsacum*) he never (as we began to say out of *Laertius*) parted from him, but one six Months, in which time he was absent at home, and thence returned to *Epicurus*. He had a Sister, *Batis*, whom he Married to *Idomeneus*, and a Concubine named *Leontium*. He had Children, whom *Epicurus* recommended in his Will, and in the Epistle which he writ dying; and particularly a Son, named *Epicurus*. He was a very good Man, undaunted with Troubles, on Death it self, as *Epicurus* himself, in *Laertius* attests. He had the Dropsie; (q) for (q) *Lib. 3. Cap. 21.* *Cornelius Celsus* writes, That whilst he was sick of that Disease, and could no longer abstain, as was convenient, from Drinking; he used, after he had forborn a great while, to Drink, and cast it up again. But whether it was of this Disease, or of some other, that he died, is not certain. The Books which he writ, are by *Laertius*, reckoned to be these; *Against Physicians* III. Of the Senses, to *Timocrates*. Of *Magnanimity*. Of the Infirmary of *Epicurus*. *Against the Dialecticks*, *Against the Sophists* IX. Of the way to Wisdom. Of Alteration. Of Riches. *Against Democritus*. Of Nobility. Besides which, (r) *Plutarch* cites his (r) *Adv. Col.* Books, Of Philosophy. Of the Poets. *Against Timarchus*. Likewise (s) *Clemens Alexandri* (s) *Strom. 2.* cites a Treatise, That the cause of Felicity which comes from our selves is greater than that which comes from other things. But of *Metrodorus*, enough.
- (p) *Lib. 10.* *Polynæus* was Son of *Athenodorus*, a *Lampsacene* also. He was a great Mathematician, (t) to use (t) *Acad. 3.* the words of *Cicero*, and to comprise much in little) Modest and Amiable, as *Philodemus* (in (u) *Laertius*) saith.
- (q) *Lib. 10.* *Hermachus* was Son of *Agemorchus*, a *Mitylenean*, his Father of mean quality. At first he studied Rhetorick, but afterwards became so knowing in Philosophy, that *Epicurus* dying, committed the Government of the School to him. He dyed at *Elysus*. There is a great mention of him in *Epicurus*'s Will. His Writings, which *Laertius* commends for excellent these. *Epistolicks*, concerning *Empedocles*, XXII. Of Disciplines, (for *Cassaubon* well reads not *Μαθημάτων*, but *Μαθηματικῶν*) Two Books. *Against Plato*. *Against Aristotle*.
- To these must be added *Leontius*, a *Lampsacene*, whom (w) *Plutarch* calleth one of the most (w) *Adv. Col. 1. 1.* eminent Disciples of *Epicurus*; adding, That this was he who writ to *Lycophron*, that *Epicurus* honoured *Democritus*.
- Moreover, *Colotes* and *Idomeneus*, *Lampsacenes* also. Of the former we shall have occasion to speak oftner, especially, because of the Two Books which *Plutarch* writ against him. (x) *La-* (x) *Lib. 6.* *ertius* elsewhere writes, that *Menedemus* the Cynick was his Disciple, (unless perhaps there were some other *Colotes* of *Lampsacum*) The same *Colotes* it is, who, cited by (y) *Macrobius*, (y) *In Somn. Scip. Lib. 1.* argues, that *Plato* ought not to have invented the Fable of *Erus*, because no kind of Fiction agreeth with the Professors of Truth. The later, *Idomeneus*, *Epicurus* design'd to make famous by his Letters, as indeed he did, which appears from (z) *Seneca*: "I will alledge, saith he, *Epi-* (z) *Epist. 21.* *curus* for an example, who writing to *Idomeneus*, (then a Minister of State employ'd in " great Affairs) to persuade him, from a specious kind of Life, to true settled Glory. If, saith he, you affect Glory, my Epistles will make you more famous, than all those things which

which you esteem, and for which you are esteemed. Who would have known *Idomeneus*, if *Epicurus* had not graved his Name in his Letters? All those Magistrates and Princes, even the King himself, from whom *Idomeneus* derived his Title, are now suppressed by a deep Oblivion. Thus he, And these (saith *Laertius*) were the more eminent Disciples.

But to these may be added two out of *Valerius*, already mentioned, *Polystratus* and *Hippoclidus*; especially seeing *Laertius* reckons *Polystratus* as Successor to *Hermachus*, unless the *Polystratus* who is joined to *Hippoclidus*, were not the same with him that succeeded *Hermachus*.

We might add *Timocrates* of *Lapsacum*, Brother of *Metrodorus*; but he seems to have fallen off, not brooking the Reprehensions of his Brother. We shall therefore rather join to these *Mus*, the Servant of *Epicurus*, who, as *Laertius* affirms, became an eminent Philosopher, not omitted by (a) *Agellius*, and (b) *Macrobius*, in reckoning up those, who, of Servants, became famous for Philosophy.

To omit *Apelles*, somewhere derided by *Plutarch*, we must here mention three Women, who together with others of the same Sex, learnt Philosophy of *Epicurus*. One *Leontium*, who studied Philosophy under *Epicurus*, as (c) *Athenæus* recites, and may also be collected from (d) *Cicero*, who saith, she wrote a Book against *Theophrastus*, in an elegant Style, and in the *Attick* Dialect. The second, *Themista*, Daughter of *Zoilus*, a *Lampsacene*, Wife of the formen-
(a) Lib. 1. cap. 12.
 (b) Saturn. 1.
 (c) Lib. 13.
 (d) De Nat. dier.
 (e) Strom. lib. 4.
 (f) Lib. 8. and 20.

tioned *Leontius*. Of her, besides the Testimonies which we shall hereafter alledge, (e) *Clemens Alexandrinus* taketh express notice. The third, *Philenis*, whom (f) *Athenæus* affirms to have written many things; adding that the obscene Books ascribed to her, were put forth under her Name, by *Rolycrates* the Sophist, to discredit the Woman.

To these may be added *Herodotus*, to whom *Epicurus* writ a little Epitome of Physick, extant in *Laertius*; and who amongst other things according to the same *Laertius*, writ a Book Of the youth of *Epicurus*.

Pithocles, to whom *Epicurus* writ of Superior things; extant in *Laertius*, and who affirmed, that when he was but 18 years old, he had not his equal for Ingenuity in all Greece, as *Plutarch* relates.

Menæceus, to whom *Epicurus* writ that Epistle concerning Morality, which is extant in *Laertius*; its beginning recited also by *Clemens Alexandrinus*.

Timocrates, Son of *Demetrius*, a *Potamian*, and *Amynomachus*, Son of *Philocrates* of *Bate*, whom *Epicurus* made the Executors of his Will.

Nicanor, whom *Epicurus* recommended to the care of the said Executors.

Eurydicus, one of those to whom, as *Laertius*, saith, he writ Epistles.

Dositheus, and his Sons *Pyrrho*, and *Hegefinax*, to whom *Epicurus* wrote a consolatory Letter upon the death of their Father, as we find in *Plutarch*.

I omit *Polymedes*, *Antidorus*, and others, to be mentioned hereafter in treating of his Books.

CHAP. IX.

How much he wrote.

NEither did *Epicurus* spend the time in giving his Disciples only Oral Instructions, but bestowed much pains in composing several Books. But to understand how much he labour'd herein, by comparison with other Philosophers, hear but *Laertius* in his (a) Lib. 1. Preface; Many things, saith he, Zeno writ; more, Xenophanes; more, Democritus; more, Aristotle; more, Epicurus; more, Chrysippus. Where we see that *Epicurus*, as to multitude of Writings came short only of *Chrysippus*. But observe, that elsewhere (b) *Laer.* (b) Lib. 17. *tius*, to shew he may be thought to have exceeded *Chrysippus* herein, cites *Apollodorus* the Athenian, who, saith he, to shew that what *Epicurus* writ of himself, not borrowed from any other, did far exceed the Books of *Chrysippus*, saith expressly thus: If a Man should take out of the Books of *Chrysippus*, the things which he hath borrowed of others, the Paper will be left blank. But that this may not seem strange, the same (c) *Laer.* (c) Lib. 10. *tius* elsewhere relates, that *Chrysippus*, for his emulation of *Epicurus* in writing much, was called by *Carneades*, the Parasite of his Books, because, if *Epicurus* writ any thing, (read γέγραπται, not γεγράφται) he would affect to write as much. Whence it came to pass, that he often wrote the same things over again, and whatsoever came next to hand, and presently thrust it in for haste, without correction; and brought in so many Testimonies of other Writers, that his Books were filled up only with them, as may be found in Zeno also, and Aristotle. Thus *Laertius* of *Chrysippus*, but of *Epicurus* not so: For (d) he relates, that his Volumes amounted (d) *Ibid.* to Three hundred, in which, saith he, there is no testimony of any other Author, but they are all the very words of *Epicurus*. Which I observe, to shew (seeing *Epicurus* wrote so many things, (e) (e) *Ibid.* a great Writer, as he terms him, and exceeding for multitude of Books, so as (f) *Origen* char- (f) *Adv. Cels.* ging *Celsus* with temerity, objects as a thing lib. 7. he conceives impossible, There is not any of us, who, saith he, knows all that *Epicurus* writ) his fluent Vein, and how he was chiefly employ'd.

CHAP. X.

What Writings of his are particularly mentioned by Authors.

HERE it is fit we give a kind of Catalogue of his Books, not of all he wrote, but of those whose Titles are extant in other Authors. I say their Titles, for the Books themselves have so miscarried by the injury of time, that besides some few Compendiums preserv'd by *Laertius*, and some Fragments scatter'd up and down amongst several Writers, there is not any thing of them remaining, at least, as yet known to us.

To begin with those, which *Laertius* accounts the best, they are ranked thus.

Of Nature, XXXVII. They are sometimes cited simply, Of Nature, sometimes with the number of the Books, as when *Laertius* hereafter in his Life, cites the 1. the XI. XII. XIV. XV.

(a) Comment. (a) *Galen* also mentions the Title and number of the Books.

(b) *lib. 2. chap. 1.* Of Atoms and Vacuum, so usually cited, (b) *Cleomedes* seemeth to mean the same under another name, Of the Principles of all things.

Of Love.

An Epitome of things appertaining to Natural Philosophers. This Epitome was twofold, Great and Little; both are cited by *Laertius*; the Lesser; that which is written to *Herodotus*.

Against the Allegorick (or Dialectick) Philosophers, Doubts. These Doubts seem chiefly to have concerned certain Moral Arguments, as concerning Justice, Marriage, and Dower: For this seemeth to be the same, which *Laertius*, and (c) *Plutarch* cite under the name of Doubts, without adding To the Allegoricks.

(c) Adv. col. lib. 1.

(d) Defin. lib. 2. *Kōtēai Dōgēai*, Maxims, or, as (d) *Cicero* interprets, *Maximæ Sententiæ*, because, saith he, they are Sentences briefly expressing, which conduce exceedingly to living happily. He elsewhere calls them select, and short Sentences.

(f) De nat. de or. 2. (g) *Adv. Phys.* to call them Memorable Sayings. *Laertius* hath put them at the end, and (b) *Lucian* somewhere commends them, as (i) *Cicero* the Book of *Crantor*.

(h) in Pseudon. (i) Lib. 4. dead. which is, saith he, not Great indeed, but Golden and, as *Panætius* advised *Tiberius*, to be gotten by heart. He was in Opinion different from *Suidas*, who calls them wicked Notions.

Περὶ ἀρρίσεων, Of Elections, so I conceive it ought rather to be rendred than of Sects; because in this Book *Epicurus* seems not to design a History of Sects, but Moral Institution, which is conversant about the Choice of things, as *Laertius* declares at the end of *Epicurus's* Epistle to *Menæceus*. Not to mention that he teacheth the Ethick kind to consist only of Election and Avoidance. For which reason, the Book, which is ordinarily and next to this cited,

Περὶ φυγῆς, Of Plants, ought rather to be entitled, *Περὶ φεύκτων*, Of things to be avoided; as well for coherence of the Title, as for that *Epicurus*, almost wholly taken up with Moral Philosophy, scarce treated of any particular subject in Physick, unless they were such as conducted to take away vain terrors from the minds of Men; of which kind, this of Plants could not be. Moreover, because in Manuscripts this Title is connexed to the former by the Conjunction *καὶ*, we may conjecture, that the Inscription was, *Περὶ ἀρρίσεων καὶ φεύκτων*; or under a single Title, *Περὶ ἀρρίσεων καὶ φυγῶν*; Of Election and Avoidance. Yet might the Inscription have been in the Plural number, forasmuch as it is afterwards said, *Elections and Avoidances are disjudicated from Pleasure and Grief*.

Of the End; So this Book is generally cited, as (k) *Adv. col. 2.* amongst others, by (k) *Plutarch*. Neither doth *Cicero* seem to mean any other, though he cite a Book Of the ends of Good and Evil.

(l) De nat. de or. 1. Of the Criterie, or the Canon; or, as (l) *Cicero* translates it, Of the Rule, and of Judgment. But if instead of Judgment we render it Judicatory, the force of the word will be more fully expressed.

Chæredemus; or, Of the Gods. This is one of those Books, which *Epicurus* entitled by the Names of his Brethren and Friends, that, being dead, their Names might not be forgotten, as (m) *Plutarch* observes.

(m) De ex. d. 2.

Of Sanctity, or, *Hegeſianax*. This perhaps is he, whom (n) *Plutarch* terms, *Hegetoanax*, (n) *Adv. Col. 2.* concerning whose Death, *Epicurus* wrote to his Parents; unless perhaps it were he who wrote Histories, and *Troica*, cited by (o) *Athenæus*; (o) *Lib. 3. c. 9.* for he was of *Alexandria*, and *Epicurus* had Friends out of *Egypt*.

Of Lives, IV. Which is all one as if the Inscription had been, Of Life and Manners. Neither doth *Epicurus* seem in these Books to relate the Story of some eminent Persons, as *Plutarch* and *Laertius* have done in their Books of Lives, but to give Rules, whereby to lead a quiet Life, as may plainly enough be collected from the Catalogue of the Moral Treatises, and the Places cited out of this by *Laertius*. The word *Lives* seems here to be taken in the same Sense, as with (p) *Plutarch*, when he speaketh of the Difference of Lives and Politicks, which the Interpreter well renders, Of Manners and Publick Institutes. Of the Books, are hereafter cited by *Laertius* the first and second.

(p) In Lycurg.

Of Just Action.

Neocles to *Themista*. This seems to have been that *Neocles* who was Brother to *Epicurus*, not his Father; for in like manner he called other of his Books after the Names of his Brothers.

The Banquet, cited by (q) *Plutarch*, (r) *Atbenæus*, and others, (s) *Plutarch* mentions Questions handled in it, concerning the heat of Wine, the time of Coition. *Laertius*, concerning troubles about Marriage, &c.

(q) Symp. quæst. I. I. (r) Deipn. 5. (s) Adv. Col. 1. Symp. quæst. 3. 3.

Eurylochus to *Metrodorus*. I guess, that this *Eurylochus* was the same with that *Eurydicus*, to whom, as we said formerly, *Epicurus* writ; but the thing is uncertain.

Of Seeing.

Of the Angle, which is in the Atome.

Of Touching; or perhaps, Of the tangibility of Atoms: for (t) *Epicurus* called Vacuum τὸ ἀνὰφθ, (t) *Apud Lami* that which cannot be touched.

Of Fate.

Of Passions. Sentences to *Timocrates*.

Προγνωστικόν, *Præcognitorium*; so I render it, because he seemeth in this to have discoursed of the Precognitive Faculty.

Προτρεπτικόν, (Exhortatory) that is, Discourse; for so *Isocrates* and *Clemens*, expressly.

Of Images, *εἰδωλά*, *Simulacra*, *Imagines*, *Species*, *Formæ*, *Spectra*; so several Persons variously interpret them, which are now commonly termed *Intentional Species*.

Of Phantastie, or the Impression thereof, which appeareth in the knowing Faculty; for neither did *Epicurus*, nor most of the ancient Philosophers, understand by this word, as we now for the most part do, the Faculty it self.

Aristobulus; this Book bears the Name of *Epicurus's* third Brother.

Of Musick; viz. as it conduceth to Manners; for this may be collected from (u) *Plutarch* and (w) *Empiricus*.

(u) Adv. Col. 1. (w) Adv. Manti.

(x) *Adv. Gram.* Of Gifts and Gratitude, mentioned by (x) *Empiricus*, who cites something Grammatical out of it.

Polymedes, he seems to have been some Friend or Disciple of *Epicurus*.

Timocrates, III. Whether meaning the Brother of *Metrodorus*, or the Executor of his Will, or some other. Hence I should believe, that by *Laertius* was cited the third Book of *Timocrates*, or written by *Timocrates*; but that instead of *Τιμοκράτης*, I suspect it should be written by *Τιμοκράτης*, relating to the third Book, which, by *Epicurus*, was so intitled. This the Text seems to confirm.

Metrodorus, V. That this was the same *Metrodorus*, of whom we have spoken formerly, cannot be doubted. From the first Book, cited by *Laertius*, may be collected, that *Epicurus* related the Story of *Metrodorus's* Life.

Antidorus, II. This *Antidorus* is mentioned by (y) *Plutarch*, and perhaps by (z) *Laertius* also, in the Life of *Heracleides*, if we there read *Antidorus* for *Autodorus*.

Περὶ νόσων δόξαι πρὸς Μίθραν, Of the South-Winds, Sentences to *Mithres*. But perhaps the Title ought rather to be read, *Περὶ νόσων*, Of Diseases, as well for the reasons alledged about the Title *Περὶ νόσων*, as for that these Sentences seem not to have been several Opinions, concerning some particular Winds, as Moral Sentences to moderate the pain of Diseases. This seems to be the same *Mithres* a Syrian, whom *Metrodorus* relieved, as (a) *Plutarch* hath several times delivered; and the same, whom (b) *Laertius* relates to have been the Steward of *Lyfimachus's* House; adding, that *Mithres* saying to *Theodorus*, Thou seemest not only not to acknowledge Gods, but Kings also. *Theodorus* repli'd, How can I but acknowledge Gods, who think thee an Enemy to the Gods?

Callistolas; who, it may be presumed, was some Friend of *Epicurus's*.

(c) *Adv. Col. 2.* Of a Kingdom, mentioned by (c) *Plutarch*.

Aneximenes; perhaps the same *Lampsacene* who is mentioned by (d) *Strabo*, and whom both (e) *Plutarch* and (f) *Laertius* seem to mean; for, though he were one of *Alexander's* Masters, yet did he survive him, (for he wrote his Actions,) and was, according to *Suidas*, Disciple to *Diogenes* the Cynick, and consequently younger than he; whereas *Diogenes* died in the eighteenth year of *Epicurus's* Age, viz. in the beginning of the 114th Olympiad.

Epistles. Of these, four are extant in *Laertius*; one, to *Herodotus*, which was, as we said, the lesser Epitome, and under that Name cited by (g) *Achilles Tatius*, Of Natural things. The second, to *Pythocles*, Of Meteors, or Superior things, as well Celestial, as all others above the Earth: The third, to *Menæceus*, Of Manners. The last is very short, which he writ Dying, to *Idomeneus*. That, besides these, he writ innumerable others, may be collected from (h) *Plutarch*, (i) *Laertius* and others. For *Plutarch*, for example, cites an Epistle of his, To *Anaxarchus*; (k) *Laertius* his Epistle, To *Aristobulus*; also an Epistle, To his Friends at Mytilene. This seems to be the same with that, which (l) *Sex-tus Empiricus* cites thus; To the Philosophers at Mytilene. But *Laertius* implyeth, there were more

which bore that Inscription, *Ἐπὶ πρὸς τὰς ἐν Μιτυλήνῃ φιλοσόφους*; so as there might be one of them, Supposititious. In the same rank may be reckoned his Epistles, concerning several Institutions of Life hinted by (m) *Laertius* cited by (n) *Athenæus* and (o) *Eusebius*. I omit that the same (p) *Athenæus* mentions his Epistles to *Hermachus*; and not to enquire after any more, the highest in repute were those written to *Idomeneus*, as we may understand from (q) *Seneca*, who also citeth something excellent out of his Epistles to *Polycæus*. Amongst these to *Idomeneus* was that, out of which (r) *Michael Zappos* cites a Fragment, containing the Original of the Proverb, *These shall live both Pythian and Delian*, apply'd to those that shall die within a short time, though *Erasmus* affirms the Proverb it self to be cited out of *Menæceus*.

As to the Epistles we shall by the way observe, that *Epicurus* used to write, by way of Salutation in the beginning of his Epistles, sometimes *χαίρειν*, Joy. sometimes *ἐν πρᾶτλει*, well to do; sometimes *ἐν διαγῶν*, sometimes *συνδαιος ἔστω*, well to live; *ὑγιαίνειν*, Health. For that which we read in (s) *Laertius*, *ἢ ἐν πρᾶτλει ἢ ἐν διαγῶν*, is defective, there seems some word wanting to the Sentence; neither doth the word *ἔστω* seem to belong to the form of Salutation. And besides, these words, *ἀντι τῶ*, exclude *χαίρειν* from the Epicurean form of Salutation; whereas this word is not only put before his Epistles, extant in *Laertius*, but it is rendred by (t) *Cicero* also when he alledgeth that which he wrote at his Death. For this reason, when heretofore I would, in the room of these two words, have put *ἐπίδῃ*, (as a less Alteration, than if I should have substituted *πρὸς ἑταίρους*, or the like) the learned *Puteanus* approved it; but withal conceived, *ἔστω*, ought to be retained; but the excellent *Menagius* was of Opinion, that since a word is wanting, for *ἔστω* should be read *ἔρχεται*, used on the like occasion by *Laertius* but that *ἀντι τῶ* ought to be retained, forasmuch as *Epicurus* seemeth not to have used the word *χαίρειν*, it being mentioned as proper to *Cleon*, both by (u) *Lucian* and (w) *Laertius* himself. Or whether instead of *ἔστω* might we not put *συνδαιος*, or, with the least alteration, *ἔστω*, signifying, that for Salutation, he was best pleased with those words, *ἐν πρᾶτλει*, and *συνδαιος ἔστω*; or might not *ἀντι τῶ* be retained, implying, that he did not quite cast aside the word *χαίρειν*, but instead of it sometimes used the other two, as if *πρὸς* were either wanting or imply'd. Indeed, (x) *Lucian* seems not obscurely to hint as much, when relating, that *Epicurus* was extremely delighted with the word *χαίρειν*; he adds, that sometimes he used other words, and that sometimes in his more Accurate and Profound Epistles, (which yet, he saith, were not many,) or when he writ to his most intimate Friends, he chiefly used *ὑγιαίνειν*. *Laertius* therefore attributing the word *ἐν πρᾶτλει* to him, may as well be thought to have intended *χαίρειν* as used by him: Since attributing *ἐν διαγῶν* to him also, he makes *ἐν πρᾶτλει* as peculiar to *Plato*, as *χαίρειν* to *Cleon*.

This Catalogue of his Books is compiled by *Laertius*; but besides these, there are others, cited

cited both by *Laertius* himself, and other Writers. *Laertius* formerly cited his Book, Of *Rhetorick*, mentioned also by the Scholiast of *Hermogenes*. But that which is cited, Of *Perspicuity requisite to Discourse*, belongs to *Canonick*, which he substituted in the room of *Dialectick*.

He likewise seems to cite his *Προηγμένα*, *Antecedentia*, or *Præcipua*; things precedent or preferred, in the Sense of the *Stoicks*. I should think it meant of some of the Books before cited, if amongst them there were any, wherein that which is alledged were written by *Epicurus*.

There are cited also *Stœcheioses*, *Institutions* or *Elements*, XII.

There seems also to be cited. Of *Worlds*, XII. For, describing several Worlds, he is said to have done it in the XIIth *αἰ τέρη*, or, as the Manuscripts, *αἰ αὐτῶ*, upon this very Subject; the rather, because it seems not meant of those XXXVII which are constantly cited, Of *Nature*.

I should add his *Physical Problems*, and *Ethical Doctrines*; but that under these Names may be comprised, all that *Epicurus* wrote concerning *Nature* and *Morality*.

Moreover, (y) *Cicero* cites his Book, Of the chief Good; unless it be the same with that, Of the End, already mentioned.

By the (z) same also is cited his Book, Of Pleasure; this perhaps *Laertius* meant, when he said, It was objected by some against *Epicurus*, that he usurped the Treatise of *Aristippus* concerning Pleasure, as if it had been his own.

Besides these, * *Cicero* cites his Book, Of Piety towards the Gods, distinct, as it seems, from that Of Sanctity, reckoned by *Laertius*. Of Sanctity, saith he, Of Piety towards the Gods, he wrote Books.

Again, *Plutarch* declares, that he wrote Books against *Theophrastus*: for the second of them, he saith, contained a discourse concerning Colours. Hitherto of his Books.

CHAP. XI.

His Will.

E*Picurus* having employed his Life in Teaching and Writing, and being now grown old, made, as the custom was, his Will, which being preserv'd entire by (a) *Laertius*, we shall not need to have recourse to those Fragments of it, which lie dispersedly in *Cicero*, and other Writers. It was in this Form.

Thus I bequeath; I give all my Estate to *Amynomachus*, Son of *Philocrates*, of *Batis*, (a Town of the *Ægean* Tribe, as (b) *Hesychius* describes it) and to *Timocrates* Son of *Deme-trius*, a *Potamian*, (of *Potamus*, a Town belonging to the *Leontian* Tribe, (c) *Phavorin*.) according to the donation which hath already been made, and is Recorded among the Deeds in the *Metroum*, (a Temple of the great Gods at *Athens*, seated upon the Haven, in which the Laws, Judgments, and other Acts were preserved, as *Athenæus*, *Suidas*, and others affirm) with this condition; that they bestow the Garden, and all that belongs to it, on *Hermachus*, Son of *Agemarchus*, a *Mityle-*

nean, and those that shall study Philosophy with him; and on those whom *Hermachus* shall leave his Successors in Philosophy, and to those who shall succeed us in the Profession of Philosophy, for ever. And that it may be preserved with all possible care, I assign the School to *Amynomachus* and *Timocrates*, and to their Heirs, according to the surest form of Law, that they may keep the Garden, and deliver it to those who shall profess Philosophy after us. The House which is at *Melite*, let *Amynomachus* and *Timocrates* deliver to *Hermachus*, and to those that study Philosophy with him, to dwell in it as long as he shall live. Of the Revenues made over by us to *Amynomachus* and *Timocrates*, let them set apart as much as shall be sufficient (advising with *Hermachus*;) to celebrate the Exequies of my Father, Mother, and Brethren; and to keep, as they have done hitherto, my Birth-day, in the first Decad of the month *Gamelion*; as also to provide a Feast for Entertainment of all those who study Philosophy with us, every month on the twentieth day of the Moon, in Commemoration of us, and of *Metrodorus*. Let them also keep a day in Memory of my Brethren in the month *Posideon*, as we used to do; and another to *Polyæus*, in the month *Metagitnion*. Let *Amynomachus* and *Timocrates* take care of *Epicurus*, Son of *Metrodorus*, and of the Son of *Polynæus*; and let them study Philosophy, and live with *Hermachus*. In like manner, let them take care of the Daughter of *Metrodorus*, and so soon as she shall be Marriageable, bestow her upon him of the Students of Philosophy, whom *Hermachus* shall chuse, provided she be modest, and obedient to *Hermachus*. Let *Amynomachus* and *Timocrates*, out of our Revenues, bestow yearly so much as shall be sufficient for their Maintenance, with the consent of *Hermachus*. For let them so esteem *Hermachus*, having an equal share in our Revenues, and grown old in studying Philosophy under us, and left by us Guide of those that studied Philosophy under us, that all things be done by his advice. As for her Portion, when she shall come to be Marriageable, let *Amynomachus* and *Timocrates* take as much as they shall think convenient, with the consent of *Hermachus*. Likewise, let them take the same care of *Nicanor* as we did, that all they, who, studying Philosophy with us, have communicated the use of their Estates, and expressing all Friendship, have chosen to grow old with us in Philosophy, want not any necessaries to the utmost of our Power. All my Books I bequeath to *Hermachus*; but if any thing of mortality happen to *Hermachus*, before the Children of *Metrodorus* arrive at full Age, let *Amynomachus* and *Timocrates* take care, that all necessaries be decently provided for them, as much as shall be necessary, out of the Revenues left by us. Let all the rest be ordered as we have appointed, as much as is possible. I manumit of my Servants, *Mus*, *Licias*, *Lycon*; *Phædria* also I set free.

CHAP. XII.

The Manner of his Death.

AS concerning his last Sickness and Death, we must know that Epicurus was of a Constitution not very strong. This is implied even by the Title of the Book written by (a) Metrodorus, *Of the Infirmitie (or Unhealthfulness) of Epicurus*. It is implied also by the envious exaggeration of (b) Suidas, that Epicurus could not endure to put on his Cloaths, nor to rise out of Bed, nor to look upon the Sun, and the Fire, and the like. These may at least persuade, that Epicurus was of a Complexion not strong, and as in the whole course of his Life, he had not a constant health, so at last he died of a painful Disease, the Stone, whereof it is probable he had many Fits. (c) Laertius, out of Hermachius, in his Epistles, relates that he died of the Stone, stopping his Urine, having lain sick 14 days.

It is memorable, that being near death, he writ that Epistle which Laertius mentions, as written to Idomeneus; (d) Cicero, to Hermachius; perhaps it was sent to both, because of the τὸ ὑμῖν: or to Idomeneus, rather than to Hermachius, because the Children of Metrodorus were sufficiently recommended to Hermachius, by his Will. Moreover, it is not likely that Hermachius, his next Successor, was absent at that time, especially seeing he sent a relation of Epicurus's death in Letters; not to press, that he from his Youth was more addicted to Rhetorick than Philosophy, as appeareth from Laertius. The Epistle is this.

'Leading a most happy life, and withal dying,
'we writ this to you, seized by the Stranguary
'and Dysentery beyond expression; but all these
'were counterpoized by the joy of mind, which
'I conceive in remembring our Discourses and
'Inventions. But thou, as becomes the good
'will which thou hast had from thy Youth to
'me, and Philosophy, take care of the Children
'of Metrodorus.

(e) Laertius adds, (out of Hermippus) that Epicurus went into a Bath of warm Water, called for Wine, drunk it off, and exhorting his Friends to be mindful of his Doctrine, whilst he was discoursing, died. Upon which Laertius hath this Epigram:

*Farewel, and bear my Doctrine in your minds;
Said dying Epicurus to his Friends:
Into a warm Bath going, Wine he quaff,
And then from Pluto took a colder draught.*

CHAP. XIII.

The time of his Death.

EPICURUS died in the 2d year of the 127th Olympiad, Pytharatus being Archon. After δευτερον ετος, which (a) Laertius cites out of

Apollodorus's Chronology, Casaubon rightly reads ἐκαστος ἐσθλὸς καὶ ἐκατοστής Ὀλυμπιάδῃ, for in the ordinary reading ἐκαστος being wanting, who could imagine that Epicurus, born in the 109th Olympiad, could die in the 107th. And indeed, the 72d year of Epicurus, in which he is said to have died, falls upon the 127th Olympiad.

The month and day of the year, in which Epicurus died, is told by (b) Clemens Alexandrinus, who saith, that Antiochus, from the time of Pythagoras to the death of Epicurus, reckoned 312 years, adding, that the death of Epicurus hapned on the 10th day of the month Gamelion. Where observe, if the time of Pythagoras be reckoned from the 60th Olympiad, in which Laertius saith, he flourished; there will be found to be but 270 years from thence to the death of Epicurus, and consequently the account of Antiochus will fall short 42 years. Wherefore this ἀκρίβεια must be taken from the birth of Pythagoras, who began to flourish in the 40th year of his age.

Now whereas Apollodorus saith, that Epicurus lived 72 years, which is confirmed also by (c) Cicero, saying, *It always was true, that Epicurus shall dye, having lived 72 years*; Pytharatus being Archon, (whence some conjecture, Epicurus died in his Climacterical year, which is commensurated by 9.) the last, or 72d year, is not to be understood as compleat, for Epicurus had but newly entred into it, there being but three days over and above the 71 years; for he was born on the 7th, and dy'd on the 10th, of the month Gamelion, there being, between the time of his Birth, and his Death, 18 complete Olympiads, except one year. Wherefore, this is in the same manner, as when (d) Pliny, (e) Lucian, and (f) Censorinus affirm the Sicilian (or Leontine) Gorgias did live 108 years, whereas (g) Cicero, and (h) Valerius Maximus say, he compleated but 107. Here is observable, the comparison which (i) Plutarch makes between Epicurus, and Gorgias; for after he had said that Alexis, the Comick Poet, (Son of Menander, and Father of Stephanus the Comick Poet, as (k) Suidas relates) lived double the time of Metrodorus, that is 106 years, Metrodorus living according to (l) Laertius, 53. he adds, that Gorgias the Sophist outlived Epicurus; πλεον ἢ ὅμιον, more than one Third; for if we take the number 34, it will be the same which Epicurus lived double, Gorgias treble; and whereas Plutarch says more, perhaps he reflected upon the Opinion which (m) Quintilian and (n) Suidas afterwards followed, that Gorgias lived 109 years.

I see not, why the (o) Interpreter of Clemens Alexandrinus should render Gamelion October; for though there be some Controversie about the order of the Greek months, yet shall we not find any but make Gamelion the 6th, 7th, or 8th, from Hecatombæon; which seeing it cannot begin higher than June, certainly Gamelion will be far distant from October. But since by many Arguments it is evinced, that Gamelion is the 7th from Hecatombæon, it ought rather to be reduced to January. Now because the 2d year of the 127th Olympiad began in Summer, in the 4443d year of the Julian period, the Gamelion of that year must fall upon Janu-

ary,

ary, in the beginning of the 444th Year of the Julian Period. Upon what day of January, the 10th of Gamelion might fall, it is not easie to determine. But if we may make Gamelion commence (as is done in the time of the Nativity,) from the 14th Moon, or from the 7th Full Moon, after the Summer Solstice, forasmuch as the new Moon hapned upon the 30th of December, and consequently the 14th Moon upon the 12th of January; Hereupon if we make that the 1st of Gamelion, the 10th will fall upon the 21st of January, upon which the death of Epicurus might fall. Where we must further observe, That whereas Epicurus is said to have lived 72 Years, it must be understood of the Grecian Years, not Julian, for so it would fall short two Days, it being already proved, he was born the 23d of January. Now, to reduce the Death of Epicurus to our Account is easie: For if we substract ten Days, and for the Cycle of the Sun that Year which is 20, and, for the Dominical Letter D, according to the Old Style, put G, according to our own, it will appear that Epicurus died the 21st of January, it being the 4th Day of the Week, or Wednesday, before the computation of Christ, 270 Years.

CHAP. XIV.

How dear his Memory was to his Followers.

IT remains, that we briefly tell how the Memory of Epicurus, after his death, was respected by his Followers. For, to omit, that his Country honoured him with brazen Statues, as (a) Laertius writes; I observe, that the Set-days and Ceremonies appointed in his Will were punctually kept by his Followers. (b) Pliny, (writing 350 years after upon this thing) On his Birth-day, saith he, the twentieth Moon, they Sacrifice, and keep Feasts every Month, which they call Icaides; whence it may be conceived, that the Epicureans were by Greek Writers, as (c) Athenæus, termed *ἐκασίται*, from observing *ἐκαστάς* as Rhodiginus also takes notice. Although (d) some there are who think, they were called *Ica-distæ*, from *ἐκόν* an Image, because there was not one of them, but had the Picture of Epicurus. And of these Images, (*) Pliny also thus; They keep (saith he) the Countenance of Epicurus in their Chambers, and carry it up and down with them; And (e) Cicero, in the Person of Atticus, "Neither, saith he, can we forget Epicurus of any Man; whose representation we have not only in Pictures, but in Cups, and Rings also. (f) There are who add, that "some took great care to have Pictures of Epicurus, not only in Rings, but in Cups, as conceiving it a fortunate Omen, to the Nation, and their own Name. As for the Affection which they bare to him, hear Parro, Honour, saith (g) Cicero, "Office, Right of Wills, the Authority of Epicurus, the Attestation of Phædrus, the Seat, House, Footsteps of excellent Persons, he saith, that he must preserve; but especially (h) Torquatus, "Owe we not much to him, saith he, who, as if he had heard the voice of Nature her self, did so firmly and soundly comprehend her, as that he brought all ingenious Persons into the way of a peaceful, calm, quiet, happy Life? And (i) again, "Who, saith he, I think only saw Truth, and freed the Minds of Men from the

"greatest Errors, and delivered all things appertaining to well and happy living.

And because Epicurus dying, advised his friends to be mindful of his Doctrines, (k) Cicero saith, that all of them got by heart his *Maxims*, and some there were who learned without Book all his Doctrines, as particularly Scyro, mentioned in his Academicks. But let it suffice, to alledge some few Verses of (l) Lucretius, by which we may perceive how affectionate they were to the Memory and Doctrines of their Master. He begins his Third Book thus:

*Who first from Darknes couldst a Light so clear
Strike forth, and make Life's Benefits appear,
Great Ornament of Græcia, I am lead
By thee, and in thy sacred Foot-steps tread:
Not to contend, but kindly imitate.
For how can chatt'ring Swallows emulate
The Swans? Or tender Kids keep equal pace
With the stout well-breath'd Steed's impetuous race?
From thee, O Father, every thing receives
Invention, thou giv'st Precepts, from thy Leaves,
As Bees skip up and down and sweetly suck
In flow'ry Groves, we Golden Sayings pluck:
Golden, deserving an Eternal Life.*

And again;

*By these a Pleasure I receiv'd from Thee
Divine; withal, a Reverence, to see
That Nature every way thou hadst unvail'd.*

And afterwards,

*Great Epicurus died, his Lives race run,
Whose Wit Mankind exceeded, as the Sun
Eclipseth by his Rising all the Stars.*

CHAP. XV.

With what Constancy and Unanimity, the Succession of his School flourished.

IT deserves to be taken notice of, not only that the succession of his School was constant, but that his Successors and Followers did always so agree, as was indeed wonderful. As concerning the Constancy, it is known that the Presidents of the Gardens, or Masters of the School, from the death of Epicurus, to the times of Julius Cæsar, and Augustus, succeeding one another in a continued Series, were, according to (a) Suidas, XIV. and that for 237 Years: In which later times, How many Epicureans there were, eminent Persons, and of great account in the State, appears from Cicero. (b) Lucian also writes, that in his time there was a stipend allowed to the Epicureans, by the Empror, no less than to other Philosophers; adding, that when any one of them died, he, whom they most approved of, was substituted in his room. (c) Laertius who lived after Lucian, declares, that whereas the Successions of the other Philosophers did almost quite fail; yet the Succession of Epicurus did constantly persevere, so many succeeding one another in government of the Disciples, as could not be reckoned up. Numenius (cited by (d) Eusebius) adds, that this Succession lasted till his time, and that so perfectly, as it was likely to endure a great while after. After these (e) Lactantius; The Discipline of Epicurus, saith he, was much more celebrated. In a word, as long as Learning flourished in Greece, and Rome was preserved from the Barbarians, the School and Discipline of Epicurus continued eminent.

As for their unanimity, to omit that of *Cicero*, 'I will maintain the Epicureans who are so many, my Friends, Men that are so loving to one another, and the like places; and shall rather observe, that whereas other Sects almost at their very beginning were distracted with intestine dissensions; the Epicurean was far from suffering any such thing. For (g) *Themistius* writes, that the Opinions of Epicurus were kept by all the Epicureans, as Laws of Solon or Lycurgus. And, as if they had all one Soul amongst them, faith (b) *Seneca*, Whatsoever *Hermachus* affirm'd, whatsoever *Menodorus*, is referr'd to one. All things that any Man delivers in that Society, go under one Man's name; This will appear more plainly, if we alledge the words of *Numenius*, the *Pythagorean*, in (i) *Eusebius*; who after he hath complain'd, that the Successors of *Plato* did not preserve that Unanimity, for which the *Pythagoreans* were esteemed, adds, "After this manner the Epicureans being instituted (though unworthy,) seeming not in any thing to dissent from *Epicurus*, and professing to have the same Tenents with their wise Master, have not unjustly attained their scope. Hence it hath hapned to the Epicureans for a long time, that they never, in any thing worth notice, contradicted either one another, or *Epicurus*. Amongst them it is an Offence, or rather Impiety, and Sin, to bring in any Innovation; wherefore none dares attempt it. Hence, by reason of their constant agreement among themselves, they enjoy their Doctrines peaceably and quietly; and this Institution of *Epicurus* resembles the true state of a perfect Common-wealth, which being far from Seditious, is governed by one Joynt Mind and Opinion. For which reason, there have not, nor are not, nor, in likelihood, will be wanting, those, that shall willingly follow it, but amongst the Stoical Faction, &c. One would think there were nothing wanting to this Testimony, but, to say of all the Epicureans, as (k) *Valerius* (before cited) did of two of them, that "Such a Society might be thought to have been begotten, nourish'd, and terminated in the bosom of Celestial Concord.

C H A P. XVI.

The Successors and Followers of Epicurus.

IT remains, that we give a Catalogue of those who were eminent in that Sect, after the death of *Epicurus*. We have already said, that *Hermachus* succeeded *Epicurus*, and *Polystratus* *Hermachus*. It also is manifest from *Laertius*, that *Dionysius* succeeded *Polystratus*; and *Basilides*, *Dionysius*. But who those ten Successors were from *Basilides*, to him who govern'd the School in the time of *Augustus*, we cannot easily say. Perhaps after *Basilides*, succeeded *Protarchus* *Bargyleites*, whom (a) *Strabo* terms an Illustrious Person. The same *Strabo* faith, That Disciple to *Protarchus* was *Demetrius*, surnamed *Lacon*, who is mentioned also by (b) *Laertius*, and was, as (c) *Sextus Empiricus* faith, eminent amongst the Followers of *Epicurus*. Perhaps after him succeeded *Diogenes* of *Tarsus*, Author of the *Select Schools*, whereof *Laertius* mentions XX Books. He also cites an Epitome of Moral Doctrine, written by the same Person. *Laertius* menti-

ons also (but whether they belong to this Series of Successors, is uncertain,) Two *Ptolomies* of *Alexandria*; whether from differences of Complexion, or some other Respect, one surnamed Black, the other White. He mentions also *Orion*, and seems to mention one *Democritus*, who, in his *Timocrates* takes notice of Pleasure after *Epicurus's* Doctrine.

There follow Two out of this rank, named by (d) *Athenæus*; The First, *Diogenes* of *Seleucia* near *Babylon*, whom he describes to have been Eloquent, but of an ill Life; The other, *Lysias*, who, as he faith, Governed at *Tarsus*; and being chosen by the Country, *Stephanophorus* (Priest of *Hercules*.) he enjoy'd the Supream Government, and wore Regal Ornaments. This is he, who distributed the Estates of the Rich amongst the Poor, and put many of them to death for refusing to part with them. At what time he lived, we cannot certainly determine; But *Diogenes* being contemporary with *Alexander* King of *Syria*, and *Antiochus* his Successor, may be referred to the 155th Olympiad.

About the same time seemeth to have flourished *Eucratidas*, to whom belongs this Inscription, recited by *Janus Gruterus*; At *Brundisium*, before the Gate of *Diomedes* *Athenæus*, a Physician, on the Basis of; EUCRATIDAS Son OF PISIDAMUS, A RHODIAN, AN EPI-CUREAN PHILOSOPHER, THIS PLACE APPOINTED FOR BURIAL BY THE SENATE OF BRUNDISIUM.

Not long after seems to have flourished in the School that *Apollodorus*, whom *Laertius* termeth eminent, ἀπολόδορος, for that (as I conceive) he bore such sway in the Garden, as *Demosthenes* is said to done in Courts of Judicature. He wrote about 300 Books, amongst which were some concerning the Life of *Epicurus*, cited by *Laertius*. It may be conjectured, that he was the same, whose Chronology is cited by *Laertius*, and others.

Auditor of *Apollodorus* was *Zeno* the *Sidonian*, according to (e) *Laertius*, who adds, that he wrote much, and that he was famous both for Philosophy and Rhetorick; whence I conjecture, it is the same *Zeno* of whom (f) *Cicero* faith, He spoke Distinctly, Gravely, and Neatly; and that he was Chief of the Epicureans; unless both He and *Apollodorus* lived earlier; which if it were so, this other belongs to the Times of the Emperors, for (g) *Cicero* heard him, and writing concerning him to (h) *Atticus*; *Zeno*, faith He, I love as well as thou dost.

C H A P. XVII.

Laertius, his Vindication of Epicurus.

Diotymus the Stoick, much maligning *Epicurus*, traduced him exceedingly, producing Fifty Epistles, very lascivious, as written by *Epicurus*; to which he added, as *Epicurus's* also, the short Epistles, commonly ascribed to *Chrysippus*. No less disaffected to him were *Po-sidonius* the Stoick; and *Nicolaus*, and *Sotion*, in the 12th of his *Dioclean* Confutations, (which are in all XXIV,) and *Dionysius Halicarnassæus*. For they say, he went from House to House with his Mother reading expiatory Prayers; and

A a a a

that

that with his Father he taught Children for a small stipend; that one of his Brothers was a Pandor; that he himself used the company of *Leontium*, a Curtezan; that he ascribed to himself the Books of *Democritus* concerning Atoms, and of *Aristippus* concerning Pleasure; that he was not a true Native of the City, as *Timocrates* acknowledgeth, and *Herodotus*, in his Book of the Youth of *Epicurus*; That he basely flattered *Mithres*, Steward of *Lysimachus*, calling him in his Epistles, *Apollo* and *King*; That *Idomeneus*, *Herodotus*, and *Timocrates*, who published some obscure Pieces of his, did commend and flatter him for the same: That in his Epistles, he writes to *Leontium*, thus; O King *Apollo*, my dear little *Leontium*; How were we transported and filled with Joy at the reading of thy Letter! To *Themista* Wife of *Leontius*, thus; If you come not to me, I shall roll to you whithersoever you call me. And to *Pithocles*, a handsome Youth; I consume in expectation of your Amiable and Divine company. And again, writing to *Themista*, he thinks to persuade her: As *Theodorus* affirms, in his Fourth Book against *Epicurus*. That he wrote to many other Curtezans, especially to *Leontium*, with whom *Metrodorus* also was in Love. That in his Book concerning the *End*, he writes thus, Neither know I what is this Good, If we take away the Pleasures of the Taste; If we take away those of Coition; If we take away those of Hearing; If we take away those of the Sight. That in his Epistle to *Pithocles* he writes; Happy Youth, fly as fast as thou canst from all Discipline. *Epicurus* calls him, *Cinædologum*, and rails at him exceedingly. *Timocrates*, Brother of *Metrodorus*, who was a while a Disciple of *Epicurus*, but at last forsook the School, saith; That he vomited twice a day, upon overcharging his Stomach; and that he himself had much ado to get away from their Nocturnal Philosophy, and Conversation in secret. That *Epicurus*, was ignorant of many things belonging to Discourse, but much more of those which belonged to Life. That he was of such a miserable Constitution, that he was not able of himself for many years, to get out of Bed, or rise out of the Chair in which he was carried. That he spent every day a Mina at his Table, as he himself writeth in his Epistle to *Leontium*, and in his Epistles to the Philosophers at *Mitylene*. That he and *Metrodorus* also used the company of Curtezans; amongst others, *Marmarium*, *Hedia*, *Erotium*, *Nicidium*. That in the Thirty Books which he writ concerning Nature, he saith most of the same things over and over; and that in them he writes against many Persons, and, amongst the rest, against *Nausiphanes*, and that in these very words; But this Man, if ever any, had a way of teeming a Sophistick brag, like many other Slaves. And that in his Epistles, he writes thus concerning *Nausiphanes*; This so far transported him, that he railed at me, and called himself my Master. Likewise, that he called himself *Nausiphanes*, Lungs (as senseless,) and unlearned, and deceitful, and lascivious. The Disciples of *Plato*, *Dionysius's* Parasites; *Plato* himself, *Golden*; *Aristotle*, a Pro-

digal, that, having wasted his Patrimony, was fain to turn Soldier, and Apothecary; *Pretagoras*, a Basket-carrier, an *Amanuens* to *Democritus*, and a High-way Schoolmaster; *Heraclitus*, *καυχήτης*, a causer of Confusion; *Democritus*, *ἀνέλκιστος*, Purblind; *Antidorus*, *σαυιδάπων*, a fawner upon Gifts; the *Cyrenaicks*, Enemies to *Greece*; the *Dialecticks*, Envious; *Pyrrho*, Unlearned and Unmanner'd.

But these Men are mad; for, of the excellent Candor of *Epicurus* towards all Men, there are many witnesses; his Country, which honoured him with Statues of Brass; his Friends, who were so many, that whole Cities could not contain them; his Disciples, who were also taken with his Sirenical Doctrine, except *Metrodorus* the *Stratonicean*, who, perhaps over-burdened with his excessive Goodness, revolted to *C Carneades*; the Succession of his School, which, when all the rest were almost quite worn out, remained constant, and ordained so many Masters one after another, as cannot be numbred; his Piety towards his Parents, his Kindness towards his Brethren, his Meekness towards his Servants, (as may appear by his Will, and their studying Philosophy with him, amongst whom *Mus* formerly mentioned was most eminent;) and, in general, His Humanity towards all, His Devotion to the Gods, and Love to his Country, was beyond expression. He would not except of any publick Office, out of an excessive Modesty; and, in the most difficult troublesome times, continued in *Greece*, where he lived constantly; except that twice or thrice he made a Journey to his Friends on the borders of *Ionis*. But to him they resorted from all parts, and lived with him (as *Apollodorus* relates) in the Garden which he purchased with 80 Minæ. *Diocles* in his Third Book, *De Incurisione*, saith, They used a most frugal spare Dyet, for they were contented with a pint of small Wine, and for the most part they drunk nothing but Water. And that *Epicurus* would not have them to put their Estates into one common stock, as *Pythagoras* ordained, saying, The Goods of Friends are common; for this argued distrust, and where there is distrust, there is no friendship. As for himself in his Epistles, that he was contented with Water only, and coarse Bread; And send me, saith he, a little *Cytheridian* Cheese, that I may Feast my self when I have a mind. Such was he, who professed, that Pleasure is the End, or chief Good; for which, *Athenæus* in an Epigram, thus commends him:

*Man's most unhappy Race for worst things toils,
For Wealth (unsatiate) raiseth Wars and Broils.
Nature to Wealth a narrow bound assign'd,
But vain Opinions ways unbounded find:
Thus Neocles; whom the Sacred Quire
Of Muses, or Apollo did inspire.*

But this we shall understand better from his own Doctrine and Words. Hitherto *Laertius* in vindication of *Epicurus*; which Subject is more fully and Rhetorically handled by the Learned *Gassendus*, *De Vita & Moribus Epicuri*, in the six last Books.

THE DOCTRINE OF E P I C U R U S.

Of PHILOSOPHY in General.

(a) *Sext. Emp. adv. Eth.*

(b) *Sext. Emp. adv. Math. 1.*

(c) *Laert.*

Philosophy (a) (or the love of Wisdom,) "is an exercising of the Reason; by which, in Meditating and Discourſing, it acquireth happy Life, and enjoyeth it. For (b) Philosophy hath this propriety above other Arts, that its end is the end alſo of Reason which ſo tends to it, that it may reſt in the enjoyment of it.

Now happy Life conſiſting in the tranquillity of the Mind, and indolency of the Body, but eſpecially in the former, (in regard, the Goods of the Mind are better than thoſe of the Body, and the Ills thereof worſe;) it comes to paſs, that Philoſophy is chiefly the Medicine of the Mind, in regard it both makes and preſerves it ſound, its Soundneſs or Health being nothing elſe but its tranquillity.

Hence it followeth, (c) That "neither ought a young Man to delay Philoſophizing, nor an old Man to be wearied therewith; for, to rectifie and cure his Mind, no Man is too young; and he who pretends, that the time of Philoſophizing either is not yet, or is paſt, doth, as he who ſaith, the time to live well and happily either is not yet come, or is quite gone.

Both young and old therefore muſt Philoſophize; the one, that whiſt he is growing old, he may perſevere to advance himſelf in good things to continue the excellence of his former actions; the other, that, though aged in years, he may yet be youthful in Mind, remaining ſecure from future eminent harms.

For it is Philoſophy alone, which breeds in its Followers an aſſuredneſs and an immunity from all vain fears; whence we ought to devote ourſelves to it, that we may be truly free.

Happy they, who are of ſuch a diſpoſition of Body or Mind, or Born in ſuch a Country, as they can either of themſelves, or by the inſtigations of others, addiſt themſelves to Philoſophy, and perſue Truth; by attainment whereof, a Man is made truly free or wiſe, and abſolute Maſter of himſelf.

They who apply their Minds hereto, are of three ſorts; Some addreſs themſelves to enquire after Truth, without the aſſiſtence of any; ſome require help, and would not go, if none had gone before, but follow well; ſome may be compelled to the Right, who need not ſo much a

Leader; as an Aſſiſtent; and, as I may call it, a Driver.

The Firſt are moſt to be commended; yet the ingenuity of the Second is excellent likewiſe; and the Third not to be contemned. Of the Second was *Metrodorus*; Of the Third *Hermachus*. As I highly praiſe the fortune of the former, ſo I no leſs admire and value the later; but although both of them arriv'd at the ſame end, yet he deſerv'd the greater praiſe, who, their performances being equal, broke through the greater difficulties.

Now whereas to a Philoſopher nothing ought to be more valuable than Truth, let him proceed to it in a direct way, (d) and neither feign any thing, nor admit any thing that is feign'd, by another, for no kind of Fiction beſeemeth Profeſſors of Truth. Neither is that perpetual Irony of (e) *Socrates* to be approved, whereby he extolled to the Skies *Protagoras*, *Hippias*, *Prodicus*, *Gorgias*, and the reſt, but pretended himſelf rude and ignorant of all things.

(f) How much leſs was it becoming a (g) Philoſopher to have feign'd that Fable concerning *Erus Armenius*: For why (if he had an intent to teach us the knowledge of Celeftial things, and the diſpoſition of Souls,) did he not perform this by naked plain inſtruction, but rather choſe to introduce a Perſon; by which carriage the newneſs of the Invention, and the formal Scene of a Fiction, repreſented on the Stage, contaminated the very way of ſeeking Truth with a Falſhood?

For this reaſon (b) a Wiſe Man will neither hearken to the Fables of Poets, nor will himſelf labour in compoling fabulous Poems; nay rather, (i) he will have an averſion from the juggling tricks and ſophiſtications of Orators: And as he exacts no more from Grammar than Congruity, ſo neither will he exact more from Rhetorick than Perſpicuity of Speech, but will uſe a plain familiar Style; whether he profeſs to Teach or Write Books, or explicate to the multitude any thing already written, he will be wary that he do it not Panegerycally and Hyperbolically.

But ſeeing that of Philoſophers there are ſome, who aſſert nothing of Truth, but doubt of all things, others, who imagine they know all things,

A a a a

and

and assert without any distinction: A wise Man ought not to behave himself so, as that he assert not all, but (k) only maintain some positive Maxims which are indisputable.

(k) Laert.

For when there are divers ways whereby some things may be performed, as the Eclipses of the Stars, their Rising, Setting, and other Superior things, so to approve one way as to disapprove the rest, is certainly ridiculous. But when we speak of things that cannot be any way but one, (such as are these Maxims) *Of nothing is made nothing; the Universe consists of Body and Vacuum; The Principles of things are indivisible*, and the like; then it is very absurd not to adhere firmly to them.

Hence, it is proper for a Wise Man to maintain both the manifold ways in those, and the one single way in these, and not to stagger nor recede from Science once obtained; not like those, who, as if prescribed by a Law, Philosophize concerning Nature, not in such manner as the things themselves require; but go out of the right way and run into Fables; never considering that to vent, or vainly boast our own Opinions, conduceth nothing to happy Life, but disturbeth the Mind.

(l) Senec. Epist.

Now whereas, (l) the principal parts of Philosophy are held to be Two; One *Physick*, consisting in contemplation of Nature; the other *Ethick*, which treats of directing of Manners in order to Happy Life, it is manifest, either that *Ethick* comprehends all Philosophy, or that *Physick* comes to be a part therefore; only inasmuch as it conduceth to Happy Life.

(m) Laert.

For (m) if those things which we suspect and dread from the Superior Bodies, and even from death it self, breed no disturbance in us, as things unconcerning our condition; if also we could sufficiently comprehend what are the

just bounds of our Desires, and to what degree the Grief which springs from them is to be asswaged, there were no need of Physiology, or the explication of Nature.

But because (n) it is not possible we should arrive at so great a Good, without having first surveyed the nature of things; but, (o) as Children in the dark tremble, and are afraid of every thing; so we miserably groping in the darkness of Ignorance, fear things that are fabulous, and no more to be dreaded than those which Children fear in the dark, and fancy to themselves will happen. It is therefore necessary, that this terror and darkness of the Mind be dispelled, not by the beams of the Sun, but by impressions from Nature and Reason, that is by Physiology. Whence all Physick is to be esteemed a part of Philosophy.

Dialectick, which some add as a third Part, is to be rejected, because as ordinarily taught it doth nothing but beget thorny Questions, being an empty bubbling and Forge of Cavils. Moreover, because it is superfluous to that end which they propose, that is, to the Perception and Dijudication of the Reasons of Naturalists: For there needs no more thereto, than, like the natural Philosophers themselves, to use terms ordinary and perspicuous.

If, besides this, there may seem any thing of use, it can be nothing but a collection of some few *Canons* or *Rules both concerning terms*, and the Criteries whereby we use to dijudicate.

Thus may this short Canonick, or Treatise of Rules, serve instead of a laborious and prolix *Dialectick*, and be reputed either a distinct part of Philosophy (though least considerable,) Or, (p) an addition to *Physick*, by way of Introduction.

(p) Senec. Epist. 89.

THE

The First Part

O F

PHILOSOPHY.

CANONICK of the CRITERIES.

(1) Laert. **F**Orasmuch as (a) every question in Philosophy is either of the Thing or of the word, to Solution whereof many Canons may be given; hence the First part of Philosophy which compriseth them, may be termed *Canonick*.

(b) Laert. But because, of the Word, nothing more is sought then the Use or *Signification*; but of the Thing, the Truth, which is of an abstruse Nature; therefore we will, in the Second place, comprehend in a few Canons all that belongs to the use of the Words: But in the first place lay down those of Truth, and its Criteries (which in number exceed the other,) premising some few Notes concerning them.

CHAP. I.

Of Truth and its Criteries.

First then Truth is Twofold, one of *Existence*, the other of *Enunciation* or Judgment.

Truth of *Existence* is that, whereby every thing which exists in the nature of things, is that very thing which it is, and no other. Whence it comes to pass, that there is no Falsity opposite to this Truth (for *Orichalcum*, for example, is not false Gold, but true *Orichalcum*,) and therefore it is all one, whether we say a thing is *Existent*, or *True*.

Truth of *Enunciation*, or Judgment, is nothing else but a conformity of an Enunciation pronounced by the Mouth, or a Judgment made in the Mind, with the thing Enunciated or Judged.

This is that Truth to which Falshood is opposite; for as (b) it is true that the thing is so as it is said to be, so is it false that it is not so as it is said to be.

(c) Cic. de fato. As for that which they call a future Contingent, (c) those Disjunctions which are made of Contraries (or rather those Complexions which are made by disjunctive Particles.) are true; as, if we should say, (d) Either *Hermachus* will live to Morrow, or will not live; but (e) neither of the parts in this disjunctive Proposition, taken singly, is true: for neither is there any necessity in Nature, that *Hermachus* shall live to Morrow; nor, on the contrary, that he shall not live.

Moreover, because as the thing, whose Truth is sought, belongs either to Speculation only, or to Action. (the first of which appertains to Physick, the later to Ethick;) we must for

this reason have a Criterie, or instrument of Judging, whereby it may be examined, judged, and discerned, in order to both these.

But forasmuch as natural things affect the *Sense* or *Intellect*, and moral things the *Appetite* or *Will*; For this reason, Criteries are to be taken from both these.

From the *Sense*, nothing can be taken more then its Function, Sensation, which likewise is called *Sense*.

From the *Intellect*, forasmuch as besides the Function which it hath, whilst like the *Sense* it contemplateth the thing, as if it were present and apparent, (whence the perception of a things appearing, which appeareth to be as well to the *Intellect*, as to the *Sense*, is called a *Phantasie*, or *Appearance*;) forasmuch, I say, as besides this Function, it is proper to the *Intellect* to ratiocinate or discourse; there is therefore required a *Prænotion* or *Anticipation*, by looking upon which, something may be inferred.

Lastly, From the *Will* or *Appetite*, whose Property it is to pursue or shun something, nothing else can be taken, but the Affection or Passion itself; and that either *Allective*, as Pleasure; or *Aversive*, as Pain or Grief.

(f) There are therefore in all three Criteries; *Sense*, or Sensation; *Prænotion*, or Anticipation; and Affection, or Passion. Concerning each of these, some Canons are to be prescribed. (f) Laert. Cic. Acad. 4.

CHAP. II.

(a) Canons of Sense, the First Criterie.

TO begin with the Canons which concern *Sense*; of these there may be laid down Four.

CANON I.

(b) Sense is never deceived; and therefore every Sensation, and every Perception, of an Appearance is true.

This is proved, First, because (c) 'All Sense is void of Ratiocination, and wholly incapable of Reminiscence. For neither being moved by itself, nor by any other, is it able to add or detract any thing; or to joyn or disjoyn by enunciating or concluding, so as thereby it might think any thing, and be mistaken in that Thought. The *Intellect* indeed can do this, but

(a) Quales Epicurus videtur posse instituisse; collecti by Gassendus, ne Canonica censetur id nomen habere jure

adepta. p. 157.

(b) From Laertius and Plutarch adv. Col.

(c) Laert.

(d) *Sext. Emp.* but the Sense cannot, (d) whose property it is only, to apprehend that which is present, and move it; as the sight, colour presented to it: but not to discern, that what is here presented is one thing; what there, another. Now where there is a bare apprehension, not pronouncing any thing, there is no error or falshood.

(e) *Laert.* Next, because (e) 'there is nothing that can 'refel or convince the Senses of Falshood, (for 'neither can Sense of a like kind refel Sense of 'a like kind; as, the sight of the Right Eye 'the sight of the Left, or the sight of *Plato* the 'sight of *Socrates*; and this, by reason of the 'equality of their credits) or that there is 'the same reason for both. For a pur-blind Man doth not less see that which he sees, than *Lucius* seeth that which he seeth. 'Neither 'can that which is of an unlike kind refel that 'which is of an unlike kind, as the Sight the Hearing, and the Taste the Smelling; 'because they have different objects, and serve 'not to give judgment of the same things. Neither can one sensation of the same Sense refel 'another, because there is not any sensation 'wherewith we are not affected; and to which, 'whilst we are affected with it, we do not adhere, and assent: as whilst we see a Staff one while strait, out of the Water; another time, part under Water, crooked, for we cannot by any means see it crooked in the former condition, or strait in the later. Lastly, 'neither 'can Reason or Ratiocination refel the Senses; 'because all Ratiocination depends upon previous Senses, and it is necessary the Senses first 'be true, before the reason which is founded on 'them can be true.

(f) *Laert.* This is confirmed; forasmuch as Sense is the first of the Criteries, to which we may appeal from the rest, but itself is self-evident, and of manifest truth. For (f) if we say every Sense is deceived, you will want a Criterie to determine and make good even that very saying upon any particular Sense; or, (g) if some one only, you will entangle yourself in an intricate Dispute, when you shall be demanded, Which Sense, how, and when it is deceived, or not deceived? So as the Controversie not being determinable, you must necessarily be deprived of all Criterie. Whence may be inferred, that, if any appearance to Sense be false, nothing can be perceived, or, (to express it in other terms) unless all appearances and bare preceptions of a thing be true, there were no credit, constancy, and judgment of truth. For, (h) 'they who 'alledge the contradiction of appearances one 'with another, can never prove even this contradiction of them, or, that some are true, 'others false; they cannot prove it by any 'thing that is apparent, for the Question is of 'things apparent; nor by any thing unapparent, 'for that which is unapparent is to be demonstrated by something else that is apparent.

(i) *Lucr. lib. 4.* Again, this is confirmed; because, taking away the certainty of the Senses, and by that means the genuine knowledge of things, we take away all rule of Life and Action. (i) For as in a Building, if the first Rule be amiss, the Square untrue, the Plummert faulty, all things must necessarily be defective, and awry, and disproportioned; so must all things in life be

preposterous, and full of trouble and confusion, if that which is to be esteemed, as it were, the first Rule, Square, and Plummert, for the discerning things good and bad, done or not to be done, be unsincere or preverse, that is, if it want the certainty which is, as it were, its rectitude. Whence it cometh to pass, that though Reason (for example,) cannot explain the cause why things near at hand are square, but seem round afar off; yet is it better to hesitate and alledge some wrong cause, rather than to overthrow the first faith and foundations whereon the constancy and security of life is so grounded, that unless you dare credit Sense, you will not have any way to shun precipitation and destruction.

Thirdly, (k) 'Because the truth of the Sense (k) *Laert.* 'ses is manifest even from this, in that their 'functions exist in nature, or really and truly 'are. For that we see and hear, is as truly something indeed existing, as our very feeling pain; 'and there is no difference (as even now we 'said,) between saying, a thing is existent, and 'true.

To speak more fully, (l) 'As the first Affections, Pleasure and Pain, depend upon some (l) *Sext. Emp. Adv. Log.* 'Causes which produce them, and are by reason of those Causes existent in Nature, (that 'is, Pleasure depends on pleasant things, Pain on 'painful, and it neither cometh to pass, that, 'what produceth Pleasure is not pleasant, nor 'that what causeth Pain is not painful, but that 'which produceth Pleasure, must necessarily be 'pleasant; that which Pain, painful and offensive to Nature,) in like manner, as to the affections of the appearances produced in us, 'whatsoever is the efficient Cause of them, is 'undoubtedly such as makes this appearance; 'and being such, it cannot come to pass, that 'it can be any other than such as that is conceived to be, which makes this appearance: 'The same is to be conceived of all the rest in 'particular, for that which is visible not only 'seems visible, but is such as it seems; and that 'which is audible, not only seems audible, but 'is indeed such, and so of the rest: Wherefore 'all appearances are true, and conformable to 'Reason.

(m) 'Hence it is manifest, that the Phantasies even of those who doat and dream, are, (m) *Laert.* 'for this Reason, conceived to be true, for that 'they truly and really exist, seeing that they 'move the Faculty, whereas, that which is not 'cannot move any thing. So that there is a necessity in Nature, that the species of things which are received in the Intellect, or Imagination, being in this manner moved, mingled, and disturbed, that such Phantasies cannot but be, whatsoever Opinion follows them, whereby things are judged to be such in themselves, of which we are to speak next.

C A N O N 2.

(n) Opinion follows upon Sense, and is super-added to Sensation, and capable of Truth or Falshood. (n) *From Lucr.*

This is proved, because when a Tower (for example) appeareth round to the Eye, the Sense indeed is true, for that it is really affected with the

the *species* of roundness, which *species* is truly such, and hath a necessary cause for which it is such, at such a distance; and withal it is not deceived, for it does not affirm that the Tower is such, but only behaves itself passively, receiving the *species*, and barely reporting that which appeareth to it. But Opinion, or the Mind, whose Office it is to conceive or judge, inasmuch as it adds, as it were from itself, that what appeareth to the Sense is a Tower, or that the Tower really and in itself, is round; Opinion, I say is that which may be true or false.

(c) Sext. Emp.
adv. Log. 1.

Whence may be inferred, that (c) 'all Phantasies, (or Sensations,) whereby *Phænomena*'s (things apparent,) are perceived, are true, but Opinions admit a difference; for some are true, others false, inasmuch as they are our own Judgements superadded to the Appearances; and we judge some things aright, others amiss, by reason that something is added, and imputed to the Appearances, or something detracted from them: And generally Sense which is incapable of Ratiocination charged with falsehood.

But some are deceived by the diversity of those Appearances, which are derived from the same sensible Object, as in a thing visible, (for example) according as the Object seemeth to be either of another Colour, or of another Figure, or some other way changed; for they conceive, that of contrary Appearances, one must necessarily be true, and the other which is opposite thereto false. Which certainly is very foolish, and proper to such men as consider not the nature of things. For (to continue our instance of things visible,) it is not the whole Solid, or the whole Solidity of the Body which we see, but the colour of the soild Body. Now of the colour, that which is in a soild Body, and appeareth in those things which are seen nigh at hand, is one; that which is without the soild Body, as a *Species*, or Image flowing from it, and is received into places situate one beyond another, such as appeareth in those things which are beheld at a great distance, is another. This later being changed in the intermedite space, and assuming a peculiar Figure, exhibits such an appearance as itself indeed is.

Whence, neither the Sound which is in the Brass that is struck, nor the Voice which is in the Mouth of him who cryeth aloud, is heard, but that sound of Voice which lights upon our Sense; for the same thing cannot be in two distant Subjects. And as no Man saith, that he hears falsely, who perceiveth the sound to be but small at distance, because coming nigher, he perceiveth it as if it were greater, so neither can we say, that the Sight is deceived, for that afar off it seeth a Tower, little and round; near, great and square; but rather that it is true. For when the sensible Object appeareth to it little, and of such a Figure, it is in that place little indeed, and of such a Figure, the extremities of those Images being broke off, whilst they are conveyed through the Air and thereupon coming into the Eye in a lesser Angle. And again, when it appeareth great and of another Figure, there it is great and of another Figure, it not being the

same in both places; for here the extremities of the Images are more entire, and come into the Eye in a greater Angle: but it is a great mistake to think, that it is the same thing which appeareth to Sight, and affecteth the Eye near and afar off.

(p) Neither can we say, that the Sight is deceived, when we see a Shadow in the Sunshine to move, to follow our Footsteps, and imitate our Gestures. For Shadow being but Air deprived of Light, and the Earth, as we go, being now here, now there, successively deprived of the Sun's Light, and successively recovering that whereof it was deprived, it comes to pass that the Shadow seems to change place, and to follow us; but the Eyes are not therefore deceived, it being only their office to see the Light, and to see the Shadow in whatsoever place it is. But to affirm, that the very Light or Shadow which is here, is the same, or distinct from that which even now was there, this belongs not to them, but to the Mind, whose office it is to determine and judge. So that whatsoever of falsity happens to be here, it is to be attributed to Opinion, not to Sense.

(p) Lucret.

(q) The same Answer may be given to a thousand other Objections, as of a Ship which seems to stand still, and the Land to move; of the Stars, which seem to rest; of Mountains far asunder, which yet seem to be nigh; of Boys, who, having made themselves giddy by turning, think the Roof itself runs round; of the Sun appearing to be near the Mountains, when as so great spaces divide them; of the appearance of a Space under Water, as large, as from above it to the Sky; of a River, which to those who pass over it, seemeth to flow back towards the Spring; of a Gallery, which seems narrow at the further end; of the Sun, who seems to rise out of the Water, and to go down into the Water; of Oars, which seem crooked or broken; of Stars in the Night, which seem to glide over the Clouds; of Things, which, by drawing the Eye on one side, double.

(q) Lucret. loc. cit.

C A N O N 3.

(r) All Opinion attested, or not contradicted by the evidence of Sense, is True.

(r) From Sext. Emp.

Evidence of Sense, I here call that kind of Sensation, or Appearance, which, all things obstructive to Judgment being removed, as distance, motion, indisposition of the Medium, and the like, cannot be contradicted. Whence to the Question, Whether a thing be such as it appears? We ought not to give a sudden Answer, but to observe (s) that which I call *μερόμενον* *expectable*; in regard that we must stay, until the thing be fully examined and sifted out, according to all the ways that it can possibly happen.

(s) Lucr.

(t) Attestation I call Comprehension, made by Evidence, that the thing conceivable is such as we before conceived it; as Plato coming towards me, from afar off; I conjecture, and think, as far as I can guess at such a distance, that it is Plato; but when he draws nigher, and the distance is taken away, by the evidence of the thing, then, is there made an Attestation that it is Plato.

(t) Sext. Emp.

Not-

Not contradiction is said to be the finding out of a thing not manifest, which we suppose, and conceive by reflecting on something manifest or evident; as when I say, there is *Vacuum*, which indeed is unmanifest, I am induced there-to by something manifest, that is, by Motion, for if there were no *Vacuum*, there would be no Motion, seeing the Body that should be moved, would not have any place to go into, all things being full, and close pack'd together. Whence that which is apparent or manifest doth not contradict that which is unmanifest, since indeed there is Motion.

The Attestation and Not-contradiction is the Criteries, whereby a thing is proved to be true.

C A N O N 4.

(a) Out of
Sext. Empir.

(a) *An Opinion, contradicted or not attested by evidence of Sense, is false.*

(b) Sext. *Ibid.*

In which words, (b) Contradiction is something opposite to Not-attestation, it being the joint destruction of a manifest thing together with another supposed unmanifest; as for instance, Some affirm, there is not *Vacuum*; but together with this supposition must be subverted a thing manifest, viz. Motion. For if there be no *Vacuum*, Motion likewise cannot be, as we have already shewed.

In like manner, Contradiction is opposed to Attestation; for it is a subversion, whereby it appeareth that the thing conceivable is not such as it was conceived in the opinion; as a Man coming towards us from afar off, we at that distance guess he is *Plato*, but the distance being taken away, it appeareth to us by evidence that he is not *Plato*. This is contradiction, for the thing manifest contradicts the preconceived Opinion. Thus an Attestation and Not-contradiction is the Criterium, by which a thing is proved to be true; so Contradiction and Not-attestation is the Criterium by which a thing is evinced to be false; Evidence being the Basis and Foundation upon which all right Opinion of Truth and False is grounded.

To omit, that Evidence is sometimes had by one Sense, and about some proper Sensible; sometimes by many, as when the Sensible is common, as Magnitude and Figure, Distance and Position, Rest and Motion, and such like, which may be perceived both by the Sight and Touch, and become manifest, if not to one Sense, at least to the other. Whereupon it sometimes happens, that by reason of several Qualities, several Senses may be summoned, that the Evidence which cannot be got by one, may be obtained by the other; as when we cannot discern by Sight, whether the Bread that is offer'd us be true or counterfeit, we may summon our Taste, whereby it will evidently appear, which of the two it is.

But this I advise, that, after we have exactly considered all, we adhere to those things which are obvious to us; using our Senses, either the common about common Sensibles, or the proper about the proper. Since we must hold generally to all Evidence which is freely presented to us by every Criterium, but especially by this: and tenaciously stick to it, as to an infallible Princi-

ple, lest either the Criteries which are established by Evidence be overthrown, or Error, being established as strong as Truth, turn all things upside down.

I need not repeat or give particular Advice, what is to be done about the Instance alledged of a Tower, which at distance seems Round, but nearer, Square: for, from what is deduced it is manifest, that before we assert any thing, we must expect or pause, and approach neither, and examine and learn, whether the Tower be such when we come at it, as it appeared far off.

I shall only give this general Rule. That unless (the truth of the Senses being preserved after the manner aforesaid,) you distinguish that which is opinable or conceivable into that which is expectable or requireth time, before it be asserted what it is, as being not yet duly perceived, and into that which is present and proposed to us, and thoroughly examined, it will come to pass, that you will perpetually be disquieted with deceitful or vain Opinions. But if, when the things opinable are agitated in your Mind, you firmly esteem all that is here called expectable as such indeed, and pass not lightly by it, as if that which is false, not having the Attestation of any Evidence, were firm and allowable; in this Case you will behave your self as one that is cautious of all Ambiguity, and solicitously takes heed to every Judgment, which is rightly or falsely passed of an opinable thing.

C H A P. III.

Canons of Prænotion or Anticipation; the Second Criterium.

OF Prænotion or Anticipation may be given Four Canons;

C A N O N I.

(a) *All Anticipation or Prænotion, which is in (a) Out of the Mind, depends on the Senses, either by Incursion, or Proportion, or Similitude, or Composition,*

I mean, that the Notion (or Idea, and Form as it were, which being anticipated is called Prænotion) is begotten in the Mind by *Incursion* (or Incidence,) when the thing incurreth into the Sense directly and by itself, as a man just before our eyes. By *Proportion*, when the Prænotion is amplified or extenuated, but the Number, Situation and Figure of the Parts, with a convenient bigness of each, is retain'd; as when having seen a Man of due magnitude, we from thence form in our mind the *Species* of a Giant, by Amplification; or of a Pigmy, by Extenuation. By *Similitude*, when according to a thing first perceived by the Sense, we fancy another like it; as when we imagine a City unseen, like to some that we have seen. Lastly, by *Composition*, when we put as it were into one the distinct Notions which we have of two or more things; as when we so unite the Notions of a Horse and a Man, as that the Notion of a Centaure ariseth out them, but (b) not without some assistance of Ratiocination.

CANON

C A N O N 2.

Anticipation is the very Notion, and (as it were) Definition of the Thing; without which, we cannot Enquire, Doubt, Think, nor so much as Name any Thing.

For by the word *Anticipation*, or *Prænotion*, I understand a *Comprehension of the Mind*, or a *suitable Opinion or Understanding fixed in the Mind*; and, as it were, a certain *Memory or Monument of that Thing which hath often appeared from without*, (which the Mind hath represented in itself after some one of the forementioned manners :) Such for example is the *Idea, or Form and Species, reflecting upon which, we say to our selves that Thing is Man*. For as soon as ever we hear this word *Man* pronounced, immediately the *Image of a Man* is understood, according to the *Anticipation* formed in the *Mind* by the foregoing *Sensations*.

Wherefore that Thing which is primarily and chiefly meant by and coucht under every word, and so apprehended by the Mind, is something perspicuous and manifest : For when we enquire after any thing, or doubt of it, or think something; we should not do it, unless we already had a *Prænotion* of that thing; as when we enquire, whether that which appeareth afar off, be an Horse or an Oxe, it is requisite that we should first have seen and known by *Anticipation* the Figure of an Horse and Oxe. Indeed we could not so much as name any thing, unless we first had some image thereof known by *Anticipation*.

Hence it comes to pass, that, if it be demanded what any thing is, we define or describe it in such manner as it is, according to the *Anticipation* thereof which we have in our Mind. Neither do we thus only, being demanded what some singular thing is, as what *Plato* is, but also what an Universal is, as *Man*, not this or that, but considered in general; this is brought to pass according as the Mind, having seen many Singulars, and set apart their several Differences, formeth and imprinteth in herself the *Anticipation* of that which is common to them all, as an Universal Notion; reflecting upon which, we say, *Man* (for example) is something animate, and endued with such a Form.

C A N O N 3.

Anticipation is the Principle in all Discourse, as being that to which we have regard, when we infer that one is the same or divers, conjoined with or disjoined from another.

(d) Laert.

For, (d) whilst we conceive any thing, either by *Enuciation* or *Ratiocination*, it depends upon something first evident, unto which thing we having regard, and referring our thought, infer that thing of which the Question is, to be such, or not to be such; that is, the same, or another; coherent, or not coherent with it. Thus, if we are to prove that this thing which we behold is a *Man*, we so look back upon the *Prænotion* which we have of *Man*, as that without any stop we say, *Man* is something animate and endued with such a Form; this that I see, is animate and endued with such a Form,

therefore this that I see is *Man*; Or, it is not animate, nor endued with such a Form, therefore it is not *Man*.

But it is not necessary to confirm all things with exquisite Reasons or Arguments, and scrupulous forms of Reasoning, which are cried up by the *Dialecticks*; For there is this difference betwixt an Argument and the Conclusion of the Reason, and between a slender *Animadversion* and an *Admonition*; that in one, some occult, and (as it were,) involved things are unfolded and opened; in the other, things ready and open are judged. But where there are such *Anticipations* as ought to be, then what will follow or not follow from them, or what agrees or disagrees with them, is perspicuously discerned, and naturally inferred, without any Artifice, or *Dialectick Construction*; wherefore we need only take care, that the *Anticipation* which we have of Things be clear and distinct.

C A N O N 4.

That which is Unmanifest ought to be demonstrated out of the Anticipation of a Thing Manifest.

This is the same we said even now, That the *Anticipations* of Things from which we infer Something, and thinking upon which we make *Sumptions* or *Propositions*, which are *Maxims* or *Principles*, by which that which is inferred or concluded is conceived to be demonstrated, be perspicuous and manifest. For, (e) *Demonstration is a Speech, which collecting by granted Sumptions (or Propositions,) brings to light a Truth not manifest before.* (e) Sext. Emp. Thus, to demonstrate that there is *Vacuum*, which is not manifest, supposing the *Anticipation* of *Vacuum*, and the *Anticipation* of a manifest thing (*Motion*,) these *Sumptions* are premised, If there is *Motion*, there is *Vacuum*, but there is *Motion*, and then is inferred, therefore there is also *Vacuum*.

In this place, *Motion* is taken for the Argument, *Aedium*, or *Sign*, which properly ought to be a sensible thing : For the sense is that, according to which it is necessary to make a conjecture by *Ratiocination*, ultimately to that which is unmanifest, although such a *Sign* or *Medium* hath not always a necessary Connexion with that which is inferred, but is sometimes only contingent, or probable, and might be otherwise.

Of this kind are many, from which we argue chiefly in superior things, those being such as may be brought to pass, not one way only, but many, as was hinted formerly.

Hither also may be (f) referred that which I use to term *συνουσία*, *Equivalence*, by which it is inferred, that one of the contraries being, the other also must be : and when I argue thus, if the multitudes of *Mortals* be so great, that of *Immortals* is no less; and if those things which destroy be innumerable, those which preserve ought also to be innumerable.

Against those who deny there is any *Demonstration*, may be brought this Argument : (g) Either you understand what *Demonstration* is, or you understand in not : if you understand and have the Notion thereof, then there is *Demonstration*.

B B B B

stration; but if you understand it not, Why do you talk of that, whereof you have not any knowledg?

(b) *Lucret. lib.*

(b) They who take away the Credit of the Senses, and profess that nothing can be known being in the same Ranks, do they not, when they confess that they know nothing, imply they know not this very thing, Whether any thing can be known? We should not therefore contend against them, that they walk backwards upon their Head: Yet if they affirm they do, and I thereupon grant, that this is known by them, I have a fair occasion to ask them, how, since before they saw nothing true in the things themselves, they came to understand what it was to know, and what to be ignorant?

CHAP. IV.

Canons of Affection or Passion; the Third Criterie.

Lastly, concerning Affection (or Passion,) which is, as I said, Pleasure and Pain, there may be Four (a) Canons.

(a) Out of *La-
ertius.*

CANON 1.

All Pleasure, which hath no Pain joined with it, is to be embraced.

CANON 2.

All Pain, which hath no Pleasure joined with it, is to be shunned.

CANON 3.

All Pleasure, which either hindreth a greater Pleasure, or procureth a greater Pain, is to be shunned.

CANON 4.

All Pain, which either putteth away a greater Pain, or procureth a greater Pleasure, is to be embraced.

Of these we shall speak more largely in the *Ethicks*. In the mean time, I shall give this general Advertisment concerning Pleasure: Pleasure is desirable of it self, because it is Pleasure; Grief or Pain is alwayes abhorred and avoidable, because it is Pain; whence I conceive, a wise Man will have an Eye to this exchange or recompence, that he shun Pleasure, if it procure a Pain greater than it self; and undergo Pain, if it produce a greater Pleasure. As for my own part, I should forsake Pleasure, and covet Pain, either if Remorse were annexed

to the Pleasure, or a lesser Pain might be taken instead of a greater.

CHAP. V.

Canons concerning the use of Words.

I Shall add something concerning the use of Words, (which I design'd to speak of last) and especially that which concerns Discourse; for which, two Canons may seem sufficient, one for the Speaker, the other for the Hearer: They are these;

CANON 1.

When thou speakest, make use of Words Common and Perspicuous, lest either thy Meaning be not known, or thou unnecessarily waste the time in Explication.

CANON 2.

When thou hearest, endeavour to comprehend the Power and Meaning of the Words, lest either their Obscurity keep thee in Ignorance, or their Ambiguity lead thee into Errour,

Above all, (a) 'we must know what Things (a) *Laert.* 'the Words signifie; that we may have something, reflecting upon which, we may safely discern whatsoever we either conceive, or seek, or doubt; otherwise, if all things should escape us undetermined, they who would demonstrate any thing to us, will proceed to infinite, and we ourselves gain nothing by our Discourse, but Words and empty Sounds. For it is necessary, we have regard to the Notion and primary Signification of every Word, and that we need not any Demonstration to understand that thing, in case we can pitch upon any thing, to which we may refer that point, about which our Enquiry, Doubt, or Opinion are busied.

Hence it is, that the Method of enquiring after Truth, which is performed by a certain orderly Procedure, ought first to prescribe certain Rules, by which that Affair may be performed, that so the Discourser's may agree, what it is concerning which they discourse. So that if any Man shall not first agree to this, but hath a mind rather to cavil and trifle in wordish Equivocation, he is not to be discoursed with, or still to be prest to explain himself, what 'tis he would be at; for by this means his Juggling will be discovered, and his Cavils will solve themselves: Nor will he be able to intangle his Adversary, but rather discover himself a ridiculous Sophister.

T H E

The Second Part

OF

PHILOSOPHY.

PHYSICK; or of, NATURE.

WE now come to *Physick*: Which I usually term *Physiology*, for that it is a Discourse and Ratiocination about the nature of things, in the contemplation whereof it is wholly employ'd.

We have already said our scope to be, that, through Perspection of the nature of things, nothing of disturbance, either from Meteors, or from Death, or from the unknown ends of Desires, or any other way, may arise unto us. Now the things which this Contemplation fathoms being so many, and so various, it seems very profitable, that (some being engag'd in the more profound Study of the liberal Disciplines, or, through some other business, not having leisure to know every thing particularly and exactly,) we have ready at least (a) 'some proper compendium of the whole Science of Nature, that 'whenever they will apply their Minds to the 'chief arguments of things, they may be assistent 'to themselves, according to the measure of their 'Knowledg, in contemplation of Nature.

'Besides, to those who have made a greater progress in the speculation of all things, whereof Physiology treateth, it is very useful, by some 'compendious Idea, to preserve the memory 'of the things themselves digested under heads: 'For it often happens, that we need a general 'inspection of things but not a particular disquisition. This way therefore is to be observed, and this kind of study continually used in 'exercising the Memory, that our attention to 'things may be constant and ready, and in the 'forms of things or notions, generally comprehended and imprinted in the Mind, and elsewhere thoroughly examined, according to the 'first Principles, and the terms whereby they 'are explained; if any thing be particularly inquired, in may be found, for where such a constancy and readiness is gotten, and the Mind is 'endued with a general and exquisite Information, we are able to understand of a sudden 'whatsoever we please. I add, according to the 'words; Forasmuch as it not possible, that a coherent sum of general heads can be frequently 'repeated by Heart, unless it so contain every 'thing, as that it may be explicated in few 'words, even if any thing come to be examined particularly.

'Hence it is, this course being most profitable 'to those, who are inclined and addicted to Physiology, that I would advise them therein, (espe-

'cially if they enjoy a happy Life,) that they 'frame to themselves some such Epitome, and 'Information by general heads. But if they are not able of themselves, that they get one elsewhere, of which kind we have freely composed, for the benefit of the studious; hoping, that if what we have laid down be exactly remembred, as much as possible, although a Man runs not out into all particular Arguments that may be discussed, yet shall he obtain a copious knowledge of Physiology, incomparably beyond other Men; for he will of himself understand many things in the more general work, and, committing those to Memory, will help himself, and continually profit.

For these are of such a kind, that such as have made no little disquisition of particulars, and addicted themselves perfectly to these contemplations, may thereby be enabled to raise and compleat more dissertations of all Nature; and whosoever of them are thoroughly vers'd in these, revolving them raptly within themselves, may be able in a moment, and quietly, to over-run whatsoever is most considerable in Physiology.

But not to stay longer in the entry, there being so many (as I say,) and various things contained in Physiology, it will be convenient to divide them into some principal Sections, which may afterwards be pursued particularly; and every thing which especially belongs to any one of them, may be referred to it.

These Sections may be four. The first, of the *Universe*, or the nature of things which compriseth this World, and all other things that are beyond it. The Second, of the *World*, this wherein we are, and by which we may conjecture of the innumerable others. The Third, of *Inferior things*, the Earth, to which we adhere, and of the things in it. The Fourth, of *Sublime things*, which are seen and produced above the Earth, and upwards from it.

S E C T. I.

Of the Universe, or the Nature of things.

TO begin then with the *Universe*, it is manifest, that it is so named, forasmuch as it containeth all things, even others besides this World; Whence it is also termed, the *Whole*, and, the *All*; And we usually call it, the Sum of things, and the Nature of things.

Bbb b 2

We

We must first speak generally of the things where the Universe consists; Next, of what the so many things in the Universe are made; Thirdly, By what they are made; Fourthly, What kind they are of, when made; Fifthly, How they are made; Lastly, How they perish.

C H A P. I.

That the Universe consists of Body, and Vacuum, or Place.

(a) Laert.
(b) Laert.

First therefore, (a) The Universe consists of Body and Vacuum (b); neither can there be conceived any third Nature besides these.

(c) Sext. Emp.

Now, (c) Body is understood by conceiving a certain vast heap (as it were) of Magnitude (or Bigness,) likewise of Figure, Resistance, (that is Solidity, and Impenetrability) and gravity; withall, to be such, as it only can touch and be touched.

(d) Laert.

(d) Emptiness, or Vacuum; which is opposed to Body, and only or properly, and in it self, is incorporeal, is understood by Negation of these, and chiefly from being of an intangible Nature, and void of all Solidity, and can suffer nor act any thing, but only afford a most free motion to Bodies passing through it.

(e) Plut. Plac.
1.20.

For this is (e) that Nature which being destitute of Body, is called Vacuum; taken up by a Body, Place; passed through by a Body, Region, considered as diffused, Interval or Space.

(f) Laert.

(f) That there are Bodies in the Universe, Sense attests; whence it is necessary to deduce Conjecture from other Principles, to that which is unmanifest, as I formerly touched. Certainly, all these things which we behold, which we touch, which we turn up and down, which we ourselves are, are nothing but Bodies.

But that there is Vacuum also, is hence manifest, that if it were not in Nature, Bodies would neither have where to be, nor any way to perform their Motions; whereas that they are moved, is evident.

(g) Lucr. lib.
1.

(g) Doubtless if all were full, and the matter of things crowded, as it were, together, it could not be, but that all things must be immoveable; for neither would any thing be moved, but it must thrust forward all things; nor would there be place left, whereinto any things might be thrust. For whereas some answer, that Fishes therefore can move, because they leave a place behind them, into which the Water, being thrust forward, and giving place, are received; they observe not, that the first impulsion forward could never begin, because there is not yet any place, neither behind, nor beside, whereinto the Water may be received. So as it is necessary, there should be little empty intervals of space within things, especially the fluid, into which the little Particles being driven may be so received, that, by the compression, place may be made, towards which, the impelling Body may be moved forward, and, in the interim, leave place behind, into which the compressed fluid may dilate it self, and, as it were, flow back.

(h) Lucr. lib.
1.

(h) I pass by other Arguments, as, That Thunder or Sound were not able to pass through Walls, nor Fire to penetrate into Iron, Gold, and the rest of Metals; unless in these there were some vacuous little Spaces intermingled. Besides,

forasmuch as Gravity is proper to Bodies, the weight of things could not be made greater or lesser, if it were not according to their having more or less Vacuity intermixed.

Now Vacuum, being incorporeal, is so penetrated by Bodies, whether existing in it, or gliding by it, that it remains unchang'd, and preserves the same Dimensions to which it is adequate. Whence a straight Line, taken in Vacuum, is indeed straight, but not so, that it becomes crooked with the Body which fills it, because Vacuum is neither moveable in whole nor in part.

Whence it comes, that whereas the Notion of place is, to receive the things placed to be coextended with it; not to be moved with it, nor to forsake it; lest either the Body be moved, yet not change place; or change place, yet not be moved: It therefore is only competent to Vacuum, to have the nature of place, forasmuch as it only, both by its corporeal Dimensions, length, breadth, and depth, is coextended with the thing placed in length, breadth, and depth, and exactly adjusted to it. Besides it is so immoveable, that whether the Body come to it, or go from it, or stay in it, it continueth the same and unvariable.

That I said, (i) No third Nature beside can (i) Laert. be conceived, it is for this reason, that whether we take to be conceived comprehensively, (in which manner the things, which, by themselves and directly fall into our knowledge are perceived,) or comparatively to those things which are conceived, (after which manner these things are understood, which are known only by proportion, as was said about Anticipation,) whatsoever it be that is conceived, either it hath some Bulk and Solidity, and so is a Body; or it is void of all Bulk and Solidity, and so it is Vacuum; which is to be understood, in case you conceive it a certain by it-self existent, subsistent, coherent Nature; and not as some adjunct or accident thereof.

For since (k) and Adjunct is a property, (k) Lucr. lib. 1. 2. 450. which cannot be taken from the thing to which it belongs, without destruction of the thing; as Tangibility from Body, Intangibility from Vacuum; and in a more familiar Example, as weight from a Stone, heat from Fire, moisture from Water: But an Accident is that, whose presence or absence violates not the integrity of the Nature, as Liberty and Servitude, Poverty and Riches, War and Peace, &c. Therefore they constitute not some third Nature, distinct from corporeal and incorporeal, but only are as something appertaining to one of these.

C H A P. II.

That the Universe is Infinite, Immoveable, and Immuttable.

Now (a) the Universe, consisting of Vacuum, (a) Laert. and Body, is Infinite; for that which is Finite hath a Bound, that which hath a Bound, is seen from some other thing; or may be seen from out of an interval beyond, or without it. But the Universe is not seen out of any other things beyond it; for there is no Interval, or Space, which it containeth not within it self, otherwise it could not be an Universe, if it did not contain all Space;

Space; therefore neither hath it any Extremity. Now, that which hath no Extremity hath no End, and that which hath no End doubtless is not finite, but Infinite.

(b) *Lucret. 1.* This is confirmed; (b) for if you imagine an Extremity, and suppose some Man placed in it, who with great force, throws a Dart towards it's utmost Surface, the Dart will either go forward, or not, but be forced to stay. If it go forward, there is place beyond, wherefore the Extremity was not there, where we desin'd it. If not, therefore there is something beyond, which hinders the Motion, and so again, the Extremity was not in the fore-designed place.

(c) *Laert. 968.* Moreover, (c) this infinity belonging to the Universe is such, both in the multitude of Bodies, and the magnitude of Vacuum; nay, in Infinites thrusting themselves forward mutually, alternately, or in order. 'For if Vacuum were Infinite, and Bodies Finite, then Bodies, which are in perpetual Motion, (as we shall anon declare,) would rest no where, but be dispersedly carried through the infinite Vacuum, as having nothing to stop them, and restrain them, by various Repercussions. But if the Vacuum were Finite, the Bodies Infinite, then there would not be place large enough for the Infinite Bodies to exist in.

(d) *Laert.* Hence (d) we ought not so to attribute to the Universe, or Infinite Space, the being above or below, as if there were any thing in the Universe highest, or any thing lowest; the former, by conceiving the space over our Head, not to be extended to Infinite; the later, by imagining that which is under our Feet not to be of Infinite extent, as if both that which is above and that which is below, were terminated with some one and the same point, as it happens with us, or the middle of this World, one of its extreame parts being imagin'd highest, the other lowest; for in Infinite, which hath neither extreame nor middle, this cannot be imagin'd.

'Wherefore it is beter to assume some one Motion, which may be understood to proceed upwards into Infinite, and in like manner another which downwards; although that moveable, which from us is carried up towards the places over our Heads, meet a thousand times the Feet of those who are above, and (conceiving other worlds,) think it comes from below; or which from us is carried towards that quarter, which is under our Feet, to the Heads of those who are below us, and who are thence apt to imagin, that it comes from above: Notwithstanding which Imagination of theirs, either of these opposite Motions, taken intirely, is rightly conceived to be of infinite extent.

(e) *Laert.* To these is consentaneous, that (e) the Universe was ever such as it now is, and such as it now is shall ever be, for there is nothing into which, losing the Nature of the Universe, it may be changed; and besides the Universe, which containeth all things, there is nothing, which by assaulling it, can cause an alteration in it.

(f) *Euseb.* Rightly therefore is the Universe esteemed as (f) *immoveable*, there being no place beyond it, into which it may be moved: So also Immutable, forasmuch as it admits neither Decrease nor In-

crease, and is void of Generation and Corruption, and therefore is eternal, not having beginning, nor end of Duration.

And indeed, many things in it are moved and changed, but whatsoever Motions and Mutations you conceive, they bear no proportion, if compared with the immensity of the Universe it self. Nor is therefore the whole Universe either moved into any other place, or changed into any other thing; does it therefore not persevere to be ever the same, which it ever was? For the Motions and Mutations in it were always alike, so as in may be said, that (g) there is nothing new done in the Universe, more than what was already done in the infinity of time. (g) *Euseb. prap.*

CHAP. III.

Of the Divine Nature in the Universe.

BUT before we speak of things in the Universe, which are generated and corrupted, and of the Principles whereof they are made, it is fit to premise, and put, as a By-discourse, a Treatise concerning Divine Nature; as well for the Excellency of that Nature, as for that, although it be of the same with corporeal Nature, yet is it not so much a Body, as a certain thing like a Body, as having nothing common to it with other Bodies, that is, with transitory, or generated, and perishable things. Now it first being usually question'd concerning the Divine Nature, whether there be any in the Universe, yet the thing seems as if it ought not at all to be called in question, forasmuch as Nature herself hath imprinted a Notion of the Gods in our Minds: For what Nation is there, or what kind of Men, which without Learning have not some Prænotion of the Gods?

Wherefore, seeing it is an Opinion not taken up by any Institution, Custom, or Law, but the firm consent of all Men, none excepted, we must necessarily understand, that there are Gods; because we have the knowledg of them ingrafted, or rather innate in us. But that, concerning which the Nature of all men agreeth, must necessarily be true; therefore it is to be acknowledged, that there are Gods.

(a) Indeed men may seem, when they beheld (a) *Lucret.* the course of the Heavens, and the various Seasons of the year, to wheel about, and return in certain order, and were not able to know by what Causes it were performed, to have recurr'd to this Refuge, to attribute all things to the Gods, and make them obey their Beck, placing them withall in Heaven, for that they beheld in Heaven the Revolution of Sun, Moon, and Stars; but how could they attribute these to the Gods, unless they had first known, that there were Gods?

(b) Did they not rather derive a knowledg (b) *Sext. Emp. adv. Math.* of the Gods from the Apparitions of Dreams? certainly, they might by some great Images incurring to them under human Forms, by Dreams, conceive that there are indeed some Gods endued with such a human Form; they might, I say, not so much in Sleep, as when Awake they called to mind, that those excellent Images had appeared to them in Sleep, so

Ma-

(a) *Lucret.*

Majestick of so subtle a composure, and so well proportion'd in shape, conceive that there is no repugnance, nay, that there was a necessity, that somewhere there should be things of like nature with these, capable also of Sense or Understanding, (c) because they fancied them moving their Limbs, and speaking. And those also immortal, because their shape was always present to their apprehensions because their Form remain'd still the same, and was of such grandeur, that they seem'd not easy convincible, but there were such; moreover Blessed, forasmuch as they neither fear death, nor take any pains in effecting their Works.

(d) *Cic. de nat. deor. 1.*

(d) They might also by discourse use that *ισοοQUIA*, or *quivalence*, by which when we treated of the Criteriës, we affirmed it was concluded, that if the multitude of Mortals were so great, that of Immortals was not less, and if those things which destroy be innumerable, those which preserve ought also to be innumerable.

(e) *Cic. de nat. deor. 1.*

(e) Which way soever it came, we have this certainly by Prenotion, That we think the gods are blessed and immortal: 'For the same Nature which gave us information of the gods themselves imprinted also in our Minds, that we esteem them Blessed and Eternal; Which if it be so, our Opinion is truly laid down, (f) 'What is Eternal and Blessed, neither is troubled with any business it self, nor troubles any other; therefore not possessed with Favour or Anger; for all such are weak.

(f) *Lucret.*

And if we sought no further than to Worship the gods piously, and to be free from Superstition, what we have said were sufficient; for the excellent Nature of the gods is worshipped by the Piety of Men, as being Eternal, and most Blessed. For to whatever is excellent, Veneration is due; and all Fear, proceeding from the Power and Anger of the gods, would be expelled; for it is understood, that Anger and Favour are far separate from a Blessed immortal Nature; which being removed, no fears hang over us as to the gods. But for confirmation of this Opinion, the Soul enquires after the Form and the Life, and the action of Mind, and agitation in God.

(*) *Cic. de nat. deor. 1.*

(*) 'As to the Form, Nature partly instructs us, partly Reason; for by Nature, all of us, of all Nations, have no other Form, but Human, of the gods. For what other Forms ever occur to any Man, waking or sleeping? But not to reduce all things to their first Notions, Reason it self declares the same. For seeing it is proper to the most excellent Nature, either because it is Blessed, or because it is Sempiternal, that it be most beautiful, What composition of Limbs, What conformity of Lineaments, What Figure, What Form can be more beautiful, than the Human?

Now if the Figure of Men excelleth the Form of all things Animate, and God is Animate, certainly he is of that Figure which is the most beautiful of all. And forasmuch as it is manifest, that the gods are most Blessed, and none can be Blessed without Virtue, nor Virtue consist without Reason, nor Reason consist in any Figure but that of Man; we must acknowledge, that the gods are of Human Form.

But when I say, that the gods are of the Form

of a Man, and of an animate Being, Do I therefore attribut such a Body to them, as ordinarily Men and animate Beings have? By no means; For 'God is not a thing, as *Plato* says, merely Incorporeal; because what kind of thing that is, cannot be understood, for then he must necessarily want Sense, he must want Prudence, he must want Pleasure; all which we comprehend together with the Notion of the gods. But neither is he therefore a gross Body, no not the most subtle that can be coagmentated of Atoms; but he is altogether a Body of his own kind, which indeed is not seen by Sense, but by the Mind; nor is he of a certain Solidity, nor composed of Number, but consists of Images, perceived by Comparison; and which, compared with those that ordinarily occur, and are called Bodies, may be said 'to be (not Body, but) as before I said, 'resemblance of Body, and (for example) not 'to have Blood, but a certain resemblance of 'Blood.

In the mean time, I must intimate by the way, that (g) he is not such a kind of Body as is co- (g) *Laßan.* agmentated of Atoms, for then he could not be Sempiternal, and upon his Generation would follow Corruption: upon his Concretion, Dissipation, and so he could not be Sempiternal. Thus, there are four things to be esteemed *Eternal* and *Incorruptible*; the *Universe*, which hath no place into which it can fall; *Vacuum*, which cannot be touch'd, nor receive any blow; the *Matter* of things, which unless it did subsist unchanged, those things which are dissolved would go away into nothing; and the *Divine Nature*, which is inconcrete, and, by reason of its Tenuity, cannot be touched nor struck.

Hence one of the Natural Philosophers was in a great error, when he said, That the Nature of the gods is such, as to diffuse, and send forth Images out of it self; for in this manner, somewhat might be so taken out of it, as that it might be admitted dissolvable. But (b) some have mis- (b) *Seneca de benef. 4. 19.* interpreted our meaning, when, upon our admitting many Worlds, and saying, that there are *Intermundia*, that is Intervals between the Worlds, they affirm we place the gods in the *Intermundia*, lest they should receive any injury by the Worlds ruine. For as (i) *Vacuum*, so is (i) *Lucret. 5.* the nature of the gods more subtle, then to fear any harm from Bodies; which if it did fear, in no place were it more to be feared than in the *Intermundia*, when the World should come to be dissolved.

Neither can we design in what places the gods live, seeing that this our World is not a seat worthy of them; but we can only say in general, such as the Poets describe *Olympus*, such are, wheresoever they be, the blessed and quiet Seats of the gods.

(k) *Where Showers not fall, nor Winds unruly blow, (k) Lucret. 3.*
Where neither blasting Frost, nor hoary Snow
Rifle the place; but Heaven is ever bright,
Spreading his Glorious Smiles with cheerful Light.

(l) 'Hereupon it being further demanded, (l) *Cic. de nat. deor. 1.*
'what kind of Life that of the gods is, and what
'state of age they enjoy, it may be answered,
'That certainly, than which nothing can be more
'Happy, nothing more abundant in all Goods.

' can be imagined. For God doth nothing, he is
' not intangled in any Employments, he under-
' takes no Works, but joyeth in his own Wisdom
' and Virtue. He knows for certain that he shall
' ever be in Pleasures, both Greatest and Eternal.
' This God we justly style Blessed, who ourselves
' place a blessed Life in security of Mind, and in
' disengagement from all Business; but not, such
' as others do describe him, Laborious, invol-
' ved in great and troublesome Employments.

C H A P. IV.

*Of First Matter, or, of the Principles of Compound
things in the Universe.*

NOW to resume and pursue our Discourse,
forasmuch as in the first place 'tis mani-
fest by Sense, that in Nature many things are
generated, and many corrupted; therefore we
must conclude, that hereto is required Matter, of
which things may be generated, and into which
they may be resolved; For (a) of nothing, nothing
is made; and into nothing, nothing goes away. For
if something were made of nothing, every thing might
be producing from any thing, as not required Seeds;
and if that which perisheth did go into nothing, all
things would perish absolutely, there not remaining
those things into which they were dissolved.

Besides, forasmuch as we affect to know the
nature of any thing, generated or made, it is
first demanded, whether it be some thing one and
simple, or compounded of some things which
themselves are simple and precedent. It is ma-
nifest, that nothing generated or made can be
one and simple, seeing that it hath parts of
which it was made up, and into which again it
may be dissolved, which therefore are precedent
and more simple; and if they still be compound-
ed, they may be conceived to consist of those,
which at length are the first and most simple.

Thus again it appear, that (b) of Bodies, some
are Concretions, or (if you like it better,) concrete
or compounded Bodies; others, of which Concre-
tions, or compounded Bodies, are made. These,
if first and simple, are the first matter of things,
and are termed Principles, and, by the later
Authors, Elements also.

These Principles, or first things of all, must be
simple uncompounded Bodies, (or rather Atoms)
and indivisible, or not resolvable by any force,
and consequently immutable, or in themselves
void of all mutation. I mean, if it shall so come to
pass, as that in the dissolution of Compounds, all
things go not into nothing, but that there consist and
persevere a certain Nature, full, or void of vacuity,
and therefore solid; which being such, it cannot
in any part, or by any means, admit a diversion,
and so be dissolved.

Wherefore it is necessary, that those which are cal-
led the Principles of compounded Bodies, be, as
of a Nature, full, solid, and immutable, so whol-
ly indivisible; whence we use to call them Atoms.
We term it an Atom, not as being the least, that
is, as it were a point, (for it hath a Magnitude)
but for that it cannot be divided, it being incapa-
ble of suffering, and void of vacuity. So that he
who saith, Atom, names that which is free from
a blow, and can suffer nothing; and which is in-

visible indeed by reason of its littleness, but in-
divisible by reason of its Solidity.

C H A P. V.

*That there are Atoms in Nature, which are the Prin-
ciples of Compound Bodies.*

THAT (a) there are Atoms, the Reason al- (a) Lucret.
ledged sufficiently convinceth; For, see-
ing that Nature makes nothing of nothing, and
reduceth nothing to nothing, there must remain
in the dissolution of compound Bodies something
that is incapable of further dissolution. Certain-
ly if you say that it is still dissolvable, or divisi-
ble, it will be necessary, by subdividing, to come
at last to something that is solid, and incapable
of division; since that neither Nature itself doth
dissolve things infinitely, but stays in some last
things; nor can Body admit of an infinite di-
vision.

(b) In a finite Body, doubtless there can- (b) Lucret.
not be parts of infinite either multitude or
magnitude; wherefore there cannot be under-
stood to be performed in it, not only that di-
vision into infinite which is made into less, or
by parts always lesser, and proceeds ever ob-
serving the same proportion of division; but
also that progression into infinite, which is
made by proceeding not always by lesser, but
by equal, or those which are called determinate
parts. For since infinite parts must needs be
admitted to serve for an infinite division, how
can there be infinite of them in a finite
Body?

He certainly who once hath said, that in eve-
ry thing there are parts infinite in number, is
not able further to understand and declare how
that magnitude, whereof he speaks, comes to
be finite. For whether the parts that a divi-
sion or progression may be made into infinite
be determinate, (that is, equal among them-
selves,) or indeterminate, (that is, always les-
ser) it is manifest that the magnitude, whose
parts they are, and which consists and is com-
pounded of them, must indeed be infinite.

And since on the other side, a finite mag-
nitude manifestly hath an extreme or last part,
easier to be perceived and shewn, unless this part
may be seen by itself, and as the last, we cannot,
although we should subdivide it, understand any
other part, which should be thought the last
rather than this; for that with as much reason will
be divisible. Whence it will come, that by pro-
ceeding further, and consequently towards an
extreme part into infinite, we can never ar-
rive, not even by thought, to that part which
is the last, nor be able to over-run, by progression,
even the least space.

(c) Add to this, That unless in Dissolutions (c) Lucret.
there did remain little Bodies, so solid as that
they cannot be dissolved by any force, the dif-
ference between Body and Vacuum could not be
sufficiently understood, inasmuch as nothing of
Body, by infinite attenuation, would be capable
to resist; by which means too all things would
become weak or soft, and nothing could be made
hard, seeing that Solidity only is the foundation
of hardness. Neither need we scruple, as if be-
cause

cause Atoms are solid, soft things cannot be made of them, for they may be made soft by intermision only of *Vacuum*, into which the compressed parts retire, and yeild to the touch.

(d) *Lucret.*
or. cit.

(d) add also the diverse sorts of constancy in nature, as in carrying on Animals always to certain bounds of strength, augmentation and life; in imprinting always the same distinctions and marks of every particular kind; which she could not do, if she did not use Principles certain and constant, and therefore not obnoxious to Dissolution and Mutation.

CHAP. VI.

Of the Properties of Atoms; and first, of their Magnitudes.

(a) *Lucret.*

Although all Atoms, by reason of this solidity, may seem to be of one and the same nature, yet have they some Adjuncts or Properties, and certain (a) *Qualities*, by which they may differ among themselves, such only are *Magnitude, Figure, and Weight*, and if there be any beside which are necessarily ally'd to Figure, as roughness, and smoothness; for *Colour, Heat, Cold*, and the rest of the Qualities are not such as are proper to Atoms, but to Compounds, and arising partly out of the Adjuncts, partly the Accidents of Atoms, of which we shall speak hereafter.

(b) *Lucret. 2.*

This in brief, at present; (b) If Colour (for example) were in the Atoms themselves, it would be as intransmutable as they are; and so the things consisting of Atoms, that are of one Colour could not change that, and appear under another, whereas we observe the contrary happens; for the Sea foaming looks white, it being otherwise of a green Colour, which doubtless if it were in it by reason of green Atoms, could not be changed into a white Colour. For whereas some say, That Contraries are made of Contraries, it is so far from being so, that White will sooner be produced out of no Colour at all, than out of Black. Better they, who conceive the matter of things, that it may undergo variety of Colours and other Qualities, ought to be void of them; as we chuse that Oil which is most free from any scent to make Perfumes of.

But to touch a little every property of the Atoms; Whereas in the first place I attribute magnitude to them, I mean not any magnitude; for the largest Atom is not so great as to be perceptible by sight, but that magnitude which, although it be below the reach of Sense, yet is of some bigness, (for if Atoms were points void of all magnitude, no body of any magnitude could be made up of them.) Whence I use to say of an Atom, that it is some small thing, thereby, as it were, not excluding all magnitude from it, but the larger size only.

(c) *Lucret.*

(c) Neither can it be objected, That the magnitude of Atoms is not perceived by the Senses, since we must necessarily confess, there are innumerable things invisible; for can we see the Wind, Heat, Cold, Odor, Sound, or the little Bodies, by whose arrival to the Sense these are perceived? Can we see the little Bodies of

moisture, by which Garments hung by the Water-side are moistned, yet being spread abroad are dried? Can we see those which are rubb'd off from a Long Ring-worm, from a Wheel that turns round, from a Plough-share in ploughing, from a Stone which a drop hollows, which a Tread diminisheth, or those by which a Plant or Animal grows in its youth, decays in its old age, and the like?

(d) 'Yet we must not think that all Atoms are of the same magnitude, it is more consonant to Reason, that amongst them there be some greater, others lesser; and, this admitted, a Reason may be given of most things that happen about the passions of the mind, and about the senses.

(e) That there may be an incomprehensible variety of Magnitudes beyond the reach of Sense, may also be understood even from this, forasmuch as there are some little Animals, whose third part, if we imagine them divided, would be invisible; nevertheless, to the composition of them an incomprehensible number of parts is necessary. For how many must there be to make the Entrails, the Eyes, the Joints, the Soul; to constitute all parts, without which we cannot understand there should be any living, sensitive, moving Animal?

Whether may not (to use a gross Example,) this variety be comprehended from those dusty motes which the beams of the Sun, coming in at a Window, discover? For whereas without such beams all things are alike dark, yet they coming in, there appeareth an innumerable company of little bodies, in such manner, as that there is an evident difference between the greater and the lesser; nevertheless, I say not, (as some conceive) that these kinds of little Bodies are Atoms, for in the least of them are contained many Myriads of Atoms; I only use them by way of comparison, that whereas the whole Nation (as it were,) of Atoms is impervious, and dark, even to the sharpest sight, yet we may understand it to be so illustrated by the beams of Reason, that the Atoms may be perfectly seen by the mind, and that we may conceive there are several degrees of magnitudes in them.

(f) Hence it happens, that as in a great and measurable magnitude we take something, which, that it may be the common measure, must have the proportion of the least, as a Foot, a Digit, a Barly-corn; and in sensible magnitude we take also something which is accounted the least as to Sense, as the little Creature called *Acaris*; so in intelligible magnitude, such as is that of the Atom, we may take something which in it is esteemed (as it were,) the least; such as in an Atom may be conceived, the very point in which a sharp angle is terminated.

(g) But this difference there is between the least, under the notion of measure, and the least of those which are sensible and intelligible, that the former, by its repetition, may be understood to be adæquated to the whole magnitude; but these later are conceiv'd as certain individual points, which either are bounds of magnitudes, or certain Connexures (as it were,) so interpos'd between the parts, as that they have only certain respects to the parts connected on each side, though they are such, that a beginning of men-

menfuration cannot be made from them. For nothing hinders but that we may, by the mind, frame fome dimensions in an Atom.

Although, when as we fay, there are parts or connexures in an Atom, it is not fo to be understood, as if at any time they were difjoined, and afterwards united; but we do it, to declare that in an Atom there is a true magnitude confifting of parts, though withal they have that difference from compound things, that their parts can only be diftinguifhed by designation, not by feparation; forasmuch as they cohere by a natural, indivifible, and perpetual Connexion.

C H A P. VII.

Of the Figure of Atoms.

(a) Lucret.
lib. 2.

AS (a) concerning *Figure*, which is the bound of magnitude, it is firft neceffary, that in Atoms it be manifold; or, that Atoms amongst themselves be variously figured. This is proved, forasmuch as all natural things framed of them, Men, Beasts, Birds, Fishes, Plants, &c. are variously figured, not only in refpect of their *Genus*, but of every particular *Species* or *Indivium*; for there are not any two fo like one another, but that if you mind them exactly, you will find fome differences by which they are diftinguifhed.

(b) Laert.

Again, (b) Forasmuch as the kinds of Figures in Atoms are incomprehenfible for number, for they are round, oval, lenticular, flat, gibbous, oblong, conical, hooked, fmoth, rough, briftly, quadrilateral, &c. as well regular as irregular, without any determination poffible to the Intellect, yet are they not to be efteemed fimplly infinite in number: For there would not be fo many and fo great differences in concrete things, if in the Atoms, of which they are compounded, there were fuch a diverfity of Figure as could be comprehended by the mind. Yet the diverfities of Atoms cannot be abfolutely infinite, unlefs a man conceive in Atoms a magnitude, which is not only fo fmall as to efcape Senfe, but is in reality infinitely little: For in magnitude, or the fuperficies of magnitude, which is finite, cannot be understood diverfities, which are infinite.

But thirdly, although the kinds of Figure be not infinite, yet are there in every Figuration, or kind of Figure, Atoms fimplly infinite in number; that is, there are infinite round Atoms, infinite oval, infinite pyramidal; for otherwife the Universe would not be infinite in multitude of Atoms, as was already declared, unlefs the Atoms which are like to one another in Figure, were abfolutely infinite in number.

(c) Plut. plac.
1. 4.
Laert. inflit.
3. 17.

(c) But take notice, That though there are Atoms corner'd and hooked, yet can they not be conceiv'd to be worn away or broken, becaufe both the corners and hooks, as alfo the middle little bodies themselves are of one nature, and kept together with equal folidity and neceffity, infomuch as no force whatfoever can comprefs an Atom, either as to the whole, or as to its parts, even to its very points.

C H A P. VIII.

Of the Gravity (or Weight,) and manifold Motions of Atoms.

LAstly, I attribute to Atoms *Gravity*, or *Weight*; for, whereas they are perpetually in motion, or ftriving to move, it is neceffary that they be moved by that internal Impulfe which is called Gravity, or Weight.

(a) There firft presents itfelf to us in the Atoms a twofold motion, one of the gravity or weight itfelf, whereby the Atom is carried after its own way; the other, be percuffion or reflection, whereby one Atom, being driven upon another, is beaten back again. And as for the motion of gravity or weight, that motion is firft conceived, whereby the Atom is carried on in a *freight* or perpendicular line. By this motion are all heavy things moved. But becaufe if all Atoms fould be moved in a freight line, or downwards, and, as it were, freight on, it fould come to pafe, that one could never overtake the other; It is therefore neceffary, that Atoms fould go a little *afide*, the leaft that may be, that fo may be produced the complications, and adhefions, and copulations of Atoms to one another, of which may be made the World, and all the parts of the World, and all things in it.

(b) When I fay, That otherwife the Atoms would not overtake one another; and confequently not meet, the reason is, That the Universe being infinite hath no middle or centre towards which they may tend, and fo meet; but only there may be conceived, according to what hath been faid, fome Region above, out of which, without any beginning, all Atoms, by there Gravity, would defcend like drops of Rain, that is, by motions in themselves parallel; the other below, into which all, without any bound, would be carried by the fame motions.

(c) Motion from reflection may be understood to be made, as well when the Atom rebounds by great leaps, as when being impell'd and repell'd within fhort fpaces, it doth, as it were, quake and tremble. Whence alfo (d) it comes to pafe, that while it hapneth that the Atoms run into certain meetings and complications of many obviating to, and entangling one another, (which is chiefly done in thofe Compounds where they feem to reft,) yet then they are ftill unquiet, and, as much as they can, and according as they are further from, or nearer to one another, they get an agitation, or kind of palpitation, being bent down, or repressed by the reft, which make up that association.

The caufe of this not only longer rebounding, but alfo fhorter agitation, or, as it were, inward palpitation, continuing ftill in thofe Compounds is partly the nature of *Vacuum*, which, being intercepted even within the mof compact Bodies plucks all the Atoms afunder from one another, either in whole or in part, not having power to ftay or fix them; partly the Solidity connatural to the Atoms, which by collision and repercuffion caufe a trembling, as much as that complication will fuffer that motion to be kept ftill continued by the ftroke of the defcending

Cccc

Atoms.

(*) Laert.

Atoms. Now since Weight or Gravity is a certain Vigour, or Energy, as it were ingenerate in Atoms; and as I said, an Impulsion, whereby they are fitted for Motion, we must therefore take it for certain, *that (*) Atoms are moved (even with both kinds of Motion, of Weight, and Reflection,) continually, and through all eternity, because there is no first instant, since which they began to be made; not only Atoms, but also Vacuum, which serves for both Motions, being eternal.*

(+) Laert.

We must also take it for certain, 'that † that Motion of Atoms, to which nothing occurs, which may divert it by beating against it, is of so great swiftness, as it over-runs any imaginable Space *in a moment; that is in time unimaginably short; for they ought in Velocity to out-run those Beams of the Sun, which make not their Course through pure Vacuum; I say, to which nothing occurs that beats it back; for otherwise, this frequent Reverberation makes a kind of Slowness, as want of Reverberation makes a kind of Swiftness.*

Ibid.

'Yet doth not hereupon the Atom, which suffers several Repulsions, arrive at divers places in such times as may be discerned by the Mind, for to discern those times is not within the power of the Mind. Besides, it may so happen, that the same Atom, though diverted by several Repulses, may be so carried, as that from whencesoever it comes, out of that immensity of Space, we shall not be able to assign any place or term, which in that time it hath not over-passed. For the Repercussion may be such, (*that is, so little frequent, and so little diverting,*) that it may in some measure equal the Swiftness of that Motion which is free from Repercussion.

Laert.

'We must lastly take it for certain, That Atoms are equally swift, forasmuch as they are carried through Vacuum, neither is there any thing that resists their Progress: For neither are the heavy carried on more swiftly than those which are conceived light, seeing nothing occurs that may hinder either; nor the lesser more than the greater, forasmuch as the passage is equally free to all, according to their several magnitudes. Neither do the Motions which are made, either upwards, or obliquely by Collisions, or downwards by their natural Gravity, differ in Swiftness; since an Atom, as long as it is not thrust on either side, so long keeps on its way, and that by a swiftness equal to thought, untill being driven on, either extrinsically, or by its own Gravity, it meets with the Resistance or Assault of the Atom that strikes it.

Ibid.

'Moreover, as concerning compound Bodies, forasmuch as Atoms are in their own Nature equally swift, therefore one cannot be said to be swifter than another; as if the Atoms that are in compounds, and hurried away by the common Motion of them, were carried away, sometimes into one place by a sensible Motion, and that continuous, and in successive time, as whilst such Motion is slow; sometimes whither into one or more places, they should be carried in times so short, as can only be conceived by reason, as when the Motion is most rapid. But we shall only say, that which way

soever the Atoms are carried with the compounds, they are all the while exagitated with intestine, most frequent, or rather innumerable, and therefore not-sensible, Repercussions; untill the Perpetuity or Succession of the Motion of the whole Body come to be such, as that it may fall under the reach of Sense.

'For what we fancy concerning the imperceptible Motion of Atoms, as if Times conceived by reason might reach the most swift Succession of their Parts, is no way true; but rather, whatsoever our Mind, attending to the very Nature of the thing, apprehends, that is to be esteemed true. *Ibid.*

C H A P. IX.

That Atoms (not the vulgar Elements or Homœomera's,) are the first Principles of things.

THIS premised concerning Atoms, we now must shew how they are the Principles, or first Matter of things; but because that cannot be done without Treating at the same time of Generation and Corruption; and that cannot be performed, unless we first speak of the Qualities of things, and even before that, of the first Causes which produce these; it is sufficient in this place to take notice, that Atoms are the Principles and first Matter of things, because they are that first and most simple, of which all generated things are compounded; as also the last and most simple, into which all corruptible things are resolved.

I say, the first and the last; for besides other greater Bulks, of which that which is generated may more nearly be compacted, and into which that which is corrupted may be resolved, there are little Lumps, or certain small thin Compounds, which being made by some more perfect and indissoluble Coalitions, are, as it were, long durable Seeds of things; so that things may also be said to be generated of Seeds, not as of first Principles, because even these Seeds are generated of things precedent, that is, of Atoms. And likewise things may be said to be resolved into Seeds, but not ultimately, because even these may still further be dissolved into Atoms.

In like manner, the four vulgar Elements commonly admitted, Fire, Air, Water, Earth, may be called Principles, but not the first; they may also be called Matter, but not the first Matter; forasmuch as they have Atoms precedent to them, of which even they themselves are compounded. *Lucret. lib. 1.*

And they who assign one Element only for Principle, will, that of it, by Rarefaction and Condensation, the three other be made, and of these afterwards, the rest of things. But how if it be one, and nothing mixt with it, can any thing be generated? For of Fire, (for instance,) rarefied, nothing else will be produced, but a more languid, or a stronger Fire. *Ibid.*

And besides, that they who teach this, admit not Vacuum, without which, neither Rarefaction nor Condensation can be made; they seem not to observe, that Fire cannot be said to be changed by Extinction into some other thing, because

because that which is simple cannot be changed, unless by going away into nothing. Or at least, if they admit that something common remains, which is first Fire, afterwards Air; since this something is the first and common Matter, the first Matter is not of itself, either Fire or Air, but rather those Atoms which being put together on one Fashion, may make Fire; being put together after another Fashion, may make Air.

They who admit many, or all things, to be equally first, run moreover into this inconvenience, that making them contrary to one another, they by consequence make them such, as either can never join to make one Compound, or, if they do, must destroy one another.

There was a natural Philosopher, who conceived that all things are generated of tenuous little Bodies, which he called *Homoiomera's*, *similar*, or *like Parts* (as it were,) viz. to the things generated; so as those (for Example,) of which hot things are made, are hot; those of which fleshy things, fleshy; those of which bloody thing, bloody; and so of the rest. But if Principles were of the same Nature with the things generated, they might, as well as they, be altered and lose their Qualities, and so be changed, and being of a simple Nature go into nothing.

Not to press, that if the things, whereby something is made hot, must be hot; as if things alike be not generated but of their like; there must also be things laughing, that a laughing Animal may be made of them; and things weeping, that a weeping Animal; and the like.

CHAP. X.

Of the first and radical Cause of Compounds, that is, of the Agent, or Efficient.

IT followeth, That we speak of *Causes*, since to the making of any thing, is necessary, not only Matter, of which, but a Cause, by which it may be made; wherefore to say a Cause is no other, than to say, that which in the production of a thing is the Agent, or Efficient.

Now of the things that are made, no other first and radical Cause is to be required, than the same Atoms themselves as they are endued with that vigour, by which they are moved, or continually tending to Motion. Neither is it absurd to make Matter active, it is rather absurd to make it unactive, because they, who make it such, and yet will have all things to be made out of it, cannot say, from whence the things that are made, have their Efficient power, since they cannot have it elsewhere than from Matter.

Therefore, as the first little Compounds made up of Atoms have in themselves a certain Energy, or power to move themselves, and to act, consisting of the vigours of each several Atom, but variously modifi'd; as some of them mutually entangling one another are carried hither, others thither; so the greater Compounds made up of the lesser have some power also, and that modified according to their Variety; and every natural Body consisting of those greater and lesser Compounds; and Atoms,

have a particular Energy, or power of moving themselves, and acting, modified by a certain Reason. Thus, Motion or Action, ascends to and proceeds from it's very Principles.

Yet we must observe, That though all Atoms are moved alike swiftly, yet within the Compounds themselves, those which are more corner'd and hooked, are intangled and hindred, and so made as it were more sluggish and dull, than the smoother and rounder. Wherefore the Energy, or power of acting, which is in compound Bodies, chiefly comes of these. And because those, of which Fire, the Soul, and those which are more generally termed Spirits, consist, are of this nature, hence it comes, that the chiefest Energy in Bodies, is from those very Spirits; which, as they have Liberty of running up and down, so they have also Dominion within those Bodies.

But forasmuch as all Effect, or Action, whereby something is made, is either from an internal, or external Principle, it is manifest, that artificial things whose Nature is sluggish, and meerly passive, own all their Production to the Efficient, or external Agent. But natural things, although they borrow some part of themselves, or some Principle of acting from an extrinsecal Cause, yet they owe their Production to the Principles contained within themselves; as from which intrinsically, according to all their Parts, they are ordered and co-apted.

Moreover, the very Action of the external Agent is from its own internal Principles, which always so turn and direct the Action, as that it may with greater Strength sustain the Violence of most things. For even in sensitive Creatures, where there is a kind of voluntary Action, it is therefore such, and carried rather this way than that way, because there occurs to the Mind a *Species* inviting it, rather this way than that way; and the Mind, through the Dominion whereby it ruleth the Spirit contained in the Body, leads them this way and not that way; and together with them, the Members in which they are.

CHAP. XI.

Of Motion, which is the same with Action, or Effect; and of Fortune, Fate, End, and sympathetic and antipathetical Causes.

IN the mean time, I shall not need to make any Excuse, for that I confound the Action or Effect of a Cause with Motion; since it is known, that both of these are one with Motion, and only add the Connnotation, and for that it must be terminated to the thing done or effected.

I understand here no other Motion, than that which is Migration from place to place, which for the most part it called *Lation*, and transient Motion, and local Motion. For thus they name it in Distinction from that Motion, which some use to call *Mutation* and *Alteration*; that whereby a thing remaining unmoved, according to its internal Nature, is, as they conceive, changed or altered through Acquisition, or loss of some Quality, as Heat, or Cold.

Sext. Emp.
adv. Phys.

This Mutation or Alteration is not a *Species* of Motion, distinct from that which is called local Motion or Transition. Local Motion or Transition is the *Genus*, this Mutation or Alteration is nothing but a *Species* thereof, to wit, that whereby moveables are carried through short and undiscernable intervals. For whatsoever

ibid.

2. compound Body is changed according to Quality, is changed altogether by the local and transitive Motion of the Atoms and little Bodies, creating a Quality; whether they be transposed in Place and Situation in the Body itself, or come into it, or pass out of it.

For Example: That of sweet, something bitter be made; or of white, black; it is requisite, the little Bodies which constitute it be transposed, and one come into the rank of another. But this could not happen, unless those little Bodies themselves were moved by transient Motion. Again, that of hard, something soft be made; and of soft, hard; it is requisite, those Particles whereof it consists, be moved locally, forasmuch as by Extension of them it is softened, and by Condensation hardened; whence the Motion of Mutation is not generically different from the Motion of Transition.

But to return to that Motion, which is proper to the Cause or Efficient, we may observe, that to some things the name of Cause is attributed, for that they excite Motion. For Fortune, which is a Cause of some things, can no other way be admitted, than as it is the same with the self-moving and Agent Cause, and only denotes Ignorance of the Effect connexed with it, and intended by it. Otherwise, so far is it from being fit to make it a Goddess, as the ordinary sort of Men do, (for by God nothing is done disorderly,) that it is not to be esteemed so much as an unstable Cause.

Even Fate also is no other than the self-moving Causes, that act by themselves, as they are connected among themselves, and the later depend of the former, albeit this Connexion and Dependence be not of that Dependence and Necessity which some natural Philosophers would persuade; for there is no such Necessity in Nature, since the Motion of the Declination of Atoms, of which we already spoke, breaks it off, so as it intermits neither in a certain Line, nor in a certain Region of Place.

Likewise an End is said to be a Cause, forasmuch as it produceth something, or not produceth it, no otherwise than because it moveth. It moveth, I say, by sending a *Species* into the Soul, which draws and allures it by invisible, yet Physical little Hooks and Chains, as it were, by which, for the most part, together with the Soul, the Body also is attracted. Certainly, no such Attraction can be understood to be made, unless by some reboundings, and intanglings of Atoms.

Insomuch as even all those things, which are said to be done by Sympathy or Antipathy, are perform'd by Physical Causes, that is, by some (unseen indeed, but) very small Organs, which intervening, some things are as truly attracted to or repelled from one another, as those things which are wrought upon by sensible and grosser Organs are attracted and repelled.

Lucret.

For to explain this by an Example. How think we comes it to pass, that a Lyon is not

able to endure the sight of a Cock, but, as soon as he sees him, runs away? unless there are some little bodies in the body of the Cock, which being, as in Looking glasses, immitted into the Eyes of the Lion, so pierce his Eye balls, and cause so sharp pain, that he is not able to withstand or endure it, how fierce and furious soever he be. But in our Eyes, those Bodies produce nothing like this, being they of a different contexture, as shall be shewed when we come to discourse of the Senses.

C H A P. XII.

Of the Qualities of Compound things in general.

AS concerning the Qualities belonging to Compound things, it is known, that under this term are comprehended all, as well Adjuncts as Accidents of things, but chiefly the Adjuncts, whether they be properly Adjuncts, that is, constantly abiding in a Compound Body, as long as it perseveres, and not separable from it without destroying; or more properly and largely taken, that is, as a mean between Adjuncts, properly so termed, and Accidents, forasmuch as, like these, they exist in them; but in those they come and go, may be with or from a Body, without the corruption thereof.

The most obvious Question concerning them, is, How it comes to pass, that they are in Compound things, when, as we said before, they are not in Atoms, of which Compound things consist? That they are not in Atoms, is already shewn; forasmuch as every Quality that exists in Atoms, as Magnitude, Figure, and Weight, is so natural to them, that it can no more be changed, than the very substance of the Atoms; and this, because in the dissolution of Compound things, there must needs remain something solid and undissolved; whence it comes, that all motions which are made, are neither into nothing, nor out of nothing.

We answer, that Qualities arise in Compound things, as well from the transposition that is made of the Atoms, now fewer, now more; which in one position afford one quality; in another, another; as from the accession that is made of some Atomes wholly new, and the discession of some pre-existent. Whence these Qualities again are varied, or seem different from what they were at first.

For as Letters give a divers representation of themselves, not only those which are of different Figure and Form, as *A* and *N*, but even the same Letters, if their Position or Order, be changed; Position, as in *N* and *Z*; Order, as in *AN*, and *NA*: So, not only Atoms, which are of divers Figures, (as also of different bulk and motion,) are naturally apt to effect divers Senses, and, in one, to exhibit Colour; in another Odour; in a third, Sapor; in a fourth, another: But also those which are of the same, if they change the Position or Order among them, affect the Senses in such manner, that those (for example,) which now exhibit one Colour, presently exhibit another, as we before instanc'd in the water of the Sea, which, being still, seemeth green; troubled, white; and, as is ordinarily instanc'd, the neck of a Pigeon, which, according

ording as it is variously placed towards the Light, receiveth a great variety of Colours.

And as there is made a diversity, not only when the same Letters which compose one word are so transposed, as that they exhibit divers Forms, but much more, when some are added to them, and some taken away from them; in like manner it is necessary, that Colours, Odours, and other Qualities, be changed, not only when the same Atoms change their Position and Order, but likewise when some come to them, some depart from them, as is manifest from the softning, hardning, crudefaction, ripening of things, and the like.

Briefly, as it is of great concernment amongst Letters, with what other Letters they are joyned, and in what Position and Order they are among themselves, since, by so small a number of Letters, we signify the Heaven, the Earth, the Sun, the Sea, Rivers, Fruits, Shrubs, living Creatures, and innumerable such like; so is it of great concernment amongst Atoms, with what others they are joyned, and in what other Position, and in what Intervals and Connexions, what Motions amongst one another they give or receive; forasmuch as by this means they are able to exhibit the variety, as of all things, so of all Qualities in them.

To speak more particularly, some Qualities first seem to arise out of Atoms, as consider'd according to Substance; and being in such Position amongst themselves, as that they have a greater or lesser *Vacuum* intercepted or excluded. Other Qualities are made of them, as they are endued with their three Properties, some from a single Property, others from a conjuncture of more.

C H A P. XIII.

Qualities from Atoms considered, according to their Substance, and interception of Vacuum.

AND after the first manner arise *Rarity* and *Density*; for it is manifest, that no Dense thing can be made Rare, unless the Atoms thereof, or the parts of which it is Compounded (they themselves being compounded of Atoms,) be so put asunder from one another, that, being diffused into a larger place, they intercept within it more and larger *Vacuities*. Neither can any thing Rare be made Dense, unless its Atoms or parts be so thrust up together, as that, being reduced into a narrower place, they comprehend it in fewer, or more contracted *Vacuities*. Moreover, it is manifest, that, according to the more or lesser *Vacuity* which is intercepted, the Air (for example,) or Light is said to be Rare; but a Stone, Iron, and the like, said to be Dense.

Together with these seem to arise *Perspicuity* and *Opacity*; for every thing is so much more Perspicuous, (other respects being equal,) by how much more it is too Rare, so much more Opacous, by how much it is more Dense: Because the more Rare is the more patent to lucid and visible beams; the more Dense, the more obstructive of them. But I say, (other respects being equal,) a more thick Body, as Glass, may have little vacuous passages placed in so streight

a line, that the beams may pass more easily through it, than through a rarer Body; as a leaf of Colewort, whose small Pores are pester'd with little Bodies variously permixt; even the beams themselves are cut off, unless they pass through strait holes, such as are in Glass.

Again, there ariseth also *Fluidity*, *Liquidity*, and *Firmness*; For a Body seemeth to be fluid for no other reason, than because the Atoms, or Parts whereof it consists, have little *vacuities* lodg'd within them, and are withal so dissociated from one another, as that they are easily moveable, one in order to another, through the not-resistance of the little *Vacuities*: Neither doth any thing seem to be firm from any other cause, than the contrary hereof; that is, the Atoms and Parts touch one another so closely, and are so coherent to one another, that for the same reason they cannot be moved out of their situation; for such Atoms there may be, as, being more hooked, and as it were, more branching, may hold the Body more closely compacted. How Water, in particular, being liquid, becomes hardned into Ice, shall be said hereafter.

Likewise, those Qualities which depend of these, *Humidity* and *Siccity*. *Humidity* is a kind of fluidness, only it superadds this, That the parts of a Humid thing, touching some Body, or penetrating into it, are apt to stick to it, thereby rendring it moist. *Siccity* is a kind of firmness, adding only this, that a dry Body is void of Humidity.

Moreover, *Softness* and *Hardness*, which cohere with these, and, upon another account, agree also with *Rarity* and *Density*, inasmuch as (other respects being equal,) every Body is so much the more soft, by how much the more rare; and so much the more hard, by how much the more compact; I say, (other Respects being equal,) because Dirt is soft, and a Pumice hard, by reason of the greater cohesion of the parts, which pester the Cavities, and resist the Touch, and cannot retire into the hindmost Cavities, as otherwise they would.

There are others which depend upon these; as *Flexibility*, *Tactility*, *Ductility*, and others, from Softness; their opposites, from Hardness; but 'tis enough to have hinted them.

C H A P. XIV.

Qualities springing from Atoms, considered according to the Properties peculiar to each.

IN the second manner, and as far as the Properties of Atoms are considered particularly; In the first place, the Magnitude, Quantity, or bulke of every thing, ariseth no other way than from the coacervate Magnitude of the Atoms, of which it is compounded. Whence it is manifest, that *Augmentation* and *Diminution* of Bodies is therefore made, because Atoms, wheresoever they arrive, give to the things an increase; wheresoever they go away, they diminish them.

Not to mention, that, according as the Atoms are greater or lesser, may be made that which we call *Bluntness* and *Acuteness*. And thence a reason may be given, Why the Fire of Lightning

ning is more penetrative than that of a Taper : Or how it comes, that Light passeth through Horn, which resists Rain, and the like.

Besides, the very Figure of things, though it did not depend upon the Figure of Atoms, (whereas it seems to depend upon them, in all things which are constantly produced in the same Figure,) yet it is generally at least true, that every Body is therefore figured, because it consists of Parts terminate and figurate; for Figure is a Term, or Bound.

Thus, though out of smoothness, and roughness (which, as I said, are allied to the Figure of Atoms,) it doth not necessarily follow, that things smooth are made of smooth, rough things of rough: Yet in general nothing can be conceived to be smooth, but whose parts, to the least of them, are smooth; nor rough, but whose parts are rough.

Here observe, That as well from the Figure, as from the Magnitude, the Reason may be given, why Wine floweth easily through a Strainer, but Oil more slowly, which is, that the Oil may consist not of greater Atoms only, but also of more hooked, and much intangled among themselves.

Lastly, *Weight*, or the Motive-Faculty, which is in every thing, can arise no other way, than from the weight or Mobility of Atoms. But that being declared formerly, we shall here only observe, that all Atoms, are heavy, and none light; wherefore every compound Body is heavy, there is none that is light; or that is not of itself ready to tend downwards. Here presently comes in Fire for an Objection; but although it foregoeth not its propension downwards, yet it therefore tendeth upwards; forasmuch as it is driven that way by the ambient Air; After the same manner, as we see with great force the Water resist Logs and Beams, things otherwise heavy; and the deeper we plunge them, the more eagerly it casts them up, and sends them back. Whence it comes, that those things, which we call light, are not absolutely light; as if, of their own accord, they did tend upwards, but only comparatively, that is, as they are less heavy, and extruded by the more heavy, which press themselves down before them. So as Earth being the most heavy, Water less heavy, Air yet less heavy than that, and Fire least of all; the Earth drives the Water upwards, and far from the middle; Water the Air; Air the Fire: But if we suppose the Earth to be taken away, the Water will come to the middle; if the Water, the Air; if the Air, the Fire.

CHAP. XV.

Qualities from Atoms, considered according to their Properties taken together.

BUT Properties of Atoms, being taken together, and those things, especially of which we have hitherto spoken, Rarity, Density, and the rest, being commixt and varied, there arise faculties of things, which, being active and motive, have it from the Weight and Mobility of the Atoms. And whereas some act one way, some

another, they must of necessity have it, as well from the peculiar Magnitude, and Figure of the Atoms, as from their various Order and Position amongst themselves, as from their looseness, compactness, connexion, sejunction, &c.

Of this kind, are not only, in Animals, the faculties of Sense, Sight, Hearing, Smelling, Tasting, Touching, wherewith they can perceive sensible things; but also, in the things themselves, those very qualities which are called Sensible. These are, in things, the faculties of striking, and affecting the Senses, after a certain manner, to the end they may be perceived by them; as colour and light; the Sight; sound, the Hearing; odor, the Smell; sapor, the Taste; heat and cold (above the rest,) the Touch. Whence it comes, that being to speak of those hereafter, we ought not here to omit these: To treat of which, will be worth our pains.

To begin from Heat: We cannot treat of it, without joyning Light to it, for without Light there are no Colours, the variety of Colours being taken away by night; whence in the Infernal Region, all things are said to be black. But though in darkness, all things are alike discoloured, nevertheless, in themselves, or in their Superficies, there are dispositions of extreme Particles, by reason of which the affused Light is so variously modify'd, that, together with this Modification reflected on the Eye, it exhibits various Colours in the Eye, as White, for example, when the Ball receiveth into itself one kind of blow or stroke; Black, when another, &c.

For though Colours are not coherent to Bodies, but generated according to some respective Sites, Orders, and Positions, yet are they not generated, unless Light also be adjoined to the disposure of their Superficies, to compleat or make up the perfect nature of Colour. Neither, setting this aside, do I see how it can be said, that Bodies, which are in the dark invisible, have Colour.

And indeed, since not only a Pigeon's Neck, a Peacock's Train, and the like, exhibit several Colours, according to their several Positions to the Light; but also even all other things appear sometimes in some Colours, sometimes in others, according as they are placed in several degrees of Light, what else should we conceive, but that generally it is Light, by whose coming things put on Colours, and by its departure lose them.

In the mean time, Light itself, being nothing else but a substantial effluxion from a lucid Body, is not visible of itself, but only in Colour, as that is a part of it; for neither is it seen through a pure or liquid medium; neither when we imagine that we see it, either in a lucid or an illuminate Body, is it beheld as a thing distinct from the colour of the thing lucid or illuminate. In fine, neither is Shadow (the privation thereof,) in any other manner, than as because it is withal the privation of Colour in a thing shadowed, which loseth Colour always by the same proportion as it loseth the Light. How it comes to pass, that Shadow, though it be a meer privation, yet seems to be moved, was declared in the Canonick.

Sound is nothing but an effluxion of tenuious little Bodies, sent out from the thing speaking, founding

chap. 22.

foundings, or what way soever making a noise, and apt, by entering into the Ear, to affect the Hearing.

That it is a corporeal effluxion, is proved, in that it moveth the Sense, and that either by touching it smoothly and delightfully, or roughly and unpleasantly, according to the smoothness or roughness of the little Bodies. Also in that it is moved through the Air, and being driven against solid Bodies, leaps back, whence Eccho is made, viz. by reason of the solidity of the little Bodies. Also in that it is diminished, and becomes confused, in regard of the long train of little Bodies, when it goes forward, or their swerving while they go overthwart, through some thicker partition, and the like.

If you demand, why Sound can pass, where Light and the species of Colour cannot, as when we speak, the Doors being shut; the reason is, because Light, or the Images of Colour, cannot pass but in a direct line; but Sound can insinuate it self through oblique Tracts. For being excited, it leaps forward in little Bodies, which turn upwards, downwards, forwards, backwards, on the right Side, and every way; in like manner as a spark of Fire, sometimes scatters it self into little sparkles, which take a direct course towards all sides.

The same may be said of *Odor*. For this also is an effluxion, which going out of the odorous thing, is diffused every way, and, arriving at the Nostrils, moveth the Sense of Smelling, either by stroaking or pricking it. This is corporeal also, even more than Sound, in that it passeth more slowly through space, and cometh not from so great a distance, and penetrates not through those partitions, through which Sound doth penetrate.

As concerning *Sapor*, there is this difference, That tho' it consist in little Bodies, contained in the thing styled Sapid; yet they issue not forth into the Tongue and Palate at a distance, but then only, when the thing Sapid is applied to the Tongue, they so insinuate themselves into it, that they affect the contexture, of it; either mildly, and then make a sweet Taste; or roughly, and so they make a sower Taste.

As for *Heat* and *Cold*, that Sensation which they cause, is to be referred to the *Touch*. But tho' many of the foresaid Qualities properly appertain to the Touch, as Hardness, Softness, Humidity, Siccity, and the rest, which require application of the thing touched to the Hand, or to some other part of the Body; yet these two may be felt, not only when the Hot or Cold thing is applied to the Hand, or some other part; but also when it is remote, and at such a distance, as it can transmit some little Bodies out of it self into it.

Heat indeed is chiefly an effluxion of little Bodies or Atoms, in Bulk slender, in Figure round, in Motion swift. For as they are slender, there is no Body compacted, that they find not little Pores, through which they insinuate into it; as they are round, they are easily moved, and insinuate themselves every where; As they are swift, they rapidly are impelled, and enter into the Body, and more and more still succeeding one another, they are so pressed, as that they penetrate through the whole; and if they

proceed in acting, they sever and dislocate the parts thereof, and at last dissolve the whole. Such are the effects of Heat, and chiefly the fiery (for Fire is nothing but intense Heat,) towards all Bodies, and in a living Creature is only added the Sense of the Heat, which is from the plucking asunder, and loosening what before was continued.

Cold is an effluxion also, but of Atoms, whose Bulk is greater, their Figure more corner'd, their Motion slower; for, the Effects being contrary, the Principles must also be contrary. So that whereas Heat disgregates and disperses, Cold compresseth and constipates: And in a sensitive Creature, it doth this with a particular kind of Sensation; for, entering into the Pores of the Skin, it keeps back, and drives in again the little bodies of Heat, by opposing the bodies of Cold, and with its little sharp corners it tears and twingeth all things wheresoever it passes.

CHAP. XVI.

Of those Qualities which are esteemed the Accidents of Things; and particularly, of Time.

IT remains, that we a little touch those Qualities which are not so much Adjuncts as Accidents, and therefore affect not the thing internally, but externally only, and qualify them with a certain kind of respect to some extrinsecal thing. Not but that within the things themselves also there are some Accidents, (such are Position, Orders, Intervals of parts or particles, and the like,) but that being such, they are Accidents of the parts themselves, not of the whole, which consists of them.

Accidents of this kind, are all those generally out of which ariseth some relation, for which every thing is said to be such or such, in order to another; as like, unlike; greater, lesser; many, few; superior, inferior; right, left; cause, effect; giving, receiving; and innumerable of the same kind.

But it is known, that Relation is a work of the mind, referring and comparing one to another; so that, setting aside the Mind, every thing is that only which it is in it self, but not that which it is in respect of another. Whence, to Accidents we formerly referred Liberty and Health, Riches and Poverty, &c. because, setting the Mind aside, a Man is nothing but a Man; not free, or subject; rich, or poor, &c.

Now of all Accidents, there is one which may be termed the *Accident of Accidents*, that is, *Time*, from which all things are denominated, either present, or past, or future; lasting, or little durable, or momentary; sometimes also swift or slow.

For first, That Time is an Accident, is manifest, in that it is not any thing by it self, but only attributed to things by Cogitation, or the Mind, as they are conceived to persevere in the state in which they are, or to cease to be, and to have a longer or shorter existence, and to have it, or to have had it, or be to have it. Whence it comes, that *Time is not to be enquired after the same manner as we enquire after other things, which are in some subject, setting aside the mind; and therefore* Laert.

therefore neither to understand what it is, must it be referred to the perceptions of things which occur to our sight; but we ought to discourse of it according to evidence, using familiar speech. And not entangling ourselves in Circumlocutions, we say, Time is long or short.

Moreover, we call it the *Accident of Accidents*, because, whereas some things cohere by themselves as a Body, and as a *Vacuum* or Space; others happen, or are accident to the Coherent, as Days, Nights, Hours; as also passions and exemptions from them, as Motion, Rest, &c. Time, by the assistance of the mind, presupposeth all these Accidents, and supervenes to them.

For Day and Night are Accidents of the ambient Air; Day happens by the Sun's illumination; Night by privation of the solar illumination. Hour being a part of Night or Day, is an Accident of the Air also, as likewise are Night and Day; But time is coextended with every Day, and Night, and Hour; and for this reason a Day or Night is said to be long or short, whilst we are carried by thought to time that supervenes to them, according to the former Notions.

In the same manner happen Passions, and Indolencies, and Grievances, and Pleasures to us; and therefore they are not Substances, but Accidents of those things which are affected by them; to wit, by sense, of delectation, or of trouble. But these Accidents happen not without time.

Moreover, Motion and Rest, as we have already declared, are Accidents of Bodies, neither are they without time; wherefore we measure the swiftness and slowness of motion by time, as also much or little rest. And forasmuch as none understand time by it self, or separate from the motion and rest of things; therefore by understanding things done, as the *Trojan War*, and the like, which are done with motion, and are Accidents partly of the men acting, partly of the places in which they are acted; together with them is understood their time, as they are compared to our affairs, and the existence of the things intervening betwixt those and us.

C H A P. XVII.

Of the Generation and Corruption of Compounds.

IT remains that we add, how things are generated and corrupted, either of which is some kind of mutation or alteration; but whereas by other mutations, a Body is not made and exists new, but only that which now is acquires a new quality, and a new denomination from it. *Generation* is a mutation, whereby every Body is first produced, and begins in nature to be, and to be denominated such. *Corruption* is a mutation, whereby it is at last dissolved, and ceases to be in nature, and to be denominated such; for thus Fire, a Plant, an Animal, and whatsoever is in a determinate *Genus* of Bodies, when it first ariseth into the light, and beginneth to be denominated such, is said to be generated; when it goeth out of the light, and can no longer be denominated such, to be corrupted.

When I say, that a Body is first produced, or beginneth to be, I mean not, but that whatsoever is in it of Substance, Body, or Corporeal, was before; for all the Atoms, and little Bulks or Seeds, of which it is compounded, were before. As when a House is said to be made, the Stones, Wood, and the rest, whereof it is said to be built, are understood to be pre-existent. But I only mean, that the Atoms and Seeds thereof are so commixt, and so united, as that they are in a new manner, or in a new form, wherein they were not before; and therefore a Body resulting thence, then first begins to be, and be denominated such.

Hence, because there ariseth not so much a new substance, as a new quality in compounds, it cometh to pass, that Generation is a *Species* of Mutation or Alteration; and so is Corruption likewise, but in a contrary manner. Wherefore also it comes to pass, that Generation and Corruption are performed only by conjoining and disjoining those Principles, and not by changing them, because the Atoms, as we said, are incapable of change.

And indeed, seeing all change, (as we have already said, and shall shortly say again,) is perform'd either by Transposition, adding, or taking away of parts; it followeth, that Atoms, being so compact and solid, as that none of their Particles can be transposed, added, or taken away, are immutable and incorruptible, and such also are their Properties, of which sort are those little Magnitudes, and little Figures peculiar to them, for it is necessary that these also remain with the substance of the Atoms when the Compounds are dissolved; and with good reason, seeing that also in things which we transform at our pleasure, as when a Man, of standing, or upright, becomes sitting, or bowed, (or, if you will, is made black or hot,) it is ever understood, that the same Magnitude, Figure, and Order of parts are in them. But the qualities that are not in them, nor proper to them, as Standing, Straightness, White, Cold, &c. remain not in the Subject, after its Transmutation, as the others do, but perish, or are lost to the whole body, or to the part wherein they were.

Since therefore, Principles are intransmutable, and, in Generation, are no other than mingled and put together, it follows that no such mixture can be made, as is a perfect Confusion by Coalition, but only that which is a compounding by Apposition; and this, whether those little Bulks made up of Atoms are only mingled, or whether also the Atoms themselves be mingled with those little Bulks resolved into their Atoms, or first Principles; whence it follows, that the destruction of those little Bulks, and of the Bodies consisting of them, as Wine, and Water, Honey, and the like, goeth accompanied with the generation of the mixt Body, and of the other little Bulks, which are proper to it; not as if Water and Wine, (for example,) but as if aquifying, and vinifying Atoms (as I may say,) were mingled together.

And to the Generation, which is made in an infinite *Vacuum*, we must conceive, that the Atoms severed from one another, and differing amongst themselves in Figure, Magnitude, Position,

sition and Order, are carried through the *Vacuum*, and, where they concur, being mutually entangled, are condens'd; whence it happens, that a different temperature of the thing results, for they are conjoined according to proportion of Magnitude, Figures, Positions, Order, and by this means the generation of compound things comes to be perfected.

But where the Generation of one is made out of the Corruption of another, that usually happens after a threefold manner, which we touched, speaking of alteration; either only by *Transposition* of the Parts or Atoms, as when a Frog is generated of Dirt, a Mite of Cheese; or by *addition* of things accessory, as when, by accession of the Seed to a greater mass, (as of Rennet into Milk, or of Leaven into Dough,) there is begotten a Plant, or Animal; after which manner also Augmentation is made, by which the generated thing becomes bigger: Or lastly, by *taking away* something pre-existent, as when Fire is generated by the severing of watery, ashy, or other parts which were in Wood; Wax, by the severing of Honey which was in the Comb; and so of the rest.

Here the former comparison of Letters will serve to make us understand two things. One, that the particular manners of generation, and their opposite corruptions, which may be comprehended under any of these three manners, are (if not infinite, at least) innumerable, inexpressible, and incomprehensible, since of Four and twenty Letters only, which are in the Alphabet, there may be produced a multitude of words almost incomprehensible.

The other is, that as words, accommodated to Pronunciation and Reason, are not made of every combination of Letters; so in natural things, all things are not made of all things; nor are all Atoms fit, by being joined together, to constitute any *Species* of compound things. For every thing requires such a disposition, as that the Atoms constituting it match, and, as it were, associate themselves with those which are agreeable to them, but pass by, and, as it were, reject others. Whence again it comes to pass, that when a thing is dissolved, all the agreeing Atoms draw one another mutually, and disengage themselves from those which are disagreeing. This is manifestly seen in Nutrition, which is Aggeneration, and is evident even from this, that otherwise Monsters would be ordinarily generated, as Half-men, Half-beasts; Chimera's, and Zoophyts.

In a word, certainly he never had the least taste of Physiology, who conceiveth, that any thing which is generated can be eternal; for what Composition is there, which is not dissolvable? Or what is there, that hath a Beginning, and no End? Though there were no external Causes to destroy its Frame, yet wants there not an intestine motion, and, even within the most compact and durable Bodies, an unvanquishable inclination of Atoms downwards, whence their dissolution must necessarily follow.

Yet, this dissolution is not always immediately made into Atoms, but for the most part into little bulks, or parts compounded of them; which are certain kinds of compound bodies, as

when there is a dissolution of Wood, partly into fire, partly into smoke, partly into some watery moisture, partly into ashes. But what way soever it be done, we must always hold, that in Generation there is no new Substance made, but præexistent Substances are made up into one; so in Corruption, no Substance absolutely ceaseth to be, but is dissipated into more Substances, which remain after the destruction of the former.

C H A P. XVIII.

Whence it comes, that a generated Body is in a certain kind of things, and distinguished from other things.

Moreover, seeing that every Body is generated only of the aggregation of Matter, or of material and substantial Principles, knitting together in a certain Order and Position; therefore, that which is concrete or generated, is understood to be nothing else but the Principles themselves, as they are knit together in such an order or position, and thereupon are exhibited in such a form or quality.

This form or quality, whereby a thing generate, is established in such a certain kind of things, as of Metal, or of Stone, or of Plant, or of Animal, and is distinguished from all the *Species* and *Individuums* of the *Genus* wherein it is; this form, I say, is not one and simple, but rather, as it were, an aggregation and collection of many, which collection cannot be found in any thing, but in this.

Wherefore we must here observe, that the figures of things, their colours, magnitude, gravity, and (in a word,) all other qualities which are usually predicated of a compound Body, as its Accidents, (whether perceived by sight, or by other senses,) are so to be understood; not as if they were certain natures or substances, existent by themselves, (for our understanding cannot reach this;) nor, on the other side, as if truly they did not exist, or were absolutely nothing; neither again, as if they were such, as are those other incorporeal things, which are accident to it; nor, lastly, as if they were parts of the Body. But they are thus to be esteemed, that whereas a Body may be disposed after several manners, the whole complex gains, by the aggregation of them, a certain nature proper and peculiar to its kind.

Not that a Body comes to be such, as is a greater bulk made up out of a lesser, whether those be the first, least, greatest, or in general made up of others more minute; but only, as I said, that of all these joined together, and by this conjunction differencing it from others, it possesses a nature proper to itself, and distinct from any other.

All these are comprehended by certain special Notions and Conceptions, but so, that still the Body, which results out of them as a certain whole, and is not divided in itself, but conceived as one undivided thing, obtains the denomination of a Body, which is reckon'd up in such a certain kind of things.

D d d d

The

The same may, in a manner, be conceived to happen, by the concurrence of certain accidents, which are found the same in no other body; that is, the things indeed to which those accidents agree, may be distinguished and denominated from the notions of them, but yet only then, when each of those accidents is conceived to be there. For these are not of that kind of accidents, which, existing in the thing, become therefore necessary and perpetually conjoin'd to it, and consequently bestow on it a perpetual denomination.

Here it may be demanded, Whether, if we were dissolved by death, it might happen in process of time, that the very same Principles, of which we consist, might, by some odd chance, be ranged and ordered again in the same manner as they are now, and so we come to be denominated the same which we are at this present? To which we answer, That it is doubtlessly true, but still so, that, to have been formerly would nothing appertain to us, because in our very dissolution, every disposition which we had, and all memory of those things which compounded us, and which we were, would utterly be lost; by which means, all our remembrance too would so have been totally decay'd, that it were impossible it should come into our minds that we had ever had a Being. Thus much concerning the Universe.

S E C T. 2.

Of the World.

IT followeth that we speak of the World, which is a Portion of the Universe, or Infinity of things, and may not unfitly be described, *The whole Circumference of Heaven, containing the Stars, the Earth, and all things visible.*

When I say, the *Circumference of Heaven*, I imply, That Heaven is the outmost part of the World, which may also be called *Æther*, and the Region of Fire, from the Stars which it containeth, and are, as it were, Fires lighted there.

When I say the *Earth*, I mean the lowest, or, as it were, the middle part of the World, in which also there is the Water, and next over it the Air, immediate to the Region of Fire. And, because the things which we see created of these, and in these, are various; therefore we comprehend them under the name of *things visible*.

But seeing it may, and useth to be demanded concerning the World, what Form it hath within, what Figure without? Whether it be Eternal, or had a Beginning? Whether it require any other Author, than Nature or Fortune? In what manner was the production of the Whole, and of its Parts? Whether it require any Ruler, or perform its vicissitudes by it self? Whether, How, and When it shall perish? Whether it be One, or, besides it, there be Innumerable? We must therefore speak a little of each.

CHAP.

C H H P. I.

Of the Form and Figure of the World.

AND as to the first Head, the World, by its internal form or constitution, is not animate, much less a God, as some think; but whereas what is conceived to be one in its form or constitution, is such, either for that its parts are contained under one disposition, as a Plant or Animal; or, that they are artificially joined one to another, without mingling their tempers, as a House, or Ship; or, that they are discreetly distinguish'd from one another, yet have some mutual relation to each other, as an Army, and a Common-wealth; the World is only to be conceived One, partly the second way, partly the third.

The second way it may be esteemed one, in regard between the Sun, the Moon, and the rest of the more solid and compacted parts of the World, there is intercepted either Air or *Æther* diffusive, whereby a kind of Coherence is made. It may also be esteemed one the third way, in regard the Sun, Moon, Earth, and other compacted Bodies, are so separated from one another, that, after a determinate order, they possess the Situations or Seats of Superiors and Inferiors, Antecedents and Consequents, things Illustrating, and things Illustrated.

But to say, that the World is one the first way also, How can it be made good? Since that if it were so, that the World, as some will, were animate, nothing could be thought inanimate; not a Stone, not a Carcass, not any thing whatsoever; that same disposition, called Soul, being diffused through all things.

Neither do they, who assert, the World to be animate and wise, sufficiently mind and understand, what kind of nature that must be to which such expressions are proper, since as a Tree is not produced in the air, nor a Fish on dry ground, nor Blood in Wood, nor Moisture in a pumice; so neither can the Mind or the Soul be produced, or be, indifferently, in any kind of Body. But seeing it must be determinately ordered where every thing shall grow and inexist, the nature of the Soul must be looked for about the Nerves and Blood, not in putrid Globes of Earth, in Water, in the Sun, in the Sky, &c.

Now whereas some hold, That the World is not only endued with Mind and Senses, but that also it is a round burning God, and ever-moving with restless Circumvolutions; these are Prodigies and Monsters, not of Philosophers discoursing, but dreaming. For who can understand, what this ever-moving and round God is, and what Life is ascribed to him, to be turned about with so great swiftness, as is unimaginable to be equall'd? With which I see not how a constant Mind and a happy Life can consist.

But granting the World to be a God, not only the Sun, Moon, and the rest, are parts of God, but even the Earth it self, as being a part of the World, must be also a part of God. Now we see, there are very great Regions of the Earth uninhabitable, and uncultivated, part of them being burnt up by the approach of the Sun, part being

being oppressed with Snow and Ice through his distance from it. If then the World, be God, these, being the Parts of the World, are to be termed, some, the Burning; some, the frozen Members of God.

As to its external Form or Figure, it seems, in the first place, certain, that there is some extremity of the World, because the World is a kind of Segment of the infinite Universe; but what that is, who is able to tell, unless he came thence?

For whereas it seems to be Heaven, there is nothing in all apparent things hinders, but that it may be Rare, nor nothing hinders but that it may be Dense; Rare, forasmuch as the Stars which are in it, and appear to be moved, perform their Motions through it; Dense, forasmuch as itself is able to move the Stars fixed in it,

Again, nothing hinders, but that it may be either Quiescent, if the Stars are moved through it; or Circularly moved, if the Stars are carried round about with it.

Besides, nothing hinders, but that it may be round, oval, or lenticular, especially if it be moved. Again, nothing hinders, but that it may be triangular, pyramidal, squar, hexaedrical, or of any other plain Figure, especially if it be unmoved.

As for them, who, being persuaded by some Arguments, assert the World so to have one determinate Figure, as that it can have no other, we cannot but wonder at their Stupidity. For most maintain the world to be, as Immortal and Blessed, so also Round, because *Plato* denieth any Figure to be more Beautiful than that. But, to me, that of the Cylinder, or the Square, or the Cone, or the Pyramid, seem, by reason of the Variety, more Beautiful.

CHAP. II.

Of the late Beginning of the World.

AS for the second Head. The world is not Eternal, but began to be at some time.

For first, Seeing that the Nature of the whole and of the Parts is the same; And we observe, that the Parts of the World are obnoxious both to Generation and Corruption, it follows, That the whole World must be subject to Generation and Corruption. That the Parts of the World are generated and corrupted, is demonstrated even by the Sense, and shall be proved hereafter.

Neither let any say, that the Mutations which are made in the Parts of the world are not of the more Principal parts, as of the Sun, the Moon, the Earth, and the rest; but of the lesser only which are but Particles, whereof the Principal consist; for he ought to conceive, that if the Principal parts consist of parts subject to Mutation, those whole parts themselves are subject to Mutation; and though ordinarily there occur not Causes so powerful as to change them, nevertheless nothing hinders, but that such may sometimes occur, as even among the lesser parts, some continue safe a great while, which, at last, in progress of time, find causes of Mutation.

Besides, seeing that the most ancient Histories of all things exceed not the *Theban* and *Trojan* Wars, what is the reason of this, but, because the world is not old, so far is it from being eternal? For if eternal, why did not other Poets celebrate other things? How came the memorable Acts of so many eminent Persons to perish? Why are the Records of Eternal Fame nowhere extant?

In like manner, seeing that we have all Arts newly invented, and their Inventors are not unknown, (for, that daily many Arts are advanced and receive increase, is very manifest,) how comes this to pass, but because the World had not its beginning long ago? for the World could not be so long without Arts, which are of so great importance to life

If you believe, that in times past there were such Records and Arts as now, which perished by some great Conflagrations, Deluges, Earthquakes, being subverted together with the Cities and Nations themselves, do you not acknowledge it necessary, that there must be at some time to come a destruction of Earth and Heaven, as it had hapned, if in those cases some greater Causes had lighted? For we ourselves think ourselves mortal, for no other reason, but for that we perceive ourselves to fall into the same diseases, as they whom we see die.

The World therefore had a Beginning; nor was, as may appear by what we said, of very great Antiquity. But whensoever it began, it is most probable it began in the Spring, because then all things sprout, flourish, and bring forth; and the newness of the World required a temperate heat and cold for the cherishing of its young Brood, before it should pass to either of the Extreams

CHAP. III.

Of the Cause of the World.

AS to the next Head: We must first acquire the Divine Power from the solicitude and labour of framing the World, for it could not be a Cause blessed and immortal that made it.

With what Eyes could *Plato* look upon the Fabrick of so great a Work, as to conceive the World made and built by God? What Designs, What Tools, What Beams, What Engines, What Ministers, in so great a task? How could Air, Fire, Water, Earth, obey and serve the will of the Architect? Whence sprung those five Forms, of which the rest also are framed, lighting aptly to make up Mind and Senses? It were too long to repeat all, which are rather in our Wish, than in our Power to find out.

Again, this God, of whom he speaks, either was not in the former age, wherein Bodies were either immoveable, or moved without any order; or he then slept or wak'd; or did neither. The first cannot be admitted, for God is Eternal; nor the second, for if he slept from Eternity he was dead, Death being an Eternal Sleep. But neither is God capable of Sleep, for the Immortality of God, and a thing near Death, are far asunder. Now if he were awake, either something was wanting to his Felicity, or he was

D d d d 2

perfectly

perfectly happy. But the first would not allow him to be Happy; for he is not Happy who wants any thing to make up his Felicity; the latter is absurd, for 'twere a vain action for him who wants nothing, to trouble himself with making any thing.

To what end then, should God desire to adorn the World with fair Figures and Luminaries, as one that dresseth and sets out a Temple? If, to the end that he might better his Habitation, it seems then, that for an infinite time before, he lived in darkness as in a dungeon. Again, can we think, that afterwards he was delighted with the variety, wherewith we see the Heaven and the Earth adorned? What delight can that be to God, which, were it such, he could not so long have wanted it?

But some will say, That these were ordained by God for the sake of Men. Do they mean of the Wise? Then this great Fabrick of things was made for a very few persons. Or, of the Foolish? There was no reason, he should do such a Favour to the Wicked. Again, What hath he got by doing so, since all Fools are even in that regard most miserable; for what more miserable than Folly? Besides, there being many inconveniences in Life, which the Wise sweeten by compensation of the conveniences; Fools can neither prevent the future, nor sustain the present.

Or, Did he make the World, and, in the World, Men, that he might be worshipped by Men? But what doth the worship of Men advantage God, who is happy, and needeth nothing? Or, if he respect Man so much, as that he made the World for his sake, that he would instruct him in Wisdom, that he would make him Lord over all living Creature, that he would love him as his Son; Why did he make him Mortal and Frail? Why did he subject him, whom He loveth, to all evils? Seeing rather a Man ought to be Happy, as conjoyned with, and next unto God, and Immortal, as he himself is, whom he is made to worship, and contemplate.

For these reasons ought we to say, that the World rather was made by Nature; or, as one of the Natural Philosophers said, by Chance.

By Nature, for such is the nature of the Atoms, running through the immensity of the Universe, that in great abundance running against one another, they can lay hold of, entangle, and engage one another; and variously commixing themselves, First roll up a great kind of Chaos, in manner of a great Vortex, (like our bottom,) and then after many Convolution, Evolutions, and making several Efforts, and as it were Attempts, trying all kinds of Motions and Conjunctions, they came at last into that Form, which this World bears.

By Chance, for the Atoms concur, cohere, and are co-opted, not by any design, but as Chance led them. Wherefore, as I said, Chance is not such a Cause, as directly and of itself, tends to mingle the Atoms, and dispose them to such an Effect; but the very Atoms themselves are called Chance, inasmuch as meeting one another, without any premeditation, they fasten on one another, and make up such a Compound, as chanceth thence to result.

CHAP. IV.

Of the Generation of the World.

But to discuss this Matter more narrowly, and to come to another Head; the World seemeth to have been elaborated and molded into this round Figure, by a certain kind of Reason, without Billows, Anvile, or other Instruments.

First, whereas the Atoms, by an inconsiderate and casual Motion, were continually and swiftly carried on, when they began to run in multitudes into this immense place, in which the World now is; and to fasten upon one another, they presently became heaped into one rude and indigested Mass, in which great things were mingled with small, round with corner'd, smooth with hooked, others with others.

Then in this confused Croud, those, which were the greatest and most heavy, began by degrees to settle down; and such as were thin, round, small, slippery, these, in the concurrence of the others, began to be extruded, and carried upwards; as in troubled water, until it rests and groweth clear, the Earthy parts settle downwards, the Watry are as it were thrust upwards; but after the impulsive force, which drove them upward, grew languid; nor was there any other stroke, which might toss them that way, the Atoms themselves, endeavouring to go down again, met with obstacles from others; whereupon they flew about with greater activity to the utmost bounds; as also did others, which were reverberated by them, and repressed by others that closely followed them, whence was made a mutual Implication, which did generate Heaven.

But those Atoms, which were of the same nature, (there being, as we said, many kinds of them,) and carried round about in heaps, whilst they were thrust upwards, made the Sun, and Moon, and other Stars. These were chiefly called Signifying Atoms; those which they left, as not able to rise so high, produced the Air.

At length, of those which settled down the Earth was generated; and seeing there yet remained much Matter in Earth, and that condensed by the beatings of the Winds and Gales from the Stars, that Figuration of it which consisted of least Particles, was squeezed forth and produced moisture. This being fluid, either run down into hollow places, fit to receive and contain it, or, standing still, made hollow Receptacles for itself. And after this manner, were the Principal parts of the World generated.

To say something of the less Principal, the Particles as it were of the former part; there seems in that first Commission, to have been made the divers Seeds of generable and corruptible things, of which, Compounds of divers Natures were first framed; and afterwards in a great degree propagated.

Stones, Metals, and all other Minerals were therefore generated within the body of the earth at the same time it was formed, because that Mass was heterogeneous, or consisting of Atoms and Seeds of different Natures; and in that the

Bulks

bulks of Stones did diversly swell out to the very Superficies. Whereupon Mountains came to be made, and consequently Vallies, and Plains must needs have been between them.

Soon after, about the Mountains and the Hills, and in the Valleys, and in the Fields grew up Herbs, Shrubs, Trees, almost in the same manner, as Feathers, Hair, Bristles, about the Bodies and Members of Birds and Beasts.

But as concerning Animals themselves, it is likely that the Earth, retaining this new genital Seed, brought out of it self some little bubbles, in the likeness of little Wombs, and these when they grew mature (Nature so compelling,) broke, and put forth young little Creatures. Then the Earth it self did abound in a kind of Humor, like to Milk, with which Aliment living Creatures were nourished.

Which Creatures were so framed, that they had all parts necessary for nutrition, and all other uses. For as when *Nilus* forsakes the Fields, and the Earth beginneth to grow dry, through heat of the Sun, the Husbandman, turning up the Glebe, finds several living Creatures, part begun, part imperfect, and maimed; so that in the same Creature one part liveth, the other is mere Earth: In like manner, amongst those first efforts of the Earth, besides the living Creatures perfectly formed, there were some produced, wanting Hands, Feet, Mouth, and other parts; without which, there is no way to take nourishment, or to live long, or to propagate their Kind.

What I say of other living Creatures, I hold also in Man, that some little Bubbles and Wombs, sticking to the Roots of the Earth, and warmed by the Sun, first grew bigger, and by the assistance of Nature afforded to Infants sprung from it a connatural moisture, called Milk; and that those thus brought up, and ripened to perfection, propagated Mankind.

Two things I add; One, that it is by no means to be allowed; what some affirm, that at that time were produced *Centaures*, *Scyllaes*, *Chimæraes*, and other Monsters consisting of Parts, of different kinds. For how in a *Centaur* (for example,) could the Limbs of a Man, and of a Horse be joyned together, when at the third Year of his Age, at what time a Child is hardly weaned, a Horse is in full vigor? And at what time a Horse languisheth with Age, a Man flourisheth in the prime of his Youth.

The other, That in the Earth there were created new living Creatures, and more and greater than now, by more and more vigorous Seeds, and amongst those, Men too; so as that race of Men was more hardy, as consisting of greater and more solid Bones and Nerves: And so at last the Earth, her Seeds being exhausted, like a Woman too old to bear Children, left off to produce voluntarily such living Creatures: Whence it comes to pass, that now Men are no where generated on this fashion; but both they, and other more greater and perfect Animals, spring up only by way of Propagation.

CHAP. V.

Of the Vicissitudes in the World.

Here followeth a Question, Whether the World be Governed by it self, or by the Providence of any Deity?

First therefore, we ought not to think, that the Motion of Heaven, or the Summer and Winter, Course of the Sun, or the Eclipse of the Sun and Moon, or the Rising and Setting of the Stars, or the like, happen, because there is some Ruler over them, who disposeth, and hath disposed of them; and withal possesseth Beatitude and Immortality; for with Felicity agree not Business, Solitude, Anger, and Favour; these happen through Imbecillity, Fear, and want of external Help.

Neither ought we (it being a troublesome employment, and wholly averse from a happy state,) to think, that the Nature which possesseth Felicity is such, as that (knowing and willing,) it undergoes these Commotions or Perturbations of Mind; but rather to observe, out of respect to it, all veneration, and to use some kind of address to it, suggesting such Thoughts, as out of which arise no Opinions contrary to Veneration.

We should rather think, that, when the World was produced, there were made those Circumplexions of Atoms, involving themselves about one another, that from thence the Celestial Bodies being framed, there was produced in them this necessity, whereby they are moved in such a manner, and perform such Periods; and after the same manner all the rest perform their tasks, in order to the course of things once begun.

And why should we not rather think thus? For whether the World it self is a God, as some conceive, What can be less quiet, than incessantly to roll about the Axis, with admirable swiftness; But unless it be quiet, nothing is happy. Or whether there be some God in the World, who rules, governs, conserves the courses of the Stars, the mutations of Seasons, the vicissitude and order of things, who is present in all places, and at all times; and, how great soever is the variety, or rather innumera-bility of all particular things, is distracted by so many cares, by taking order that they be done this way, and no other; indeed he is, as I before objected, involved in businesses troublesome and laborious.

Besides, tho it were but only supposed, that God doth not take care of things, Shall we not find, that all things happen no otherwise, than as if there were no Providence? For some fall out well, but the most ill, and otherwise than they ought. To omit the rest, if *Jupiter* himself did Thunder, or guide the Thunder, he ought at least to spare Temples, tho it were only not to give occasion of doubting, whether it proceed from Fortune, or Divine Counsel; that is, all things, in a manner, holding on their course, as it was at first begun.

This also is of no little weight, that they assert a special Providence in respect of Men. For, (not to repeat what I even now said, That a happy and immortal Nature cannot be possess'd with Anger or Favour,) put case, That God takes

takes no care of the Affairs of Men, How can they come to be otherwise than they are? In them there is an equal, or rather greater Imbecility, than in other Creatures, equal inconveniences, equal ills: Some of them, making Vows, are preserved from Shipwrack; How many have made Vows, and yet perished? Many pray for Children, and obtain them; How many pray for Children in vain?

But, to be brief, why, if God takes care of the Affairs of Men, is it ill with the Good, well with the Bad? Truly it is an Argument with me, when I see Crosses always happen to the Good; Poverty, Labours, Exile, loss of Friends; on the other side, wicked Persons to be Happy, to increase in Power, to be honoured with Titles; That Innocence is unsafe, wicked Actions go unpunished; That Death exercises his Cruelty without observing Manners, without order and distinction of Years; Some arrive at old Age, others are snatch'd away in their Infancy, others in their full strength; others in the flower of their Youth are immaturely cut off; In War, rather the best are vanquished and perish. But that which prevails most with me, is, That the most Religious Persons are afflicted with the greatest Ills; but to them, who either wholly neglect the Gods, or worship them not Religiously, happen either the least Misfortunes, or none at all.

Moreover, I think it may not be ill argued thus: Either God would take away Ills and cannot, or he can and will not, or he neither will nor can, or he both will and can. If he would and cannot, he is impotent, and consequently not God; if he can and will not, envious, which is equally contrary to God's Nature; if he neither will nor can, he is both envious and impotent, and consequently not God; if he both will and can, which only agrees with God, Whence then are the Ills? Or, why does he not take them away?

C H A P. VI.

A Digression, concerning Genii or Dæmons.

IT is all one, whether God takes care of things by Himself, as some will have it, or (as others hold,) by Ministers, whom they generally call *Genii* and *Dæmons*; for things happen no otherwise, than as if we should suppose no such Ministers; and tho it were granted, that there are some, yet can they not be such as they feign them, that is, of a Human Form; and having a Voice that can reach to us: To omit, since for the most part they are said to be ill and vicious, they cannot be happy and long-liv'd, since both much Blindness and a Proneness to Destruction perpetually attends Wickedness.

How much were it to be wished, that there were some who might take care of us; and supply what is wanting to our Prudence, and to our Strength? Especially, how much were it to be wished, by such as are Leaders in War of most Pious and Honest Attempts, that they might confide not only in Arms, Horses, Ships, but also in the assistance of the Gods themselves;

And indeed, some are said to appear sometimes to some Persons; and why may it not be, that they who affirm *Dæmons* to have appeared to them, either lye and feign, or are melancholy, and such, that their distemper'd Body either strangely raiseth, or diverts their Imagination to extraordinary conceits. It is well known, that nothing is more apt to be moved and transformed into any Species (altho there be no real ground,) than Imagination: For the impression made upon the Mind is like that in Wax, and the Mind of Man having within it self that which represents, and that which is represented, there is such a power in it, that, taking even the very least of things seen or heard upon some occasion, it can of it self easily vary and transfigure the Species, as is manifested by the commutations of Dreams which are made in Sleep, from which we perceive, that the imaginative Faculty puts on all variety of Affections and Phantasies; so that it is no wonder, if, where the Faculty is unsound, they seem to see *Dæmons*, or other things, of which they have had any foretaken conceit.

Moreover, they use to alledge Divination as an argument to prove both Providence and the existence of *Dæmons*; But I am ashamed at Humane Imbecillity, when it fetcheth Divinations even out of Dreams, as if God walking from Bed to Bed did admonish supine Persons, by indirect Visions, what shall come to pass; and out of all kinds of Portents and Prodigies; as if Chance were not a sufficient Agent for these Effects; but we must mix God, not only with the Sun, and with the Moon, and several other living Creatures, but also with all Brasses and Stone.

But to instance in Oracles only: Many ways may it be evinced, that they are meer Impostures of Priests, as may particularly be discovered, for that the Verses which proceed from them are bad, being, for the most part maimed in the beginning, imperfect in the middle, lame in the close; which could not be, if they came from Divine Inspiration, since from God nothing can proceed, but what is well and decent.

And I remember, that, when in my younger days I lived at *Samus*, that Oracle was much cried up, by which (as they reported,) *Polycrates* King of that Island, celebrating the *Pythian* and *Delian* Games, sent at the same time to *Delus*, demanding of *Apollo*, Whether he should offer Sacrifice at the appointed time? *Pythius* answered, *These to thee are the Pythian and the Delian*; whereby (said they,) it was signify'd, that those should be his last, for soon after he happen'd to be slain. But how could it be signify'd by that Answer, that these Sacrifices should be the last rather than the middle? But that the vulgar sort of Men are most commonly led by Hearsay, and are greedy of strange Stories,

C H A P. VII.

Of the End, or Corruption of the World.

THat the World shall perish and have an end, is consequent, Forasmuch as it was generated, and had beginning; for it is necessary, that all compounded things be also dissipated, and resolved into those things of which they are compounded, some by some Causes, others by others; but still all from some Cause, and at some time or other. Whence it is the more to be admired, that there should be some, who, not only broaching the Opinion, that the World was generated, but even in a manner made by hands, thence define, that it shall be ever. For as I argued before, What Coagmentation can there be indissoluble? or, what is there that hath a Beginning, but no End?

Certainly, the World seems like an Animal, or Plant, as generated so subject to corruption, as well because, no other wise than they, it consists of Atoms, which by reason of the intestine Motion, wherewith they are incessantly moved, at length must cause a dissolution; as also because, there may happen both to them, and the World, some extrinsecal Cause, which may put them to destruction: Especially it being known that every thing is produced but one way, but may be destroyed many; As also, because, there are three Ages in them, Youth, Middle State, and Old Age; so the World first began to grow up; (as also after the time of its generation, there came extrinsecally from the Universe Atoms, which insinuated into the Pores as it were of the World, and by which Heaven, the Stars, the Air, the Sea, the Earth, and other things were augmented, the congruous Atoms accommodating themselves to those that were congruous to them) then, because there ought to have been some end of growing, it rested in a kind of perfect state; and at last began so to decay, as plainly shews, that it declines towards its last Age.

This is first proved, because, as we see, in progress of time, Towers fall, Stones moulder, Temples and Images decay, whereby at last they come to be dissolved; So we may perceive the parts of the World sensibly to moulder, and wear away; a great part of the Earth goes away into Air, (not to say any thing of those greater Concussions, which make us fear sometimes, lest the whole should fall, and sinking from under our Feet sink, as it were, into an Abyſſe,) the Water also is partly exhaled into Air, partly so distributed through the Earth, that it will not all flow back again: The Air is continually changed, many things going forth into it, and many produced again out of it. Lastly, the Fire (not only ours, but the Starry Fire, also, as that which is in the Sun,) sensibly decays by the emanation, and casting forth of Light. Wherefore, neither is there any reason to think, that these Bodies of the World will continue ever.

Again, because we see there is a continual Fight amongst the Bodies of the World themselves, through which sometimes happen Confla-

grations, sometimes Deluges, as it were with equal strength. But, as in wrestling, so is it necessary, that in the World one of the Contraries prevail at last, and destroy all things. If any shall demand, which of the two is the more likely to prevail, it may be answer'd, The Fire, as being the more active, and receiving particular recruits from the Sun, and Heaven; so as, at last, it will come to get the upper hand, and the World thereupon perish by Conflagration.

Lastly, because there is nothing indissoluble, but either as it is solid, as an Atom; or intangible, as Vacuum; or hath nothing beyond it, whence either a dissolving cause may come, or whither itself may go forth, as the Universe. But the World neither is solid, by reason of Vacuum intermix'd; nor intangible, by reason of corporeal Nature; nor hath nothing without it, by reason of its extremity: Whence it follows, that a destruction may happen extrinsecally, by Bodies incurring to it, and breaking it; but, both extrinsecally and intrinsecally, it is capable of being dissolved.

This I add because the World may perish, not only by Conflagration, or, if you will, by Inundation also, but by many other ways; amongst which the chief is, that, as a living Creature, (to which I already compar'd it,) the frame of the Soul being untied, is dissolved into several parts, and these at length are quite dissolved also, either by being dissipated, and turning into Air, and the most minute Dust, or serving again for the production of some other living Creatures; So the Walls, as it were, of the World decaying, and falling, the several pieces of it are dissolved, and go at length into Atoms, which, having gotten into the free space of Vacuum, rush downwards in a Tumult, and recommence their first motions; or run forward, far and long; or soon fall upon other Worlds; or meeting with other Atoms, joyn with them to the production of new Worlds.

And though indeed, as a living Creature may be sooner or later dissolved by departure of the Soul, so may either of these happen to the World: Yet it is more probable, that it will so come to pass, as that in a moment of time, nothing thereof shall remain except Atoms, and a desolate space; for which way soever the gate of death, as it were, shall be first opened, thither will all the crowd of Matter throng to get out.

That the World, as I said, is declining towards its last age, is probable, for that the teeming Earth, as I lately touched, scarce bringeth forth even little Animals, when as formerly she produced large; and that she, not without extrem labour, brings forth Corn and Fruits; whereas at first she brought them forth of her one accord, in great plenty. Whence it comes, that there are frequent complaints, praising the former ages, and accusing the present, for that they perceive not that it is the course of things, that all things should decay by little and little, and, wearied with long space of age, tend as it were to destruction. I wish Reason, rather than the thing itself did persuade, that within a short time, we shall see all things shatter'd in pieces.

C H A P.

C H A P. VIII.

Of Infinite Worlds.

Moreover, as to demand, Whether there are, besides this, not only other Worlds but many, even infinite : This seems to be the Answer, That there are infinite Worlds. For (a) *the Atoms being infinite, as we formerly shewed, are carried through infinite spaces ; and that several ways in far distances from this World, and there meeting one another in Multitudes, may joyn to the production of infinite Worlds. Since the Atoms, being of this nature, that a World may be made up, and consist of them, cannot, by reason of there Infinity, be consumed, or exhausted by one, nor any determinate number of Worlds ; whether these Worlds be supposed, framed after one fashion, or after divers. It is not impossible therefore, but that there may be infinite Worlds,*

(a) *Laert.*
Lucret. 2.

And indeed it is as absurd for a single World to be made in an infinite Universe, as for one Ear of Corn to sprout up in the vast Field, sowed with many Grains ; For as in the Field there are many Causes, to wit, many Seeds apt to grow up, and places to produce them ; So in the Universe, besides Places, there are Causes, not many, but infinite, namely Atoms, as capable of joyning, as those of which this World was made up.

Lucret. loc.cit.

Besides, we see not any generable thing, so one, as that it hath not many like itself, in the same kind, (for so Men, so Birds, so Beasts, so Fishes, are multiplied each under their particular Species.) Wherefore, seeing that not only the Sun, the Moon, the Earth, the Sea, and the rest of the parts of the World were generated ; but even the whole World it self, which consists of them ; we must acknowledge, that not only the Parts, but the World itself, are not single, but many, as to number, and (for the Reasons alledged) infinite.

Now there being nothing to hinder, but that some Worlds may be like this of ours, others unlike it ; for there may be equal, there may be greater, there may be lesser ; there may be, that have the same Parts, disposed in the same Order ; there may be, that have different Parts, or disposed in a different Order ; there may be, that have the same Figure ; there may be, that have a different, (for though Atoms cannot have an infinite variety of Figures, having a determinate space in their Superficies, yet may they be of more Figures than we can number, as Round, Oval, Pyramidal, &c.) Although, I say, there be no repugnance in this, yet all these diversities are only certain kinds of conditions, which vary the common Quality, and Nature of the World.

But it seems, that each of the other Worlds, as this of ours, and every compound which is made in that vast Vacuity, and hath any resemblance with those things which fall under our Observation, is generated apart, and after a fashion peculiar to itself, *By certain Convulsions, and Intertextures of Atoms proper to it ; And this, whether it be generated in the Intermundia, (so we term the interval, included betwixt two or more Worlds, not far distant from one another,)*

Laert.

or in a multivacuous place, (that is in which, though there be great and little Bodies, yet vacuities take up the greater share of it,) or Lastly, in a great unmixt and pure *Vacuum*, though not as some (who assert such a *Vacuum*,) describe it.

For we are to understand, contrary to them, *that there floweth together, if not from infinite, at least from one, or more Worlds, or intermundia, some apt Seeds, that is, a congruous heap of Atoms, or little Bodies, which are by degrees mutually adjoyned here and there, and variously formed, and change place diversly, according as it happens, and withal receive from without some Irriguous, as it were, Accretions ; untill a bulk, consisting of the whole Assembly of all these, be made up, and gain a consistency, as much as the Principles, of which it was made, can well bear.*

For it is not sufficient, for the generation of a *World*, that a great heap of Atoms be thrown together in a *Vacuum* and by the accession of others, grow bigger, till it roll into another *Vacuum* : In the same manner, as a heap of Snow, being tumbled upon Snow, gathers still more, and grows bigger, as was the Opinion of a certain Philosopher, holding the necessity of such a Method : Since this is repugnant to our daily Experience. For a heap, whose innermost kernel, as it were, is solid, and its outermost shell solid also, can neither be rolled up and down, nor increased, if the part intercepted betwixt the kernel and the Shell be fluid, as in the World it is.

Finally, That the other Worlds also are, because generated, subject to Corruption, is too manifest to be mentioned ; that some may be dissolved sooner, others later ; Some by some Causes, Others by others, is a thing necessarily consequent to the peculiar diversity of every one.

C H A P. IX.

Of inferior Terrestrial things.

But that (omitting the rest,) we may speak more particularly of this our World, since all things in it are either contained within the compass of the Earth, or exceed not the height of the ground, or are placed on high, that is, raised above the Earth's Superficies, and therefore may generically be divided into the low or Terrestrial sort of things, and those which are Sublime, Celestial, or Aerial ; Let us then so order our Discourse, as to speak first of the former, in regard, that as they are nearer, and more familiar to us ; so we may thence ascend by orderly degrees to discourse, and define, what we should most rationally conjecture of the later, which are more remote from us, and less visible to us.

In the first place, we are to take a general view of the body of the Earth, next of the Water, a considerable part of this Masse, and mingled diversly with the Earth, partly in its Superficies, partly in its very Bowels ; Afterwards of these lesser Bodies, with which we see that whole Masse replenished, whether inanimate, as Minerals, Stones, and Plants ; or animate, usually called Animals.

C H A P. I.

Of the Earth situate in the middle of the World.

First then, as to the Earth, we have already said, how it was framed together with the other parts of the World ; for it had been to no purpose to form it first, beyond the utmost Surface of the World and then convey it into the World already framed, since it was sufficient for that Effect, that there were such Seeds found in the Universal Mass, of which it, with the other parts of the World, might be generated ; in the same manner as it would be unnecessary, that living Creatures should first be separated from, and carried beyond this Infinity of things, and be formed there, that, being now perfected, they might be brought thence into this our Region. Nor was it needful, that they should first be exactly wrought in Heaven, and thence transmitted to our Earth ; seeing no Man can shew, why there must needs be found such Seeds there, of which Animals, Plants, and other visible Compounds are made up, and could as well be found here ; Or, whence Heaven hath this privilege, of having sufficient conveniences for their Generation and Nutrition, more than our Earth.

It is already said, That the Earth, when the Heaven, and other higher Bodies, did fly, as it were, upwards settled into the middle of the World, and there rested as in the lowest place. We add now, That as it is the middle part of the World, towards which all heavy things fall ; it follows not, that there is also a middle part of it, called the Center, towards which, all things that ponderate are directed in a streight line ; for all heavy things fall in parallel Motions, without any endeavour to meet in any Angle, there being, as in the Universe, so also in our World, one Region above, from which all heavy things come, and only one below, towards which they tend.

Whence, as they are not to be approved of, who say, there are Antipodes, or Men so situated in a strange region of the Earth, that they walk with their Feet Diametrically opposite to ours, in like manner as we see the Images of Men, or other things, either stand or go with their Heads downwards under the Water ; for these Philosophers endeavours to maintain, contrary to the Laws of Nature and of heavy things, That Men, and other Terrestrial Bodies placed there, tend upwards, or towards the Earth ; and that it is equally impossible, they should fall down from the Earth, to the inferior places of the Sky ; as that Bodies amongst us here should unimpell'd mount up to Heaven. However, upon another account they speak consequently to their Hypothesis, that 'tis day with the Antipodes when 'tis night with us, and night with them when 'tis our day.

The Earth then is framed indeed after a circular Figure, but yet as a Dish or a Drum is, not like a Sphear or Bowl ; for this Surface of it which we inhabit, and which indeed is only habitable, is flat or plain, and not globous, and such as all heavy things are carried to it in a streight line, or perpendicularly, as was formerly declared.

This being so, here ariseth a great difficulty, How it can then be, that it should stand steady, and not fall downwards into that Region, into which the Antipodes would slide ? But, the reason why the Earth falls not, is, because it rests upon the Air, as ally'd to it in Nature ; Nor doth it any more burthen the Air than Animals, which are of like Nature with the Earth, burthen the Earth.

Nor is it hard to conceive, that in the Air beneath there is a power to sustain the Earth, because the Air and the Earth, by the general contexture of the World, are things not of different extraction, but ally'd to one another by a certain affinity. Whence, as being Parts of the same Whole, one cannot be burthensom to the other, but are held by a mutual embrace, as if they had no Gravity at all ; especially since this Earth, however in this upper part of it more compacted and heavy, may, descending lower, be, by degrees, less solid, and so less weighty ; till at length, in its lowest part of all, it approach very near the nature of the Air which supports it.

And for this reason I said, that the Earth was not made in some place out of the World, and thence brought into it, because then it would have pressed the Air with its weight, as our Bodies are sensible of the least weight, if imposed from without ; Whereas, neither the Head, nor other Parts are heavy to one another, by reason that they are agreeable to one another in Nature, and knit to one another by the Common Law of the same Whole.

And that it seem not incredible, a thing so tenuous as is Air should be able to uphold so gross a Bulk ; do but consider, how subtle a thing the Soul or Animal Spirit is, and yet how gross and weighty a Bulk of the Body it upholds and governs, and that only by this means, because it is a thing joyned to it, and aptly united to it, as the Air is to the Earth.

But we must not therefore conceive the Earth to be Animate, much less a Goddess, for we have formerly proved the contrary ; The Earth indeed many times brings forth several living Creatures, yet not as being herself Animate, but because, containing various Atoms and divers Seeds of things, she produceth many things many ways ; of which, Animate Beings are formed. Some there are, who call the Earth, The Great Mother of the Gods, and Bercynthia. That to the Earth these Names be attributed, if it be lawful to make use of Divine things, thereby to signify Natural things, may perhaps seem tolerable ; but to believe, that there is a Divinity in the Earth, is no way allowable.

C H A P. II.

Of Earth-Quakes, and the Flames of Aetna.

IT seems wonderful, how it comes to pass, That the Earth is sometimes shaken, and trembles ; but this is an Effect which may happen from divers Causes, supposing that the Earth, as I see no reason to doubt, is in all parts alike, and that below as well as above, it hath Caverns,
E e e Breaches,

Breaches, and Rivers, rolling great Billows, vast Stones, &c.

For the Water may move the Earth, if it hath wash'd or worn away some parts, which being made hollow, it can no longer be held up; as it was whilst they were entire; or if some Wind drive upon Channels, and Lakes, or standing Waters within the Earth and the [blow] impulsion either shake the Earth from thence, or the agitation of the Wind increasing with its own motion, and stirring up it self, be carried from the bottom to the top; as a Vessel cannot stand stedfast, untill the water which hath been troubled in it give over moving.

Likewise the Earth may receive a shock, by some part thereof suddainly falling down, and thereby be moved; seeing that some of its parts are upheld, as it were, with Columns and Pillars, which decaying and sinking, the weight that is laid on them quakes: For we see whole Houses shake, by reason of the jumbling, and succussion of Carts and Chariots.

Also the very Wind it self may move the Earth, either if the Earth (its interior and lower parts being full of crannies and chinks,) be shaken by some Wind variously dispers'd, and falling into those hollow Caverns, and so tremble in such manner, as our Limbs by insinuation of Cold tremble, and are moved, whether we will or no; Or, if the Wind getting in at the top, and driving downwards, the Earth is driven upwards by the Air under it; which is somewhat gross and watery, (for it sustains the Earth,) and shaken as it were from beneath, leaps up, which happens to all things: Not only to those which are forc'd against any thing, hard or firm; or so stretched or bent, that being prest upon it recoils; but also against a fluid thing, if it be able to strike it back, as when Wood is plung'd into Water.

The force of this Wind, if we conceive it turned into Fire, and resembling Thunder, may be carried on with a great destruction of all things that oppose its passage. For as Lightning, engendr'd in a Cloud, breaks thorow it, and shakes the Air with wonderful violence; in like manner, may the Fire, generated within the Caverns of the Earth of a coacervate and exagitated Wind, break thorow it, and make it tremble.

Now as there appears not any Cause, more likely than that which is taken from the Wind, and chiefly in this last manner, either by distributing it self into many several Cavities of the Earth, it causeth a trembling only, and (as if there were a transpiration through the looser Earth,) the Earth is not so broken thorow, as that there is a breach made, or something overthrown, or turn'd awry; or else by its being heaped up together in greater Caverns, there may follow such a succussion and impulsion, as may heave up, and cleave asunder the Earth, and make Gaps big enough to entomb whole Cities, as in divers places it hath often hapned.

What I say concerning the force of the Wind, which being turned into Fire breaks thorow and shakes the Earth, may serve to make us understand, that the eruptions of Fire which often happen in the same places, as at *Ætna*, proceed from the same Cause.

For this Mountain is all hollow within, and so underpropped with Vaults of Flint, that the Wind shut up in them groweth hot, and being enkindled, forceth its way thorough the breaches which it finds above, and eats into the sides of those Caverns; whence (together with Flame and Smoke,) it casts up sparkles and pumices.

And the better to bring this to pass, the Sea lies at the foot of the Mountain, which rolling its Waves to and from the Shore, unto which the Caverns of the Hill extend, thrusts in, and drives forward the Air, whereby the Fire is augmented, and cherish'd, as with the blowing of Bellows.

CHAP. III.

Of the Sea, Rivers, Fountains, and the overflowing of Nilus.

AS for those Waters which are on the Earth, for of those which are generated on high, and thence fall down in Rain, we shall speak more opportunely hereafter;) First, there is a vast body of them, which we call the Sea: For besides those in-land Seas which wash our Shores, there is also an extern Sea, or Ocean, which flowing about all the habitable Earth, is believed by some to be so immediately placed under the Arch of Heaven, that the Sun and other Stars Rise from it, and Set in it, as we shall have occasion to shew elsewhere.

And indeed, the Vastness of the Sea being such, it may be esteemed not the most inconsiderable Reason, Why the Sea seems not to be increased by the flowing of so many Rivers into it; for all the Rivers are hardly like a Drop, compared to so immense a Body. And withal the Sun, who with his beams so soon dries wet Garments; although he suck not up much moisture from every place, yet from so large a compass cannot but take away a great deal. Not to mention how much the Winds, which in one night many times dry up the Ways, and harden the Dirt, may in sweeping along the Sea, consume of it.

But, the chiefest reason seems to be this. The Earth being a rare Body, and easily penetrated, and withal, washed on all sides by the Sea, the Waters, as well as they are poured from the Earth into the Sea, so must they also soak down from the Sea into the Earth, that they may rise up in Springs and flow again.

Neither need it trouble us, that the water of the Sea is salt, and the waters of Springs and Rivers fresh; because the water, passing out of the Sea into the Earth is strained in such manner, that it puts off the little bodies of Salt, and returns quite stripp'd of them. For, the body of the Sea being commixed of Salt, and of Water; forasmuch, as the Seeds of Salt, are more hooked, and those of Water more smooth, therefore, these glide easily away, whilst the others cannot but be entangled, and are all along left behind.

Hence appeareth the Cause (which seemeth the Principal,) of the perpetual flowing of Springs: Where they rise up, there may indeed be some great quantity of water gather'd together, which may serve for supply: But upon an-
other

other account, they may be supplied, forasmuch as there is something continually flowing from beneath into them. And though these subterraneous Rivulets (as it were,) might be made up of the several Seeds, which are dispersed through the Earth, yet must these Seeds be supplied by the Sea, which soaks into the Earth.

Whence it comes to pass, as was said, that those Rivulets, dispersing themselves into lesser streams, and running down into lower hollow Receptacles, and meeting there, at last joyn together in great Channels, and make large Rivers, which continually renew and supply the immense Sea.

But since, there is not any River more wonderful than *Nilus*, for that every Summer it overfloweth and watereth *Egypt*, we must not therefore omit to say, that this may happen by reason of the *Etesian* Winds which at that season blowing towards *Egypt*, raise up the Sea to the mouths of *Nilus*, and drive up Sands thither, so as *Nilus* cannot but stop, and swell, and rising above its Channel, overflow the Plain which lies beneath.

Perhaps also it happens, for that the *Etesian* Winds blowing from the North carry the Clouds into the South beyond *Egypt*, which, meeting at some very high Mountains, are there crowded together, and squeeze forth Rain, by which *Nilus* is increased.

It may happen also, that the exceeding high Mountains of *Ethiopia*, may be cover'd with Snow, which being dissolved by the Sun's excessive heat, fills the Channel of *Nilus*.

CHAP. IV.

Of the Properties of some Waters, and of Ice.

BUT that we may select besides some properties of Water, which seem wonderful to the Vulgar, I omit at present that Property, which is of kin to those we last mentioned; That although the Water so easily dissolves Salt, and admits to be imbued by it; yet there are some sweet Fountains, which spring out of the midst of the Sea. For this plainly happens hence, That the Water bursting forth from the bottom of the Sea, riseth up with so great vehemency, that it drives away on all sides the Sea-water, and neither suffers it, nor its Salt to be mingled with it.

Wonderful is that Fountain in *Epirus*, over which Flax or a Taper is no sooner put, but it is presently set on fire and flames. It seems, that from the Earth which is beneath it, so many Seeds of Heat are breathed forth, as that, though they are not able to heat the Water in their passage through it; yet as soon as ever they get out of it into the open Air, running into the Flax and Tapers, they associate themselves with the fiery Seeds, wherewith such things abound, and break forth into flame; in the same manner, as when putting flame to a Candle newly extinguish'd, you may see it light before the flame touches it.

But what shall we say of that Fountain, which is reported to be at the Temple of *Jupiter Hammon*, cold in the day-time, and hot in the night?

Certainly, the Earth about this Fountain, tho' it be looser than other Earth, yet being compress'd by the cold of night, it strikes out, or squeezeth forth, and transmits into the Water, many Seeds of Fire which it contains, whereby the Water groweth hot; but being loosened by the Heat of Day, it sucks back again, as it were the same Seeds, whereby the Water becometh cold.

It may likewise come to pass, that the Water which is made hot through the same Seeds, which are repressed in the night-time, by reason of the cold Air, may become cold in the day-time, the beams of the Sun passing so through the Water, that they afford to those Seeds a free vent into the Air. Just as Ice is dissolved by the same piercing and rarifying Beams; and though the Effects are contrary, yet may they proceed from the same Cause, as the melting of Wax, and hardning of Clay.

'Tis from the same Cause, that Water in Wells is Hot in the Winter, Cold in the Summer. For in Summer, the Earth is rarify'd by Heat, and exaleth the Seeds of Heat which are in her; by which means the Water, which is kept close within her, becomes colder. But in Winter the Earth is compress'd and condens'd with Cold; whence, if she hath any Heat, she squeezeth it forth into the Wells.

These put me in mind to speak of Ice, by which the Water, forgetting, as it were, its natural fluidity, grows solid and hard. Here we must conceive, that those Bodies only are capable of being made solid, which are made up of Parts of little Bodies, that have plain Surfaces; because, by exclusion of Vacuity, the Parts cohere best with one another; whereas if those little Bodies be round, or joyned to round, or intermingled with plain, there is a *Vacuum* contained round about them, into which the round may roll, and the plain bend; whence followeth softness, and (unless there be some hooks that stay it,) fluxibility.

Ice therefor is made, either when the round little Bodies, which cause Heat, are thrust out of the Water, and the plain which are in the same Water (part whereof are acute-angled, part obtuse-angled,) are thrust up close together; Or, when those little Bodies are brought thither from without, (and that for the most part from the Air, when it is made cold by them,) which being closely pressed, and thrusting out all the round that they meet, bring solidity into the Water.

CHAP. V.

Of things Terrestrial Inanimate.

OUR Method leading us to speak of those things which are generated of Earth and Water; it is in the first place manifest, that those things are either Animate or Inanimate. Animate things are those which have Sense, and are vulgarly called Animals; Inanimate things are those which want Sense, whence, under this Name are comprehended all those, to which the Name of Animal is not applied.

Of this sort are, First, certain moist things which are grown consistent, as we see Salt, Sulphur, and ill-scented Bitumen generated in the Earth. Now these are the chief cause, not only of subterraneous Heat, and ignivomous Eruptions, as that of *Ætna*, already spoken of; but also of pestiferous Exhalations, which being carried on high cause Avernous Lakes and Diseases. Wherefore we will speak more amply of these, when we treat of Meteors. Concerning Amber, which attracteth Straws, we shall say something hereafter.

Of this sort also are Metals, which were first found out upon occasion of some Woods being burnt by Lightning, or some other Fire, which being quite burnt up, the Metals were melted and stuck to the roots, and thereupon dazzled the Eye with their splendor, and were observ'd to retain the same Figure with the things in which they flowed. Whence Men conjectured, That the same Metals, being melted by the force of Fire, might be formed into any Figure, even, acute, or pointed; and by reason of the solidity they had acquired, might be made fit to malleate, or to strike, or for other uses.

Moreover, not only Lead, but also Gold and Silver lay neglected, as being found less commodious for those uses, and Brass only was in esteem, of which were made Darts, Swords, Axes, Ploughshares, and the like; until Iron came to be found out; of which then, they chose rather to make these things, by reason it was of greater hardness.

Of this sort also are Stones, whereof many are daily generated, many broke off from Rocks, but the main bodies of Rocks and Stones were made from the beginning; for by this means, as we said formerly, Mountains were first occasion'd; and sometimes we find, that the Earth encloseth in her Bowels, Caverns, Rocks, and broken Stones, as well as Rivers, Channels, and Winds.

Now as Stones are ordinarily discerned by their hardness and solidity, so in the first rank, as it were, may be reckoned Adamants, not damnifi'd by blows, (for a tryal of them being made upon Anvils, they split the Iron,) and huge Flints, out of which, by the stroke of Iron, Fire flyeth, for they contain Seeds of Fire close hidden in their Veins; neither doth the cold force of the Iron hinder, but that being stirred up by its stroke, they meet together in one Body or Spark.

Lastly, of the inanimate kind are Plants, that is, Herbs and Trees; for the Soul is not without Sense. And we see, that of animate Beings, which from thence are called Animals and living Creatures, some have a moving and desiderative Soul; others a discursive; But Plants neither have Sense, nor either of those Souls, and therefore cannot be called Animate things.

Something indeed they have common with living Creatures, that is, Nutrition, Augmentation, Generation; but they perform these things by the impulse of Nature, not by the direction of a Soul, and therefore are only Analogically, or for resemblance-sake, said to live and die as Animals. Whence also whatsoever may be said of them, may be understood by Parity, and in some proportion, by those things which shall be said of living Creatures.

I would add, that the original of Sowing and Grafting was, upon the observation Men took, that Berries and Acorns shedding, and falling to the ground, sprung up again, and begot new Plants, like those of which sort they themselves were. But it is enough to have hinted this.

CHAP. VI.

Of the Loadstone in particular.

BUT we must insist a little longer upon a thing inanimate indeed, yet very admirable; I mean the *Herculean Stone*, which we call also Magnet, for that it was first found in *Magnesia*. It is much wondred at, by reason of its singular Power (or Virtue,) in attracting Iron.

To explicate this Power, we must suppose three or four Principles; One is, That there is a continual effluxion of little Bodies out of all things: As, out of coloured and lucid Bodies, flow such as belong to Colour and Light; From hot and cold Bodies, such as belong to heat and cold Bodies; From odorous Bodies, such as belong to smell; and so of the rest.

A Second is, That there is no Body so solid, but hath little vacuities contained within it, as is manifest by all Bodies, through which passeth Moisture, (or Sweat,) Light, Sound, Heat, or Cold.

The Third, That these effluent little Bodies are not alike adaptable to all things. The Sun, by emission of his Beams, hardens Clay, melts Snow; Fire resolves Metal, contracts Leather; Water makes hot Iron harder, Leather softer; The Olive-tree is bitter to the Taste of Man, pleasing to Goats; Marjoram is sweet to the smell of Man, hateful to Swine, &c.

The Fourth, That the little Vacuities are not of the same compass in all things, wherefore neither can the same be accommodated to all little Bodies. This is manifest from the contextures of the Sense, for the little Bodies which affect these, move not those; or those which affect some one way, affect others another; as also from the contextures of all things else, for what will penetrate one, will not penetrate another.

From these it is understood, that the Loadstone may attract Iron (and Amber, Straw,) upon a double account. For First, We may imagine the Atoms that flow out of the Stone, so to suit with those which flow out of the Iron, that they easily knit together; wherefore being dashed on both sides on the Bodies of the Iron and the Stone, and bounding back into the middle, they entangle with one another, and draw the Iron along with them.

But forasmuch as we see, that the Iron, which is attracted by the Stone, is itself able to attract other Iron; Whether shall we say, that some of the particles flowing out of the Stone, hitting against the Iron, bound back, and these are they which catch hold of the Iron. Others, insinuating into it, pass with swiftness through the empty Pores, and being dashed against the Iron that is next, into which they could not all enter, although they had penetrated it; from thence leaping back to the first Iron, they made other complications like the former; and if any hap-
ned

ned to penetrate farther, they likewise might attract another Iron, and that another, upon the same ground.

Moreover, it may be conceived in this manner, that there flow certain little Bodies, as well out of the Magnet, as out of Iron, but more and stronger out of the Magnet; whereby it comes to pass, that the Air is driven away much farther from about the Magnet, than from about the Iron; whereupon there are many more little vacuities made about it than about the Iron. And because the Iron is placed within the compass of the dispelled Air, there is much *Vacuum* taken up betwixt it and the Magnet. Whence it happens, that the little Bodies leap forward more freely, to be carried into that place, and thereupon run towards the Magnet; but they cannot go thither in a great and extraordinary company, without enticing along the things that cohere with them; and so the whole mass, consisting of such coherent things, goes along with them.

It may also be said, that the motion of the Iron is assisted by the Air, through its continual motion and agitation. And that first from the outward Air, which continually pressing, and pressing more vehemently where it most abounds, cannot but drive the Iron into that part where there is less, or which is more vacuous, as towards the Magnet. Next from the inward, which in the same manner continually agitating, moving, and deriving, cannot but give it a motion into that part, where there is greatest Vacuity.

CHAP. VII.

Of the Generation of Animals.

WE come now to speak of Animals, which are of so different Natures, some Walking, others Flying, others Swimming, others Creeping; some being Greater, some Lesser; some more Perfect, some less Perfect, (even we Ourselves also being Animals,) and yet withal still of one Nature; that Nature discovers an admirable Power in the composition of them.

For since Nature is, as it were, instructed by the things themselves, and from their orderly procedure, and compelled by a kind of necessity, or by the concatenation of Motions, to perform these so many and so different Effects, which we call the Works of Nature; this especially appears in Animals, because the concatenation of Motions shews itself to be Artificial, chiefly in them, although proceeding from a substance utterly void of Reason.

And although the Atoms themselves be not endued with Reason, nor their motion govern'd by a rational Conduct; yet the nature of every living Creature in the beginning of the World grew to be such, that, according to the temperature of those Motions, which the Atoms then had, other Motions still, and others followed, which being caused after the same manner still produced their Like. By which means those motions, which, in the beginning were merely casual, in process of time became artificial, and succeeded after a constant and determinate Order.

But to discourse more fully hereupon, Divers kinds of Animals being produced in the beginning of the World, it came to pass, first by their receiving congruous Aliment, that those Atoms, which are adaptable to one another, were attracted and intangled by their fellow-Atoms, which were already in the Animal, (those which were not adaptable being cut off,) so that a peculiar Nature to every one of them, *viz.* Such a compound of such Atoms grows up first, and at length becomes confirmed.

Next, That by the perpetual motion of Atoms, and their intrinsic Ebullition, some of them being still thrust out of their place, and running into the genital parts, meet there from all places; and, there being a distinction of Sexes, after mutual Appetition and Coition, are received in the Womb.

After this, that the Atoms, or seminal Bodies compounded of them, and flowing from all parts, (whence therefore, *the Seed may be conceived as something incorporeal*; not in rigour indeed, because only *Vacuum* is truly such, but in the most familiar Sense of the Word, by which we term any thing incorporeal, which easily penetrates through the most solid Bodies,) that the Atoms, I say, are those seminal little Bodies, which thus flowed from all parts, did therefore (this Motion continuing,) withdraw them from the tumult of others, and, like Atoms, drawing their Like; therefore those that come from the Head, would betake themselves to one place; those from the Breast into the next place; and those which come from every other part, each rank themselves in their distinct situation; and so at length, a little Animal is formed like that, whence the Seed was taken.

Moreover, that this little Animal is nourished, and increaseth by the attraction of like Atoms, or little Bodies meeting together in the Womb; until the Womb being wearied, and no longer fit to nourish them, slackens its motions, or rather opens the door, and gives them leave to go out.

Further, that this Animal being after the same manner fully grown up, and the continual agitation of the Atoms pursuing one another, not ceasing, it begetteth another like thing, and that other consequently another.

At length, that Nature, being by little and little accustomed hereunto, learneth, as it were, so to propagate Animals like in their kinds, as that from the motion, and perpetual Series of Atoms, it derives a necessity of operating continually in this manner.

Thus much for the generation of those Animals, which are made by Propagation; As for those which we sometimes see produced otherwise, they may be generated after the same manner, as all things at first were; whether some Seeds of them were remaining, formed from the very beginning; or whether daily formed, either within, or without, the Animals themselves; and if within, then thrust out, (as in the generation of Worms, and Flies, leaving behind them some remainders, either in the Earth, or elsewhere; of which, other Animals, of the same kinds, are begotten.)

What I said of the defluxion of Seed, I mean not only, on the parts of the Male, but of the Female

Female also, seeing that she likewise emitteth, having *Parastatae*, or Testicles, though placed in a contrary way, and therefore is she desirous of Coition.

And this indeed seems necessary to be granted towards giving the Reason, why a Male or Female is formed; for nothing can be alledged more proper than this, that whereas the young One consists of the Seeds, both of its Sire and Dam, if that of the Sire predominate, it proves Male, if that of the Dam, Female:

Hence also may be given a cause of the resemblance which it hath to either, or both its Parents; for if the Female with a sudden force attracts, and snatcheth away the Seed of the Male, then the young One becometh like the Dam; if both alike, it becometh like both, but mixtly.

If you demand, Why Children are sometimes like their Grandfathers, or Great Grandfathers? The Reason seems to be this; the Seed is made up of many little Barks, which are not always all of them dissolved into Atoms, or nearest to Atoms, in the first or next Generations, but at length in some one of the following Generations, they unfold themselves in such manner, as that, what they might have done in the Immediate, they exhibit only in the Remote.

But whence comes Barrenness? From the Seed's being either thinner than it ought, so as it cannot fasten one the place; or thicker, so as it cannot easily be commixed: For there is requisite a due proportion betwixt the Seeds of the Male, and of the Female; whence it happens, that many times the same Man or Woman who are incapable of having Children by one, may yet have them by another. I omit other Reasons, as from the Aliment, since it is manifest, that Aliment, by which Seed is increased, differs from that whereby it is attenuated and wasted.

C H A P. VIII.

Of the use of Parts in Animals.

Hence follows, That the parts of Animals were not from the very beginning of things framed, after the fashion they have now, for those ends and uses whereto we see them now serve, (for there was no cause to foresee this end, nor any things precedent to which that cause attending, and thence taking a conjectural aim might design any such fashion,) but because it happened that the parts were made, and did exist as we now see them; therefore they came to be applied to these uses rather than to others, and being first made, themselves became afterwards the occasion of their own usefulness, and insinuated the knowledge of it into the minds of the Users.

The Eyes therefore were not made to see, nor the Ears to here, nor the Tongue to speak, nor the Hands to work, nor the Feet to go, for all these Members were made before there was Seeing, Hearing, Speaking, Working, Going; but these became their Functions after they had been made.

For the Soul being formed together with and within the Body, and moreover being capable of Sense, the Eye hapned to be made of such a

Cotexture, that the Soul, being applied unto it, could not but produce the sensitive act of Seeing; and the Ear of such, as that being joined to it, it could not but produce Hearing; and there being within the Body, made together with it, an Animal Spirit capable to impel and move, the Tongue hapned to be framed after such a Cotexture, as that this Spirit coming to it, could not but move it, and break the Air (which at the same time it breathed forth,) into words. In like manner, the Hands, the Feet, and the rest of the Limbs were so fashioned, as that this Spirit rushing into them could not but give this motion to one, and that to the other.

As for the Tendons, which are plainly the Organs, by which the Parts are stirred, it is evident that the Actions are not strong, because these are big; nor remiss, because they are small; but the Actions are such or such, according to the occasions of frequent or seldom using them: But the bigness of the Tendons follows the quantity of the Motion, so that those which are exercised are in good plight, and grow conveniently bigger, those which lie idle thrive not, but waste away.

Wherefore the Tendons were not so formed by Nature, as if it were better, that they should be strong and big for the discharge of vehement Functions; weak and slender for the weaker, (for we see even Apes have Fingers fashioned like ours,) but, as was said before, those which are exercised, must of necessity be big, because they are well nourished; and those which are not exercised, small, because they are less nourished.

For Confirmation hereof may be alledged, that most Parts are sometimes directed to those uses for which no Man will say they were designed; and this, when either Necessity or Occasion, or some Conjecture taken elsewhere, lays them open to us, Men would not so much as dream of fighting with Weapons, if they had not first fought with their Hands; nor of holding Shields before them, if they had not first felt Wounds that were to be avoided; nor of making soft Beds, if they had not first slept on the Ground; nor of making Cups, if they had not drunk Water first out of their Hands; nor of making Houses, if they had not been acquainted with the use of Caves; And so of the rest.

C H H P. IX.

Of the Soul, the intrinsecal Form of Animals.

LET us now come to the Soul, by which Animals are, and from it have their denomination. In the first place we must conceive it to be Corporeal, *some most tenuous or subtle Body, made up of most subtle Particles.* Doubtless they who affirm it is Incorporeal, besides that they abuse the Word, play the Fools exceedingly; For, except it were such, it could neither act nor suffer; it could not act, for it could not touch any thing; it could not suffer, for it could not be touch'd by any thing, but would be as a meer Vacuity, which, as I said before, is such that it can neither act nor suffer any thing, but only affords a free motion to Bodies passing thorow it. Now

Now that the Soul acts and suffers something, is manifestly declared by those things which happen about its Senses and Affections; as also by the motions wherewith it impels the members, and, from within, governeth the whole Animal, turneth it about, transports it with Dreams; and, in general, by its union and consent, to mix in one compound with this grosser matter, which usually, upon this occasion, is more particularly termed the Body.

I say, it is a most tenuous and subtle Body, for that it is made up of most tenuous or most subtle little Bodies; which, as they are, for the most part, exceeding smooth, so are they very round; otherwise they could not permeate, and cohere intrinsically with the whole Body, and with and its parts, as with Veins, Nerves, Entrails, and the rest. Which is manifest even from hence; for that when the Soul goeth out of the Body, we find not that any thing is taken off from the Whole, neither as to its Figure nor Weight; but like Wine, when its flower or spirit is gone; or Unguent, that hath lost its scent; for the Wine and Unguent retain the same quantity, as if nothing of them were perished. So that the Soul, if you should imagine her to be rolled up together; might be contained almost in a point, or the very least of places.

Nevertheless, though it be of such a subtle Contexture, yet is it mixed and compounded of four several Natures: for we are to conceive it a thing made up and contempered of something fiery, something aerial, something flatuous, and a fourth which hath no name; by means whereof, it is endued with a sensitive faculty.

The Reason is this, because when a thin Breath departs out of the Body of a dying person, this Breath is mixed with Heat, and Heat attracts Air, there being no Heat without Air. Thus we have three of those things which make up the Soul; and because there is none of these three from which the sensitive motions can be derived, we must therefore admit a fourth, though without a name, whereunto the sensitive Faculty may be attributed.

This may be confirmed from hence, for that there is a certain Breath or Gale, as it is were, and Wind, which is cause of the Body's motion; Air, of its Rest; something Hot cause of the Heat that is in it; there must likewise be some fourth thing, the cause of its Sense.

Now the necessity of this fourth being manifest, upon another account, Anger, by which the Heart boils, and Fervor sparkles in the Eyes, convinceth, that there is Heat in it; Fear, exciting Horror throughout the Limbs, argues a Cold, or copious Breath or Wind; and the calm state of the Breast, and serenity of the Countenance, demonstrates there is Air.

Whence it comes to pass, that those Animals in which Heat is predominant are angry, as Lions; those in which a cold Breath, are timorous, as Harts; those in which an aerial portion, are more quiet, and, as it were, of a middle condition between Lions and Harts, as Oxen. The same difference is also to be observ'd amongst Men.

Lastly, Although the Soul be a mixt and compounded thing, and this fourth nameless thing, or sensitive faculty, be the chief of its parts, (it being, in a manner, the Soul of the Soul, for from

it the Soul hath, that it is a Soul, and it distinguishes Animals from other things, as their intrinsecal form and essential difference,) nevertheless these parts are so perfectly contempered, as that of them is made one substance, and that most subtle and most coherent; neither, as long as the Soul is in the Body, can these four be separated from one another any more than Odor, Heat, or Sapor, which are natural to any inward part of the Body, can be separated from it.

Now this substance being contained in the Body, and coherent, as it were, with it, is, in a manner, upheld by it, and is likewise the cause of all the Faculties, Passions, and Motions in the Body; and mutually containeth the Body, and governeth it, and is moreover the cause of its Health and preservation, and can no more be severed from the Body, without the dissolution thereof, than Scent can be divided from Frankincense, without destruction of its nature.

I shall not need to take notice, that one of the Natural Philosophers seems, without any reason, to conceive, that there are as many parts of the Soul, as of the Body, which are mutually applied to one another. For the substance of the Soul being so subtle, and the bulk of the Body so gross; doubtless its Principles must be more subtle and fewer than those of the Body: so that every one of these coheres not with another, but each of them to little bulks and heaps, as it were, that consist of a greater number. Whence it comes to pass, that sometimes we feel not when Dust, or a Gnat lights upon the Body, nor a Mist in the Night, nor the Spiders thread, nor Feathers, nor Thistle-down, or the like, when we meet with them; it being requisite, that more of the little Bodies which are mingled with the parts of the Soul be stirred up, before they can feel any thing that toucheth or striketh them.

We must further observe, that there is some Internal part of the Body of such a temperature, as that where the Soul adheres to it, it receives an extraordinary Perfection. This Perfection is the Mind, the Intellect, or that which we call the Rational part of the Soul; because (the other part diffused through the whole Body being irrational,) this only discourseth.

Now forasmuch as the Irrational part is twofold, Sense and Affection or Appetite, and the Intellect is between both, for it hath the Sense going before it to judge of things, and the Appetite coming after it, that by its own judgment it may direct it. We shall therefore, being to speak of each, begin with the Sense.

C H A P. X.

Of Sense in general, which is the Soul (as it were) of the Soul.

TO speak therefore first of Sense in general; We must observe, that the Soul possesseth it after such a manner, as that both to have it, and to use it, it requirerh the Body, as being the thing wherein it is contained, and with which it operates. Now the Body affording this *Laert.* to the Soul, viz. That it hath a Principle of Sensation, and is able to use it, becometh itself also part;

participant of this Effect, which dependeth upon that Principle, (that is to say, it feeleth or perceiveth,) but not of all things that belong thereto, as of Tenuity, and the like.

Wherefore it is not to be wondred at, that the Body, when the Soul is departed, remaineth void of Sense; for it did not of itself possess this Faculty, but only made it ready for the Soul, which was congenius with it; Which Soul, by means of the Faculty coelected in the Body, exercising, by a peculiar motion of hers, the Act of Sensation, giveth Sense, not only to itself, but to the Body also, by reason of their Neighborhood, Cohæsion, or Union with one another.

Ibid.

Thus it comes to pass, that not the Soul alone, nor the Body alone, perceive or feel, but rather both together; and though the Principle of Sensation be in the Soul, yet whoever holds, that the Body doth not perceive or feel together with the Soul; and believeth that the Soul, intermingled with the whole Body, is able of herself to perform this motion of Sensation, he oppugns a thing most manifest.

Lucret.

And they who say, (as some do,) that the Eyes see not any thing, but it is the Soul only that seeth through them, as through open doors, observe not, that if the Eyes were like doors, we might see things much better if our Eyes were out, as if the doors were taken away.

Now that which here seems the greatest difficulty being this, How it comes to pass that a thing Sensitive, or capable of Sense, may be generated of Principles that are wholly Insensitive, or void of Sense, we are to take notice, that this is to be ascribed to some necessary and peculiar Magnitude, Figure, Motion, Position, and Order of those Principles, as was before declared when we treated of Qualities, for the Faculty of Sense is one of the Qualities, which, that it appear where it was not, requireth that there be some Addition, Detraction, Transposition, and, in a word, a new Contexture, able to do that which the former could not.

Yet we must not therefore believe, that Stones, Wood, Clods of Earth, and such like Compounds, perceive, or feel; for, as other Qualities, so this also is not begotten of every mixture, or of the mixture of any kind of things, but it is wholly requisite, that the Principles be endued with such a Bigness, such Figures, Motions, Orders, and the like Accidents; whence it comes to pass, that even Clods of Earth, Wood, and the like, when putrified by Rain, and heated by the Sun, the Position and Order of their Parts being changed, turn into Worms, and other sensitive things. This may be understood from the several Aliments, which being applied to the Bodies of living Creatures, and variously altered, do, in like manner, of Insensitive become Sensitive; as Wood applied to Fire, of Not-burning becometh Burning.

And that it may appear, how much some are mistaken, who assert, that the Principles whereof Sense and Sensitive things consist, must be sensitive; consider, that if they were such, they must be soft, forasmuch as no hard, or solid thing is capable of Sense, and consequently, as we argued before, they must be corruptible; because, unless they are solid, they may be diminished, and so lose their Nature, whereas the

Principles of Things, as we have often heretofore alledged, must be incorruptible and permanent.

It may otherwise be proved thus, If we allow the Principles to be Incorruptible, we cannot conceive them to be Sensitive; neither as Parts, for Parts severed from the Whole feel not; neither as Wholes, for then they would be Animals, and consequently Mortal, or Corruptible, which is contrary to the Hypothesis. Moreover, if we should admit, that they are both Animals, and Immortal, it would follow, that no such Animals as we now behold, (that is, of a peculiar kind, and agreeing in one species,) could be generated, but only a heap of several little Animals.

Furthermore, If sensitive Things must be generated of sensitive, that is, like of like, it will be necessary, as we said before, that a Man (for Example,) consist of Principles that laugh, weep, ratiocinate, discourse of the mixture of Things, and of themselves, enquiring of what Things they consist, and these being like to corruptible Things must consist of others, and those likewise of others, into infinite.

Now it being well known, that in the Bodies of Animals there are five distinct Organs of Sense, by which the Soul (or the sensitive Faculty in Her,) apprehends, and perceives sensible Objects several ways, that is by Seeing, Hearing, Smelling, Tasting, Touching; nothing hinders, but that we allow Five Senses, the Sight, the Hearing, the Smell, the Taste, and the Touch.

All this diversity ariseth from hence, that on one side the species of Colours, and visible Things, as also Sounds, Odors, Savors, and other Qualities, are made up of little Bodies, endued with particular Magnitudes, Figures, Positions, Orders, and Motions. On the other side, the Organs of Sight, Hearing, and the rest of the Senses, are of such Contextures as contain little Vacuities, or Pores, which have likewise peculiar Magnitudes, Figures, Positions, and Orders, and these Organs being various have several Aptnesses and Proportions, to which the several little Bodies of the Qualities are commensurated, so as some can receive into themselves these, others those, whence it happens, that only these little Bodies, of which the species, of Colour consist, are capable of penetrating into the Organ of Sight, and to move and affect it after that manner; But so are not the little Bodies, which are only capable of piercing, moving, and affecting the Organ of Hearing, or those which can only affect that of the Touch, and so of the rest.

Hence also, when we observe, that not only Animals of different kinds, but even amongst Men themselves, some are not affected with the same sensible Objects, we may understand that there is not in them the same kind of Contexture. And since in all little Bodies blended and mingled together, some will naturally agree with others, some not, therefore neither can the impression and apprehensions, or sensation of the same quality be made in all Animals, neither can a sensible Object affect all Animals alike with all its parts, but each one with those qualities only which are suitable to their Senses, and convenient to affect them.

J shall

I shall add nothing concerning the common Objects of Sense, as Magnitude, Figure, Motion, and the like, which are perceptible by more Senses than one; for what we said of them in the Canonick, is sufficient.

C H A P. XI.

Of Sight, and of the Images which glide into it.

BEing to speak something of every Sense, we must begin with Sight, whose Organ manifestly is the Eye; nor is it less evident, that the external Appearances, and Forms of Things, are therefore seen by us; because something glides from without, or from the Objects into us, that is, into our Eye. But before we undertake to shew, that this is far more probable than what others assert, we must declare whether there be any thing which comes from the Things themselves into our Eye, and of what nature it is.

First then we affirm, that nothing hinders but that certain Effluxions of Atoms, perpetually flying in an uninterrupted course, are sent from the Surfaces of Bodies, in which also the same Position and same Order may be preserved, which was found in the Superficies and Solids of the very Bodies themselves, whence such Effluxions are as it were Forms, Figures, or Images of these Bodies from which they are derived, and resembling them in all their Lineaments; and, moreover, are far more subtle than any of the things themselves, which by them are made visible to us. This then is the nature of those forms or figures, which we use to call Idols, or Images.

Nor is it difficult, that such kind of contextures should be found in the middle Aire, or ambiently diffused space; nor, that there should be in the things themselves, and especially in the Atoms, certain dispositions rendering them apt to make representations, which are only meer empty cavities, and superficial tenuities of no determinable depth. * But in this place, we speak of those effluvijs, which are as it were thin films, or skins stript from the remaining Bodies.

Nor yet is it difficult, that images of this nature should flow from the out-sides of bodies, as is hence proved, that there flowing ever something from the inner parts of bodies, as smell, heat, cold, (as we hinted formerly,) it is far more easie, that something should flow, or be carried away from their out-most parts; since the Atoms, as well in one as the other, are in a perpetual endeavour of disentangling themselves to get away, but in the former case, being covered with other Atoms, they find resistance, whereas in the later, being placed in the fore-front of the body, they find none. Add, that hence also they gain the advantage of flying out from the superficies in the same order and rank, which they held there; whereas those which comes from within, cannot but change their postures, being often disturbed in the way, by their anfractuous passages.

Now that there are indeed such effluvijs, may hence be proved, that if the Sun-beams pass thorough Curtains, red (for example,) or of any other colour, drawn before the Theaters, such

subtle emissions are sent from them, as make all things behind them appear so coloured. But the experiment from Looking-glasses is more than sufficient; for these clearly shew, that there are indeed such effluvijs emitted from bodies, in regard, the bodies being present, they light upon the glass; if any thing intervene, they are hindered from coming thither; if the bodies be moved, they move also; if inverted, they also are inverted; if the bodies retire, they also goe back; if they are taken away, they wholly disappear.

But forasmuch as there is no point of time, in which these Images flow not into the Medium, doubtless, their production must be made in a point of time, and be perpetually flowing out at the superficies, in a continued stream. For the reason, why they cannot be discerned apart, is, because, when one Image goes away, another coherently succeeds, and supplies its room; and instantly preserves the same order and position of Atoms, which is in the superficies of the solid Body, and that for a long time, and at a great distance, (although at last they are confounded.) Whence it comes to pass, that the Body always appeareth with the same accidents, and in the same form.

I mean here, that form which is proper to the Body, and is conceived to be a collection (as it were,) of parts, disposed in a certain order, or (as it were,) the superficies left behind by the Image, which flies away from it.

It may here seem strange, that the Body seemeth no more to be diminish'd, than as if nothing at all were taken off from it; but this is by reason of their extraordinary tenuity, which cannot be understood, without first conceiving the tenuity of the Atoms. Concerning this, we instanc'd formerly, in an animal so small, as if we supposed it divided into three parts, each of them will be indiscernable; and yet for performance of those animal functions which it dischargeth, it must necessarily be made up of such parts and particles as can hardly be formed, without innumerable myriads of Atoms.

Not to mention, in confirmation of the probability hereof, that there are many odorous things, out of which, though something incessantly flow, yet for a long time nothing appeareth to be diminished, either as to their figure or weight, notwithstanding that the effluvijs out of them are far grosser, and more numerous than these Images, which flow out along with them; yet are so inconsiderable a part of the things that flow out, as no man can express.

Wonderful also may seem their celerity in flying out; but this must be understood by the celerity of the Atoms, formerly declared; for these Images, by reason of the tenuity we spoke of, being nothing else but certain contextures of simple Atoms, have a celerity beyond all imagination, and their passage through the transparent place which is round about them is like that which is through the infinit spaces, there being not much difference, because they meet few or no obstacles in the space which surrounds them. Certainly, if the light of the Sun and other Stars can come so swiftly (as we observe,) from Heaven, the celerity of these Images ought to be, if not greater yet not less,

F f f f

by

by reason of the Atoms which stand in the surface of the body, ready for motion, and have nothing to retard them.

C H A P. XII.

That Seeing is perform'd by means of those Images.

THese things presupposed, some conceive, that 'external and distinct things are therefore seen by us, because they imprint in our eye the Image of their colour or figure, the Air intervening between them and us, performing the Office of a Seale, by means of which, this impression is made. Others think, that this is effected by the rays or effluvia sent from us or our eyes to the object; it is far more probable, that it is performed by these Images we spoke of, which coming from the things, or their colour and figure, flow into us, and preserving a congruous magnitude, enter into our eyes, and strike our sight with a very swift motion.

This sigillation (or impression,) indeed is a thing extream hard, and perhaps impossible to be explicated; and as for the emission of rays out of our eyes, it is unimaginable what the Looking-glasses send out of them, that they also should have Images painted in them; or what that is, which in a moment is sent from the eye, into the whole vast circumference of the Heavens.

To omit, that since in hearing, smelling, tasting, touching, we send nothing out of ourselves, but receive something from without, which causeth a sensation of itself, (for of itself a voice comes into the Ears, odors into the nostrils, saps into the palate, and things which may be touched are applied to the body,) it is obvious to be conceived, that neither is any thing sent out from our eyes, but that something (*viz.* those Images,) comes into our eyes from the things themselves.

But the soul, inasmuch as it is in the eyes, cannot but see, that is, apprehend the colour and outward form of that thing which is presented to it: For by reason of the polite and perspicuous contexture of the Organ, it receiveth the Image of the thing, and is struck by it according to all the presented parts.

And forasmuch as those things are beautiful which delight the sight, those deformed which offend it; how should we imagine this to be, but that the Images which come from the one consist of bodies, which, by their smoothness, are gently accommodated to the contexture of the eye; but those which come from the other consist of such, as by their ugly figure rend the contexture?

And when the eye is troubled with the Jaundice, how comes it, that all things seem yellow? but that the Images, in their application to the eye, receive a tincture; or they may be strain'd also without the eye, coming amongst the yellow little bodies or Images, which proceed in like manner from the eye.

But how happens it, that we see not only the colour and form of a body, but we discern its distance also? This proceeds from the

Air, which the Image drives on before, it For though it comes to the eye exceeding swiftly, and in imperceptible time; yet it comes thither, and touches upon it orderly; and by how much the longer it is in doing so, so much the more distant the thing appears to be; by how much the sooner, so much the nearer.

Hence also may be given a reason, why an Image seems to be beyond the Looking-glass; for as when a man, from any place within a house, looks upon a thing that is without doors, the Air cometh to him imprinted, as well that without to the door, as that within from the door: So to him who looketh in a glass, cometh successively as well that Air which is from the glass to the Eye, as that which is from the object to the glass.

Hence also may be given a reason, why, being in the dark, we can see the things that are in the light; but being in the light, cannot see those that are in the dark. For the enlightened Air succeeding the dark, the Eye informed by it is enabled to see; but not when the dark succeeds the enlightened.

How comes it, that the Images in a glass seem to walk as we do? This happens, by reason of the varied parts of the glass, from which several parts there must necessarily be made a reflection upon the Eye, and thereupon the Images seem to walk as we.

If you ask, Why the Image which goeth from us to the glass represents not the back-side, but the fore-side, and that so, as that the right part is on the left side, and the left on the right; take notice, that this happens on the very same fashion, as if the Image of a man made of chalk or clay, not quite dried, should be clapt to a ball or pillar.

But if the Image be reflected from one glass to another, and thence to the Eye, the situation of the parts is restored, so as the right parts appear on the right side, and the left on the left, (and by this means it may be brought to pass, especially if there be many glasses, that such things as are hidden behind something, and out of sight, may be brought to view,) which may also happen even in one glass, if it hath little sides, whereof one reflects the Image to the other.

Thus much concerning the Sight; to which also some things, formerly hinted in our discourse of the Criteries and of Qualities, have reference.

C H A P. XIII.

Of Hearing.

CONCERNING Hearing, we must repeat what we have touched formerly, that, it being confess'd, the Ear is the Organ of the Hearing, As Seeing is perform'd by the coming of something into the Eye; so Hearing also is perform'd in the Ear by an emission of something, convey'd thither from the thing that speaks, sounds, makes a noise, or is some other way disposed to stir up the sense of hearing. This kind of effluvia, as it affects this sense, is called Sound.

More-

Laert. loc. cit. Moreover, this *effluvium*, either in the mouth of the Speaker, or generally in the thing struck upon and making a noise, *is shatter'd there by motion into innumerable little pieces of the same figure*, (* round, if the whole effluvium were round; inequilateral and triangular, if the first effluvium were such,) in like manner as we observe, that little drops are made when we pour any thing out of bottles, or when Cloath-workers spurt water upon their cloaths.

** Plut. plac. Phil.* These little pieces, or small bulks, are thereupon dispersed in such manner, as that they preserve a certain mutual conformity to one another, (and strike the hearing of several persons alike, so as they all seem to hear one and the same sound, though it be not the same, but like onely,) and keep fast also within themselves, each by a particular coherence, whereby it comes to pass that they are known to have reference to that thing, from which they were sent forth, and for the most part make such a sensation, as was first made by that which sent forth the sound, (as when the sound comes not from far into the Ear, and passeth through a free space.) But otherwise, (as by reason of a great distance, or some partition,) something from without bringeth in the sound confusedly onely. For without a kind of conformity and coherence, deduced and preserv'd from the very thing sounding, there could never be any distinct hearing.

ibid. Yet must we not imagine, that when the voice (*for example,*) is once sent forth into the Air, the Air is presently imprinted or formed, either by that voice, or by some others made by it, into like voices. which (as * one expresseth it, flye away together, as one Jay with another, as saith the proverb,) ' It were too great a task, that the Air should be designed for any such employment; but as soon as ever the blow is made within us when we speak, the voice being articulated out of certain little pieces, of a most spiritual and nimble effluxion, fit for the Office, and arriving at the Ear, causeth hearing in us.

** Democ.* That these little pieces which insinuate into the Ear have a figure, may be argued, by reason that Sound could not affect the hearing pleasantly and unpleasantly, if it had not such a smoothness as suits with the contexture of the Organ, not such a roughness as rends the Organ. This may better be understood, by comparing the grating of a Saw with the sweetness of a Lute, or the hoarse cawing of a Crow with the sweet melody of a dying Swan.

Lucret. Nor to repeat some things spoken heretofore, which seem to conduce hereunto, I shall onely touch this difficulty, How it comes to pass, that sounds in the night-times are both louder and clearer than in the day? To solve this, we must assume what is manifest from our discourse formerly, That Motion is made through Vacuum, and that there is much of Vacuum scattered up and down through the little bodies, or bulks of Air, which are made up of Atoms; and that in the day-time it being hot, and these little bodies rarified, and the Atoms diffused, the little Vacuities contained in them must necessarily become narrower and straiter; but in the night, it being cold, and these little bodies prest up

close, and the Atoms crowded together, the Vacuities become larger. This is evident from all things, which in a Vessel are boiled, softened, and melted; but if they take up a larger place, they cool, return to their temper, and become contracted.

Hence therefore it happens, that the Sound *ibid.* in the Day-time passing thorough the dilated Air, and lighting upon many Bodies in its way, is either quite stopp'd, or torn, and much knock'd and worn away. But when in the Night it passeth thorough a space free from Bodies, it arrives at the hearing by a full, ready, and uninterrupted carriage, and with that swiftness preserves its clearness and distinction.

From the same ground it springs, that empty *ibid.* Vessels being struck, sound; the full sound not; and that the more small Bodies, as Gold, make a low dull noise; the less compact, as Brasse, a greater and clearer.

C H A P. XIV.

Of Smelling.

AS concerning Smelling, we must understand, that Odor (*as was in proportion declared concerning sound or voice, when we treated of Hearing*) would not make any impression or stamp of *Laert.* itself, unless from the odorous thing there were deduced some little Bodies or Bulks, so commensurated to the organ of Smelling, (*the Nostrils,*) as to be able to move and affect it.

That Odors flow and come out of things, is manifest, forasmuch as all things esteemed odorous have a stronger Scent, being broken pounded, or dissolved by Fire, than whilst they are whole. For the stock of these little Bodies, which are fit to move the Smell, is pent up, as it were, within the odorous Body, and bound, but the Body being broken, pounded, or burnt, it leaps forth, and spreads itself like a Vapor or Cloud, and affects the Smelling, if it can light upon it.

It useth to affect the Smell two ways, either *Laert.* *unquietly and unsuitably*, whence proceed unpleasant Odors; or *smoothly and aptly*, whence pleasant Odors. For some of the little Bodies of Odor having a smooth and even Surface; others, more or greater Angles than is fit; thence it happens, that some Odors affect the Organ with delight, as touching it smoothly; others, with a kind of Pain, as if they tore it.

There must needs be a difference betwixt the *Lucret. lib. 2.* penetrations of these little Bodies into the Nostrils, when Carcasses are burnt, and when the Theatre is newly strew'd with Saffron. And it may be conceived after this manner. As the Hand, if we put Down to it, presseth upon it; but if a Nettle, snatcheth itself back, (for the smoothness of the One, and the roughness of the Other by its Prickles, affect two different ways,) in like manner the little Bodies which proceed out of the Saffron, are smooth; those which out of the Carcass, prickly: so as the first gently stroke and delight the Nostrils, the other prick them, and make them draw back.

Moreover, there being so great variety of *Lucret. lib. 4.* tempers amongst Animals, (even amongst Men one in respect of another) and the Contexture of the organ of Smelling being different in several

ral Persons, it ough not to seem strange, that some Scents please Some; Others, Others, by reason of the dissimilitudes of the Figures of the little Bodies, of which they consist; nor that Bees delight in Flowers, Vultures in Carrion; or that Dogs find out by the Scent which way Beasts have gone, which we cannot perceive; as if in passing, they left a Steam which cannot strike our Smell.

C H A P. XV.

Of Tasting.

WE come next to speak of *Tasting*: Whereas it is manifest, that the Organ thereof, is the Tongue and Palate; and that * we then taste and perceive the Sapor in our mouth, when chewing the Meat, we squeeze out the Juice (as when we press with the Hand a Sponge full of Water) and thereupon, the Juice which is squeezed forth, is distributed thorough the Pores, or complicated Holes of the Tongue and Palate, we may in general assert the Sapor to be sweet, the little Bodies whereof are accommodated to the Organ, gently and smoothly; on the contrary, that to be Bitter, Salt, Sharp, Acid, Sower, Hot, &c. which roughly and unsuitably. For neither could Honey or Milk affect the Tongue pleasantly, nor Wormwood or Centory unpleasantly, if it were not that those consist of smoother and rounder little Bodies, these of more harsh and hooked; so as those touch it gently, these prick and rend it.

He therefore not defines the thing amiss, who saith, That the Atoms, which make a sweet Sapor, are round, and of a convenient size; Those which a sower, large; Those which a harsh, multangular, and nothing round; Those which a sharp, acute, conical, crooked, not slender, nor round; Those which an acid, round, slender, corner'd, crooked; Those which a salt, corner'd, distorted, æquicrural; Those which a bitter, round, smooth, distorted, little; Those which a fat, slender, round, little.

But, more particularly, seeing that the tempers, not only of Animals, but even of Men among themselves, are so various, and that as they differ in the outward lineaments of their Bodies, so they cannot but differ also in their inward Contextures, hence we may say, that the Savors, that are pleasing to some Animals or Men, are displeasing to others, by reason that the little Bodies, of which they consist, are suitable, and accommodated to the Contexture of the Organs of those, but unsuitable and unaccommodate to the Contexture of the Organs of these; since the round Pores, that in the Organ, can receive the round Atomes smoothly, but the triangular difficultly; and the triangular Pores can receive the triangular smoothly, but the round difficultly.

Hereby also is understood, how it comes to pass, that the things which were formerly pleasant to us, are in a Fever distasteful, for the texture is so disorder'd, and the Figures of the Pores so alter'd, that the Figures of the little Bodies which insinuate into them, though formerly they were adaptable, now become unsuitable and incongruous.

From the same Reason it is, that the Meat which agreeth with one Animal, is Poison to another; as Hemlock, or Hellebore, is destructive to a Man, yet it fattens Goats, and Quails. This happens, by reason of the interior Contextures, which differing from one another, that which is accommodate, and adaptable to one, is inadaptate to another.

C H A P. XVI.

Of Touching.

Lastly, Concerning the *Touch*, I mean not that which is common to all Bodies, as they are laid to touch one another by their *Superficies*, (contrary to the Nature of *Vacuum*, which can neither touch, nor be touched,) but that which is proper to Animals, not performed without perception of the Soul; and hath not one, but all parts of the Body for its Organ. Concerning this *Touch*, I shall only declare, that what is perceived by it, is perceived three ways:

For first, A thing is perceived by the *Touch*, when it is extrinsically applied, or, from without insinuates itself; applied, as when the Hand feels a Stone clapp'd to it; insinuated, as when a hot thing emitting Heat, or a cold thing Cold, certain little Bodies get into the Pores, which, according to the state wherein the Body is, either refresh or disturb it.

Secondly, When a thing which is within, is driven out, which sometimes happens with Pleasure, especially when the thing itself was burthenous and incommodious, *ut dum semen excernitur*; sometimes with Pain, as when by reason of the angles of the little Bodies, it excoriates the Passage, as by the Strangury, or Difficulty of Urine.

Lastly, When some things within the Body take some of these motions, as by Impulsion, Deduction, Distraction, Convulsion, Compunction, Rasure, Excoriation, Inflation, Tension, Breaking, and innumerable other ways, it disturbs the Natural Constitution, and confounds and troubles the Senses. Thus all Aches and Pains of the Head, and other parts within, are caused; and the Animal doth in such manner affect itself, as if a Man should with his own hand strike a part of his Body.

C H A P. XVII.

Of the Intellect, Mind, or Reason, and its Seat.

Hitherto of the *Sense*. We must now speak of the *Intellect*, which is also usually called, *Mind*, *Reason*. The Rational and Hegemonick part; sometimes Cogitation, Imagination, Opinion, Counsel: Its property is, when the Sense strikes it, to think, apprehend, understand, revolve, meditate, discourse, or deliberate something.

The Contexture of the *Intellect* consists of little Bodies, the most subtle, smooth and round of all, forasmuch as nothing can be more subtle, nor of quicker motion. Neither is there any thing that can stir up itself sooner, or perform any thing

* Lucret.

Theophrast.
lib. 4. de sens.
& sens.

Lucret.

thing quicker than the Intellect, which if it design or begin any thing, brings it to pass in a moment; whence all acknowledge, that nothing can be swifter than (her action) Thought.

And certainly, as Water is much apter to move, and more fluent than Honey, by reason that is made up of little Bodies, which are smoother, lesser, and rounder; nothing consequently can consist of rounder, lesser, and smoother, than the Mind, for nothing can be readier for motion, quicker, or more pliant.

And in whatsoever part of the Body the Intellect inheres, it so cohereth to the Soul, or to that portion of the Soul which coexists with it in that part, as that it is indivisibly conjoined to it, and constitutes one Nature with it, yet it always so preserves and retains its own Nature, as that it is the property of the Intellect, to think; of the Soul, to undergo affections; though, by reason of their Cohæsion, it be conceived, that the Soul thinks, and the Intellect is affected.

Indeed, the Intellect is void of Affection or Passion; but (because, as the Passions depending on Sense, are stirred up in the Soul about those parts wherein the Sense is seated; so those which depend on Cogitation, are stirred up in the Soul about that part where Cogitation is, and in which part the Soul is one thing with the Intellect thinking :) Hence it cometh to pass, that, as if the aggregate or compound of the Intellect and the Soul residing in that part, made up only Intellect, the Passions come to be attributed to the Intellect itself.

Thus, whether the Intellect be taken distinctly or jointly, it hath this property beyond the other part of the Soul, that, As when the Head or Eye akeeth, we are not thereupon pain'd all over the Body; so sometimes the Intellect is affected with Grief or Joy, when the other part of the Soul, which is diffused through the Body, is free from this affection. I say, *sometimes*, because it may happen, that the Intellect be seiz'd with a Fear so vehement, as that the rest of the Soul may be struck together with it, and thereby may be caused Sweating, Paleness, stopping of the Speech, the Eyes grow dim, the Ears possessed with a humming, the Joints grow faint, and, in a word, the Man may fall into a Swoon.

Moreover, the Intellect may be conceived to partake of life more perfectly than the Soul, or the other part of the Soul, forasmuch as the Soul cannot subsist never so little in the limbs, without the Intellect; but the Intellect, though the limbs round about it were cut off, and there by a great part of the Soul taken away, would nevertheless subsist and preserve life: Like the Ball, which conduceth more to Sight than all the rest of the Eye, because the Ball being hurt, though the rest of the parts be sound, the Sight is destroy'd; but as long as the Ball is sound, though the other parts be destroy'd, the Sight continueth.

It seemeth not, that there can be any other seat assign'd for the Intellect, or rational part of the Soul, than the middle part of the Breast, and consequently the Entrails, or the Heart, which is in the midst of the Breast. This is manifest from the affections of Fear and Joy, proceeding from Cogitation, (or the Intellect thinking,) which we perceive to be in the Breast.

C H A P. XVIII.

That the Soul thinketh by Images, which glide into it.

There is only this difficulty, How the Intellect can be stirred up to think something? But it being manifest, that things are thought by the Intellect, in the same manner as they are seen by the Eye; it is also evident, that as Sight, so Thinking or Cogitation is made by Images which glide into it. *Lucret.*

For besides those Images which glide into the Eye, and being of something a grosser bulk, are accommodated to the contexture of the Eye, and produce in it the act of Seeing, there must necessarily wander through the Air an innumerable company of others, far more subtle, and those either peel'd off from Bodies, or form'd in the Air itself, as was formerly said; which penetrating through the Body, and being adaptable to the contexture of the Intellect, as soon as they arrive as it, move it to Think. *Ibid.*

Whence it comes to pass, that as we see (for example,) a Lion, because the image thereof glides into our Eyes; so we think a Lion, because the image of a Lion, glides into our Mind. That we think or imagine Centaurs, Sylla's and the like, which neither are, nor ever were; this may happen, not so much by Images framed on purpose, as for that when the Images (for example) of a Man and of a Horse are presented to us, they, by reason of their Tenuity or Subtlety, like a Cobweb, or a Leaf of Gold, are joined together, and made one, such as is attributed to a Centaur. *Ibid.*

But take notice, that when sometimes we persevere in the same thought, whether waking or sleeping, this happens not, for that we use some one image of the same thing, but that we use many images succeeding in a continual fluxion, which if they come to us in the same posture, the thing thought or imagined seemeth unmoved; if in a varied, it seems moved. Which is the reason, why, in dreams especially, images seem to us to be moved, and to stir their arms and other limbs one after another. *Ibid.*

But how comes it to pass, that whatsoever any Man would, his Mind or Intellect thinks that very thing? Because, though there are every where Images of all sorts, yet the greatest part passeth by unthought of, and those only move the Mind which she herself takes notice of, or would observe, or frames herself to think of. And, observe we not, that the Eyes, when they begin to have a sight of something very little, bend and fix themselves upon it, and, till they see something plainly, all other things are as if they were not, although they receive their images also. *Ibid.*

Now as there is some Intentiveness requisite to the Mind, that it may apprehend things distinctly, so much more that it may simply think or give some judgment, by affirming or denying? but most of all, that it may discourse of them as if its greatest care were not to be deceived.

But this we declared formerly, in treating of the Criteries. It will be sufficient, as to the speculation of natural things, here to observe, that

Hu.

Laert.

Human Discourse first admireth the things that are produced by Nature, and next enquires into them, and finds out their Causes ; but in some sooner, in others later ; and sometimes evinceth this, or arrives at the full knowledge in a longer times, sometimes in a shorter.

C H A P. XIX.

Of the Affections or Passions of the Soul.

THERE is besides Sense another part of the Irrational Soul, which may be called Affectuous, or Passionate, from the Affections or Passions raised in it. It is also termed the Appetite or Desire, from the chief Affection which it hath, called Appetite or Desire ; some distinguish it into Concupiscible and Irascible.

Now whereas it was already said, that the affections which follow Sense, are produced in the organs of Sense, those which follow opinion in the Breast ; hereupon there being two principal affections, Pleasure, and Pain ; the first, familiar, and suitable to the Soul ; the other, incommodious, and unsuitable to Nature. It is manifest, that both these are excited, not in the Breast only, where Pleasure, for the most part, comes under the name of Joy, Gladness, Exultation, Mirth ; and Pain, under that of Grief, Sorrow, Anguish, &c. but also in the other parts, in which, when they are removed from their natural state, there is raised Pain or Grief ; when they are restored to that state, Pleasure.

If all the parts could continue in their natural state, either there would be no affection, or if there were any, it must be called Pleasure, from the quiet and calmness of that state. But because either by reason of the continual motion of principles in the Body of an Animal, some things depart from it, others come to it ; some are taken asunder, others put together, &c. or by reason of the motion which is in the things round about, some things are brought which insinuate into them, change, invert, disjoin, &c. pain is caused, (from the first occasion, as by Hunger, Thirst, Sickness ; from the second, as by burning, bruising, wrestling, wounding,) therefore the affection of pain seems to be first produced : And withal, because it is of an opposite nature, that of aversion or avoidance of it, and of the thing that bringeth it, to which, for that reason, is attributed the name of Ill.

Hereupon followeth a desire of exemption from pain, or of that state which is void of pain, and consequently of the thing by which it may be expelled, and to which, for that reason, is given the name of Good ; and then the pain being taken away, and the thing reduced into a better, that is, into its natural state, pleasure is excited, and goeth along with it ; so as there would not be pleasure, if some kind of pain did not go before, as is easily observable even from hunger and thirst and the pleasure that is taken in eating and drinking.

For this pleasure is only made, because (most of the parts being dissipated by the action of the intrinsecal heat, by which means the body itself becomes rarify'd, all Nature destroy'd, and the stomach especially grip'd, or otherwise some lit-

tle Bodies of heat rolling about it, make it glow, whereby is caused pain) because, I say, meat cometh, and supplieth the defect, supports the limbs, stoppeth the desire of eating, which gapeth throughout the members and the veins ; Drink comes and extinguishes the heat, moistneth the parts which before were dry, and reduceth them to their first state. And besides, both are made with a smooth and pleasing sense of Nature, which, it is manifest, is then absent, when a Man eats, not being hungry ; or drinks, not being athirst:

Thus the general affections of the Soul seem to be these four, Pain and Pleasure, the Extreme ; Aversion and Desire, the Intermediate. I say, General, because the rest are kinds of these, and made by opinion intervening, and may be reduced principally to Desire and Avoidance.

For Desire is particularly called Will, when the Mind wills that which it thinks, and conceiveth it to be good ; and Avoidance is called Aversion, when it turneth away from that which it thinketh, or conceiveth to be ill. Hereupon, Love (for Example) is a Will, whereby we are carried to the enjoyment of something. Hate is an Aversion, whereby we withdraw ourselves from conversing with something. Again, Anger is nothing but Desire, whereby we are carried on to vengeance. Fear is an Avoidance, by which we shrink at some future Ill, and retire, as it were, within ourselves ; and so of the rest.

But forasmuch as Desire (as also in proportion Avoidance too,) is partly excited by Nature, and by reason of some Indigence, which must necessarily be supplied, that Nature may be preserved ; partly is begotten by Opinion, which is sometimes conformable to the design of Nature, and so tends to remove her Indigence, as that yet it is not necessary it should be quite taken away. Lastly, it sometimes conduces nothing either to Nature, or to the taking away of its Indigence. Hence it comes to pass, that of Desires, some are Natural and Necessary ; others Natural, but not Necessary ; others, neither Natural nor Necessary, but Vain.

Natural and Necessary are those, which take away, both the Indigence, and the Pain proceeding from the Indigence ; such is that of Meat, of Drink, of Cloathing, to expel the Cold. Natural, but not Necessary, are those which only vary the Pleasure, but are not absolutely Necessary to the taking away of the Pain, as those which are of delicate Meats, even that which is of Venereal Delights, to which Nature gives a Beginning, but from which a Man may abstain without Inconvenience. Lastly, neither Natural nor Necessary are those, which contribute nothing to the taking away of any Pain, caused by some indigence of Nature, but are begotten only by Opinion ; such are for Instance, those of Crowns, Statues, Ornaments, Rich Cloathing, Gold, Silver, Ivory, and the like.

Moreover, it is to be observed, That whereas Pleasure consists in the fruition of Good ; Pain in suffering Ill ; for this Reason, the first is produced with a kind of dilatation and exaltation of the Soul, the other with a contraction and depression thereof ; and therefore it is not to be wondred at, if the Soul dilates herself as much

as she can, to make way for the Good to come into her, and contracts herself to prevent the Ill.

There is a Diffusion, or Dilatation; for as soon as ever the Form of a good and pleasing thing strikes the Sense, or moveth the Mind, the little Bodies, of which it consists, so insinuate into the organs of Sense, or into the Heart itself, as that being accommodated as well to the Soul, as to the Body, they, in a more particular manner, gently stroke and delight the Soul, and, like little Chains, allure and draw it towards that thing out of which they were sent: Whereupon the Soul being turned towards, and intent upon that thing, gives a great leap, as it were, towards it, with all the strength it hath, that it may enjoy it.

On the other side there is Contraction, because as soon as ever the Form of a painful thing strikes the Sense, or the Mind, the little Bodies of which it consists, as so many little Darts or Needles, prick the very Soul together with the Organ, in such manner, that they loosen its Contexture, while she, to prevent them as much as she can, shuts herself up, and retires to her very Centre or Root, where the Heart or Intellect is placed.

It will not be necessary to repeat what we formerly said, that it depends upon the contexture of the Soul, why one Animal is more inclined to Anger, another to Fear, a third to calm smooth Motions; nor to add, that this difference is found in Men also, according as their Souls participate more of a fiery, or a flatuous, or of an aerial Principle. Or we may observe even in Men that are polished by Learning, these Seeds cannot be so rooted out, but that one is more propense to Anger, another more subject to Fear, a third more prone to Clemency than he ought. Moreover, the difference of manners, which is observed to be so great; not amongst Animals only; but in Men from one another, is plainly enough deriyed from the various commission of these Seeds.

C H A P. XX.

Of Voluntary Motion, and particularly, of Speaking, and Imposition of Names.

NOW the Soul being naturally stirring, and ready for motion, and able to move the Body wherein it exists, and the Members thereof; it is well known, that whensoever she moveth the Body, or its Members with any motion whatsoever, she therefore doth it, because she hath a Will to move them, and that this Will is stirred up by the Intellect, imagining; and that this Imagination is caused by the Image that strikes it: for the Intellect, or Mind, never doth any thing, but first she foreseeth it; nor foreseeth it, unless she first have the Image of that thing.

Lucret. 4. 879. Thus, when we move (for Example) the Thighs, and walk, this is therefore done, because first the Images of walking coming to the Mind, strike it, thence proceeds a Will to walk; then when the Mind hath so mov'd itself, as that it wills to walk, it instantly strikes the

Soul in that part whereto it is joined; that part strikes the rest of the Soul, which is diffused through the whole Body, and especially through the Thighs and Feet. Thus the whole Frame is by degrees thrust forwards, and moved; Not to mention that the Air conduceth something thereto, by reason that as the whole Body becomes rarify'd, the Air insinuates into its parts. The Body therefore is moved from two causes, like a Ship, which is driven on by Oars and Wind.

That the beginning of Motion proceeds from the Heart, where the Mind is seated, is manifest, for that we see sometimes Horses (for Example) cannot, as soon as ever the Barrier is let down, break forth, nor start away so suddenly, as their Will prompts them; because the whole substance of the Soul diffused, thorough all the Limbs, must first be summoned, that, being stirred up, it may follow the design of the Mind. Thus it proceeds first from the will of the Mind, and then thorough the Body and Limbs.

It may perhaps seem strange, that so little Bodies as those, whereof the Mind consists, should be able to move, wrest, and turn about so great a weight, as is that of the Body. But what wonder, when the Wind, a thing so subtle, can with so great a force drive forward a vast Ship; and one Hand, one Rudder, turn it about and guide it, though under full Sail? And are there not Engines, which by Pullies and Screws, move and draw up huge Weights, and that with no great force?

But forasmuch as of the motions, with which we move the parts of the Body, as we will ourselves, that of the Tongue is most considerable, which is called Speaking, it seems requisite to say something of this in particular.

The Tongue being framed in breathing Animals after such a manner, as that it can break, and, as it were, mould the Air, which is vehemently breathed forth, and thereupon causeth a Sound; hence it happeneth, that, as because every Animal perceiveth its own power, by which it can do something, and hereupon the Bull butts with his Horns, the Horse strikes with his Heels, the Lyon teareth with his Teeth and Claws, the Bird trusts to her Wings; hence it hapneth, I say, that Animals, and chiefly Men, perceiving the ability of their Tongue to express the affections of the Mind, (even when they would signifie something, that is without them,) they send out a Sound which is called Voice, and by the interposition of the Tongue, and other parts serving for that variation, bend and mould it in several Fashions.

I instance Animals also, because we see that they likewise send forth several Voices, according as they are joy'd or griev'd, or fear, or pursue any thing; Dogs, for Example, make several Noises, when they assault furiously, when they bark, when they play with their Whelps, when they fawn, when they are hurt, and cry or howl; a Horse neigheth after a different manner, when he rouseth himself, when he followeth a Mare, and when he is spurr'd by his Rider. And Birds make different Cries, when they strive about their Prey, and when they perceive Change of Weather, and when they sit idly, still.

Now

Lucret. ib.

Now Man, above the rest, perceiving the great power of his Tongue, and how he can bend it various ways, so as to make divers articulate Sounds, which may be accommodated to signify several things, hence proceeds Speech, by which Men ordinarily discourse with one another, expressing the passions of the Mind, and other things, no otherwise than as by nodding the Head, or pointing with the Finger.

Lucret.

Here, because it is usually demanded, How Men came at first impose Names on things? We must know, that Names were not imposed merely by Invention of Man, nor by some Law; but the very Natures, or natural Dispositions of Men, which were in several Nations, being, upon the presentment of things to them, affected with particular motions of the mind, and compelled by images proper to the things, sent forth the Air out of their mouths, after a peculiar fashion, and broke and articulated it, according to the impulsion of the several affections or phantasies, and sometimes according to the difference of places, as the Heaven and the Earth is various in different Countries. The words which were thus pronounced, and particularly with a will of denoting things to others, became the names of things.

Lucret.

Some also desiring to mention some things to others, which were out of their sight, pronounced certain sounds or words, and then were constrained to repeat the same words; whereupon the hearers finding out the thing by some discourse and conjecture, at last, with much use, understood what the others meant.

Lucret.

And because several Men used several Names, to signify the same things to others, and thereupon there was a variety of Names; for this Reason, Names proper to signify things were in every Nation by degrees, and, as it were, with common consent chosen and appointed, so as their mutual significations might be less ambiguous, and things might be explicated by a more compendious way of speaking.

Lucret. 5.
1040.

For this Reason I conclude, That the first Man imposed Names on things, not out of certain Science, or by the Command or Dictate of any one Man; for how should he come by that Science, or have power to compel many Men to use the words which he dictated? But rather, that they imposed them, being moved by a certain natural Impulsion, like those who cough, sneeze, bellow, bark, sigh. And therefore we may say, that Names are not by Institution, but by Nature, seeing they are the Effects and Works, as it were, of Nature; for, to see and hear things (which are certain Effects and Works of Nature,) are of the same kind, as the giving of Names to Things.

C H A P. XXI.

Of Sleep and Dreams.

Lucret.

IT rests, that we add something concerning Sleep, and the Death of Animals, two things near of Kin; for one is an Intermision, the other the Extinction of Sense, and Death is ordinarily termed an Everlasting Sleep.

Sleep is caused, when the parts of the Soul, which are diffused thorough the whole composition of the

Body, are either repressed or segregated; or else some little Bodies, either from the Air or from Food, light upon the dispersed parts, which partly drive them away from the Body, partly crowd them into the Body, and discompose them. For hereupon the Body, as destitute of its ordinary support and government, becometh weak, and all the limbs grow feeble, the Arms and Eye-lids hang down, the Knees sink, and, in a word, there is no more Sense.

Lucret. 4. 941.

For it being certain, that Sense proceeds from the Soul, it is no less evident, that when Sleep hindereth the Sense, the Soul is disturbed, and thrown out of doors; not the whole Soul, for then it were not Sleep, but Death; but a part only, and yet so, as that which is left behind is oppressed within, and buried like Fire rak'd up in ashes. And as, if we stir up the Fire, it wakes, as it were, and a flame arises from it, in appearance extinguished; so the Senses are restored throughout the Members, and raised again out of a thing in appearance dead.

Lucret. 4. 941.

When I say, that little Bodies coming from the Air cause this disturbance, I mean, partly the exterior Air, which never ceaseth to beat and drive against the Body, (whereby it comes to pass, that the outward part of every Animal becomes solid and hard,) partly the interior, or that which is drawn in at the mouth, and blown out again. For the stroke of each of these passing through the little vacuities, to the principles and first elements of the Body, their Positions are so disordered, that part are cast out, part thrust in, and the rest, which is diffused through the limbs, are not able to discharge their office, by reason that they are intercepted, and not joined one to another.

Lucret.

I add, that this happens from the Food also, because the Food, being convey'd inwardly by the Veins, performs the same thing as the Air, and that with more abundant and greater force. Whence it comes to pass, that the Sleep which is caused by Meat, by reason of the greater disturbance of those Particles, is more sound than ordinary, as is that also which proceeds from excessive weariness, by reason of their greater dissipation.

Lucret.

Now forasmuch as it may seem strange, that Dreams should come to us in Sleep, we must observe what was said not long since, that every where there are Images of innumerable things, continually roving up and down, which, by reason of their subtlety, are able to penetrate into the Body, and able to strike and affect the Mind, which is seated in the midst of the Breast, so as it is stirred up to think of those things whereof they are the Images. Hereupon, forasmuch as these penetrate and strike the Mind no less in sleep, than in waking, it comes to pass that we seem to behold things as well in sleep as awake.

Lucret.

But it happens, that we receive the things which appear to us in this manner as true, because our Senses being stupified, nothing can occur to us, that may give us notice of the Error, and convince the Falsity by true things; and besides, our Memory being laid asleep, we esteem (for example,) those Men to be alive who are dead, because their Images are present to us, and we remember not their death.

Lucret.

Lucret. If you demand, why we dream most of those things in which we chiefly delight, or to which we are most particularly addicted when awake, (for Orators plead, Solders fight, Mariners contest with the winds, Gamesters play, and so of others; Neither is it thus with men only, but amongst other Animals also; Horses sweat and blow, as if they were running a race; Hounds stretch their legs, cry, and snuff up the Air; and so of the rest,) We must say, that this happens; forasmuch as by reason of the impression lately made in the mind, the passages are left open, into which the same Images insinuate, and above the rest, move the soul again.

Lucret. From the same ground it seems to proceed, that he who is thirsty dreams of a fountain, and that he is drinking; he that hath need to Urine dreams of a chamber-pot, and that he is using it. For the intrinsecal motions open as it were, the wayes, into which the Images of things of the same nature insinuating, strike the mind. Hence also it comes to pass, that many Images of the same thing meeting together, there are produced certain great motions in the mind, and then he who dreameth, imagines that he possesseth great knowledge, performeth great actions, speaketh excellent things; and sometimes cryeth out as if his throat were about to be cut, or himself to be devoured by a Lion or Panther, and is no less affrighted, than if he had cast himself down from a high Mountain, so as when he awakes, he has scarce the use of his reason.

CHAP. XXII.

Of Death.

Lucret. **A**S for Death, it is nothing but a privation of sense, by reason of the departure of the Soul. By sense here, I understand not only the action, of which sleep also is the privation; but the faculty likewise of feeling or perceiving, which perisheth with the soul, and together with these, the mind also; so that the soul going forth, the mind which is joyned with it goeth forth also.

Lucret. For, 'as long as the soul exists in the body, although some other part fail, yet there is not a privation of sense: but sense perishes together with the soul, as soon as ever that wherein it is contained, whether it be the whole body, or some part in which it is seated, happens to be dissolved. Neither can it be objected, that the body remaineth a while undissolved, either in whole or in part: For it is nevertheless void of sense, as soon as such a company of Atoms, as is necessary to constitute the nature of the soul, goeth out of it.

Lucret. Moreover, the body being dissolved, the soul itself is dissipated, and hath no longer the same faculties, nor any longer is moved, nor any longer hath sense; for we cannot imagine, that the same thing doth any longer feel or perceive, when it no longer useth the same motions, when it no longer is in the same compound, when those things no longer are by which it was cherished and preserved, and in which existing it performed such kind of motions. It is the same with the soul as with the eye; which, being out,

and divided from the body in which it was, cannot see any thing.

When I say, The soul is dissipated, I imply the mind also; since the mind is indivisibly joyned with it, neither can it subsist if the soul perish. So that here it is all one to say, the mind and the soul, for the same dissipation happens to both. Now this dissolution is made, not into nothing, (as they must necessarily affirm, who hold the soul to be harmony, or such a contemplation as health,) but into the Principles and little bodies, of which its contexture is made; and this not so much like water, which runneth about when the vessel is broken, as like smoke, or a mist, which goes away into Air, but much more easily; its contexture being more subtle, since it is capable of receiving impressions from the Images of smoke and mist.

That the soul is dissipated and perisheth, is manifest; for that it is compounded and hath a beginning. Some indeed there are, who conceive it to be Eternal, denying it to have a beginning, to avoid its dissolution; and assuming for granted, that it was before the Body, and came from without into it, that they may maintain, that it survives after the body, out of which it goes intire. I shall omit, that they seem not to observe, that nothing can be durable for ever, unless it be such, either by reason of its solidity as an Atom; or for that it is incapable of being struck, as Vacuum; or for that it wants place whereinto it might remove, as the Universe. Neither do they reflect how great a madness it is to conceive, that things so different as immortal and mortal, may be joyned together.

I omit this, I say, and demand onely, How it is possible the soul can, from without, be insinuated into the body, and diffused through its parts, and yet not be divided and dissolved, as meat distributed through the limbs; And must it not dwell in the Body, as a Bird in a Cage, rather than be thought to grow, and be coextended with the Body? And how then arrives it together with the Body, at the flower of age? And why it is, that in old age it fears, not rejoiceth, to go out of the Body as out of her prison, and like the serpent to cast her decay'd skin? And if forsaking the Body, it leaves some relicks of it self behind, is it not dissolvable? But if it leaves none, how comes it, that so many worms are generated in a carcass?

For to say, that so many souls flow thither from without, and fly up and down like shadows, and chuse their own matter, and frame their own Bodies, and the like, How absurd is it? Neither is it less ridiculous, that there should be a swarm, as it were, of Souls, hovering round about at the coition and birth of Animals, contesting with one another which shall enter into the Body.

And if Souls did so often shift Bodies, would not their natures, by degrees, become changed, and so the Lion in time not be fierce, the Hart not timorous, the Fox not crafty, the Dog afraid of the Hare, the Hawke of the Dove? And if any shall say, that human souls only pass into human Bodies, he cannot give a reason, Why the soul, of wise, becomes foolish? why no children are wise? why we, as the first Author of these Opinions feigned of themselves, never remem-

ber our past life, and the actions performed in it.

The soul therefore hath a beginning, from which, as it groweth up and flourisheth, with the Body, so must it necessarily tend to an end, growing old, and decaying by degrees, together with it.

This I say likewise of the Mind, which by degrees is perfected, and decayeth; seeing that it not only bears a share in the diseases, and pains of the Body, but suffers diseases, and pains of her own, and is cured by Medicine: which could not be, if something were not added to, or taken from, or transposed in her contexture. We need not instance, what happens to her by drunkenness, the falling sickness, or dotage.

We must observe, that she is affixed to some certain part of the Body, no otherwise than the ear to the eye, so that, accordingly she begins and ends with the whole; and this is manifest, forasmuch as every thing, (Thees, Fishes, &c.) hath a certain determinate place in which it is produced, liveth, and at last ceaseth to be, and cannot exist out of it.

And forasmuch, as a man dieth limb by limb, and expireth by degrees, the soul being as it were divisible; who can say, that the Mind (or Intellect) doth not evaporate out of the midst of the breast, but goeth entire out at the throat and mouth? For, that the soul her self goeth out, sifted as it were, and sever'd thorough the whole Body, is argued, even for that the stench which after her departure is in the dead carcass, proceedeth from no other cause, than that its several parts are got into that place, which was taken up by the several parts of the soul. Not to mention, that, otherwise, when the Body is suddenly cut asunder, into two or more pieces, the soul could not be cut into two or more pieces as the Body.

As therefore, the soul was not before the generation, so neither will it be after the dissolution, or death; and as, before that, we did not feel any pain; so neither shall we no any, after this; as well, for that there will be no longer Touch, or any other Sense, which cannot exist in a separate soul; as for that, it is now without those Organs, in which only the senses reside, and with which only, they can act and suffer.

Hence it is manifest, that all fears of the Inferi are vain; *Ixion* is not roll'd upon a wheel; *Sisyphus* does not thrust a stone up hill continually; *Prometheus's* liver cannot be devoured and renew'd every day. These are but Fables, as are also those which are reported of *Tantalus*, of *Cerberus*, of the *Danaiides*, of the *Furies*, and the like; which if they are made good any where, it is in this life, through the depraved manners of men.

SECT. IV.

Of *Superiour things*, as well *Celestial*, as *Aerial*.

Hitherto, of *Inferiour things*; we come now to the *Superiour*, which appear in the Re-

gion above the Earth; such are the Sun, the Moon, and other Stars, and all that belongs to them, as Risings, Settings, Tropicks, Eclipses, and the like. Moreover Clouds, Rain, Wind, Lighting, Thunder, Thunder-bolts, and the like. For tho' some make a distinction, and call these later only *Meteora*, *Superiour things*, yet is it convenient, to call the former also *Meteors*, and to include both within Meteorology, that is, a Treatise of *superiour things*.

Here we must repeat what was said at first, that we must not propose any other end of the knowledge of *Superiour things*, whether they be treated of jointly with others, as here, or separately, and by themselves, as else where we do, than an undisturbed state of mind, and unwavering Judgement; as also in the rest of the things, of which we use to discourse.

For *Superiour things* being such, as that they either have, or may have a manifold cause of generation, and declaration of their being, conformable to that which we perceive by the sense; we ought not to adhere to one particular way, as we do in *Moral Maxims*, or some in *Physick*, such as are, The Universe is Body and Vacuum; the Principles of things are indivisible, and the like which agree onely one way with the *Phænomena's*: But firmly hold, that these things are indeed explicable, not one, but many ways, neither ought we to attempt any thing above the reach of human power, by defining one certain way, after which only the thing may be performed.

This, I say, we must repeat; forasmuch as it is requisite to conceive, that it is the Office of *Physiology*, accurately, to examine the causes of the chief things which are in nature, and that from hence proceedeth all the felicity which consisteth in knowledge of *superiour things*, and in that especially, that we examine, what kind of things those are, which are discovered in those *superiour ones*, and whatever has affinity with them. And withal, inviolably to observe this rule, that it is competent to those things, to be done many ways, and not necessarily one way onely; but, that they may be brought some other way also.

This, I so expressly inculcate; lest, if we adhere onely to one way, and that happen to displease us, we presently recur, not to some other natural cause, but to the divine; for this were to acknowledge a manifold manner, where there is but one. Thus, to the divine nature we should attribute trouble and business, whereas it is simply and absolutely necessary, that in an Immortal and Blessed Nature, there be none of those things which cause dissolution and trouble; for the mind immediately apprehends, and concludes from the consideration of an immortal and blessed condition, that it is absolutely impossible, any such thing should happen to it.

And doubtless, for want of this consideration, it comes to pass, that the contemplation and observation of rising, setting, solstices, eclipses and the like, make our knowledge nothing the happier, but they who have considered these things (yet know not what are the nature of those Bodies, and what are their chief Causes,) fear as much, and perhaps more, than as if they had not contemplated them at all; by reason, that

the admiration which ariseth from their consideration, cannot be satisfied, as to the disposition and manner, whereby they performed. For this reason we endeavour to find out, and alledge many several causes of solstices, settings, risings, eclipses and the like, conformable to things of the like kind, which happen amongst us on the earth.

Besides we must not think, that an accurate enquiry after these things, conduceth to acquisition of tranquillity and felicity. In superiour things, and others that are obscure, we ought to seek out causes, according to the several ways by which the like things happen amongst us, despising those who neither know one certain way by which a thing is effected, nor a manifold way, but content themselves only with the appearance of things as presented at that distance, and yet are ignorant in what consists or not consists imperturbation. Truly, if we conceive it may fall out, that a thing may be done one certain way, and thereupon we are not troubled; truly I say, knowing on the other side, that the same thing may be effected many several ways, we shall be no less undisturbed, than if we knew it could be done by a certain way.

But whensoever one has a mind to adhere to, or defend any thing that is likely in itself, that explication is sufficient in this present subject, which runs congruously, according to the manifold ways the Phænomena's afford us. Yet is it necessary to derive our conjectures concerning superiour things, from those which are done amongst us; from those, I say, which are observed to resemble those in those which are seen above: For those things are effected several ways; wherefore also that which appeareth in every superiour thing, is to be considered by those thing, which agree with it, and which may be effected several ways amongst us, as several things may happen.

But I insist too much hereupon. To come therefore to the business. Although the whole Region above Earth is sometimes called Heaven, for even the nearer part of it, the Air, is sometimes called so too; yet by the word Heaven and Æther we will understand the superiour part of the Region, which containeth the Stars; and, by Air, the inferiour, in which Clouds, Lightning, and the like are generated. We shall begin with the celestial superiour things, and speak afterwards of the Aerial.

C H A P. I.

Of the Substance and Variety of the Stars

WE must first lay down what was formerly touched, that the Sun, Moon, and other Stars, were not made apart, and afterwards brought into the World, but received their figure, augmentation, and magnitude, immediately, and together with the World; (as the Earth, the Sea, and whatsoever is in the World,) by the coagulations and convolutions made within it, of some more tenuous natures, and those either aerial, or fiery; or both; for this our sense suggests to us.

Hence some Stars seem to be of more fiery substance, especially the Sun, whose heat is so ma-

nifest to sense; but withal, they seem not so much to be pure fires, as some mixed concretions, to which fire is annex.

Or, it may be, they are, as it were, certain glassy smooth dishes, capable to receive the bright, fiery little Bodies, which, coming from the ætherial Region thorough which they run, light upon them, and so reflect them, and shew them to us in that form wherein they appear: For the like is done amongst us. Or that they may be clouds, enlightened, and, as it were, enkindled; for those Meteors, called the Parelii, are caused no other way.

Or, it may be, they are, as it were, deep vessels, containing fire in their hollow part, like a Lanthorn, or a Chafing dish, which holdeth coles, or melting metals. Or, they may be, as it were, glowing plates, or, as it were, stones burning in a furnace; for there is nothing in all these that implies a contradiction.

In like manner, the Sun in particular may be nothing else, but a thick kind of clod, which being like a pumice, or a sponge full of pores, and little holes, may, containing fire, dart light out of them.

Onely the most impossible thing seems to be what some assert, that the Stars are animate, or so many Animals, and moreover, so many gods. For though we should grant, that each of them is a kind of World, or rather, as it were, an Earth, which hath not onely an Air, but an æther peculiar to itself. Nevertheless, as this our Earth, though it produceth Animals, is not therefore itself an Animal; so neither would the Stars be, although we should grant that some Animals may be generated in them.

But if we should admit this, yet what they further press, that there are such a kind of round and rolling gods, needs to be repeated onely; for we formerly proved that these are prodigious fancies, not of discoursing but dreaming Philosophers, when expressing immortal beings by the language proper to mortal, they pronounce things so contrary to the felicity of the gods, and which seem so far beneath their excellent nature.

The Stars have been already distinguished into two kinds; some are fixed, which observe the same position from one another, and keep the same course from East to West, never altering it. Others are wandring, whence called Planets or erratick Stars, because they never observe the same position, either towards one another, nor to the rest; and sometimes perform their courses nigher the North, sometimes nigher the South.

If you demand from whence this diversity proceeds, I shall say, that it may be the Stars were from the beginning moved round, with such a necessity, that some took a circular motion uniform and even; others, an irregular and unequal one.

It may also be, that, in the places thorough which they move, there may be some even diffusion of spaces, which may carry them on the same way one after another, whereby they may move evenly, but that elsewhere they may be uneven for the same reason; varieties which we observe in their motions proceeding from hence.

To alledge one onely cause for these, seeing that the Phænomena's argue that the causes may be many, is madness, and not rightly considered by those, who dote

ber our past life, and the actions performed in it.

The soul therefore hath a beginning, from which, as it groweth up and flourisheth, with the Body, so must it necessarily tend to an end, growing old, and decaying by degrees, together with it.

This I say likewise of the Mind, which by degrees is perfected, and decayeth; seeing that it not only bears a share in the diseases, and pains of the Body, but suffers diseases, and pains of her own, and is cured by Medicine: which could not be, if something were not added to, or taken from, or transposed in her contexture. We need not instance, what happens to her by drunkenness, the falling sickness, or dotage.

We must observe, that she is affixed to some certain part of the Body, no otherwise than the ear to the eye, so that, accordingly she begins and ends with the whole; and this is manifest, forasmuch as every thing, (Thees, Fishes, &c.) hath a certain determinate place in which it is produced, liveth, and at last ceaseth to be, and cannot exist out of it.

And forasmuch, as a man dieth limb by limb, and expireth by degrees, the soul being as it were divisible; who can say, that the Mind (or Intellect) doth not evaporate out of the midst of the breast, but goeth entire out at the throat and mouth? For that the soul her self goeth out, fitted as it were, and sever'd thorough the whole Body, is argued, even for that the stench which after her departure is in the dead carcass, proceedeth from no other cause, than that its several parts are got into that place, which was taken up by the several parts of the soul. Not to mention, that, otherwise, when the Body is suddenly cut asunder, into two or more pieces, the soul could not be cut into two or more pieces as the Body.

As therefore, the soul was not before the generation, so neither will it be after the dissolution, or death; and as, before that, we did not feel any pain; so neither shall we, no any, after this; as well, for that there will be no longer Touch, or any other Sense, which cannot exist in a separate soul; as for that, it is now without those Organs, in which only the senses reside, and with which only, they can act and suffer.

Hence it is manifest, that all fears of the Inferi are vain; *Ixion* is not roll'd upon a wheel; *Sisyphus* does not thrust a stone up hill continually; *Prometheus's* liver cannot be devoured and renew'd every day. C H A P. I.

Of the Substance and Variety of the Stars

WE must first lay down what was formerly touched, that the Sun, Moon, and other Stars, were not made apart; and afterwards brought into the World, but received their figure, augmentation, and magnitude, immediately, and together with the World, (as the Earth, the Sea, and whatsoever is in the World,) by the coagmentations and convolutions made within it, of some more tenuous natures, and those either aerial, or fiery; or both; for this our sense suggests to us.

Hence some Stars seem to be of more fiery substance, especially the Sun, whose heat is so ma-

nifest to sense; but withal, they seem not so much to be pure fires, as some mixed concretions, to which fire is annexed.

Or, it may be, they are, as it were, certain glassy smooth dishes, capable to receive the bright, fiery little Bodies, which, coming from the ætherial Region thorough which they run, light upon them, and so reflect them, and shew them to us in that form wherein they appear: For the like is done amongst us: Or that they may be clouds, enlightened, and, as it were, enkindled; for those Meteors, called the Parelly, are caused no other way.

Or, it may be, they are, as it were, deep vessels, containing fire in their hollow part, like a Lanthorn, or a Chafing dish, which holdeth coles, or melting metals. Or, they may be, as it were, glowing plates, or, as it were, stones burning in a furnace; for there is nothing in all these that implies a contradiction.

In like manner, the Sun in particular may be nothing else, but a thick kind of clod, which being like a pumice, or a sponge full of pores, and little holes, may, containing fire, dart light out of them.

Onely the most impossible thing seems to be what some assert, that the Stars are animate, or so many Animals, and moreover, so many gods. For though we should grant, that each of them is a kind of World, or rather, as it were, an Earth, which hath not onely an Air, but an æther peculiar to itself. Nevertheless, as this our Earth, though it produceth Animals, is not therefore itself an Animal; so neither would the Stars be, although we should grant that some Animals may be generated in them.

But if we should admit this, yet what they further press, that there are such a kind of round and rolling gods, needs to be repeated onely; for we formerly proved that these are prodigious fancies, not of discoursing but dreaming Philosophers, when expressing immortal beings by the language proper to mortal, they pronounce things so contrary to the felicity of the gods, and which seem so far beneath their excellent nature.

The Stars have been already distinguished into two kinds; some are fixed, which observe the same position from one another, and keep the same course from East to West, never altering it. Others are wandring, whence called Planets or errattick Stars, because they never observe the same position, either towards one another, nor to the rest; and sometimes perform their courses nigher the North, sometimes nigher the South.

If you demand from whence this diversity proceeds, I shall say, that it may be the Stars were from the beginning moved round, with such a necessity, that some took a circular motion uniform and even; others, an irregular and unequal one.

It may also be, that, in the places thorough which they move, there may be some even diffusion of spaces, which may carry them on the same way one after another, whereby they may move evenly, but that elsewhere they may be uneven for the same reason; varieties which we observe in their motions proceeding from hence.

To alledge one onely cause for these, seeing that the Phænomena's argue that the causes may be many, is madness, and not rightly considered by those, who do.

on vain Astrology, and trivially explain the cause of some things; and in the mean time will not allow the divine nature (to which they ascribe most of these) to be free from the task of several troublesome offices.

C H A P. II.

Of the Magnitude and Figure of the Stars.

AS concerning the magnitude of the Sun, and of the rest of the Stars, it may be considered, either as to us, or in itself. *As to us, it is so much as it appeareth to be,* for the sense is not deceived; and whatsoever magnitude the eye seeth in them, is such in them, for they have not any other thing immediately encompassing them without, which is visible; nor any thing of their own, which falls not within view of the eye.

But this magnitude considered in itself, or as to the thing itself, may be either somewhat greater, or somewhat lesser, or exactly so much as it appears to be. For with such variety are fires presented to our senses; seen at a distance, in the day-time, or by night. For either they are just so big as they seem, as the light of a candle if we look near it; or lesser, as when we see the same light in the day-time at distance; or greater than indeed they are, as when the same light is seen in the night-time afar off.

I say, somewhat greater or lesser, in regard this diversity betwixt the appearance and the true compass cannot be very great, as may be evinced from our ordinary fires; for, from what distance soever we perceive the heat of any fire, from the same its just form appeareth to us. In like manner, since we perceive the heat of the Sun here from the place where he seemeth to us to be, his just magnitude cannot be sensibly different.

That nothing perceivable is taken off from the Stars by this distance, is confirmed; because those things which we behold at a great distance, and much Air mediating between, are presented to us with a confused circumference; but the Sun, to those who can look upon him, appears to be of an exact compass; nor can any thing be seen more distinctly than the circumference of the Moon. There are indeed some Stars which twinkle, and seem to shoot forth trembling beams; but upon another account, this argues they are so near, as to be seen exactly. For fires amongst us seem, in like manner, to wave and tremble, when we behold them at a distance, which, near at hand, seem fixed and constant.

Again, this is confirmed, because, if the Stars did lose their due magnitude by reason of distance, they would much more lose their colour; for we know, that a thing at distance ceaseth to be seen in its native colour, sooner than by reason of its littleness it totally disappears, or comes not to be seen at all. But though there be no distance more capable to effect this, (for there is not any length greater,) yet the Stars do not therefore lose their true colour.

Many things may be objected against this, but they are easily solv'd, if a man stick close to those things which are manifest to us, as we have shewed

in our Books concerning Nature, where we bring in this distinction of magnitude; considered in itself, and, according to us, we declared, that neither he did absurdly, who said, The Sun is a foot broad; nor he that said, It was many times bigger than *Peloponnesus*; nor he who said It is of equal bigness with the Earth, forasmuch as of things, which in themselves are greater and lesser, there may be as to us one magnitude, according as they are nearer or farther off.

As for the figure, I shall only say, that since it appeareth round to us, it is globous and plain like a Plate, and therefore the Stars are either as dishes, or as cylinders, or as cones and tops, or as certain nails fixed in the Sky. For none of these hath any thing that implyeth a contradiction, nor dissonancy from the phenomena.

C H A P. III.

How the Stars move, out-run one another, and are turned round.

HAVING said, not long since, that, of the Stars, some are fixed, others erratick, and that this difference proceeds from their having different motions; we must now say, in general, that the motions of both may be made either by the turning about of the whole Heaven, in which one or more of them are, supposing it to be solid, and carrying them about with it, like nails fastned into it; or else, the Heaven standing still, as a fluid or pervious thing, by their being whirled about, and moved thorough it.

Now forasmuch, as whether it be the motion of the Heaven, or of the Stars, it may have begun from a necessity made at the very time that the World was generated, and impress'd east-wardly; it might in the first case, (that is, if it be in the whole Heaven,) both have begun, and be continued by the hurry of some Air. For there may be a two-fold extrinsecal Air; one, pressing from above, and driving the Heaven towards the West; the other lifting it up as it were, and carrying it on, and that otherwise than the former, which on all sides presses and fixes the Poles. In the second case, (that is if the motion be in the Stars themselves,) it may have been, either by hurry of Air, or by the course of the fire.

For it may have been from the very beginning, that a great company of little Bodies, evaporating, and diffusing themselves, might break the Air, and force their passage thorough it; and the Air, receiving this motion of the Wind, and hurrying the Stars along with it, might carry them about, and cause that continual circular Motion, which is still seen above in them. It might also be, that the proper fire of every Star, either being shut up close and seeking a vent, might begin to turn about, and continue still as it began; or, being at greater liberty, might move in this fashion that way, unto which the food or aliment of each invites them, and so go on, thorough its heat and desire of aliment to the next Bodies which were fuel convenient to nourish it.

None of all these is repugnant to the Phenomena's; but otherwise, we cannot easily determine

mine from what cause the motion of the Stars should proceed.

But, How comes it to pass, that some Stars anticipate, or get before others, so as that we see the other left behind them; This may happen, either because the others performing the same diurnal revolution with them are moved more slowly, as the Moon, which moving more slowly than the rest, towards the West, is left as it were behind them East-ward. Or because, being carried about by the diurnal motion towards the West, they are in the mean time slowly carried on, by a contrary motion towards the East, whereby the Moon may not have been left by the rest, East-ward, but rather have left them West-ward. Or because, all things being carried about only with a diurnal revolution, and equal motion, yet some perform a longer, others a shorter course; and so the Moon, if she be above the fixed Stars, as some conceive, will perform its revolution more slowly, and be observed to be left behind.

Certainly, to assert any thing absolutely in these matters, becomes those, who affect to make ostentation of something magnificent, and prodigious before the multitude.

Again, How comes it to pass, that the Sun, Moon, and Planets, when they come to the Tropicks, or Solstices, turn about and go back again? This may happen, either because, such a kind of circular motion was at the beginning impress'd upon these Stars, as that they should be carried round about after a spiral manner, limited on each side at the Solstices. Or that they go according to the obliquity of Heaven, which in process of time acquired a necessity of that indirect position. Or because, they are repell'd by the Air, which driveth them back on, now to this side, now to that, by reason of its coldness, density, or some other quality. Or because, their aliment is conveniently disposed all along that way, kindling backward, and failing forwards.

And these, and those which are like these, have in them nothing repugnant to the evidence of things; if a man, adhering only to the possibility that is in these things, can reduce each of them to that, which agreeth with the Phenomena's, not fearing the groundless contrivements of Astrologers, who forbear not to build upon and in them a vast company of concentrick Orbs.

CHAP. IV.

Of the Rising and Setting of the Stars, and of the alternate length of dayes and nights,

THe Rising and Setting of the Sun, Moon, and the rest of the Stars may happen three ways.

First, by appearance above, and occultation beneath: For that the Stars being always bright and never extinguish'd, are so carried about, above, and below the Earth, that sometimes they rise, sometimes they go down, or set; and the Sun, in particular, when he goeth down causeth darkness with us; but returning, he enkindleth as it were the Heaven with his morning-beams. There is not any thing amongst the Phenomena's which contradicts this.

Again, by being enkindled in the East quarter, *Laert.* and extinguished in the West: For, there may be such a disposition of the Medium in both these places, as that, whilst the Stars pass through it, what I affirm may be effected, there being nothing in the Phenomenas that contradicts it; seeing, there are not only fountains that extinguish, but such also, as enkindle Tapers, as that at *Epire*, formerly mentioned. So that the Ocean compassing the Earth, the Sun may be extinguished by it in the West quarter, and return all along it, passing along the North into the East quarter, and from thence arise re-enkindled.

Thirdly, by a new production every day; for nothing hindreth, but that there may every day arise new Suns; for example, there flowing together to the East, several fires, or seeds of fire, which joyn in one round Body, and shine, and are carried on impetuously towards the West. For it is reported, that the like happens in the Mountains of *Ida*, and chiefly about the rising of the Dog-star; and that fires may meet in great Bodies together at certain seasons, may be understood from what is observed to be done at some determinate time in all other Bodies. For, from the confluxion and defluxion of seed, Trees at a certain time bring forth leaves and fruits, at a certain time shed them; at a certain time Teeth are bred, at a certain time cast; and so in other things, which it were too long to instance.

Now the Sun's continuance above the Earth making day, and his absence night; How comes it to pass, that all daies are not equal, and all nights equal, but that in Summer the days are longer, the nights shorter; in Winter alternately, the nights longer and the days shorter? This also may happen three ways.

First, For that the revolutions of the Sun above *Laert.* and beneath the Earth, are sometimes performed faster, sometimes slower, according to the alternate lengths of the paces, or ways in which the Sun passeth: *† Lucrēt. 5.* And this by reason of the position of the Orb called the Zodiack, through which the Sun passeth obliquely, and in two Signs of it makes the nights and the days equal. But when from thence he declineth to the North or South, as much of his journey as he taketh off from one part, either above or below the Earth, so much he adds to the other.

Secondly, Because there may be certain places in the Ether, which, by reason of their grossness, and the resistance which happens thereupon, cannot be passed thorough so swiftly as others. Such are those which make the Sun stay long beneath the Earth in the Winter, whereby they make the night longer and the day shorter than in Summer. Some things of the same kind may be observed amongst us, according to which it is convenient to explicate superior Bodies.

Thirdly, that in the alternate parts of the year, the fires, or seeds of fire aforesaid, flow together in such manner, as that they make a Sun sooner or later; and the Sun rises out of that part from which he begins a longer or shorter course above the Earth.

They who insist and fix upon but some one particular way, to explicate these effects, both contradict things apparent, and deviate from that which falls under human contemplation.

CHAP.

C H A P. V.

Of the light of the Stars, and of the changes and Spots in the Moon.

Let us now say something of the light, not onely of the Sun, but of the rest of the Stars, and particularly of the Moon. First, men admire, that the Sun, being so little, should pour forth so much light out of himself, as sufficeth to enlighten and warm the Heaven, the Earth, the Sea, and yet not be itself exhausted. But the Sun is a kind of fountain, into which there flow together from beneath on very side perpetual rivulets; for the seeds of heat throughout the whole world flow so into the Sun, as that immediately from him, as from one fountain or head, both heat and light overfloweth every way.

Moreover, the substance of the Sun, may be of such thickness, and the light and heat which floweth from him of such thinness, that as a little current or a rivulet, streaming from a spring, watereth the meadows and fields round about it, without any loss to itself; so that of the Sun may be sufficient to irrigate, as it were, the whole world, without any sensible diminution of the Sun.

Moreover, the Air may be of such a nature, as that it may be kindled, as it were, by a little light, diffused from the Sun; as a whole field of corn may be set on fire by one spark.

Likewise, the Sun may have his aliment round about him, which may supply what he loseth, as the flame of a lamp is fed by the oyl which is put to it. It may happen also many other ways.

As to the rest of the Stars, especially the Moon, it may be, that they have their light from themselves, *it may be they borrow it from the Sun; for amongst us we see, that there are many things which shine of themselves, many things which borrow light from others; and there is nothing appearing in the superiour things themselves, which hinders, but that either of those opinions may be true.*

If a man persevere stedfast in his mind the manifold ways, and the suppositions conformable to it, and consider the causes together with it, lest minding things that are incoherent, he grow vainly proud, and sometimes fall into one particular way, sometimes into another.

As for the Moon, it is in the first place wonderful, How she comes to have so many changes, or increase or decrease of light. It may be, that being round, and receiving light from the Sun, she is successively so figured, (after the same manner as the Air, when the Sun riseth, is enlightened, and when he setteth is darkened successively,) as that going away from the Sun, she seemeth every day to encrease, because she sheweth more and more of her enlightened face to us, until she presents it at full; and then going towards the Sun, decreaseth every day, because she sheweth less and less of it, until at last she turneth no part of it towards us, but is quite unseen.

Moreover, it may be, that the Moon being round, one part of her may be bright, another dark, and as she turneth her Body about, may discover to us, alternately, more or less of each part.

It may also be, that being bright of itself, she may be obscured by an interposition of some

opacous Body coming under her, which is hemispherical and hollow, and, moved along with her, is continually rolled about her.

Neither doth any thing hinder, but that there may every day (according to what we formerly said,) be made a new Moon of a several form and figure; as in like manner the seasons of the Spring, Summer, Autumn, and Winter; and many things in them, come and go, are produced and perish, at set times.

In fine, it may be any way, wherein those things which appear to us may be applied to explication of that manner, unless some man, being much in love with one singular way, shall vainly reject the rest, not considering what things it is possible for a man to know, and thereupon aims at the knowledge of those things which man cannot attain.

Moreover, they admire in the Moon, that there appear spots in her face; but *her face may appear so, either from the various and different nature of the parts of the Moon, or from the interposition of some body, not so much opacous as dusky; not rolling about her, but perpetually adhering to her, and not solid all over, but full of holes like a Racket.*

Or, it may be any other way of all those which are observed to be conformable to things apparent. This is the course to which we must adhere, concerning superiour things; for no man, if he contest against apparent things, can ever partake of true tranquillity.

C H A P. VI.

Of the Eclipses of the Stars, and their set Periods.

But there is nothing which useth to strike a greater terrour into men, than that sometimes they observe Eclipses, and defects of light in the Sun and Moon, to happen on a suddain. Yet why may not this also happen many several ways?

For first, the Sun may be Eclipsed, for that the Moon, being interposed, puts her dark Orb or opacous Body before him, and keeping away his light from the Earth, causeth darkness in her, until by her removal the light is restored. The Moon may be Eclipsed, for that the Earth, being interposed betwixt her, and the Sun, takes the Sun off from her, and darkens her, while she comes within the cone of the shadow, until, passing from out of it, she recovereth light.

Again, the Sun may be Eclipsed, for that some part of Heaven, or some other opacous Body, such as is the Earth, may move along with the Sun, and at certain times come underneath him, and intercept his light. And the Moon in like manner, for that some other opacous Body passing betwixt her and the Sun, keeps off the beams of the Sun from her, or moving together with her, doth not onely perform its phases slowly, but sometimes overcasts her with a suddain darkness. Not to mention, that if she be dark on one side and bright on the other, it may happen, that she may sometimes on a suddain turn her dark side towards us.

Moreover, both the Sun and Moon may suffer Eclipse, for that they may pass thorough places pernicious to fire, and thereby their light become exting-

Laert.

extinguished, until going beyond them they renew and recover it.

Thus ought the several ordinary wayes to be heeded, and some of them also put together, it being possible, that many causes may concur.

The periodical order, by which Eclipses happen at certain times, is conceived to be kept in like manner as amongst us in some things, as in the vicissitude of seasons. There is no need of recurring to the divine nature for the bringing of these to pass; let us allow that to be free from all business, and exquisitely happy.

Unless this be done, all discourse, of Causes in superiour things will be vain; as hath already happened to some, who taking an impossible course became frivolous for that they approved only one, and rejected all the rest, though they were possible, and were transported to dream of that which exceeds the capacity of the Intellect, and were neither able to admit, as they ought, apparent signes, nor understand, as they say, how to rejoyce with God.

CHAP. VII.

Of the Presignifications of the Stars.

IT remains, we speak of the Presignifications of the changes of the Air attributed to the Stars, as rain, wind, drought, heat, and the like, which happen according to the time of the rising or setting of certain Stars, as of the Dog, Orion, the Pleiades.

These Presignifications may be made either according to the condition of the Seasons, as it happens in those living creatures which being seen at one time with us, at another with others, passing hither and thither, are signs not causes of the seasons for the rising and setting-Stars may be not causes but signs of those mutations; or as it happens not certainly, but casually, at what time the Stars rise or set, there are causes of some mutation in the Air.

For neither of those is repugnant with things apparent; and what cause there may be, besides these agreeable with things apparent, we cannot perceive.

It is not without some reason what I hinted of Presignifications; which are observed in some Animals, to be made according to the condition of the season which at that time comes in, so as the motions observed in Animals only declare tempests but make them not. As those for example, which depart from us in Autumne induce not any necessity of the Winters being at that time; Neither is there any divine nature which fits and marks the departure of living creatures; that it may make good what is foretold by them.

This is a kind of folly that cannot fall upon any Animal, in which there were the least grain of wit; so far is it from being in that nature which possesseth all felicity.

CHAP. VIII.

Of Comets, and those which are called Falling Stars.

WHAT hath been hitherto spoken of the Stars, belongs to the Sun and Moon, and Stars, which having been made from the beginning of the World constantly inhere and appear in Heaven. But besides these, there are

other Stars, which sometimes are generated or newly appear, and after some few dayes or Months either perish or lye hid. They are called Comets, *quasi Comate Stella* hairy-stars, for that they have a long train, like hair.

Some also there are, that last but for a moment, vanishing almost as soon as they appear; and, seeming in some kind of excursion to fall down, they are ordinarily termed falling-Stars.

As for the Comets, they may be generated; Either for that some fire is sometimes kindled in some of those superiour places, and being kindled is for a time nourish'd and moved, according to the abundance and disposition of the matter. Or else they appear, for that Heaven, as to that part which is over our heads, hath some peculiar motion according to several vicissitudes, so as these Stars are driven to be made manifest. Or else, they come forth by reason of a certain disposition at some times; and, as soon as they come lower towards us, they become manifest.

Comets disappear to our sight through the causes contrary to these. Either the matter convenient for them is not placed all along, as it is in that place where they are observed to inhere, so as by degrees through want of aliment, they consume as it weirs and go out, or that something opposeth their motion. And that may happen, not only for that this part of the World, round about which the rest is turned, remaineth unmoved, as some affirm; but also, for that there may be in the Air some impetuous gyration, which may hinder their moving round, and drive it another way, as may also happen to the other Stars which are called Planets at the Tropicks.

Moreover this may happen many other wayes, if we discourse upon that which is conformable to things apparant.

As for those which are called falling-Stars, they may be made either by pieces broken off from the true Stars, or from the falling down of that matter whereof there is a kind of distillation, as may happen also in lightning; or from a company of ignifying Atoms, meeting and joyning together to effect it; the motion being made, according as the force of meeting together was from the beginning. Or from the driving of wind up together within certain cloudy bottoms or windings, and setting it a-fire whilst it is rolled up and down, and breaking thorough the bottoms which restrain them, and moving to that part towards which that impulsion carries them.

There are other wayes not fictitious, by which this may be done. But of celestial Meteors, enough.

CHAP.

C H A P. V.

Of the light of the Stars, and of the changes and Spots in the Moon.

Let us now say something of the light, not onely of the Sun, but of the rest of the Stars, and particularly of the Moon. First, men admire, that the Sun, being so little, should pour forth so much light out of himself, as sufficeth to enlighten and warm the Heaven, the Earth, the Sea, and yet not be itself exhausted. But the Sun is a kind of fountain, into which there flow together from beneath on very side perpetual rivulets; for the seeds of heat throughout the whole world flow so into the Sun, as that immediately from him, as from one fountain or head, both heat and light overfloweth every way.

Moreover, the substance of the Sun, may be of such thickness, and the light and heat which floweth from him of such thinness, that as a little current, or a rivulet, streaming from a spring, watereth the meadows and fields round about it, without any loss to itself; so that of the Sun may be sufficient to irrigate, as it were, the whole world, without any sensible diminution of the Sun.

Moteover, the Air may be of such a nature, as that it may be kindled, as it were, by a little light, diffused from the Sun; as a whole field of corn may be set on fire by one spark.

Likewise, the Sun may have his aliment round about him, which may supply what he loseth, as the flame of a lamp is fed by the oyl which is put to it. It may happen also many other ways.

As to the rest of the Stars, especially the Moon, it may be, that they have their light from themselves, *it may be they borrow it from the Sun; for amongst us we see, that there are many things which shine of themselves, many things which borrow light from others; and there is nothing appearing in the superiour things themselves, which hinders, but that either of those opinions may be true.*

If a man persevere stedfast in his mind the manifold ways, and the suppositions conformable to it, and consider the causes together with it, lest minding things that are incoherent, he grow vainly proud, and sometimes fall into one particular way, sometimes into another.

As for the Moon, it is in the first place wonderful, How she comes to have so many changes, or increase or decrease of light. It may be, that being round, and receiving light from the Sun, she is successively so figured, (after the same manner as the Air, when the Sun riseth, is enlightened, and when he setteth is dardened successively,) as that going away from the Sun, she seemeth every day to encrease, because she sheweth more and more of her enlightened face to us, until she presents it at full; and then going towards the Sun, decreaseth every day, because she sheweth less and less of it, until at last she turneth no part of it towards us, but is quite unseen.

Moreover, it may be, that the Moon being round, one part of her may be bright, another dark, and as she turneth her Body about, may discover to us, alternately, more or less of each part.

It may also be, that being bright of itself, she may be obscured by an interposition of some

opacous Body coming under her, which is hemispherical and hollow, and, moved along with her, is continually rolled about her.

Neither doth any thing hinder, but that there may every day (according to what we formerly said,) be made a new Moon of a several form and figure; as in like manner the seasons of the Spring, Summer, Autumn, and Winter; and many things in them, come and go, are produced and perish, at set times.

In fine, it may be any way, wherein those things which appear to us may be applyed to explication of that manner, unless some man, being much in love with one singular way, shall vainly reject the rest, not considering what things it is possible for a man to know, and thereupon aims at the knowledge of those things which man cannot attain.

Moreover, they admire in the Moon, that there appear spots in her face; but *her face may appear so, either from the various and different nature of the parts of the Moon, or from the interposition of some body, not so much opacous as dusky; not rolling about her, but perpetually adhering to her, and not solid all over, but full of holes like a Racket.*

Or, it may be any other way of all those which are observed to be conformable to things apparent. This is the course to which we must adhere, concerning superiour things; for no man, if he contest against apparent things, can ever partake of true tranquillity.

C H A P. VI.

Of the Eclipses of the Stars, and their set Periods.

Or from the driving of wind up together within certain cloudy bottoms or windings, and setting it a fire whilst it is rolled up and down, and breaking thorough the bottoms which restrain them, and moving to that part towards which that impulsion carries them.

There are other wayes not fictitious, by which this may be done. But of celestial Meteors, enough.

C H A P. IX.

Of Clouds.

NExt these are the aerial Meteors, which are made nearer us in the Air. We shall begin with the Clouds; than which nothing is generated above in the Air, or seen more frequently.

Lucret.

A Cloud therefore may be generated and have its being, by some accumulation as it were of the Air, the Winds driving it, so as that a Cloud is nothing but a thickning of the Air. Again by implication of some Atoms cohering mutually to one another, and fit to produce such a compound; and this when they first come together into little Bodies of Clouds, and those are gathered together into greater bulks, so as at last they become greatest of all.

They most commonly seem to rise at the tops of Hills, for that the first little compounds are so subtle as that they escape the sight, and are carried on by the wind, until being by little and little condensed, they appear on the tops of the Hills which by reason thereof seem to smok.

If any shall doubt, From whence there can come so great a conflux of Atoms as is sufficient to make such great bulks of Clouds, let him consider, that if no other way, yet they may at least come from without, out of the immensity of the Universe, were there is an infinite multitude of them. And this because there is allowed to the principles a free passage in and out, thorough the vents of the World, as was formerly declared.

Moreover, a Cloud may be generated by the gathering together of effluxions and exhalations, out of the Earth and Water, and carried upwards. For, that there are many little Bodies drawn out of the whole Sea, appeareth by Garments which being hung upon the shore grow moist. Besides we see, that every where out of Rivers, arise mists and exhalations and vapours, in such abundance, as that being carried upwards they darken the Skye, and by little and little meeting together turn into Clouds.

Neither doth any thing hinder, but that these coagmentations may be made many other ways,

C H A P. X.

Of the Winds, and of Presters.

Lucret.

WInd may be generated, first, when the Atoms or little Bodies leap out of some convenient places and fly thorough the Air, there being a more vehement effusion made from some heaps which are proper for such kind of emissions; * When in a narrow Vacuum there are many little Bodies, there followeth Wind; and contrary, the Air is quiet and calm, when in a great Vacuum there are but a few little Bodies.

* Senecc. nat. quæst. 55.

Senecc. Ibid.

For, as in a market place or street, as long as the people are but few, they walk without any trouble; but when they run into some narrow place, they jostle and quarrel with one another; so in this space which encompasseth us, when many Bodies crowd into one little place, they must necessarily jostle one another, and be thrust forward, and driven back and entangled and squeezed; of which as made the wind, when they which contested yeeld and having been long

to's'd up and down uncertainly, shrink. But when a few Bodies stir up and down in a large space, they can neither drive nor be driven impetuously.

Again, Wind may be caused when the Air is driven on and agitated either by exhalations coming from the Earth and Water, or by the Sun's pressing upon it from above; for it is manifest, that where the Air is agitated and stirred, there is caused wind, so as wind seems to be nothing else but the waves of the Air. Whence we may conceive, that the wind somewhat resembles water troubled, and that the more violent winds come from being stirred by some more vehement cause, after the same manner as torrents rage and make waste, when there happens a vast defluxion of waters by great showers falling upon the Mountains.

Presters are windy whirlings (for the fiery, and those which burn, from which the name is taken, are a kind of Thunder.) They may be generated either from the depiection of a Cloud after various fashions towards inferior places, whilst it is carried down and driven on by abundance of wind, which rous itself about, and tears away the sides of the Clouds, the wind also driveth on the Cloud immediately from without, or from the wind standing round about, whereas the Air pressing upon it from above, and withal the Air which is driven on and diffused round about hindring by reason of its density, the great abundance of wind knoweth not which way it may spread itself, and being driven back, as well by the sides as from above, it necessarily thrusts the Cloud downwards.

When this Prester is thrust down upon the land, it causeth whirl-winds; when upon the Sea, whirl-pools. Whirl-winds are less frequently seen, because the mountains snatch them away before they come within our sight; whirl-pools more frequently, by reason of the wide smoothness of the Sea, into which we may behold a Cloud like a pillar descend from Heaven, and push it down, as it were with the force of an arm or fist, until the violence of the wind breaking thorough it, the Sea works and boils, and the ships incur a danger almost inevitable.

C H A P. XI.

Of Thunder.

IT was not without reason that I said, there are also fiery Presters, which are not different from Thunder. For, Thunder seems to be caused by the manifold conglomeration of blasts, swelling with fiery little Bodies, within the bulks of the Clouds; and by the evolution and strong enkindling of them, and breaking of the Clouds by the fire, which is so forcibly darted to inferiour places, according as that breaking forth is sometimes directed towards a high mountain, (which kind of places are oftentimes struck with Thunder,) sometimes towards other things.

For that the nature of Thunder is fiery is manifest, even because it often burneth the houses upon which it is darted, and for that it leaveth behind it a stench like brimstone. That it is generated within the Clouds, is evident for that it never Thunders when the sky is clear; but the Clouds first gather together all along the Air, and darken the sky, and there ariseth a foul night, as it were, of showers. Lastly, that many little Bodies or seeds, as it were, of fire, are contained within a Cloud may be argued, as well

well from the effect, as for that amongst the little Bodies of a Cloud rising up from beneath, are intermingled, not only watery, but fiery also, and of other sorts. Withal, it cannot be, but that the Cloud must receive many things from the beams of the Sun.

When therefore the blast or wind, which drove the Clouds together, hath intermingled itself with the seeds of fire, that are in the bosom, as it were, and cavity of the Clouds, there is caused a whirling or vortex within it, which being carried about very rapidly, groweth hot by motion; and either by intension of this heat, or the contagion of some other fire, breaketh out into perfect Thunder, and tearing the Cloud is darted forth. Now the Cloud is cleft and broken, by reason that the places round about the whirling or vortex are taken up, and stuffed thicker with the part of the Cloud; neither, by reason of their being squeezed up so close together, is there any chink open, whereby whilst it is spread with the wind may insinuate itself, and retire, by penetrating into it by degrees. Whereupon it is necessary, that the fire lately made, being dilated by the wind, breaks thorough the Cloud with violence, which makes the noise of Thunder; and coming forth, shineth and filleth all parts with a glittering light.

It may also be, that the force of the wind may light from within upon the Cloud, at such time as the Thunder is mature and perfect, and rending the Cloud, make way for the fiery vortex to break thorough.

It may also be, that the fiery vortex, though not set on fire when it breaks forth, may be kindled afterwards in its passage thorough the Air; after the same manner as a leaden slug passing thorough the Air grows hot, and takes fire. It may also be, that the fire is made in the very dashing against the thing which it hits, the seeds of fire being struck out of both, in the same manner as they are struck by a Flint out of Steel.

There are many other ways by which this fire may be kindled, or Thunder made, only let us cast away all fiction; and cast away it will be, if we take our conjecture of things unseen, from that which is conformable to things apparent.

Hence may be given the reason, Why it comes to pass, that it Thunders oftner in the Spring and Autumn, than in other seasons. In Winter, there wants the seeds of fire; in Summer, the blasts and heaps of Clouds; in the Spring and in Autumn, all things convenient are ready.

But how comes it to pass, that the motion of Thunder is so swift, and its stroke so violent? This proceeds from the great violence of the eruption, and the tenuity; by reason of which, nothing in the way resists them, and force, which is, as it were, doubled by gravity, and encreaseth by motion.

How comes it to penetrate thorough the walls of Houses, to melt metals in a moment, to draw out all the Wine out of full vessels? This proceeds from the tenuity, and quick motion, and violent force of the little Bodies, whereby it can in a moment dissipate and disperse those things, which the ordinary fire of the Sun cannot under a long time.

CHAP. XII.

Of Lightning and Thunder-claps.

Although I hinted by the way how Lightning and how Thunder are generated; yet nothing hinders, but that they may be generated many ways besides.

For Lightning may be made either by the rubbing or striking of the Clouds against one another, such a kind of figure issuing from them; or by such a disposition and conformation of Atoms heaped up together, as causeth fire, and generates lightning; after the same manner as we observe it to be done, when Iron and a Stone are hit against one another.

Or by the winds stirring up out of the Clouds those Bodies, or little Bodies, that is, Atoms, which cause this glittering brightness; for that the wind (and especially if it grow hot like a leaden slug,) strikes off the same little Bodies, which are struck by the mutual attrition of the Clouds.

Or by squeezing forth; there being made a compression either by the Clouds one with another, or by the winds driving them, which is caused over and above the force of collision.

Or by interception of the light which is diffused by the Stars, which thereupon is driven by the motion of the Clouds and winds, and collecteth out of the Clouds.

Or by the falling down of some most tenuous light out of the Clouds, whilst the Clouds are intrinsically gather'd together by the fire; and withal, Thunder is caused like a kind of bounce by their motion.

Or by the enkindling of a wind, which is caused, as well by a vehement intensification, as convolution of motion.

Or by a breaking of the Clouds by the winds, and falling down of fiery Atoms, which cause lightning to shine.

That lightning may be generated many other ways, he will easily perceive, who adheres to things apparent, and is able to understand what suits with them.

Thunder-claps may be made thus, Either by the rolling of a wind within the cavities of the Clouds, as in ordinary vessels, when something is rolled in them.

Or making a crack by the very distillation and ebullition, as it were, of the fire, within the same Clouds.

Or by the breaking and tearing of the same Clouds, as when a swollen bladder cracks, paper is torn, or a shroud rent.

Or by the same Clouds, rubbing and driving against one another, having acquired an icy kind of concretion, and this by reason of the winds driving them; as tall Woods crackle at the blowing of the East-wind, waves unbroken murmur, garments hung up, and papers carried away and beaten, as it were, by the winds, make a clattering noise.

Or by extinction of the fire of Thunder, breaking out of one Cloud, and lighting upon another which is waterish, whereupon it hisses like red-hot Iron, taken out of the fire, and cast into the water.

Or by the burning of some dry Cloud, which crackles like a branch in the fire.

‘In a word, that this also may be explained several ways, the things which appear evince and teach us, that we think not, with ignorant and superstitious persons, that the noise of Thunder denotes the appearance of some god, since other Bodies, being struck against one another, make a sound also, as Mill-Stones in grinding, or the hands clapped together.

Left any wonder how it comes to pass, that Lightning is seen before the Thunder is heard, this may happen, ‘either for that in some certain disposition of the Clouds, as soon as the Wind lights upon them, there leaps forth such a configuration of little Bodies, as causeth lightning; and thereupon the wind, by rolling up and down, maketh this sound.

‘Or for that they being both generated together, the lightning is brought to us with a quicker nimbleness; the Thunder cometh later, as happeneth in some things which are seen at distance and make a sound by blowes; for it is manifest, that the stroak is seen before the sound is heard.

C H A P. XIII.

Of Rain and Dew.

WE must now speak of watery concretions, wherof some continue fluid, others acquire some solidity by the impression of cold; those which continue fluid are Rain and Dew, whereof one is made, the Heaven being cloudy; the other, when it is clear.

Rain may be made of the Clouds, either when being thinner than ordinary, the wind driving them, or they pressing upon one another, are squeezed together, and knit into drops; or when being thicker than ordinary, they are rarified and changed by heat or by the wind? or, like Wax, melt so, that they fall down in drops.

That there are seeds of Water contained in the Clouds, is so well known, that we need not speak of it. They ascend together with Clouds, they encrease together with them, and are dispersed thorough them, as blood through the parts of our Body. Neither doth there ascend moisture into the Clouds from all Rivers only, but the Clouds also which hang over the Sea receive moisture, like a fleece of wool.

Wherefore Rain may flow from the Clouds, either when the force of the wind thrusteth the Clouds up together, and great store of showers being raised above them, presseth and thrusts them; or when the Clouds by the power of the winds are rarified, and suffer their moisture to flow abroad; or by the heat of the Sun are so dissolved, that they fall down in drops, and, as I said, like melting wax.

It may happen, that Rains sometimes last a long while, because it then happeneth, that many seeds of waters, rising up to several Clouds, and dispersed every way, may supply the Rain. Sometimes also the Earth reeking, exhales back again all the moisture which she receiveth.

Dew is made, either by the meeting together of the little Bodies in the Air, which are of

such a nature, as to be fit to generate this kind of moisture; or by the bringing forth of little Bodies, which chiefly generate Dew above, when they so meet together as to make that moisture, and flow down into the places beneath. Many things of this kind are done amongst us; especially in stoves.

C H A P. XIV.

Of Hail, Snow, and Frost.

OF watery Concretions, which by impression of cold are congealed into some solidity, there are two things which are made when the Heaven is Cloudy, Hail and Snow; one, when it is clear, Frost.

Hail is generated, either when the congelation is stronger by reason of the setting of a cold wind which is on every side, and presseth the drippings or drops of the Clouds, which otherwise would go away into Rain, or when the congealed bulk cleaveth asunder in many places, and by a moderate liquefaction, watery drops insinuating into the chinks by compression of the parts, and breaking the whole frame into pieces, they cause that the parts exist compacted severally by themselves, and make a heap of fragments, which are thereupon dispersed.

That these fragments be in a manner round, nothing hindreth, either, for that the outmost corners are cut off on every side, by reason of their long falling; or, for that in their very forming, something either watery or windy surrounds all the parts evenly, as we said, so that their surface is round, and not uneven.

Snow happeneth to be made either by thin water poured out of the Clouds, so that it froaths, (some Clouds fit for that purpose pressing, and the winds blowing them abroad,) and is afterwards congealed in the very Motion, by reason of some more vehement cold in the lower places of the Clouds.

Or by some smooth congealing, caused in the Clouds; unto which, whilst the little watery Bodies, compressed by, and neighbouring to, one another, arrive, there is caused an aggeneration of such looseness, as the flocks of Snow have, whereas, the same driving one another cause Hail, which two things chiefly are made in the Air.

It may also be, that a kind of ejaculation of the Snow, which falleth down in heaps, may be made, the Clouds, which were first congealed, breaking in asunder.

Lastly, Frost is made of the same little Bodies as Dew, whenas the little drops of Dew made either way, are by the cold temperament of the Air congealed, and in congealing, receive a light compactedness.

C H A P. XV.

Of the Rain-bow, and Halos.

WE must not here pass by two remarkable things, which appear in the Clouds or above; The Rain-bow, an Arch of various colours, over against the Sun; and Halos, which sometimes like a White Crown compasseth the Moon.

The Rain-bow is made either, for that the moist Air shineth by the opposite splendor of the Sun, or for that it is the particular nature of light, and of the Air, to present such kind of colours either all of them, or one only, from which (shining forward,) the neighbouring parts of the Air are so coloured; in like manner, as we observe to be done, when the parts of any thing, which is enlightned, make the parts of other things next to it shine also.

As to the roundness of its figure, this is caused by reason, that it is only convey'd to the beholders eye, from a distance every way equal; or, for that the Atoms, which are carried out of the Air into the Cloud, are so compelled, that every concretion made of them is formed into this roundness.

A Halos is made about the Moon, either by the carrying up of a somewhat gross or lightly-cloudy Air towards the Moon, whilst in the mean time, some effluxions derived from her do as it were sift it, (for they do not absolutely disperse it,) in such manner, that they are formed into a circle about her in this cloudy figure.

Or by the Air, compelled about the Moon, after such a manner, as to make this round and grosser figure about her; which some conceive to happen according to some of her parts, or by some effluxion driving together from without, or, by insinuation of heat from beneath, fit to effect this.

C H A P. XVI.

Of Avernall places.

IT rests, that we speak some things of Avernall places, so termed, for that they are pernicious to Birds; for when Birds attempt to flye over them, they instantly fall down and dye: As also concerning the causes of Pestilence, as far as they depend on the Air.

I must here only repeat, that the Earth containeth all kinds of little Bodies so diversly figured that some are suitable to the natures of Animals, others hurtful; and by reason that the contextures of Animals are so unlike to one another, some of these are convenient and wholesome to some Animals, which to others are inconvenient and pernicious. And why not? when the contexture and temper of the same person being changed by a Feaver, the same wine, which before did him much good, is now as deadly to him as to be stabb'd to the heart.

It is manifest, that many things unpleasant, troublesome, and pernicious ordinarily come into the taste, the smell, the touch, and all the senses, not to mention some Trees which either

cause a heaviness to those who sleep in their shade or by an ill scent kill them; nor strong Wine, or the fume of coles and the like. How many places are there, which exhale strong and hurtful scents of Brimstone and sulphur? They who dig in Mines, who look so whan, and dye so soon, how many noisome vapours do they find to breath out of the inmost parts of the Earth?

Thus there are some places out of which these vapours breathe, which being carried up into the Air, diffused round over it, in some manner poison it, and infect it with a deadly quality; so as that, when Birds come to pass over it, *Veluti si Mulier mensium tempore Castoreum olfaciat*, they become stupefy'd, and immediately fall down dead.

It may also be, that the Air which lies between the Birds and the Earth, being cleft asunder by the force of a vapour breaking forth, and the place becoming almost Vacuous; the Birds may not have a support, upon which to rest their spreading wings, and continue their flight, so that they sink and fall, over-burthen'd by the weight of their own Body. Thus much for Avernall places.

C H A P. XVII.

Of Pestilence.

THough Pestilence, or a mortal affection of the Air may come from above, like a Cloud or dew, yet it is most commonly caused, when the Earth is putrify'd by unseasonable rains and heats, and such a vapour ariseth out of it, as infects the Air, and killeth far and neer, not only men but other living Creatures.

That the Air easily entertains the affection (or quality,) of the vapour breathed immediately out of the Earth into it, is manifest, from the diseases that are particular to Countries, as here with us, the Gout is frequent; among the *Acheans*, soreness of Eyes; among the *Egyptians*, the Leprosie; As also for that Travellers find it by experience, acknowledging that the Air in several places is very different.

That this affection is sometimes propagated by the Air, the nature of the Pestilence declareth, as That especially, which, in the memory of our Ancestors beginning in *Aethiopia*, ran on into *Libia* and *Egypt*, and almost over all the Dominions of the King of *Persia*, so as it came into our City and Country also, and quite laid it waste.

This propagation is made, when the poisonous vapour intermingling its little Bodies with the Air, doth so disorder, and pervert the situation of the little Bodies thereof, that whatsoever of them are like its own, it formeth into the same contexture: As when fire insinuating with its little Bodies into wood, so altereth its composition, that it striketh forth all the fiery little Bodies that are in it; and, out of it, maketh a new fire like to itself. Moreover, as fire running along in its swift motion, is able to spread it self thorough a whole Wood; so this Pestilent affection, by reason of the little Bodies, of which it consists, creepeth forward by Degrees, and changeth the Air a great way, until it be repress'd by an affection quite different, in like manner, as when

a Cloud or mist creeps thorough the Air, and by little and little, changeth and disturbeth it all along as it goeth.

Not to mention, that when men by breathing, draw the Air into their Bodies, they suck in at the same time, the little Bodies of this affection; wherewith, those which are like them in the Body are transposed, and perverted in the same manner, as we said of the Air; and by contagious afflation, they are transmitted on to others, which cause the same perversion, whereby the disease spreads every where.

Thus much concerning not Meteorology only, but all Physiology: Of which the few things that we have said are such, as that by contemplating them, we may thoroughly understand the things that are done, whereby the things that are of affinity with them, may be comprehended; and the causes of particular effects in Nature, known. For they, who pursue not these with all possible diligence, are far from understanding

them, as they ought, and from obtaining the end, for which those are to be understood.

And never must we cast out of Mind the Criteries, (nor the evidence that belongs to every one of them,) because, if we forsake not these, we shall with right reason find out from whence perturbation ariseth, and what it is that causeth fear, and shall quit ourselves from it, understanding the cause of superiour things, and of all others which ordinarily happen, and strike great fear into others.

But, presupposing the Criteries, it avails most to apply ourselves to speculation of the Principles, of which all things consist, and of the infinity of Nature, and other things coherent with these, and with constant remembrance to preserve the chiefest and most general Maxims concerning them. For by this means, we shall be farthest off from Fables, and obtain that undisturbed state of mind, which is the true and only mark, at which, in all this discourse, we have aimed.

T H E

The Third Part

OF

PHILOSOPHY.

ETHICK, or MORALS.

IT resteth that we speak of *Ethick*, or the Philosophy of *Manners*; neither is it without cause that we said at first, that this is to be esteemed the principal Part of Philosophy, because that which is of Nature would be useless, unless it conferr'd to the End of Life with an Ethical Consideration, Even Prudence itself, which belongs to this Part, therefore excels Natural Philosophy, because it rules it, and useth it as a means to Moral Philosophy.

In saying this Part concerns the *End of Life*, I shew why it is commonly called the Philosophy concerning *Life and Manners*, or concerning the Institution of the Actions of Life, (for *Manners* are no other than the customary Actions of Human Life;) likewise concerning the *End*, that is, the extremum or greatest of the Goods which we pursue; and concerning things eligible and avoidable, inasmuch as it prescribeth the election of such things as conduce to that End, and the avoidance of such as divert from it.

For the *End of Life*, by the tacit Consent of all Men, is *Felicity*; and since almost all miss of that End, must it not happen either, for that they propose not to themselves that *Felicity* which they ought, or for that they use not the right means to attain it?

When we behold so many, who, abounding in all things necessary to the use of Life, (swimming in Wealth, adorn'd with Titles, flourishing in a hopeful Issue; in Fine, possess'd of all things commonly esteemed desirable,) are notwithstanding anxious and querulous, full of cares and solitudes, distracted with terrors, in a word, leading a miserable life; thence we may infer, that they know not wherein true *Felicity* consists, and by what means it may be attained: Their Hearts resembling a Vessel, which either being leaky and full of holes, can never be filled; or being tainted with ill liquor, corrupts and spoils whatsoever it receives.

It is therefore worth our pains, by the benefit of this Philosophy, (which treats of the *End* and of *Felicity*;) to cleanse and mend our heart, that it may be satisfi'd with a little, and be pleased in the enjoying of any thing, we must Philosophize: not for shew, but seriously; for it is requisite, not that we seem sound, but that we be sound: We must Philosophize forthwith, and not defer it to the morrow; for even to day it concerns us to live happily, and it is a mischief of Folly that

it always begins to live, or defers to begin, but in the mean time liveth never.

A strange thing, it is! *We have been born once, we cannot be born twice, and Age must have an End; Yet thou, O Man, though the Morrow be not in thy power, in confidence of living to Morrow, put'st thyself off to the future, and losest the present: So mens lives waste with delay, and hence it is that some of us die in the midst of business: Every man leaves the World as if he had but newly entered it; and therefore old men are upbraided with Infancy, because, as if employed in business that concerns them not, they do not take notice that they live, and so their whole life passeth away without the benefit of life.* Plut. adv. Col. Stob. ferm. 16.

Let us therefore endeavor so to live, that we may not repent of the time past; and so enjoy the present, as if the morrow nothing concerned us. He most sweetly attains the morrow, who least needs or desires the morrow; and that hour overtakes a man most welcom, whereof he had framed to himself the least hope. And since it is troublesome always to begin life, let life be always to us as it were perfect and absolute, and as if there wanted nothing to its measure. *The life of a Fool is unpleasant, it is timorous, it is wholly carried on to the future; let us endeavor that ours be pleasant, secure, not only present, but even now settled in safety.* Senec. Ep. 23.

Doubtless the way to flee Folly, is to ascend that Watch-tower (as it were) of wise men, from whence we may behold the rest wandring, and, in life, vainly seeking life. If you think it pleasant, from Land to behold Mariners striving with Storms; or, without endangering yourself, see Armies joining Battel; certainly nothing can be more delightful, than from the calm Throne of Wisdom, to view the Tumults and Contentions of Fools. Not that it is pleasant that others be afflicted, but it pleaseth that we are not involved in the same evils.

But that we may in some measure, to our ability, help those who desire to attain this height of Wisdom, we will collect our meditations upon these things, treating first of *Felicity*, which is man's greatest good, and then of those things which conduce to the making and preserving it, which are nothing else but the *Virtues* themselves.

C H A P. I.

Of Felicity, or the End of Good, as far as Man is capable of it.

OF Felicity we must first take notice, it is termed the *End*, that is, the last, the extreme and greatest of Goods; because since those things are called Good which allure the Appetite to pursue them, and of these Goods some are desired for themselves, some for other things, Felicity is such a Good as all Goods ought to be referred unto, itself to none.

And though Felicity, or *Beatitude*, and *Happy Life* be the same thing, yet that doth not hinder us, but that we sometimes mention the End of Happy Life, which we do, according to the Vulgar Phrase, taking the End of Happy Life, and Happy Life, for the same thing; but not implying any further End, to which Happy Life, may be thought to be referred.

This premised, we must first distinguish Felicity into two kinds; one Supreme, incapable of Intension and Remission; the other Subalternate, in which there may be Addition and Detraction of Pleasure.

The first is conceived to be a state, than which none can be imagined, better, sweeter, more desirable, in which there is no Ill to be feared, no Good wanting: There is nothing that would and may not be done; and which is so sure, that it can at no time be lost.

By the other we understand a state, in which it is as well as may be, or in which there are very many necessary Goods, very few Ills, and in which it is permitted to lead a Life so sweetly, so quietly, and constantly, as the Company, Course of Life, Constitution of Body, Age, and other Circumstances will allow.

Nor without Reason is it I make this Distinction and Definition. For, though it seem manifest, that the first kind is proper only to Good; yet there are, who, having a high opinion of themselves, and of their own Wisdom, dare promise and arrogate it to themselves, and therefore affirm, that they are equal to God; and modest amongst them are they, who repute themselves inferior to none but *Jupiter*.

But these truly seem forgetful of their own Mortality and Weakness, whenas all, who are conscious thereof, cannot but acknowledge, that Men are capable only of the later, and that Wisdom doth much, if, all Men being in some manner miserable, it place thee in a state, wherein thou shalt be the least miserable of all Men. Or, if among the several degrees of miseries, to which thou art obnoxious by Birth, it place thee in that wherein thou shalt be least miserable. For that is to be happy, to be free from those Ills wherewith thou mightest be afflicted; and in the mean time to enjoy such Goods, than which, greater cannot be had in the condition wherein thou art.

This indeed is the Reason, why I conceive a Man, though deprived of Sight and Hearing, may nevertheless partake of Happy Life, because he will yet persevere in as many Goods as he can, and be free from those Ills, if not of Body, at least of Mind, which otherwise might have afflicted him.

I further declare, that a wise Man, though he should be cruelly tormented, will yet be happy, by Felicity not Divine but Human; which in a wise Man is always as great as can be for the condition of the time.

For in Torments he feels the Pain indeed, sometimes groans and cries out; but because there is a necessity of suffering them, he exasperates not or makes them greater, by Impatience or Despair, but rather, with as great constancy of Mind as is possible, mitigates and renders them somewhat more easie. Herein certainly he is more happy than if he sunk under them, like those, who, being under the same Torment, bear them not with equal Courage and Constancy, nor have the like assistance from Wisdom (which confers at least innocence of Life, and security of Conscience,) to lighten them.

Therefore neither is there any Reason to cavil, that the Bull of *Phalaris*, and a Bed of Roses, are all one to us; and the wise Man, burning in that Bull, must cry out, *How pleasant is this! How unconcern'd am I! How little care I!* Since there are some things, which a wise Man had rather should happen to him, as rest of Body, free from all Disturbance, and leisure of Mind, rejoicing in contemplation of its own good. There are other things, which though he would not have them, yet when they do come, he bears them constantly, even commends and approves them, inasmuch as they give him occasion to please himself in his own constancy, and to say, *I burn, but yield not.* Why may it not be wished, not indeed to be burnt, but to be vanished?

This I say, in regard a wise Man is obnoxious both to the Pains of Sickness, and the Tortures of Tyrants, although he neither invites those, nor provokes these, so far as decently he may. Besides, the times are not such always to all Men, as that they may by Indolence live happy.

C H A P. II.

That Pleasure, without which there is no Notion of Felicity, is in its own Nature Good.

SEeing that to live without Pain is sweet or pleasant, and to enjoy good things, and be recreated by them; it follows that Felicity cannot consist without both, or at least one of these; (by Pleasure, Suavity, Jucundity, and the like terms, I understand the same thing:) Yet some there are, who, with great flourish, have so discoursed against Pleasure itself, as if it were something ill in its own Nature, and consequently not appertaining to Wisdom and Felicity.

Therefore, before we enquire whether Felicity really consists in Pleasure, we must shew, that Pleasure is in its own Nature good, as its contrary, Pain, is in its own Nature ill.

Certainly since that is good which delighteth, pleaseth, is amiable, and allures the Appetite; that, consequently, ill which harmeth, is unpleasant and therefore excites Hate and Aversion: That is nothing pleaseth more than Pleasure, delighteth more, is lov'd more, is desired more; as on the contrary, nothing incommodes more than Pain, displeaseth, is abhorred, and shunned.

So as Pleasure seems not only to be a good, but the very essence of good, it being that by which any thing is good or desirable: Pain not only an ill, but the very essence of ill, as being that by which any thing is ill or hateful.

For though we sometimes shun Pleasure, yet it is not the Pleasure itself which we shun, but some Pain annexed accidentally to it; as, if at any time we pursue Pain, it is not the Pain itself that we pursue, but some Pleasure accidentally joined to it.

For, (to express this more plainly,) no man flights, hates, or shuns Pleasure as Pleasure, but because great Pains overtake those who know not how to follow Pleasure with reason. Nor is there any who loves, pursues, would incur Pain simply as Pain, but because sometimes it so happens, as that with Labour and Pain he must pursue some great Pleasure.

For to instance in the least things; Who amongst us undertakes any laborious exercise of Body, unless that some Commodity arise by it? Who can justly blame him, who desires to be in that Pleasure which hath no Trouble? Or him, who shuns that Pain which procures no Pleasure? But we accuse and esteem those worthy of Contempt, who, blinded and corrupted with the blandishments of present Pleasures, foresee not the Troubles that must ensue. Alike faulty are they, who desert their Duties out of softness of Mind, that is, the avoidance of Labour and Pains.

Of these things, the Distinction is easie and ready. For at a free time, when our Election is at liberty, and nothing hinders, but that we may do what pleaseth us most, all Pleasure is to be embraced, all Pain to be expelled. But at some times it often falleth out, that Pleasures are to be rejected, and Troubles not to be declined.

Thus, although we esteem all Pleasures a good, and all Pain an ill, yet we affirm not, that we ought at all times to pursue that, or to avoid this; but that we ought to have regard as to their quantity, so also to their quality; since it is better for us to undergo some Pains, that we may thereby enjoy the more abundant Pleasures; and it is expedient to abstain from some Pleasures, lest they prove the occasion of our incurring more grievous Pains.

Hercupon this was, as it were, the Fountain, from which, in treating of Criteries, we deduced several Canons concerning Affection or Passion, esteeming Pleasure or Pain the Criterie of Election and Avoidance. And not without reason, forasmuch as we ought to judge of all these things, by the commensuration and choice of things profiting or hurting, since we sometimes use a good as an ill; and, on the contrary, sometimes an ill as a good.

Hence therefore, to press this further, I say, that no Pleasure is ill in itself, but some things there are which procure some pleasures, but withal bring Pains far greater than the Pleasures themselves. Whereupon I add, that if every Pleasure might be so reduced within itself, as that it neither should comprise within it, nor leave behind it any Pain; every Pleasure, by this reduction, would be no less perfect and absolute than the principal works of Nature, and conse-

quently there would be no difference amongst Pleasures, but all would be expetible alike.

Moreover, if those very things which afford Pleasure to luxurious Persons, could free them from the fear of Meteors, and of Death, and Pain, and could instruct them what are the bounds of desires, I could not find any fault, forasmuch as they would be every way replete with Pleasures, and have nothing grievous or painful that is ill.

C H A P. III.

That Felicity consists generally in Pleasure.

NOW to come to what was proposed, Felicity seems plainly to consist in Pleasure. This is first to be proved in general, then we must shew, in what Pleasure particularly it consists.

In general, Pleasure seems to be, as the Beginning, so the End also of Happy Life, since we find it to be the first good, and convenient to our, and to all animal, Nature; and is that from which we begin all election and avoidance, and in which at last we terminate them, using this affection as a Rule to judge every Good.

That Pleasure is the first and connatural good, or (as they term it,) the first thing suitable and convenient to Nature, appeareth; for that *every Animal, as soon as born, desireth pleasure, and Cic. de fin. rejoiceth in it, as the chief good; shunneth pain as its greatest ill, and to its utmost ability, repels it.* We see that * even Hercules himself, tormented * *Lact.* by a poisonous Shirt, could not withhold from tears;

Crying and howling whilst the Locrian Stones,
And high Eubæan Hills, retort his Groans.

Thus doth every undepraved Animal, its own Cic. ibid. nature judging incorruptly and entirely.

There needs not therefore any reasoning to prove, that Pleasure is to be desired, Pain to be shunned; for this is manifest to our Sense, as that Fire is hot, Snow white, Honey sweet. We need no Arguments ibid. to prove this, it is enough that we give Notice of it. For since that if we take away from Man all his Senses, there is nothing remaining, it is necessary that what is convenient or contrary to Nature, be judged by Nature herself, and that Pleasure be expetible in itself, and Pain in itself to be avoided: For what perceives, or what judgeth, either to pursue or avoid any thing, except Pleasure and Pain?

That Pleasure, as being the first thing convenient to Nature, is also the last of Expetibles, or the end of good things, may be understood even from this, Because it is Pleasure only for whose sake we so desire the rest, that itself is not desired for the sake of any other, but only for itself; for we may desire other things to delight or please ourselves, but no man ever demanded a Reason, why we would be delighted and pleased? Certainly no more, than for what cause we desire to be happy; since Pleasure and Felicity ought to be reputed, not only in the same degree, but to be the very same thing, and, consequently, the end, or ultimate and greatest good, on which the rest depend, but itself depends on none.

This

This is further proved, for that *Felicity* is, as we hinted formerly, no otherwise, than because it is that state, in which we may live most sweetly and most pleasantly, that is, with the greatest pleasure that may be. For, take from life this sweetness, jucundity, pleasure; and where, I pray, will be your Notion of *Felicity*, not of that *Felicity* only which I termed Divine, but even of the other, esteemed Human; which is no otherwise capable to receive degrees of more and less, or intension and remission, than because addition or detraction of pleasure may befall it.

To understand this better, by comparing Pleasure with Pain, let us suppose a man enjoying many great incessant pleasures, both in mind and body, no Pain hindring them, nor likely to disturb them; What state, can we say, is more excellent, or more desirable than this? For in him who is thus affected, there must necessarily be a constancy of mind, fearing neither death nor pain, because death is void of sense; pain, if long, itself to be light; if great, short, so as the shortness makes amends for its greatness, the lightness for its length. When he arrives at such a condition, as he trembles not with horror of the Deity, nor suffers the present pleasures to pass away, whilst his mind is busied with the remembrance of past, or expectation of future, good things, but is daily joyed with the reflecting upon them? What can be added to better the condition of this person?

Suppose, on the other side, a man afflicted with as great pains of body, and griefs of mind, as man's nature is capable of, no hope that they shall ever be eased, no pleasure past, present, or expected; What can be said or imagined more miserable than he?

If therefore a life full of pains be of all things most to be avoided, doubtless the greatest ill is to live in pain; whence it followeth, that the greatest good is to live in pleasure. Neither indeed hath our mind any thing else, wherein, as its Centre, it may rest; all sicknesses and troubles are reduced to pain, nor is there any thing else which can remove Nature out of her place, or dissolve her.

CHAP. IV.

That the Pleasure, wherein consists Felicity, is Indolence of Body, and Tranquillity of Mind.

There being (as before is intimated,) two kinds of Pleasures; one in station or rest, which is a placability, calmness, and vacuity, or immunity from trouble and grief; the other in motion, which consists in a sweet movement, as in gladness, mirth, and whatsoever moveth the Sense delightfully, with a kind of sweetness and titillation, as to eat and drink out of hunger and thirst: It may be demanded, Whether in both, or in either, and in which, consist Felicity?

We say, that Pleasure, wherein Felicity consists, is of the first kind, the stable, or that which is in station; and so can be no other than Indolence of Body, and Tranquillity of Mind.

When therefore we say in general terms, Pleasure is the end of happy Life, we are far from meaning the pleasures of luxurious persons, or of others, as considered in the motion or act of fruition, by which the Sense is pleasantly and sweetly affected; as some, either through ignorance, dissent, or ill will, interpret. We mean no more but this, (to repeat it once more,) *Not pained in Body, nor troubled in Mind.*

For it is not perpetual Feasting, and Drinking; not the Conversation of beautiful Women; not Rarities of Fish, nor any other Dainties of a profuse Table, that make a happy Life; but Reason, with Sobriety, and a serene Mind, searching the causes, why this Object is to be preferred, that to be rejected; and expelling Opinions, which occasion much trouble to the mind.

The better to understand why this Pleasure only is the End, we may observe, that Nature tends to no other Pleasure primarily, as to her end, but to the stable, which followeth upon removal of pain and trouble. The Moveable she proposes not as the end, but provides only as a means conducing to the stable, to sweeten (as it were) that operation of hers which is requisite to the extirpation of pain and trouble. For Example, Hunger and Thirst being things troublesome and incommodious to an Animal, the primary end of Nature is to constitute the Animal in such a state, as that it may be free from that trouble and inconvenience; and because this cannot be done but by eating and drinking, she therefore seasons with a sweet relish the action of eating and drinking, that the Animal may apply himself more readily thereto.

Most Men, indeed, live preposterously; transported inconsiderately and intemperately, they propose for their end the pleasure which consists in motion; But Wisdom summon'd to our relief reduceth all pleasures into decent order, and teacheth that pleasure is to be proposed as the end; but that which is the end according to Nature, is no other than that which we have spoken of. For while Nature is our Guide, whatsoever we do tends to this, that we neither be pained in Body, nor troubled in Mind; And as soon as we have attained this, all disturbances of the Mind are quieted, and there is nothing beyond it, that we can aim at to compleat the good both of our Soul and Body. For we then want pleasure when its absence excites pain in us: But as long as we are not pained, we want not pleasure.

Hence comes it, that a motion of pain, or the state which follows upon that one word is the furthest bound or height of pleasures; for, wherever pleasure is, as long as it is there, there is nothing painful or grievous, or both together. Hence also it comes, that the highest pleasure terminated in privation of pain may be varied and distinguished, but not increased and amplified: For Nature, until she hath quite taken away the pain, increaseth the pleasure; but when the pain is quite removed, she permits not the pleasure to increase in greatness, but only admits some Varieties which are not necessary, as not conducing to our not being pained.

Moreover, hence it appears, that they insult without cause, who accuse us, that we mean not by want of pain, some middle thing betwixt pain and

and pleasure, but so confound it with the other part (in the division,) as to make it not only a pleasure, but the very highest of pleasures. For, because when we are delivered out of Pain, we rejoice at that very freedom and exemption from all trouble, but every thing whereat we rejoice is pleasure, as every thing whereat we are offended, pain; the privation of all pain is rightly named pleasure. For, when hunger and thirst are expelled by eating and drinking, the very detraction of the trouble brings pleasure; so in every thing else, the removal of pain causeth succession of pleasure.

Hence also may be shewn the difference, when they object, that there is no reason why this Middle state should rather be esteemed a pleasure than a pain. For discontent ensues not immediately upon detraction of pleasure, unless some pain chance to succeed in the room of the pleasure: But on the contrary, we rejoice at the loss of pain, though none of those pleasures which move the sense succeed. By this we may understand, how great a pleasure it is, not to be pained; which if any doubt, let them ask those who are oppressed with sharp sicknesses.

Some laugh hereat; they object, that this pleasure is like the condition of one that sleeps, and accuse us of sloth, never considering that this constitution of ours is not mere stupidity, but rather a state wherein all actions of life are performed pleasantly and sweetly. For, as we should not have the life of a wise man to be like a torrent or rapid stream, so we would not it should be like a standing dead-pool: But rather like a river gliding on silently and quietly. We therefore hold his pleasure is not unactive, but that which reason makes firm to him.

But to omit these, and return to our Subject, there are two good things of which our chiefest Felicity consists; That the mind be free from trouble, the body from pain; and so as that these goods be so full, and all trouble taken away, that they admit not increase. For how can that increase, which is full? If the Body be free from all pain, what can be added to this indolence? If the mind from perturbation, what can be added to this tranquility? As the serenity of Heaven being refin'd to the sincerest splendor, admits no greater splendor; so the state of a man who takes care of his Body and Soul, and connects his good out of both, is perfect, and he hath attained the end of his desires, if his Body be neither subject to pain, nor his mind to disturbance. If any external blandishments happen, they increase not the chief good, but, as I may say, season and sweeten it; for that absolute good of human nature is contained in the peace of the Soul and the Body.

CHAP. V.

Of the means to procure this Felicity; and of Virtues, the chief.

NOW seeing this peace of Body and mind, tranquillity in one, indolency in the other, is the compleat felicity of man; nothing more concerns us than to consider what things will procure and preserve it; for when we have it,

we want nothing, while we want it, all we do is to obtain it, and yet (as we said,) for the most part we fail of it.

First, therefore, we must consider of Felicity no otherwise than as of Health; it being manifest, that the state, in which the mind is free from perturbation, the Body from pain, is no other than the perfect health of the whole man. Whence it comes, that as in the Body, so in the Mind also, those things which produce and conserve health are the same with those which either prevent diseases, or cure and expel them.

Now seeing that to provide against the diseases of the Body belongs to the art of Medicine, as well for the prevention as cure of them, we shall not need to say much hereupon, but only give two cautions which may be sufficient.

One, that for the driving away all diseases, or at least making them lighter and easier to be cured, we use Temperance and a sober continent life.

The other, that when there is a necessity of our suffering them, we betake our selves to fortitude, and undergo them with a constant mind, not exasperating them by impatience, but comforting our selves with considering, that, if great, they must be short; if long, light.

Against the diseases of the Mind, Philosophy provides, when we justly esteem it the medicine of the mind: But it is not with equal facility consulted, nor applyed, by those who are sick in Mind. For we judge of the diseases of the Body by the Mind; but the diseases of the Mind, we neither feel in the Body, nor know or judge as we ought by the Mind, because that whereby we should judge is demented. Whence we may understand, that the diseases of the Mind are more pernicious than those of the Body; as amongst those of the Body, the worst and most dangerous are such as make the patient insensible of them; as the Apoplexy, or a violent Fever.

Moreover, that the diseases of the Mind are worse than those of the Body, is evident from the same reason which demonstrates that the pleasures of the Mind are better than those of the Body; viz. because in the Body we feel nothing but what is present, but in the Mind we are sensible also of the past and future. For, as the anxiety of the Mind which ariseth from pain of the Body, may be highly aggravated, if we conceit, (for instance,) that some eternal and infinite Evil is ready to fall on us; so (to transfer the instance,) pleasure is the greater, if we fear no such thing; it being manifest, that the greatest pleasure or trouble of mind doth more conduce to a miserable or happy life, than either of the other two, though they should be equally lasting in the Body.

Now forasmuch as there are two principal diseases of the mind, *Desire*, and *Fear*, with their several off-springs, and accompany'd with discontent and trouble, in the same manner as pain is joyned to the diseases of the Body; it is therefore the office of Philosophy to apply such remedies as may prevent them from invading the Mind, or, if they have invaded it, expel them. Such briefly, are the vain desires of health, of honours, fear of the gods, of death, and the like, which having but once taken possession of the Mind they leave no part thereof sound.

The remedies which Philosophy applyeth, are the *Virtues*, which, being deriv'd from reason, or the more general prudence, easily drive away and expel the affections. I say, from Reason, or the more general prudence; because, as there is a more particular prudence, serving for the directions of all the particular actions of our life; so is there a more general prudence, which is no other than reason itself, or the dictate of reason, and is by most esteemed the same with wisdom; whereas, *Virtue* is only a perfect disposition of the mind, which reason or prudence doth create and oppose to the diseases of the mind, the *Vices*.

CHAP. VI.

Of Right-reason, and Free will, from which the Virtues have all their praise.

BEing therefore to proceed in our discourse to *Virtue* and its several kinds, we must premise something concerning Reason itself, and likewise concerning the Free-will which is in it; for thence is derived all the praise belonging to *Virtue*; as also its opposite, the reproach due to *Vice*.

Forasmuch as Reason generally is nothing but the faculty of ratiocinating, or judging and inferring one thing from another, we here take it particularly for that which judgeth, inferreth, and ratiocinates in things of action, subject to election or avoidance.

But whereas, judgment or reasoning may be either right or wrong, that reason, whose judgment is false, is not properly reason, and therefore we term it *opinion*; yet in respect it is the common phrase, you may call it also reason if you please, meaning *wrong reason*; as right reason may be termed *Opinion*, meaning *sound Opinion*.

Right reason ariseth either from ingenuity, or experience, and sedulous observation. Being grounded upon firm and correct principles, our ratiocination becomes solid; and justly do we appeal to the judgment of him, who is expert and knowing in things. But of this already in the Canonick part, concerning the Criteries, which need not repetition.

When, I say, things subject to election and avoidance; I take for granted that there is in us a free or arbitrary power or reason, that is, a faculty elective and prolecuive of that which reason hath judged good, and of avoiding and shunning what it hath judged ill.

That it really is in us, is proved even by experience, and by common sense, which manifests, that nothing is worthy of praise or dispraise, but what is done freely, voluntarily, deliberately, and by election; and therefore must depend on something within us which is beyond compulsion, and in respect whereunto, all rewards and punishments are rightly ordained by the Laws: Than which nothing were more unjust, if the actions of men were to be imputed to that rigid Necessity, which some assert, derived from Fate, as the sole commanders of all things, declaring, that whatsoever comes to pass floweth from an eternal truth, and continuation of causes.

Truly it is much better to be addicted to the fabulous (that is, the common,) opinion of the gods, than to be slaves to the belief of Fate, according as some Naturalists hold it, imposing it upon our necks as an everlasting Lord or Tyrant, whom we are to stand in awe of, night and day. For the other opinion hath some comfort in it, that the gods will be moved with our prayers; but this, imports an inexorable necessity.

True indeed it is, that, in things void of reason, some effects are necessary, (yet not necessary, but that they might have been prevented, as we declared in the Canonick; and where we treated of causes,) but, in Man, endu'd with reason, and as far as he makes use of that reason, there can be no Necessity. Hence it was, we endeavoured to assert the declination of motions in Atoms, that we might from thence deduce, how Fortune might sometimes intervene, and put in for a share amongst human affairs, yet, that which is in us, our Will not be destroy'd.

It behoves us to employ all our wit and endeavours to maintain our own free-will against that sempiternal motion, and not to suffer wickedness to escape unculpable.

But what I say of fortune, implies not that we ascribe any divinity to it, not only as the vulgar, but even as those Philosophers, who esteeming her an unstable Cause, though they conceive not that she bestows on men any thing of good or ill that may conduce to happy life, yet think that she gives occasion of very considerable goods and ills. We imply not this, I say, but only mean, that, as many things are affected by necessity and counsel, so also by Fortune; and therefore, it is the duty of a wise man to arm himself against Fortune.

Now seeing, whatever good or ill there is in human actions, depends only upon this, that a man doth it knowingly, and willingly, or freely; therefore the mind must be accustomed to know truly, that is, to use right reason; and to will truly, that is, to bend the free will to that which is truly good, from that which is truly ill. Forasmuch, as this accustoming begets that disposition in the mind, which we described to be *Virtue*; as the accustoming of it to the contrary, begets that disposition which we may justly define *Vice*.

Not to mention, that what produceth pleasure, sincere without any pain, trouble or repentance attending or ensuing thereupon, is truly good; that which produceth pain, sincere without any pleasure, or joy succeeding upon it, is truly ill; I only give this hint of both to distinguish each of them from what is only apparent and dissembled: Such as that good which begets present pleasure, and afterwards introduceth pain and trouble; and that ill which procures pain or trouble, but afterwards pleasure and cheerfulness.

C H A P. VII.

Of the Virtues in General.

FOrasmuch as all *Virtue* is either *Prudence*, or the Dictate of *Right Reason*, as we accustom ourselves to it, or is directed by, and dependent on *Prudence*, and the Dictate of *Right Reason*; it is manifest, that to this later kind belongs, as well, that whereby a man is affected toward himself, as that, whereby he is affected towards another: For by *Prudence*, a Man is made capable to govern not only himself, but others.

The *Virtue* which relates to others, is generally called *Justice*; that which concerns ourself, is ordinarily distinguished into *Temperance*, and *Fortitude*. But we use to comprize both under the term *Honesty*, as when we say, to act *Virtuously*, is no other than to act *Prudently*, *Honestly*, *Justly*; they who live *Soberly* and *Continently*, are said to live *Honestly* or *Decently*; they who do *Valiantly*, are thought to behave themselves *Honestly* or *Decently*.

Hereupon we (as others,) distinguish *Virtue* into four kinds. *Prudence*, *Temperance*, *Fortitude*, and *Justice*; but so, as that we oppose not *Prudence* to any affection so much as to *Incontinence*, *Ignorance*, *Folly*, (except by accident, inasmuch as perturbation blinds Reason, and causeth a Man to act imprudently;) nor *Justice*, to any affection in so much as to *Malice*, whereby a Man is prone to Deceits, (unless by accident, in as much as anger, hatred, covetousness, or some other passion may cause a Man to do unjustly; *Temperance*, we oppose to *Desire*; *Fortitude*, to *Fear*.

Hence is manifest, when I formerly said, A sober or well ordered Reason procures a pleasant or happy Life; we are to understand, that it procures it by means of the *Virtues* which it ingenerates and preserves. And whereas I added, that it searched out the Causes, why things are to be embraced or avoided, and chaseth away Opinions which occasion great trouble in the mind, we are to understand that is all one with general *prudence*, the principle of all things experient and avoidable, and consequently the greatest, because the *Virtues* which arise from it appease Perturbations, teaching, that we cannot live pleasantly, unless prudently, honestly, and justly; nor prudently, honestly, and justly, unless pleasantly.

By this you find why I conceive, that the *Virtues* are connatural to a happy life, and that it is impossible to separate happy life from them. All other things, as being frail and mortal, are transitory, separable from true and constant pleasure; only *Virtue*, as being a perpetual and immortal good, is inseparable from it.

By this also you may understand, that all the *Virtues* are connected within one another, and that by one; because to the principal, *Prudence*, all the rest are conjoined, as the Members to the Head, or as Rivers to the Spring from which they flow; the other, because as well *Prudence*, as all the rest cohere with happy life, there cannot be a happy life where the *Virtues* are not; neither can the *Virtues* be there, where the life is not happy.

Notwithstanding that the *Virtues* are all connected within one another, yet are they not therefore all equal, as some conceive, who hold that all Vices and Faults are also equal. For a man may be more inclin'd to *Justice*, than to *Temperance*; and *Temperance* may be more perfect in one, than in another. As, for instance, (without Envy be it spoken,) myself by length of time, have made so great a progress in *Sobriety*, as less than an *Obolus* serves me for a meal; *Metrodorus*, who hath not yet made so great progress, a whole *Obolus*. And it is evident, that, of men, one is wiser than another; and of them, who do rightly according to *Virtue*, equal Rewards are not allotted to all, as neither equal Punishments to all Offenders. Even *Sence* and *Manners* confute them, who make all equal, and hold that they offend alike, he who beats his Servant wrongfully, and he who his Parent; seeing some there are who make no difference betwixt eating a Bean, and the head of our Father.

Others condemn, and exclaim on us, for affirming, that the *Virtues* are of such a nature, as that they conduce to Pleasure or Felicity, as if we meant that Pleasure which is obscene and infamous, but let them rail as they please. For as they make *Virtue* the chief good, so do we: If the discourse be of the means conducing to happy life, neither is there any of so great power as *Virtue*, therefore not more excellent, (not Wealth, not Honour, not Friends, not Children, &c.) But if the discourse be of living happily, or Felicity, why should not this be a good superior to *Virtue*, to the attainment whereof *Virtue* itself is but subservient?

They exclaim again, that we enervate *Virtue*, in not allowing her so much power, as to render a wise man free from all passion or affection, but to permit him to be moved therewith, (as for instance) to grieve, weep, and sigh at the death of Friends: But as we set a high value upon *Virtue*, as being able to deliver us from vain terrors and superfluous desires, the chief heads of all greivous Perturbations; so likewise not a little esteem it, for that it reduceth the rest of the affections to such a mediocrity, in which there remains some sense as it were of humanity.

Certainly, that total exemption from Grief, which these men boast of, proceeds from some greater ill, cruelty, and immoderate ambition of vain-glory, and a kind of madness. So that it seems much better to feel some passion, to be affected with some grief, to shed some tears, such as proceed from persons touched with love and tenderness, than to be wise as these would have us, and grin like brute Beasts.

C H A P. VIII.

Of Prudence in general.

WE must now say something of every *Virtue* in particular, beginning with *Prudence*, whose office being to govern the life, and so to provide for every occurrent in life, as to direct it to happiness, it seems alone to comprize the offices of all *Virtues*.

That the propriety of Prudence, is to dispose all accidents and actions of life to felicity, or pleasure, is most manifest. As we value Medicine, not for the Science it self, but for Health; and the Art of steering, not for its Ingenuity, but use in Navigation; so Prudence, the Art of living, would never be desired, if it were nothing efficacious in life; but being so, it is desired, as the Art, by which Pleasure is sought and obtained.

For Prudence, or (if you like the word better) Wisdom, alone it is, which not only provides that nothing happen which may afflict the Body, but likewise above all, expels sadness from the mind, not permitting us to be daunted with fear; Under which Governness we may live in tranquillity, extinguishing the ardor of all desires. For desires are insatiable, they subvert not only single Persons, but Families, many times a whole Commonwealth. From Desires arise Hatreds, Dissentions, Discords, Seditions, Wars; neither do these only revel abroad, or with blind fury assault others only, but likewise, shut up in the breast, they disagree and quarrel with one another, which must necessarily make life exceeding bitter. Only the prudent and wise person, cutting off all vanity and error, content with the limits of nature, can live without discontent, and without fear.

Now seeing Life is disturbed by error and ignorance, and that it is Prudence alone which rescues us from the violence of Lusts and Fears, teacheth us temperately to sustain the injuries of Fortune, and sheweth us all the ways that lead to quiet and tranquillity, Why should we stick to affirm, that Prudence is expetible in order to pleasure, and Imprudence to be shunned for trouble's sake?

That we say, a Prudent Person temperately sustains the injuries of Fortune, the reason is, that he foresees them, if not in particular, at least in the general; Neither, if any thing happen contrary to his expectations or designs, is he troubled, for that he knoweth it not to be within the reach of human industry, sagacity, or power, either to foresee, or to prevent, that nothing adverse or troublesome happen. He judgeth it better to be, with well-ordered reason (as far as human frailty will admit,) unfortunate, than with inconsideration fortunate; and thinks nothing more handsome, than if Fortune bring about a thing fairly and prosperously, that was not undertaken without judgment and deliberation.

But indeed, a wise man orders so himself, that cutting off vain desires, he contracts himself within necessities, which are so few and small, as hardly any Fortune can snatch them from him. Thus, since none, or very little fortune can intervene to a wise man, he may say to her, I have seized on thee, (Fortune,) and intercepted thee, so as thou canst not come at me.

Concerning the cutting off all Desires, we shall speak hereafter. Now forasmuch as prudence may be considered, either as it governs ourselves, or a House, or a Family, or a City, or a Commonwealth, and so is distinguished into Private, Domestick, Civil; let us say something upon each.

C H A P. IX.

Private Prudence.

Private Prudence consisteth almost wholly in this, that a man understand his own *Genius*, and undertake nothing whereto his nature is averse, that he deliberately pre-examine the state in which he is to spend his whole life, and to which he must so accommodate all the actions of life, as that, as much as possible, he may live in indolence and tranquillity.

For he ought to have the end or scope of life fixt, and constantly set before his eyes, and consult with right reason, according to all evidence, whereby we use to weigh whatsoever we think or determine. For unless this be done, all will be full of indiscreet temerity and confusion, and our designs and enterprizes will be overtaken by too late repentance.

Besides, if upon every emergent occasion, you refer not each of your actions both to this kind of scope, and to that end of nature which you proposed to yourself in designing it, but turn aside to pursue or flee some other thing, the actions of you life will not correspond to your own words. For example, you extol tranquillity in words, but in actions discover yourself busy and obnoxious to trouble.

He understands the bounds prescribed by Nature, to those who enter the course of life, who discerns how easily procurable that is which is necessary to life, or what is sufficient to remove any thing that afflicts the body with indigence. Thereby he knows so well to order the whole series of life, as never to need such things or business as are contentious, and consequently full of hazard and danger.

Hence it is, that a wise man is not much afraid of poverty, it hapning seldom, that any man wants the things necessary to life. Yet if those should chance to be wanting, and he not have money to procure them, he will not betake himself to beg, as the *Cynick*, but rather apply himself to instruct some persons in learning: thus taking an employment not misbecoming Wisdom, and at the same time supplying himself with necessities from those who have full estates.

Whilst we are obliged to this or the like employment; 'If necessities fail us, and our business be, to entertain daily occurrences with a settled courage, we must have recourse to Wisdom or Philosophy for relief. To an ill Counsellor we resign the ordering of the things that concern us, if, what is necessary to nature, we measure and provide without Philosophy.

'It therefore imports a Philosopher to bestow time in looking after these things, until by diligent care he hath furnished himself with them. But as long as he hath so much of these, as that he can spend of them, yet retain perfect confidence, he is not to apply himself to acquisition of wealth and provisions.

'Thus is Philosophy to be our Guide in these things, by which we shall soon perceive, what a Vertue, and how great a Good it is, to require only what is simple, light, and very small; because what is most sweet and free from trouble in all a man's life, depends upon our being

Porp. de nat. esu carn.

'con-

contented with the least. But, by those impediments which a solicitous acquisition of things draws upon us, being quickly discover'd, either by the pains and toil of the Body, or by the difficulty of their procurement, or by their drawing the mind away from the most advantageous speculations, (which we ought ever more highly to esteem,) or by some other cause; we shall clearly find, that it is altogether fruitless, and not of countervalue with the troubles which follow it.

I advis'd, that every man should examine his own genius, and advise with himself, that he may apply himself to that which is proper for him, because otherwise, nothing can be more miserable, and more at a distance with tranquillity, than to be engaged in a course of life, for which nature hath rendred thee unfit.

For neither is an active life to be undertaken by an unactive person, nor an unactive life by an active person. To one, rest is quiet, and action labour; to the other, rest is labour, and action quiet. A timorous and soft person must avoid the military life; a bold and impatient, the ease; for one cannot brook War, nor the other Peace. The same it is in all the rest. So that nothing can be more safe, than to undertake that course only which thou canst run through, without any reluctance or repugnance of nature.

I shall only add this, That every man, as far as lies in his power, to the end the state of life which he chooseth may be the more secure and quiet, ought to choose it mean, neither very eminent, nor very abject. For it behoves him to live in a Civil society, neither as a Lion, nor as a Goat, lest, resembling the one, he be cast out; the other, caught in a snare.

CHAP. X.

Domestick Prudence.

Domestick Prudence being either conjugal and paternal, or dominative and possessory; we shall, in the first, only consider that which ariseth from what hath been said, concerning the Institution of life.

If you find, that you cannot, without much trouble, live single; that you can patiently bear with a cross wife, and disobedient children; that you will not so much as vex, to behold your children crying before you; that you shall not be perplexed and distracted with various sollicitudes, how to provide all things requisite to a married life, how to prevent all inconveniences, and the like: In this case, to marry a wife, and to beget children, for whom you may provide with a conjugal and fatherly prudence, is lawful. But unless you know yourself to be such, you see, by Marriage and issue, how much you hinder the happiness of your life, True tranquillity.

Presume you may, of having a loving wife, dutiful children, cares neither great nor many; but you can only presume it, there is not any God will warrant the success of your presumption. Since therefore the case is hazardous, it is no wisdom voluntarily to undergo the venture and throw yourself into a condition, out of

which, should you afterwards repent, you can never retire.

I say, voluntarily; for some circumstance of life may exact, that, though unwilling, you marry and beget children; as if your condition be such, as that it requires you to serve your Country herein. For whereas some pretend propagation of the species, to which we are in a manner oblig'd, certainly there is no danger, that there should be wanting such as will marry and procreate; so that some few wise men may be allowed to abstain from this employment.

But if some case, or certain counsel, or necessity, enforce you to marry, you must so dispose your wife, as that she may be loving to you, and a partner in your cares. You must take such care for your children, as is partly prescribed by Nature, which instigates us to love them as soon as born, (common also to sheep, wolves, and other living creatures;) partly by prudence, which adviseth so to bring them up, as they may be obedient to the Laws of their Country, and desirous themselves may become wise.

Neither is this care to be taken for our own children only, but likewise for the children of our friends, especially if they are our Pupils, there being nothing more befitting friendship, than to be a Guardian in the room of a parent to those, whom our deceased friend entirely loved, and hath left Orphans needing protection.

For the other kind, as having slaves and servants under us, (a possession, though necessary, yet for the most part not very pleasant,) a wise man must take order, they grow not insolent and froward, that he may behave himself mildly (as far as is fitting,) towards them, and chastise the disobedient, remembering they are men, with a kind of unwillingness, being ever ready to forgive, especially if they are diligent, not of an ill disposition. And not only this, but if he find any inclined to learning, (such as we had, particularly *Mus*,) let him delight to further them, call them Friends, and study Philosophy with them.

As to his Estate, he must take care of it, and provide for the future, but so, as without covetousness, and the desire of growing rich, of which hereafter. A wise man must not neglect his estate, because it is his livelihood; lest, if that be consumed, and he want the necessaries of life, his study of Philosophy be hindered, whilst he either gains by labour what might with little or no pains have been preserved; or begs, and by importunity extorts from another, what every one with little endeavour might provide for himself; or, growing old, fall sick; and die in want, which not a little hinders the tranquillity of the mind.

Besides the things necessary to the uses of life, there may be others, which, according to the condition of the person, place, time, must be esteemed necessary, and therefore not to be neglected. But our chiefest care must be for things requisite, to the prevention of natural indigence, without which, nature herself would suffer; such is the provision of corn. Those who store their houses with corn, are to be commended above those, who adorn them with rich furniture. I rejoyce exceedingly; that lately in a strict Siege, when many perished in our City by Famine, we were able to sustain so many good friends with

food

food (no delicacies, but a provident quantity of Beans,) which we distributed daily to every one by tale,

CHAP. XI.

Civil Prudence.

LASTLY, as to Civil prudence we must likewise repeat what we insinuated concerning the choice of a course of life.

They who are naturally ambitious, desirous of honour, active withal, and fit to manage publick affairs; as also they, whom the quality of their birth, or fortune, and opportunity invite by an easie accession to publick government; those men may decline quiet, and comply with their own nature, by addicting themselves to publick government, and an active life. For their disposition is such, that a quiet life gives them trouble and molestation, whilst they obtain not what they desire.

But they, who either are naturally inclined to quiet, or have suppress'd ambition and vanity by the power of reason; or, having made trial hereof, have escaped, as out of a storm, or took warning by many eminent precedents; these will justly conceive, that quiet is much the best for them, and that it is not convenient to exchange it for an active life, unless by chance some accident intervene in the Common wealth, requiring their industry. Whence we conclude, that a wise man must not involve himself in publick affairs, unless upon some intervening necessity.

What else? Since he in pursuing quiet, may far more easily and safely attain to that end, which the ambitious aim at by dangers and by labours.

For to speak of their scope, there never wanted some, who, to procure security of men, (according to the condition of Sovereignty and Rule, by which they commonly think it gained,) have affected to excel in honour, and to become illustrious, thinking that by this means to attain a secure and quiet estate. But if their life be secure and quiet, they have acquired the chief good of nature; if not secure and quiet, (as indeed it can hardly be,) then have they lost it, because they sought that which is inconvenient to nature in Dominion.

But the wise mans scope being the same, security and tranquility of life, by how much nearer a way doth he arrive at that end, when flying the troubles of civil life, he directly and immediately settles himself in a most profound quiet, as in a still calm Haven? Happy indeed, who knows, The chief good and a blessed life consists not in Sovereignty or power, not in numerous wealth or plenty, but in indolence, composure of affection, and such a disposition of mind, as, circumscribing all things by the boundaries of nature, makes him, in being content with little, obtain that which they, who rule over many, and possess great Treasures, despair ever to arrive at.

Truly, if it be fit to speak of myself, I esteem it a great happiness that I was never engaged in

the factions of our City, and never studied to flatter and please the people. To what end should I? when as, what I know, the people approve not; what the people approve, I know not. That *Metrodorus* and I lived private, How far was it from doing us harm, when among the large goods enjoyed in narrow gardens, and in obscure *Melite*, Greece was so far from knowing us, that she had scarce ever heard of us.

I said, unless something intervene as to the Common-wealth: Because, if the Common-wealth should summon and really need our assistance, we should be inhuman, where we might benefit many, not to do it: Injurious also to ourselves; for unless the Common-wealth be safe, we cannot be what we most desire, quiet.

A wise man therefore doth not like some, who, professing wisdom, have, through excessive pride so great an opinion of their own judgment in civil government, that they think they could equalize *Lycurgus* and *Solon*.

But if he be desired to make Laws, and to prescribe a form of government, and the offices of Magistrates, he will not refuse it; knowing that they, who first made laws and ordinances and constituted Government and Magistracy in Cities, settled life in a secure and quiet condition: For if that be taken away, we shall live like Beasts, and every man devour the next he meets with.

And if he be called to the supreme power to govern the Common wealth according to the laws and form of Government already established, he shall not refuse; knowing that though the thing itself is for the most part full of hazard, yet a wise man may have such regard to all things, and such a provident care of all, as that little of fortune, as I said before, shall intervene to him; but the greatest things, and such as are of most concernment be managed by his advice and conduct. He will first take care, that the weaker sort of men, discharging their duty towards the more powerful, be neither oppressed by them, nor permitted to want those necessities of life where-with the others abound; it being the end of every Society and Common wealth, that by mutual assistance the lives of all be safe, and as happy as is possible.

Lastly, if he be summoned by his Prince, and some occasion require, that he serve him either with his advice or help, neither shall he refuse this, knowing that as it is, not only more honourable, but more pleasant to give than to receive a benefit: It is as the most honourable, so the most pleasant thing to oblige a Prince who confers so many obligations on others. Hitherto of Prudence.

CHAP. XII.

Of Temperance in general.

NEXT follows Temperance, the first part, as we said, of honesty, and which seems to contain the greatest share of what is honest and decent. For it being the office of Temperance

to suppress the mind when it desires, as of Fortitude to exalt it when it fears; it is esteemed less undecent to be dejected by pusillanimity, than exalted by desire; and therefore to resist desire, is more decent than to oppose fear.

Concerning Temperance, we must first observe, that it is desired not for its own sake, but for that it procureth pleasure, that is, brings peace to the minds of men, pleasing and soothing them with a kind of concord. For it being employed in moderating desires, and consequently in advising that in things to be pursued or avoided we follow reason, it is not enough that we judge what is to be done or not to be done, but we must fix upon that which is judged.

But most men, not able to hold and keep to what they have resolved on, being vanquish'd and debilitated by the appearance of a present pleasure, resign themselves to the fatters of Lust, not foreseeing what will follow; and hereupon for a small unnecessary pleasure, which might otherwise have been procured, or wholly wanted without incurring pain, they fall into great sicknesses, losses, and infamy, and many times into the penalties of Law.

But they who so enjoy pleasures as that no pain shall ensue, and who preserve their judgment constant, nor are overcome by pleasure, to the doing of what they know ought not to be done; these men obtain the greatest pleasure, by pretermittting pleasure: They also many times suffer some pain to prevent falling into greater.

Hence is it understood, that Temperance is to be desired, not for that it avoids some pleasures, but because he who refrains from them declines troubles; which being avoided, he obtains greater pleasures. Which it so doth, as that the action becomes honest and decent, and we may clearly understand, that the same men may be Lovers both of pleasure and of decency, and that such as esteem and practise all virtues, perform for the most part those actions, and attain those ends, as that by them it is manifest, how odious to all men cruelty is, and how amiable, goodness and clemency; and that those very things which ill men most desire and aim at, happen also to the good.

Now forasmuch as of the desires about which Temperance is employ'd, some are natural, others vain; and of the natural, some necessary, others not necessary, (to omit, that, of the necessary) some pertain simply to life, as that of meat and drink, and the pleasure which consists in motion; others to felicity itself, (as that of indolence and tranquility or stable pleasure:) It is manifest, that not without good cause we in our Physiology distinguished desires into three kinds, some both natural and necessary; others natural but not necessary; others neither natural nor necessary, but vain, or arising from vain opinion.

And forasmuch as we said, that those are natural and necessary, which unless they be satisfied, cause damage and pain in the Body; it is evident, that those which infer no damage nor pain, though not satisfi'd, yet are accompanied with earnest and vehement instigations, are such not by necessity, but vain opinions, and though they have some beginning from nature, yet their diffusion and excess they have not from nature,

but from the vanity of opinions, which render men worse than beasts, that are not obnoxious to such diffusion or excess. Likewise, that such desires are not only not necessary, but not natural may be proved, for that they have a diffident excessive appetition, very hardly or never to be satisfi'd; and are, for the most part, justly esteemed causes of harm.

But to discourse of some chief kinds of Temperance, according to some chief kinds of desires, we may make choice of Sobriety opposed to Gluttony, or the excessive desire of meat and drink; Continence, to Lust, or the unbridled desire of coition; Mildness, to Anger or desire of Revenge; Modesty, to ambition or desire of honour; Moderation to Avarice or desire of riches; and lastly, in respect of the affinity betwixt desire and hope, Mediocrity, which consists betwixt hope and desperation of the future.

C H A P. XIII.

Of Sobriety opposite to Gluttony.

It can hardly be expressed, how great a good Sobriety is, which reduceth us to a thin simple and spare dyet, teaching us how little that is which Nature requires, and clearly shewing, that the necessities she lies under may be abundantly satisfi'd with things light, and easily provided, as Barly-cakes, Fruits, Herbs, and Water.

*For these things being every where to be had, and Porph. de 1
having the simple nature of moist and dry, moist a- carn.
liments sufficiently remove the trouble of the Body
arising from want of sustenance. Whatever is more
than this amounts to Luxury, and concerns only
the satisfaction of a desire, which neither is necessary,
nor occasion'd by any thing, the want whereof doth
necessarily infer any offence to nature, but partly
for that the want of somewhat is born with impatience;
partly, for that there is presumption of an absolute
delight without mixture of any trouble; partly,
(to speak in short,) for that there are vain and false
opinions inherent in the mind, which serve neither
for the supplying of any natural defect, nor tend to
the acquisition of any thing, by the want of which, the
frame of the Body would be dissolved.*

Those very things which are ready at hand, abundantly suffice to supply all nature's wants; and they are such as partly for their simplicity, partly for their lightness, are easily made ready. He, for example, who feeds on flesh, needs other things inanimate to eat with it; whereas he, who is content with inanimate, needs but half so much as the other, and sustains himself with what is easily got, and cheaply dress'd.

There are four benefits arising from Sobriety; *Laet.* the first, that to accustom ourselves to a simple diet brings and preserves health: For it is sumptuous feasting and variety of meats, which begets, exasperates, and continues crudities, head-aches, rheums, gouts, feavers, and other diseases; not plain and simple food, which nature makes both necessary and wholesome, and not only to other Animals but even to man himself, who yet depraves

praves them by his exorbitancy, and corrupts them by such delicacies, as which while he affects he affects only his own destruction.

mpb. loc. cit. Therefore if we are wise, let us beware of that meat which we much desire and long for, but as soon as we have had it, find it was pleasant to us only to our harm. Such are all costly and luscious meats; whence the eating flesh is less to be approved, as being rather prejudicial to health than wholesome, as may be argued, because * health is preserved by the same means whereby it is recovered; but it is manifest that it is recovered by a thin dyet and abstinence from flesh.

orph. loc. cit. Neither is it any wonder, that the ordinary sort of men conceive the eating of flesh to conduce much to health; for, they in like manner think, that the way to preserve health is to wallow in pleasures, even the Venereal; whereof nevertheless there is none benefits any man; and it is well if it hurt not.

orph. The second is, that it makes a man ready and quick in the offices necessary to life. For if you look upon the functions of the mind, it preserves her serenity, acuteness, vigour; if upon the functions of the Body, it keeps it sound, active, and hardy. But repletion, over-fatigues, surfeiting and drunkenness cloud the mind, make it blunt and languid; the Body diseased, unactive, and burdensome. What, I pray, can you expect extraordinary from that man, whose limbs are unweildy, his knees feeble, his tongue faltering, his head swimming, his eyes full of rheum, his mouth of the hic-up, brawling, and clamour; and all this, through excess of Wine.

act. Certainly, a wise man, who ought to content himself with a hemina of small Wine, or to esteem the next water he comes at to be the most pleasant of all drinks, will be far from spending the night in drunkenness; and as far from stuffing himself with meats that are high, or burthening his stomach with such as are luscious and gross, who ought to be content with the most simple, even the very free, gifts of Nature.

Indeed such simple and slender dyet will not make a man as strong as Milo, nor conduceth absolutely to an intense corroboration of the Body; but neither doth a wise man need such intense strength, seeing his employment consists in contemplation, not in an active and petulant kind of life.

The third benefit is, that 'if sometimes the Table happen to be more plentifully furnish'd, we shall come much better prepared to taste what it yields. Not but that homely fare affords as much delight as sumptuous feasts; when hunger, which, in want of food, troubleth us, is satisfied, (for Barley-cakes and water are highly pleasant, if taken only when we hunger and thirst;) but because they who are daily accustomed to more costly viands are not so sensible of their sweetness, by reason of their being almost continually cloyed with them; as a wise man is, who the better to relish them brings along with him a taste prepared by mean dyet: In like manner it comes to pass, that he, if at any time he chance to be present at public spectacles, is taken with them more sensibly than are others.

What I affirm concerning the coarsest meat and drink, that it affords no less pleasure than

the greatest delicacies, cannot be deny'd by any but by him who deceiveth himself with vain opinions; who observes not, that they only enjoy magnificence with greatest pleasure, who least need it; who never hath tasted coarse bread and water, pressed with hunger and thirst. For my own part, when I eat coarse bread and drink water, or sometimes augment my Commons with a little Cytheridian-Cheese, (when I have a mind to feast extraordinarily,) I take great delight in it, and bid defiance to those pleasures which accompany the usual magnificence of feasts; so that if I have but bread, or barley-cakes and water, I am furnish'd to contend even with Jove himself in point of Felicity.

Shall I add, that 'magnificence of feasts, and variety of dishes not only not free the Mind from perturbation, but not so much as augment the pleasure of the Body, forasmuch as this also, when that trouble is removed, hath found its end? For example, the eating of flesh (which we lately instanc'd,) neither takes away any thing particularly that is a trouble to nature, nor performs any thing which would occasion trouble, if not fulfilled. But it hath a forc'd delight, and perhaps mingled with that which is contrary to these, for it conduceth little to long life, and serveth only to variation of pleasures, like Venereal pleasures, and the drinking of foreign Wines, without which nature or life may well subsist: For those things, without which it cannot subsist, are most compendious, and may be obtained easily without breach of Justice, Liberality and Tranquility.

Neither is it any matter, whether the ordinary sort of men be of this belief or not; since petulancy and intemperance abound in such persons, so that we need not fear, but there will be those who will feed on flesh. For though all men had the best and right judgment of things, yet would there be no need of Fowling or Fowling, or Fishers, or Swine-herds; these Animals, living by themselves, free and without a keeper, would in a short time be destroy'd by others preying upon them, and supressing the vastness of their increase, as happens to infinite others which men eat not. But since there reigneth always a multiplicitous, or rather universal, folly amongst men, there will never be wanting an innumerable company of gluttons to feed on these.

Lastly, the fourth benefit is, that 'it renders us fearless of Fortune. For they only must stand in awe of Fortune, who being accusom'd to live sumptuously, conceive their lives cannot be otherwise than most miserable, unless they are able to spend Pounds, and Talents every day. Whence it happens, that such men are for the most part subject to a troublesome life, and often commit Rapines, Murthers, and the like villaines. But he, who is content with coarse food, as fruits and fallads, who is satisfy'd with bread and water; who hath confin'd his desire within these, what can he fear from Fortune? For, who is there so poor as to want these? Who so distress'd, that he cannot easily meet with beans, pulse, herbs, fruits? As for water, what need I mention it?

For my own part, truly (that I may with modesty instance my self) I am content, and highly pleas'd with the Plants and Fruits of my own little Gardens; and will, that this Inscription be set over the Gate, *Stranger, here you may stay; here the Supreme Good is Pleasure; the Master of this little house is hospitable, friendly, and will entertain you with polenta, and afford you water plentifully, and will ask you, How you like your entertainment? These little Gardens invite not hunger, but satisfy it; nor encrease thirst with drinks, but extinguish it with the natural and pleasant remedy.*

In this pleasure I have grown old, finding by account, that my diet amounts not fully to an *obolus* a day, and yet some days there are, in which I abate somewhat even of that, to make trial, whether I want any thing of full and perfect pleasure, or how much, and whether it be worth great labour.

C H A P. XIV.

Of Continence, opposite to Lust.

MOREOVER, Continence or Abstinence from Venereal Pleasures is a great Virtue; for the use of them, as I said formerly, doth never benefit, and it is well if it hurts not.

Certainly, to abuse them intemperately, is to make a man destitute of vigor, anxious with cares, painful with diseases, and of short continuance. Wherefore a wise man must stand upon his guard, and not suffer himself to be caught with love, far from conceiving love to be something sent from the Gods above, and therefore to be cherished.

And that a man may be least subject thereto and want the chief excitements to venereal delights, nothing more avails than spare diet, of which we lately treated: for excess in eating, causeth abundance of that humor, which is the food and fuel of love's fire. The next antidotes are, an honest employment, (especially the study of wisdom,) and meditation upon the inconveniences to which they, who suffer themselves to be transported with love, are liable.

The general inconveniences which attend love of Women and Boys, are consumption of strength, decay of industry, ruin of estate, mortgages and forfeitures, loss of reputation. And while the feet wear *Sicyonian* buskins, the fingers Emeralds, the body other ornaments, the mind, in the mean time, conscious to it self, is full of remorse, for that she lives idly, and suffers good years to be lost, and the like, which it were easie to instance.

But as to Particulars, What ill doth it not draw upon a Man to desire the company of a Woman prohibited to him by the Laws? Doubtless, a wise Man will be very far from thinking of such a thing; it being enough to deter him from it, to reflect upon the vast solicitude, which is necessary to precaution, of those many and great dangers which intervene; it hapning, for the most part, that they who attempt such things are wounded, murdered, imprison'd, banish'd, or suffer some great punishments. Whence it comes, that (as we said before) for a pleasure,

which is but short, little, and not necessary, and which might either have been obtained otherwise, or quite let alone, men expose themselves to great pain, and sad repentance.

Besides, to be incontinent, to resign up our selves to this one kind of pleasure, were to defraud our selves in the mean time of other pleasures, many and great; which he enjoys, who lives, continently according to the Laws. He so applies himself to wisdom, as that he neither blunts his mind, nor excruciates it with cares, nor disturbs it with other affections; and for his body, he neither enervates it, nor vexeth it with diseases, nor torments it with pains. And thus he attains the chief good, which (as I said,) is not gotten by keeping company with Boys or Women, not having a Table plenteously furnished with choice of Fish or Fowl.

Yet there is no reason, any one, from this commendation of general abstinence from venereal delights, should infer, that therefore a man ought to abstain even from lawful marriage. What our judgment is of that Particular, we have formerly declared. I shall only add, that whereas I said, Love is not sent from the gods, it gives us to understand, that if a man hath no Children by his wife, he must not attribute it to the anger of *Cupid* or *Venus*, or hope to become a Father by Vows, Prayers, and Sacrifices, rather than by natural Remedies.

I shall add, that a wise man ought not to live after the manner of the *Cynicks*, or to behave himself with such immodesty as they shew in publick. For whilst they plead they follow Nature, and reprehend and deride us, for esteeming it obscene and dishonest to call things which are not dishonest by their names, but things which are indeed dishonest we call by their proper Names; as to rob, to cozen, to commit adultery, are dishonest indeed, but not obscene in name; whereas to perform the act of generation, is honest in deed, but obscene in name, and alledge divers other arguments against modesty: they seem not sufficiently to consider, that they live in a civil Society, not in the Fields, like wild Beast, and therefore ought not to follow Nature exactly.

For, from the time that we enroll'd our names in a Society, Nature commands, that we observe the Laws and Customs of that Society; to the end, that participating of the common goods, we draw no evil upon our selves: such as is (besides all other punishments,) the very infamy or ignominy which attends Impudence, or the want of such Modesty as is prescribed by the customs and manners of the Society wherein we live, and from which, in the Voice, the Countenance, and Behaviour, that modest Respect, which is deservedly commended by all, is denominated.

Lastly, I add, that it not a little conduceth as to Modesty in particular, so to all kinds of Continency, to abstain from Musick and Poetry, for that their pleasing Songs and Airs are no other than Incentives to Lust.

Hence is our Maxim, That a wise Man only can treat of Musick and Poetry aright, and according to virtue. For others, easily taken with the allurements of both, indulge to both; only the wise Man duely foreseeing the harm that

K k k k

would

would ensue, cast them away; declaring that Musick is, amongst other things, an allurements to drink, an exhauster of Money, a friend to idleness, conducing nothing to good, honest, and generous works; that Poetry hath always made men prone to all sorts of vices, especially to lust, even by the examples of the Gods themselves, whom it introduceth, inflamed with anger, and raging with lust, and represents not only their Wars, conflicts, wounds, hatred, discords, diffentions, birth, deaths: But also their complaints, lamentations, imprisonments, coition with mortal children of immortal Parents, and the like; which certainly sober men would abhor.

C H A P. XV.

Of Meekness opposite to Anger.

Moreover Lenity or Meekness, whereunto are reduced Clemency and Pity, is so excellent an antidote against anger, or desire of revenge, that it is esteemed a most eminent virtue; in as much as anger, especially if excessive, causeth madness for the time. For by anger, the mind is heated and darkned, the eyes sparkling with fire, the breast ready to burst with rage, the teeth gnashing, the voice choaked, the hairs standing on end, the face glowing, and distorted with menacing looks, horrid, and ugly to behold, so that the mind seems to have lost the command of herself, and to have forgotten all decency. But, lenity cures the mind, or rather preserves it sound, so that it is neither moved in itself, nor is there any eruption of passion into the Body, that may cause the least undecency.

Now anger being commonly kindled, and set on fire, by opinion of some injury receiv'd; but men are injur'd through hatred, envy, or contempt; how can a wise man so bear an injury, as to behave himself with Lenity, and sweetness towards those who did it? By submitting himself to the government of right reason; whereby (as I formerly said,) he must fortifie himself against fortune. For, he accounts an injury among things of chance, and discreetly considers, it is not in his power to make other men just, and free from passion; and therefore, is as little moved at injuries done to him by men, as at the incommodities, or losses which happen by accidents of fortune, or by any other cause above, beyond his own power.

He is not, for example, troubled at the great heats or colds of the seasons of the year, because it is the nature of the seasons in their vicissitudes, which he cannot alter! In like manner, neither is he troubled at the injuries, which dishonest and malicious men do to him, because in doing so, they act according to their own natures, and to make them do otherwise, and to change their natures, is not in his power. Besides, he conceives it not agreeable to Reason, and Wisdom, to add ill to ill, (to add, unto the harm which happens to him from without, perturbation within by opinion,) or, because another man would afflict his mind with vexation he should be so foolish as to admit that vexation,

and further the ill designs of his enemy upon him.

Yet is it fit, that a wise man take such care of his reputation, as not to become contemptible, since there are some pleasures that arise from a good Name, some troubles from an ill, and the contempt that follows it; but he must take care of his reputation, not so much by revenging injuries, or being offended at those that do them, as by living well, and innocently, giving no man a just cause of contumely or malediction. To do thus, is in our power; not, to hinder another from exercising his one malice.

Whence, if one that bears you ill-will, and is your profess'd enemy, shall demand any thing of you, you must not deny him, provided what he demand be lawful, and you are nothing the less secure from him; he differs not from the Dog, and therefore must be appeased with a morsel. Nevertheless, nothing is better or safer, than to confront his malice with innocence of life, and the security of your own Conscience, and withal to shew that you are above injury.

Especially, seeing it may so happen, that a wise man (as I said before,) may be arraign'd and suffer not only injury, but calumny, accusation, condemnation: Even then he considers, that to live well and virtuously, is in his power, but, not to fall into the hands of envious unjust persons; not to be unjustly accused by them; not to be sentenced by unrighteous Judges, is not in his power. He therefore is not angry, either with the accusers, witnesses, or judges but confiding in a good conscience, loseth nothing of his lenity and tranquillity, and esteeming himself to be above this chance, he looks upon it undaunted, and behaves himself in his trial boldly, and with courage.

Let not any object, that what I here advise concerning lenity, is repugnant to what I formerly said of the chastising of servants; for I limited castigation, only to the refractory and perverse. It is manifest, that punishment ought to be inflicted on offenders, as well in a private family, as in a Common-wealth; and that, as a Prince or Magistrate punisheth the offences of his subjects, without anger; so the Father of a family may without anger, punish the faults of his servants.

Moreover, a wise man must not only bear injuries, nor only pardon them mildly, but even kindly encourage, and congratulate him, who betakes himself to a better course. For since the beginning of reformation is to know our fault; therefore must this gratulation, and encouragement be given to the penitent offender, that, as he is affected with horror at this knowledge of his crime, so the excellence, and beauty of that which he ought to have done, and thenceforward must do, may be fully represented to him, and the love of it increase daily in him.

C H A P.

C H A P. XVI.

Of Modesty, opposite to Ambition.

AS concerning *Modesty*, there needs little more to be said, than what we formerly declared, when we shew'd it was not the part of a wise man to affect high Offices, or Honours in a Common-wealth, but rather so to contain himself, as to live in some private corner: Wherefore, here I shall once more give the same counsel, which I give to all my friends. Live close, or private, (provided no necessities of the Common-wealth require otherwise,) for even experience teacheth, that he hath lived well, who hath well concealed himself.

It is but too frequently seen, that they who climb up to the top of Honour, are cast down by envy, as with a Thunder-bolt, and then too late acknowledge that it is much better, quietly to obey, than by laborious climbing up the narrow path of ambition, to aim at command and sovereignty, and to arrive there, where nothing can be expected, but a great and dangerous precipitation. Besides, are not they, whom the common people gaze upon with admiration, glittering with Titles and Honours, the most unhappy of all men, for that their breasts are gnawn with weighty and troublesome cares? You must not imagine that such persons live quiet and secure in mind; for it is impossible, but that they who are feared by many, should themselves fear many.

And though you see them send out great Navies, command Legions, compassed with Guards, yet you must not think they live all quiet, or indeed do at all partake of any true pleasure, for all these things are ridiculous pageantry and dreams: Fears and cares are not afraid of the noise of Arms, nor stand in awe of the brightness of gold, or splendor of purple, but boldly intrude amongst Princes and Potentates, and, like the Vulture, which the Poets talk of, gnaw and prey on their hearts.

Neither must you think, that the Body is any thing the better for this, since you see that Fevers go away nothing the sooner, if you lye in a bed of Tyrian purple, in a chamber furnished with rich Tapistry, than under a plain homely coverlet; and that we take no harm by the want of purple robes, embroidered with Gold and pearl, as long as we have a coarse plain Garment sufficient to keep away the cold. And what, if, being cheerful and contented with rags and a bed of straw, you should instruct men how vain those are, who with astonish'd and turbulent minds gaze and thirst after the trifles of magnificence, not understanding how few and small those things are which make a happy life? Believe me that which you shall say will appear far more magnificent and high, being delivered from a Mattress covered with coarse cloath; for it is not only spoken but practised.

Though your house shine not with Silver and Gold, resound not with musick, hath not any Golden Images of Boyes holding tapers to light you at your nightly Revels and Banquets; truly, it is not a whit less pleasant to repose yourself on the soft grass by a purling stream, underneath

a spreading tree and especially in the spring, at what time the fields are besprinked with flowers, the Birds entertain you with their musick, the West wind fans you, and Nature herself smiles on you.

Why therefore should any man, that may live thus in his own fields and garden, pursue honour; and not rather modestly restrain his desires within this compass; For to aim at glory by ostentation of Virtue, Science, Eloquence, Nobility, Wealth, Attendants, Attire, Beauty, Mien, and the like, is a ridiculous vanity: In all these, Modesty requires no more than that we transgress not decency through rusticity, stupidity, or negligence. It is (as I said,) equally base and abject, to grow insolent, upon possession of these, as to be cast down at their loss.

Hereupon a wise man, if he happen to have the Images or statues of his Ancestors or other persons, will be far from taking pride in them, or shewing them as badges of honour; yet on the other side, he will not neglect them, but place and keep them carefully in his gallery.

In like manner, neither will he be solicitous about his own Funeral, or give order that it be performed Magnificently. He will only consider what may be beneficial and pleasant to his successors, knowing that as for himself or his dead Body, it is all one what becomes of it. For to propagate vanity even beyond death is madness, and such also is the fancy of those, who would not that their dead Bodies should be devoured by wild beasts. For, if that be an ill, must it not be very bad to have them burnt, embalmed, and immeried in honey, to grow cold and stiff under a Marble-stone, to be pressed and consumed with Earth?

C H A P. XVII.

Of Moderation, opposite to Avarice.

THe next is Moderation, or that disposition of mind by which a man is contented with little, and than which he cannot have a greater Good. To be content with little is the greatest wealth in the world, forasmuch as a mean estate proportion'd to the Law of Nature is great riches. To have wherewithal to prevent hunger, thirst, and cold, is a felicity equal to that of the Divinity; and who possesses so much, and desires no more, however the world may esteem him poor, is the richest man.

How sweet a thing is this poverty, cheerful and contented with what is enough, that is, with those riches of nature which suffice to preserve from hunger, thirst, and cold? Truly, seeing the riches of nature are finite and easie to be had, but those that are coveted out of vain opinions, are without measure and infinite, we ought to be thankful to kind Nature, for making those things necessary, that are easie to be had, and those that are hard to be got, unnecessary.

‘ And since it behoves a wise man to hope he shall never, as long as he lives, want necessities, doth not the easie acquisition of these cheap and common things abundantly cherish that hope? Whereas, on the contrary, things of magnificence afford him not the like hope. And this is the reason, why ordinary men, though they have great possessions, yet as if they feared those might faile them, labour still to heap up more, never thinking their store compleat.

‘ This may teach us to content ourselves with the most simple things, and such as are easily gotten, remembering that not all the wealth in the World put together is able in the least measure to allay the perturbation of the mind, whereas things that are mean, ordinary, and easie to be had, remove that indigence which is incommodious to the Body, and besides are such that the thought of parting with them is nothing grievous to him who reflects upon death.

Miserable indeed are the minds of men and their hearts blind, in as much as they will not see that Nature dictates nothing more to them than this, that they supply the wants of the Body, and withal enjoy a well pleased mind, without fear or trouble; not that they should employ their whole life in scraping together that which is necessary to life, and that with such greediness as if they were to out-live death, never thinking how deadly a cup, from our very birth, we are design’d to pledge.

What though those things which are purely necessary, and in respect whereunto no man is poor, yield not the delights which vulgar minds dote on? Nature wants them not, and yet she ceaseth not to afford real and sincere pleasures, in the fruition of those mean and simple things, as we already have declared. Whence a wise man is so indifferently affected towards those things, for whose sake money is coveted, (to supply the daily expences of love, and ambition,) as that being at a great distance from them all, he hath no reason either to desire or care for money.

Whereas I said, that the riches which are coveted through opinion, have not any measure or bound, the reason is, that though Nature is satisfied with little, yet vain opinion, ushering in desire, always thinks of something which we have not, and, as if it were really needful, directs the desire to that thing. Whence it happens, that he who is not satisfied with a little, can never have enough; but the more wealth he hath, the more he conceives himself to be in want.

Wherefore seeing there can never be want of a little, a wise man, possessing that little, ought to esteem it great riches, because therein is no want; whereas other riches, how great soever in esteem, are indeed small, because they want multiplication to infinity. Whence it follows, that he who thinks not what he possesseth is sufficient and plenteous, though he were master of the whole World, would yet be miserable. For misery is the companion of want, and the same vain opinion which first perswaded him, that his own estate was not sufficient, will continue to perswade him, that one World is not sufficient, but that he wants more and more to infinity.

Would you then make a man rich? Know, that it must be done, not by adding to his riches, but by detracting from his desires. For when, having cut off all vain and superfluous desires, he shall compose himself to the rules of Nature, and covet no more than she requires, then shall he find himself to be rich indeed, because he shall then find that he wants nothing. Whence this also should be inculcated to him, if you live according to Nature, you shall never be poor; but if according to Opinion, never rich. Nature desires little, Opinion infinite.

Certainly this disposition or faculty of the mind, whereby a man, moderating himself, cuts off from his desires whatsoever is not necessary to nature, and contents himself with such things as are most simple and easie to be got; this disposition, I say, begets that security which is found in a quiet retirement, and avoidance of the multitude; moreover, by it, even he who lives with much company wants no more, than he who lives alone.

Hence also it proceeds, that whosoever endeavours to beget a confidence and security to himself out of external things, the best way that may be, seeks after things possible to be got, as being not unsuitable to him: But the impossible he esteems unsuitable. Besides, even of the possible, there are many which he attains not; and all those which it is not necessary for him to attain, he renounceth.

Now for want of this renouncing or detraction, how great misery is it for a man, to be continually pouring into a bored Vessel, never able to fill his mind? For not to mention, that many, who have heaped up wealth, have therein found only a change, not an end, of their misery; either because they run themselves into new cares, to which they were not subject before, or because they made way for snares, in which they were entangled and taken. Not to mention this, I say, the greatest misery is, that the more thou feedest, the more thou art tormented with hunger.

C H A P. XVIII.

Of Mediocrity, betwixt Hope and Despair of the Future.

L Astly, seeing that all desire whatsoever is carried to that which is not possessed, but proposed as possible to be attained, and accompany’d with some hope of obtaining it; which hope, cherishing the desire, is accompany’d with a certain pleasure; as its contrary Despair, fomenting a fear that what is desired cannot be obtained, is not without trouble. Something therefore must be added concerning *Mediocrity*, which is of great use, as well in the general, concerning things hoped or despaired, as in the particular, concerning the duration, or rather perpetuity of life, whereof, as there is a desire kindled in the breasts of men, so the despair of it torments them.

Laert.

In the first place therefore we must look upon this as a general Rule; In contingent things, that which is to come is neither absolutely ours, nor absolutely not ours; so that we are neither to hope for it, as if it must certainly come to pass, because it may be diverted by some accident intervening; nor to despair of it, as if it must certainly not come to pass, because it may fall out, that no accident may intervene to divert it. Thus, not being destitute of all hope, we shall not be without some pleasure; nor being quite frustrated of our hope, we shall not receive any trouble.

This difference there is betwixt a wise Man and a Fool; the wise Man expects future things, but depends not on them, and in the mean time enjoys the present, (by considering how great and pleasant they are,) and remembers the past with delight. But the life of a Fool (as I said before,) is unpleasant and timorous, for that it is wholly carried on to the future.

How many may we see, who neither remember the past good, nor enjoy the present? they are wholly taken up with expectation of future things, and, those being uncertain, they are perpetually afflicted with anguish and fear, and are exceedingly grieved when they too late perceive, that they have in vain addicted themselves to the getting of Riches, or Honours, or Power, or Glory; for they fail of obtaining those Pleasures, with the hopes whereof being enflamed, they had undergone many and great labours. Not to say any thing of those others, who being abject and narrow-hearted despair of all things, and are, for the most part, malevolent, envious, morose, shunners of the light, evil speakers, monstrous.

I say a wise Man remembers the past goods with delight and gratitude; but indeed it cannot sufficiently be lamented, that we are too ungrateful towards the past, in not calling to mind, nor accounting amongst pleasures all the good things we have received; forasmuch as no pleasure is more certain, than that which cannot now be taken from us. The present goods are not yet consummate and wholly solid, some chance or other may intervene, and cut them off in half; the future are dependent and uncertain, what is already past is only safe, and out of all danger to be lost.

Among the past goods I reckon, not only such as we have enjoyed, but even the avoidance of the Ills that might have befall'n us; as also, our deliverance out of such Ills as did fall on us, and might have lasted longer, likewise the remembrance and delight that we sustained them constantly and bravely,

As to the desire of prolonging Life to a vast extent, I already hinted, that a wise Man must cut off that desire, because there would immediately upon it follow Desperation, which is never without trouble and anguish. Hither it conduceth to consider, that no greater pleasure can be received from an age of infinite duration, than may be received from this which we know to be finite, provided a Man measure the bounds of it by right reason.

For seeing that to measure the bounds of Nature by right reason, is nothing else but to consider, (as I said before,) that the supreme pleasure is no other, than an exemption from pain

and trouble, it is manifest, that it can neither be made greater by length; nor lesser, or more remis, by shortness of time.

And though the hopes of a more prolonged pleasure, or of a longer age, seem to render the present pleasure more intense; yet it is only so with those, who measure the bound of pleasure, not by right reason, but by vain desire; and who look upon themselves so, as if, when they die and cease to be, they should yet be troubled at the privation of pleasure, as if they had been alive. Whence it happens, that, as I hinted formerly, to understand fully, that Death nothing concerns us, much conduceth to our enjoyment of this mortal life, not by adding any thing of uncertain time, but by casting away the desire of Immortality.

Wherefore seeing that since Nature hath prescribed bounds to corporeal pleasure, and the desire of eternal duration takes them away, it is necessary that the mind or reason interpose, that, by discoursing upon those bounds, and extirpating the desire of Sempiternity, it may make life every way perfect, so that we being content therewith, shall not want a longer duration.

Moreover, neither shall we be deprived of pleasure, even then when Death shall summon us, forasmuch as we have attained the perfect and delightful end of the best life, departing like Guests full and well satisfied with life, and having duly discharged that Office, to acquit ourselves of which we received life.

C H A P. XIX.

Of Fortitude in general.

WE come next to *Fortitude*, which I affirmed to be the other part of *Honesty*, because it withstands Fear, and all things that use to cause Fear; whereby, they who behave themselves not timorous and cowardly, but valiantly and stoutly, are said to behave themselves honestly and befittingly. This may be manifested many ways, especially from War, wherein they who behave themselves with courage and honesty, get honour above the rest. Whence *Honesty* is almost the very same with that, which in the common esteem is Honourable.

That this virtue conduceth also to pleasure, may be inferred from hence, for that neither the undergoing of Labours, nor the suffering of Pains, are things in themselves allecive, nor patience, nor assiduity, nor watching, nor industry, though so highly commended, nor *Fortitude* itself; but we pursue these, to the end we may live without care and fear, and so (as much as possible) free both the body and mind from molestation.

For as by the fear of death (for example,) all the quiet of life is disturbed; and as to sink under pains, and to bear them with a dejected and weak mind, is a great misery, and by such lowness of spirit, many have quite undone their Parents, Friends, Country, and even themselves: so on the other side, a strong and gallant mind is free from all care and anguish, for it contemns death,

death because they who suffer it, are in the same case, as before they were born; and is so fortified against all pains, as to remember, That the greatest are determined by death, the least have many intervals of ease, the middle sort we ourselves can master; if they are tolerable we can endure them, we can contentedly quit this life, when it no longer pleaseth us, as if we went off from a stage.

Hence is it manifest, that Timidity and Cowardliness are not dispraised, nor Fortitude and Patience praised, for their own sakes, but, those are rejected, for that they cause pain; and these desired, for that they produce pleasure.

Whereas I said, that Fortitude withstands Fear, and all things that use to cause Fear, it tends to let us understand, that they are the very same ills, which torment when they are present, and are feared, when expected as future; and therefore, we must learn not to fear those ills, which we either fancy to ourselves, or any ways apprehend as future, but to bear those which are present with constancy and patience.

Of the ills, which we fancy to ourselves, but are not really future, the chiefest are those which we fear either from the Gods, as if they were ill to us; or from death, as if that brought along with it, or after it, some sempiternal ill. Of the ills which we fear, for that they may happen, and yet in the mean time are so present, that they afflict and trouble us, are, those which either cause pain in the body, or discontent in the mind.

Those which cause pain are, Sickneses, Stripes, Fire, Sword and the like: Those which cause discontent, are such as are termed external ills; and of these some are publick, as Tyranny, War, destruction of our Country, Pestilence, Famine, &c. Others private, of which sort are Servitude, Banishment, Imprisonment, Infamy, Loss of Friends, and the like.

The difference betwixt all these things on one part, and pain and discontent on the other, is this, that pain and discontent are absolute ills in themselves, the others are not so, but only inasmuch as they relate to pain and discontent, as causes; for if they did not cause pain and discontent, there were no reason why we should shun them.

We shall say something, in order, upon these: But first take notice, that Fortitude is not to be looked upon as if ingenerate in us by nature, but acquired by reason. Fortitude is different from Audacity, Ferocity, inconsiderate Temerity, for those are found even in brute Animals also, but this is proper to Man, and to such Men only as act advisedly and prudently; and therefore it is to be measured not by the strength and violent carriage of the Body, but by the firmness of the Mind, constantly adhering to an honest intention or purpose.

CHAP. XX.

Of Fortitude, as to Fear of the Gods.

WE must first treat of a twofold fear, far transcending the rest. For if any thing ever produced the ultimate good, and chief pleasure, proper to the mind; it was the expunction of those opinions, (and all allied to them,) which have impress'd the greatest fear upon the mind. Such is the condition of miserable Mortals, that they are not led by sound opinions, but by some affection void of reason; so that not discerning what is ill indeed, by reason they suffer an equal and no less intense perturbation, than as if these things, for which they are troubled, were indeed such.

That, which in the first place, useth to possess men with greatest fear, and consequently causes in them the greatest perturbation, is this, that, conceiving there are certain blessed and immortal Natures, they do yet think them to have wills, passions, and operations, plainly repugnant to those attributes, (of beatitude and immortality,) as perpetual Solitude, Business, Anger, Favour; whereby it comes to pass, that ill men receive great harms by way of punishment; the Good protection and benefits, from these Natures, that is from the Gods. Thus men being nursed up in their own, that is, in human affections, fancy and admit Gods like to themselves; and whatsoever suits not with their own dispositions, that they conceive incompetent to them.

Hereupon, it cannot be express'd, how great unhappiness mankind hath drawn upon itself, by attributing such things to the Gods, especially Anger, and Severity; by reason whereof, Mens minds being dejected, every one trembles with fear, when the Heaven Thunders, or the Earth quakes, or the Sea is Tempestuous, or any other thing happens, whereby he is perswaded, that the Gods intend to punish him, miserable man.

But it is not so with those, who, instructed by reason, have learnt, that the Gods live in perpetual security and tranquillity, and that their nature is too far remov'd from us, and our affairs, for them to be either pleased or displeased with us. Truly if they were, and did hear the prayers of men, how soon would all men be destroy'd, who continually imprecate mischief on one another?

Therefore, when you conceive God to be an immortal and blessed Animal, (as the common notion concerning God suggests,) take heed of attributing any thing to him, which is either incompetent with immortality, or repugnant to beatitude; but let all your conceptions be such, as may consist with immortality and beatitude.

Gods indeed there are, for the knowledge of them is evident, as we formerly proved; but such as men commonly conceive them, they are not. For first, they describe them by some adjuncts or properties, as when they say, they are immortal and blessed, and then overthrow what they asserted, by applying other attributes to them, repugnant to the former; as when they say, that they have business, or create business for others; that

that they are affected with anger or favour, which, as I hinted formerly, imply imbecillity, fear and want of external assistance.

Neither need you fear, that this will make you esteemed impious; for he is impious indeed, not, who denies the vulgar Gods of the multitude, but he who ascribes to the Gods the opinions of the multitude. For those things which are commonly delivered concerning the Gods, are not genuine prænotions, but false opinions.

By the same reason likewise, he is not pious, who out of fear to the Gods addresseth himself to every stone, to every Alter, besprinkles every Temple with the blood of Victims: But he, who contemplating all things with a serene and quiet soul, conceiveth aright of the Gods, and worshipping them in his mind, not induced thereto by hope or reward, but for their excellent Majesty and supreme nature, observes all kind of veneration towards them, and useth expressions suggesting such thoughts, as out of them arise no opinions repugnant to veneration, and consequently, suffereth not that which others suffer, in whose minds, this contrariety causeth an extraordinary perturbation.

C H A P. XXI.

Of Fortitude, as to fear of Death.

THat which next striketh greatest terror into the minds of men is *Death*, for that they expect, and fear, I know not what everlasting ill, as Fables tell them, (and which is strange, in the very privation of sense which then happens, as if they should still have being,) not knowing that all stories concerning the infernal places (which we spoke of formerly,) and mere fictions of Poets; or if they contain any thing of truth, it is made good in this life, by vain fears, superfluous cares, insatiable desires, and other violent passions, which torture unhappy men in such manner, that their life is worse than hellish.

That you may exempt yourself, therefore, from these terrors, accustom *your self to this thought, That death nothing concerns us*; and to this argument, *That all good or ill that happen to us is with sense; but death is a privation of sense*, for death is a dissolution, and what is dissolved remains without sense. So that death seems easie to be contemn'd, because it is an ineffectual Agent, and in vain threatens pain, when the patient is not.

Indeed the ordinary sort of men *abhor death, because they look upon it sometimes as the greatest of pains, sometimes because they apprehend it as the cessation of all things that we enjoy in life; but without cause is it, that not to live, or not to be, is fear'd; for when it comes to that, we shall not have any faculty left whereby to know, that, not to live, is ill.*

Hence we may conclude, that they are very foolish who abhor, amongst other things, to think, that after death their Bodies should be torn by wild Beasts, burnt by fire, devoured by worms; for, they do not consider, that then they shall not be, and so not feel nor complain, that they are torn, burnt, devoured, turned into corruption. As also, those who are troubled to think, that they shall no longer enjoy the conversation of their Wives, Children,

Friends; no longer do them good offices nor assist them; for these consider not, that they shall have no desire of such things.

Death therefore, which is esteemed the most horrid of Ills, doth (as I said,) nothing concern us, because while we are, Death is not; and when Death is, we are not: So that it concerns neither the living nor the dead; the living it toucheth not, the dead are not. Laert.

Now the assured knowledge that *Death nothing concerns us, makes us enjoy this mortal life, not adding uncertain time to it, but casting away the desire of immortality.* For, in life, there can be nothing of ill to him, who perfectly understands, that there can be nothing of ill in the privation of life. Whence, as we make choice not of the most meat, but of the best, so should we covet, not the longest, but most pleasant life.

Neither can he be acquitted of folly, who says, he fears death, for that, when it comes, it brings not any trouble, but because it afflicts the mind with grief before it comes: For, that which brings no trouble with it, when it comes, ought not to make us sad with expectation. Certainly, if there be any thing of inconvenience or fear in this business, it is the fault of him that is dying, not of Death: Nor, is there any trouble in death, more than there is after it, and it is no less folly to fear death, than to fear old age, since as old age follows youth, so death follows old age.

Moreover, we are to hope at least, that either we shall feel no pain at the point of death; or if any, so short, as the very consideration of that may comfort us; for no great pain lasts long, and every man ought to believe, that, though the dissolution of his Soul and body be accompanied with some torment, yet that being past he shall feel no more pain.

He also who advised young man to live well, and old to dye well, was very ridiculous, for these are not to be parted; the meditation of living well and of dying well is one and the same, seeing that a young man may dye suddenly, and an old man hath something more of life behind: Besides, the last act is a part, even the crown, of life. Laert.

Both young and old ought to consider, that though men may provide for their security in other things; yet as to death itself, all men live as it were in a City without walls or bulwarks.

Besides, a young man may dye happy, if he consider, that he should find nothing more in a longer life, than what he hath already seen and experienc'd; and an old man may live unhappy, if, like a vessel full of holes, he suffer the goods of life only to run thorough him, and so is never full of them, nor, as a sober guest of Nature, after a plentiful feast of life, is willing to go away, and take his repose.

Think not any old man happy for dying old, but for dying full and well satisfi'd with goods.

Lastly, far more foolish and ridiculous is he, who saith, It is good either not to be born at all; or as soon as born to pass the gates of death. For, if he speak this in earnest, why does he not presently rid himself of life, it being very easie for him so to do, if he hath well deliberated upon it? If in jest, he is perfectly mad, because these are things that admit not of jesting. Again, in life there is something amiable in itself; and therefore they are no less to be reproved who desire death, than they who are afraid of Laert.

of it. What can be so ridiculous as to desire Death, having made your own life unquiet by fear of death? Or, out of a weariness of life, to run to death, when your own imprudent and constant course of life is the cause of that weariness.

You must rather take care to make life not tedious to you, that you be not willing to part with it, unless either nature, or some intolerable chance summon you to surrender it. And in that respect we ought seriously to consider, whether it be more commodious, that death come to us, or that we go to death. For though it be an evil indeed to live in necessity, yet is there no necessity we should live in necessity; since Nature, though she hath given us but one way into life, yet hath furnish'd us with many to get out of it.

But though it may sometimes so fall out, that it behoves us to hasten and flye to death, before some greater power intercept and rob us of the liberty to quit life; yet ought we not to attempt any thing, but when it may be attempted conveniently and opportunely, and when that long waited for time comes, then to leap out of life resolutely. For neither is it fit for him, who thinks of flight, to sleep; nor ought we to despair of a happy exit even out of the greatest difficulties, if we neither hasten it before the time; nor, when the time is come, delay it.

C H A P. XXII.

Of Fortitude against Corporeal pain.

Corporeal pain is that, which alone would deserve the name of ill, even of the greatest ill, did we not of our selves add to it the pain of the Mind, which is worse than that of the Body. For discontent of mind, taken at the loss of riches, honours, Children; and the like, many times becomes more intolerable than the greatest corporeal pains; but this is by reason of our own opinion, which if it were right and sound, we should not be moved by any such loss, in regard that all such things are without or beyond us, and touch us not indeed, but only by mediation of that opinion which we frame to our selves. And thereupon we may infer, that there is no real ill, but the pain of the Body, and that the mind ought not to complain of any thing, which is not joyned to some pain of the Body, either present or to come.

He therefore who is wise, will be very cautious that he draw not any corporeal pain upon himself, or do any thing upon which corporeal pain may ensue; unless it be done either for avoidance of some greater pain, or acquisition of some greater pleasure, as we formerly declared. Hence we may well wonder at those Philosophers, who, accounting health, which is the state of indolence, a very great good, as to all other respects, do yet, as to this, hold it to be a thing indifferent? as if it were not a trivial playing with words, or rather a high folly, to affirm, that to be in pain, and to be free from pain, is all one thing.

But if any necessity either of the natural constitution, whereby the Body is obnoxious to diseases, or of any external violence done to him, which, as human affairs stand, cannot sometimes

be avoided, (for that a wise and innocent person may sometimes be arraigned, condemned, beaten and tortur'd, is manifest,) if either of these shall bring pain upon him, then is it his part to endure that pain, with a constant and valiant mind, and patiently to expect, either the solution or relaxation of it.

Certainly, Pain never continues long in the Body, but that which is great, or highly intense soon ceaseth, for either it is determined of itself, and succeeded, if not by absolute indolence, yet by very great mitigation, or is taken away by death, in which there is no Pain. And as for that Pain which is lasting, it is not only gentle, but hath many lucid intervals; so that it will not be many days, nay, not hours, ere the Body hath not only ease, but pleasure.

And may we not observe, that long or Chronical Diseases have more hours of ease, and quiet intervals, than of pain and trouble? For (not to mention that the thirst, which they raise, increaseth the pleasure of drinking,) they allow us time for repast, strength to talk, some recreation and sports, and for the most part have many long intermissions, in which we may apply ourselves to studies and business. Whence it is evident, that as great pain usually is short, so long pain is light; thus the shortness makes amends for the greatness, the remissness for its length.

Let us therefore often reflect, that Pain either is not intolerable, or not perpetual; for if it be long, it is light; if great, short. Provided, that you remember the bounds prescribed to the things themselves by nature, and add nothing through your own opinion, whereby you may think, and make it greater than it is; and oppressing yourself with complaints, and impatient exasperations, help only to render it more insupportable: Whereas, on the other side, nothing doth assuage Pain more than constancy, and insurance to suffering. Whence it comes that a wise man, accusom'd to Pain, can many times rejoyce and smile, even in the height of his sickness.

Thus much we can testify of our friend *Metrodorus*, who hath at all times behaved himself undauntedly, as well against death, as pain. For concerning myself, I need not say any thing, who frequently suffer such pain in the bladder and bowels, as none can be greater: And yet full amends, for all these, is made by the alacrity of mind which redounds to us, from the remembrance of our dissertations and inventions, and by our constant patience; whereby we forbear not to esteem those very days, in which we are tormented with those diseases and pains, happy.

And this indeed is the reason, why we formerly said, that a wise man, though in torments, may yet be happy; because he both softens, by his patience, the necessity which he cannot break; and, as much as possible, withdraws his mind from his suffering Body, conversing no otherwise with it, than as with a weak and querulous part: He bethinks himself, what he hath at any time done honestly and generously; and fixing his memory upon those things, which he hath most admired, and have most delighted him, cheers himself with the past goods, for which he is far from shewing himself, as fools usually do, unthankful. He

He also considers, that he can do nothing more worthy that virtue and wisdom which he professeth, than not to yield the victory to pain, though the most hard to be sustained of all things; to bear up courageously, to repulse by patience so dangerous an enemy; and at length to make so perfect a conquest, as that the very remembrance of it will be most delightful, and especially through absolute indolency, which will be so much the more pleasing, as a quiet Haven is most welcome after a Tempest.

Now if a wise man is not without his alleviations and comforts in the greatest pain, what shall we say of him in remiss and gentle pains, or at the loss of some limb or sense? Truly, it was not without reason, that I said formerly, a wise man, though depriv'd of the best of Senses, Sight, would yet be happy: For if the Night doth not diminish the happiness of life, why should blindness, that so nearly resembles Night? However he may want some pleasures that depend upon the light, yet are there several others left him, and what is much above all the rest, he may delight his mind with many things, and many ways without Seeing.

For since to a wise man, to live is to think, certainly his thoughts are not oblig'd to his eyes in the business of searching into truth. And that man, to whose Doctrine I gave up my name, could live long and happy, without being able to distinguish colours: But without the knowledge of things, he could not have lived happy. Moreover, he was of opinion, that the perspicacity of the mind was very much dimm'd by the sight of the eyes; and while others could scarcely be said to see things that were before them, he travelled abroad into all infinity, not stopping at any bounds.

CHAP. XXIII.

Of Fortitude, against Discontent of Mind.

I Said, that Discontent of Mind is commonly taken at such things as are conceived to be external Ills, and the Contraries to those Goods which we most love and desire. For men call some things adverse, others prosperous: And we may generally observe, that the Mind, which is elevated, and insolent with prosperity, and cast down with adversity, is abject and base. Hence is it, that all we should here say, concerning the Ills which cause Discontent, and against which we have need of Fortitude, may be sufficiently inferred from what we formerly said, touching those Goods which are the general objects of our desires or inclinations, and in respect whereof we have need of Temperance.

Let it suffice in general to repeat what we formerly said, That Discontent of Mind is not grounded upon Nature, but merely upon opinion of Ill. Wherefore, who ever conceives himself to lie under some Ill, whether only foreseen and expected, or already come upon him, must of necessity be discontented. For how comes it, that a Father whose Son is kill'd, and he knows it not, is not a whit less chearful or merry, than

if he were alive? Or that he, who hath lost much of his good Fame abroad, or all his Goods, and Cattel, by Robbery at home, is not at all sensible of either loss till he hear of it? Is it not Opinion only which discontents him? For, if Nature did it, at the same minute wherein the Son was slain, the Father's mind would be struck with a sense of his death; the like would be perceived in the loss of Honours or Goods.

Therefore, to raise Discontent in the Mind, it is necessary that Opinion, not Nature, intervene. And that you may doubt the less of this, observe, that a Man who thinks a supposititious Child his own, and his own supposititious; if News be brought him of the death of his own Son, he will not be moved, but if of his supposititious, he will be exceedingly afflicted; and this comes not from Nature, but Opinion.

But that those things which afflict us are not indeed Ills to us, appears even from this, that they are without or beyond us, and cannot reach us of themselves, but only by our own opinion are made Ills to us. And hence it was that I said, it is reason which makes Life happy or pleasant, by expelling opinions, for which the mind is possess'd with trouble. For it is discontent alone which disturbs the mind, and its quiet and content.

But how can reason expel these opinions? By teaching a wise Man to arm his mind against Fortune. For the external things which we think Goods, and the loss of which causeth discontent in our minds, are termed the Goods of Fortune, because indeed they are not ours, but come and go, as Fortune pleaseth.

For this reason, a wise Man esteems them no more belonging to him, than to others; nor possesseth them so, as not to be ready to part with them. He hath cast off that opinion which tells us, Such Goods are our own, and can never be lost; and hath put on the right opinion, which assures him they are uncertain and transitory, as indeed they are. And hereupon he considers with himself before-hand, what he shall do if he chance to lose them; he considers, I say, before-hand, that when it happens, he may not be afflicted with vain grief, but take it quietly, that Fortune redemands what she gave not, but only lent.

Certainly to those who think, that to be deprived of these Goods is an Ill, the most unhappy thing of all is, that Premeditation encreaseth the Ills which it might have much diminished, if not wholly prevented; and thus becomes only a foolish consideration of Ill to come, and which perhaps will never come. Every Ill is of itself troublesome enough when it comes; and if it chance never to come, we draw a voluntary misery upon ourselves to no purpose, and by that means shall never be free from trouble, either by receiving or apprehending some Ill; for he who always thinks that some Ill or adversity will befall him, to him that very thought is a continual Ill.

Now if it shall happen also to a wise man, that, by being long accustomed to the possession and use of the goods of Fortune, he hath not quite blotted that opinion out of his mind, and so some little of Fortune intervene, and give him a blow, by reason whereof, he falls into

LIII

some

some discontent, and perhaps grieves: In this case, the asswagement of his discontent consists in two things, formerly prescribed as remedies against corporeal pain; *viz.* Diversion of his thoughts from his loss, or the cause of it: and an application of them to those things, which he knows to be grateful and pleasant to his mind.

For the mind of a wise man is conformed to reason, and follows the conduct thereof; but reason forbids to look on those things, which create and nourish discontent; and thus he abstracts the mind from bitter thoughts, to convert it to think upon goods, either future or past, especially those which he knows please him most.

Those sad and importune thoughts indeed are very apt to return, but he must insist upon that diversion and application of the mind whereby it is brought by little and little to wear out, and deface its sorrow. Neither doth time diminish discontent any other way, than by exhibiting various occasions of divertisement, which, by degrees, take the mind off, and make her forget, as it were, the things that caused her discontent.

C H A P. XXIV.

Of Justice in general.

IT rests, we speak of Justice, which, as I said before, wholly relates to others, and therefore belongs to a man, as living in a civil society. And certainly it is a common tie, without which, no Society can subsist, it being a virtue which gives to every one that which is his, and takes care that none receive injury.

And to begin with that, with which I used to begin, in treating of the other virtues, truly not unlike are the things that may be said of this. For, as I shewed, that Prudence, Temperance, Fortitude, are inseparably joyned to pleasure, the same may be said of Justice, which not only never hurts any one, but, on the contrary, always preserves and nourisheth something, that calms and quiets the mind; and this as well by its own power and nature, as by hope, that none shall ever want any of those things, which pure undepraved Nature desires.

Now forasmuch as temerity, lust, and cowardise, always excruciate the minds alway, perplex and trouble it; it is impossible, that a mind in which Injustice dwells, should, for that very reason, because Injustice dwells in it, be otherwise than unquiet: Because though such a mind should attempt any unjust action with the greatest secrecy imaginable, yet can it not persuade itself, but that it will at last come to light. And though some men may think their consciences sufficiently barricado'd and fortifi'd by their wealth, yet they dread the divine power, and imagin, that those very solitudes and troubles, which torture their souls day and night, are sent by the immortal Gods for their punishment.

But, how can we expect, that unjust actions should diminish the troubles of life, so much as remorse of conscience, penalties of the Law, and the being hated by our country-men encrease them? And yet, in some men, there is not any bound or moderation of wealth, of honour, of

power, of lust, of gluttony, and other desires, which nothing that is unjustly gotten diminisheth, but rather encreaseth and emflameth, so that they are fitter for restraint than instruction.

All sound and Judicious persons therefore, are, by right reason, induced to Justice, equity, honesty; but neither can unjust actions benefit a Child or impotent person, for such can neither easily effect what they endeavour, nor obtain their ends when they have effected it. Besides, riches are more suitable to fortune, or a noble genius, which they who enjoy, procure to themselves a general respect and goodwill, and (what most conduceth to quiet living,) an endearment from others, especially there being no cause of offending.

For the desires which proceed from Nature are easily satisfied, without injuring any man; those which come from vain opinions are not to be followed, for they aim at nothing which is desirable, and there is more detriment in the injury itself, than advantage or benefit in the things that are gained by the injury.

Nevertheless, no man can say rightly, that Justice is a virtue, experible only for itself, but because it brings great pleasure along with it, For to be belov'd, and to be dear to others, is pleasant, because it renders life more safe, and pleasure more full. We therefore conceive, that Injustice ought to be avoided, not only for the inconveniences which happen to the unjust; but much more, for that as long as it is in the mind, it never suffers it to take breath, never to be at rest.

These considerations might perhaps be sufficient, yet I shall add something, partly concerning *Right* or *Just*, from which *Justice* is denominated, that we may come the better to understand what is its original, among whom it is practised, what are its benefits; and partly concerning some other virtues nearly allied to Justice, as, *Beneficence*, *Gratitude*, *Piety*, *Observance*, and *Friendship*.

C H A P. XXV.

Of Jus (Right,) or Just, whence Justice is denominated.

First therefore, forasmuch as *Justice* is so named, for that it preserves the *Jus* or *Right*, due to one another, or performs that which is *Just*; it is worth our knowing what that is, which ought to be esteemed *Right* or *Just*.

Now in regard Justice was instituted in order to the common good, necessary it is, that *Right* or *Just*, to which Justice hath respect, should be such a good, as is common to all and every member of the Society. And because every one, by the direction of nature, desires what is good for himself; it is also necessary, that what is right or just be conformable to Nature, and therefore termed Natural.

It is not without cause that I hint this; for sometimes it happens, that in a Society, something is prescribed as *Right* and *Just*, which is not good for the Society, and so being not Natural, or contrary to Nature, it cannot, but by abuse, and only in name, be reputed *Right* or *Just*, since that

that which hath the true reason of Natural right or just, is such, as that it is not only prescribed as profitable and good, but is really such.

Wherefore to speak properly, Natural right or just is no other, than a symbol of utility, or such an utility agreed upon by concurrence of votes, as may keep men from hurting, or being hurt by one another, so that they may live securely; A good, which every man is taught by Nature to desire.

I here take Profitable and Good for the same thing; and I conceive, that, to a thing's being just or rightly kept, two things are requisite; One, That it be profitable, or respect the common utility, that is, security: The other, That it be prescribed by the common consent of the Society; For nothing is compleatly just, but what the Society, by common consent or agreement, hath decreed to be observed.

Hence it is, that the name of Right or Just is usually given to both these, since not only what is profitable is said to be just, but also the very common Covenant or prescription of the Society, which is Tearn'd Law, as being that which Prescribes to very one what is profitable or just.

Some there are, who conceive all things that are just, to be just of their own proper and unalterable Nature, and that Laws do not make them to be just, but only declare and prescribe, according to the Nature which those things have. But it is not so, but rather after the same manner as is observed in other things, which are profitable, as in those which concern health, and many others of the like Nature, which are beneficial to some men, hurtful to others; by which means they often fail of their mark, as well in common as in private.

And seeing that every thing is apprehended every where, always, and by all men, to be really such as it is in its own Nature, because its Nature is unalterable, whether are those things, which these men call just, just in all places and always, and amongst all men? Ought they not to have observed, that many of those things that are constituted by Laws, and Consequently accounted lawful and just, are not constituted and received amongst all Nations alike, but are neglected by many as things indifferent, rejected by others as hurtful, and condemned as unjust? And are there not some, who account things not generally profitable, to be nevertheless such; and accordingly embrace those things which are not generally approv'd, if they find them advantageous in respect of their own Society, and seem but to promise some general benefit?

In fine, that is universally just, or hath the Nature of just, which is profitable or conformable to the prenotation of right or just even now described: For particularly, according as utility is various amongst several Nations, so also is right or just, various; insomuch as what is esteemed just in one, is unjust in another. Whence, if it be demanded, whether just or right be the same among all men? I answer, that, as to the general, it is the same, for it is something that is profitable in mutual society: But the differences of several Countries, and various causes amongst them being considered in particular, it comes to pass that it is not the same amongst all.

And, (to deduce some few particulars hence,) whatsoever is by experience found profitable to a mutual Society, or the common participation of such things as are esteemed just, that thing hath the nature of just or right, if it be such as its utility extends unto all. But if any man shall establish such a thing for just, and yet it shall happen not to be profitable to mutual Society, it hath not the true nature of just or right.

Again, though sometimes the utility of that which was esteemed just may fail, nevertheless, if there be sometimes some utility in it, so that it corresponds to the prenotation of just or right, it is truly just for that time: They certainly will esteem it so, who confound not themselves with vain loquacity, but look more generally into human affairs.

Lastly, where, no new circumstance of things intervening, those very things, which were esteemed just in the actions of men, are found not to correspond with the notion of just, they are not just at all: But where, upon innovation or change of affairs, those things, which we formerly decreed to be just, cease to be profitable, they were just, as long as they continued profitable to mutual Society, but as soon as ever they ceased to be profitable they ceased to be just.

C H A P. XXVI.

Of the Original of Right and Just.

BUt that we may go higher and deduce the thing from its original, it appears that Right and Just are as ancient, and Justice hath been kept amongst men, as long as they have had societies amongst themselves.

For, in the beginning, Men wandring up and down like wild beasts and suffering many inconveniences, as well from beasts as from the injuries of weather, a certain natural agreement amongst them (by reason of their likeness in form and soul or manners,) perswaded them to joyn together in several companies, and to make some provision against those inconveniences, by building huts or Cottages, and Furnishing themselves with other Shelters, as well against Wild Beasts as the Weather. But in regard every one was desirous to be in a better condition than another, hereupon there arose frequent contestations about food, women, and other conveniences, which they took away from one another; until at length they perceived, that they could not live secure and commodiously, unless they made a covenant not to injure one another, and that in case any one did harm and injure another, the rest should punish him.

This was the first band of Society; which, supposing that every one might have something proper to himself; or which he might call his own, as being his, either by first possession, or by purchase, or by acquisition through his own industry, or otherwise, decreed, that it should remain in the possession and disposal of that person. Now this band or covenant was no other than a common law, which all were equally bound to observe, and which did confirm to every one a certain right or faculty of using whatsoever was his own. Whereupon that very law

also came to be (as I formerly intimated,) the common right as it were of the Society.

I need not mention, how the whole Society transferr'd their power of restraining or punishing, upon some few wise and good persons, or else on one, who was reputed the wisest and best amongst them. I shall only observe, that in the Society those were accounted just or favourers of justice, who being content with their own rights invaded not those of other men, but did injury to none; those unjust, or doers of injustice, who being not content with their own rights, did assault the rights of other men; and, harming them by rapine, personal violence or some other way, became injurious to them.

Thus men lived a while peaceably and happily, especially being under one or more Kings or Princes, the wisest and best, who being wholly intent upon the conservation and utility of the publick, made, and, with consent of the people, established divers Laws, to prevent dissensions from rising, or, if any did arise, to compose them. But, such is the corruption of mens manners, in process of time the government fell into the hands of Princes or Kings that were not good; and those being either deposed or slain, it reverted to the people, whereupon tumults were raised by the factions of such as aspired to the supream power, until at length, the people languishing under enmities and dissensions, and weary of living by force and hostility, became willing to submit again to the Government of Magistrates or Princes. But because the Wills of Princes had formerly pass'd for absolute laws, they made a covenant with their Governours, about those Laws, according to which they desired to be governed; and thus brought themselves again under Laws, that is, under strict Rights.

But not to descend to later times, but to touch only upon that chief head, which concerns the preservation of life, for whose security (as being the most precious of all things,) care was taken from the beginning that it might be established by common Covenant or Law; * It appears, that those most wise and good founders of Laws, having regard to the Society of life, and to those things, which men usually do each to other, declared it a wicked act to kill a man, and decreed, that the Murthrer should be punish'd with more than common ignominy, and loss of life. And to this they seem to have been induced, partly by considering the conciliation of men among themselves, (of which I treated even now,) in respect whereof men ought not to be as forward to destroy an animal of their own kind, as one of different kind, which it is lawful to kill; partly, indeed chiefly, by considering, that men ought to abhor, what is no way advantageous to life, but tends only to evil.

Indeed from the beginning, to those who had regard to the utility of that constitution, there needed not any other cause to make them contain themselves from doing any such act: But they, who could not sufficiently comprehend of what great concernment it was, abstained from murdering one another, only out of a fear of those great punishments; both which we may observe to have happened even in our own days. They, who consider the great advantages of such a constitution, are sufficiently disposed for a constant observance thereof; but they, who are not capable of

understanding it, conform themselves to it out of fear of the punishments threatned by the Laws, and ordained by the more prudent, against such as had no regard to this utility, the greater part of the multitude admitting them as legal.

For none of the Laws written or not written that have been derived to us, and shall be transmitted to our posterity, did at first subsist by any force or violence, but (as I said,) merely by the consent of those who used it. For it was prudence, not strength of Body or imperious sway, wherein they, who settled these Laws upon the People, Transcended the Vulgar; and this, by inducing some men to consider, what would be profitable, (especially when they did not before so well understand it as they ought,) and by Terrifying others with the greatness of the Punishments. Nor could they indeed make use of any other remedy for cure of the peoples ignorance of this utility, than fear of the punishment prescribed by the Law. For even now also, it is fear alone, that keeps the ordinary sort of men within the bounds of their duty, and hinders them from committing any thing against either the publick or private good.

Now if all men could alike understand, and bear in mind what is truly profitable, they should need no Laws at all, but would of their own accord beware of doing such things as the Laws forbid, and do what they enjoyn: Since only to know what is profitable and what hurtful, is more than sufficient, to induce them to avoid this, and pursue that. But as for those, who discern not what is beneficial, what hurtful, doubtless the commination of punishment against such is highly necessary; insomuch, as the fear of the punishment impendent causeth them to suppress and bridle those heats of their passions, which instigate them to unjust actions, and in a manner compel them, though against their wills, to do what is right.

Hereupon was it, the Law-makers ordained, that even involuntary killing of a man should not be free from all mulct and punishment. Not that they might not, to such as were apt to commit wilful murder, give any occasion of pretext or excuse, to imitate that on set purpose, which the others did unwittingly; but lest they might seem not to have used sufficient caution, and diligence as to this particular, whereupon many things would fall out, which indeed were not involuntary. Nor could this course but prove beneficial for the same causes, for which men were expressly prohibited to kill each other. So that considering, that, of these actions, of this kind, that are done involuntarily, some happen from a cause, that could not be fore seen, nor prevented by human nature, others meerly through our negligence, and heedlessness of the imminent danger; therefore to prevent negligence, which might tend to the destruction of others, they provided, that even the involuntary action should not pass altogether unchastised, but took away the frequency of this sin, by the fear of Law.

Moreover I conceive, that even those slaughters of men, which were permitted by the Law, were made liable to those accustomed expiations, by publick Lustrations, (and that by order of the same persons, who first ordained them,) for no other cause but this, that they had a mind to deter men from involuntary slaughter, which was too too frequent.

For the vulgar sort of men stood in need of something, to restrain them from doing any thing rashly, which might not conduce to the publick utility; which these first Law-makers understanding, not only decreed severe punishments, but withal strook another fear

*Parph. de non
esu carniū.

fear into their minds, the reason of which was not so manifest as the other, declaring that such as had killed a man, by what means or accident soever, should be impure until they had used lustrations.

Thus the brutish part of the Soul, in which the affections and passions reside, being instructed and reform'd, came at length to that Gentleness which now flourisheth amongst us, by applying the arts of taming and civilizing our savage affections, which were invented, and practised at first, by those who ruled the multitude; of which, this is one chief act among the rest, that men should not destroy one another without any distinction.

C H A P. XXVII.

Between whom, Right and Justice is to be exercised.

NOW since, it may be demanded, Betwixt what Persons, as well Right, and the violation of it, which is Injury, as Justice, and what is opposite to it, Injustice, properly consist? We shall therefore explicate this, by comparing men with other living Creatures.

As therefore, there is no reason of Right or Injury, or just and unjust betwixt Animals, that could not make a common agreement, not to hurt nor be hurt by mutual invasion: So neither, is there between those nations which neither would not, or could not, enter into a mutual engagement, not to hurt, nor be hurt by one another.

For just, or right, the conservation whereof is Justice, hath no being at all, but in mutual Society; whence Justice is the good of a Society, insomuch as by it, every one of the said associated Persons live securely, free from that anxiety, which is caused by the continual fear of harm. Whence it follows, that whatever Animals, or what Men soever, either cannot, or will not make an association, nor enter into Covenant among themselves, must want this good, not being reciprocally oblig'd by any bond of right or Justice, whereby they might live securely. And so to them, there can remain no other reason of security, than only this, to do harm to others, that they be not harmed themselves.

As therefore, when one of those brute Animals, amongst which there hath past no such agreement or pact, doth hurt another, though it may be said that one hurts the other, yet it cannot be said that one doth an injury to the other, because one was not bound by any right, compact, or Law, not to hurt the other: In like manner, if one man of that nation, among whom there is no Covenant, or association, hurt another, it may be said that he hurts him, but not that he wrongs or doth him an injury; because he was not obliged by any compact or Law, not to hurt him.

I speak of brute Animals, not as if there were any even of those who live in herds or flocks, that are capable of entering into Covenant, not to harm or be hurt by each other, and so might be conceived to be just if they do not hurt each other, and unjust if they do; but only to the end, that from thence it may be the better understood, that, even among men, justice in itself is nothing, for that it is found only in mutual Societies, according to the amplitude of every

Country, in which the inhabitants may conveniently enter into agreements, and Covenants of not doing, or receiving any hurt; since otherwise, and in a man singly considered, there is no Justice at all; and what is Justice in one Society of men, many times is in respect of contrary Covenants, Injustice in another.

But can there be Justice betwixt Men and other Animals? Certainly not. For if men could make a covenant with brute Animals, as they can with other men, that they should not kill, nor be killed by them, without any distinction: then indeed, might the reason of Just or right be founded betwixt them and us, since the end of that covenant would be the security of both parties: But, because it is impossible, that Animals void of reason should be obliged by one Law with us, it must also be impossible, for us to obtain more assurance of security from Animals, than even from inanimate beings. So that, there is no other way for us to secure ourselves from brute Beasts, but only to execute that power of destroying them, which Nature hath given us.

Perhaps you will, by the way, demand, why we kill even such Animals, as can give us no occasion of fear? This we may do either through intemperance, and a certain natural savageness or cruelty, as we exercise cruelty even upon men, who live out of our Society and cannot give us any fear. But it is one thing, to break the rules of Temperance, or any of its kinds, as Sobriety, Lenity, or Mansuetude, or, (if you please,) mere humanity or goodness of nature; another, to violate Justice, which presupposeth Laws and Covenants established by mutual consent.

* Nor can it be alledg'd, that we have a power * porphy. granted us by Law, to destroy any such Animals, as are not offensive or destructive to mankind. I confess, there is not any kind of living Creatures, among all those we are allowed to destroy, which being permitted to increase to vast multitudes, would not prove pernicious to mankind, but being preserved in such number as ordinarily they are, are not some ways useful to life.

For sheep, kine, and all such like, as long as they are preserv'd to a moderate number, afford us many necessaries for life: But if they were suffered to multiply in a far greater manner; certainly, they could not but prove very hurtful to us, as well in regard of their strength, as for that they would devour the fruits of the earth, that should serve for our subsistence. And for this very cause is it, that we are not prohibited to destroy such Animals, yet preserve so many of them as may be useful to us, and easily ruled by us.

For, of Lyons, Wolves, and all such as are called wild Beasts, (whether little or great,) we cannot take a certain number, which being preserved, may afford us any relief necessary to life, as we may of kine, horses, and the rest, that are called tame Creatures. Whence it comes to pass, that we endeavour wholly to exterminate those, and of these cut off only so many as are over and above a Competent stock.

Hereupon, (to touch briefly on this also,) we may conceive, that even among those Nations who make their choice of certain sorts of Animals for food, the matter was determined and prescribed by certain Laws, grounded upon reason correspondent to those we have now given. And as for those Animals that were not to be eaten, there was respect had to their utility and inutility, and for some reason

reason Peculiar to each Country ; to the constitutions whereof there is no necessity for us to adhere, who live not in those places.

Hence we come to understand, that from the very beginning a difference was put betwixt the killing of Men, and the killing of all other Animals * ; For as to other Animals it is manifest, that those primitive wise persons who prescribed what we should do, and what not, did not forbid to kill any of them, because the profit that ariseth from them is perfected by the contrary action, that is, by killing them. For it could not be, that men living promiscuously amongst beasts, could preserve themselves in safety otherwise, than by expelling or destroying them.

* Porpb.]

* Porpb.

But as concerning Mankind, * Some, who at that time were more gracious than the rest, (these perhaps were they that persuaded men first to enter into the Covenant we spoke of) remembered, that in those places where men lived promiscuously, they had sometimes abstained from slaughter, out of a respect to that utility which conduced to their safety ; as also represented to others in their meetings what had hapned, that refraining from slaughter of an Animal of the same kind, they might defend the society of life, which is generally the cause of every man's particular safety. And it was profitable at first to quit the society of either other Animals, or Men meeting together, at least not to hurt any, to avoid the incensing of, not only other Animals of several kinds, but also Men, who are all of the same, and apt enough of themselves to do harm. Whence, upon this account, Men refrained laying hands upon an Animal of their own Species, that offer'd itself to the communication of things necessary, and contributed some benefit to society.

But in process of time, there being a great increase on both sides, and Animals of different Species being forc'd away, Men began to make use of their reason, (whereas before that time they had trusted altogether to memory,) and to enter into consultation what was to be done in order to their safety, when they should come together, and conjoin their habitations. For they endeavor'd strongly to restrain those who rashly and imprudently would murder one another, and thereby made the mutual assistance, that Men were able to afford each other, daily the weaker ; and this chiefly, because those great inconveniences which had frequently fallen out in former times upon the like cases, were utterly forgotten. Now whilst they endeavour'd to bring this to pass, they at length introduced the Laws and Constitutions which continue in all Cities and Nations even to this day, the Common people of their own accord consenting to them, as I said ; being sensible how much greater utility would from thence accrue to them, living in mutual society. In like manner, it conduceth also to security, both to destroy without any pity what is pernicious, and to preserve whatever is useful to exterminate it.

Thus it is probable, that upon these Considerations, the slaughter of all other Animals came to be permitted, and that of Men prohibited. But I insist too long hereupon.

CH A P. XXVIII.

With what Right Justice is to be exercised.

Justice being established by a mutual agreement, it remains, that every Man, whether a Native or Alien, ought, from the time he hath given up his Name to a Society, to account himself a Member of that Society, upon this condition, either expressly or tacitly, that he hurt none of his Fellow-members, nor be hurt by any other. Wherefore he must either stand to the Covenant, or depart out of the Society ; for he is not to be suffer'd to live in the Society upon any other terms. Whence it follows, since by nature no Man is willing to receive harm from another, that he do not that to another which he would not should be done to himself.

Hereupon it may be imagined, that the Laws in all Societies were made in favour of the wise, not to prevent wise Men from doing unjustly, but that others should not injure them : For as for them, they are so well disposed, as that, if there were no Laws, yet would they not do harm to any. They have prescribed bounds to their desires, and accommodate them to Nature, which requires nothing that must be obtained by ways of Injustice ; nor indeed is there any of Nature's pleasures which induceth a Man to do injury to another, but some exorbitant desire arising from vain opinion.

For Nature having (for Example,) provided Herbs, Corn, Fruits, for Food, competent and useful; and Water for Drink, things easie to be had, it cannot be the pleasure of satisfying Hunger and Thirst, that should cause a Man to rob his Neighbour, or commit any of those Injuries which they usually do : But the vain desire of living at a higher rate, more splendidly and wantonly, that so he may acquire wealth enough to discharge the expences of his Luxury. The same may be said also of those, who not content with plain Apparel, a plain House, a plain Match, and the like, through Ambition, Pride, Lust, and other Passions, desire more than Nature needs,

Moreover, seeing that a wise Man, as I hinted formerly, doth all things for his own sake, nothing certainly can more conduce to his advantage, than to observe Justice exactly. For in giving to every one his due, and harming no Man, he, to his utmost, preserves and keeps safe that Society, which, unless it be safe, he cannot be safe himself ; nor doth he provoke any Man to revenge an injury suffered at his hand, or fear any mulct or punishment to be inflicted upon him by publick Decree. Thus being conscious to himself of no ill done, he remains free from all perturbation, which is the greatest benefit and fruit of Justice ; and while he reaps that, what can be more to his own advantage ?

Neither ought you to think, that he, who, though secretly, and without the knowledge of any Man, violates Right, or the Covenants ratified by general consent, to prevent the com-

mit-

mitting and suffering of wrong, can live in the same security and indisturbance as the Just Man doth, because (as I said,) he cannot assure himself that his Injustice shall never be brought to light: For Crimes, though they may be secret, can never be secure; nor doth it avail an Offender to be concealed from others, while he can never be concealed from himself.

Truly, though his Offence were never so well concealed for a time, yet it is very uncertain, whether it will continue so concealed till his death. For first, there is a jealousy and suspicion, that follows upon ill actions; and again, there have been many who have detected themselves, some in Dreams, others in raving Fits, others in Drink, others through Incogitancy. So that a wicked Man, though he may for a time lie hid both from gods and men, (as they say,) yet he hath reason to mistrust that he will not be concealed for ever.

Hence is it, that notwithstanding Injustice is not an Ill in itself, because what is reputed unjust in one place, may be Just in another; yet it is an Ill in respect of that fear, which, stinging the Conscience, creates in it a continual suspicion, that at some time or other his unjust deeds will come to the ears of the avengers of Unjustice, and so he be called to a severe account for them. Thus there is nothing that more conduceth as to security, so likewise to a quiet and pleasant life, than to live innocently, and upon no occasion to violate the common Covenants of Peace.

Wherefore since the Just and unjust are in this opposition, that the Just, of all men, are the most free from Perturbations, What can be more profitable to those, than Justice? What more hurtful to these, than Injustice? For how can any anguish of mind, solitudes, dayly and nightly fears, be profitable to any man?

Justice therefore being so great a good, and Injustice so great an ill, let us embrace one, and abhor the other. And if at any time our mind seem to stagger, and we are in suspense what to do, let us fix on some grave good Man, and suppose him to be always present with us, that we may live and do all things as if he looked upon us.

By this means we shall not only avoid the doing of any thing openly against Justice, but also of offending in secret against the Rules of Honesty. This good man will be to us in stead of a Guardian or Tutor, whom, because we reverence, we fear to offend. Following this counsel therefore, thus argue; If he were present, I would not do it; Why do I do it in his absence? He would find fault with it, because it is Ill; Why do not I shun ill, of my self? Thus, do all things, as if some such person looked on; for if you in this manner reverence another, you will soon come to be revered y yourself.

CHAP. XXIX.

Of Beneficence, Gratitude, Piety, Observance.

WE come next to the Virtues which we said were allied to Justice, for that they

have regard to other persons; and though they are not (as Justice is,) prescribed by Laws and Covenants, yet they import, out of decency, a certain obligation like that of Justice.

The first is *Beneficence*, or the doing good to others, whereunto those are obliged, who are able to assist or relieve others, either with their hand or purse. If they deny the assistance of their hands, they are censured as barbarous, cruel, inhuman; if that of their purse, they are thought the same, as also forbid, tenacious, covetous, and the like. But if they assist others, they are accounted courteous, civil, kind; as also liberal, munificent, magnificent, &c. So that they are obliged for their own sakes to do good to others, so far as may be without prodigality.

For those who practise this Virtue, procure to themselves good will, and (what most of all conduces to quiet living) dearnefs or tender estimation from others: They who use it not, illwill, and (what most occasions troublesome life) contempt and hatred. Take heed therefore you omit not to be beneficent, at least in small matters, that so you lose not the advantage of being accounted ready to gratifie others, even in great.

Not without reason did I say formerly, It is not only more honourable, but also more delightful to give than to receive a benefit; because, the giver thereby makes himself superior to the receiver, and reaps moreover the interest of Thanks; and there is not any thing that Joys a man more than Thanks. A beneficent person is like a Fountain, which if you should suppose it to have a reasonable Soul, what Joy would it not have at the sight of so many Cornfields, and Pastures, which flourish and smile as it were with plenty and verdure, and all by the diffusion of its streams upon them?

The second is *gratitude*, to which every man that receives a benefit is reciprocally obliged, unless he would incur the greatest hatred and ignominy. For Ingratitude is worthily hateful to all men; because seeing nothing is more suitable to nature, than to be propense to receive a good, it is highly contrary to nature, not to be readily grateful towards the Author of that good.

Now since no man is more gratefully affected towards his Benefactors than the wise man, we may Justly affirm, that only the wise man knows how to fulfil the duty of gratitude, because he alone is ready upon all occasions to express his thankfulness to his Friends, both present and absent, even to those that are dead.

Others pay thanks only to present Friends, when present, and this perhaps for their own farther ends, to encourage them to some new favour; but how few are there, who gratefully commemorate their absent Benefactors? Who requite the good they did them upon their Children, or other Relations? How few who honour their memory after death; who rejoyce not rather, as if their obligations were cancelled? Who love those that were dear to them, respect them, and as far as in them lies, do good to them?

The third is *Piety*, the most sacred species of gratitude. It looks upon our parents in the first place, to whom every man is more obliged than to all the World besides: For to others he may, owe

owe other things; but to his parents he owes himself. Therefore if ingratitude to others be hateful, that which is shewn to parents must certainly be the most horrid and detestable.

We say, in the first place; because piety in the second place extends to kindred, and chiefly to our Brothers and Sisters, to whom we are obliged by the interest of our parents; in such manner as that we cannot shew ourselves disrespectful and unkind to them, but we must be at the same time highly ungrateful to our parents, and all our progenitors, who in the circle of their love and benevolence comprehended all that were, and should afterwards be derived from them.

Nor is this piety distinct from that dearneſs we are to bear towards our native Country, which comprehends our Parents and all our kindred, and receives us at our Birth, bring us up and protects us. And as by the interest of our parents we are obliged to our kindred, so by the interest of our Country we are obliged to respect all our Countrymen; but more especially the Magistrates and Princes, who defend the Country itself, and the laws of it, and give us this benefit in particular, that under their protection we may live securely and peaceably.

The fourth is *obſervance*, or that reverence which we owe to all persons of eminency in any kind. This is accompany'd partly with gratitude and piety, (for we cannot any way better express the gratefulness of our minds, than by giving due veneration and worship to our Benefactors, Parents, Governours, Princes, and all men of dignity and power,) and partly with honour and respect, as it is the best testimony we can give of our internal sentiments of their deservings, who excel in Age, Wisdom, Learning, and Virtue, the most honourable of all things.

To this obſervance belongs that which men call *Religion* and *Sanctity* toward the Gods, whom we are bound to reverence and honour no otherwise than our parents, nor through hope of any reward, but (as I said before,) for their transcendent majesty and the supremacy of their nature. Because, whatever is excellent deserves a just veneration, and no excellency is greater than that of the divine Nature, for it is immortal and most blessed.

Thus understanding, that the Gods neither create troubles themselves, nor give to others, we piously and holily reverence their most excellent nature.

C H A P. XXX.

Of Friendship.

THE last is *Friendship*, to which all are mutually obliged, who love and are reciprocally belov'd. And well may it be the close and crown of this Discourse; for amongst all the means procured by wisdom, to make life happy, there is not any thing more full and pleasant than Friendship; and the same reason that confirms the mind not to fear any lasting or eter-

nal ill, doth also assure, that, in life, there is no Sanctuary so safe, no protection so secure as that of Friendship, which together with that security, conferreth also very great pleasures.

For as hatreds, envies, despites are enemies to pleasure; so are friendships, not only most faithful conservers, but effectual causers of pleasures, as well to our friend as to ourselves: By which, men not only enjoy present things more fully, but are cheer'd with hopes of those to come. And a solitary life destitute of friends being full of fears, and subject to treacheries, reason itself adviseth us to procure friendships, by which the mind is confirmed, and possessed with hopes of enjoying future pleasures.

Now though friendship is contracted in respect of use and utility, in like manner as we sow the earth in hope of a crop hereafter; and the first meetings and conversations of friendship are made in respect of the utility and pleasures which are hoped from thence; Yet when this custom hath gone on to intimacy, then love so flourisheth, that though there were not any benefit of friendship, yet friends would be loved for their own sakes. If we love Places, Temples, Cities, Academies, Plains, Houses, Dogs, Sports, out of an habitual custom of exercising or hunting, how much easier and more justly may we do this in conversation with men?

But in the choice of our friends, we must be exceeding cautious and prudent; for it concerns us to be more circumspect with whom we eat, than what we eat. And though to eat alone without a friend, be to lead the life of a Lion or Wolfe, yet we must be careful to choose such a friend, whose conversation may be the best sauce to our meat. We must seek one to whom nothing is more in esteem, than candor, simplicity, and sincerity; one that is not morose, querulous, and murmuring at all things, but who by his complacency, alacrity, and pleasantness may render our life sweet to us.

Friendship, I grant, consists in, and is kept alive by, the mutual participation of pleasures or goods which we may enjoy whilst we live; yet is it not necessary that the goods of friends should be put into one common stock, as he conceived, who said, *Amongst Friends all things are common*. This implies a diffidence, (that all their wills may not continue constant,) and they who are diffident are not friends; such only are friends, who can with full confidence, and freedom take and use so much of their friends goods or estate as they need, although kept in several not in one Joynstock, no otherwise than as if it were their own, esteeming them to be no less their own, than if they had them in their own possession and keeping.

This sounds strange in the ears of the vulgar: But what are they to us? There is no faith or constancy in their kindness and friendship, they being incapable of these things and of the least part of commendable Wisdom.

Moreover, he that is one of the vulgar understands not, what is profitable in private or publick, nor can distinguish betwixt good manners and bad.

I speak therefore of the wise only, amongst whom there is a kind league, and covenant not to love their friends less than themselves, which we

we know may be done and see it often comes to pass; whence is it manifest, that there can be nothing more conducing to pleasant living than such a conjunction.

Whence also we understand, that the placing of the chief good in pleasure is so far from being obstructive hereunto, that without it there can be no institution of friendship.

For it being impossible for us to conserve the sweetness and security of our lives firm and lasting without friendship, and to preserve friendship, unless we love our friends as much as ourselves; this therefore and pleasure are the inseparable adjuncts of friendship; for, we rejoyce in our friends joy as much as if it were our own, and are concern'd equally in his grief.

A wise man therefore will be alike towards his friend as towards himself; what labour and pains he undergoes for his own pleasure, the same will he undergo for the pleasure of his friend. And as he would rejoyce to think, that he hath one that will sit by him, if he should be sick, and relieve him if he were cast into prison, or fallen into want; so will he rejoyce, as having one, by whom, if he should fall sick, he may sit, and whom if imprisoned, or fallen into want, relieve. And not only this, but his love will be so great, as to undergo the greatest torments, even death itself, for his friend's sake.

We have known it certainly happen, (and that within the memory of our parents,) that many, who had the happiness of procuring to themselves full confidence and security in the Society of men, living in the same opinion and the same affections with them, have, in the assurance of this comfortable league, lived most sweetly together, and been conjoined with so absolute a nearness, as that one could without the least reluctancy, wish to suffer for the other, condemned to dye.

This is all I had to say concerning ETHICK, which in the beginning I asserted to be the chiefest part of Philosophy. You, who ever you are, that aspire to true wisdom, practise and meditate upon these rules, considering them as the grounds of honest, well, and happy living.

Meditate, I say, upon them day and night, as well when you are alone, as when in company of some faithful companion who is like yourself, and to whom you may say, We are indeed alone; but by this means we have the greater opportunity of making inquisition into truth without prejudice. I speak not to many, but to you; and you speak not to many, but to me; and that's enough, since each to other is a theatre large enough.

Do you not now grant, that no man can be com-

pared to him, whose mind is rightly inform'd as concerning the Gods, and is fearless of Death and who hath so reasoned concerning the end of nature, and the ultimate good, as to understand, that it may be compleated and attain'd with the greatest facility imaginable, and that whatever ill he must endure, either is short, if vehement; if long, gentle; and telleth himself, that there is no such thing as an inevitable necessity of fates concerning him, but that he hath an absolute freedom of will, and that nothing at all or very little of Fortune can at any time intervene to cross him; and the rest which we have laid down?

Certainly when you shall come to be such a man as this, you will never be troubled waking *Laert.* nor sleeping (for even in sleep you will be just as you are when awake, by reason of the well-composedness of your mind,) but shall live like some Deity among men. For that man who spends his life in the enjoyment of immortal goods, is far different from a mortal creature. Hitherto *Gassendus.*

C H A P. XXXI.

Wherein Epicurus, asserting Pleasure to be the ultimate good, differs from the Cyrenaicks.

THough *Epicurus* agrees with the *Cyrenaicks* in asserting Pleasure to be the ultimate good yet *concerning this Pleasure, they disagree. **Laert.* The *Cyrenaicks* admit not pleasure, to consist in rest, but in motion only; *Epicurus* allowed both, as well that of the Soul as of the Body, as he asserts in his Book Of Election and Avoidance, and in his Treatise of the End, and in his first book of Lives and in his Epistle to the Philosophers at Mitylene. Likewise *Diogenes* in the eleventh of his Select Rules, and *Democritus* in his *Timocrates*, for thus; Whereas pleasure is twofold, one consisting in motion, the other in rest, &c. And *Epicurus* in his Treatise Of Elections, expressly thus; Of pleasures, indolence and imperturbation consist in rest; and delight, in motion.

Moreover, he differs from the *Cyrenaicks*, for that they conceived the pains of the Body to be worse than those of the mind; whence it comes to pass, that, upon Malefactors, Corporal punishment is inflicted as being the most grievous. But *Epicurus* held, that the pains of the mind are the greatest, for that no ill can afflict the Body longer than whilst it is present; but besides the present, the past and future also torment the Mind; and by the same reason, the pleasures of the Soul are the greatest. Thus much of the *Epicurean*, the last of all the *Italic Sects.*

A

TOPOGRAPHICAL

TABLE.

A

A *Bdera*, a City of *Thrace*, situate next beyond the River *Nestus*, toward the East; Founded and Named by *Abdera*, Sister to *Diomedes*, in the 104th. year after the taking of *Troy*: And afterwards, (*Olymp.* 31.) reedifi'd by a Colony of *Clazomenians*.

Egina, an Island over against *Epidaurus*, in the *Saronian Bay*.

Ægos potamos, a River in the *Thracian Chersonesus*, distant from *Sestos* 15 Furlongs.

Ægypt, a Kingdom of *Africa*, most Eminent; divided into the Upper and Lower: It had Twenty Thousand Cities, the Principal were *Memphis*, *Diospolis*, and *Heliopolis*; Its River, *Nilus*.

Agrianes, a People of *Thrace*, dwelling upon the River *Agrianes*, betwixt the Mountains *Rhodope* and *Hæmus*. Of this Country perhaps was *Hippomedon* the Pythagorean, mentioned by *Jamblichus*. [*Doctr. Pyth.* p. 1. chap. 8.]

Agrigentum. See *Pythag.* Chap. 10.

Ambracia, an Eminent City of *Epirus*, in the bottom of the *Abracian Bay*, upon the River *Aracthus*, not far from the Sea. The *Ambracian Bay* parts *Epirus* from *Acarvania*.

Atarna, a City of *Mysia*.

Athens, the chief City of *Greece*, seated in *Attica*; founded by *Cecrops*.

Attica, an Eminent Region of *Greece*, bounding on the Territory of *Megara*, on the Shore over against *Salamis*; and on the Territory of the *Bœotians*, by Sea, at *Orpus*; by Land, at *Panactum*, at *Oence*, at *Hysia*.

B.

Bœotia, a Region of *Greece*, between *Attica* and *Phocis*; reaching from the *Ægean Sea* to the *Corinthian Isthmus*.

Brachmanes. See *Pythag.* ch. 5.

Branchidæ, a Town where there was a Temple to *Apollo*, on the *Milesian Shore*, between the Promontory of *Posideum*, and the City *Miletus*.

Byzantium, a City of *Thrace*, situate at the en-

trance of the *Bosphorus*, over against *Chalcedon*; *Constantine* afterwards enlarg'd it, from whom it is now called *Constantinople*.

C.

Caria, a Region of *Asia* bounded on the North by *Ionis*, on the East by *Lycia*, on the West by the *Carpethian Sea*, on the South by the *Rhodian*: Its principal Cities were *Miletus*, *Mindus*, *Halycarnassus*, and *Gnidus*.

Catana. See *Pythag.* chap. 10.

Chalcedon, a City of *Bythinia*, over against *Byzantium* in the Mouth of *Pontus Euxinus*. From its nearness to *Byzantium*, which is less than a Mile, it was termed (*Pliny* saith,) *The City of the Blind*.

Chene, an obscure Village, either belonging to *Ortæa*, or *Lacedæmonia*; not mentioned (that I know of,) by any Geographer.

Chios, an Island and City of the *Ionians*, distant from *Lesbos* about 400 Furlongs, and 900 Furlongs in Circuit.

Cilicia, an Eminent Kingdom of *Asia*, denominated from *Cilix*, Son of *Rhea*; lying betwixt *Pamphylia* to the West, and *Syria* to the East, and Mount *Taurus* to the North, and the *Cilician Sea* to the South.

Cirrha, a Maritime City of *Phocis*, seated in the *Corinthian Bay*, at the Foot of the Mountain *Parnassus*, over against *Sicyon*, distant from *Delphi* 60 Furlongs. From *Delphi* to *Cirrha* runs the River *Puflus*; It is the Haven or Town of Shipping for *Delphi*. It bordereth on *Locris*.

Clazomene, an Ionick City in *Lydia*, situate in the *Chersonesus* of *Erythræ*, confining on the *Erythræans*, these being within the *Chersonesus*; the *Clazomenians* without it: In the narrowest part of the *Isthmus*.

Cnidus, a City of the *Dorians* in *Asia*, by the Sea, called *Tropium*; on the North is the *Ceraunian Bay*; on the South, the *Rhodian Sea*.

Cnossus, a City of *Creet*.

Corcyra, an Island in the *Ionian Sea*, over against *Epirus*, from which it is but 12 Miles distant.

Corinth, an Eminent City near the *Isthmus* of *Peloponnesus*, governed Democratically.

A TOPOGRAPHICAL TABLE.

A

A *Bdera*, a City of *Thrace*, situate next beyond the River *Nestus*, toward the East; Founded and Named by *Abdera*, Sister to *Diomedes*, in the 104th. year after the taking of *Troy*: And afterwards, (*Olymp.* 31.) reedifi'd by a Colony of *Clazomenians*.

Ægina, an Island over against *Epidaurus*, in the *Saronian Bay*.

Ægos potamos, a River in the *Thracian Chersonesus*, distant from *Sestos* 15 Furlongs.

Ægypt, a Kingdom of *Africa*, most Eminent; divided into the Upper and Lower: It had Twenty Thousand Cities, the Principal were *Memphis*, *Diospolis*, and *Heliopolis*; Its River, *Nilus*.

Agrianes, a People of *Thrace*, dwelling upon the River *Agrianes*, betwixt the Mountains *Rhodope* and *Hæmus*. Of this Country perhaps was *Hippomedon* the Pythagorean, mentioned by *Jamblichus*. [*Doctr. Pyth.* p. 1. chap. 8.]

Agrigentum. See *Pythag.* Chap. 10.

Ambracia, an Eminent City of *Epirus*, in the bottom of the *Abracian Bay*, upon the River *Araethus*, not far from the Sea. The *Ambracian Bay* parts *Epirus* from *Acarmania*.

Atarna, a City of *Mysia*.

Athenis, the chief City of *Greece*, seated in *Attica*; founded by *Cecrops*.

Attica, an Eminent Region of *Greece*, bounding on the Territory of *Megara*, on the Shore over against *Salamis*; and on the Territory of the *Boeotians*, by Sea, at *Orpus*; by Land, at *Panactum*, at *Oenæ*, at *Hysia*.

B.

Boeotia, a Region of *Greece*, between *Attica* and *Phocis*; reaching from the *Ægean Sea* to the *Corinthian Isthmus*.

Brachmanes. See *Pythag.* ch. 5.

Branchidæ, a Town where there was a Temple to *Apollo*, on the *Milesian Shore*, between the Promontory of *Posideum*, and the City *Miletus*.

Byzantium, a City of *Thrace*, situate at the en-

trance of the *Bosphorus*, over against *Chalcedon*; *Constantine* afterwards enlarg'd it, from whom it is now called *Constantinople*.

C.

Caria, a Region of *Asia* bounded on the North by *Ionis*, on the East by *Lycia*, on the West by the *Carpathian Sea*, on the South by the *Rhodian*: Its principal Cities were *Miletus*, *Mindus*, *Halycarnassus*, and *Cnidus*.

Catana. See *Pythag.* chap. 10.

Chalcedon, a City of *Bythinia*, over against *Byzantium* in the Mouth of *Pontus Euxinus*. From its nearness to *Byzantium*, which is less than a Mile, it was termed (*Pliny* saith,) *The City of the Blind*.

Chene, an obscure Village, either belonging to *Olæa*, or *Lacedæmonia*; not mentioned (that I know of,) by any Geographer.

Chios, an Island and City of the *Ionians*, distant from *Lesbos* about 400 Furlongs, and 900 Furlongs in Circuit.

Cilicia, an Eminent Kingdom of *Asia*, denominated from *Cilix*, Son of *Rhea*; lying betwixt *Pamphylia* to the West, and *Syria* to the East, and Mount *Taurus* to the North, and the *Cilician Sea* to the South.

Cirrha, a Maritime City of *Phocis*, seated in the *Corinthian Bay*, at the Foot of the Mountain *Parnassus*, over against *Sicyon*, distant from *Delphi* 60 Furlongs. From *Delphi* to *Cirrha* runs the River *Puflus*; It is the Haven or Town of Shipping for *Delphi*. It bordereth on *Locris*.

Clazomene, an Ionick City in *Lydia*, situate in the *Chersonesus* of *Erythræ*, confining on the *Erythræans*, these being within the *Chersonesus*, the *Clazomenians* without it: In the narrowest part of the *Isthmus*.

Cnidus, a City of the *Dorians* in *Asia*, by the Sea, called *Tropium*; on the North is the *Ceraunian Bay*; on the South, the *Rhodian Sea*.

Cnossus, a City of *Creet*.

Corcyra, an Island in the *Ionian Sea*, over against *Epirus*, from which it is but 12 Miles distant.

Corinth, an Eminent City near the *Isthmus* of *Peloponnesus*, governed Democratically.

Cos, an Island of the *Carpathian Sea*, with a City in it of the same Name, opposite to *Tarmarium*, a Promontory of the *Myndians*. It belonged to the Dorians of *Asia*, called *Cos Meropidis*, because inhabited of old by the Meropians. It was most eminent, for being the Country of *Hippocrates* the Physician. [*Heraclit. chap. 3.*]

Cranon, a City of *Thessaly*, bordering upon *Macedonia*, distant from *Crato* an 100 Furlongs.

Creet, an Island in the Mouth of the *Ægean Sea*, between *Rhodes* and *Peloponnesus*; famous for the Birth and Priests of *Jupiter*, and Laws of *Minos*; for both which visited by many Philosophers.

Crotone. See *Pythag. chap. 10.*

Cyclades, Islands in the *Ægean Sea*; so called, for that they lye round about the Island *Delos*; their Number and Order, according to *Strabo*; is this, *Helona*, *Ceos*, *Cythaos*, *Scriphus*, *Melos*, *Siphant*, *Cimolis*, *Prepesinthus*, *Olearus*, *Naxus*, *Parus*, *Syrus*, *Alycanus*, *Tenus*, *Andrus*, *Gyarus*.

Cyprus, an Island in the *Carpathian Sea*, situate betwixt *Syria* and *Cilicia*.

Cyrene, a City of *Africa*, the Metropolis of the *Cyrenaick Province*, which contained besides, *Apollonia*, *Barce*, *Teuchira* and *Berenice*.

Cythera, an Island in the *Ægean Sea*, opposite to *Malea*, a Promontory of *Laconia*, and distant from it 40 Furlongs, opposite directly to the City *Baza*.

Cyzicus, an Island and City of *Mysia* in *Asia*, seated on the *Propontis*, at the Mouth of the River *Æsopus*; built after *Rome* 70 years, at the same time as *Miletus*.

D.

Delium, a little Town in *Bœotia*, by the Seaside, in the Territory of *Tanagra*, opposite to *Chalcis* of *Eubœa*. Here there was a Temple of *Apollo*.

Delos, an Island in the *Ægean Sea*, the chiefest of these that were called *Cyclades*, and in it a City, with a Temple of *Apollo*. It is distant from *Andros* 15 Miles, and as many from *Myconus*; from *Eubœa* 30 Miles to the West.

Delphia, a City of *Phocis* in *Achaia*, at the Foot of the Mountain *Parnassus*, on the South part of the Hill; Famous for the Temple and Oracle of *Apollo*; Threescore Furlongs from the Sea.

E.

Elia, a City of *Magna Græcia*. See *Xenophanes, chap. 1.*

Elis, a Region on the West part of *Peloponnesus*, bounded on the North by the Promontory *Araxus*, and divided from *Messenia* in the parts towards the Sea, by the River *Neda*; the principal City thereof bore the same Name, distant from the Sea 20 Furlongs, from *Olympia* almost 300.

Ephesus, a Maritime City of *Ionia*, built by the *Amazons*, 40 years after the taking of *Troy*. It was famous for the Temple of *Diana*, burnt by *Herostratus*, after it had stood 385 years.

Epidaurus, a City of *Argia* in *Peloponnesus*, seated by the Sea, in the inmost part of the *Saronian Bay*.

Eressus, a City of *Lesbos*, between *Pyrrha* and the promontory *Sigrium*.

Eretria, a Maritime City of *Eubœa*, between

Chalcis and *Gereftus*, opposite to *Oropus* in *Attica*; distant from *Chalcis* 20 Miles to the East.

Eubœa, a great Grecian Island, opposite to the Continent of *Attica*, and *Boeotia*, and *Locris*, extending from *Sunium* as far as *Thessaly*; the length of it is reckoned to be 150 Miles: Its principal Cities, *Chalcis*, *Carystus*, and *Eretria*.

G.

Galata, *Galli*.

H.

Hellas, first signified only a City of *Thessaly*, betwixt *Pharsalus* and *Melitæa*, named from *Hellen* Son of *Deucalion*, *Thucydides lib. 1.* *Stephanus*: Whence *Eustathius*, throughout *Homer*, interprets *Ἑλλάδα* and *Ἑλλήνας*, only that City of *Thessaly* and *Thessalians*. Afterwards the word extended to all that Tract of Land, which is from the *Sunian Promontory* to *Acarmania* and *Athamene* on the East, and to *Thessaly* on the North, unto the *Melian Bay*. This is the *Hellas* of *Ptolomy*, who excludes *Thessaly*, which first gave that Name to *Greece*, out of the Name *Hellas*. Thirdly, in a larger acceptation, besides that Tract, it includes also *Thessaly* and *Peloponnesus*, and most of the Islands in the *Ægean Sea*; and this is the *Greece* of *Strabo*. Lastly, besides those Countrys, it implies *Asia* the Lesser, and some parts of the African Shore; and, in a Word, all Places inhabited by the *Grecians*: In which sense, it is most commonly used by the later Authors.

Heraclea of *Pontus*, a City of *Bithynia*, the Metropolis of the *Mariandyni*, seated upon the *Euxine Sea*. See *Xenoph.*

Himera. See *Pythag. chap. 10.*

Hyperboreans, a People of *Scythia*, so named from the *Hyperborean Mountains*.

I.

Imbros, an Island in the *Ægean Sea*, not far from the *Thracian Chersonesus*, distant from *Lemnos* 22 Miles.

Ionia, a Region of *Asia*, lying upon the *Ægean Sea*, inhabited by the *Grecians*, reaching from *Posideum*, a Promontory of *Miletus*, on the South, to *Phocæa*, and the Mouth of the River *Hermus* on the North; its chief Cities, *Miletus* and *Ephesus*.

L.

Lacedæmon, the chief City of *Laconia*, on the West side of the River *Eurotas*, remote from the Sea, lying beneath the Mountain *Taygetus*; to which was ascribed its unhealthfulness. *Pyth.*

Lampsacum, a City of *Mysia*, seated on the *Hellepont*, at the Mouth of the River *Granicus*; having *Parus* on the North, and *Abydus* on the South.

Larissa; there were two Cities in *Thessaly* of this Name.

Lebedus, a Maritime City of *Ionia*, between *Colophon* to the South, and *Teos* to the North; distant from each, 120 Furlongs.

Lesbos, an Island in the *Ægean Sea*, over against *Æolis* in *Asia*, distant from *Lemnos*, *Tenedos*, and *Chios*, almost equally; less than 300 Furlongs from the

The T A B L E.

the farthest of them. Cities, *Mitylene* and *Me-thymne*. Promontories; to the North, *Sigrium*; to the East, *Melea*.

Lindus, one of the three chief Cities of the Island *Rhodes*, situate on the right hand to them that sail from the City of *Rhodes* Southward.

Locri in *Italy*: See *Pythag.* chap. 10.

Lydia, a Kingdom of *Asia*, lying betwixt *Ionian* to the West, and *Phrygia magna* to the East.

M.

Magna Græcia. *Ovid. Fast.* 4.

For the Italian Land was Greater Greece.

Hither Evander did his Navy Steer,

Hither Alcides Sail'd; both Grecians were.

The Club-Arm'd Traveller, whose Herd did stray
On Aventine, here drunk of Albula.

That here Ulysses was, Lestrigons best,

And the Shore nam'd from Circe, can attest.

Not long ago, of Telegone appear'd

The Walls, and Tiber, both by Grecians rear'd.

Hither Hæleſus forc'd Atreides Death,

Who to Falisca did his Name bequeath.

Antenor add, who for Troy's peace did plead;

And (Son to Pulian Daunus,) Diomed.

Hither, Æneas, since Antenor, came,

And brought his Gods, rescu'd from Ilion's Flame:

Him Solimus, from Ida did attend,

From whom to Sulmo did that Name descend.

But though *Ovid* takes it for *Italy* in general, yet *Pliny* more cautiously saith, it comprehended a great part thereof, (*quotam partem.*) *Athenæus*, almost all *Italy*. And perhaps no otherwise is *Festus* to be understood, than as of a great part, when he saith, *Italy* was called Major Græcia, because the *Sicilians* possessed it, or because many great Cities thereof were derived from the *Greeks*. And *Servius*, *Italy* is called *Μεγάλη* *Ἑλλάς* because from *Tarentum* to *Cumæ*, all the Cities were built by the *Greeks*. More expressly *Seneca*, all that side of *Italy* which lies upon the low Sea, was called Major Græcia. And so indeed is it set out by Geographers, but including also *Sicily*.

Mantineæ, a City of *Arcadia* in *Peloponnesus*, confining on *Argia*, *Tegea*, *Metbydrium*, and *Orchomenes*, near to *Megalopolis*.

Marathon, a Town of *Attica*, over against *Eratia* of *Eubœa*, between *Rhamnus* and *Brauron*; distant from *Athens* Ten Miles, and as much from *Caryſtus* in *Eubœa*.

Media, the greatest Kingdom in *Asia*, lying betwixt *Armenia* the Greater, to the West, and *Parthia* and *Hyrkania* to the East; extending Northward to the *Caspian* Sea, and Southward to *Aſſyria* and *Suſiana*.

Megara, a City confining with *Attica* at *Eleuſis*, distant from the Sea 18 Furlongs.

Memphis, a City of *Egypt*, built by *Oſiris* at the point of *Delta*, over against *Babylon*.

Metapontum. See *Pythag.* chap. 10.

Miletus, an Ionick City of *Caria*, the furthest towards the South, next to *Posideum*, situate 12 Furlongs from the Mouth of the River *Mæander*; built by *Miletus*, Son of *Apollon*.

Mitylene, the chief City of *Lesbos*, situate between *Metbymina* and *Malea*, distant from *Malea* 70 Furlongs, from *Cane* 120 Furlongs. *Cicero* much commends it for situation, beauty of the

Buildings, and fruitfulness of the Soil; *Cic. de leg. agr.* 2.

Munychia, a Promontory of *Attica*, which, with *Piræus*, made the Harbour of the Athenian Shipping, with three fair Havens within it. At the Mouth of the River *Ilissus*, on the West is *Piræus*; on the East, the Promontory *Sunium*.

O.

Oetoca, a City of *Thracia*, named from the Mountain *Oeta*.

Olympia, a place in *Elis*, with a Temple dedicated to *Jupiter*, upon the side of the River *Alpheus*, distant from the Sea 80 Furlongs. Here were celebrated the Games called *Olympick*.

P.

Parnes, a Mountain of *Attica*.

Paros, an Island in the *Ægean* Sea; one of the *Cyclades*.

Peloponnesus, a Grecian Peninsula, within the Isthmus of *Corinth*, containing many Regions, whereof the principal, *Achaia*, *Elis*, *Messenia*, *Laconica*, and *Argia*; the most Eminent Cities, *Messenia*, *Corinth*, *Tegea*, *Lacedæmon*, &c.

Phœnicia, a Region of *Syria* lying next the Sea; it contained four Eminent Cities, *Tripolis*, *Byblos*, *Tyre*, and *Sidon*. The *Phœnicians* were Inventors of Navigation and Arithmetick; great Merchants, but Suble, Deceitful, and Thievish to a Proverb, *I Lœnicum* more. Whence *Polemo* said of *Zeno*, He came to steal Learning (*παρμαῖος*,) like a *Phœnician*, (not *I Lœniceo antiſta*, as rendered,) *Zen.* chap. 2.

Phologondros, an Island to the West of the Island *Ios*, of very mean account, as appears by *Solon's* expression, chap. 2.

Piræus a Town and Haven of *Attica*, serving for the Shipping of *Athens*, in the midst betwixt *Pege* and *Sunium*, distant from *Athens* 40 Furlongs.

Pisa, a City of the *Peloponnesus*, situate at the River *Alpheus* and the *Pisæan* Mountain.

Posidonia, *Pæstum*, a Maritime City of *Lucania* in *Italy*, betwixt *Salernus* to the West, and *Velia* to the East; built by the *Darians* and *Syracites*.

Priene, a Maritime City of *Caria* in *Ionian*, between the Mouth of *Mæander*, and the Mountain *Mycale*.

Pylus, a City of *Messenia*, in the Promontory *Coryphasium*, distant from *Metbone* 100 Furlongs.

R.

Rhegium. See *Pythag.* chap. 10.

S.

Salamis, an Island in the *Saronick*-Bay, betwixt *Peloponnesus* and *Attica*; adjacent to *Eleuſis* of *Attica*, and to *Ægina*.

Same, a City in the Island *Cephalonia*, at the passage between it and *Ithaca*. From hence went *Antæus*, who first planted a Colony in the Island *Samus*, which he so named from *Same*. See *Pythag.* chap. 1.

Samus, an Ionian Island, and a City of the same Name; the Island is 600 Furlongs about, and *Posideum*, a Promontory thereof, not above Seven Furlongs from the Continent. The City standeth on the South part of it, at the Sea-side. It

was

The T A B L E.

was first called *Melamphylos*, as *Strabo*; or *Melamphylos*, as *Jamblichus*. See *Pythag.* chap. 1.

Sardes, the Metropolis of *Lydia*, situate under the Hill *Tmolus*, upon the River *Pactolus*.

Scepsis, a City of *Troas* in *Asia*, seated on *Cotylus*, the highest part of Mount *Ida*, whence floweth the River *Scamander*.

Scio, an Island not far from *Melos*, on the West of the Island *Ios*; obscure, and of no esteem, as appears by *Solon's* expression, chap. 2. and *Aristophanes* in his *Clouds*, Act. 1. Scen. 2.

Sicyon, a City of *Peloponnesus*, Metropolis of the Kingdom of *Sicyonia*, between *Corinth* and *Achaea*, distant 100 Furlongs from *Phlius*.

Sinope, a Maritime City of *Paphlagonia*.

Sparta, all one with *Lacedæmon*.

Stagyræ, a City of *Thrace*, seated in the Bay of *Strymon*, between *Ægilus* and *Acanthus*. See *Arist.* chap. 1.

Sunium, a Promontory in *Attica*, together with a Town of the same Name, between the *Saronian* Bay, and the Sea towards *Eubœa*.

Sybaris. See *Pythag.* chap. 10.

Syrus, an Island in the *Ægean* Sea, one of the *Cyclades*, 20 Miles distant from *Delos*, to the North. The Adjective is *Syrius*; as on the con-

trary, the Adjective of *Syria* in *Syrus*: Which the Interpreters of *Clemens Alexandrinus*, *Eusebius*, *Theodoret*, *Diogenes Laertius*, and others, not observed, who, render *Φερεκύδης τὸν Σύριον* *Pherecydes Syrius*; much less they, who, as an argument to prove, that Learning was brought out of *Syria* into *Greece*, instance *Pherecydes*, Master to *Pythagorus*, the first Philosopher.

T.

Tenarus, a Promontory of *Laconia* in *Peloponnesus*, parting the *Læonian* and *Messenian* Bays.

Tarentum. See *Pythag.* chap. 10.

Tauromenium. See *Pythag.* chap. 10.

Taygetus, a Mountain of *Laconia*, at the River *Eurotas*, and the City *Sparta*; which City was subject to Diseases, by reason of that Mountain's hanging over it.

Thebes, a City of *Bœotia*, seated at the River *Asopus* and *Ismenus*; built by *Cadmus*.

Thyatira, a City of *Lydia*, seated upon the River *Lycus*, betwixt *Sardes* and *Pergamum*.

Troas, a Territory of *Asia* the Less, upon the side of the *Ægean* Sea, between *Æolis* and *Hellespont*; having a City of the same Name.

A

TABLE

Of some Memorable Passages in the Lives of the Philosophers.

Zoroastres. *Pyth.* ch. 5.

Authors that have Written the Lives and Doctrine of Philosophers.

Damastes, (of Sigeum, a Promontory of Troas,) Son of Dioxippus, Disciple of Hellanicus, wrote *Of Sophists*, (Suid.) He lived before the Peloponnesian War. (Dionys. Halic. de Thucyd. Charact.)

Xenophon, the Philosopher, wrote first, *Of the Lives of Philosophers*; (Suid.) perhaps meaning his Socratical Apology and Commentaries.

Anaximander the Younger, of Miletus, Contemporary with Xenophon, for he lived in the time of Artaxerxes Alneon, wrote, *An Explication of the Pythagorick Symbols*.

Theopompus, of Chios, the most eminent of all Isocrates his Disciples, (Dionys. Halic. Epist. ad Pomp.) in the time of Artaxerxes Ochus, King of Persia, and of Philip King of Macedon, wrote, *Concerning the Exorcitations of Plato*. Athen. Deip. 11.

Timæus the Locrian, a Pythagorean Philosopher, wrote the *Life of Pythagoras*, (Suid.)

Speusippus wrote, *Of Philosophers*, 1 Book. (Laert.)

Xenocrates, the Philosopher, wrote Books, *Of Lives*. (Laert.)

Theophrastes wrote of the *Wise Men*. (Laert.)

Aristoxenus of Tarentum, Disciple of Aristotle, wrote, *Of the Lives of Eminent Persons*; amongst whom were Pythagoras, Archytas, Socrates, Plato.

Heraclides, of Pontus, heard Speusippus and Aristotle; wrote, *Of the Pythagoreans*, and, *Of Lives*: Which last tho reckoned by Laertius amongst Physical Writings, yet, as Vossius (de Histor. Græc. 1. 9.) conceives, they seem to have been rather Historical, because Eutocius cites his *Life of Archimedes*, (in Archim.)

Dicæarchus of Messene, Disciple also to Aristotle, (Athen. Deipn. 11.) wrote of *Lives*. Laert. in Plat.

Glearchus of Soli, Disciple also to Aristotle, wrote, *Of Lives*, (Athen. Deipn. 6.) Of this work, Athenæus cites the First, Fourth, and Fifth Book; and out of it, Agellius takes what he writes of Pythagoras. ch. 11.

Phanias of Enessus, Disciple also to Aristotle, wrote, *Of the Socraticks*. (Laert. in Antisth.)

Epicurus wrote, *Of Lives*, Four Books: (Laert.) But Gassendus conceives, they contained not the Stories of any Eminent Persons, but Moral Rules, whereby to lead a quiet Life. (Laert.)

Apollodorus, Surnamed Cepotyranus, Disciple of Epicurus, wrote, *His Life*, (Laert.)

Bardefanes, a Babylonian, living in the time of Alexander Severus, wrote, *Of the Brachmanes and Samanæans*, Indian Philosophers, whom the Grecians term Gymnosophists.

Idomeneus of Lampfacum, Disciple to Epicurus, wrote Books, *Of the Socraticks*. (Laert. in Socrates.)

Antigonus of Caristus, Lived in the time of Ptolemæus Lagis, and Ptolemæus Philadelphus; wrote, *Of Lives*, (Laert.) of which were particularly mentioned those of Polemo, Menedemus, Dionysius, Metabemenus, Lyco, Zeno, Pyrrho, Timon, by Athenæus and others.

Callimachus of Cyrene, a Poet, Lived in the time of Ptolemæus Philadelphus; wrote a *Table or Description of those who were eminent in any kind of Learning, and of their Writings*. (Athen. Deipn. 6. & 14.)

Neanthes, of Cyzicus, an Orator, (Disciple of Philiscus the Milesian, the Orator, (who learnt of Isocrates, wrote, *Of Eminent Persons*, cited by Stephanus, Clemens Alexandrinus, Laertius, Porphyrius, and Hesychius Milesius.

Hermippus of Smyrna, about the time of Ptolemæus Euergetes, wrote Books, *Of Lives*, of which are particularly cited the Lives of Plato, Arcefilaus, Aristotle, Theophrastus, Lyco, and others; by Laertius.

Sphærus, in the time of Ptolemæus Euergetes, Disciple to Zeno the Cittean, and to Cleanthes, wrote, *Of the Eretrick Philosophers*, and of *Lycurgus and Socrates*, Three Books. (Laert.)

Chrysippus, the Philosopher, wrote, *Of Lives*; to which, perhaps appertained that which he wrote, *Of ancient Physiologists*.

Sotion wrote a *Succession of Philosophers*, wherein, as Eunapius declares, he gave an account of the Lives of the Philosophers, as they succeeded one another. Laertius cites the third Book.

Heraclides, Son of Serapion, lived under Ptolemy Philometor, wrote a *Succession* in Six Books, doubtless of *Philosophers*; perhaps the same with his Epitome of Sotion: Laertius cites both Titles.

Apollodorus an Athenian, Son of Asclepiades; he was a Grammarian, flourished under Ptolemæus Euergetes, heard Aristarchus the Grammarian, and Panætius the Stoick, (Suid.) He wrote, *Of the Sects of Philosophers*; and (if it were not the same work,) a *Collection of Doctrines*, both cited by Laertius in Solone, & in Chrysippo.

Clitomachus, Disciple to Carneades, flourished about the 162 Olympiad; wrote, *Of Sects*. (Laertius in his Life.)

Alexander Cornelius, Surnamed Polyhistor, flourished in the 173 Olymp. wrote *Successions*. (Laert.)

Damis the Assyrian, wrote the *Life of Apollonius Tyaneus*. (Hierocles, cited by Euseb.)

Maximus the Ægæan, Contemporary with Damis, wrote the *Life of the same Apollonius* (Hierocles. Ibidem.)

Mocragenes wrote Four Books of the life of the same Apollonius; discredited by Philostratus, lib. 1. cap. 4.

Plutarch (who flourished under Trajan and Hadrian,) wrote of the *Opinions of Philosophers*, Five Books extant.

Diogenes Laertius, or, as Tzetzes terms him, Diogenianus, whose Ten Books, *Of the Lives of Philosophers*, are extant; out of which Photius affirms, that Sopater borrow'd much, (Timem. 161.) Diogenes therefore lived before Constantine the Great, who put Sopater to Death, (Suid. in 'Αλεξανδρος,) but later than Trajan; for he mentions Plutarch, and Sættus Empriricus, and Saturninus Disciple of Sextus. Whence Vossius collects, he lived under Antoninus Pius, or somewhat later, De Natura & constit. Rhetor. cap. 9.

Lucian of Samosata, under Aurelius and Commodus, wrote the life of Demonax, a Philosopher of that time.

Philostratus, flourishing from Severus to Philippus (Suid.) wrote the *Life of Apollonius Tyaneus*, comprising

prising all that *Maximus* and *Damis* had written before ; it consists of Eight Books extant.

Philostatus, Uncle and Father-in-Law to the other, living under *Macrinus* and *Heliogabalus* ; wrote the *Lives of the Sophists*.

Porphyrus, living from *Galenus* to *Probus*, wrote *Φιλοσοφικὴ ἱστορία*, *Historian Philosophican*, concluding about the time of *Plato*, (*Eunap. Proem.*) It is mentioned by *Theodoret* and *Tzetzes* under the Title of, *The Lives of Philosophers*. The third Book of it is cited by *Suidas* ; part of the Life of *Pythagoras* belonging to it is extant, first set forth by *Ritterbusius*, afterwards by *Lucas Holstenius*.

Soterichus lived under *Dioclesian*, wrote the *Life of Apollonius Tyaneus*. (*Suid.*)

Jamblichus, Master to *Julian* the Emperor, wrote the *Life of Pythagoras*, put forth by *Joannes Arcerius*.

Eunapius, living under *Valentinian*, *Valens*, and *Gratian*, an Eminent Sophist, Physician, and Historian, wrote, at the request of *Chrysantius*, *The Lives of the Philosophers and Sophists*, extant.

Marinus, a Neapolitan, a Philosopher and Orator, Disciple to *Proclus*, lived about the times of *Zeno* and *Anastasius* ; wrote, *the Life of Proclus*, his Master and Predecessor in the School, in Prose and Verse. That in Prose only is extant.

Hesychius illustris, a Milefian, wrote a *Nomenclator*, or *Index of such as were Eminent for Learning*, extant.

Damascius, of *Damascus* in *Syria*, lived under *Justinian*, was a Stoick, Disciple of *Simplicius* and *Elamita Phrygians* ; wrote a *Philosophical History* (*Suid. in Δωρίσ.*)

Of more uncertain time are these following.

Amphicrates, who writ a Book of Eminent Persons, cited by *Laertius* and *Athenaeus*.

Andron of *Ephesus*, who wrote a Treatise of the *Seven Wise Men* ; perhaps the same with his *Tripod*, the subject of which was the Story of the *Golden Tripod*. *Laert. in the Life of Thal.*

Antisthenes, a Peripatetical Philosopher, writ the *Successions of Philosophers*. (*Laert.*)

Apollodorus, who wrote a *Collection of Doctrines*. (*Laert.*)

Aristocles of *Messena*, a Peripatetical Philosopher, wrote Ten Books, *Of Philosophy*, in which he gave account of all the Philosophers and their Opinions. (*Suid.*)

Damas wrote, *The Life of Eudemus* ; *Eudemus* was a Rhodian, Disciple to *Aristotle*.

Damon, a Cyrenæan, wrote a Book of *Philosophers*. (*Laert.*)

Didymus lived in the time of *Julius* the Dictator ; wrote, *Of the Pythagorick Philosophy*. (*Suid.*)

Diocles wrote the *Lives of Philosophers*. (*Laert.*)

Eubulides wrote a Book of *Diogenes* ; and perhaps of *Socrates*. (See *Laert. Socr.*)

Herodotus wrote, *Of the Youth of Epicurus*, (*Laert. Dionys. Halic.*)

Heron, Son of *Cotys*, an Athenian Orator, wrote an *Epitome of the Histories of Heraclides*. (*Suid.*)

Hippobotus wrote, *Of Sects*, (*Laert.*) not only of the Doctrines, but Lives, of Philosophers ; for there is cited also his Book, *Of Philosophers*, perhaps the same. (*Laert.*)

Jason wrote, *Successions of Philosophers*. (*Suid.*)

Lycon of *Fasia* wrote, *The Life of Pythagoras*. (*Athen. 14.*)

Meleager wrote, *Of Opinions*. (*Laert. in Aristip.*)

Nicander of *Alexandria* wrote, *Of the Disciple of Aristotle*. (*Suid. in αἰγῶν.*)

Nicias of *Nice*, wrote the *History, or Succession of Philosophers*. (*Athen.*)

Panatius wrote, *Of Sects*. (*Laert. in Aristippo.*)

Satyrus, a Peripatetick, wrote, *The Lives of Eminent Persons* ; Epitomiz'd by *Heraclides*.

Socrates wrote, *Successions*, cited by *Laertius*, in *Diogene* ; but perhaps it should be,

Soficrates, a Rhodian, who wrote the *Successions of Philosophers*.

Theodorus wrote, *Of Sects*. (*Laert. in Aristip.*)

Timotheus an Athenian, wrote, *Of Lives*. (*Laert.*)

CONJECTURES

UPON

Some Passages of the said AUTHORS.

Aristotle.

DE anima, lib. 1. cap. 2. ἀπείρων γὰρ ὄντων χημάτων καὶ ἀτόμων (Pacius, cum enim infinitæ sint figurae & atomi;) perhaps, χημάτων καὶ ἀτόμων. (Democr. chap. 9. Sect. 8.)

De generatione animalium, lib. 4. cap. 9. ἐν μὲν τῇ μητρὶ (perhaps μήτρα) γίνεσθαι φυσικῶς διαφορῶν τῶν θήλειον καὶ τῶν ἀρρένους. (Democr. chap. 9. Sect. 7.)

Basil.

Hermil. 24. de legend. lib. Gentil. ἔτι καὶ ἐφ' ἡ πᾶν σὺν χαλεπώτερον σεαυτῷ κατασκευάζων τὸ δεσποτῆριον; perhaps, ἔτι καὶ, ἐφ' ἡ πᾶν σὺν χαλεπώτερον ἐσθλῶς, &c. (Pythag. doct. part. 3. Sect. 1. chap. 3.)

Ibid. Διὸ δὲ καὶ Πλάτωνα φασὶ τὴν ἐκ σώματος βλάβην περιδόμενον, &c. perhaps περιδόμενον. (Plat. chap. 5.)

Clement Alexandrinus.

Stromat. lib. 1. ἥδε καὶ δὲ διμαί, ὡς ἀπὸ ἥδη πολυμαθῶν νόον ἔχει ὁ διδάσκει καθ' Ἡρακλήον (rendred, sciebat enim, ut existimo, cum multarum rerum scientiam jam habere mentem, quæ docet, ut est, Heracliti sententia,) perhaps, πολυμαθῆν νόον ἔχει διδάσκει. (Heracl. chap. 1.)

Lib. 5. for Ευρύς πυθαγορείς, perhaps read Ευρύς. (Pyth. chap. 21.)

Lib. 6. καὶ γὰρ ἀπὸ θείων, ἐν ταῖς ἀλλοῖς ἐπιπλεον, the sense seems to require, ἀπὸ θείων. (Democr. chap. 4.)

Dionysius Siculus.

Hist. lib. 6. ἐν ἀρχῇ δ' Αθωνῆσι * φανος, supply, ἀφ' ἐφ' αὐτοῦ. (Democr. chap. 1.)

Excerpt. Vales. pag. 245. supply the Text (out of Iamblich. de vit. Pyth. cap. 29.) thus, ἐδὲν γὰρ μετὰ πρὸς ἐπὶ ἡρώων καὶ φρονήσιν, ἔτι δὲ καὶ πάντων ἡμῶν, τῶν δὲ πολλὰ μνημονεύειν, (Pyth. doct. part. 1. chap. 1.)

Nicogenes Laertius,

More frequently.

Etymologicum Magnum.

Σολοικοὶ οἱ βλῆβροὶ ἀπὸ Σόλωνος κλίμα, perhaps ἀπὸ Σόλωνος κλίμα. (Solon. chap. 11.)

Gregory Nazianzen.

Advers. Julian. Orat. 3. Ἐπεὶ καὶ ἔτοιμι μιμήσθαι μὲν λέγονσαν καὶ ἀνθρώπων τινὰ δελεασμάτων, κακοῦ χυμῶν περιδόμενον· τέτοις μὲν τοὶ καὶ ἀλίσκονσαν μὴ δυνάμενης ἐξίκεσθαι τῶν ἡμετέρων σοφῶν καὶ μιμήσεως, perhaps transpōse; δελεασμάτων μὲν τοὶ κακοῦ χυμῶν περιδόμενον τέτοις καὶ ἀλίσκονσαν. (Pyth. chap. 22.)

Herodotus.

Lib. 4. ἴσω καὶ τῶν ἀδελφίδων ἀποθανόντων. (Valla & Stephen. a patruale,) perhaps ἀδελφίδων. (Anachars. chap. 1.)

Iamblichus, his Life of Pythagoras,

Set forth corruptly by Arcerius; and corrupted yet more by his Translation and Castigations, restored a little by the Anonymus Writer at the end of his Edition, and by Desiderius Heraldus at the end of his Animadversions; and by Rittereustius upon Porphyrius: But generally requires much more; as,

Cap. 2. for τὴν Σάμω τὴν ἐν τῇ Κεφαλληνίᾳ, read Σάμω, and afterwards, pag. 27. ἀντὶ τῆς Σαμῆς read Σάμω. For so the Oracle immediately following.

Λυκαῖ, (not Λυκαῖε,) εἰναλίαν νῆσον Σάμω ἀντὶ Σάμω σέ

ὀικίζεν κέλομαι· φυλλὰς (Hesych. φυλλῆς,) δ' ὀνομάζεσθαι αὐτήν. (Pyth. c. 1.)

Pag. 29. καὶ κούσας αὐτήν, εἰ μὴ οὕτως ἐχέσας καταστῆσαι, read, καὶ κούσας αὐτὴν ἐκ (for so the MS.) καὶ ἔτι ἐχέσας. (Pyth. chap. 2.)

Pag. 32. καὶ γὰρ ἐκείνων καὶ ἐαυτὸν ἐφοδιάσασθαι ταῦτα· διὸ σοφὸς παρὰ τοῖς πολλοῖς νομίζεσθαι. read, παρὰ γὰρ ἐκείνων καὶ ἐαυτὸν ἐφοδιάσασθαι ταῦτα, διὸ καὶ for the MS. had διὰ,) σοφὸς, &c. and immediately, for ὅσοι καὶ Πυθαγόραν καθορῶν, read, ὅσων καὶ καθορῶν. (Pyth. ibid.)

Chap. 3. καὶ τὸν ὀλιγοπνίαν, read, καὶ τὸν τέλει. (Pyth. chap. 3.)

Pag. 32. καὶ τοῖς ἄλλοις, καὶ φοινικοῖς ἐσθλῶναις, καὶ πάσαις τελεθεῖς τελεῖαις ἐν τε Βύβλω καὶ τύρῳ, καὶ καὶ πολλὰ τῆς Συρίας μέρη ἐξ ἀιρήσεως ἐσθλῶναις, read and distinguish, καὶ τοῖς ἄλλοις τῆς φοινίκης (or φοινικικοῖς) ἐσθλῶναις, καὶ πάσαις τελεθεῖς τελεῖαις ἐν τε Βύβλω καὶ τύρῳ καὶ καὶ πολλὰ τῆς Συρίας μέρη, ἐξ ἀιρήσεως ἐσθλῶναις. (Pyth. ibid.)

Pag. 34. μόνον τὸ ἐπὶ φεγγάρι, εἰς Αἰγυπτίον δ' ἀπὸ πλεον, perhaps, ἐπὶ φεγγάρι, εἰς Αἰγυπτίον δ' ἀπὸ πλεον, (Pyth. chap. 4.)

Cap. 5.

Conjectures.

Cap. 5. for κατ' ἐπαιδευθῆναι, read καθάρ. (Pyth. chap. 6.)

Pag. 38. ἐνδιαδέξατο αὐτόν; read ἢν διαδέξατο αὐτόν. (Pyth. *ibid.*)

Pag. 39. διδ' νοῦν ἡκολαζεν, read νοῦν. (Pyth. *ibid.*)

Cap. 8. pag. 50. ἐν οἷς (read θείοις,) ἐδεδόξεν ἑλπί-
τον, &c. (Pyth. chap. 12.)

Pag. 51. for ἐνθυμίας read ἐπιθυμίας. (Pyth. *ibid.*)

Cap. 9. ὁ δὲ πρῶτον μὲν αὐτοῖς συμβούλευεν ἰδρύσαι
μασῶν, (read μασείων,) ἵνα πρῶτον τὴν ὑπάρχου
(read ὑπάρχουσαν,) ὁμόνοιαν, (Pyth. chap. 13.)

Cap. 10. μὲν ἀρχὴν λοιδορίας, read λοιδορίας,
and afterwards, καὶ μόνον διὰ τέλος ἀγνεύουσιν ἐξουσίας;
&c. (*Ibid.*)

Pag. 60. for ἐκλυθῶσιν, read, περιεκλυθῶσιν
(*Ibid.*)

Cap. 11. ἔσται αὐτὰς περὶ πλείους ποιεῖν ἐπικρίαν,
perhaps ἐπικρίαν. (Pyth. chap. 14.)

Cap. 15. for ἀεφορῶσι, read αὐτὸς ἐφορῶσι. (Pyth.
doctr. part. 1. Sect. 2. chap. 7.)

Cap. 18. pag. 89. ἱππομέδων ἀγροῦ Ἀνδρῶν, per-
haps Ἀγροῦ Ἀνδρῶν, (Pyth. doctr. part. 1. chap. 8.)

Cap. 19. ἀπερῶσατο πρὸς τὴν ἀπερῶσιν, perhaps
ἀπερῶσατο. (Pyth. chap. 23.)

Pag. 93. for καὶ τὰ ἀβαστα διαβαίνων, read καὶ, and
afterwards, for ἀλλὰ τοιαῦτα τέχνη, perhaps ἰχνη.
(*Ibid.*)

Cap. 21. pag. 99. παρτίθεσθαι δὲ κρεῖα ζώων θυ-
σιμῶν ἱερέων, expunge ἱερέων, which seems a gloss.
(Pyth. doctr. part. 1. chap. 9.)

Cap. 25. καὶ ἐπὶ (read ἀπὸ) ἡ ἔργων. (Pythag.
doctr. part. 1. Sect. 2. chap. 8.)

Cap. 26. ἐστὶ μὲν τοῖς ἴσως ἐκείνων perhaps ἐκείνων)
ἔλπεσθαι καὶ πάντ' ἐπὶ τῷ ἐκείνῳ ἀελλόν. (Pyth.
doctr. part. 4. chap. 4. Symb. 4.)

Pag. 135. θέαν * οἱ τῇ μητρί, read θεανοῖ. (Pyth.
chap. 21.)

Ibid. δεγμίδες ἐν Λιβήθους, read δεγμίδες. (Pyth.
doctr. part. 2. Sect. 1. chap. 15.)

Marmora Arundeliana.

Pag. 10. line 38. ἀρχοῦσθαι ἀθλῶσιν τὴν δῆμον, (Mr
Selden, archonte Athenis populo,) read Εὐθυδῆμος:
(Chilon. chap. 1.)

Nicomachus, his Introduction to Arithmetick.

(So supply the Title, ἀριθμητικῆς εἰσαγωγῆς; see
pag. 30, 35, 44, 62, 76.)

Pag. 7. ἀλλὰ καὶ οἷον φύσει προγενέστερον ὑπάρχον ὅσον
συνεπείκει μὲν ἐπὶ τὰ λοιπὰ, read, προγενέστερον ὑπάρ-
χουσα συνεπείκει μὲν, &c. (Pythag. doctr. part. 2.
Sect. 1.)

His Enchiridion of Musick, set forth by Meibomius.

Pag. 10. continue the fifth Section, and distin-
guish thus, ὁ ἀεὶ τόνος ἐπὶ γόδοι. τὴν δὲ κατ' αἰθ-
μὴν ποσότητα ταύτην, ἢ τε διὰ πάντες, καὶ ἢ κατ' ἀμφοτέρων
συνόδον, διὰ πασῶν λεγομένη, καὶ προσκεκμημένη μεταξὺ τῶν
δύο τετραγώνων τόνος, τῶν τινὶ τοῖς ἑξήκοντα Πυ-
θαγόρου καταληφθέντα ἔχεν ἐβεβαιώθη. (Sect. 6.) Ἐν
φροντίδι ποτὲ καὶ διαλογισμῶ, &c. (Pyth. part. 2. Sect.
2. chap. 3.)

Pag. 11. ἰσοσέφους, not ἰσορρόπους, as Meibomius:
(Pyth. part. 2. Sect. 2. chap. 4.)

Porphyrius, his Life of Pythagoras,

Set forth by Lucas Holstenius: p. 2. and p. 10.
Ερμολάμαντι πρὸ Κρεοφύλῳ, perhaps πρὸ Κρεοφύλῳ
or τῷ Κρεοφύλῳ. (Pyth. chap. 2.)

Pag. 11. ἐν τῷ καλεσμένῳ τείποδι, perhaps τείσαι.
(Pyth. chap. 7.)

Pag. 27. τὴν δαλατίαν μὲν ἐκάλει εἶναι read κέρνυ,
δάκρυον. (Pyth. doctr. part. 4. chap. 1.)

Ibid. φωνὴ εἶναι τινὸς τῶν δαμνόντων ἐναπειλημῶν πρὸ
χαλκῶ, perhaps ἐναπειλημῶν. (Pyth. doctr. 3. Sect.
3. chap. 4.)

Proclus, upon Euclid.

Lib. 1. chap. 12. τὰς γὰρ ἀφελέσας (read ἀφελέσας,) ἡ
ἀπείρων τὰς ἐπισήμας κατανοῶν, ὥς ἡ κερδὴν τὴν κατ'
ἐκότερον ἀπειρίαν γνώσει λαβεῖν, transpose, ὥς ἡ τὴν
κατ' ἐκότερον ἀπειρίαν γνώσει λαβεῖν κερδὴν. (Pyth. doctr.
part. 2. chap. 2.)

Ibid. καὶ τὴν αἰθμετικὴν καὶ δε τὴν ἐννοσιν τῶν πλήθους,
καὶ τὴν πρὸς ἐαυτὸ κοινωρίαν, καὶ τὴν νοήσασα ἐαυτὴν ἐν καὶ πολ-
λὰ ἔσαν τὰς τε αἰθμετικὰς προβάλλει, καὶ τὴν τέλειαν γνώσιν, καὶ
σώδεσμον * καὶ μυστικὴν, transpose the lines, καὶ νοήσασα
ἐαυτὴν ἐν καὶ πολλὰ ἔσαν, τὰς τε αἰθμετικὰς προβάλλει, καὶ
τὴν τέλειαν, γνώσιν τὴν αἰθμετικὴν. καὶ δὲ τὴν ἐννοσιν τῶν
πλήθους, καὶ τὴν πρὸς ἐαυτὸ κοινωρίαν καὶ σώδεσμον, καὶ μυσ-
τικὴν. (Pythag. *ibid.*)

Ibid. for κατ' ἐννοσιν read καὶ γένν. (Pyth. *ibid.*)

Lib. 2. chap. 4. ὑπὸ ἀδύσσεως ὅση εἰς λογισμὸν, καὶ
ὑπὸ τῇ * ἡ μετὰ βασις γέννηται ἀν' ἐκείνῳ, supply καὶ ὑπὸ
τῷ λογισμῷ εἰς τὴν νοῦν ἡ μετὰ βασις, &c. and presently
after, for ὅς ἐφαπόμενοι, read ὅς ἐφαπόμενοι. (Thal.
chap. 7.)

Ibid. καὶ μὲν τοῖς καὶ φασὶν ὅτι Πύθαγμα ἡρεῖο ποτὲ
αὐτὸν εἰ τις ἐστὶ περὶ γεωμετρίας, νεώτερος μὲν ἔν, &c.
supply, εἰ τις ἐστὶ περὶ γεωμετρίας τὴν στοιχειώσεως βεβαίαν
μέθοδον, ἡδεῖα (φασὶν,) ὅς βασιλεὺς, πρὸς γεωμετρίας
βασιλικῇ ὁδῷ νεώτερος, &c.

Pag. 31. Τρεῖς γεωμετρίας ὅτι πέντε τομαῖς ἐννοσιν τῶν
σπινειῶν, read, τὰς σπινειῶν ἐννοσιν. (Thal. chap. 7.
Sect. 1.)

Lib. 4. pag. 109. ὅτι εἰς τὴν ἐννοσιν ἐκκεκμημένη τὸ
δοθέν χωρίον πᾶσι τῇ ἐννοσιν συμπεραβαλὴν ἐκείνο τὸ χω-
ρίον φασὶν, ὅτι εἰς μὲν δὴ ποιητικῆς, &c. supply, πᾶσι
τῇ ἐννοσιν συμπεραβαλὴν, ποτὲ παραβαλὴν ἐκείνο τὸ χωρίον
φασὶν ὅτι εἰς μὲν δὴ ποιητικῆς, &c. (Pythag. doctr. part. 2.
Sect. 3. chap. 2.)

Sextus Empiricus, his Pyrrhonian Hypotyposes.

Lib. 1. c. 4. καὶ τὸ, ἀντιθέσει ἀντιθέτων τε καὶ νομῶ-
νων. καὶ τῇ, perhaps πρὸ. (Sext. *ibid.*)

Cap. 14. ἐς καὶ λόγους καὶ τύπους ὡμωνύμους καλεῖσιν.
perhaps τύπους, (chap. 11.)

Ibid. p. 10. πολὺ δὴ πᾶσι ἀλογονοῦν ἐστὶ. MS. ἐλο-
γώτερον. better. (chap. 12.)

Chap. 33. pag. 46. in the Veries of Xenophanes,
for ἀμφοτέρω βλεπτοῖ MS. ἀμφοτέρω. for ὅτι
read ὅτι. for ἴσα MS. ἴσα. for εἰ MS.
ἐκόν perhaps εἰσόν. (chap. 31.)

Lib. 2. cap. 5. pag. 61. ἀκλόνητον μὲν ἴσως per-
haps μὴ ἴν. (*Ibid.*)

Cap. 6. p. 64. τῇ διανοῇ καὶ ταῖς ἀδύσσεσι κενῶν, καὶ
τισὶ δὲ μὴ, in the MS of Sir Henry Savile and Mr
Cassaubone there is a breach, to shew the defect, thus,
ταῖς ἀδύσσεσι κενῶν * τισὶ δὲ μὴ. presently after
for διὰ τῶν κείνων, read τῶν. (*Ibid.*)

Ibid. lin. 36. ἢ τοῖς ἀγαθῶν ἐστὶν ὁ πλεονέκτης, καὶ
supply, ἢ ἀδύσσεσι. otherwise it is not a d d five
reason. (*Ibid.*)

Cap. 13. pag. 82. lin. 4. εἰ ἡμέτεροι ἐσθ, ἐχθροὶ δὲ αὐτοῖς
ἐσθ, ἐκ ἀεὶ ἡμέτεροι ἐσθ. supply, εἰ φῶς ἐκ ἐσθ. ἐκ
ἡμέτεροι ἐσθ. ἐχθροὶ δὲ φῶς ἐσθ. ἐκ ἀεὶ, &c. (*Ibid.*)

Cap. 22. pag. 101. lin. 18. ἐρώτηκα δὲ τί σε πρῶ-
τον, εἰ ἀεὶ ἀνέρετες ὄντες εἰσιν. read ἐκ δὲ. (*Ibid.*)

Conjectures.

Cap. 23. pag. 102. perhaps τὸ ἀποβαλὲν ἢ συμ-
πλοκή should be expunged; and is but a repetition
of the next line. (*Ibid.*)

Lib. 3. cap. 8. line 30. for ἀλλ' εἰ μὴ ὅφ' ἡτέρω.
perhaps read, ἀλλ' ἐπεὶ ὅφ' αὐτῷ ἐδεδύφ' ἐτέρω. (*Ibid.*)

Cap. 16. pag. 136. lin. 40. εἰ δὲ ὑπαχῶσθαι, κε-
νέμετον μελαβελικῶς. perhaps κινέμετον. (*Ibid.*)

Cap. 18. * αἰετὸς δυάσ' read αἰετὸς. (*Ibid.*)

Pag. 141. lin. 3. ἐκ αἰετῶν τὸ ζῶον ἐν ἑστῇ, add, καὶ
τὸ ἐαυτῷ λόγον. (*Ibid.*)

Lin. 30. ὡς ὑπεμνήσαντο, read ὑπεμνήσαντο. (*Ibid.*)

*Socrates and the Socratics, their Epistles.
Set forth by Leo Allatius.*

Epist. 1. pag. 2. ὅστις ὁμοίως ἀκύνει τὰ αἰετῶν τε,
καὶ μή. perhaps τὰ αἰετῶν τε, καὶ μή, (*Socrat. Epist. 1.*)

Pag. 3. ὡς ὑμῖν περὶ αἰετῶν. perhaps ὡς ὑμῖν ἡμῖν
περὶ αἰετῶν. (*Ibid.*)

Pag. 5. ἀλλὰ ἥ μὴ ἐλπίς ἔχειν τὴν αἰτίαν. τὴν δὲ
καταπαξ αἰτίας. M.S. τὴν μὴ ἐλπίδα. perhaps ἀλλὰ τὴν
μὴ ἐλπίδα ἃν ἔχοι τὴν αἰτίαν, τὴν δὲ, καταπαξ αἰτίας. (*Ibid.*)

Pag. 9. ὅτι ἐκ ἀλλήλων ἐκείνῳ ἐκείνῳ ἀμείνων
δοκῶν. perhaps, ἀμείνων εἶναι δοκῶν, or ἐμμένειν δοκῶν.

T O

Sir John Marham, Kt.

^{S I R,}
I Send this Book to you, because you first directed me to this Design. The Learned *Gassendus* was my Precedent; whom nevertheless I have not follow'd in his Partiality: For he, tho' limited to a Single Person, yet giveth himself Liberty of Enlargement, and taketh occasion from his Subject to make the World acquainted with many excellent Disquisitions of his own. Our Scope being of a greater Latitude, affords less Opportunity to favour any Particular; whilst there is due to every one the Commendation of their own Deserts. This Benefit I hope to have received from the variety of the Subject; but far more are those I owe to your Encouragement, which if I could wish less, I should upon this Occasion, that there might seem to have been expressed something of Choice and Inclination in this Action, which is now but an inconsiderable Effect of the Gratitude of,

Dear Uncle,

Your Most Affectionate Nephew,

and Humble Servant,

THOMAS STANDLEY.

P R E F A C E.

WE are entring upon a Subject which I confess, is in it self harsh, and exotick, very unproper for our Tongue ; yet I doubt not but they will pardon this, who shall consider, that other Philosophies and Sciences have been lately well received by several Nations Translated into their own Languages, and that this, as being the first, contributes not a little to the understanding of the rest.

Another disadvantage this Subject incurs far more considerable : There is not any thing more difficult to be retrieved out of the Ruins of Antiquities than the Learning of the Eastern Nations, and particularly that of the Chaldæans. What remains of it is chiefly transmitted to us by the Greeks, of whom, some converted it to their own use, intermixing it with their Philosophy, as Pythagoras and Plato ; others treated expresly of it, but their Writings are lost. Of its first Authors nothing remains ; what others took from it, is not distinguishable from their proper Philosophy. The Greeks were first made acquainted with it by Osthanes, and, long after, by Berosus ; the former living in the time of Xerxes, the other, under Ptolomæus Philadelphus. Whence it may be inferred, that the Discourse, which Democritus writ of Chaldæa, and his Commentary of the Sacred Letters at Babylon, either came short of these Sciences, or were so obscure, that they conduced little to their discovery. Neither seems the Treatise, entituled Magicum, ascribed by some, to Aristotle, by others, to Rhodon, but indeed written by Antisthenes, to have considered the Learning and Sciences, so much as the History of the Professors. Of which kind were also the Writers concerning the Magi, cited, under that general Title, by Diogenes Laertius.

But there wanted not those, who further explained to the Greeks what Osthanes and Berosus had first communicated. Hermippus (to use Pliny's Words) wrote most diligently of Magick, and Commented upon the Verses of Zoroaster. About the time of Antonius Pius flourished the two Julians, Father and Son, Chaldaick Philosophers : the first wrote concerning the Chaldaick Rites, the latter, Theurgick Oracles in Verse, and other Secrets of that Science. Afterwards wrote Symbulus and Pallas, concerning the Magi ; and the latter Platonick Philosophers more frequently : Amelius, 40 Books of Confutation ; Porphyrius 4 on the History of Julian the Chaldæan ; Jamblichus, 28 intituled, Of the most perfect Chaldaick Theology ; and Syrianus 10 upon the Oracles.

Of all these, there's nothing extant, unless (which we shall have occasion hereafter to prove) the few Oracles, dispersed among the Platonick Writers, be part of those, which were, by the Greeks, (Hermippus, Julian the Son, and others) translated out of the Chaldaick. Some of these Pletho and Psellus have explained with a Comment, adding two brief obscure Summaries of the Chaldaick Doctrine, which we have endeavoured to supply and clear, by adding and digesting the few Remains of those Sciences which lie dispersed amongst other Authors ; taking care to reject such as are suppositious, or of no credit, as in the Historical Part, Annius Viterbiensis, Clemens Romanus, and the like : in the Philosophical, the Rabbinnical Inventions, which tho' incuriously admitted by Kircher, Gaulmin, and others) manifestly appear to have been of later Invention.

T H E

THE HISTORY OF THE CHALDAICK PHILOSOPHERS.

The First BOOK.

Of the Chaldeans.

Philosophy is generally acknowledged even by the most Learned of the *Grecians* themselves, to have had its Original in the East. None of the Eastern Nations, for Antiquity of Learning, stood in Competition with the *Chaldeans* and *Ægyptians*. The *Ægyptians* pretended that the *Chaldeans* were a Colony of them, and had all their Learning and Institutions from them; but they who are less interested, and unprejudiced Judges of this Controversie, assert that *a* The *Magi* (who derived their Knowledge from the *Chaldeans*) were more ancient than the *Ægyptians*, that *b* Astrological Learning passed from the *Chaldeans* to the *Ægyptians*, and from them to the *Grecians*, and, in a word, that the *Chaldeans* were *c antiquissimum Doctorum genus*, the most ancient of Teachers.

a The Author of the *Treatise* *Μαγικόν*, cited by *Laertius* in *Proem.*
b *Joseph.* 1. 8.
c *Cic.*

Chaldaea is a part of *Babylonia* in *Asia*, the Inhabitants termed *Chasdim*, (as if *Chusdim*) from *Chus* the Son of *Cham*. But the Philosophy of the *Chaldeans*, exceeded the Bounds of their Country, and diffused it self into *Persia* and *Arabia*, that Border upon it; for which reason the Learning of the *Chaldeans*, *Persians* and *Arabians* is comprehended under the general Title of *CHALDAICK*.

Of these therefore we shall begin with That from which the other two were derived, and is more properly termed *CHALDÆAN*, in respect of the Country. In treating of which (as likewise of the other two) the first part of our Discourse shall consider the Authors or Professors, and their Sects; the Second their Doctrine.

THE FOURTEENTH PART.

The Chaldaean Philosophers, Institution, and Sects.

S E C T. I.

Of the Chaldaean Philosophers.

C H A P. I.

The Antiquity of the Chaldaick Learning.

THE Antiquity of the *Chaldaick* Learning, though such as other Nations cannot equal, comes far short of that to which they did pretend. When *Alexander*, by his Victories against *Darius*, was possessed of *Babylon*, (in the 4383d year of the *Julian* Period) *Aristotle*, a curious promoter of Arts, requested his Nephew *Calisthenes*, who accompanied *Alexander* in the Expedition, to inform him of what Antiquity the Learning of the *Chaldeans* might with reason be esteemed. The *Chaldeans* themselves pretended, that, from the time they had first begun to observe the Stars until this Expedition of *Alexander* into *Asia*, were 470000 years. But far beneath this number were the Observations, which (as *Porphyrius* cited by *Simplicius* relates) *Calisthenes* sent to *Aristotle*, being out of 1903 years, preserved to that time, which from the 4383d year of the *Julian* Period upward, falls upon the 2480th. And even

a In lib. 2. de
cælo, p. 123.
line. 18.

[B b b b]

ven this may with good Reason be questioned, for there is not any thing extant in the Chaldaick Astrology more ancient than the Era of Nabonassar, which began but on the 3967th of the Julian Period. By this Era they compute their Astronomical Observations, of which if there had been any more ancient, Ptolemy would not have omitted them. *b* The first of these is the first year of *Alerodach*, *c* (that King of Babylon who sent the Message to *Abas* concerning the Miracle of the Dial) which was about the 27th of Nabonassar. The next was in the 28th of Nabonassar. *d* The third Observation is in the 127th of Nabonassar, which is the 5th year of Nabopolassar. This indeed is beyond all exception; for we have them confirmed by the Authority of Ptolemy, who shews the Reasons and Rules for the Observations. What is more than this, seems to have been only hypothetical. And if we shall imagine a canicular Cycle, which consists of 1461 years (and are 1460 natural years) to have been supposed by Porphyrius to make up his Hypothesis, then there will want but 18 years of this number.

CHAP. II.

That there were several Zoroasters.

THE Invention of Arts among the Chaldeans is generally ascribed to Zoroaster. The name Zoroaster (to omit those who give it a Greek Etymology, from *ζωον* and *αστρων*) *Dion* cited by *a* Laertius interprets *αστροδωτης*, Rendered by his Translators, a Worshipper of the Stars. *b* Kircher finds fault with this Etymology as being compounded out of two several Languages, from the Greek *αστρων*, and the Chaldee *Zor*, and therefore endeavours to deduce it from *c* *tsura*, a figure, or *d* *tsajar*, to fashion, and *e* *as* and *f* *star*, hidden fire, as if it were *g* *Zairaster*, fashioning Images of hidden fire, or, *b* *Tsuraster*, the Image of secret things, with which the Persian *Zarast* agreeth. But it hath been observed, that *Ester* in the Persian Language signifieth a Star. The former Particle *Zor*, *i* *Bochartus* derives from the Hebrew *Schur*, to contemplate, and thereupon, for *αστροδωτης*, (in Laertius) Reads *αστροθεωτης*, a contemplator of the Stars. But we find *Zor* used among other words (by composition) in the name *Zorobabel*, which we interpret, Born at Babylon: Zoroaster therefore properly signifies the Son of the Stars.

The same name it is which some call *Zabrazas*, others *Nazaratas*, others, *Zares*, others *Zarun*, others, *Zaratus*, others *Zaradas*; all which are but several corruptions from the Chaldee or Persian Word, which the Greeks most generally render Zoroaster.

That there were several Zoroasters (except *Gorapius* who paradoxically maintains there was not any one) none deny; but in reckoning them up, there is no small disagreement amongst Writers, grounded chiefly upon *k* *Arnobius*, whom they differently interpret; his words are these, *Age nunc veniat quis super igneam zonam Magus interiore ab orbe Zoroastres, Hermippo ut assentiamur Authori: Baſtrianus & ille conveniat,*

cujus Ctesias res gestas historiarum exponit in primo; Armenius, Hostanis nepos, & familiaris Pamphilus Cyri. *l* *Patricius*, *m* *Naudæus*, *l* *Mag. Phil. Kircher*, and others, conceive that *Arnobius* in *Apol. Mag. 3.* here mentions four Zoroasters; the first a Chal. *n* *Obelisc.* *dean*, the second a Baſtrian, the third a Pamph. *Pamphil.* *lian* (named also *Erus*,) the fourth an Armenian, Son (as Kircher would have it) of *Hostanes*. *o* *Salmasius* alters the Text thus, *Age nunc, veniat quæſo per igneam Zonam Magus interiore ab orbe Zoroastres, Hermippo ut assentiamur Authori, Baſtrianus. Et ille conveniat, cujus Ctesias res gestas historiarum exponit in primo, Armenius, Hostanis nepos, & familiaris Pamphilus Cyri.* Which words thus altered by himself, imply, as he pretends, but three Zoroasters, the first according to some, an Æthiopian, (a Country near the torrid Zone) but according to Hermippus, a Baſtrian; the second, Armenian, Nephew of *Hostanes*, of whose Actions *Ctesias* gives account in the first Book of his Histories; the third named *Pamphilus*, Friend to *Cyrus*. *p* *Ursinus*, from the same reading of the words, infers that *Arnobius* mentions only two, that he manifestly explodes the Baſtrian Zoroaster of Hermippus, and that *Ctesias* confuting the fabulous Relation of *Eudoxus*, proved Zoroaster to have lived in the time of *Cyrus*. But the words of *Arnobius* seem not to require such alteration; which will appear more, if we mention particularly all those on whom the name of Zoroaster was conferred,

The first a Chaldean, the same whom *q* *Suidas* calls the Assyrian, adding that he died by fire from Heaven; to which Story perhaps *Arnobius* alludes, or to that other Relation mentioned by *r* *Dion Chrysostom*, that Zoroaster the Persian (for their Stories are confounded) came forth to the People out of a fiery Mountain; or else by fiery Zone, he means the Seat of the zoned Deities just above the Empyrean or Corporeal Heaven, according to the Doctrine of the Chaldeans; for I find not any where that Zoroaster was esteemed an Æthiopian, or of interior Lybia as *Salmasius* expounds. Concerning this Zoroaster, *Arnobius* cites *Hermippus*: who, as *s* *Pliny* saith, wrote in explication of the Verses, and added Tables to his Volumes.

The second a Baſtrian; *t* *Justin* mentions Zoroastres, King of Baſtria contemporary with *Ninus* the Assyrian, by whom he was subdued and slain; adding, He was said to be the first that invented Magical Arts, and observed the beginnings of the World, and the Motions of the Stars *Arnobius* saith, *u* he contested with *Ninus*, not only by steel and strength, but likewise by the Magical and abstruse Disciplines of the Chaldeans. The Actions of this Zoroaster, *Ctesias* recorded in the first Book of his Persica; for so *Arnobius*, *x* *Baſtrianus* & ille conveniat, cujus Ctesias res gesta historiam exponit in primo. The first six Book of that Work treated (as *y* *Photius* shews) only of the Assyrian History, and passages that preceded the Persian Affairs. Whereupon, I cannot assent to the conjecture of *Salmasius*, who applies the citation of *Ctesias* to the Nephew of *Hostanes*, since *Hostanes* (as *z* *Pliny* affirms) lived under *Darius*. But *a* *Diodorus* names the King of Baſtria, whom *Ninus* conquered, *Oxyartes*; and some old Mss. of *Justin* (attested by *Ligerius*) *Oxyartes*, others *Zoroastres*: perhaps

perhaps the nearness of the Names and Times (the Chaldean living also under Ninus, as (b) Suidas relates) gave occasion to some to confound them, and to ascribe to the Bactrian what was proper to the Chaldean; since it cannot be imagined, that the Bactrian was Inventor of those Arts, in which the Chaldean, who lived contemporary with him, was so well skilled. Elichmannus, a Persian Writer, affirms the Arabians and Persians to hold, that Zoroaster was not King of the Bactrians, but a Magus or Prophet; who by persuasions having wrought upon their King, first introduced a new Form of Superstition amongst them, whercof there are some remainders at this day.

The third a Persian, so termed by c Laertius and others; the same whom Clemens Alexandrinus styles a Mede; Suidas a Perso-Mede; Institutor of the Magi, and Introducer of the Chaldaick Sciences amongst the Persians. Some confound this Zoroaster with the Chaldean, and both of them (as d Kircher doth) with Cham the Son of Noah, not without a very great Anachronism: for we find the word Persian no where mentioned before the Prophet Ezekiel, neither did it come to be of note till the time of Cyrus. The occasion of which mistake seems to have been; for that Zoroaster the Persian, is by Pliny, Laertius, and others, styled Institutor of Magick, and of the Magi, which is to be understood no otherwise than that he first introduced them into Persia. For e Plutarch acknowledgeth, Zoroaster instituted Magi amongst the Chaldeans, in imitation of whom the Persians had theirs also: And the f Arabick History that Zaradusht not first instituted, but reformed, the Religion of the Persians and Magi, being divided into many Sects.

The fourth a Pamphylian, commonly called Er, or Erus Armenius. That he also had the Name of Zoroaster, g Clement witnesseth: The same Author, (saith he, meaning Plato) in the 10th of his Politicks, mentioneth Erus Armenius, by descent a Pamphylian, who is Zoroaster; now this Zoroaster writes thus, h 'This wrote I, Zoroaster Armenius, by descent a Pamphylian, dying in War, and being in Hades, I learned of the Gods. This Zoroaster, i Plato affirmeth to have been raised again to Life, after he had been dead ten days, and laid on the Funeral Pyle, repeated by k Valerius Maximus, and l Macrobius. To this Zoroaster, doubtless the latter part of Arnobius's Words, with which Interpreters are so much perplexed, ought to be preferred, Armenius Hostanis nepos & familiaris Pamphilius Cyri. Some conjecture he mentions two Zoroasters; I rather conceive the words, relate only to this one, and perhaps are corrupt, thus to be restored and distinguished, Armenius Hostanis nepos & familiaris, Pamphilius Erus: Armenius, Nephew and Disciple (in which sense γνῆσιμος is usually taken) of Hostanes, Erus Pamphilius.

The fifth a Proconnesian, mentioned by m Pliny; such as are more diligent (saith he) place another Zoroaster, a Proconnesian, a little before Hostanes. This Zoroaster might probably be Aristas the Proconnesian, who, according to n Suidas, lived in the time of Cyrus and Cræsus. He adds, that his Soul could go out of his Body, and return as often as he pleased. o Herodotus relates an Instance hereof, not unlike that of Erus

Armenius, that he died suddenly in a Fuller's Shop at Proconnesus, and was seen the same time at Cyzicus: his Friends coming to fetch his Body, could not find it. Seven years after he returned home, and published the Verses which were afterwards called Arimaspiæ, a Poem describing a happy Life, or rather an Imaginary Civil Government after such a manner as he conceived most perfect. This we may gather from p Clemens Alexandrinus, who saith, that the Hyperborean and Arimaspiæ Cities, and the Elizian Fields are Forms of Civil Governments of just Persons; of which kinds Plato's Commonwealth.

To these may be added a sixth Zoroaster, (for so q Apuleius calls him) who lived at Babylon, at what time Pythagoras was carried Prisoner thither by Cambyfès. The same Author terms him omnis Divini arcanum Antistitem, adding, that he was the chief Person whom Pythagoras had for Master; probably, therefore, the same with Zabratas, by whom r Diogenes affirms, he was cleansed from the Pollutions of his Life past, and instructed from what things Virtuous Persons ought to be free; and learn the discourse concerning Nature (Physick) and what are the Principles of the Universe; the same which Nazaratas the Assyrian, whom Alexander in his Book of Pythagorick Symbols, affirms to have been Master to Pythagoras; the same whom Suidas calls Zarcs; Cyril, Zarn; Plutarch, Zaratus.

That there should be so many Zoroasters, and so much confusion amongst Authors that write of them, by mistaking one for another, is nothing strange; for, from extraordinary Persons, Authors of some Publick Benefit, they who afterwards were Eminent in the same kind, were usually called by the same name. Hence it is, that there were so many Belus's, Saturns, Jupiters; and, consequently, so much confusion in their Stories. The like may be said of Zoroaster the Chaldean, who being the inventor of Magical and Astronomical Sciences, they who introduced the same into other Countries, as Zoroaster the Persian did, in imitation (as Plutarch saith) of the Chaldeans, and such likewise as were eminently skilful in those Sciences, as the Bactrian, the Pamphylian, and the Proconnesian, are described to have been, were called by the same Name.

C H A P. III.

Of the Chaldean Zoroaster, Institutor of the Chaldaick Philosophy.

THE first of these Zoroasters term'd the Chaldean or Assyrian, is generally acknowledged the inventor of Arts and Sciences amongst the Chaldeans, but concerning the time in which he lived, there is a vast disagreement amongst Authors.

Some of these err so largely, as not to need any Confutation; such are a Eudoxus, and the Author of the Treatise entituled Mayinde, commonly ascribed to Aristotle, and so b Pliny cites it, who asserts he lived 5000 years before Plato. Such likewise are Hermippus, Hemodorus the Platonick, Plutarch and Gemistus Pletho (following Plutarch,) who place him 5000 years before the destruction of Troy.

Others conceive Zoroaster, to be the same with Cham, the Son of Noah; of which Opinion (not to mention the Pseudo-Berosus of Annius Viterbiensis) were Didymus of Alexandria, Agathias, Scholasticus, and Abenephi: Cham (saith the last) was the Son of Noah; he first taught the Worshipping of Idols, and first introduced Magical Arts into the World, his Name is Zoroaster, he the second Adris, a perpetual fire. Hither also some refer the Rabbinical stories concerning Cham, that c by Magick he emasculated his Father, &c. d That Noah being by this means disabled from getting a fourth Son, Cursed the fourth Son of Cham; That e this Curse (which was, that he should be a Servant of Servants) implied strange Service, viz. Idolatry; That f hereupon the Posterity of Chus became Idolaters, Cham himself being the first that made Idols, and introduced strange Service into the World, and taught his Family the Worshipping of Fire.

The greater part of Writers place him later. Epiphanius in the time of Nimrod, with whom agree the Observations g said to be sent by Calisthenes to Aristotle of 1903 years before Alexander's taking Babylon, for from the year of the Julian Period, in which Babylon was taken, the 1903. upward falls on the 2480 of the same Æra; about which time Nimrod laid the Foundations of that City, and there settled his Empire.

Suidas relates him contemporary with Ninus King of Assyria; Eusebius, with Semiramis wife of Ninus; Ninus is placed by Chronologers above the 3447. of the Julian Period.

Suidas (elsewhere) reckons him to have lived 500 years before the taking of Troy; Xanthus, 600 years before Xerxes's Expedition into Greece. Troy, according to the Marmor Arundelianum was taken 444 years before the first Olympiad. Xerxes's Expedition was on the first of the 75th Olympiad, viz. the of the Julian Period. The Account of Suidas therefore falls on the 3030. that of Xanthus on the 3634th. of the Julian Period. The latest of these seemeth to me most Historical, and agreeable to Truth.

Of his Birth, Life, and Death, there is little to be found; and even that uncertain, whether applicable to him, or to the Persian. Plato styles Zoroaster the Son of Oromases; but Oromases (as Plutarch and others shew) was a Name given to God by Zoroaster the Persian, and his Followers: whence I conceive that Plato is to be understood of the Persian Zoroaster, who perhaps in regard of his extraordinary knowledge, was either Allegorically styled, or fabulously reported to be the Son of God, or of some good Genius, as Pythagoras, Plato, and many other Excellent Persons were.

b Pliny reports, that Zoroaster (not particularizing which of them) laughed the same day he was born; and that his Brain did beat so hard that it heaved up the hand laid upon it, a presage of his future Science; and that he lived in the Deserts twenty years upon Cheese so tempered, as that it became not old. The Assyrian Zoroaster, (saith Suidas) prayed he might die by fire from Heaven, and advised the Assyrians to preserve his Ashes, assuring them that as long as they kept 'em, their Kingdom should never fail; but Cedrenus attributes the same to the Persian.

Of Writings attributed to him, are mentioned, i Verses, two Millions, upon which Hermippus wrote a Comment, and added Tables to them. cap. 1. Plin. lib. 36.

Oracles, perhaps part of the foresaid Verses; upon these Syrianus wrote a Comment in twelve Books.

Of Agriculture, or, Mechanicks, Pliny alledgeth a Rule for Sowing; and the Author of the Geoponicks, many Experiments under his name: but this was either spurious, or written by some other Zoroaster.

Revelations; supposititious also, forged (as Porphyrius professeth) by some Gnosticks.

To these add, cited by the Arabians, a Treatise of Magick; and another of Dreams, and their Interpretations, cited by Gelaldin frequently; Inventions doubtless of latter times.

Some ascribe the Treatises of the Persian Zoroaster to the Chaldean; but of those hereafter.

CHAP. IV.

Of Belus, another reputed Inventor of Sciences amongst the Chaldeans.

SOME there are who ascribe the Invention of Astronomy to Belus, of which Name there were two Persons, one a Tyrian, the other an Assyrian, who Reigned in Babylonia next after the Arabians, about the 2682 year of the World according to the account of Africanus; for whose Inventions the Babylonians honoured him as a God. There is yet standing, (saith a Plin. a Lib. ny) the Temple of Jupiter Belus; he was the Inventor of the Sciences of the Stars, and b Diodorus, speaking of the Egyptians, They affirm that afterwards many Colonies went out of Egypt, and were dispersed over the Earth, and that Belus reputed to be Son of Neptune and Lybia, carried one to Babylon; and making choice of the River Euphrates, to settle it, instituted Priests after the manner of those in Egypt, exempt from all publick Charges and Duties, which the Babylonians call Chaldeans; these observed the Stars, imitating the Egyptian Priests, Naturalists and Astrologers. Thus Diodorus. But that Belus was Son of Neptune and Lybia, is nothing but Greek Mythology; that he brought a Colony out of Egypt into Babylon, is Fabulous. For the Egyptians had not any Correspondence with Foreigners for a long time after. But to confirm that he was skilful in those Sciences, c Ælian gives this Relation.

Xerxes Son of Darius, breaking up the Monument of ancient Belus, found an Urn of Glass, in which his dead Body lay in Oyl; But the Urn was not full, it wanted a hand-breadth of the top: next the Urn there was a little Pillar, on which it was written, That whosoever should open the Sepulchre, and did not fill up the Urn, should have ill Fortune, which Xerxes reading grew afraid, and commanded that they should pour Oyl into it with all Speed; notwithstanding it was not filled: Then he commanded to pour into it a second time; but neither did it increase at all thereby. So that at last failing of Success, he gave over; and shutting up the Monument, departed very sad. Nor did the

the Event foretold by the Pillar, deceive him: for he led an Army of 50 Myriads against Greece, where he received a great Defeat, and returning home, died miserably, being Murdered by his own Son, in the Night-time, a-bed.

d Diad. l. 2.

To this Belus, Semiramis his Daughter d created a Temple in the middle of Babylon, which was exceeding high, and by the help thereof the Chaldeans, who addicted themselves there to Contemplation of the Stars, did exactly observe their Risings and Settings.

CHAP. V.

Other Chaldean Philosophers.

FROM Zoroaster were derived the Chaldean Magi and Philosophers his Disciples; amongst whom, a Pliny mentions one *Azonaces* Master of Zoroaster, which doubtless must have been meant of some later Zoroaster, there being many of that name, as we shewed formerly.

a Lib. 36.

b Loc. cit.

By the same b Author are mentioned of the Ancient Magi, *Marmaridius* a Babylonian, and *Zarmoceniadas* an Assyrian; of whom nothing is left but their Names, no Monuments extant of them.

c Suid.

To these add c *Zoromafres* a Chaldean Philosopher, who wrote *Mathematicks* and *Physicks*; and *Tencer* a Babylonian, an ancient Author, who wrote concerning the *Decanates*.

d Lib.

The Mathematicians also, saith d *Strabo*, mention some of these, as *Cidenas*, and *Naburrianus*, and *Sudinus*, and *Seleucus* of *Seleucia* a Chaldean, and many other Eminent Persons.

CHAP. VI.

Of *Berosus*, who first introduced the Chaldaick Learning into Greece.

AFTER these flourished *Berosus*, or, as the Greeks call him *Βηρώς*, which name a some interpret the Son of *Ofeas*: for as is manifest from *Elias*, *בֵּיר* with the Chaldees is the same with *בֵּר* in Syriack; whence *Bar-Ptolemeus*, as if the Son of *Ptolemy*, *Bar-Timaeus*, and the like: *Gorionides* and other Rabbins call him b *Bar-Hosea*, The Arabians *Barasa*; so *Abenepei*, and others.

d Adversar. 51.7

c *Barthius* saith, that there are some who assert him contemporary with *Moses*, which Opinion justly he condemns as Ridiculous; d *Claudianus Verderius* in his Censure upon the *Annian Berosus* affirms, he lived a little before the Reign of *Alexander* the Great; upon what Authority, I know not. That he lived in the time of *Alexander*, we find in the Oration of *Tatian* against the Gentiles; but the same *Tatian* adds, he dedicated his History to that *Antiochus*, who was the third from *Alexander*. But neither is this Reading unquestionable; for e *Eusebius* cites the same place of *Tatian* thus, *Berosus* the Babylonian, Priest of *Belus* at *Babylon*, who lived in the time of *Alexander*, and dedicated to *Antiochus*, the third after *Seleucus*, a History of the Chaldeans in three Books, and relates the Actions of their Kings, mentions one of them named Na-

e Præp. n. Evang. l. 10.

buchodonosor, &c. Here we find *μὲν Σέλευνον*, but in the Text of *Tatian*, *μὲν δὲ αὐτὸν* after *Alexander*. And indeed this Reading seems most consonant to the Story. The next to *Alexander* was *Seleucus Nicanor*: the next to him, *Antiochus Soter*; The third, *Antiochus Θεός*, who began his Reign 61 years after the Death of *Alexander*: Now, it is possible that *Berosus* at the time of *Alexander*'s taking *Babylon* might be thirty years old or less; and at the 90th year, or somewhat younger, might dedicate his History to *Antiochus Θεός*. Or we may say, that by *Antiochus* the third from *Alexander* is meant *Antiochus Σωτήρ*, reckoning *Alexander* himself inclusively for one, *Seleucus*, the second *Antiochus Σωτήρ* the third; to whom from the death of *Alexander* are but 44 years: And in approving this Account we may retain the Reading of *Eusebius*, supposing the first to be *Seleucus*, the second *Antiochus Σωτήρ*, the third *Antiochus Θεός*: Neither is this inconsistent with *Gesner*'s Translation of the Words of *Tatian*, *καὶ Ἀλέξανδρον γενόμενον*, as in *Stephen*'s Edition of *Eusebius*; or *καὶ Ἀλέξανδρον γενόμενος*, as in *Tatian* himself, *qui Alexandri ætate vixit*: which Interpretation f *Onuphrius Panvinus* also follows. But considering these words more intently, it came into my Mind (saith *Vossius*) that it might better be rendred, *qui Alexander ætate natus est*, whereby all scruple may be taken away, supposing *Berosus* to have been born but two years before *Alexander*'s death; by which account he must have been but 64 years old when *Antiochus Θεός*, to whom he dedicated his Book, began to Reign: which way soever it is, *Berosus* Published his History in the time of *Ptolemaus Philadelphus*; for he Reigned 38 years, and in the sixth year of his Rein *Antiochus Soter* began to Reign in Syria in the 22d of *Antiochus Θεός*, to one of whom *Berosus* dedicated his Book. But by no means we can assent to the Learned g *Conradus Gesnerus*, who by *Alexander* conceives to be meant not he who was firnamed the Great, Son of *Philip*, but that *Alexander* who succeeded *Demetrius Soter*, in the Kingdom of Syria, and was Succeeded by *Demetrius Nicanor*; by *Antiochus* understanding *Antiochus Sedetes* who Reigned next after *Demetrius Nicanor*: for if it were so, *Berosus* must have been a whole Age later than *Manetho*; but *Manetho* flourished under *Philadelphus*, (as *Vossius* elsewhere proves.) *Philadelphus* died in the third year of the 133d Olympiad; but *Antiochus Sedetes* invaded Syria in the first of the 160th Olympiad: How then could *Berosus* live so late, who was a little precedent to *Manetho*, as *Syncellus* expressly affirms? Again, we may assert the time of *Berosus* another way. b *Pliny* saith, he gave account of 480 years, which doubtless were of *Nabonassar*: Now the *Æra* of *Nabonassar* began in the second year of the 8th Olympiad; from which if we reckon 480, it will fall upon the latter end of *Antiochus Soter*'s Reign; wherefore *Berosus* dedicated his Book either to him or to *Antiochus Θεός* his Son. These Arguments will not suffer us to doubt of the time *Berosus*.

f Lib. de Sibyl.

g Tatian.

h Lib. 6. c. 55

This *Berosus* is mentioned by many of the Ancients i *Vitruvius* saith, he first settled in the Island *Coos*, and there opened Learning. k *Josephus*

i Lib. 9. c. 7.
k Contr. Apion. lib. 1.

Josephus that he introduced the Writings of the Chaldeans concerning Astronomy and Philosophy among the Grecians. *Pliny*, that the Athenians, for his Divine Predictions, dedicated to him publicly in their Gymnasium a Statue with a golden Tongue. He is mentioned likewise by *m Tertulian*, and the Author of the *n Chronicon Alexandrinum*.

He wrote *Babylonicks* or *Chaldaicks*, in three Books: for they are cited promiscuously under both these Titles: *The Babylonicks* of *Berosus* *o Athenæus* cites; but *Tatian* saith, he wrote the *Chaldaic History* in three Books. And *p Clemens Alexandrinus* cites *Berotius*, his third of *Chaldaicks*; and elsewhere, simply his *Chaldaick Histories*. And *Agathias* affirms, he wrote the *Antiquities of the Assyrians and Medes*; for those Books contained not only the *Assyrian* or *Chaldean Affairs*, but also the *Median*; *q Agathias*, as somewhere *Berosus* the *Babylonian*, and *Athenocles*, and *Simacus*, relate, who have Recorded the *Antiquities of the Assyrians and Medes*. Out of this work *r Josephus* hath preserved some excellent Fragments; but the supposititious *Berosus* of *Annius* is most trivial and foolish, of the same kind as his *Megasthenes* and *Archilochus*: Many Kings are there reckoned which are no where to be found; and scarce is there any of those fragments which *Josephus* cites out of the true *Berosus*; on the contrary, some things are plainly repugnant, as when he saith, *Semiramis* built *Babylon*, whereas *Josephus* saith *Berosus* wrote, that it was not Built by *Semiramis*.

A Daughter of this *Berosus* is mentioned by *s Justin Martyr* a *Babylonian Sibyl*, who prophesied at *Cumæ*; this cannot be understood of that *Cumæan Sibyl*, who lived in the time of *Tarquinius Priscus*; for betwixt *Tarquinius Priscus*, and the first *Pontick War*, (in which time *Berosus* lived) are 245 years; but of some other *Cumæan Sibyl*, of much later time. That there were several *Sibyls*, who Prophesied at *Cumæ* *t Onuphrius* hath already proved out of the *Treatise of wonderful things* ascribed to *Aristotle*; and out of *Martianus Capella*, and other Writers.

Berosus being the Person who introduced the *Chaldaick Learning* into *Greece*, we shall with him close the History of the Learned Persons of or Philosophers amongst the *Chaldeans*.

SECT. II.

The Chaldaick Institution and Sects.

CHAP. I.

That all Professors of Learning were more peculiarly termed Chaldeans.

Philosophy. or Learning was not taught and propagated by the *Chaldeans* after the *Grecian* manner, communicated by public Professors indifferently to all sorts of Auditors; but restrained to certain Families. These were by a more peculiar compellation termed

Chaldeans, addicted themselves wholly to study; had a proper habitation allotted for them; and lived exempt from all publick Charges and Duties.

Of these is a *Diodorus* to be understood; *a Lib. 1.* who relates, that *Belus* Instituted Priests exempt from all publick Charges and Duties, whom the *Babylonians* call *Chaldeans*. *Strabo* adds, that there was a peculiar Habitation in *Babylonia* allotted for the Philosophers of that Country, who were termed *Chaldeans*, and that they inhabited a certain Tribe of the *Chaldeans*, and a portion of *Babylonia*, adjoining to the *Arabians*, and the *Persian Gulf*.

There were those *Chaldeans* who, as *Cicero* saith, were named not from the Art, but Nation. And of whom he is elsewhere to be understood, when he affirms that in *Syria* the *Chaldeans* excell for knowledge of the Stars, and acuteness of Wit; and *b Q. Curtius*, who describing the Solemnity of those two who went out of *Babylon* to meet *Alexander*, saith, Then went the *Magi* after their manner; next whom, the *Chaldeans* Non vates modo, sed Artifices *Babyloniorum*: Where tho' some interpret Artifices, those Astrologers who made Instruments for the practice of their Art; yet *Curtius* seems to intend no more than the *Chaldeans* of both sorts, the *Plebeian Tradesmen*, and the *Learned*.

Of these *Chaldeans* peculiarly so termed, is *c Lactantius* likewise to be understood, when he cites as Authors of Philosophy amongst the *Persians* the *Magi*, amongst the *Babylonians* or *Assyrians* the *Chaldeans*. And *Hesychius*, who interprets the word *Chaldeans*, a kind of *Magi* that know all things.

CHAP. II.

Their Institution.

These *Chaldeans* preserved their Learning within themselves by a continued Tradition from Father to Son. They learn not, (saith *a Lib. 1.* *a Diodorus*) after the same fashion as the *Greeks*: For amongst the *Chaldeans*, Philosophy is delivered by Tradition in the Family, the Son receiving it from the Father, being exempted from all other Employment; and thus having their Parents for their Teachers, they learn all things fully and abundantly, believing more firmly what is communicated to them: and being brought up in these Disciplines from Children, they acquire a great habit in *Astrology*, as well because that Age is apt to Learn, as for that they employ so much time in Study. But among the *Greeks*, for the most part they come unprepared, and attain Philosophy very late; and having bestowed some time therein, quit it to seek out means for their Livelihood: and tho' some few give themselves up wholly to Philosophy, yet they persist in Learning only for gain, continually innovating some things in the most considerable Doctrines, and never follow those that went before them; whereas the *Barbarians* persevering always in the same, receive each of them firmly: But the *Greeks* aiming at gain, by this Profession erect new Sects, and contradicting one another in the most considerable Theorems, make their Disciples dubious; their minds, as long as they live,

live, are in suspense and doubt, neither can they firmly believe any thing: for if a Man examine the chiefest Sects of the Philosophers, he will find them most different from one another, and directly opposite in the principal assertions.

C H A P. III.

Sects of the Chaldeans distinguished according to their several Habitations.

AS all Professors of Learning among the Chaldeans, were distinguished from the rest of the People by the common denomination of the Country, Chaldeans; so were they distinguished among themselves into Sects, denominated from the several parts of the Country, wherein they were seated: Whereof *a* Pliny and *b* Strabo mention Hipparenes from Hipparenum, a City in Mesopotamia; Babylonians, from Babylon; Orchenes, *c* (a third Chaldaick Doctrine) from Orchœ a City of Chaldea; and Borsippenes, from Borsippe, another City of Babylonia dedicated to Apollo and Diana. And though *d* Diodorus prefer the Chaldeans before the Grecians, for the perseverance in the same Doctrines without Innovations; yet we must not infer thence, that there was an universal consent of Doctrine amongst them; but only, that each of them was constant in belief, and maintenance of his own Sect, without introducing any new Opinion. For, that amongst these Sects there was no absolute agreement, is manifest from Strabo, who adds that *e* they did (as indifferent Sects) assert contrary Doctrines; *f* some of them cal- culated Nativities, others disapproved it; Whence *g* Lucretius,

The Babylonick Doctrine doth oppose
The Chaldee, and Astrology o'rtrows.

C H A P. IV.

Sects of the Chaldeans distinguished according to their several Sciences.

ANother (more proper) distinction of Sects amongst the Learned Chaldeans, there was, according to the several Sciences which they profess. The Prophet *a* Daniel relating how Nebuchadonofar sent for all the Learned Men, to tell him his Dream, takes occasion to name the principal of them, which were four; Hbartumim, Ashaphim, Mecashphim, Chasdim.

Hbartumim, are by Abrabaniel, expounded Magi, skilful in Natural Things; and by Jachiades, those Magi who addicted themselves to contemplative Science, which interpretation suits well with the derivation of the Word; not as some would have from Charmini, Burnt Bones, (for that the Magi performed their Rites with Dead Mens Bones) nor from Churat, a Pen or Scribe) in regard the Egyptians used to call their wise Persons Scribes,) for the Word in Chaldee, is not taken in that Sense; but from Charad a Persian Word, (by Transmutation of *h* into *ch*) signifying to know, whence Elmacinus

instead of this Persee-Chaldee, useth two Arabick Words, Albachamaon, Walarraphon; Wise and Knowing Persons. The Hbartumim, therefore were not (as commonly rendered) Magicians, but rather such as studied the Nature of all things, under which Contemplation is comprehended Theology, and Physick, the Knowledge of Beings, Divine and Natural.

Ashaphim *b* Jachiades expounds those Magi *b* In Dan. 1 qui scientiam adivom excolbant: So Constantinus *b* renders him, but adds, that Jachiades is mistaken, and that the Ashaphim were rather the same as Souphoon in Arabick, Wise, Religious Person. This indeed, is the more probable; Souphoon is an Attribute, proper to all those who delivered all Theology, Mystically, and Allegorically, derived from Souph, Wool; either for that the Garments of these Professors of Theology, were made only of Wool, never of Silk; or from attiring, and vailing the things which concern the Love of God, under the figures of visible things: whence is derived the Word Haseviph, Mystick Theology; and perhaps from the Hebrew Root, Ashaph, comes to the Greek σοφία, the first Attribute given by the Greeks to Learned Persons, afterwards changed into σοφιστης. These Ashaphim, the ordinary Interpretation of the Text in Daniel stiles Astrologers: And Eben Ezra derives the Word from נבואה ray-light, because they observe the Heavens at that time; but the Astrologers are meant afterwards by the Word Chasdim, (last of the four.) The Ashaphim of the Chaldeans, seem rather to be the same with the Magi of the Persians, Priests, the Professors of Religious Worship, which they termed Magick.

Mecashphim, properly signifieth Revelers, (that is,) of abstruse things: The Word is derived from Chasphaph; which the Arabians still use in the same sense of Revealing: Mecashphim are generally taken, (as by R. Moses, Nachmarides, Abrabaniel, and others) for such as practised Diabolical Arts: Not improperly rendered, Sorcerers.

Chasdim, (or Chaldeans) was an Attribute (as we shewed formerly) conferred in a particular sense upon the Learned Persons of the Chaldeans: Amongst whom, by a restriction yet more particular, it signified the professors of Astrology, this being a Study, to which they were more especially addicted, and for which most eminent; these are those Chasdim, whom *c* Strabo stiles χαλδαίαις ἀστρονομικάς, Astronomical Chaldeans.

Besides these four kinds (which seem to have been the principal,) there are several others mentioned, and prohibited by the Levitical Law. Deut. 18. 10. Choser, Casnim, Megnonenim, Menacheshim, Hbober, Hhaber, Shel, Ob, Fideoni, Doreshel Hammetim; R. Mai- monides reciting them all; adds, that they were several sorts of Diviners sprung up of old amongst the Chaldeans. Jachiades mentions them, as particular kinds of the Mecashphim.

THE
FIFTEENTH PART.

The Chaldaick Doctrine.

*a P. ut, 1.
Sect. 2. cap. 4.*

From the four general kinds of the Professors of Learning amongst the Chaldeans, mentioned by the Prophet Daniel, (of which we last treated) may be inferred, of what parts or Sciences the Chaldaick Doctrine did consist. The Hbartumim were employed in Divine and Natural Speculation; The Ashaphim, in Religious Worship, and Rites; The Meccashphim, and Chasdim in Divination: these by Astrology, those by other Arts: which two last, Diodorus, speaking of the Learned Chaldeans, comprehends under the common name of Astrologers; the other two, under that of Natural Philosophers, and Priests: for he saith, *the imitated the Egyptian Priests, Naturalists, and Astrologers.*

In treating therefore of the Chaldaick Doctrine, we shall first lay down their Theology, and Physick, the proper Study of the Hbartumim; Next, their Astrology, and other Arts of Divination, practised by the Chasdim, and Meccashphim: Thirdly, their Theurgy, and Lastly, their Gods. Which Contemplation and Rites were peculiar to the Ashaphim.

S E C T. I.

Theology and Physick.

The Chaldaick Doctrine, in the first place considers all Beings, as well Divine, as Natural: the Contemplation of the first, is Theology; of the latter, Physick.

*a Psell. in O-
ra. l. 51.*

a Zoroaster divided all things into three kinds; the first Eternal; the second had a beginning in time, but shall have no end; the third Mortal: the two first belong to Theology. The Subject of Theology, (saith *b* Eusebius, speaking doubtless of the Followers of Zoroaster) they divided into four kinds; the first is God, the Father and King: next him, there followeth a multitude of other Gods; in the third place they rank Demons; in the fourth Heroes, or, according to others, Angels, Demons, and Souls.

*b Præp. Evang.
lib. 4. cap. 3.*

The third, or Mortal kind is the Subject of Physick: It comprehends all things material; which they divide into seven Worlds, one Empyrean, three Ætherial, three Corporeal.

C H A P. I.

Of the Eternal Being, God.

The first kind of things (according to Zoroaster) is Eternal, the Supreme God. In the first place (saith Eusebius) they conceive

that God the Father and King ought to be ranked. This the Delphian Oracle (cited by Porphyrius) confirms.

*Chaldees and Jews wise only, Worshipping
Purely a self-begotten God and King.*

This is that Principle of which the Author of the Chaldaick Summary saith; *They conceive there is one Principle of all things, and declare that it is one and good.*

a God (as Pythagoras learnt of the Magi, who ^{*a* Porphyr. cit. Pythag.} term him Oromasdes) in his Body resembles Light, in his Soul truth; That God (according to the Chaldaick Opinion) is Light, besides the Testimony of Eusebius, may be inferred from the Oracles of Zoroaster, wherein are frequently mentioned the *b* Light, Beams, and Splendor of <sup>*b* δαδ' αὐγὰς
καὶ φέγγος,
πατέρος.</sup> the Father.

In the same sense they likewise termed God a Fire; for Ur in Chaldee signifying both Light and Fire, they took Light and Fire promiscuously (as amongst many others Plato doth when he saith that God began to compound the whole Body of the World out of Fire and Earth: by which Fire he afterwards professeth to mean the Sun, whom he Styles the brightest and whitest of things, as if Light and Fire, Brightness and Whiteness were all one;). this is manifest from the Zoroastrian Oracles also; wherein he is sometimes called simply Fire, sometimes the Paternal Fire, *the one Fire, the first Fire above.*

Upon this Ground (doubtless) was the Worship of Fire instituted by the Ancient Chaldeans, and *c* from them derived to the Persians, of ^{*c* Agath.} which hereafter, when we shall come to speak of their Gods and Religious Rites.

C H A P. II.

The Emanation of Light or Fire from God.

God (as we have shewn) an Intellectual Light or Fire did not (as the Oracle saith) shut up his Fire within his Intellectual Power; but communicated it to all Creatures; first and immediately to the first Mind (as the some Oracles assert) and to all other ævternal and incorporeal Beings, (under which notion are comprehended a multitude of God's Angels, good Demons, and the Souls of Men:). The next Emanation is the Supramundane Light, an Incorporeal Infinite luminous Space, in which the intellectual Beings reside; The Supramundane Light kindles the first Corporeal World, the Empyreum or Fiery Heaven, which being immediately beneath the Incorporeal Light, is the Highest, Brightest, and Rarest of Bodies. The Empyreum diffuseth it self through the Æther, which is the next Body below it, a Fire less refined than the Empyreum: But that it is Fire, the more condensed parts thereof, the Sun and Stars sufficiently evince; from the Æther this Fire is transmitted to the Material and Sublunary World; for though the Matter whereof it consists be not Light but Darkness, (as are also the Material or bad Demons) yet this *a* <sup>*a* Ζωνήδον
αὐγῆς, Orat.</sup> vivificative Fire actuates and gives Life to all its Parts,

Parts, insinuating, diffusing it self, and penetrating even to the very Center: *passing from above* (saith the Oracle) *to the opposite Part, through the Center of the Earth.* We shall describe this more fully, when we treat of the Particulars.

C H A P. III.

Of things Æviterual and Incorporeal.

THe Second or middle kind of Things (according to Zoroaster is that which) is begun in time, but is without end (commonly termed æviterual.) To this belong that *multitude of Gods*, which Eusebius saith, they asserted next after God the Father and King; and the Souls of Men: Psellus and the other Summarists of the Chaldaick Doctrine, name them in this order; *Intelligibles; Intelligibles and Intellectuals; Intellectuals; Fountains; Hyperarchii, or Principles; Unzoned Gods; Zoned Gods; Angels; Demons; Souls.* *a* All these they conceive to be light, (except the ill Demons which are dark.)

b Over this Middle kind Zoroaster held *Mithra* to preside, whom the Oracles (saith Psellus) call the Mind. *c* This is employed about secondary things.

C H A P. IV.

The First Order.

IN the first place are three Orders, one *Intelligible*, another *Intelligible and Intellectual*, the third *Intellectual*. The first Order which is of *Intelligibles*, seems to be (as the Learned *Patricius* conjectures; for Psellus gives only a bare accompt, not an Exposition of these things) that which is only understood: This is the highest Order: The *second* or middle Order is of *Intelligibles and Intellectuals*, that is, those which are understood, and understand also; as Zoroaster,

There are Intelligibles and Intellectuals, which understanding are understood.

The *third* is of *Intellectuals*; which only understand: as being Intellect, either essentially or by participation. By which distinction we may conceive that the highest Order is above Intellect, being understood by the middle sort of Minds. The middle Order participates of the Superiour, but consists of Minds which understand both the Superiour and themselves also. The last Order seems to be of Minds, whose Office is to understand not only themselves but Superiors and Inferiours also.

Of the first of which Orders, the *Anonymous* Author of the Summary of the Chaldaick Doctrine, thus: *Then (viz. next the one and good) they Worship a certain paternal Depth consisting of three Triads; each Triad hath a Father, a Power, and a Mind: Psellus somewhat more fully; Next the one they assert the paternal Depth completed by three Triads: each of the Triads having a Father first, then a Power middle, and a Mind the third amongst them: which (Mind) shutteth up the Triad within it self, these they call also Intelligibles.*

This Tripple Triad seems to be the same with the Triad mentioned in the Oracles of Zoroaster. What Psellus terms Father, he calls Father also.

The Father perfected all things, and Paternal Monad.

Where the paternal Monad is.

The second which Psellus calls *Power*, he terms also the *Power of the Father*.

Neither did he shut up his own Fire in his Intellectual Power.

And—*The strength of the Father.*

And the *Duad* generated by the *Monad*, and resident with him:

The Monad is enlarged, which Generates two.

And again,

The Duad resides with him.

This is also the *first paternal Mind*: for the third of this Triad, which Psellus terms the *Mind*, he saith is the second *Mind*.

The Father perfected all things, and delivered them over,

To the second Mind, which all Mankind calls the first,

And as Psellus saith, that this Mind shuts up the Triad and paternal depth within it self: so Zoroaster;

It is the Bound of the paternal Depth and Fountain of Intellectuals.

And again,

It proceeded not further, but remained in the paternal Depth.

C H A P. V.

The Second Order.

NExt these (saith Psellus) there is another Order of *Intelligibles and intellectuals*; This also is divided three-fold, into *Jynges Synoches, and Teletarchs*. With him agrees the *Anonymous Summarist*. *Then is the Intelligible Jynx; next which are the Synoches, the Empyrean, the Ætherial and the Material; after the Synoches are the Teletarchs.*

The first are *Jynges*, of which the Oracle;

Intelligent Jynges do themselves also understand from the Father

By unspeakable Counsels being moved so as to understand;

Psellus saith, they are certain Powers next to the paternal Depth consisting of three Triads (I would rather read, the paternal Depth which consists of three Triads, for so it is described in the foregoing Chapter, by the same Author) which, according to the Oracle, understand by the paternal Mind, which contains the cause of them singly within it self: *Pletho*, They are *Intellectual Species* conceived by the Father, they themselves being conceptive also, and exciting Conceptions or Notions by unspeakable Counsels; These seem to be the Idea's described by the Zoroastrian Oracle;

The Mind of the Father made a jarring noise, understanding by vigorous Counsels

Omni-form Idea's, and flying out of one Fountain, C c c c They

THE
FIFTEENTH PART.

The Chaldaick Doctrine.

*a Part, 1.
Sect. 2. cap. 4.*

From the four general kinds of the Professors of Learning amongst the Chaldeans, mentioned by the Prophet Daniel, (of which we last treated) may be inferred, of what parts or Sciences the Chaldaick Doctrine did consist. The *Hbartumim* were employed in Divine and Natural Speculation; The *Asaphim*, in Religious Worship, and Rites; The *Mecashphim*, and *Chasdim* in Divination: these by *Astrology*, those by other Arts: which two last, *Diodorus*, speaking of the Learned Chaldeans, comprehends under the common name of *Astrologers*; the other two, under that of *Natural Philosophers*, and *Priests*: for he saith, *the imitated the Egyptian Priests, Naturalists, and Astrologers.*

In treating therefore of the Chaldaick Doctrine, we shall first lay down their *Theology*, and *Physick*, the proper Study of the *Hbartumim*; Next, their *Astrology*, and other Arts of Divination, practised by the *Chasdim*, and *Mecashphim*: Thirdly, their *Theurgy*, and Lastly, their Gods. Which Contemplation and Rites were peculiar to the *Asaphim*.

*b Prop. Ev. ang.
lib. 4. cap. 3.*

The Chaldaick Doctrine, in the first place considers all Beings, as well Divine, as Natural: the Contemplation of the first, is Theology; of the latter, Physick. *a Zoroaster divided all things into three kinds; the first Eternal; the second had a beginning in time, but shall have no end; the third Mortal: the two first belong to Theology. The Subject of Theology, (saith b Eusebius, speaking doubtless of the Followers of Zoroaster) they divided into four kinds; the first is God, the Father and King: next him, there followeth a multitude of other Gods; in the third place they rank Demons; in the fourth Heroes, or, according to others, Angels, Demons, and Souls.*

The third, or Mortal kind is the Subject of Physick: It comprehends all things material; which they divide into seven Worlds, one *Empyrean*, three *Ætherial*, three *Corporeal*.

C H A P. I.

Of the Eternal Being, God.

The first kind of things (according to Zoroaster) is Eternal, the Supreme God. In the first place (saith Eusebius) they conceive

that God the Father and King ought to be ranked. This the Delphian Oracle (cited by Porphyrius) confirms.

Chaldees and Jews wise only, Worshipping Purely a self-begotten God and King.

This is that Principle of which the Author of the Chaldaick Summary saith, *They conceive there is one Principle of all things, and declare that it is one and good.*

a God (as Pythagoras learnt of the Magi, who term him Oromasdes) in his Body resembles Light, in his Soul truth; That God (according to the Chaldaick Opinion) is Light, besides the Testimony of Eusebius, may be inferred from the Oracles of Zoroaster, wherein are frequently mentioned the b Light, Beams, and Splendor of the Father.

In the same sense they likewise termed God a Fire; for *Ur* in Chaldee signifying both Light and Fire, they took Light and Fire promiscuously (as amongst many others Plato doth when he saith that God began to compound the whole Body of the World out of Fire and Earth: by which Fire he afterwards professeth to mean the Sun, whom he Styles the brightest and whitest of things, as if Light and Fire, Brightness and Whiteness were all one;) this is manifest from the Zoroastrian Oracles also; wherein he is sometimes called simply Fire, sometimes the *Paternal Fire*, *the one Fire*, *the first Fire above.*

Upon this Ground (doubtless) was the Worship of Fire instituted by the Ancient Chaldeans, and c from them derived to the Persians, of which hereafter, when we shall come to speak of their Gods and Religious Rites.

C H A P. II.

The Emanation of Light or Fire from God.

God (as we have shewn) an Intellectual Light or Fire did not (as the Oracle saith) shut up his Fire within his Intellectual Power, but communicated it to all Creatures; first and immediately to the first Mind (as the some Oracles assert) and to all other æviterual and incorporeal Beings, (under which notion are comprehended a multitude of God's Angels, good Demons, and the Souls of Men:) The next Emanation is the Supramundane Light, an Incorporeal Infinite luminous Space, in which the intellectual Beings reside; The Supramundane Light kindles the first Corporeal World, the Empyreum or Fiery Heaven, which being immediately beneath the Incorporeal Light, is the Highest, Brightest, and Rarest of Bodies. The Empyreum diffuseth it self through the Æther, which is the next Body below it, a Fire less refined than the Empyreum: But that it is Fire, the more condensed parts thereof, the Sun and Stars sufficiently evince; from the Æther this Fire is transmitted to the Material and Sublunary World; for though the Matter whereof it consists be not Light but Darkeness, (as are also the Material or bad Demons) yet this a vivificative Fire actuates and gives Life to all its Parts,

*a Zoroastrian.
Orat.*

Parts, insinuating, diffusing it self, and penetrating even to the very Center: *passing from above (saith the Oracle) to the opposite Part, through the Center of the Earth.* We shall describe this more fully, when we treat of the Particulars.

CHAP. III.

Of things Æviternal and Incorporeal.

THe Second or middle kind of Things (according to Zoroaster is that which) is begun in time, but is without end (commonly termed æviternal.) To this belong that multitude of Gods, which Eusebius saith, they asserted next after God the Father and King; and the Souls of Men: Psellus and the other Summarists of the Chaldaick Doctrine, name them in this order; *Intelligibles; Intelligibles and Intellectuals; Intellectuals; Fountains; Hyperarchii, or Principles; Unzoned Gods; Zoned Gods; Angels; Demons; Souls.* *a* All these they conceive to be light, (except the ill Demons which are dark.) *b* Over this Middle kind Zoroaster held *Mithra* to preside, whom the Oracles (saith Psellus) call the Mind. *c* This is employed about secondary things.

*a Euseb.
b Plut.
c Plut.*

CHAP. IV.

The First Order.

IN the first place are three Orders, one *Intelligible*, another *Intelligible and Intellectual*, the third *Intellectual*. The first Order which is of Intelligibles, seems to be (as the Learned *Patricius* conjectures; for Psellus gives only a bare accompt, not an Exposition of these things) that which is only understood: This is the highest Order: The second or middle Order is of Intelligibles and Intellectuals, that is, those which are understood, and understand also; as Zoroaster, *There are Intelligibles and Intellectuals, which understanding are understood.* The third is of Intellectuals; which only understand: as being Intellect, either essentially or by participation. By which distinction we may conceive that the highest Order is above Intellect, being understood by the middle sort of Minds. The middle Order participates of the Superiour, but consists of Minds which understand both the Superiour and themselves also. The last Order seems to be of Minds, whose Office is to understand not only themselves but Superiors and Inferiours also. Of the first of which Orders, the *Anonymus* Author of the Summary of the Chaldaick Doctrine, thus: *Then (viz. next the one and good) they Worship a certain paternal Depth consisting of three Triads; each Triad hath a Father, a Power, and a Mind: Psellus somewhat more fully; Next the one they assert the paternal Depth completed by three Triads: each of the Triads having a Father first, then a Power middle, and a Mind the third amongst them: which (Mind) shutteth up the Triad within it self, these they call also Intelligibles.*

This Tripple Triad seems to be the same with the Triad mentioned in the Oracles of Zoroaster. What Psellus terms Father, he calls Father also.

The Father perfected all things, and Paternal Monad.

Where the paternal Monad is.—
The second which Psellus calls Power, he terms also the Power of the Father.

Neither did he shut up his own Fire in his Intellectual Power.

And—*The strength of the Father.*
And the Duad generated by the Monad, and resident with him:

The Monad is enlarged, which Generates two.

And again, *The Duad resides with him.*

This is also the first paternal Mind: for the third of this Triad, which Psellus terms the Mind, he saith is the second Mind.

The Father perfected all things, and delivered them over,

To the second Mind, which all Mankind calls the first,

And as Psellus saith, that this Mind shuts up the Triad and paternal depth within it self: so Zoroaster;

It is the Bound of the paternal Depth and Fountain of Intellectuals.

And again, *It proceeded not further, but remained in the paternal Depth.*

CHAP. V.

The Second Order.

NExt these (saith Psellus) there is another Order of Intelligibles and intellectuals; This also is divided three-fold, into *Jynges Synoches, and Teletarchs*. With him agrees the Anonymous Summarist. *Then is the Intelligible Jynx; next which are the Synoches, the Emphyreal, the Ætherial and the Material; after the Synoches are the Teletarchs.*

The first are Jynges, of which the Oracle; *Intelligent Jynges do themselves also understand from the Father*

By unspeakable Counsels being moved so as to understand;

Psellus saith, they are certain Powers next to the paternal Depth consisting of three Triads (I would rather read, the paternal Depth which consists of three Triads, for so it is described in the foregoing Chapter, by the same Author) which, according to the Oracle, understand by the paternal Mind, which contains the cause of them singly within it self: Pletho, *They are Intellectual Species conceived by the Father, they themselves being conceptive also, and exciting Conceptions or Notions by unspeakable Counsels; These seem to be the Idea's described by the Zoroastræan Oracle;*

*The Mind of the Father made a jarring noise, understanding by vigorous Counsels
Omni-form Idea's, and flying out of one Fountain, C c c c They*

They sprung forth, for from the Father was
the Counsel and End;
But they were divided, being by Intellectual
Fire distributed
Into other Intellectuals, for the King did set
before the multi-form World
An Intellectual incorruptible pattern, the Print
of whose Form
He promoted through the World, and accord-
ingly the World was framed,
Beautified with all kind of Idea's, of which
there is one Fountain,
Out of which came rushing forth others undi-
stributed,
Being broken about the Bodies of the World,
which through the vast Recesses,
Like Swarms, are carried round about every
Way,
Intellectual Notions from the paternal Foun-
tain, cropping the Flower of Fire.
In the point of sleepless Time, of this
Primigenious Idea, the first self-budding Foun-
tain of the Father budded.

Upon which Words, Proclus having cited
them as an Oracle of the Gods, adds, *Hereby the
Gods declared as well where the subsistence of Ide-
a's is, as who that God is who contains the one Foun-
tain of them, as also, after what manner the multi-
tude of them proceeded out of this Fountain, and
how the World was made according to them. And
that they are movers of all the Systems of the
World, and that they are all Intellectual essentially.*
Others may find out many other profound things,
by searching into these Divine Notions; but for
the present, let it suffice us to know, that the
Gods themselves ratifie the Contemplations of Pla-
to, for as much as they term those Intellectual Cau-
ses Idea's; and affirm that they gave pattern to the
World, and that they are Conceptions of the Fa-
ther: for they remain in the Intellections of the
Father: and that they go forth to the making of
the World, for, *παύσις* implies their going forth,
and that they are of all forms, as containing the
Causes of all things divisible: and that from the
Fountainous Idea's there proceeded others, which
by several parts framed the World, and are
said to be like Swarms (of Bees) because they be-
get the secondary Idea's: Thus Proclus.

The second are the Synoches, which are three;
the Empyrean, the Æthereal, the Material: an-
swerable to the several Worlds, which they Go-
vern: For they seem to be Minds, which receiv-
ing from Hecate the influence of that Fire which
dispenseth life, infuse it into the Empyrean, Æ-
thereal, and Material Worlds, and Support and
Govern those Worlds, and give them vital Mo-
tion. The Oracle termeth them *Anoches*.

Each World hath Intellectual *Anoches* inflexible,
where Psellus interprets them the most Excellent
of Intelligible Species, and of those that are
brought down by the Immortals in this Heaven, in
the head of whom is conceived to be a God, the
second from the Father.

The last of this Order are the Teletarchs,
joyned with the Synoches by the Oracle.

The Teletarchs are comprehended with the Sy-
noches.

This second Order or Triad, Proclus and Da-
mascius often mention, styling it by the double
name of Intelligent and Intellectual.

CHAP. VI.

The third Order.

The last Order is of Intellectuals; a Psellus, ^{a Epist.}
After the middle Order is the Intellectual ha-
ving one paternal Triad, which consists of the once
above, and of Hecate and of the twice above; And
another (Triad) which consists of the Amiliēti,
which are three; And one, the Hypezocos. These
are seven Fountains. Anonymus Summarist, Af-
ter these are the fountainous Fathers called also
Cosmagogues; the first of whom is called the once
above; next whom is Hecate; then the twice above,
next whom three Amiliēti; and last, the Hypezo-
cos.

Of the Cosmagogues Psellus interprets the Zo-
roastrean Oracle.

Oh how the World hath intellectual Guides, in-
flexible!

The Chaldeans, saith he, asserts Powers in the
World, which they term Cosmagogi, (guides of the
World) for that they guide the World by provident
Motions. These Powers the Oracle calls *ἀνοχῆς*,
Sustainers, as sustaining the whole World. The O-
racle saith, they are immoveable, implying their set-
tled Power; sustentive, denoting their Guardianship.
These Powers they design only by the Causes and im-
mobility of the Worlds. Pletcho interprets them the
most excellent of Intelligible Species, and of those
that are brought down by Immortals in this Heaven.
The Coryphaus of whom, he conceives to be a God,
the second from the Father.

The Amiliēti also, and the Hypezocos are men-
tioned by the Oracle.

— — — for from him

Spring forth all the implacable (Amiliēti) Thun-
ders.

And the Recesses (suscipient of Presters) of the
omni-lucent Strength.

Of Father-begotten Hecate, and Hypezocos the
Flower of Fire.

The Amiliēti [implacable] are Powers so ter-
med, for that they are firm, and not to be con-
verted towards these inferiour things; and also
cause that Souls be not allured by affections. ^{Psell. in Orac.}

CHAP. VII

Fountains, and Principles

Besides this last Order of Intellectuals, which
Psellus styles seven Fountains, and the A-
nonymous Summarist fountainous Fathers, the
latter gives account of many other Fountains,
They reverence also (saith he) a Fountainous Triad ^{Ἀρχὴ τῆς}
of Faith, Truth, and Love; they likewise assert
a Principiative Son from the Solar Fountain, and
Archangelical, and the Fountain of Sense, and
fountainous Judgment, and the Fountain of Per-
spectives, and the fountain of Characters: which
walketh on unknown Marks, and the fountainous
Tops of Apollo, Osyris, Hermes, they assert ma-
terial Fountains of Centers and Elements, and a
Zone of Dreams, and a fountainous Soul. ^{Ἐν ὁμοίᾳ}

Next the Fountains, saith Psellus, are the Hyper-
archii; the Anonymous more fully, Next the
Fountains ^{Ἀρχαί}

Fountains, they say, are the Principalities, for the Fountains are more principal than the Principles; Both these names of Fountains and Principles are used by Dionysius Areopagita, frequently; even in the third Triad, he puts the name of Principles, ἀρχαί (or Principalities) after whom the Arch-Angels.

Of the Animal-productive Principles, (continues the Anonymus) the top is called Hecate, the middle principitative Soul, the bottom principitative Virtue. This seems to be that Hecate, whom Pfellus saith, they held to be the Fountain of Angels and Demons, and of Souls, and of Natures; The same which the Oracle means, saying,

On the left side of Hecate, is the Fountain of Vertue: for the Chaldeans, (as Pfellus saith,) esteem Hecate a Goddess, seated in the middle rank, and possessing as it were the Center of all the powers; in her right parts they place the Fountain of Souls, in her left the Fountain of Goods, or of Vertues; Moreover they say, the Fountain of Souls is prompt to propagations, but the Fountain of Vertues continueth within the bounds of its own Essence, and is as a Virgin incorrupted; which settledness and immobility, it receives from the power of the Amiliēti, and is girt with a Virgin Zone. What Pfellus here calls the Fountain of Souls, and the Fountain of Vertues, is the same which the Anonymous styles, principitative Soul, and Principiative Virtue.

CHAP. VIII.

Unzoned Gods, and Zoned Gods.

Next (the Hyperarchii, according to Pfellus) are the Azoni, (Unzoned Gods) there are amongst them, (saith the Anonymus) Summarist) a unzoned Hecates, as the Chaldaick, the Triecdotis, Comas, and Ecclustick: The unzoned Gods are Sarapis and Bacchus, and the Chain of Osyris, and of Apollo, (contin'd Series of Geniusses, connected in the manner of a Chain) they are called unzoned, for that they use their power freely (without restriction) in the Zones, and are enthroned above the conspicuous Deities: These conspicuous Deities are the Heavens and the Planets, (perhaps of the same kind as the Intelligences, which the Peripateticks asserted Movers of the Spheres,) and whereas he saith, they live in Power, ἐν δυνάμει, it is the same Attribute which Dionysius gives the third of the second Hierarchy, ἡ δυνάμις ἡ ἐξουσία.

c The Zoned Gods are next: d These are they which have (confinement to) particular Zones, and are rouled freely about the Zones of Heaven, and have the Office of Governing the World; for they hold, there is a Zoned kind of Deity, which inhabits the parts of the sensible World, and girdeth (or circleth) the Regions about the material place according to several distributions. The same Office Dionysius seems to assign to the second and third Hierarchies.

These Azoni, and Zonei, are mentioned also by Damascius; This (saith he) sendeth out of her self the Fountain of all things, and the fountainous Chain; but That (sendeth out of her self the fountainous Chain) of Particulars; and passeth on to Principles and Arch-Angels, and Azoni, and Zonei, as the Law is of the Procession of

the renowned particular Fountains. And by Proclus, The Sacred names of the Gods delivered according to their Mystical Interpretation; as those which are celebrated by the Assyrians, * Zonei, * Azoni, and Fountains, and Amiliēti, and Synoches, by which they Interpret the Orders of the Gods.

CHAP. IX.

Angels and Immaterial Demons.

Next (the Zonei) are the Angels. Arnobius Pfell. saith of Hosthanes, (one of the Persian Magi, who received their Learning from the Chaldeans) that he knew the Angels, Ministers, and Messengers of God (the true God) did wait on his Majesty, and tremble as afraid, at the Beck and Countenance of the Lord; the Zoroastrian Oracles mention redutive Angels, which reduce Souls to them, drawing them from several things.

The next are Demons; of these the Chaldeans hold some to be good, others bad. The good they conceive to be Light; the bad Darkness. That there are good Demons, natural Reason tells us; Oracle:

Nature persuades that there are pure Demons. The bourgeois even of ill matter are beneficial and good.

Nature, or natural Reason, saith Pletho, persuades, that the Demons are holy, and that all things proceeding from God, who is good in himself, are beneficial: if the bloomings of ill matter (viz. of last Substances) are good, much more are the Demons such, who are in a more excellent rank, as partaking of Rational Nature, and being mixed with Mortal Nature.

CHAP. X.

Souls.

Next to Demons, Pfellus (in his Epitome of the Chaldaick Doctrine) placeth Souls, the last of ævital Beings.

a Of Forms, the Magi, (and from them the Pythagoreans and Platonists) assert three kinds; One wholly separate from matter, the supercelestial intelligences; Another inseparable from matter, having a substance not subsisting by it self, but dependent on matter, together with which matter, which is sometimes dissolved by reason of its nature, subject to mutation, this kind of Soul is dissolved also, and perisheth. This they hold to be wholly Irrational.

b Betwixt these, they place a middle kind, a Rational Soul, differing from the Supercelestial Intelligences, for that it always co-exists with matter; and from the irrational kind, for that it is not dependent on matter, but on the contrary, matter is dependent on it; and it hath a proper substance potentially subsistent by it self. It is also indivisible, as well as the Supercelestial Intelligences, and performing some Works in some manner ally'd to theirs, being it self also busied in the knowledge and contemplation of Beings, even unto the Supreme God, and for this reason is incorruptible,

C c c c

c This

c Psel. in Orac. *c* This Soul is an Immaterial and Incorporeal Fire, exempt from all Compounds, and from the Material Body; it is consequently Immortal: for nothing Material or Dark is commixed with her, neither is she compounded so as that she may be resolved into those things of which she consists.

d In Or. t. *d* This Soul hath a self-generate and self-animating Essence; for it is not moved by another: For if according to the Oracle, it is a portion of the Divine Fire, and a Lucid Fire, and Paternal Notion, it is an immaterial and self-subsistent Form, for such is every Divine Nature, and the Soul is part thereof.

e Epit. *e* Of Humane Souls they alledge two Fountainous Causes, the Paternal Mind, and the Fountainous Soul: the particular Soul, according to them, proceeds from the Fountainous, by the Will of the Father.

f Psel. in Orac. *f* Now whereas there are several Mansions, one wholly bright, another wholly dark; others betwixt both, partly bright, partly dark, the place beneath the Moon is circumnebulous, dark on every side; the Lunary, partly Lucid, and partly Dark, one half Bright, the other Dark; the place above the Moon circumlucid, or Bright throughout; the Soul is seated in the circumlucid Region.

g Psel. Epit. *g* From thence this kind of Soul is often sent down to Earth, upon several occasions, either by reason of the flagging of its Wings (so they term the Divination from its Original Perfection) or in Obedience to the Will of the Father.

h Psel. in Orac. *h* This Soul is always co-existent with any Æthereal Body as its *Vehiculum*, which she by continual approximation maketh also Immortal. Neither is this her *Vehiculum* inanimate in it self, but is it self animated with the other Species of the Soul, the irrational (which the Wise call (ἡσυχία) the Image of the Rational Soul) adorned with Phantasie and Sense, which seeth and heareth it self whole through whole, and is furnished with all the Senses, and with all the rest of the Irrational Faculties of the Soul.

i Luc. cit. *i* Thus by the principal Faculty of this Body Phantasie, the Rational Soul is continually joyned to such a Body, and by such a Body sometimes the Humane Soul is joyned with a Mortal Body, by a certain Affinity of Nature, the whole being enfolded in the whole enlivening Spirit of the Embryo; this *Vehiculum* it self being of the nature of a Spirit.

k In Orac. *k* The Image of the Soul, viz. that part which being it self void of irrational, is joyned to the Rational Part, and depends upon the Vehicle thereof, hath a part in the circumlucid Region; for the Soul never layeth down the Vehicle adherent to her.

l Psel. in Orac. *l* The Soul being sent down from the Mansion wholly bright, to serve the Mortal Body, that is, to operate therein for a certain time, and to animate and adorn it to her power, and being enabled according to her several Virtues, do dwell in several Zones of the World, if she perform her Office well, goes back to the same place, but if not well, she retires to the worst Mansions, according to the things she hath done in this Life. *m* Thus (the Chaldeans) restore Souls to their first condition, according to the measure of their several Purifications, in all the

Regions of the World; some also they conceive to be carried beyond the World.

CHAP. XI.

The Supramundane Light.

ALL these ævital and incorporeal Beings are seated in the Supramundane Light, which it self also is incorporeal, placed immediately above the highest Corporeal World; and from thence extending upwards to infinite.

Proclus (cited by *Simplicius* on this Oracle of *Zoroaster*.

Abundantly animating Light, Fire, Æther, Worlds.)

faith, *This Light is above all the seven Worlds, as a Monad before or above the Triad of the Empyrean Æthereal, and Material Worlds: adding, that this primary Light is the Image of the Paternal Depth, and is therefore supramundane, because the paternal Depth is supramundane.* And again, *this Light, faith he, being the supramundane Sun, sends forth Fountains of Light; and the Mystick Discourses tell us, that its genealogy is among supramundane things, for there is the Solar World, and the Universal Light, as the Chaldaick Oracles assert.*

And again, *The Centers of the whole World, as one, seem to be fixed in this: for, if the Oracles fixed the Centers of the Material World above it self, in the Æther, proportionably ascending, we shall affirm that the Centers of the highest of the Worlds are seated in this Light. Is not this first Light the Image of the Paternal Depth, and for that reason supramundane also, because that is so?*

CHAP. XII.

Of Things Temporal (or Corruptible) and Corporeal.

THE third and last kind of things, according to *Zoroaster*, is Corruptible or Temporal; which as it began in time, so shall it likewise in time be dissolved: the President over these is *Arimanes*.

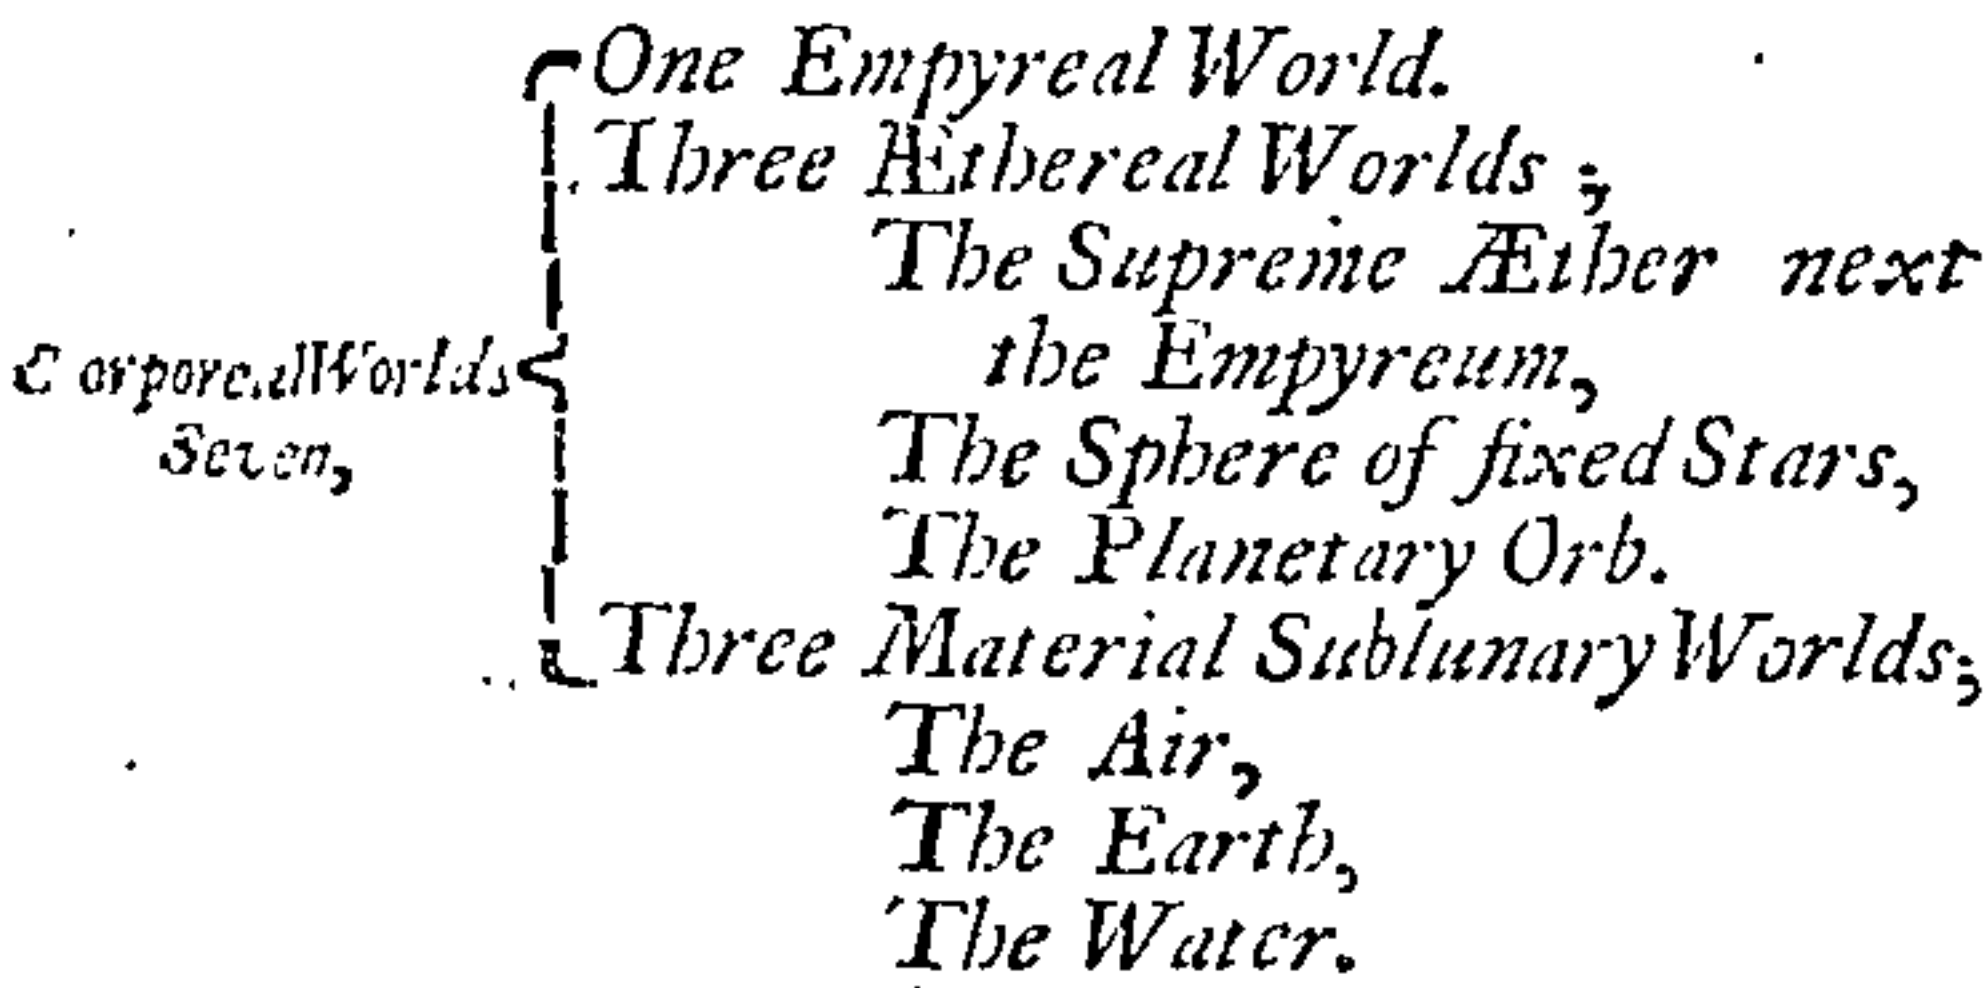

Under this third kind are comprehended the Corporeal Worlds, the Empyrean immediately below the Supramundane Light, the Æthereal next the Empyrean, and the Material the lowest of all, as the Oracle Ranks them.

Abundantly animating Light, Fire, Æther, Worlds.

These Corporeal Worlds are seven; *Orac.* *For the Father formed seven Firmaments of Worlds, Including Heaven in a round Figure, He fixed a great company of inerratick Stars, He constituted a Heptad of Erratick Animals, Placing the Earth in the middle, but the Water in the bosom of the Earth; The Air above these.*

Pfellus explaining how they are seven, faith, *They*

They affirm that there are seven Corporeal Worlds; one Empyrean and first; then three Æthereal; and lastly three Material, the fixed Circle, the Erratick, and the Sublunary Region: But this enumeration seems to fall short; for he mentions but two Æthereal Worlds (the Orb of fixed Stars, and the Planetary Orb) and one Material, (the Sublunary Region;) as the Learned *Patricius* observes, who therefore reckons the seven thus; one Empyrean, three Æthereal, (the fixed Orb, the Planetary Orb, the Orb of the Moon) and three Elementary, (the Aereal, the Watery, and the Terrestrial;) but perhaps it will better suit with the Oracle (which includes the Moon within the Planetary Orb, and placeth the Water under the Earth,) as also with *Pfellus* (who calls the last three Worlds, Material,) to dispose them thus,

Neither can it seem strange that the three last only should be called Material; for the Chaldeans conceiving Matter to be a dark substance or rather darkness it self, the Empyrean and Æthereal Worlds, which, (as we shall shew) consist of Light or Fire, cannot in their sense be said to be Material, though Corporeal.

Epitom. 1. The Empyrean or First of these, saith *Pfellus*, they attributed to the Mind, the Æthereal to the Soul, the Material to Nature.

C H A P. XIII.

The Empyrean World.

** Pfell.* The * First of the Corporeal Worlds, is the Empyrean; (by *Empyreum* the Chaldeans understand not, as the Christian Theologists, the Seat of God, and the Blessed Spirits, which is rather analagous to the Supreme Light of the Chaldeans, but the outmost Sphere of the Corporeal World.) It is round in Figure, according to the Oracle,

Inclosing Heaven in a round Figure.

It is also a solid Orb, or Firmament: for the same Oracles call it *σεπέωμα*. It consists of Fire, whence named the Empyrean, or, as the Oracles the *Fiery World*; which Fire being immediately next the Incorporeal supramundane Light is the rarest and subtilest of Bodies, and by reason of this Subtily penetrates into the Æther, which is the next World below it, and, by Mediation of the Æther, through all the Material World: This may be evinced more particularly, saith *Proclus*, from the Divine Tradition (meaning the Zoroastrian Oracles:) for the Empyreum penetrates through the Æther, and the Æther through the

Material World; and tho' all the Intellectual Tetrads and Hebdomads have a Fountainous Order, and consequently an Empyrean President, nevertheless they are contained in the Worlds, since the Empyrean passeth, through all the Worlds.

Nevertheless, the Empyreum it self is fixed and immoveable; as *Simplicius*, further explicating the Chaldaick Doctrine, acknowledgeth, by this Similitude; Let us imagine to our selves (saith he) two Spheres, one consisting of many Bodies, these two to be of equal bigness, but place one together with the Center, and put the other into it; you will see the whole World existing in place, moved in immoveable Light, which World according to its whole self is immoveable, that it may imitate place, but is moved as to its Parts, that herein it may have less than Place.

C H A P. XIV.

The Æthereal Worlds.

After the Empyreum, the Oracle names the Æther, Fire, Æther, Worlds; confirmed by *Pfellus* and the Anonymos Summarist, who assert, that next the Empyreum are the three Æthereal Worlds; but of these three they mention only two, (and those misapply'd to the Material Worlds) The Sphere of fixed Stars, and the Planetary Sphere: The third (perhaps implied though not express'd) might be the Æther which is betwixt the Empyreum and the Sphere of fixed Stars.

The Æther is a Fire (as its name implies) less subtile than the Empyreum, for the Empyreum penetrates through the Æther: yet is the Æther it self so subtile, that it penetrates through the Material World.

The second Æthereal World is the Sphere of fixed Stars, which are the more compacted or condensed parts of the Æthereal Fire; as *Patricius* ingeniously interprets this Oracle.

*He compacted a great number of incerratick Stars.
Forcing (or pressing) Fire to Fire.*

The third Æthereal World is that of the Planetary Orb, which contains the Sun, Moon, and five Planets; stiled by the Oracles, Erratick Animals and Fire,

*He constituted a Heptad of Erratick Animals.
And again, He constituted them six; the seventh was that of the Sun,
Mingling Fire in them.*

C H A P. XV.

The Material Worlds.

The last and lowest are the Material Worlds; which *Pfellus* and the other Summarist assert to be three, meaning doubtless the Air, Earth, and Water, for so the Oracle ranks 'em.

Placing

Placing the Earth in the middle, but the Water in the Bosom of the Earth, The Air above them.

This is that last Order of Worlds, of which the Chaldaick Summary saith, *it is called Terrestrial, and the hater of Light: it is the Region beneath the Moon, and comprehends within it self matter, which they call the bottom.* By which Words it appears upon what ground the Chaldeans asserted only these Sublunary Worlds to consist of Matter, but the Empyrean and Æthereal to be Immaterial though Corporeal: for Matter they understand to be the hater of Light, Darkness, and the bottom of a Nature quite different from the Empyreum and Æther, whose very substance is Light it self, yet it is actuated by their vivificative Fire which penetrates quite through it even to the Center, as we shewed formerly.

Lib. 1.

Concerning the Earth, *Diodorus Siculus* saith, they held Opinions peculiar to themselves, asserting that *it is in Figure like a Boat, and hollow*, for which, as likewise for other things concerning the World, they abound with probable Arguments.

Pfellus adds, that *they sometimes call this Sublunary Hades.*

CHAP. XVI.

Of Material Demons.

OF Demons, as we said, they asserted two kinds, some good, others ill; the good, light, the ill dark. The former are those whom * *Hofanes* calls the *Ministers and Messengers of God, dwelling in his Presence*; But these, he describes as *Terrestrial, wandring up and down, and Enemies to Mankind.* Of the first we have treated already; of the latter *Pfellus* in his Discourse upon this Subject, gives a large account from one *Marcus of Mesopotamia*, who having been of this Religion, and well acquainted with their Institutions, was afterwards converted to Christianity: What he relates, as well from the Doctrine it self, as from the place, sufficiently appears to be of the *Chaldaick* Tradition. It is to this effect.

These Demons are of many kinds, and various sorts, both as to their Figures and Bodies, inasmuch that the Air is full of them, as well that which is above us, as that which is round about us. The Earth likewise is full, and the Sea, and the most retired Cavities and Depths.

There are six general kinds of these Demons. The first named *Leliurins*, which signifies Fiery. This kind dwelleth in the Air that is above us: for from the places next about the Moon, as being Sacred, all kinds of Demons, as being Prophane, are expelled. The second kind is that which wandreth in the Air contiguous to us, and is by many peculiarly called Aereal. The third, Terrestrial. The fourth, Watery and Marine. The fifth, Subterraneous. The sixth, Lucifugous, and hardly sensible.

All these kind of Demons are haters of God, and Enemies of Man. Moreover, of these ill

Demons, some are worse than others. Aquatile, and Subterraneous, and Lucifugous, are extremely malicious and pernicious: For these do not hurt Souls by Phantasms and Delusions, but by Assault, like the most Savage Beasts, accelerate the Destruction of Men. The Watery Drown those who are Sailing upon the Water. The Subterraneous and Lucifugous, insinuating into the Entrails, cause Epilepsies and Frenzy. The Aereal and Terrestrial circumvent Men by Art and Subtilty, and deceive the Minds of Men, and draw them to absurd and illegal Passions.

They effect these things not as having Dominion over us, and carrying us as their Slaves whithersoever they please, but by Suggestion; for applying themselves to the phantastick Spirit, which is within us, they themselves being Spirits also, they instill Discourses of Affections and Pleasures, not by Voice verberating the Air, but by whisper, insinuating their Discourse.

Nor is it impossible that they should speak without voice, if we consider that he who speaks, being a far off, is forced to use a greater sound; being near, he speaks softly into the ear of the Hearer, and if he could get into the Spirit of the Soul, he would not need any Sound, but what discourse soever he pleaseth, would, by a way without sound, arrive there where it is to be received, which they say is likewise in Souls, when they are out of the Body, for they discourse with one another without noise. After this manner the Demons converse with us, privately, so that we are not sensible which way the War comes upon us.

Neither can this be doubted, if we observe what happens to the Air. For, when the Sun shineth it assumeth several colours and forms, transmitting them to other things, as we may see in Looking-glasses. In like manner the Demons, assuming Figures and Colours, and whatsoever Forms they please, transmit them into our animal Spirit, and by that means afford us much business, suggesting Counsels, representing Figures, resuscitating the remembrance of pleasures, exciting the images of passions, as well when we sleep, as when we wake, and sometimes, titillating the genital parts, inflame us with frantick and unlawful desires, especially if they take, co-operating with them the hot humidities which are in us.

The rest of the Demons know nothing that is subtle, nor how to breed disturbance, yet are they hurtful and abominable, hurting in the same manner as the spirit or vapour in *Charon's* Cave: For as that is reported to kill whatsoever approacheth it, whether Beast, Man, or Bird; in like manner these Demons destroy those upon whom they chance to fall, overthrowing their Souls and Bodies, and their natural Habits, and sometimes by Fire, or Water, or Precipice, they destroy not Men only, but some irrational Creatures.

The Demons assault Irrational Creatures, not out of Hate, or wishing them ill, but out of the love they have of their Animal heat: For dwelling in the most remote Cavities, which are extremely cold and dry; they contract much coldness, wherewith being afflicted, they affect the humid and animal heat, and, to enjoy it, they insinuate themselves into irrational Creatures.

and go into Baths and Pits; for they hate the heat of Fire and of the Sun, because it burns and drieth up.

But they most delight in the heat of Animals, as being temperate, and mixt with moisture, especially that of men, being best tempered, into which insinuating themselves, they cause infinite disturbance, stopping up the pores in which the Animal Spirit is inherent, and streightning and compressing the Spirit, by reason of the grossness of the Bodies with which they are indued. Whence it happeneth, that the Bodies are disorder'd, and their principal Faculties distemper'd, and their Motions become dull and heavy.

Now if the insinuating Dæmon be one of the Subterraneous kind, he distorteth the possessed Person, and speaketh by him, making use of the Spirit of the patient, as if it were his own Organ. But if any of those who are called Lucifugous, get privately into a Man, he causeth relaxation of the Limbs, and stoppeth the Voice, and maketh the possessed person in all respects like one that is dead. For this being the last of Dæmons is more Earthly, and extremely Cold and Dry, and into whomsoever it insinuates, it hebetates and makes dull all the Faculties of his Soul.

And because it is Irrational, void of all Intellectual Contemplation, and is guided by irrational Phantasie, like the more Savage kind of Beasts, hence it comes to pass, that it stands not in awe of Menaces, and for that reason most Persons aptly call it Dumb and Deaf, nor can they who are possessed with it by any other means be freed from it, but by the Divine Favour obtained by Fasting and Prayer.

That Physicians endeavour to perswade us, that these Passions proceed not from Dæmons, but from Humours, and Spirits ill affected, and therefore go about to cure them, not by incantations and Expiations, but by Medicines and Diet, is nothing strange, since they know nothing beyond Sense, and are wholly addicted to Study the Body. And perhaps not without reason are some things ascribed to ill affected Humours, as Lethargies, Melancholies, Frenzies, which they take away and cure, either by evacuating the Humours, or by replenishing the Body, if it be empty, or by outward applications. But as for Enthusiasms, ragings, and unclean Spirits, with which whosoever is possessed is not able to act any thing, neither by Intellect, Speech, Phantasie nor Sense; or else there is some other thing that moves them unknown to the Person Possessed, which sometimes foretelleth future Events; how can we call these the Motions of depraved Matter?

No kind of Dæmon is in its own Nature Male or Female, for such Affections are only proper to Compounds: but the Bodies of Dæmons are simple, and being very ductile and flexible, are ready to take any figure. As we see the Clouds represent sometimes Men, sometimes Bears, sometimes Dragons, or any other Figures: So is it with the Dæmoniack Bodies. Now the Clouds appear in various Figures according as they are driven by exterior Blasts or Winds: But in Dæmons, who can pass as they please into any Bodies, and sometimes contract, sometimes extend themselves like Worms on

the Earth, being of a soft and tractable Nature; not only the Bulk is changed, but the Figure and Colour, and that several ways; for the Dæmoniack Body being by Nature capable of all those, as it is apt to recede, it is changed into several Forms; as it is Aerial, it is susceptible of all sorts of Colours, like Air, but the Air is coloured by something extrinsecal.

The Dæmoniack Body, from its intrinsecal Phantastick Power and Energy, produceth the Forms of Colours in it self, as we sometimes look Pale, sometimes Red, according as the Soul is affected either with Fear or Anger. The like we must imagine of Dæmons: for from within they send forth several kinds of Colours into their Bodies. Thus their Bodies being changed into what Figure, and assuming what Colour they please, they sometimes appear in the shape of a Man, sometimes of a Woman, of a Lyon, of a Leopard, of a Wild Boar, sometimes in the figure of a Bottle, and sometimes like a little Dog fawning upon us.

Into all these Forms they change themselves, but keep none of them constantly: for the Figure is not solid, but immediately is dissipated; as when we pour something coloured into Water, or draw a Figure in the Air. In like manner is it with Dæmons, their Colour, Figure, and Form presently vanish.

But all Dæmons have not the same Power and Will, there is much inequality amongst them as to these. Some there are Irrational, as amongst compound Animals; for, as of them, Man participating of Intellect and Reason, hath also a longer Phantasie, extending also to all sensibles, as well in the Heavens, as on Earth and under the Earth; but Horses, Oxen, and the like, have a narrower, and more particular phantasie, yet such as extends to the knowledge of the Creatures that feed with them, their Mangers and their Masters; Lastly, Flies, Gnats, Worms, have it extremely contracted and incoherent; for they know neither the hole out of which they came, nor whither they go, nor whither they ought to go, they have only one phantasie, which is that of Aliment. In like manner there are different kinds of Dæmons. Of these some are Fiery, others Aereal; these have a various phantasie which is capable of extending to any thing imaginable: the Subterraneous and Lucifugous are not of this nature; whence it comes to pass, that they make not use of many figures, as neither having variety of phantasms, nor a Body apt for Action or Transformation. But the Watry and Terrestrial being of a middle kind betwixt these, are capable of taking many Forms, but keep themselves to that in which they delight. They which live in humid places, transform themselves into the shapes of Birds and Women, whencetermed by the Greeks *Naiades* and *Nereides* and *Dryades* in the Feminine Gender. But such as are conversant in dry places, have also dry Bodies, such as the *Onosceles* are said to be. These transform themselves into Men, sometimes into Dogs, Lions, and the like Animals, which are of a Masculine Disposition.

The Bodies of Dæmons are capable of being struck, and are pained thereby, though they are not compounds, for Sense is not only proper to Compounds. That thing in Man which feel-eth,

eth, is neither the Bone nor the Nerve, but the Spirit which is in them: Whence if the Nerve be pressed, or seized with cold, or the like, there ariseth pain from the Emission of one Spirit into another Spirit: for it is impossible that a Compound Body should in it self be sensible of pain, but in as much as it partaketh of Spirit, and therefore being broken into pieces, or dead, it is absolutely insensible, because it hath no Spirit. In like manner a Damon being all Spirit, is of his own nature sensible in every part; he immediately seeth, and heareth, he is obnoxious to suffering by touch; being cut asunder, he is pained like Solid Bodies, only herein, differing from them, that other things cut asunder can by no means or very hardly be made whole again, whereas the Damon immediately cometh together again, as Air or Water parted by some more Solid Body. But though this Spirit joyns again in a moment, nevertheless, at the very time in which the dissection is made, it is pained.

Hitherto the Theology and Physick of the Chaldeans.

THE SECOND SECTION.

Astrology, and other Arts of Divination.

THE Second Part of the Chaldaick Learning consists in Arts of Divination; the chief whereof is Astrology. This as it is generally acknowledged to have been their proper Invention, so were they most particularly addicted to it, for which Ptolomy gives a Reason out of the Art it self; *because they are under Vingo and Mercury*; but Cicero one much better; *that the plainness and evenness of the Country did invite them to Contemplation of the Stars.*

It consists of two parts; 1. Meteorologic, which considers the Motions of the Stars; the other Apotelesmatick, which regards Divination: The first was known to the Ancient Greeks by the common names of Astronomy and Astrology; until the other being brought into Greece also, they for distinction called the former more particularly Astronomy, the latter Astrology. The excellent a Joseph Scaliger to advance the Credit of the Greek Learning, constantly avers that the Chaldeans had only a gross and general, not exact knowledge of Astronomy; *ἀνοξεῖν, tantum, non etiam ἀκριβῶς*, and that the Greeks learned nothing therein of the Chaldeans: when as Aristotle ingenuously acknowledgeth the contrary, the Egyptians and Babylonians, saith he, *from whom we have many Informations concerning each of the Stars.* Though doubtless they were far short of that height in this Art, to which the Greeks, who brought it out of the East, improved it: for Diodorus Siculus affirms

that b they alledged very weak Reasons for the b Lib. 1. Eclipses of the Sun, which Eclipses they neither durst foretell, nor reduce to certain Periods.

But of the Apotelesmatick part they boasted themselves not only the Inventors, but Masters; infomuch that all the Professors of it, of what Country soever, were (as we formerly shewed) called after them, Chaldeans.

CHAP. I.

Of the Stars fixed and Erratick, and of their Præsignification.

They first lay down for a Ground, That Ter- Sext. Emp. restrials Sympathize with the Cælestials, and that every one of those is renewed by the influence of these.

*For every Man's indued with such a Mind,
As by the Sire of God's and Men's assign'd.*

Above all things they hold that our Act and Censor. Life is subjected to the Stars, as well to the Erratick as the Fixed, and that Mankind is governed by their various and multiplicitous course;

* That the Planets are of the kind of efficient * Sext. Emp. Causes in every thing that happens in Life, and loco cit. that the Signs of the Zodiack co-operate with them:

† That they confer all good and ill to the Nati- † Diod. lib. vities of Men, and that by contemplation of their Natures may be known the chief things that happen to Men.

They held the Principal Gods to be twelve, to Diod. lib. 1. each of which they attributed a Month, and one of the Signs of the Zodiack.

Next the Zodiack they assert twenty four Stars, Diod. loc. cit. whereof half they say are ranked in the Northern Parts, the other half in the Southern: Of these they which are apparent they conceive to be deputed to the Living, the inapparent congregated to the Dead: These they call Judges of all things.

But the greatest Observation and Theory they hold to be that concerning the five Stars termed Planets, which they call the Interpreters, * be- * Ibid. cause therest of the Stars being Fixed, and having a settled Course, these only having a peculiar Course, foretell things that shall come to pass, interpreting and declaring to Men the Benevolence of the Gods: for some things (say they) they præsignifie by their rising, some things by their setting, some things by their colour, if observed; sometimes they foretel great Winds, sometimes extraordinary Rains, or Droughts. Likewise the rising of Comets, and Eclipses of the Sun, and of the Moon, and Earth-quakes, and in a word, all Alterations in the Air signifie things advantageous or hurtful, not only to Nations or Countries, but even to Kings and private Persons.

Beneath the course of these, they hold that there Diod. loc. cit. are placed thirty Stars, which they call Consiliary Gods; that half of these oversee the places under the Earth, the other half oversee the Earth and the Business of Men, and what is done in the Heavens, and that every ten days one of these is sent to those below as a Messenger, and in like manner one of the Stars under the Earth is sent to those above, and that they have this certain Motion settled in an Eternal Revolution.

CHAP.

CHAP. II.

Of Planets.

Diod. Lib. 1. **T**He greatest Theory they hold (as we said) to be that which concerns the Planets: These they call the Interpreters, because, whereas the rest of the Stars are Fixed, & have a settled Course, these having their proper Courses foretell what things shall come to pass, Interpreting and declaring to Men the Benevolence of the Gods.

Sext. Em. Of the Seven, they hold the Sun and Moon to be the chief, and that the other five have less Power than they, as to the causing Events.

Sext. Em. loc. cit. Of the five, they affirm there are three which agree with, and are assistant to the Sun, viz. Saturn, Jupiter and Mercury; these they call diurnal, because the Sun, to whom they are assistant, predominates over the things that are done in the day.

Sext. Emp. loc. cit. As concerning the Powers of the five, some they say are Benevolent, others, Malevolent, others Common; the Benevolent are Jupiter and Venus; the Malevolent, Mars and Saturn; the Common, Mercury, who is Benevolent with the Benevolent, and Malevolent with the Malevolent.

CHAP. III.

The Divisions of the Zodiac.

Sat. Emp. **T**He Chaldeans having at first no certain Rule of Observation of the other Stars, in as much as they contemplated not the Signs as within their proper circumscriptions, but only together with their observation of the seven Planets, it came at length into their minds to divide the whole Circle into twelve Parts: The manner they relate thus; they say that the Ancients having observed some one bright Star of those in the Zodiac, filled a Vessel (in which they bore a hole) with water, and let the water run into another Vessel placed underneath, so long until the same Star rose again; collecting that from the same Sign to the same, was the whole revolution of the Circle; Then they took the twelfth part of the water which had run out, and considered how long it was in running; affirming that the 12th part of the Circle past over in the same space of time; and that it had that proportion to the whole Circle which the part of water had to the whole water: By this Analogy (I mean of the Dodecatemoria or 12th part) they marked out the extremum term from some signal Star which then appeared, or from some that arose within that time, Northern, or Southern; the same course they took in the rest of the Dodecatemoria.

Contra Aphol. lib. That to each of these Dodecatemoria, the Ancient Chaldeans apply'd a particular Figure and a Character, (as for instance to the first, the Figure of a Ram, and this Character Λ .) tho' denied by the Learned * John Picus Mirandula, seems manifest enough from what we find ascribed peculiarly to them, by Ptolomy, Sextus Empyrius and others, which we shall cite in their due places.

Diod. lib. 1. To each of these Signs they appropriated one of the principal Gods which they held to be twelve, and One of the Months; the Zodiac it self they termed the Circle Mazaloth, which the Septuagint render $\mu\alpha\lambda\acute{o}\theta\eta$, interpreted by Suidas, the

Constellations which are commonly termed $\zeta\omega\delta\iota\alpha$, Signs, for Mazal Signifieth a Star. That they ascribed several Gods to them agreeth with what is said of the followers of Baal (whom Rabbi Maimonides conceives the same with these Chaldeans) they burnt Incense to Baal, to the Sun, *2 Kings 23. 5* and to the Moon, and to the Mazaloth, and to all the Host of Heaven. Hence some are of Opinion that Homer received this Doctrine from the Egyptians, as the Egyptians from the Chaldeans, alluding to it in the first of his Iliads, where he mentions the entertainment of Jupiter and the rest of the Gods in *Æthiopia* twelve days, with the several Houses built for them by Vulcan, and better deserve they to be credited than those Ancients, who (according to Eustathius) writ that Homer first gave the Hint of this Opinion to the Mathematicians. Neither is what he adds in Explication of this Mythology dissident from the Chaldaick Doctrine, that the making those Mansions for the Gods or Stars, is ascribed to Vulcan in respect of the *Æthiopian* heat of the Celestial Orb. *In Iliad. 7.*

Of the Signs some they call Masculine, others Feminine, some Double, others Single; some Tropical, others Solid. *Sext. Emp.*

The Masculine or Feminine are those which have a Nature that co-operates towards the Generation of Males or Females; Aries is a Masculine Sign, Taurus a Feminine, Gemini a Masculine; in like manner the rest alternately are Masculine and Feminine. In imitation of whom as I conceive the Pythagoreans call the Monad Masculine, the Diad Feminine, the Triad Masculine, and so on thro' all Numbers, Odd and Even. Some there are who divide every Sign into 12 Parts, observing almost the same order; as in Aries they call the first 12th part Aries and Masculine, the second Taurus and Feminine, the third Gemini and Masculine, and so of the rest.

Double Signs are Gemini, and its diametrically opposite Sagittarius; Virgo and Pisces: The rest are single.

Tropical are those to which when the Sun cometh he turneth back, and maketh a Conversion: Such is the Sign Aries, and its opposite Libra, Capricorn and Cancer; In Aries is the Spring Tropick, in Capricorn the Winter, in Cancer the Summer, in Libra the Autumnal. The Solid are Taurus and its opposite Scorpio, Leo, and Aquarius. *Sext. loc. cit.*

Some Chaldeans there are who attribute the several parts of Man's Body to particular Signs, as sympathizing with them; To Aries the Head, to Taurus the Neck, to Gemini the Shoulders, Cancer the Breast, Leo the Sides, Virgo the Bowels and Belly, Libra the Reins and Loins, Scorpio the Secret Parts and Womb, Sagittarius the Thighs, Capricorn the Knees, Aquarius the Legs, Pisces, the Feet. This did they not without consideration, for if any Star shall be in any Ascension of these Malignant Signs, it will cause a Maim in that Part which bears the same Name with it. Thus much in brief of the Nature of the Signs in the Zodiac. * *Sext. Emp.*

Besides this Division of the Zodiac into Signs * they subdivided every Sign into 30 Degrees, every Degree into 60 Minutes, so they call the least indivisible Parts, (as Empyrius affirms; whence it may be argued, that the Chaldeans made not any lower Divisions into Seconds, or the like.) The Degrees being in every Sign 30.

C H A P. III.

The Divisions of the Zodiac.

Sext. Emp. **T**He Chaldeans having at first no certain Rule of Observation of the other Stars, in as much as they contemplated not the Signs as within their proper circumscriptions, but only together with their observation of the seven Planets, it came at length into their minds to divide the whole Circle into twelve Parts: The manner they relate thus; they say that the Ancients having observed some one bright Star of those in the Zodiac, filled a Vessel (in which they bore a hole) with water, and let the water run into another Vessel placed underneath, so long until the same Star rose again, collecting that from the same Sign to the same, was the whole revolution of the Circle; Then they took the twelfth part of the water which had run out, and considered how long it was in running; affirming that the 12th part of the Circle past over in the same space of time; and that it had that proportion to the whole Circle which the part of water had to the whole water: By this Analogy (I mean of the Dodecatemoria or 12th part) they marked out the extremum term from some signal Star which then appeared, or from some that arose within that time; Northern, or Southern; the same course they took in the rest of the Dodecatemoria.

Contra Astrol. lib. That to each of these Dodecatemoria, the Ancient Chaldeans apply'd a particular Figure and a Character, (as for instance to the first, the Figure of a Ram, and this Character Λ .) tho' denied by the Learned * John Picus Mirandula, seems manifest enough from what we find ascribed peculiarly to them, by Ptolomy, Sextus Empyrius and others, which we shall cite in their due places.

Diod. lib. i. To each of these Signs they appropriated one of the principal Gods which they held to be twelve, and One of the Months; the Zodiac it self they termed the Circle Mazaloth, which the Septuagint render $\mu\alpha\lambda' \theta\epsilon\theta$, interpreted by Suidas, the

Constellations which are commonly termed $\zeta\omega\delta\iota\alpha$, Signs, for Mazal Signifieth a Star. That they ascribed several Gods to them agreeth with what is said of the followers of Baal (whom Rabbi Maimonides conceives the same with these Chaldeans) they burnt Incense to Baal, to the Sun, *2 Kings 23. 5* and to the Moon, and to the Mazaloth, and to all the Host of Heaven. Hence some are of Opinion that Homer received this Doctrine from the Egyptians, as the Egyptians from the Chaldeans, alluding to it in the first of his Iliads, where he mentions the entertainment of Jupiter and the rest of the Gods in Æthiopia twelve days, with the several Houses built for them by Vulcan, and better deserve they to be credited than those Ancients, who (according to Eustathius) writ that Homer first gave the Hint of this Opinion to the Mathematicians. Neither is what he adds in Explication of this Mythology dissonant from the Chaldaick Doctrine, that the making those Mansions for the Gods or Stars, is ascribed to Vulcan in respect of the Ætherial heat of the Celestial Orb.

In Iliad. 7. Of the Signs some they call Masculine, others Feminine; some Double, others Single; some Tropical, others Solid. *Sext. Emp.*

The Masculine or Feminine are those which have a Nature that co operates towards the Generation of Males or Females; Aries is a Masculine Sign, Taurus a Feminine, Gemini a Masculine; in like manner the rest alternately are Masculine and Feminine. In imitation of whom as I conceive the Pythagoreans call the Monad Masculine, the Diad Feminine, the Triad Masculine, and so on thro' all Numbers, Odd and Even. Some there are who divide every Sign into 12 Parts, observing almost the same order; as in Aries they call the first 12th part Aries and Masculine, the second Taurus and Feminine, the third Gemini and Masculine, and so of the rest.

Double Signs are Gemini, and its diametrically opposite Sagittarius; Virgo and Pisces: The rest are single.

Tropical are those to which when the Sun cometh he turneth back, and maketh a Conversion: Such is the Sign Aries, and its opposite Libra, Capricorn and Cancer; In Aries is the Spring Tropick, in Capricorn the Winter, in Cancer the Summer, in Libra the Autumnal. The Solid are Taurus and its opposite Scorpio, Leo, and Aquarius. *Sext. loc. cit.*

Some Chaldeans there are who attribute the several parts of Man's Body to particular Signs, as sympathizing with them; To Aries the Head, to Taurus the Neck, to Gemini the Shoulders, Cancer the Breast, Leo the Sides, Virgo the Bowels and Belly, Libra the Reins and Loins, Scorpio the Secret Parts and Womb, Sagittarius the Thighs, Capricorn the Knees, Aquarius the Legs, Pisces, the Feet. This did they not without consideration, for if any Star shall be in any Ascension of these Malignant Signs, it will cause a Maim in that Part which bears the same Name with it. Thus much in brief of the Nature of the Signs in the Zodiac. * *Sext. Emp.*

Besides this Division of the Zodiac into Signs * they Subdivided every Sign into 30 Degrees, every Degree into 60 Minutes, so they call the least indivisible Parts, (as Empyrius affirms; whence it may be argued, that the Chaldeans made not any lower Divisions into Seconds, or the like.) The Degrees being in every Sign 30. *Censorin. de die natali.*
[D d d d] are

are in the whole Zodiack 360. in some one of these the Sun must necessarily be at the time of the Nativity; which Degree the Chaldeans properly call the place of the Birth. Hence the Greeks call these Degrees *μῆραι*, in allusion to the *μῆραι* Goddesses of Destiny, these being our Fates; for it is of greatest Importance which of these Degrees is Ascendant at the time of Birth.

Three other ways there are of dividing of the Zodiack ascribed to the Chaldeans, which are Triplicities, Terms, Decanates.

Ptol.

The Trigrams or Triplicities are these four. The first is Aries, Leo, Sagittarius, the second Taurus, Virgo, Capricorn, the third Gemini, Libra, Aquarius, the last Cancer, Scorpio, Pisces; That the Chaldeans divided the Zodiack according to these Triplicities is manifest from their way of collecting the Terms of the Planets described by Ptolemy.

* *Ptol.*

Every Sign hath five Terms. * The Chaldaick way of finding out the quantity of the Terms in every Sign is one, and that very plain, for their Quantities differ by an equal Diminution, every Term is less than the precedent by one Degree, for they made the first Term of every Sign to be eight Degrees, the second seven, the third six, the fourth five, the fifth four, which makes up 30 Degrees.

In Manil.

Lastly, the Signs are divided into Faces, for so the Ancients called them, in Hebrew *Phanim*, in Arabick *Mageah*, in Greek *πρόσωπα*; but the latter Astrologers Decanates *δεκάτες*. Decanos a word (as Scaliger observes) deriv'd from the Roman Militia, of these in every Sign there are three, each of which comprehends ten Degrees. That the Chaldeans were not ignorant of these is manifest, in as much as Temer the Babylonian, an Author of great Antiquity, wrote concerning them.

CHAP. IV.

Of the Planets considered in respect to the Zodiack.

Sext. Emp.

THE Chaldeans held that the Planets have not always Power alike, as the procuring of Good and Ill; but that in some Places [or Signs of the Zodiack] they are more efficacious, in others less; and that same Stars have greater Power being in their proper Houses, or in their Exaltations [or Triplicities,] or Terms, or Decanates. All which the later Astrologers call their Essential Dignities.

Sext. Emp. loc. cit.

Sext. Emp. ibid.

The most Efficacious is that of Houses. They hold the Sun's House to be Leo, the Moon's Cancer, Saturn's Capricorn and Aquarius, Jupiter's

Sagittarius and Pisces, that of Mars Aries and Scorpio, that of Venus Taurus and Libra, that of Mercury Gemini and Virgo.

They call the Exaltations and Depressions of *Sext. loc. cit.* the Planets, when they are in Signs wherewith they are delighted, or when they are in those in which they have little (or no) Power: For they are delighted in their Exaltations; but have little (or no) Power in their Depressions. As the Sun's Exaltation is in Aries, when he is exactly in the 19th Degree thereof, his Depression in the Sign and Degree diametrically opposite to it. The Moon's Exaltation is in Taurus, her Depression (or Detriment) in the Sign diametrically opposite. That of Saturn is in Libra, of Jupiter in Cancer, of Mars in Capricorn, of Venus in Pisces, and their Depressions are in the Signs diametrically opposite to their Exaltations.

The Trigrams or Triplicities of Planets are order'd by the Chaldeans after this manner. * The Lord of the first Triplicity (of the Zodiack) is Jupiter, of the second Venus; the same Order they observe in the other two Triplicities, except that the third is said to have two Lords, Saturn and Mercury: The first part of the Day is assigned to Saturn, the Night to Mercury. The Lord of the last Triplicity is Mars. How much this differs from the Vulgar Way (which takes in the Sun and Moon) will easily appear to those who will take the pains to compare them. The latter way see in Firmicus.

They call the Terms of the Planets in every Sign, those in which any Planet from such a Degree to such a Degree is most powerful or prevalent. * The Chaldaick way of Terms is gathered from the Lords of the Triplicities, (which is plainer and more effectual than that of the Egyptians from the Lords of the Houses) yet neither in their Orders nor Quantities do they always follow those Planets which govern the Triplicities. In the first Triplicity, their Division of Terms in every Sign thereof is one and the same. The first Term they give to the Lord of the Triplicity Jupiter, the second to the Lord of the following Triplicity, Venus, the third and fourth, to the two Lords of the Triplicity of the Gemini, which are Saturn and Mercury; the fifth, to the Lord of the last Triplicity Mars. In the second Triplicity they divide every Sign alike, and allot the first Term to Venus, by reason of her Dominion in that Triplicity, the second and third to the two Lords of the Triplicity of the Gemini, which are Saturn and Mercury; the fourth to Mars; the last to Jupiter. To Saturn are attributed in the day 66 Degrees, in the night 78, to Jupiter 72, to Mars 60, to Venus 75, to Mercury in the Day, 66, in the Night 78.

The

The Terms of the Chaldæans or Babylonians.

Aries	Jupiter.	8	Venus	7	Saturn	6	Mercury	5	Mars	4
Taurus	Venus	8	Saturn	7	Mercury	6	Mars	5	Jupiter	4
Gemini	Saturn	8	Mercury	7	Mars	6	Jupiter	5	Venus	4
Cancer	Mars	8	Jupiter	7	Venus	6	Saturn	5	Mercury	4
Leo	Jupiter	8	Venus	7	Saturn.	6	Mercury	5	Mars	4
Virgo	Venus	8	Saturn	7	Mercury	6	Mars	5	Jupiter	4

Aquarius	Saturn	8	Mercury	7	Mars	6	Jupiter	5	Venus	4
Pisces	Mars	8	Jupiter.	7	Venus	6	Saturn.	5	Mercury	4

The Decanates or Faces of the Planets, have reference to those of the Zodiack; the first Face is that Planet whose Sign it is: the second, the next Planet; and so on. That these were of Ancient Chaldaick Invention is manifest, not only in regard that Teucer the Babylonian wrote concerning them, but likewise they were observed by the Egyptians, who, (as Josephus saith) derived this Learning from the Chaldeans. Nicipso King of Egypt, a most Just Governor, and excellent Astrologer, did (if we credit Julius Firmicus) collect all Sickneses from the Decanates, shewing what Diseases every Decanate caused; because one Nature was overcome by another, and one God by another. The same Author adds, that Ptolemy touched this part of Astrology but lightly; not as being ignorant of it, but not willing to communicate his Immortal Learning unto Posterity.

C H A P. V.

Aspects of the Signs and Planets.

Confer.
*Sext. Emp.

Every Sign of the Zodiack hath a mutual Aspect to the rest; in like manner the Planets have several Aspects; * They are said to be in mutual Aspect or Configuration, when they appear either in Trine or Square. They are said to behold one another in Trine, when there is an Interposition of three Signs between them: In Square or Quartile, when of two.

Confer.

The Sun passing into the Sign next to that wherein he was at the time of Birth, regards the place of Conception either with a very weak Aspect, or not at all; for most of the Chaldæans have absolutely denied, that the Signs which are next to one another behold one another; but when he is in the third Sign, that is, when there is a Sign betwixt them, then he is said to behold the first place whence he came, but with a very oblique and weak light, which Aspect is termed Sextile; for it subtends the sixth part of a Circle: for if we draw Lines from the first Sign to the third, from the third to the fifth, and from thence to the seventh, and so on, we shall describe an equilateral Hexagone. This Aspect they did not wholly rely on for that it seemed to conduce the least to the Na-

tivity of the Child, but when he comes to the fourth Sign, so that there are two betwixt, he looks on it with a Quarterly Aspect: for that Line which his Aspect makes, cuts off a fourth part of the Circle. When he is in the fifth, there being three betwixt it, is a Trine Aspect, for it subtends a third part of the Zodiack: which two Aspects the Quartile and Trine, being very efficacious, afford much encrease to the Birth. But the Aspect from the sixth place is wholly inefficacious, for the Line there makes not a side of any Polygone, but from the 7th Sign which is the opposite to the Aspect is most full and powerful, and bringeth forth some Infants already mature, termed Septimestres, from being born in the 7th Month: But if within that space it be not mature, in the 8th Month it is not born, for from the 8th Sign as from the sixth the Aspect is inefficacious, but either in the 9th Month, or in the 10th for the Sun from the 9th Sign beholds again the Particle of the Conception in a Trine Aspect, and from the 10th in a Quartile; which Aspects, as we said, are very efficacious: But in the 11th Month they hold it cannot be born, because then, the Light being weak, sends forth his languishing Ray in a Sextile Aspect, much less in the 12th which Aspect is not at all valid.

C H A P. VI.

Schemes.

The way by which the Chaldæans from the very beginning observed the Horoscope of any Nativity, corresponds with that of their Division of the Zodiack (mentioned formerly;) For a Chaldæan sate in the night time on some high Promontory contemplating the Stars; another sate by the Woman in Travail until such time as she were delivered. As soon as she was Delivered, she signified it to him on the Promontory, which as soon as he heard, he observed the Sign then rising for the Horoscope, but in the Day he attended the Ascendants and Sun's Motion.

Of the twelve parts or Houses into which the Zodiack is divided, those which are predominant in every Nativity, and chiefly to be considered in Prognosticks, are four, by which one common Name they

Sext. Emp.

Sext. Emp. sec. cit.

they term Centers (or Angles) but more particularly, they call one the Horoscope, or Ascendant, another the Medium Cœli, (the tenth House,) another the Descendant, (the seventh House, another the Subterrestrial and opposite to the Medium Cœli, (the fourth House.) The Horoscope is that which happens to be Ascendant at the time of the Birth, the Medium Cœli is the fourth Sign inclusively from it. The Descendant is that which is opposite to the Horoscope. The Subterrestrial and Imum Cœli, that which is opposite to the Medium Cœli: as (to explain it by an Example) if Cancer be the Horoscope, Aries is the Medium Cœli Capricorn Descendant, and Libra Subterrestrial. That House which goes before either of these Houses they call cadent, that which followeth, succedent; now that which goeth before the Horoscope being apparent to us, they affirm to be of the ill Genius, that next which followeth the Medium Cœli of the good Genius, that which is before the Medium Cœli, the inferior Portion and single Lot, and God. That which is before the Descendant, a Slothful Sign, and the beginning of Death; that which is after the Ascendant, and is not apparant to us, the Fury and ill Fortune; that which cometh under the Earth good Fortune, opposite to the good Genius: that which is beyond the Imum Cœli towards the East, Goddess; that which followeth the Horoscope slothful, which also is opposite to the Slothful.

Sext. loc. cit.

Or more briefly thus: The cadent of the Horoscope is called the ill Genius, the Succedent slothful, the Cadent of the Medium Cœli, God, the Succedent good Genius, the Cadent of the Imum Cœli Goddess, the Succedent good Fortune, the Cadent of the Descendant ill Fortune, the Succedent Slothful. These, as they conceive, ought to be examined not superficially.

Sext. loc. cit.

Upon these Grounds the Chaldeans made their Apotelesmatick Predictions, of which there is a difference; for some of them are more simple, others, more accurate: the more simple, those which are made from any one Sign, or the simple force of a single Star, as that a Star being in such a Sign shall cause such kind of Men: the more accurate, those which are made by the Concourse, and as they say, the Contemperation of many. As if one Star be in the Horoscope, another in the Mid-heaven, another in the opposite Point to the Mid-heaven, others thus or thus posited, then these or these things will come to pass. These are all the Remains of this Art, which can be attributed to the Ancient Chaldeans.

C H A P. VII.

Other Arts of Divination.

THE Chaldeans, besides Astrology, invented and used many other ways of Divination, of which a Diodorus Siculus instanceth, Divination by Birds, Interpretation of Dreams, Explication of Prodigies, and Hieroscopia. b R. Maimonides likewise affirms, that among the Chaldeans anciently there arose several sorts of Diviners, in particular these, Megnonemim, Menacheshim, Mecashephim, Chober chaber, Shel ob, Fideyoni, Doresh el hammetim; all which are mentioned, Deut. 18. 10, 11.

The first ascribed by Diodorus to the Chaldeans, is Divination of Birds, οὐροσκόπια, or

Augury: neither is it probable, that they who were so great Inquisitors into the several kinds of Divination, should be ignorant of this, which after-Ages esteemed one of the most considerable. But they who understand the Word c Menacheshim in this Sense, seem to have been drawn to it by a mistake of the Latine Word augurari, by which it is rendred.

The next, Interpretation of Dreams, ὀνείρων, d Philo Judæus affirms to have been d Suid. invented by Abraham. That it was profess'd by the ancient Chaldeans appears from their Answer to Nebuchadnezzar, e Tell thy Servants e Dan. 2. the Dream, and we will shew the Interpretation. There are extant many onirocritical Verses, under the name of Astrampsychus, collected out of Suidas, and digested by Joseph Scaliger: Astrampsychus is mentioned among the Magi by Laertius: and f there are who conceive the name to f Urfm. 20r. be only an Interpretation of the Chaldean or Persian Zoroaster, which some render, a living Star.

The third, Explication of Prodigies, ἱερόσκοπος, this kind the Greek Interpreters conceive included in the Word Fydioni, for they render it ἐπισκοπὴ τῶν τελεσθῶντων.

The last that Diodorus mentions, is Hieroscopia, by which I conceive to be meant extispicium, Divination by inspection into the Entrails (ἱερόσκιον) of Sacrificed Beasts. That the Chaldeans used this kind, may be argued from the Prophet Ezekiel, who faith of the King of Babylon (using Divination) g he looked into the Liver. These g Chap. 21. seem to be the gazrin, reckoned by h Daniel h Chap. 2. among the Chaldean Diviners; from Gazar, to cut; for they cut open the Beast and Divined by his Entrails.

Ob, is rendred Pytho, or (rather) Pythonicus Spiritus; the Word Originally signifieth a Bottle, and thereupon is taken for that Spirit which speaketh ex utero Pythonissæ: The Sacred Text calls the VVoman Esheth Baalath Ob, which the Septuagint render, γυνὴ ἐγγασίμου, and where Saul faith, i I pray thee Divine to me in i 1 Sam. 22. Ob, they Translate, μαντεύου μοι ἐν τῇ ἐγγασίμῳ. R. Maimonides faith, shethat was initiated held in her hand a Myrtle Wand, and received Suffumigations, R. Abraham ben David, that these Rites were usually performed at some dead Man's Tomb.

Doresh el hammetim, is properly (as rendred) a Necromancer; k some affirm this kind of Divination had its Original in Chaldea. k Fran. 187. rand. de rer. p. 328.

These and the rest of this kind are all comprehended under the general name Mecashephim, of which formerly.

a Lib. 1.

b Mor. Neu.

THE

THIRD SECTION.

Magick, Natural and Theurgick.

THE third Part of the Chaldaick Doctrine was Magick: for though the Name is conceived to be Persian (by some derived from

*a Salmas.
b Suid.*

from *Mog*, *a* a Sirname of the Persian Zoroaster, *b* by others from the *Magussæans*) yet this Science it self was originally Chaldaean, and properly the Study of the *Ashaphim*; of whom *Laertius* is to be understood, when he saith that the Chaldaens were the same with the Babylonians as the Magi with the Persians: Hence it is also that the Term *Magi* is sometimes extended to the Chaldaean Philosophers.

c Lib. 30. c. 1. *Pliny* indeed saith, that *c* Magick had its beginning in Persia from Zoroaster, but adds, that whether this Zoroaster was one, or afterwards a second also, is not certain: And that he rather meant the Chaldaean, than the Persian, may be inferred from his citing those Authors who placed this Zoroaster 6000 years before Plato, or 5000 years before the Trojan War; which Accounts (though extravagant) were doubtless intended of the most Ancient Zoroaster, the Chaldaean. He likewise instanceth *d* as skilful in this Art *Marmaridius* a Babylonian, and *Zormocenas* an Assyrian both so ancient as that there are not any Monuments of them extant.

d Loc. cit.

The few Remains we find of the Chaldaean Magick may be reduced to two Kinds, Natural and Theurgick.

CH A P. I.

Natural Magick.

THE first part of the Chaldaick Magick is that which we commonly term Natural, because it contemplates the Vertues of all Natural Beings, Coelestial and Sublunary, *a* makes Scrutiny into their Sympathy, and mutual Application of them, produceth extraordinary Effects.

a Psel.

By this kind of Magick the Chaldaens professed *b* to perform many admirable things, not only upon particular Persons, but upon whole Countries. *R. Maimonides* instanceth *c* the expelling Noxious Animals, as Lions, Serpents, and the like, out of Cities; the driving away all kind of harms from Plants, prevention of Hail, the destroying of Worms that they hurt not the Vines; concerning these (saith he) they have written much in their Books; and some there are who boast they can cause that no Leaves or Fruit shall fall from the Trees.

*b Maimon.
Mor. Ne.
c Mor. Ne.*

CH A P. II.

Magical Operations, their Kinds.

THeir Operations *a* *R. Maimonides* reduceth to three Kinds. The first of those which deal in Plants, Animals, and Metals. The Second consists in Circumscription and Determination of some time, in which the Operations are to be performed. The third consists in Humane Gestures and Actions; as in clapping the Hands, Leaping, Crying aloud, Laughing, Lying Prostrate on the Earth, Burning any Thing, Kindling of Smoak, and lastly, in pronouncing certain Words Intelligible or Unintelligible; these are the Kinds of their Magical Operations.

c Mor. Ne.

b Loc. cit.

b Some there are which are not performed but by all these Kinds: As when they say, take such a Leaf of such an Herb, when the Moon is in such

a Degree and Place: Or, take of the Horn of such a Beast, or of his Hair, Sweat or Blood, such a quantity, when the Sun is in the middle of Heaven, or in some other certain Place. Or, take of such a Metal, or of many Metals, melt them under such a Constellation, and in such a Position of the Moon; then pronounce such and such Words; make a suffumigation of such and such Leaves, in such and such a Figure, and this or that thing shall come to pass.

c Other Magical Operations there are which they conceive may be performed by one of the forementioned Kinds, only these (say they) are performed for the most part by Women; as we find amongst them: For the bringing forth of Waters, if ten Virgins shall adorn themselves, and put on red Garments, and leap in such manner that one shall thrust on the other, and this to be done going backwards and forwards, and afterwards shall stretch out their Fingers towards the Sun, making certain Signs, this Action being finished, they say that Waters will issue forth. In like manner they write, that if four Women, &c. using certain Words and certain Gestures, by this Action they shall divert Hail from falling down. Many other such like Vanities they mention all along their Writings, which are to be performed by Women.

c Loc. cit.

d But none of these (as they imagine) can be performed without having respect and consideration of the Stars; for they conceive that every Plant hath its proper Star: They ascribe also certain Stars to all living Creatures and Metals; Moreover these Operations are peculiar Worshipps of the Stars, and that they are delighted with such an Action, or Speech, or Suffumigation, and for its sake afford them what they wish. Hitherto *R. Maimonides*, who only hath preserved these Remains of the Ancient Chaldaick Superstition.

d Maim. Mor. Ne.

CH A P. III.

Of the *Tsilmenia* (or *Telefms*) used for Averruncation.

Moreover the Chaldaens are by the Rabbies reported to have been the first that found out the secret power of Figures; neither was there any thing more celebrated than the Images of this kind made by them.

They are called in Chaldee and Persian *Tsilmenia*, from the Hebrew *Tselem*, an Image: in Arabick, *Talitsmam*, or *Tjalimam*, perhaps from the same Root; rather than as some conjecture from the Greek word, *τελέσμα τέλεσματος*.

These Images were prepared under certain Constellations, for several purposes; some for Averruncation, others for Prædiction.

Those that serve for Averruncation, some conceive to have been of later invention, and ascribe them to *Apollonius Tyaneus*; he indeed was the first amongst the Grecians that was famous for them: but it is most probable that he brought this Art out of the East, there being yet to be seen many of these Figures or *Telefms* throughout the whole Eastern part of the World; and some of them very Ancient, which *a* *Gassarel* alledgeth to confirm, that the Persians, or if you will the Babylonians, were the first that found 'em out. These

a Curios. inoyer.

b Centiloq.

These the Greeks term also *σοιχῆαι*, and *σοιχῆαι* *αἰσῆς*; and the makers of them *Stoicheiomaticks*, b Ptolemy, The generable and corruptible Forms are affected by the Celestial Forms: for which reason the *Stoicheiomaticks* make use of them, considering the entrance of the Stars into them: On which words *Hali Aben Redoan* (or as the Hebrew Translation *Aben Giafar*) writes thus. In this Chapter Ptolemy means to discover many secrets of Images, and that the Figures which are here below are correspondent to the like figurations above, which predominate over them: as for instance, the Celestial Scorpion predominates over the Terrestrial Scorpions, and the Celestial Serpent over the Terrestrial Serpents; and the skilful in Images (*Stoicheiomaticks*) observed, when a Planet was out of his combustion, and entred into any of these Figures, then placing the Planet in the Horoscope, they engraved the Figure upon a Stone, and having added what else was necessary, they fitted it for preservation, or destruction; as they pleased; and this Power continued in the Stone a long time after.

C H A P. IV.

Of the *Tsilmenaia*, used for Prediction.

a Mor. Ne.

A Nother kind, there was of *Tsilmenaia* or *Telestes*, used for Prediction: These Images (according to the Description of a R. Maimonides) they did erect to the Stars: of Gold to the Sun, of Silver to the Moon; and so distributed the Metals and Climates of the Earth among the Stars, for they said, that such a Star is the God of such a Climate. There they built Temples, and placed the Images in them, conceiving that the Power of the Stars did flow into those Images, and that those Images had the faculty of understanding, and did give to Men the gift of Prophecy, and in a word, did declare to them what things were good for them. So also they say of Trees, which belong to those Stars, every Tree being dedicated to some Star, and planted to its Name, and Worshipped for this or that Reason, because the Spiritual Virtues of the Stars are infused into that Tree. So that after the manner of Prophecy they discourse to Men, and speak to them also in Dreams.

b Gen. 3.

c Ch. 21. 21.

The word *Teraphim* in the Sacred Scripture, among other significations, is sometimes taken for these Images, whence b Onkelos the Chaldee Paraphrast renders it *Tsilmenaia*, with which the Syriack Version agrees; the Septuagint *θεῶν* and *εἰδωλῶν*, and *εἰδωλῶν*, implying by all these Interpretations, that they were indued with the Gift of Prediction: which is no more than the Text it self confirms; For c Ezekiel saith of the King of Babylon using Divination, that he consulted the *Teraphim*.

d Gen. 31.

Of this kind are those *Teraphims* conceived to be, which Rachel stole from her Father Laban; for he calls them his d Gods; the Coptick Version renders it, the greatest of his Gods: R. D. Kimchi conceives they were made by Astrologers to foretel things to come, and that they were Images whose Figures we know not, by which the Ancients were informed of future Events, they being in some manner like the Oracles, which often spake by the mouth of the De-

vil. R. Eliezer, that they were Statues made in the Figure of Men under certain Constellations, whose influences (which they were capable of receiving) caused them to speak at some set hours, and give an answer to whatsoever was demanded of them. *Aben Ezra*, that they were made after the Shapes of Men, to the end they might be capable of Celestial Influence (and in the same manner interprets he the *Teraphim* placed by Michol in David's Bed.) Adding, that the reason why Rachel took them away, was not to take her Father off from Idolatry; for if it were so, why then did she take them along with her, and not rather hide them in the way near his House? But by reason that her Father was skilful in Astrology, she feared lest by consulting those Images and the Stars, he should know which way Jacob was gone. And S. Austin, that Laban saith, why hast thou stolen my Gods? It is perhaps in as much as 94. if he had said he Divined, * I divined the Lord * Gen. 30. because of thee;] for so the more antient Expositors interpret the word *nicašti*, and the Jews understand that place, of Prescience, Divination, or Conjecture, as Mr. Selden observes.

Philo Judæus speaking of the * *Teraphim* of * Judg. 17. Micah, fancies that Micah made of fine Gold and Silver three Images of young Lads, and three Calves, and one Lion, one Dragon, and one Dove; so that if any had a mind to know any Secret concerning his Wife, he was to have recourse to the Image of the Dove, which answered his demands; if concerning his Children, he went to the Boy; if concerning Riches, to the Eagle; if concerning Power and Strength, to the Lion; if it any thing concerned Sons and Daughters, he went then to the Calves; and if about the length of years and days, he was to consult the Image of the Dragon. This, how light soever, shews that he also understood the *Teraphim* to be Prophetical.

C H A P. V.

Theurgick Magick.

T He other part of the Chaldaick Magick is Theurgick: to which perhaps Plato more particularly alluded, when he defined a the Magick of Zoroaster, the Service of the Gods. This they called also b the Method of Rites; the works of Piety, and (as rendred by the Greeks) *τελεστήαι* and *εὐσεβήματα*, the Telestick Science and Telestickurgick. It what it did consist may be gathered from what Suidas saith of the two Julians; Julian (saith he) the Chaldæen, a Philosopher, Father of Julian Sirnamed the Theurgick; he wrote of Demons four Books; they treat of Preservations of every part of Man's Body, of which kind are the Chaldaick Telestickurgicks. And again, Julian Son of the aforementioned, lived under Marcus Antonius the Emperor; he also wrote Theurgick Initiatory Oracles in Verse; and all other Secrets of the Science.

Thus the Telestick Science was conceived to procure a Conversation with Demons by certain Rites and Ceremonies, and c to initiate or perfect the Soul by the power of Materials here on Earth; for the supream faculty of the Soul cannot by its own guidance aspire to the sublimest Institution, and to the comprehension of Divinity, but the work of Piety leads it by the hand to God by

by illumination from thence; Plato indeed holds, that we may comprehend the ungenerate Essence by Reason and Intellect; but the Chaldaean asserts, that there is no other means for us to arrive at God, but by strengthening the Vehicle of the Soul by material Rites; for he supposeth that the Soul is purified by Stones, and Herbs, and Charms, and is rendred expedite for Ascent.

It is likewise beneficial to the Body, as well as to the Soul, for* if a Man shall give his mind to these, he shall not only render his Soul unvanquishable by Passions, but shall also preserve his Body the better in health: for the usual effect of Divine Illuminations is to consume the matter of the Body, and to establish Nature by Health, that we be not seized either by Passions or Diseases.

CHAP. VI.

Theurgick Rites.

BY Theurgick or Telestick Rites they conceived that they could procure a Communication with the good Demons, and Expulsion or Averruncation of the bad.

The chief of these Rites was Sacrifice; concerning which there is a remarkable passage in a *Jamblichus*, who delivers the Chaldaick Opinion thus: The Gods give those things that are truly good, to such as are purified by Sacrifices; with whom also they converse, and by their communication drive away Wickedness and Passion far from them; and by their brightness chase from thence the dark Spirit; for the evil Spirits, when the light of the Gods cometh in, fly away as Shadows at the light of the Sun: Neither are they able any longer to disturb the Pious Sacrificer, who is free from all Wickedness, Perverseness, and Passion: But such as are pernicious, and behave themselves insolently in opposition to sacred Rites and Orders, these by reason of the imbecillity of their Action, and want of Power, are not able to attain to the Gods, but because of certain Pollutions are driven away from the Gods, and associated with ill Demons, by whose bad Breath they are inspired, and depart thence most wicked, profane and dissolute; unlike the Gods in desire, but in all things resembling the bad Demons with whom they converse daily. There Men therefore being full of Passion and Wickedness, by the Affinity that is betwixt them, draw the evil Spirits to them, by whom being quickly possessed, they are again excited to all Iniquity, one assisting and strengthening the other, like a Circle whose beginning and end meet.

Several other Rites they used also, which they conceived to be prevalent in evocation of these Demons. They are allowed (saith *b* Gregorius Nicephoras) out of the Air and Earth by certain Stones or Pulse, or certain Voices or Figures, which they call Characters, invented by the Chaldeans and Egyptians who first found out the proper discernitive sign of every Demon.

Some few of these are mention'd in the Chaldaick Oracles, as,

When thou seest the Terrestrial Demon approach, Sacrifice the Stone Mnizuris, using Invocation.

The Demons (saith *Pfellus*) that are near the Earth are by Nature lying, as being far off from the Divine Knowledge, and filled with dark matter. Now if you would have any true Discourse from these, prepare an Altar, and Sacrifice the Stone Mnizuris. This Stone hath the Power of Evocations, the other greater Demon who invisibly approacheth to the material Demon will pronounce the true Relation of Demands, which transmits to the Demandant the Oracle the vocative name with the Sacrificing of the Stone.

Another of these Rites mentioned by the same Oracles, is that of the *Hecatine Strophalus*.

Labour about the Hecatine Strophalus.

The Hecatine Strophalus (saith *Pfellus*) is a Golden Ball, in the midst whereof is a Sapphire; they fold about it a Leather Thong, it is beset all over with Characters; thus whipping it about they made their Invocations. These they use to call Fynges whether it be round or triangle, or any other Figure, and whilst they are doing thus they make insignificant or brutish cries, and lash the Air with their Whips. The Oracle adviseth to the performance of these Rites, or such a Motion of the Strophalus, as having an expressible Power. It is called Hecatine as being dedicated to Hecate. Hecate is a Goddess amongst the Chaldeans, having at her right side the Fountain of Vertues.

No little Efficacy was attributed to certain Words used in these Rites, which the Chaldaick Oracles expressly forbid to be changed.

Never change Barbarous Names.

There are certain Names (saith *Pfellus*) among all Nations delivered to them by God, which have an unspeakable Power in Divine Rites, change not these into the Greek Dialect; As Seraphim and Cherubin, and Michael and Gabriel: These in the Hebrew Dialect have an unspeakable Efficacy in Divine Rites; but changed into Greek Names are ineffectual.

CHAP. VII.

Apparitions.

THE Apparitions procured by these Rites are of two Kinds.

a The first is called *ἐποπτεία* Super-inspection (in respect to the initiated Person.) When he who orders the Divine Rites seeth a meer Apparition, (as for instance) of Light in some Figure or Form, concerning which the Chaldaick Oracle adviseth, that if any one sees such a Light, he apply not his Mind to it, nor esteem the voice proceeding from thence to be true. *c* Sometimes likewise too many initiated Persons there appears whilst they are sacrificing some Apparitions in the shape of Dogs, and several other Figures. These are Apparitions of the Passions of the Soul in performing Divine Rites, meer Appearances, having no Substance, and therefore not signifying any thing true.

The Second is called *δ' αὐτοψία* self-inspection; this is when the initiated Person seeth the Divine Light it self without any Figure or Form: This the Oracle calls *ἁγία* e Sacro-sanct, for that

a De Myster. Egypt.

c Psel. in O. rac. 19.

a Psel. in O. rac. 15.

e Loc. Cit. that

f Loc. cit. that it is seen with a Beauty by Sacred Persons, and glides up and down pleasantly and graciously through the Depths of the World. f This will not deceive the initiated Person, but whatsoever question you shall propose, the answer will be most true,

When thou seest (saith the Oracle) a Sacred Fire without Form, shining flashingly thro' the Depths of the whole World, Hear the voice of Fire.

g Psel. in Orac. 21.

g When thou beholdest the Divine Fire void of Figure, brightly gliding up and down the World, and graciously smiling, listen to this voice, as bringing a most perfect Prescience.

h Psel. in Orac. 25.

But h these things which appear to initiated Persons, as Thunder, Lightning, and all else whatsoever, are only Symbols or Signs, not the Nature of God.

CHAP. VIII.

Material Demons how to be repulsed.

AS it is one property of Theurgy to evocate and procure a Conversation with good Demons, so is it another, to repulse and chase away the Material Demons, which, as they conceive may be effected several ways; either by Words or Actions.

a Psel. de Demon.

By Words: For as a Marcus delivers the Chaldaick Opinion) these material Demons fearing to be sent to Abysses and subterranean Places, and standing in awe of the Angels who send them thither, if a Man threaten to send them thither, and pronounce the names of those Angels whose Office that is, it is hardly to be expressed how much they will be affrighted and troubled; so great will their astonishment be, as that they are not able to discern the Person that menaces them, and tho' it be some old Woman, or a little old Man that threatens them, yet so great is their fear, that they depart as if he that menaces were able to kill 'em.

b De Demon.

By Actions: For the Bodies of Demons (saith the same b Author) are capable of being struck, and are pained thereby; Sense is not the Property of Compounds, but of Spirits; That thing in a Man which feelth, is neither the Bone; nor the Nerve, but the Spirit which is in them: whence, if the Nerve be pressed or seized with cold, or the like, there ariseth pain from the Emission of one Spirit into another; for 'tis impossible that a compound Body should in it self be sensible of Pain, but in as much as it partakes of Spirit, and therefore being cut into pieces, or dead, it is absolutely insensible; because it hath no Spirit. In like manner a Demon being all Spirit, is of his own Nature sensible in every part; he immediately feelth and beareth; he is obnoxious to suffering by touch; being cut asunder he is pained like solid Bodies; only herein differing from 'em, that other things being cut asunder can by no means or very hardly be made whole again, whereas the Demon immediately comes together again, as air or water parted by some more solid Body. But tho' this Spirit joyn again in a moment, at the time in which the dissection is made 'tis pained; for this reason they are much afraid of Swords, which they who chase 'em away knowing, stick up pointed Irons or Swords in those places

where they would not have them come, chasing them away by things Antipathetical to them, as they allure them by things Sympathetical.

From these Material Demons, * upon those * Psel. de D. that worship them, descend certain fiery Irradiations, like those they call falling Stars, gliding up and down, which those mad Persons term Apparitions of God; but there is nothing true, firm, or certain in them, but cheats, like those of Jugglers, which the common People term Wonders, because they deceive the eye, * for being removed far * Psel. in from the Beatitude of Divine Life, and destitute Orac. 23. of Intellectual Contemplation, they cannot presignific futures, but all that they say or shew is false and not solid, for they know Beings *μὴ ὄντα*, by their outsides, but that which knoweth futures particularly, useth Notions indivisible and not figured.

THE FOURTH SECTION.

Of the Gods, and Religious Worship of the Chaldeans.

IN the last place, as to the Explication of the Chaldaick Doctrine, especially of that part which concerns their *Ashaphim*) it is necessary, we give account of the Gods of the Chaldeans, and of their Religious Worship.

And tho' Mr. Selden hath reduced all the Asiatick Gods under the common name of Syrian, in his excellent Treatise upon that Subject; yet we shall take notice of such only as were proper to Assyria, (whether as being Worshipped no where else, or from thence brought into Syria and other Countries) conceiving the rest nothing pertinent to the Chaldeans or Babylonians.

The Religious Worship of the Chaldeans may be reduced to three Kinds; The first, a Worship of the true God, but after an Idolatrous manner: The second, of Demons, or Spirits: The third, of the Celestial Bodies, and Elements.

CHAP. I.

Of their Idolatrous Worship of the True God.

THE first kind of the Chaldaick Worship was of the True God, tho' after an Idolatrous manner: The Author of the Chaldaick Summary affirms, that they held one Principle of all things, and declare that it is one and good. That by this one and good they meant the True God, (to whom alone those Attributes belong) may be gathered from a Eusebius, who saith, (speaking doubtless of the Followers of Zoroaster) that in the first place they conceive God the Father and King ought to be ranked; for this reason the Delphian Oracle attested by Porphyrius, joyns them with the Hebrews;

a Prepar. Evang.

Chaldees and Jews wise only, Worshipping Purely a Self-begotten God and King.

But

But (notwithstanding the Oracle) that this Worship, though of the True God, was Idolatrous, is beyond doubt: so as to them might be applied what St. Paul saith of the Romans, *a when they knew God they glorify'd him not as God, but b changed the Glory of the uncorruptible God into an Image made like to corruptible Man.*

a Rom. 1. 20.

b Verse 23.

c Hos. 2. 16.

Act. 17. 28.

Stom. 6.

Lib. 1.

The Name and Image whereby they represented the supream God was that of *Bell*, as appears by the prohibition given by God himself, not to call him so any more: *c Thou shalt call me no longer Baali; Bell with the Chaldeans is the same as Baal with the Phœnicians, both derived from the Hebrew Baal, Lord; this Bell of the Babylonians is mentioned by the Prophets Esay and Jeremy: They who first translated the Eastern Learning into Greek, for the most part interpret this Bell by the word Zeüs, Jupiter. So Herodotus, Diodorus, Hesychius, and others: Belosus (saith Eusebius) was Priest of Belus, whom they interpret (Δία) Jupiter; the reason of which seems to be, for that Bell was the chief God with the Chaldeans, as Jupiter with the Grecians, who by that name meant the True God, as the Chaldeans by the other; for to him St. Paul applies that Hemistick of Aratus ὅς ἐστιν ὁ θεὸς ἡμεῶν, (for we are also his off-spring,) which hath reference to the first Verse, ἐν αὐτῷ ἀρχαίως δα. And upon these words of St. Peter, Worship ye God, but not as the Grecians. Clemens Alexandrinus observes, that he saith not, Worship not the God whom the Grecians, but as the Grecians: he changed the manner of the Worship, but Preached not another God.*

The Temple of this Jupiter Belus at Babylon, is exactly described by Herodotus an Eye-witness in whose time it was yet extant, thus: *the gates were of Brass: the Temple it self square; every side two furlongs broad. In the midst of the Temple there was a solid Tower (not hollow) of thickness and height of a Stadium; upon which there was set another, and another upon that, and so on to eight: on the outside of these were stairs, by which to go up every one of them; in the midst of the stairs were seats for such as went up, to rest themselves: in the highest Tower there was another Temple (or Chappel,) and in it a Bed sumptuously furnish'd, and a Table of Gold; but neither in this was there any Statue, nor doth any Person lie here anights except one Woman, a Foreigner, of whom the God makes choice above all other, as the Chaldeans who are Priests of this God aver: for they (say tho' I hardly credit it) that the God himself comes into this Temple, and rests in this Bed: There is moreover in this Temple another lower Chappel, in which there is a great Statue of Jupiter all of Gold, sitting; and beside it a Table and Bench all of Gold also: insomuch that the Chaldeans value it at 800 Talents: Likewise without the Chappel there is an Altar of Gold, and another Altar very great, upon which are Sacrificed Sheep of full growth, for upon that of Gold, it is not lawful to Sacrifice any but Sucklings; On this greater Altar the Chaldeans burn yearly of Frankincense to the value of 100000 Talents, in Sacrifice to their Gods. There was also at the same time in this Temple a Statue 12 Cubits high, of massie Gold, which I saw not, but take upon the report of the Chaldeans: this Statue Darius Son of Hyftaspes had a great mind to take, but*

durst not; but his Son Xerxes afterwards took it, and slew the Priest which forbade him to stir it: Thus was this Temple Built and Beautified, beside infinite Gifts and Presents. Hitherto Herodotus: he terms the Priests of Belus Chaldeans; and R. Maimonides asserts the Chaldean Idolaters to be the same with the Prophets of Baal.

The Festival of Bell is mentioned, 2 King 10. 20. his Oracle by Arrian; the same which Stephanus means, saying, The Chaldeans had an Oracle which was no less in esteem with them, than that at Delphi was with the Grecians.

CHAP. II.

Worship of other Gods, Angels and Demons.

THE second kind of their Religious Worship, was that of other Gods, Angels and Demons; Next the Supream God (saith Eusebius, delivering their Opinion) there followeth a multitude of other Gods, Angels, and Demons. These Gods they distinguished into several Orders, *Intelligibles; Intelligibles and Intellectuals; Intellectuals; Mountains; Principles; Unzoned Gods; Zoned Gods; Angels and Demons.* To the Worship of these belongs what we have already delivered concerning their Theurgy.

CHAP. III.

The Chaldean Worship of the Celestial Bodies.

THE third kind of Idolatrous Worship used by the Chaldeans and Babylonians was of the Celestial Bodies; into which, Maimonides saith, they fell soon after the Flood: perhaps occasioned by their continual addition to Contemplation of them; and grounded upon Observation of the great Benefits communicated to Mankind by their Influence.

The Levitical Law, in prohibiting this Idolatry, sets down the particulars of it, *Lest thou lift up thine eyes unto Heaven, and when thou seest the Sun, and the Moon, and the Stars, even all the Host of Heaven, should be driven to Worship them and Serve them.* And of the Jewish Idolaters put down by Josiah (besides those that burn Incense to Baal, of whom already) are reckoned those that burnt Incense to the Sun and to the Moon and the Planets (or Signs, Mazaloth) and to all the Host of Heaven. This doubtless they learned of their Neighbours the Assyrians, of whom the Prophet Ezekiel complains that they doted.

CHAP. IV.

Of the Sun.

THE Sun and Moon are first named and distinguished from the rest; with them perhaps this kind of Idolatry began, before it came to be apply'd to any of the other Stars; for the most ancient mention of it, (which is by Job a Neighbour to the Chaldeans) we find these two only named: That the Chaldeans esteemed these the principal is confirmed by R. Maimonides, who saith, *They held the rest of the seven Planets*

Mor. Ne.

to be Gods, but the two Luminaries the greatest. But of these (adds Maimonides) they held the Sun to be the greatest God. What he farther relates in confirmation hereof, out of the Books of the Sabæans concerning Abraham, and the like, was delivered formerly. Of the Assyrian Idols dedicated to the Sun, Macrobius mentions three, Adad, Adonis and Jupiter Heliopolites.

Saturn. I. cap.

Adad signifieth one; this God they adore as most powerful, but they joyn with him a Goddess named Atargates, ascribing to these two an absolute power over all things; by these they mean the Sun and the Earth; that hereby they understand the Sun, is manifest, for the Image of Adad is very fair and hath beams bending downwards, to shew that the Power of Heaven consists in the beams of the Sun, sent down upon the Earth. The Image of Atargates hath beams erected, to shew that the Earth produceth all things by the power of the beams sent from above: Thus Macrobius; but whereas he saith that Adad signifieth one, either he himself is mistaken, or his Text depraved, for (as Mr. Selden observes) with the Syrians, and Chaldeans or Assyrians, Chad, from the Hebrew Achad, signifieth one; but Adad or Adod which in the Scripture is Hbadad, is of a different spelling; Drusus reads (in Macrobius) Hhada, which signifies One in Syriack. Of this Idol perhaps is the Prophet Isaiah to be understood, they that sanctifie and purifie themselves after One in the midst of the Gardens, dedicated to that Idol behind the Temple; Subintelligendum enim Templum, pone Templum, saith Joseph Scaliger.

Saturn. I. 21.

Adonis is derived from Adon, Lord. That Adonis is the Sun (saith Macrobius) is not doubted, upon view of the Religion of the Assyrians, with whom Venus Architis (now worshipped by the Phœnicians) and Adonis were held in great veneration: For the Naturalists worshipped the Superiour Hemisphere of the Earth, in part whereof we dwell, by the name of Venus, the inferior they called Proserpina. Hereupon among the Assyrians or Phœnicians the Goddess is introduced mourning, because the Sun in performing his annual Course passeth thro' the 12 Signs of the inferior Hemisphere; for of the Signs of the Zodiac, six are esteemed superior, six inferior; and when he is in the inferior, and consequently makes the days shorter, the Goddess is believ'd to mourn, as if the Sun were snatch'd away by death for a time, and detained by Proserpina the Goddess of the inferior part, and of the Antipodes: Again, they conceive that Adonis is restor'd to Venus when the Sun surmounting the six Stars of the inscrib'd Order begins to illuminate our Hemisphere, and lengthen the light and days.

Saturn. I. 17.

The last is Jupiter Heliopolites; the Assyrians (saith the same Author) under the name of Jupiter worship the Sun (whom they style Διὰ ἡλιοπολίτην) with extraordinary Ceremonies: The Image of this God was taken from a Town in Egypt, named Heliopolis also, at what time Senemus, perhaps the same as Senepos, Reign'd over the Egyptians; it was brought thither by Oppias Ambassador of Delebois King of the Assyrians, and by the Egyptian Priests, the chief of whom was Parmetis; and having been a long time kept by the Assyrians, was afterwards removed to Heliopolis (in Egypt) the reason of which, and why being carried out of Egypt it was brought back into the place where now it is, and where it is worshipped with

Rites that are more Assyrian than Egyptian, I forbear to relate, as being nothing pertinent to our purpose. That this Jupiter is the same with the Sun, appears as well by their Religious Rites, as by the fashion of the Image, for its being of Gold (of which Metal Maimonides describes those Teletemes to have been which the Chaldeans made to the Sun) and without a Beard, is sufficient Argument hereof. The right hand is lifted up, holding a Whip like a Charioteer, the left holds a Thunderbolt and some Ears of Corn, all which denote the consociate powers of Jupiter and the Sun. Moreover the Religion of this Temple is excellent for Divination, which is ascribed to the power of Apollo, who is the same with the Sun: Likewise the Image of the Heliopolitane God is carried on a Bier, as the Image of the Gods are carried at the Solemnity of the Games of the Circensian Gods; Many Nobles of that Country follow, their Heads shaved, they themselves pure by a long Chastity; they are driven by Divine inspiration, not as they will themselves, but whither the God carries them. This God they consult even absent, by sending Table-books Sealed up, and he writes back in order to the Questions inserted in them: Thus the Emperor Trajan being to go out of that Country into Parthia with his Army, at the request of his Friends zealous in this Religion, who having had great experiments in this kind, perswaded him to enquire concerning the success of his Expedition, proceeded with Roman prudence, lest there might be some deceit of Man in it, and first sent the Table-books Sealed up, requiring an answer in writing: The God commanded Paper to be brought, and ordered that it should be sent to him blank, to the astonishment of the Priests. Trajan received it with admiration, for that he also had sent a blank Table-book to the God. Then he took another Table-book, and wrote in it this Question, whether having finished this War, he should return to Rome; This he Sealed up; The God commanded a Centurial Vine, one of those Gifts that were in the Temple, to be brought, and to be cut into two pieces, and wrapt up in a Napkin and sent. The event appeared manifest in the death of Trajan, his Bones being brought back to Rome: For by the Fragments, the kind of Reliques (his Bones) by the token of the Vine, the future chance was declared. Hitherto Macrobius.

To these add Bell or Belus a name tho' more peculiar to the Supreme Deity, yet common to many of the Chaldean Gods, and among others to the Sun, as Servius witnesseth. In Punick Language (saith he) God is named Baal; but amongst the Assyrians he is called Bell, and by a certain mystical reason, Saturn and the Sun.

CHAP. V.

The Chaldean Worship of the Moon.

THE Moon was worshipped by the Chaldeans under many names, all which are Feminine; and the greater part answerable to those of the Sun (last mentioned) which seems to confirm what R. Maimonides delivers of them, that they held the seven Planets to be Gods and Goddesses, Male and Female, Married to one another.

Now the Chaldeans (or rather they who first Translated the Chaldaick Learning into Greek) among other names applied to the Sun those of Jupiter

Jupiter and *Adonis*, in like manner did they give to the *Moon* the correspondent Attributes of *Juno* and *Venus*.

To *Juno* belong *Ada* and *Belta*, for so interpreted by *Hesychius*; *a Ada*, *Juno*, with the *Babylonians*; *b Belthes*, *Juno*, or *Venus*. Both which are doubtless no other than the Feminine names answerable to *Adad* and *Bell*, two names of the Sun. That by *Juno* Mythologists sometimes understand the Moon, the Learned *c Mr. Selden* confirms by the old Form of incantation which the *Roman Priests* used at the Nones of every Month, *dies te quinque calo. Juno novella* (or *co-vella, Cælestis*) to this *Juno* perhaps may more properly be referred what *Julius Firmicus* applies to the Air; *The Assyrians* (saith he) ascribed the Principality of the Elements, to the Air, the Image whereof they worshipped, styling it by the name of *Juno* or *Venus the Virgin*; whom the Quires of their Priests worshipped with effeminate Voices and Gestures, their skin smoothed, and their habit after the fashion of Women; thus he, but that the *Assyrians* worshipped the Element of Air is not elsewhere easily found; what he adds concerning their immodest Rites, seems rather of Affinity with those of *Venus*, as described by other Authors.

To *Venus* (taken for the Moon) belong the names *Mylitta* and *Alilat*. They learnt (saith *Herodotus* speaking of the *Persians*) of the *Assyrians* and *Arabians* to Sacrifice to *Urania*: the *Assyrians* call *Venus Mylitta*, the *Arabians* (our *Sabaans*) *Alilat*. Thus *Herodotus*; who indeed seems to make this *Mylitta* distinct from the Moon, (of whom he had spoken a little before) but that by *Alilat* was meant no other, is evident from its Etymology from *Lail Night*. The Ancients (saith *Sihel Assemon*) among many other false Gods, Served one whom they called *Alilath*, and affirmed that she is the Moon, as being the Mistress and Queen of the Night.

CHAP. VI.

The Chaldaean Worship of the Planets

The rest of the seven Planets (as *a Maimonides* saith) they held to be Gods also. To *Saturn*, whom *Diodorus* (if the Text be not depraved, which I suspect) affirms they held to be the chiefest of the five, they gave the common name of *Bell*. *Eusebius* in the 28th year of *Thara*; *Belus* the first King of the *Assyrians* died; whom the *Assyrians* styled a God; others call him *Saturn*; and *Servius* cited elsewhere, *b In the Punick Language* God is named *Baal*; but among the *Assyrians* he is called *Bell*, and by a certain Mystical Reason, *Saturn* and the Sun. *c* Whence *Theophilus* Patriarch of *Antioch*, some Worship *Saturn* as a God; and call him *Bell*, and *Baal*; this is done chiefly by those who dwell in the Eastern Climates, not knowing who *Saturn* is, and who *Belus*.

Some conceive that the more particular name of this Planet was *Chiun* or *Remphan*: of which the Prophet *Amos*, but ye have born the Tabernacle of your Moloch and *Chiun* your Images, the Stars of your God which ye made to yours selves: Which Text *St. Stephen* renders thus, *d* Ye, ye took up the Tabernacle of your God *Remphan*,

Figures which ye made to Worship them; what is the Hebrew *Chiun*, the Greek renders *Remphan*. By *Chiun Aben Ezra* understands the Planet *Saturn*, whom *Plautus* also, as *Petitus* observes, calls *Chiun*: *Rephan* (as *Kircher* attests) is used in the *Coptick* Language for the same Planet.

Of *Jupiter* (having spoken already in treating of *Bell* and the Sun, to both which this name was applied,) there is little more to be said.

Mars (as the Author of *Chronicon Alexandrinum* relates) was first owned as a Deity by the *Assyrians*: the *Assyrians*, saith he, were the first who did erect a Column to *Mars*, and adored him as a God; They gave him the common name of *Belus*, whence the *Babylonian Belus* is by *Histieus* interpreted *Zeus ἐννάνιος* *Jupiter Martius*.

But a more particular name of *Mars* was that of *Azizus*, under which he was worshipped together with *Mercury* in the Temple of the Sun at *Edeffa*, a City of *Mesopotamia*. They who inhabit *Edeffa* (saith *Julian*) a Region of a long time Sacred to the Sun, place together with him in the Temple *Monimus* and *Azizus*. That by *Monimus* they understood *Mercury*, by *Azizus*, *Mars*, and that both these were Assessors to the Sun, *Julian* acknowledgeth to have learned of his Master *Jamblicus*.

Some there are who refer the Idol *Negal* (brought by the *Samaritans* out of *Assyria*) to this Planet, for the Rabbies fancy this Idol to have been in the form of a Cock: Now the Cock being * Sacred to *Mars*, and styled his Bird in regard of his Courage, † hence they infer that *Mars* was represented under that form, as *Venus* under that of the Hen by the Idol *Succoth Benoth*.

Venus was worshipped by the *Assyrians* and *Chaldeans* under many names: Three of which we find in *Hesychius*: The first *Belthes* (or rather *Belta*) which he interprets *Juno* and *Venus*. This was a name common to the Moon also, and spoken of formerly.

The next *Delephat*, a name more appropriate to *Venus* than the former, as appears by its Etymology, from the *Syriack* word *Delpha*, coition.

The last *Myleta*, as *Hesychius* reads, who adds, the *Assyrians* (so called) *Urania*. *Herodotus* writes it *Mylitta*: They Learned (saith he, speaking of the *Persians*) from the *Assyrians* and *Arabians*, to Sacrifice to *Urania*: The *Assyrians* call *Venus Mylitta*, the *Arabians* *Alilat*. Of which two names, tho' *Alilat* (as was observed heretofore) was given to the Moon also; yet that of *Mylitta* seems peculiar to *Venus*, it being no other (as *Scaliger* observes) than the plain *Syriack* Word *Myliidtha*, generative or prolifick: *Venus* genetrix. With this Etymology well suit the Rites belonging to the Idol; of which thus *Herodotus*: The *Babylonians* have one abominable Law; every Woman of that Country, must once in her life sit in the Temple of *Venus*, and accompany with a Stranger. Some of the Richer sort disdain- ing to associate themselves with the rest of ordinary quality, are carry'd thither in covered Chariots, and stand before the Temple, a Train of Attendants coming after them; the greater part do in this manner; there are Women sitting in the Temple of *Venus* Crowned with Garlands of Flowers, some coming, others going: There are also several Passages distinguished by Cords, which guide the strangers

Mr. Ne.

to be Gods, but the two Luminaries the greatest. But of these (adds Maimonides) they held the Sun to be the greatest God. What he farther relates in confirmation hereof, out of the Books of the Sabæans concerning Abraham, and the like, was delivered formerly. Of the Assyrian Idols dedicated to the Sun, Macrobius mentions three, Adad, Adonis and Jupiter Heliopolites.

Saturn. I. cap.

Adad signifieth one; this God they adore as most powerful, but they joyn with him a Goddess named Atargates, ascribing to these two an absolute power over all things; by these they mean the Sun and the Earth; that hereby they understand the Sun, is manifest, for the Image of Adad is very fair and hath beams bending downwards, to shew that the Power of Heaven consists in the beams of the Sun, sent down upon the Earth. The Image of Atargates hath beams crested, to shew that the Earth produceth all things by the power of the beams sent from above: Thus Macrobius; but whereas he saith that Adad signifieth one, either he himself is mistaken, or his Text depraved, for (as Mr. Selden observes) with the Syrians, and Chaldeans or Assyrians, Chad, from the Hebrew Achad, signifieth one; but Adad or Adod which in the Scripture is Hbadad, is of a different spelling; Drusus reads (in Macrobius) Hbada, which signifies One in Syriack. Of this Idol perhaps is the Prophet Isaiah to be understood, they that sanctifie and purifie themselves after One in the midst of the Gardens, dedicated to that Idol behind the Temple; Subintelligendum enim Templum, pone Templum, saith Joseph Scaliger.

Saturn. I. 21.

Adonis is derived from Adon, Lord. That Adonis is the Sun (saith Macrobius) is not doubted, upon view of the Religion of the Assyrians, with whom Venus Architis (now worshipped by the Phœnicians) and Adonis were held in great veneration: For the Naturalists worshipped the Superiour Hemisphere of the Earth, in part whereof we dwell, by the name of Venus, the inferior they called Proserpina. Hereupon among the Assyrians or Phœnicians the Goddess is introduced mourning, because the Sun in performing his annual Course passeth thro' the 12 Signs of the inferior Hemisphere, for of the Signs of the Zodiack, six are esteemed superior, six inferior; and when he is in the inferior, and consequently makes the days shorter, the Goddess is believ'd to mourn, as if the Sun were snatch'd away by death for a time, and detained by Proserpina the Goddess of the inferior part, and of the Antipodes: Again, they conceive that Adonis is restor'd to Venus when the Sun surmounting the six Stars of the inscrib'd Order begins to illuminate our Hemisphere, and lengthen the light and days,

Saturn. I. 17.

The last is Jupiter Heliopolites; the Assyrians (saith the same Author) under the name of Jupiter worship the Sun (whom they style Δία ἡλιοπολίτην) with extraordinary Ceremonies: The Image of this God was taken from a Town in Ægypt, named Heliopolis also, at what time Senemus, perhaps the same as Senepos, Reign'd over the Ægyptians; it was brought thither by Oppias Ambassador of Delebois King of the Assyrians, and by the Ægyptian Priests, the chief of whom was Parmetis; and having been a long time kept by the Assyrians, was afterwards removed to Heliopolis (in Ægypt) the reason of which, and why being carried out of Ægypt it was brought back into the place where now it is, and where it is worshipped with

Rites that are more Assyrian than Egyptian, I forbear to relate, as being nothing pertinent to our purpose. That this Jupiter is the same with the Sun, appears as well by their Religious Rites, as by the fashion of the Image, for its being of Gold (of which Metal Maimonides describes those Teletemes to have been which the Chaldeans made to the Sun) and without a Beard, is sufficient Argument hereof. The right hand is lifted up, holding a Whip like a Charioteer, the left holds a Thunderbolt and some Ears of Corn, all which denote the consociate powers of Jupiter and the Sun. Moreover the Religion of this Temple is excellent for Divination, which is ascribed to the power of Apollo, who is the same with the Sun: Likewise the Image of the Heliopolitane God is carried on a Bier, as the Image of the Gods are carried at the Solemnity of the Games of the Circensian Gods; Many Nobles of that Country follow, their Heads shaved, they themselves pure by a long Chastity; they are driven by Divine inspiration, not as they will themselves, but whither the God carries them. This God they consult even absent, by sending Table-books Sealed up, and he writes back in order to the Questions inserted in them: Thus the Emperor Trajan being to go out of that Country into Parthia with his Army, at the request of his friends zealous in this Religion, who having had great experiments in this kind, perswaded him to enquire concerning the success of his Expedition, proceeded with Roman prudence, lest there might be some deceit of Man in it, and first sent the Table-books Sealed up, requiring an answer in writing: The God commanded Paper to be brought, and ordered that it should be sent to him blank, to the astonishment of the Priests. Trajan received it with admiration, for that he also had sent a blank Table-book to the God. Then he took another Table-book, and wrote in it this Question, whether having finished this War, he should return to Rome; This he Sealed up; The God commanded a Centurial Vine, one of those Gifts that were in the Temple, to be brought, and to be cut into two pieces, and wrapt up in a Napkin and sent. The event appeared manifest in the death of Trajan, his Bones being brought back to Rome: For by the Fragments, the kind of Reliques (his Bones) by the token of the Vine, the future chance was declared. Hitherto Macrobius.

To these add Bell or Belus a name tho' more peculiar to the Supreme Deity, yet common to many of the Chaldean Gods, and among others to the Sun, as Servius witnesseth. In Punick Language (saith he) God is named Baal; but amongst the Assyrians he is called Bell, and by a certain mystical reason, Saturn and the Sun. In Æncid. 1.

C H A P. V.

The Chaldean Worship of the Moon.

THE Moon was worshipped by the Chaldeans under many names, all which are Feminine; and the greater part answerable to those of the Sun (last mentioned) which seems to confirm what R. Maimonides delivers of them, that they held the seven Planets to be Gods and Goddesses, Male and Female, Married to one another. Pag. 18.

Now the Chaldeans (or rather they who first Translated the Chaldaick Learning into Greek) among other names applied to the Sun those of Jupiter

Jupiter and Adonis, in like manner did they give to the Moon the correspondent Attributes of Juno and Venus.

To Juno belong Ada and Belta, for so interpreted by Hesychius; a Ada, Juno, with the Babylonians; b Belthes, Juno, or Venus. Both which are doubtless no other than the Feminine names answerable to Adad and Bell, two names of the Sun. That by Juno Mythologists sometimes understand the Moon, the Learned c Mr. Selden confirms by the old Form of incantation which the Roman Priests used at the Nones of every Month, dies te quinque calo. Juno novella (or covella, Celestis) to this Juno perhaps may more properly be referred what Julius Firmicus applies to the Air; The Assyrians (saith he) ascribed the Principality of the Elements, to the Air, the Image whereof they worshipped, styling it by the name of Juno or Venus the Virgin; whom the Quires of their Priests worshipped with effeminate Voices and Gestures, their skin smoothed, and their habit after the fashion of Women; thus he, but that the Assyrians worshipped the Element of Air is not elsewhere easily found; what he adds concerning their immodest Rites, seems rather of Affinity with those of Venus, as described by other Authors.

To Venus (taken for the Moon) belong the names Mylitta and Alilat. They learnt (saith Herodotus speaking of the Persians) of the Assyrians and Arabians to Sacrifice to Urania: the Assyrians call Venus Mylitta, the Arabians (our Sabæans) Alilat. Thus Herodotus; who indeed seems to make this Mylitta distinct from the Moon, (of whom he had spoken a little before) but that by Alilat was meant no other, is evident from its Etymology from Lail Night. The Ancients (saith Sibal Assemon) among many other false Gods, Served one whom they called Alilath, and affirmed that she is the Moon, as being the Mistress and Queen of the Night.

CHAP. VI.

The Chaldaean Worship of the Planets

The rest of the seven Planets (as a Maimonides saith) they held to be Gods also. To Saturn, whom Diodorus (if the Text be not depraved, which I suspect) affirms they held to be the chiefest of the five, they gave the common name of Bell. Eusebius in the 28th year of Thara; Belus the first King of the Assyrians died; whom the Assyrians styled a God; others call him Saturn; and Servius cited elsewhere, b In the Punick Language God is named Baal; but among the Assyrians he is called Bell, and by a certain Mystical Reason, Saturn and the Sun. c Whence Theophilus Patriarch of Antioch, some Worship Saturn as a God; and call him Bell, and Baal; this is done chiefly by those who dwell in the Eastern Climates, not knowing who Saturn is, and who Belus.

Some conceive that the more particular name of this Planet was Chium or Remphan: of which the Prophet Amos, but ye have born the Tabernacle of your Moloch and Chium your Images, the Stars of your God which ye made to yours selves: Which Text St. Stephen renders thus, d Yea, ye took up the Tabernacle of your God Remphan,

Figures which ye made to Worship them; what is the Hebrew Chium, the Greek renders Remphan. By Chium Aben Ezra understands the Planet Saturn, whom Plautus also, as Petrus observes, calls Chium: Remphan (as Kircher attests) is used in the Coptick Language for the same Planet.

Of Jupiter (having spoken already in treating of Bell and the Sun, to both which this name was applied,) there is little more to be said.

Mars (as the Author of Chronicon Alexandrinum relates) was first owned as a Deity by the Assyrians: the Assyrians, saith he, were the first who did erect a Column to Mars, and adored him as a God; They gave him the common name of Belus, whence the Babylonian Belus is by Histiaeus interpreted Ζεὺς ἐνυάλιος Jupiter Martius.

But a more particular name of Mars was that of Azizus, under which he was worshipped together with Mercury in the Temple of the Sun at Edessa, a City of Mesopotamia. They who inhabit Edessa (saith Julian) a Region of a long time Sacred to the Sun, place together with him in the Temple Monimus and Azizus. That by Monimus they understood Mercury, by Azizus, Mars, and that both these were Assessors to the Sun, Julian acknowledgeth to have learned of his Master Jamblicus.

*Some there are who refer the Idol Negal (brought by the Samaritans out of Assyria) to this Planet, for the Rabbies fancy this Idol to have been in the form of a Cock: Now the Cock being * Sacred to Mars, and styled his Bird in regard of his Courage, † hence they infer that Mars was represented under that form, as Venus under that of the Hen by the Idol Succoth Benoth.*

Venus was worshipped by the Assyrians and Chaldeans under many names: Three of which we find in Hesychius: The first Belthes (or rather Belta) which he interprets Juno and Venus. This was a name common to the Moon also, and spoken of formerly.

The next Delephat, a name more appropriate to Venus than the former, as appears by its Etymology, from the Syriack word Delpha, coition.

The last Mylitta, as Hesychius reads, who adds, the Assyrians (so called) Urania. Herodotus writes it Mylitta: They Learned (saith he, speaking of the Persians) from the Assyrians and Arabians, to Sacrifice to Urania: The Assyrians call Venus Mylitta, the Arabians Alilat. Of which two names, tho' Alilat (as was observed heretofore) was given to the Moon also; yet that of Mylitta seems peculiar to Venus, it being no other (as Scaliger observes) than the plain Syriack Word Mylidtha, generative or prolific: Venus genetrix. With this Etymology well suit the Rites belonging to the Idol; of which thus Herodotus: The Babylonians have one abominable Law; every Woman of that Country, must once in her life sit in the Temple of Venus, and accompany with a Stranger. Some of the Richer sort disdain to associate themselves with the rest of ordinary quality, are carry'd thither in covered Chariots, and stand before the Temple, a Train of Attendants coming after them; the greater part do in this manner; there are Women sitting in the Temple of Venus Crowned with Garlands of Flowers, some coming, others going: There are also several Passages distinguished by Cords, which guide the strangers

gers to the Women; of whom they made choice as they best like; No Woman being once set there, returns home, until some Stranger have cast Money in her lap, and taking her aside, lain with her. The Stranger who offers this Money must say, I Invoke the Goddess Mylitta for thee; the Assyrians call Venus Mylitta; the Money she must not refuse whatever it be; for it is Sacred. Neither may the Woman deny any Man; but must follow him that first offers her money, without any choice on her part. As soon as she has lain with him, and performed the Rites of the Goddess, she returns home, nor from thenceforward can be allured by any price whatsoever. Such as are handsome are the soonest dismissed; but the deformed are forced to stay longer before they can satisfy the Law; sometimes it happens that they attend a whole year, or two, or three in expectation. Hitherto Herodotus, of which Custom some interpret the Words of the Prophet Baruch concerning the Chaldaean Women. The Women sit in the ways girded (or rather surrounded) *περικελευμέναι* (or *περικελευμέναι*) with Rushes and burnt Straw; and if one of them be drawn away and lie with such as come by, she casteth her Neighbour in the Teeth, because she was not so worthily reputed, nor her Cord broken.

2 Kings 17.
30.

To these add Succoth benoth, an Idol made by the Men of Babylon: the signification of the Word being the Tents of the Daughters. Some conceive that hereby were meant those Tents or Partitions by Cords described by Herodotus, in which the Women sat to perform the Rites of Venus Mylitta; Venus being, as Mr. Selden is of Opinion, derived from Benoth: but, from the Words of the Sacred Text, it is manifest, that by Succoth Benoth was meant rather an Idol, than Temple or Tents. The Rabbies fancy it to have been in form of a Hen and Chickens; For as they called a Hen Succus, that is covering, so they called Hens Succoth, as brooding and covering, and Benoth they interpreted her Chickens, which she useth to cover with her Wings. Whence Kircher expounds it of Venus Mylitta.

Radak.

CHAP. VII.

Of the other Stars.

NOR were the Planets only but the Signs, and all the rest of the Stars esteemed Gods by the Chaldeans: for they burnt Incense to the Mazaloth, and to all the rest of the Host of Heaven. Mazal is a Star: they called the Signs the twelve Mazaloth: the Zodiack the Circle Mazaloth; and sometimes changing γ into γ Mazaroth; the Septuagint renders it *μαζαρωθ*, which Suidas interprets, the Constellations called *ζωδια*, Signs. This agrees with what Diodorus reports of the Chaldeans, that they held the principal Gods to be 12, to each of which they attributed a Month, and one of the Signs of the Zodiack.

2 Kings

Lib. 1.

That they worshipped the rest of the fixed Stars as Gods also, is imply'd by the Sacred Text last cited, which adds, and to all the Host of Heaven; and is more expressly asserted (among others) by Diodorus, who in his account of their Doctrine affirms, that as they called the Planets Interpreters, so of the other Stars, they called some the judges of all things, others consiliary gods; as we shal shew more particularly, when we come

Lib. 1.

to speak of their Astrology: Neither is it to be doubted, but that as they owned some of the fixed Stars by these common Titles of Dignity Judges and Counsellors, so to the principal of them they attributed particular names and Idols, as well as to the Planets. And since the Chaldaick Polytheism was not (like that of the Greeks) founded upon an imaginary Mythology, (tho' later Writers treat of it after the same manner) but had reference to the Celestial Bodies, which they worshipped under several Names and Idols; it is no less probable than Consonant to the Chaldaick Doctrine, that those other Assyrian Idols, (Ashim, Nibhaz, Tartak, Adrammelek, Anammelek, Nisroch,) mentioned in the Scripture, were of the same kind with the rest, and belonged to several other of the Stars; but this conjecture is not easily evinced, in regard that there is little extant of those Idols more than the bare mention of their names.

CHAP. VIII.

Of Fire.

THERE are who reckon the Elements among the Gods which the Chaldeans worshipped: That they had a particular Devotion to the Fire, is certain; by it as some conceive they represented the supreme God; as others, the Sun; the ground of which Analogy we deliver'd formerly.

Concerning this Idolatry of the Chaldeans there is a memorable passage related by a Rustinus; The Chaldeans in the time of Constantine the Great Travelled all over the Earth to shew all Men that their God excelled all other Gods, for they destroyed all the Statues of other Gods by their Fire; at length coming into Egypt, and making this Challenge, the Egyptian Priests brought forth a large Statue of Nilus, filling it with water, and stopping up the holes it had (which were many) with Wax, so artificially, that it kept in the Water; but could not hold out against the Fire. b Suidas relates this something differently, as performed by a Priest of Canopus, who taking off the head of an old Statue, put it upon a water-pot, which (stopping the holes with wax) he painted over, and set up in the room of Canopus. The Chaldeans began the Contest with much rejoicing, and put fire round about the Statue; the wax melted, the holes opened, the water gushing forth, put out the fire, and the Chaldeans were laughed at for their God.

As for the Earth, b Macrobius saith, They worshipped the Superior Hemisphere of it, in part cap. 21. whereof

b Saturn. lib. 1.

whereof we dwell, by the name of Venus; the inferior Hemisphere of the Earth they called Proserpina; more of this Mythology, rather Phœnician than Assyrian, and perhaps more Græcian than either, see in *Macrobius*. Thus much concerning the Doctrine of the Chaldeans.

THE SECOND BOOK. Of the Persians.

BEYOND Chaldea, to the South, on one hand lies Persia, on the other, Arabia. Philosophy (or Learning) was communicated to both these Countries by their Neighbours, the Chaldeans. Zoroaster; faith *a* *Plutarch*, instituted Magick among the Chaldeans, in imitation of whom, the Persians had theirs also. Persia is the most considerable Kingdom of Asia; bounded, on the North, by Media, on the East by Cilicia, on the West, by Susiana; on the South, by part of the Persian Gulf.

THE SIXTEENTH PART. The Persian Philosophers, their Sects and Institutions.

SECT. I.

Of the Persian Philosophers.

CHAP. I.

Of the Persian Zoroaster, Institutor of Philosophy among the Persians.

THE Persian Learning is generally acknowledged to have been instituted by Zarades, Zaradusht, or Zoroaster: but this name, (as we observed formerly,) seems to have been commonly attributed to such Persons as were eminently Learned. Who therefore this Zoroaster was, or *a* about what time he lived, is uncertain. *b* *Laertius* styles him a Persian; *c* *Clemens Alexandrinus*, a Mede; *d* *Suidas*, a Perso-Mede: whence it may be argued, that he was not of so great Antiquity, as most Authors conceive. For we find the word Persian no where used before the Prophet Ezekiel; neither did it come to be of any note, until the time of Cyrus. The later Persians, faith *e* *Agathias*, affirm, he lived under Hytaspes, but simply, without any addition, so as it is much to be doubted, nor can it be certainly known, whether

this Hytaspes were the Father of Darius, or some other. Hytaspes the Father of Darius was contemporary with Cyrus, neither doth it appear that the Persian Zoroaster lived much earlier.

But at what time soever he lived, faith *f* *Agathias*, he was the Author, and Introducer of Magical Religion among the Persians, and changing their old Form of Sacred Rites, he introduced several Opinions. So likewise *g* the Arabick *h* *Historiographer*, Zaradusht not first Instituted, but Reformed the Religion of the Persians and Magi, it being divided into many Sects.

A Fabulous Tradition of the occasion and manner thereof related by the Persians themselves, receive from *b* *Dion Chrysostom*. They say, that through love of Wisdom, and Justice, he withdrew him from Men, and lived alone in a certain Mountain; That afterwards leaving the Mountain, a great fire coming from above, did continually burn about him; That hereupon the King, together with the Noblest of the Persians came nigh him, intending to pray to God; that he came out of the Fire unharmed, appeared propitiously, bidding them be of good cheer, and Offered certain Sacrifices, as if God had come along with him into that place; that from thenceforward he conversed not with all men, but with such only as were naturally most addicted to truth, and capable of the knowledge of the Gods, whom the Persians called Magi.

To this Persian Zoroaster *i* *Suidas* ascribes, *j* *In Zor.* Of Nature, four Books; of precious Stones, one; Astroscopick Apotelesmes, five; *k* *Eusebius*, a *l* *Presp. Evange* Sacred Collection of Persicks, which by the Fragments he cites, seems to have treated of the Persian Religion. These some attribute to the Chaldean Zoroaster; others, to some other, nor any with greater certainty than the rest.

CHAP. II.

Of Hytaspes, as a great improver of the Persian Learning.

THE Doctrine of the Persian Magi was much augmented by Hytaspes. He was (according to *a* *Herodotus*) of Achæmenia, a Region of Persia, Son of Arsames, or, (as other Editions) Arsases; he lived in the time of Cyrus, whose Dream concerning Darius, the eldest Son of Hytaspes, prognosticating his being King of Persia, together with the discourse betwixt Cyrus Hytaspes concerning it, is related by *b* *Herodotus*. Darius the Son of this Hytaspes was born in the 4165th year of the Julian period, and was almost twenty years old a little before Cyrus died. About the same time also *c* Hytaspes and Adusius joyned together, Conquered all Phrygia bordering upon the Hellespont, and taking the King thereof, brought him Prisoner to Cyrus.

Hytaspes was, (as *d* *Ammianus Marcellinus* affirms) a most wise Person, who adds, that boldly penetrating into the inner parts of the upper India, he came to a woody Desert, whose calm silence was possessed by those high Wits the Brachmanes. Of these he learnt the discordant Concord of the motions of the Stars, and of Heaven, and of pure Rites of Sacrifices, which, returning into Persia, he contributed as an addition and complement to Magick.

Of Osthanes, who first introduced the Persian Learning into Greece.

^a Lib. 30. 1. **T**He Persian Learning, (as a Pliny affirms,) was first communicated to the Græcians by Osthanes. The first, saith he, that I find to have commented on this Art (Magick) is Osthanes who accompanied Xerxes King of the Persians in the War which he made upon Greece. Xerxes set out from Susa upon this Expedition in the beginning of the fourth year of the 74 Olympiad, though Diodorus Siculus, confounding the Transactions of two years in one, relates this done in the first year of the Olympiad following. ^b Herodotus affirms, that this Provision was in making the three whole years before this year; but with a note premised in the precedent Chapter, which cannot consist with the exact course of the times. For, saith he; From the subduing of Ægypt, he was full four years in gathering an Army, and in making his Preparations, and in beginning of the fifth year, he began to March with a huge Army; for indeed he set out from Susa, in the beginning of the 5th year, not from his subduing of Ægypt, but from his coming to the Crown. So that both ^c Justin out of Trogus, and Orosius following him do unadvisedly attribute five years: but most absurdly, doth Julianus, in his first Oration of the praises of Constantine, say that he was ten years in making this preparation. But more Ingenuous than all those, (yet not over exquisite in his account) (is ^d Libanius, where he saith, that, between Darius and Xerxes there was ten years time spent in make this preparation against Greece, since we have formerly shewed out of Plato, that from the Fight at Marathon, to the Fight of Salamis, which was fought in the first year of the 75 Olympiad (almost a full year after Xerxes his setting out from Susa) there were only ten years run out.

Hence it appears that Pythagoras and Plato who were precedent in time to Osthanes; and in their Travels conversed with the Persian Magi, were not fully acquainted with the depth of their Sciences, or else being more reserved forbore to communicate them, otherwise than as intermingled with those which they appropriated to themselves.

^e Lox. cit. ^e Pliny adds, that Osthanes, whilst he accompanied Xerxes into Greece, scattered the seeds as it were of his portentous Art (Magick) wherewith he infected the World, all the World whithersoever he went; and 'tis certain, that this Osthanes chiefly made the Græcians not desirous, but mad after his Art. Thus Pliny, alluding to Goetick Magick, of which the Author of the ^f Treatise *μαγικον*, asserts the Magi to have been wholly ignorant. And ^g Arnobius affords him a better Character, that he was chief of the Magi, both for Eloquence and Action; that he made address to the true God with due Veneration; that he knew the Angels did wait upon the true God, and the like.

By Osthanes (as we said) the Persian Learning was brought into Greece, and therefore we shall not proceed farther in our enquiry after the professors of it among the Persians.

S E C T. II.

The Institution, and Sects of the Persians.

C H A P. I.

The Persian Magi their Institution.

AL L Professors of Learning among the Persians were termed Magi. ^a Laertius. ^a Proem. It is said that Philosophy had its Original from the Barbarians, since among the Persians were Magi; among the Babylonians, or Assyrians, the Chaldeans; and Gymnosophists among the Indians; among the Celtae and Gallatae, where those who were called the Druides, or Seninothei, as Aristotle, in his Treatise Magicum, and Sotion, in the 23d Chap. of his Succession, affirms, Hence, ^b Suidas, Magi among the Persians were Philosophi and Philothei. But their principal Study and Employment consisting in Theology and Religious Rite, Magus is more frequently Interpreted a Priest. Among the Persians, saith Porphyrius, those wise Persons who were employed about the Divinity, and served him, were called Magi; this is the signification of Magus in their Dialect. And ^d Apuleius, Magus in the Persian Language, signifieth the same as Priest in ours. He- ^d Apolog. 1. sychius, A Worshipper of God, and a Theologist, and a Priest, is by the Persians styled Magus.

Some conceive they were so termed by Zoroaster, at their first Institution. ^e Suidas, Zoro- ^e In Zor. after the Perso-Mede, who first began the name of Magi celebrated among them. ^f Others derive ^f Salmas. the Word from Mog a Surname of Zoroaster; or from Mije Gush, one that hath short ears, affirming that Zoroaster was such.

The Author of the Arabick History relates that the Religion of the Persians being before Zoroaster's time divided into many Sects, he reformed it; Agathias, that he changed their old Form of Sacred Rites, and introduced many new Opinions, and was the Author and Introducer of Magical Religion among the Persians.

^k The Magi delivered their Learning successively in their Families from one Age to another, whence, after the Succession of many Ages, at this present, saith Ammianus Marcellinus, a multitude sprung from one and the same Race, is dedicated to the Rites and Worship of the Gods. For, increasing by degrees, they grew at last to the largeness and name of a compleat Nation dwelling in Towns not Fortified with any Walls, and, being permitted to use their own Laws, they were honoured in respect of their Religion. ^k Ammian. Marcellin.

The Country of the Magi in Persia, is mentioned by ^l Clemens Alexandrinus, who takes notice of three wonderful Mountains in it. And ^l Strom. 6. Solinus mentions; as belonging to them, the City Pasargada. Suidas and Cedrenus call them Magussæans, and affirm, that they were called Magog by those of their own Country.

So great was the esteem which the Magi had among the Persians, that Cicero saith, the Kings of Persia, before they undertook the Government, were always initiated in the Sacred Mysteries

q Alcib.

Mysteries of the Magi, which q Plato describes thus: At fourteen years old they whom they call the Royal Pedagogues take charge of the Youth. These are four Men chosen out of the most excellent of the Persians, in the prime of their age. The most wise, the most just, the most temperate, and the most valiant. The first of these teacheth him the Magick of Zoroaster the Son of Horomazes (this is the Service of the Gods) and teacheth him also the Royal Institutions. Dyon Chrysostom saith, that the Magi were admitted to the King's Counsels, and were Assessors with him in Judicature, as being well acquainted with the natures of things, and knowing after what manner the Gods are to be Served. All publick Affairs (saith Agathias) were managed by their direction and advice. They adjudged Rewards or Punishments. Dion elsewhere relates, that Cambyzes, upon his Expedition into Ægypt, resign'd the Government of the Persians into the hands of the Magi. Constantinus Manasses styles them the Guardians of the Royal Palaces, and t Pliny, speaking of Magick, saith, it grew up at last to so great height, that even at this day it is exceeding prevalent with many Nations, and in the East it beareth Sway over the King of Kings: King of Kings was the proper Title of the Persian Monarch.

t 30. 1.

CHAPTER II.

The Sects, Discipline and Manners of the Magi.

a D. Hieron. advers. Jovin. li. 2.

Eubulus, a who wrote the History of Mythra in many Volumes, affirms, that amongst the Persians there were three kinds of Magi: the first, who were the most Learned and Eloquent of them, did eat no other food but Meal and Oyl. Thus Eubulus cited by St. Hieron. More of the distinction of the Magi into three Sects we meet not elsewhere; but, probably, it had reference (as among the Chaldeans) to their several Studies, of which hereafter.

b Laert. in proem.

b Dinon and Aristotle, or rather the Author of the Treatise of Magick cited by Laertius, relate of the Magi, that they renounce rich attire, and to wear Gold. Their Rayment is white upon occasion, their Beds, the ground, their Food, nothing but Herbs, Cheese, and Bread; instead of a Staff they carry a Cane, in the top whereof they put their Cheese, which as occasion served they did eat.

They had one their Society chief among 'em, called by Zozomene, the Prince of the Magi.

d Laert.

d Their chief Employment was Religious Worship, they being conceived to be the only Persons whose Prayers the Gods would hear.

e Laert. proem.

e They made discourses concerning Justice, and esteemed it impious to burn the Bodies of the dead, and Lawful to lie with a Mother or a Daughter, as Solon in his 23d Book.

f Lib.

f Herodotus saith, they differ, as from others, so from the Ægyptian Priests, in this, that these pollute themselves with the death of nothing but their Sacrifices, whereas the Magi, with their own hands, kill any thing, except a Man and a Dog; yea they esteem it a great exploit, if they have killed very many Ants, or Serpents, or other creeping or flying things.

THE SEVENTH PART.

The Doctrine of the Persians.

That which is delivered to us of the Persian Doctrine and Opinions, is so little and so imperfect, as it will not easily admit of being knit together by any Method; yet, in regard of the near affinity their Learning is conceived to have had with the Chaldeans, we shall observe the same course in collecting and digesting the few remains of it: First, to alledge what concerns their Theology and Physick; Next, their Arts of Divination; Thirdly, Their Religious Worship and Rites, particularly termed Magick; And lastly, to give a Catalogue of all their Gods.

CHAPTER I.

Theology and Physick.

That the Persian Magi were not unacquainted with Theology and Physick, is confirm'd by a Suidas. Magi, saith he, among the Persians are Philosophers and lovers of God. b Laertius a Voc. Magi, affirms, they discoursed concerning the Substance b In Proem. and Generation of the Gods; and c Dion Chrysostom, that they were skilful in Natures.

d Zoroaster the Magus in his Sacred Collection of Physicks, saith expressly thus. ' God hath Evang. ' the Head of a Hawk: he is the first Incorruptible, Eternal, Unbegotten, Indivisible, most like ' himself, the Charioteer of every good, one that ' cannot be Bribed: the best of things Good; the ' wisest of things Wise: Moreover, he is the Father of Equity and Justice: self-taught, Natural and Perfect, and Wise, and the sole Inventor ' of Sacred Nature.

e Plutarch relates of Zoroaster, that he divided all things into three kinds. Over the first e Pletho in O. kind he conceived Horomazes to be President, the same whom the Oracles call the Father. Over the last, Arimanes; over the middle kind, Mythra, whom the Oracles call the second Mind. And that Horomazes made himself 3 times as big as the Sun (who in the Persian Language is called Cyrus.) Mythra made himself twice as big (as the Sun) who was next to Horomazes. To which these Platonick assertions are correspondent, That all things are about the King of all, and that all things are for him. That he is the cause of all good things, The second is employed about the secondary things, The third is employed about the third kind of things. The three parts into which Zoroaster and Plato divided all things, are these; The first is Eternal; The second had a beginning in Time, but is Eternal; The third is corruptible. Thus Pletho citing Plutarch, whose own words are these.

f Some are of Opinion there are two Gods, one opposite in operation to the other; one, working g Isid. & O. good, the other ill. Others call him who is the good, God, the bad, Demon: of this Opinion was Zoroaster the Magus, whom they report to have preceded the

CHAP. III.

Of Osthanes, who first introduced the Persian Learning into Greece.

^a Lib. 30. 1. **T**He Persian Learning, (as a Pliny affirms,) was first communicated to the Græcians by Osthanes. The first, saith he, that I find to have commented on this Art (Magick) is Osthanes who accompanied Xerxes King of the Persians in the War which he made upon Greece. Xerxes set out from Susa upon this Expedition in the beginning of the fourth year of the 74 Olympiad, though Diodorus Siculus, confounding the Transactions of two years in one, relates this done in the first year of the Olympiad following. ^b Herodotus affirms, that this Provision was in making the three whole years before this year; but with a note premised in the precedent Chapter, which cannot consist with the exact course of the times. For, saith he; From the subduing of Ægypt, he was full four years in gathering an Army, and in making his Preparations, and in beginning of the fifth year, he began to March with a huge Army; for indeed he set out from Susa, in the beginning of the 5th year, not from his subduing of Ægypt, but from his coming to the Crown. So that both ^c Justin out of Trogus, and Orosius following him do unadvisedly attribute five years: but most absurdly, doth Julianus, in his first Oration of the praises of Constantine, say that he was ten years in making this preparation. But more Ingenuous than all those, (yet not over exquisite in his account) (is ^d Libanius, where he saith, that, between Darius and Xerxes there was ten years time spent in make this preparation against Greece, since we have formerly shewed out of Plato, that from the Fight at Marathon, to the Fight of Salamis, which was fought in the first year of the 75 Olympiad (almost a full year after Xerxes his setting out from Susa) there were only ten years run out.

Hence it appears that Pythagoras and Plato who were precedent in time to Osthanes; and in their Travels conversed with the Persian Magi, were not fully acquainted with the depth of their Sciences, or else being more reserved forbore to communicate them, otherwise than as intermingled with those which they appropriated to themselves.

^e Pliny adds, that Osthanes, whilst he accompanied Xerxes into Greece, scattered the seeds as it were of his portentous Art (Magick) wherewith he infected the World, all the World whithersoever he went; and 'tis certain, that this Osthanes chiefly made the Græcians not desirous, but mad after his Art. Thus Pliny, alluding to Goetick Magick, of which the Author of the ^f Treatise *μᾶγικον*, asserts the Magi to have been wholly ignorant. And ^g Arnobius affords him a better Character, that he was chief of the Magi, both for Eloquence and Action; that he made address to the true God with due Veneration; that he knew the Angels did wait upon the true God, and the like.

By Osthanes (as we said) the Persian Learning was brought into Greece, and therefore we shall not proceed farther in our enquiry after the professors of it among the Persians.

SECT. II.

The Institution, and Sects of the Persians.

CHAP. I.

The Persian Magi their Institution.

ALL Professors of Learning among the Persians were termed Magi. ^a Laertius. ^a Proem. It is said that Philosophy had its Original from the Barbarians, since among the Persians were Magi; among the Babylonians, or Assyrians, the Chaldeans; and Gymnosophists among the Indians; among the Celta and Gallata, where those who were called the Druides, or Seninothei, as Aristotle, in his Treatise Magicum, and Sotion, in the 23d Chap. of his Succession, affirms, Hence, ^b Suidas, Magi among the Persians were Philosophi and Philothei. But their principal Study and Employment consisting in Theology and Religious Rite, Magus is more frequently Interpreted a Priest. Among the Persians, saith Porphyrius, those wise Persons who were employed about the Divinity, and served him, were called Magi; this is the signification of Magus in their Dialect. And ^d Apuleius, Magus in the Persian Language, signifieth the same as Priest in ours. Hesychius, A Worshipper of God, and a Theologist, and a Priest, is by the Persians styled Magus. ^d Apolog. 1.

Some conceive they were so termed by Zoroaster, at their first Institution. ^e Suidas, Zoroaster the Perso-Mede, who first began the name of Magi celebrated among them. ^f Others derive the Word from Mog a Surname of Zoroaster; or from Mije Gush, one that hath short ears, affirming that Zoroaster was such. ^e In Zor. ^f Salmas.

The Author of the Arabick History relates that the Religion of the Persians being before Zoroaster's time divided into many Sects, he reformed it; Agathias, that he changed their old Form of Sacred Rites, and introduced many new Opinions, and was the Author and Introducer of Magical Religion among the Persians.

^k The Magi delivered their Learning successively in their Families from one Age to another, whence, after the Succession of many Ages, at this present, saith Ammianus Marcellinus, a multitude sprung from one and the same Race, is dedicated to the Rites and Worship of the Gods. For, increasing by degrees, they grew at last to the largeness and name of a compleat Nation dwelling in Towns not Fortified with any Walls, and, being permitted to use their own Laws, they were honoured in respect of their Religion. ^k Ammian. Marcellin.

The Country of the Magi in Persia, is mentioned by ^l Clemens Alexandrinus, who takes notice of three wonderful Mountains in it. And Solinus mentions; as belonging to them, the City Pasargada. Suidas and Cedrenus call them Magusseans, and affirm, that they were called Magog by those of their own Country. ^l Strom. 6.

So great was the esteem which the Magi had among the Persians, that Cicero saith, the Kings of Persia, before they undertook the Government, were always initiated in the Sacred Mysteries

q Alcib.

Mysteries of the Magi, which q *Plato* describes thus: At fourteen years old they whom they call the Royal Pedagogues take charge of the Youth. These are four Men chosen out of the most excellent of the Persians, in the prime of their age. The most wise, the most just, the most temperate, and the most valiant. The first of these teacheth him the Magick of Zoroaster the Son of Horomazes (this is the Service of the Gods) and teacheth him also the Royal Institutions. Dyon Chrysostom saith, that the Magi were admitted to the King's Counsels, and were Assessors with him in Judicature, as being well acquainted with the natures of things, and knowing after what manner the Gods are to be Served. All publick Affairs (saith Agathias) were managed by their direction and advice. They adjudged Rewards or Punishments. Dion elsewhere relates, that Cambyfes, upon his Expedition into Ægypt, resign'd the Government of the Persians into the hands of the Magi. Constantius Manasses styles them the Guardians of the Royal Palaces, and t *Pliny*, speaking of Magick, saith, it grew up at last to so great height, that even at this day it is exceeding prevalent with many Nations, and in the East it beareth Sway over the King of Kings: King of Kings was the proper Title of the Persian Monarch.

t 30. 1.

CHAP. II.

The Sects, Discipline and Manners of the Magi.

a D. Hieron. advers. Jovin. li. 2.

Eubulus, a who wrote the History of Mythra in many Volumes, affirms, that amongst the Persians there were three kinds of Magi: the first, who were the most Learned and Eloquent of them, did eat no other food but Meal and Oyl. Thus Eubulus cited by St. Hieron. More of the distinction of the Magi into three Sects we meet not elsewhere; but, probably, it had reference (as among the Chaldeans) to their several Studies, of which hereafter.

b Laert. in proem.

b *Dion* and *Aristotle*, or rather the Author of the Treatise of Magick cited by *Laertius*, relate of the Magi, that they renounce rich attire, and to wear Gold. Their Rayment is white upon occasion, their Beds, the ground, their Food, nothing but Herbs, Cheese, and Bread; instead of a Staff they carry a Cane, in the top whereof they put their Cheese, which as occasion served they did eat.

They had one their Society chief among 'em, called by *Zozomene*, the Prince of the Magi.

d Laert.

d Their chief Employment was Religious Worship, they being conceived to be the only Persons whose Prayers the Gods would hear.

e Laert. proem.

e They made discourses concerning Justice, and esteemed it impious to burn the Bodies of the dead, and Lawful to lie with a Mother or a Daughter, as *Solion* in his 23d Book.

f Lib.

f *Herodotus* saith, they differ, as from others, so from the Ægyptian Priests, in this, that these pollute themselves with the death of nothing but their Sacrifices; whereas the Magi, with their own hands, kill any thing, except a Man and a Dog; yea they esteem it a great exploit, if they have killed very many Ants, or Serpents, or other creeping or flying things.

THE SEVENTH PART.

The Doctrine of the Persians.

That which is delivered to us of the Persian Doctrine and Opinions, is so little and so imperfect, as it will not easily admit of being knit together by any Method; yet, in regard of the near affinity their Learning is conceived to have had with the Chaldeans, we shall observe the same course in collecting and digesting the few remains of it: First, to alledge what concerns their Theology and Physick; Next, their Arts of Divination; Thirdly, Their Religious Worship and Rites, particularly termed Magick; And lastly, to give a Catalogue of all their Gods.

CHAP. I.

Theology and Physick.

That the Persian Magi were not unacquainted with Theology and Physick, is confirm'd by a *Suidas*. Magi, saith he, among the Persians are Philosophers and lovers of God. b *Laertius* a Voc. Magi affirms, they discoursed concerning the Substance b In Proem. and Generation of the Gods; and c *Dion Chrysostom*, that they were skilful in Natures.

d *Zoroaster* the Magus in his Sacred Collection of Physicks, saith expressly thus. 'God hath Evang. 'the Head of a Hawk: he is the first Incorruptible, Eternal, Unbegotten, Indivisible, most like himself, the Charioteer of every good, one that cannot be Bribed: the best of things Good; the wisest of things Wise: Moreover, he is the Father of Equity and Justice: self-taught, Natural and Perfect, and Wise, and the sole Inventor of Sacred Nature.

e *Plutarch* relates of Zoroaster, that he divided all things into three kinds. Over the first kind he conceived Horomazes to be President, the same whom the Oracles call the Father. Over the last, Arimanes; over the middle kind, Mythra, whom the Oracles call the second Mind. And that Horomazes made himself 3 times as big as the Sun (who in the Persian Language is called Cyrus.) Mythra made himself twice as big (as the Sun) who was next to Horomazes. To which these Platonick assertions are correspondent, That all things are about the King of all, and that all things are for him. That he is the cause of all good things, The second is employed about the secondary things, The third is employed about the third kind of things. The three parts into which Zoroaster and Plato divided all things, are these; The first is Eternal; The second had a beginning in Time, but is Eternal; The third is corruptible. Thus *Pletho* citing *Plutarch*, whose own words are these.

f Some are of Opinion there are two Gods, one opposite in operation to the other; one, working good, the other ill. Others call him who is the good, God, the bad, Demon: of this Opinion was Zoroaster the Magus, whom they report to have preceded the

the Trojan War 5000 years. This Zoroaster declared the names of the good, to be Oromazes, of the bad, Arimanius, adding, that, of sensible things the one did most resemble Light, and Knowledge, the other Darknefs and Ignorance. Wherefore the Persians call Mythra the Mediator. He further taught, that, to one, we ought to offer votives and gratulatory Sacrifices, to the other, averruncative and dismal Oblations. For, pounding a certain Herb called Omoni, in a Mortar, they invoke Hades and Darknefs, then mixing it with the blood of a slain Wolf, they carry it forth and throw it into a place where the Beams of the Sun come not: for, of Plants, they hold, that some belong to the good God, others, to the ill Demon, and that of Animals, some, as Dogs, Birds, and Porcupines, belong to the good, the aquatic, to the bad; for which reason they esteem him blessed who killed most of that kind.

g Loc. cit.

g They likewise relate many fabulous things concerning the gods, of which kind is this I will alledge, That Oromazes was produced of purest light, Arimanes of darknefs, and that these two war against one another; That Oromazes made six Gods, The first, of Benevolence; the second of Truth; The third, of Equity; the rest of Wisdom, Riches, and Pleasure, which good things are attendant upon the Maker; That then Oromazes tripled himself, and removed himself so far from the Sun, as the Sun is distant from the Earth, and adorned the Heaven with Stars, appointed one the Dog-Star as Guardian and Watch for the rest; That he made 24 other gods, and put them in an Egg, and that Arimanius having made as many more they broke the Egg. Whence it comes, that good is intermingled with ill. That the fatal time approacheth, in which these shall be destroyed by Famine and Pestilence, and Arimanius utterly destroyed, and the Earth made even and smooth; There shall be one Life and one City (or common Society) of all men living, and one Language.

CHAP. II.

Arts of Divination.

AMong the other parts of the Persians Learning, are to be reckoned their Arts of Divination and Prædiction, which a Laertius affirms were practised by the Magi. b Cicero adds, that they assembled in (fana) in Temples or consecrated places, to consult about Divination.

2. 17.

h Lib. 2.

i In Zor.

Hence c Strabo saith, that, by the Ancients, Diviners were much esteemed, such as among the Persians, were the Magi, and Necromancers, and Lecanomancers, and Hydromancers: d Ælian, that the Wisdom of the Persian Magi, besides all other things which it was lawful for them to know, did consist also in Divination; And e Lucian styles the Magi a kind of Persons skilful in Divination, and dedicated to the Gods. Of their Divination f Cicero giveth an instance concerning Cyrus; g Ælian, another concerning Ochus.

Among other kinds of Divination, h Velleius Paterculus affirms, they foretold by the marks of the Body. They seem to have been skilful likewise in Astrology, for i Suidas ascribeth to the Persian Zoroaster five Books of Astroscopic Apotelesmes. That they were also consulted concerning the presignification of Prodigies, is mani-

fest from the Relation of k Valerius Maximus, k Lib. 1. c. 6. concerning that which hapned to Xerxes.

CHAP. III.

Of the Religious Rites, or Magick of the Persians.

THe chief Science and Employment of the Persian Magi, was termed Magick, from the Professors, Magi, and is defined by Plato, a the service of the Gods, called also μαγεία. a Alcibiad. The Magi, saith b Laertius, are employed in the b Proem. Service of the Gods, and about Sacrificing and Praying, as being the only Persons whom the Gods will hear. So c Dion Chrysostom, the Persians c Borysthen. call them Magi, who are skilful in the Worship of the Gods, not like the Greeks who, ignorant of the meaning of the Word, call them so who were skilful in Goetick Magick; of which that the Persian Magi were ignorant, d Laertius alledg- d Proem. eth the Testimonies of Aristotle, in his Treatise entituled Magick, and Dinon in the first Book of his Histories.

As concerning their Religious Rites, e Hero- e Lib. dotus and f Strabo affirm that they had no Tem- f Lib. ples, Altars, or Images, but did impute it to madness in such as had; the reason whereof g Hero- g Loc. cit. dotus conceives to have been, for that they did not believe as the Grecians, that the Gods were h h De leg. 2. of humane form; or as i Cicero, for that they con- i 'Ανθρώπου-ceived the Gods, to whom the whole World was πύλας, i. e. but a Temple or House, could not be shut up with αυθροπύλας. in Walls; upon which ground the Magi perswaded Xerxes to burn the Grecian Temples.

But Strabo frequently elsewhere mentions their Temples, Altars, and Images; whence it may be argued, either that in the time of Herodotus they had not any, and that Strabo, in affirming the same, with Herodotus, is to be understood only of their Primitive Institution, which when the Macedonians afterwards Conquered them, became corrupted with Grecian Rites; Or that there were different Sects among them from the beginning; whereof some allowed Altars, Images, Temples, others disallowed them.

Herodotus and Strabo further add, that they Sacrificed in High Places; their Rites and Sacrifices Herodotus describes thus. When they go about to Sacrifice, they neither erect an Altar, nor kindle Fire, nor use Libation, nor Flutes, nor Garlands, nor Cakes, but when any Man intends to Sacrifice to one of these Gods, he drives the victim to a clean place, and invokes that God; his Tyara being Crown'd with Myrtle; 'tis not Lawful for him who Sacrificeth to pray for good things for himself alone, but he must pray for all Persians in general, and in particular for the King: for in praying for all Persians he includes himself. Having cut the victim into little pieces, he boils the flesh, and strewing soft herbs, especially Trifoly, he lays the flesh on them; the Magus standing by sings a Theogonical Hymn; for this they conceive to be a powerful incantation. Without a Magus it is not lawful for them to Sacrifice. Soon after, he who Sacrificeth takes the flesh and disposeth of it as he pleaseth.

m Strabo adds, that when the Magus who declares the Sacrifice, hath distributed the pieces of m Lib. 15. flesh, every one taking his piece they depart home; leaving no part for the Gods; for they say the Gods require

require nothing but the Soul of the victim: Yet some (it is said) lay part of the Fat upon the Fire.

C H A P. IV.

The Gods of the Persians.

*a Lib. 1.
b Lib. 15.*

Herodotus *a* and *b* Strabo reckon the Gods of the Persians thus, Jupiter; the Sun; the Moon; Venus; the Fire; the Earth; the Winds; the Water. *c* Laertius not so fully, the Fire, the Earth, and not the Water.

c Proem.

d Loc. cit.

By Jupiter, as *d* Herodotus and Strabo affirm, they understood the whole Circuit of Heaven: Agathias adds, that they worshipped Jupiter under the name of Bell, which sufficiently argues they derived this God from the Chaldeans.

e Loc. cit.

f Oeconom.

To the Sun (as both *e* Herodotus and Strabo witness) they sacrificed: Strabo adds, that they called him Mithra. This was the greatest of their Gods, as Cyrus (introduced by *f* Xenophon) acknowledgeth; swearing by him: Hecychius likewise affirms it was the greatest of their Gods, and that the greatest Oath which the King himself took was by Mithra.

They represented him with the face of a Lion, in a Persian Habit, with a Tiara, holding with both hands a Bull by the Horns, which seemed to strive to get from him; signifying, that the Moon begins to receive her Light from him when she leaves him.

*g Porphy.
h antr. Nymph.*

g Zoroaster first among the Persians (as Eubulus affirms, who wrote many Volumes of the History of Mithra) did consecrate a natural Cave in the Mountains next Persia, in honour of Mithra, the King and Father of all: signifying by this Cave the World framed by Mithra; by the other things disposed within it, in fit distances, the Elements and Quarters of the World. The Cave of Mithra is mentioned by many others.

*h Lib. 6. con-
tra Cels.*

In the Mithrean Rites (for so Lampridius terms them) Celsus (cited by *h* Origen) saith, the twofold Motion of the Stars, Fixed and Erratick, was represented; and the passage of the Soul through them: in sign whereof there was set up a high pair of Stairs, having seven Gates, the first of Lead, the second of Tin, the third, of Brass, the fourth of Iron, the fifth of Leather, the sixth of Silver, the seventh of Gold; the first belongs to Saturn, the Lead signifying the slowness of that Planet; the second to Venus, to whom they compare Tin, for its brightness and softness; the third to Jupiter, as being most solid, with Brazen Steps; the fourth to Mercury, for they hold him to be the stoutest undertaker of all Businesses, Cunning, and Eloquent, the fifth to Mars, in regard of its unequal and various commixture; the sixth to the Moon; of Silver; the seventh to the Sun, whose colour, as also that of the Stars resembles Gold.

He who was initiated into these Rites proceeded, as Suidas relates, through several degrees of contumely. *i* Nonnus upon Gregory Nazianzen saith twelve *k* and of pain, as burning, blows, and the like, by which trial he was to give testimony of his Sanctity, and of his being void of Passion.

Of the Rites of the Moon there is nothing said in particular.

Concerning those of Venus *l* Herodotus saith, *l* Lib. 1. They sacrifice also to Urania, which they learnt of the Assyrians and Arabians; the Assyrians call Venus, Militta, the Arabians Alilat, the Persians Metra. And as Milidtha in Syriack signifieth generative, prolifick, Venus genetrix, so mater, or mater, with the Persians signifies, (as Raphaelengius observes) a Mother. This perhaps was that Mother of the Gods, which Cicero affirms to have been worshipped by the Persians, Assyrians, and all the Kings of Europe and Asia; with great Devotion.

The Fire, *n* Julius Firmicus saith, they preferred before all the other Elements; *n* De error. Agathias prof. Relig. affirms they learnt to worship it of the Chaldeans: *p* Strabo relates, that in Cappadocia there *p* Lib. 15. was a great number of Magi, called Pyrethi, and many Temples of the Persian Gods; they kill not the Victim with a Knife, but strike it down with a Club: Here also there are Pyrethia Chappels, in the midst of which is an Altar, covered with great store of Ashes; where the Magi preserve a fire that never goes out; and coming in every day sing almost the space of an hour, holding a bundle of Rods before the Fire, (with which, as *q* M. Sel. *q* De Diis Syr. den observes, they stir'd it up whilst they sung,) *q* synt. 2. c. 7. Their Heads are covered with Woollen Tiara's, which being tied on both sides hide their Lips and Cheeks: Thus Strabo, an eye-witness. These Pyrethia (or as Suidas terms them Pyreia) were those sempiternal Fires of the Magi mentioned by *r* Ammianus Marcellinus. Neither in Temples only did they use these Rites, but in private Caves, where *s* Julius Firmicus reports, they *s* Lib. 1. worshipped the Fire with many extraordinary Ceremonies, as among other things using to pronounce these Words, *Μηδίαδω μουσαῶν ὁ κλαπῆς σὺνδῆς καλῆς ἀγῶν*: Nor did this Worship extend to Fire only, but *t* to all things that resembled it, as Dionysius reports, whereof, *u* Strabo *u* Lib. 1. instanceth the Pyropus. Julius Firmicus adds, that they called the Fire Mithra, by which, as also by their worshipping it in Caves, it is manifest, that (sometimes at least) they took it for the Sun, their greatest Deity.

Concerning the Worship of the Earth and Winds nothing particular is delivered; That of the Water was performed in this manner, *x* They *x* Strab. lib. 15. go to a Lake, River, or Spring, where they make a Trench, and kill a Victim; taking care that none of the Blood come at the Water; then laying Myrtle and Laurel on it they burn it with Rods, and making some Prayers, sprinkle Oyl mixed with Milk and Honey, not in the Fire or Water, but on the Earth.

Other Gods the Persians had, though not reckoned among these, whether as less principal, or of later date; of these are mentioned by the same Author (Strabo,) and by others, Anaitis (Venus) Amandatus Sacaa, Sandes, and Nannaa (Diana.)

Hitherto of the Doctrine of the Persians.

*i In Stelicut.
k Gregor. Naz.*

THE
THIRD BOOK.
Of the Sabæans.

ARABIA the Noblest Peninsula (if we may so term it) of *Asia*, is terminated by the Persian, the Indian, and the Red Sea, except that on one side it is conterminous to *Syria*, by which vicinity was occasioned so near a correspondence betwixt those Nations, that as the Chaldaean Learning overspreading all *Mesopotamia*, *Syria*, and *Affyria*, did on one side extend to their Neighbours the *Persians*, so on the other it reached to the *Arabians*, from which nearness perhaps it was (not only of Situation, but Religion and Opinions,) that *Pliny* useth their names promiscuously, calling a great part of *Mesopotamia*, *Arabia*; and the *Arabians* themselves *Syrians*. And the later Eastern Writers (especially the *Arabians*) under the appellation of *Chasdim* or *Chaldanin* (*Chaldeans*,) comprehended not only the *Babylonians* but the *Nabatheans*, *Charaneans*, and *Sabæans*, as (among others) *Muhammed Isacides* takes *Chasdanin* and *Nabatheans* to be synonymous, and *Abmedus*, to his Book concerning the Religion of the *Sabæans*, gives this Title, *Of the Rites of the Charanean Chaldeans commonly known by the name of Sabæans*, he adds, *commonly known by the name of Sabæans*, because the *Sabæans* being the most considerable of these, they likewise under the appellation of *Sabæans* included all the rest; even the *Chaldeans* of *Mesopotamia*: using the terms of *Chaldea* and *Sabæa* no less promiscuously than *Pliny* those of *Arabia*, *Mesopotamia*, and *Syria*: for which *R. Maimonides* (who doth so throughout all his Writings) gives this reason, because the Doctrine of the *Chaldeans* extend thither, and that the Religion of all these Nations was the same.

Now whereas *Arabia* is commonly distinguished into the *Stony*, the *Desart*, and the *Happy*, we here mean not that part which is styled the *Desert*, lying on the North of *Sabæa*, and first planted by *Ismael*, whose Posterity afterwards, having learned the Language of the *Sabæans* (*Arabick*) were called *Arabians* also, or more properly, *Hagarens*, as descended from *Hagar*, and *Aarab Mastiaarabah*, the made *Arabians*, (that is, made such by cohabitation and conversation with the true *Arabs*,) but those other true *Arabs* the Inhabitants of the *Desert* and the *Happy*, whereof the former came from *Nebaiothus*, Son of *Ismael*, and are by *Pliny*, *Strabo*, and *Ptolemy* called *Nabateans*, as the Country it self *Nabatea*, the later from *Saba*, Son of *Chus*, the Son of *Cham*, after whom stiled *Sabæans* (as the Country *Sabæa*) and (in distinction from the made *Arabians* of *Arabia*, the *Desert*) the native *Arabians*. The *Charaneans* mentioned together with these, were the Inhabitants of *Cara*, a City of *Arabia*, mentioned by *Pomponius Mela*, whose Inhabitants the *Carreans*, *Pliny* placeth next the *Sabæans*, distinct from *Hara* or *Caran* in *Mesopotamia*.

THE
EIGHTEENTH PART.
The Sabæan Philosophers

CHAP.

Of the Institutors of the Sabæan Sect.

CONCERNING the first Institutor of Learning and Religion among the *Sabæans*, there is not any certain agreement of Authors. *Patricides*, an *Arabian* Writer, attribute; this Invention to a certain *Persian* named *Zoroaster*, contemporary with *Tera* Father to *Abraham*; *Zerodast* and *Zoroaster* are the same; whereby it appears, that *Patricides* means one of these two *Zoroasters*, whereof one was the first Author of Sciences among the *Chaldeans*, the other introduced the same Sciences among the *Persians*; and tho' he calls this *Zerodast* a *Persian*, yet by the Antiquity of the Time in which he conceives him to have lived, it is probable he rather intended the *Chaldean*.

Others (adds *Patricides*) are of Opinion that *Tachmurat* King of *Persia* gave beginning to this Religion. The same perhaps whom *Elmacinus* (another *Arabian* Historian,) calls *Tachurith*: *Others* (saith he) conceive that the Religion of the *Sabæans* was manifested by a certain King of the *Persians*, whose name was *Tachurirth*.

Elmacinus mentions another *Persian*, to whom the same invention was attributed, *In those days* saith he, *came forth* *Nazarib* a *Persian*, who, as is reported, was Author of the Religion of the *Sabæans*.

Others (continues *Patricides*) derive the *In*fancy of the *Sabæans* from a certain *Gracian* named *Juvan* or *Javan*, Son of *Berkley*, and him they will have to be of the City of *Zaituna*, which was built in *Attica*. Thus he; where *Hottinger* for *Berkley* reads, *Mercolim*, *Mercury*, confirmed by *Elmacinus* upon the same Subject. *Others*, saith he, affirm, that the Religion of the *Sabæans* was brought forth by a man whose name was *Juvan*, Son of *Markoli*, a *Gracian*, who first found out the Science of the Stars.

To these *Patricides* adds the Opinion of some others, who held that the Authors of this Sect were some of those who were at the building of the Tower of *Babel*. Thus the *Arabians*.

Some attribute the Institution of the *Sabæans* to *Cham*, Son of *Noah*, who, being banished from his Father's sight, fled thither, and (to use the words of *Lactantius*) settled in that part of the Earth, which is now called *Arabia*. This was the first Nation that knew not God, because the principal Founder thereof had not received the Worship of God by Tradition from his Father: Thus *Lactantius*, with whom many agree in attributing the Original of Idolatry to *Cham*, and to his Son *Chus* the first Planter of *Chaldea*, from whose Son *Saba* the *Sabæans* were named, and, upon this ground, some have laboured to prove *Cham* and

and *Chus*, to be the same with the first and second *Zoroasters*, of which formerly.

Others (as *Damascene*) ascribe the Original of Idolatry to *Zerug*. *Epiphanius*, and the Author of the *Chronicon Alexandrinum*, affirm that *Hellenism* began in the time of *Zerug*. This *Hellenism* some conceive the same with the *Sabeian* Superstition; what the *Greek* Fathers call *Hellenism*, the *Rabbins* term *Goth*, the *Arabians*, *Aligabeiton*, the time of Ignorance and Paganism. And tho' to determine any thing of those early and obscure times be very difficult, yet we cannot doubt, but that the Idolatrous Worship of Fire, and of the Sun (ascribed to the *Sabeans*) was of great Antiquity among them, since mentioned by the most ancient Authors, *Job*, who lived near them, as appears by the inroad which the *Sabeans* made upon him. *b* If I beheld (saith he) the *c* Sun when it shined, and the Moon walking in brightness, and my heart hath been secretly enticed, or my mouth hath kissed my hand, this also were an Iniquity to be punished by the Judge, for I should have denied the God that is above; where by kissing of the hand is implied the ancient manner of Veneration.

CHAP. II.

Others of the Sabeian Sect.

THAT *Tera* Father of *Abraham* was bred up in this Doctrine, might be conjectur'd from *Joshua* 24. 2. where he is reckoned among those that Served Strange Gods. • *Philo* terms him an Astronomer, one of those that are versed in Mathematicks.

Of *Abraham* Son of *Terah*, *b* *R. Maimonides* expressly saith, It is well known that our Father *Abraham* was Educated in the Faith of the *Zabians*, who held, there is no God but the Stars; indeed *c* *Berosus* acknowledgeth he was skilful in the *Cælestials*, and *Eupolemus*, cited by *Eusebius*, ascribes to him the Invention of *Astrology* and *Chaldaick*. The *Zabians* themselves in their Annals give this account of his departure out of *Chaldaea*. *Abraham*, say they, being Educated in *Ur*, but dissenting from the *Vulgar*, and asserting that there was another Creator besides the Sun, they began thus, and objected against him, and among other Objections, they alledged the evident and manifest operations of the Sun in the World; but *Abraham* answered them, You are right, which Sun is like the *Ax* which is in the hand of him that striketh therewith. Then they recite some of the Objections which he brought against them, and at last, they say, that the King cast him in Prison, nevertheless, he persisted in Prison to oppugn them; whereupon, the King fearing lest he might do some hurt to his Kingdom, and seduce Men from their Religion, Confiscated all his Estate, and Banished him to the utmost Borders of the East. Thus the *Zabians*: from which Relation *Josephus* differs not much, who saith, that *c* *Abraham* first undertook to convince the received Erroneous Opinion of Men, concerning the Deity, and that he first taught and proved that there is but one God, but seeing the *Chaldeans* and *Mesopotamians* begin to Mutiny against him for it, he thought it Expedient to forsake the Country.

The Rabbinical Traditions, are more particu-

lar herein: • *R. Solomon Hiarki* reports from an Ancient Commentary, that *Tera* fell out with his Son *Abraham*, in the Presence of *Nimrod*, for breaking his Idols, and that *Abraham* was thereupon cast into a Fiery Furnace. *Moses Gerunden-sis* confirms the same Story, but *R. Chain* relates it otherwise; *Abraham*, saith he, met with a Woman holding a Dish in her hand, and the Woman asking him whether he would offer any thing to the Gods, he took a Staff, and broke the Images which the Woman had, and threw away the Staff; his Father coming thither at the same time, demanded what was the matter? *Abraham* answered, she had asked him to make an Offering, and upon his answering that he would first eat something, there arose a dispute betwixt them: but his Father urged that the business was otherwise, and that he was heard to say many reproachful things of *Nimrod*. The Controversie was brought before *Nimrod* the King of *Babel*: he commanded *Abraham* to Worship the Fire that was set before him; *Abraham* answered, If so, then adore you the Water, Water which quenbeth Fire. *Nimrod* said to him, Worship the Water; *Abraham* answered, If so, Worship the Clouds which distil the Water. *Nimrod* said, Then Worship the Clouds; whereupon *Abraham*, If it be so, then the Wind is to be Worshipped, which agitates and scatters the Clouds. Again, *Nimrod*, Worship the Wind; but *Abraham*, If so, then is Man much more to be worshipped who understands the Wind. At length *Nimrod* growing angry, Thou talk, saith he, idly, I Worship none but the Fire, into the midst of which I will cast thee. Let the God whom thou Worshippest come and free thee by his right hand. *Aran* stood by and talked; they asked of which Opinion he was; he answered, if *Abraham* get the better, I will be for him, if *Nimrod* for *Nimrod*. After *Abraham* had gone into the Fiery Furnace and was freed, they said to *Aran*, of which side art thou; he said, of *Abraham's*; then they took him, and cast him into the Fire, and all his Bowels were Burned, and he was taken out dead in the Presence of his Father. Thus *R. Chain* but *Cedrenus* affirms, that *Abraham* throwing his Father's Idols into the Fire, his Brother *Aran* endeavouring to Rescue them, was Burned.

The *Arabians* who imitate the Jews in Relations of this kind, and fancy Superstructures of their own upon Fables of the *Rabbins*, give a further account of what happen'd to *Abraham* after his departure from *Nimrod*, as appears by a fragment of a Mahumetan Writer, of which I shall cite only so much as most particularly concerns the *Sabeans*. *Edris*, on whom be Peace, was the first who after *Enoch*, the Son of *Seth*, the Son of *Adam*, on whom Peace, wrote with a Pen. This thing afterwards *Edris* taught his Sons, and said to them, O Sons, know that you are *Sabeans*, learn therefore to read Books in your Youth. Now *Sabeans* are Writers, of whom the High, he means, *Mahumet*, said (*Alk. Sur. 2.*) The *Sabeans* and the *Nazarenes*. The Author adds, that they ceased not to possess the Books of *Seth* and *Edris* by Hereditary Right among themselves, until the times of *Noah*, and of *Abraham*, after that the High God aided him against *Nimrod*, on whom be malediction. But in that day wherein *Abraham* went out of the Land of *Irack*, and would go into *Syria*, into the Land of his Fore-fathers, he went to the Land of *Charan*, and *Ghesira*, and there he found a People

ple of the Zabians, who read old Books, and believed such things as were contained in them. But Abraham said. 'O my God, I did not think that besides my self, and those that are with me, there had been any of the Faithful who believed thee to be One; and God breathed to Abraham this Answer. O Abraham, the Earth is never destitute, but that there are some in it that dispute for God: But God commanded him to call them to his Religion, and he called them, but they would not, saying, how shall we believe thee, when thou readeſt not a Book? and God ſent among them a forgetfulneſs of thoſe things which they knew of Sciences and Books, for they conceived the Books which they uſed, to be from God, and ſome of them Believed, others not. Afterwards the Zabians were divided, and ſome of them believed, viz. the Barhameans, who did not ſeparate themſelves from Abraham of Blessed Memory, but the reſt followed their own Religion very eagerly, viz. thoſe who were in the Land of Charran, who went not with Abraham into Syria, and ſaid, we follow the Religion of Seth, Edris, and Noah; Thus, according to Kiffaus, the Religion of the Sabæans was the ſame with that of the Haraneans, or Meſopotamians. What he relates of Abraham's being ſent to the Sabæans, is all borrowed from the Rabbinical Traditions.

But that there were anciently Learned Perſons in Arabia, ſkilful in Natural Philoſophy, Aſtronomy, and other Sciences, is manifeſt from Teſtimonies far more authentick; (as particularly) from the Diſcourſes betwixt Job and his Friends; of the Arabian Philoſophers it is underſtood, that Solomon's Wiſdom is ſaid to have Excelled the Wiſdom of all the Sons of the Eaſt. Tacitus, deſcribing Judea, the Land and Bounds to the Eaſt are terminated by Arabia. And that the Jews called Arabia the Eaſt County is evident from ſeveral places in Scripture, as Gen. 10. 30. and 25. 6, 18. Job 1. 3. Judges 6. 3, 1. &c. Pliny alſo mentions the Magi of Arabia (of whom he inſtanceth Hippocus.) Ptolomy, the Gulf of the Magi, in Arabia; and Porphyrius (citing Diogenes) relates that Pythagoras (among other Countries to which he Travell'd for Learning) went alſo to Arabia, and lived with the King there.

CHAP. III.

Their Writings.

THE Sabæans pretended (as was lately ſhew'd out of Kiffaus,) to have had the Books of Seth and Edris, and not only thoſe, but ſome alſo written by Adam; for the ſame Author continuing the Story of Abraham's coming among the Sabæans, adds, that afterwards Abraham opened the Cheſt of Adam, and behold, in it were the Books of Adam; likewise the Books of Seth, and of Edris; as alſo the names of all the Prophets that were to be ſent after Abraham; But Abraham ſaid, Happy indeed are the Lins out of which all theſe Prophets ſhall come: And God Breathed to him (this Answer) Thou, O Abraham art the Father of them all, and they thy Children; and for this reaſon Abraham deſerved to be called the Father of the Prophets, upon whom be Peace.

Of the ſame alſay a Maimonides conceives a Mor. Nev. lib. the Book of Healings to have been, which was hid by Ezeziel.

The ſame b Maimonides cites many other b Mor. Nev. lib. Books of the Sabæans, Tranſlated into Arabick, of which the chiefſt is entituled, of the Agriculture of the c Nabateans, Tranſlated by Aben Vachſchijah: full of Idololatrical extravagancies; it treats of the making of Tifilmenaias, of the deſcent of Familiar Spirits, of Conjurations of Demons, of Devils, of ſuch as dwell in Deſerts (as Satyrs were thought to do) many other things it contained very ridiculous, by which nevertheleſs they conceived that they could confute the manifeſt Miracles (of Moſes, and the Prophets.)

Another entituled, the Worſhip, or of the Worſhip of the Nabateans, out of which, d Maimonides cites a Story concerning Abraham related formerly.

e The Book Haiftanchus, aſcribed to Ariſtotle, e Maim. Mor. Nev. lib. but falſly.

f The Book Hatteſimaoth, of Tifilmenaias; f Ibid. Buxtorfus renders it, of ſpeaking Images; the reaſon we have given formerly.

The Book Tamtam.

The Book of Haſſearab.

The Book of the Degrees of the Cæleſtial Orbs and the Figures that are aſcendent in every degree Another Book concerning Tifilmenaias, which alſo is attributed to Ariſtotle.

Another Book aſcribed to Hermes.

The Book of Iſaak the Zabian, wherein he argues in defence of the Laws of the Zabians.

A great Book of the Cuſtoms and Particularities of the Law of the Zabians, as of their Feaſts, Sacrifices, Prayers, and other things concerning their Belief: All theſe (ſaith Maimonides) are Books which treat of Idololatrical things, and are Tranſlated into the Arabick Tongue.

Befides theſe, (as Maimonides acknowledgeth,) there are many others, g Hottinger cites, (in his g Hiſtor. own Poſſeſſion) A Treatiſe of Mahomer the El. rient. lib. 1. der, Son of Iſaak, who is otherwiſe called Abul. cap. 8. ſark, the Son of Abi Jakub.

THE

NINETEENTH PART.

The Doctrine of the Sabæans.

WHAT is left to us of the Doctrine of the Sabæans is delivered upon later Authorities, than thoſe from which we have the Chaldaick: and therefore perhaps is but an account of what it was in later times, degenerated from their Primitive Doctrine, which was immediately derived for the Chaldaick. Nor is it impoſſible, but that this Corruption might be ſomewhat aggravated by the eager oppoſition of the Talmudiſts, and ſome Arabick Writers that follow them, from whoſe hands only we receive it. However, we conceive it neceſſary to be annexed to the former, of which, tho' depraved, it pretends at leaſt to be the continued Succeſſion.

CHAP.

CHAP. I.

Of the Gods and Rites of the Sabæans.

a Maimon.

b Idem.

c Mor. Nev.

THE Sabæans held (as the Chaldeans) that the Stars are Gods, but the Sun the greatest God; for they plainly assert, that the Sun governs the superiour and inferiour Worlds; b and call him the great Lord, the Lord of good. What they relate concerning Abraham, refusing to Worship the Sun, is delivered elsewhere, what they further fable of the Patriarchs, that Adam, (not being the first Man, but begotten by a Man and Woman) was a Prophet of the Moon, and, by Preaching, perswaded Men to Worship the Moon, and composed Books of Husbandry; That Noah was an Husbandman likewise, but believed not in Idols, for which they discommended him in all their Writings; That Seth also dissented from Adam, as to Worshipping the Moon; see delivered more fully by c Maimonides.

Their Forms of Worshipping these Gods was twofold, daily, and Monthly; the daily, is by Said Vahed described thus: They make the first day Sacred to the Sun; the second to the Moon, the third, to Mars; the fourth to Mercury; the fifth to Jupiter; the sixth, to Beltha Venus; the seventh, to Saturn.

The description of their Monthly Worship receive from a Ms. of Mahumed ben Isaac, cited by Hottinger; They begin the year from the Month Nisan, of which they keep holy the first, second, and third days; adoring and praying to their Goddess Beltha: they go to her Temples, Sacrificing Sacrifices, and burning living Creatures: On the sixth day of the same Month they kill a Bull to their Goddess the Moon; and towards the Evening of the same Day eat it. On the eighth day they keep a Fast, and likewise celebrate (at Night) a Feast in honour of the seven Gods, and of the Demons; Offering a Lamb to the God of the Blind (Mars:) On the fifteenth day is the Festival of Sammael, (by this name the Talmudists understand the Devil) Celebrated with many Sacrifices, Holocausts, and Offerings; On the twentieth they visit a Cenobium of the Haraneans, called Cadi, where they kill three Oxen, one to Saturn; another to Mars, the blind God; the third to the Moon: they kill likewise nine Lambs, seven to their seven Gods (the Planets) one to the God of the Geniuses, and one to the God of the Hours. They likewise burn many Lambs and Cocks. On the 28th day they go into the Temple which they have in the City Saba, at a certain Gate of Charran, called the Gate Assarah; and kill to Hermes their God, a great Bull; as also seven Lambs to their seven Gods; one to the God of the Demons, and to the God of the Hours, eating and drinking; but they burnt nothing of any Beast that day.

The second Month which is Fiar, they begin also with Sacrifices, celebrating the Consecration of Sammael, and Feasting; The second day they keep in honour of Aben Salem; drinking, and filling their hands with Tamarik and other Fruits.

The 23d day of the third Month they keep in honour of Sammael, whom they affirm to be

the God that maketh the Arrows fly; the Cumar, or Priest, makes an Arrow take fire twelve times, by rubbing another stick against it: the last time he creeps upon the ground, and puts Flax to it; if their Flax kindle, they conceive their Rites well accepted of the Gods, otherwise not.

The fourth Month Thammuz, had a peculiar Solemnity about the middle of it, called the Festival Abiukal, of the Weeping Women: The Original of which is thus related by R. Maimonides: In the same Book, saith he, they tell a Story of a certain Idolatrous Pseudo-Prophet, named Thammuz: who calling upon the King to Worship the seven Planets, and the twelve Signs of the Zodiack, and being by the King put to an ignominious death, the same night in which he was slain, all the Images from all parts of the Earth met in the Palace which was erected at Babylon to the great Golden Image of the Sun, suspended betwixt Heaven and Earth: There this Image of the Sun fell down prostrate in the midst, and (all the rest of the Images standing round about it) bewailed Thammuz, and began to relate what hapned to him; whereupon the rest of the Images fell a weeping, and lamented all that Night: But as soon as the Morning appeared they all flew away and returned home to their several Temples. Hence came the Custom, that on the first day of the Month Thammuz (June) they Weep, Lament, and Bewail Thammuz. This Custom of Women-Weeping for Thammuz, is mentioned also by the Prophet d Ezekiel, as imitated by the Jews d Chap. 8. the 29th day of this Month they consecrate to v. 14. Sammael, and to other Gods and Demons; Sacrificing nine Lambs to Hanan.

In the fifth Month, which, as the Syrians, they call Ab, they press new Wine to their Gods, and give it several Names; this they do the eight first days. They likewise kill a new born Infant to their Gods, which they beat all to pieces; then they take the flesh and mix it with Rye-meal, Saffron, Ears of Corn, Mace, and little Cakes like Figs; they bake this in a new Oven, and give it to the People of the Congregation of Sammael all the year long; no Woman eats of this, nor Servant, nor Son of a Bond-woman, nor Man that is Possessed, or Mad.

The Rites of the sixth Month, named Eloul, are thus described by the same Author; Three days they boil Water to wash themselves, that they may perform the Rites of Sammael, who is the Prince of the Demons, and the greatest God; into this water they cast some Tamarisk, VVax, Olives, Spice, &c. and when it is hot, take it before Sun-rise, and pour it upon their Bodies, as an Amulet: The same day also they kill eight Lambs, seven to their Gods, and one to the God Sammael; they eat also in their Congregations, and drink every Man seven Cups of VVine; The Prince exacts of every one of them two Drachms to be paid into his Exchequer. On the 26th day of the same Month, they go forth to a Mountain, celebrating the Rites of the Sun, Saturn and Venus; burning eight Hens, eight Cocks, and as many Hens; He who made a Prayer and Request to Fortune takes an old Cock, or a Cock-chicken, to the wings of which he ties two strings; and sets their ends on fire,

fire, and gives up the Chickens to the Goddess Fortune; If the Chickens are quite consumed by the fire, his Prayer is heard, but if the fire of those strings goes out before the Chickens be quite burnt, the Lord of Fortune accepts not his Prayer, nor Offerings, nor Sacrifices. On the 27th and 28th they have their Mysteries, Sacrifices, Offerings, and Holocausts to *Sammael*, (who is the greatest Lord:) to the Demons and Geniuses, which compass them about, defend them, and bestow good Fortune on them.

The seventh Month, which the Syrians and Sabæans call *the first Tisbri*, hath peculiar Rites, thus described by the same Author: About the middle of this Month, they burn Meat to the Dead, in this manner: Every one buys of every sort of Meat that is in the Market; of all kind of Flesh, Fruits, green and dry; they likewise dress it several ways; all which they burn in the night time to the Dead, and with it the Thigh-bone of a Camel; they also pour mixed Wine upon the Fire for the Dead to drink.

In the eighth Month, which is called the *later Tisbri*, they Fast on the 21st day, and so on, for nine days, the last of which is the 29th, this day they do in honour of the Lord of Fortunes, &c.

The ninth Month, called *the first Canun*, is chiefly Sacred to *Venus*; on the fourth day they set up a Tabernacle, which they call the Bed of *Beltha*; adorning it with several Leaves, Fruits, Roses, &c. Before they offer their Sacrifices of Beasts and Birds, they say, Let these Sacrifices be Destined to our Goddess *Beltha*; this they do for seven days: all which time they burn many Beasts to their Gods and Goddesses. On the 30th day of the same Month, the Priest sits in an high Chair, to which he gets up by nine steps; and, taking in his hand a stick of Tamarisk, stretcheth it out to them all, and striketh every one of them with it three, or five, or seven times. Afterwards he makes a Discourse to them, wherein he declareth to the Congregation their continuance, multitude, places, and excellency above all other Nations; he likewise tells them the largeness of their Empire, and the days of their Reign: After which he comes down from the Chair, and they eat of the things Offered to the Idols, and drink: and the Prince exacts of every one of them this day two Drachms to the Exchequer.

The tenth Month, called *the other Canun*, seems particularly devoted to the Moon; for on the 24th day thereof is the Nativity of the Lord, that is, the Moon, at what time they celebrate the Rites of *Sammael*, Sacrificing, and Burning fourscore living creatures, four-footed Beasts and Fowl; they also eat and drink and burn *Badi*, sticks or canes of Palm, slender at the bottom, to their Gods and Goddesses.

In the eleventh Month, *Sijubar*, they Fast seven days together, beginning from the 9th day, upon which they proclaim a Fast to the Sun, who is the great Lord, the Lord of Good: They eat not in all this time any thing of Milk; nor drink Wine; nor pray during this Month to any but *Sammael*, the Genii, and Demons.

In the Month *Adar*, which is the twelfth and last, they Fast also to the Moon, especially on the 28th day; The President distributes a Barley

Loaf to the Congregation, in honour of *Mars*; the Prince exacts of every one of them towards his Exchequer two Drachms.

CHAP. II.

Other Rites of the Sabæans contrary to the Levitical Law.

R *Maimonides* mentions several other Rites ^{a Mor. Nev.} of the Sabæans, which were expressly repugnant to the Levitical Law, adding, that he was acquainted with the Reasons and Causes of many of the Laws of Moses, by means of knowing the Faith, Rites, and Worship of the Sabæans. The Examples alledged by him and others are these.

They Offered Leavened Bread only, and, for their Offerings, made choice of sweet things only, and anointed their Sacrifices with Honey; prohibited, Levit. 2. 11.

They used on a certain day to feed on Swines Flesh; prohibited, Levit. 11. 7.

They held it unlawful to kill and feed on some Beasts permitted to the Jews; as the Ox, which Maimonides saith, they much honoured for the great Profit he brings by Agriculture, and therefore held it unlawful to kill him, as also the Sheep; neither of which they killed.

Some of the Sabæans worshipped Devils, believing they had the Shapes of Goats, and therefore called them Seirim; On the contrary, the Levitical Law prohibits to Offer Sacrifices to Seirim, unto Goats, that is to say, Devils, appearing in the Forms of Goats, Levit. 17. 7.

Though they did abominate Blood, as a thing exceeding detestable, yet they did eat it, believing it to be the Food of the Demons, and that he that did eat of it should become a Brother, or Intimate Acquaintance of the Demons, insomuch that they would come to him and tell him future Events; prohibited, Levit. 17. 10, 23.

They worshipped the Sun at his Rising, for which Reason, as our Rabbins expressly teach in Gemara, saith Maimonides, Abraham our Father designed the West for the place of the Sanctum Sanctorum, when he worshipped in the Mountain Moria. Of this Idolatry they Interpret what the Prophet Ezekiel saith, of the Men with ^{b Chap. 8. 16.} their Backs toward the Temple of the Lord, and their Faces towards the East, Worshipping the Sun towards the East.

Mahummed Ben-Isaac relates, that they shaved themselves with Razors, and branded themselves with fire; there were also Married Women among them who shaved themselves in the same manner; forbidden, Levit. 21. 5.

c They had a Custom of passing their Children, as soon as they were born, through the Fire, ^{c Maimon. Mor. Nev. 3.} which they worshipped, affirming, that such Children as were not so passed would die. This was also expressly forbidden by the Levitical Law.

Another most obscene Custom they had of Engrafting, described by d Maimonides, to ^{d Mor. Nev.} which he conceives the Levitical Prohibition to 3. 37. allude.

Others there are of the same kind cited by the same e Author, who concludes, that as concern- ^{e Mor. Nev.} ing those particular Laws, the reasons whereof are 3. 44. concealed

concealed, and the benefit unknown to me, it proceeds from hence, that the things which we hear are not such as those which we see and perceive with our eyes. For this cause, those things concerning the Rites of the Sabæans, which I have learnt by hearing, and from their Writings, are not so solid and certain, as with those who have seen them practised, especially seeing that their Opinions and Sets perished 1000 years since, and their Names were abolished.

With the Sabæans, we conclude the Chaldaick Philosophy.

THE CHALDAICK ORACLES OF ZOROASTER. and his Followers.

THe most considerable Remains of the Chaldaick Philosophy are those Oracles which go under the name of Zoroaster; some indeed condemn them as supposititious, *a* Forged by some Pseudo-Christian Greek; (perhaps the rather, because *b* The followers of Prodicus the Heretick, boasted that they had the secret Books of Zoroaster.) But this seems less probable, in regard they lie dispersed among several Authors; nor are they to be neglected, in that they have been held in great veneration by the Platonick Philosophers. Which sufficiently also argues, that they are none of the Writings charged by *c* Porphyrius upon the Gnosticks, as Forged by them under the name of Zoroaster, since those (as he acknowledgeth) were by the Platonick Philosophers, (of whom he instanceth Plotinus and Amelius) rejected and demonstrated to be spurious and supposititious.

Some argue that they are not Chaldaick, because many times accommodated to the Greek Style; but there are in them many so harsh and exotick Expressions, as discover them to be Originally foreign; and where they agree in Terms with that which is proper to the Greek Philosophy, we may say of them as *d* Jamblichus upon another occasion, (On the Writings that go under the Name of Hermes Trismegistus) as they are published under the name of Zoroaster, so also they contain the Doctrine of Zoroaster, though they frequently speak in the Style of the Greeks; for they were Translated out of Chaldee into Greek by Persons skilful in the Greek Philosophy.

To perswade us that they are genuine, and not of Greekish Invention, *e* Mirandula professeth to Ficinus, that he had the Chaldee Original in his possession, I was (saith he) forcibly taken off from other things, and instigated to the

Arabick and Chaldaick Learning by certain Books in both those Languages, which came to my hands, not accidentally, but doubtless by the disposal of God, in favour of my Studies. Hear the Inscriptions, and you will believe it. The Chaldaick Books, (if they are Books, and not rather Treasures) are the Oracles of Aben Esra, Zoroaster and Melchior, Magi: in which those things which are faulty and defective in the Greek, are Read perfect and entire. There is also, (adds he) an Exposition by the Chaldean Wise men upon these Oracles, short and knotty, but full of Mysteries; There is also a Book of the Doctrines of the Chaldaick Theology, and upon it a Divine and Copious Discourse of the Persians, Grecians, and Chaldeans; Thus Mirandula, after whose Death these Books were found by Ficinus, but so worn and illegible that nothing could be made out of them.

Further, to confirm that these Oracles were (as we said) Translated into Greek by Persons skilful in the Greek Philosophy, let us call to mind that Berosus *f* introduced the Writings of the Chaldeans concerning Astronomy and Philosophy among the Grecians; and that Julian the Son, a Chaldaick Philosopher, *g* wrote the *g* Suid. in voce *g*ick Oracles in Verse, and other Secrets of that Julianus. Science: and probably, if these were no part of that Chaldaick Learning which Berosus first rendered in Greek, they yet might be some of the Theurgick Oracles (for such the Title speaks them) of Julian; for some of them are cited by Proclus as such. From the account which Mirandula gives of those in his Possession, to which were added a Comment, and a Discourse of the Doctrines of the Chaldaick Theology, it might be conjectured, that what is delivered to us by Pletho and Psellus, who, besides the Oracles, give us a Comment on them, together with a Chaldaick Summary, was extracted out of that Author which Mirandula describes to have been of the same kind and Method, but much more perfect and Copious.

This Title of Oracles was perhaps not given to them only Metaphorically to express the Divine Excellence of their Doctrine, but as conceived indeed to have been delivered by the Oracle it self; for *h* Stephanus testifies that the *h* Deurb. Chaldeans had an Oracle which they held in no less Veneration than the Greeks did theirs at Delphi: This Opinion may be confirmed by the high Testimonies which the Platonick Philosophers give of them, calling them *i* the Assyrian Theology revealed by God, and the Theology delivered by God. And Proclus elsewhere having cited as from the Gods, one of those Oracles which speaks of the Ideas, *a* (Platonick Doctrine) adds, that hereby the Gods declared the Subsistence of Ideas, and acquiesceth as satisfied that the Gods themselves ratify the Contemplation of Plato. *i* Procl. in Tim.

Some of these Oracles which escaped the Injuries of Time, were first published by Ludovicus Tiletanus, Anno 1563. at Paris; together with the Commentaries of Gemistus Pletho, under the Title of the Magical Oracles of the Magi descended from Zoroaster, the same were afterwards Translated and put forth by Jacobus Marthanus, and lastly, together with the Comment of Psellus also, by Johannes Opsopæus at Paris, 1607.

These by Franciscus Patricius were enlarged with

a Beza.

b Clem. Strom.

c Vit. Plot.

d De Myst. Egypt.

e Epist.

with a plentiful Addition out of *Proclus*, *Hermias*, *Simplicius*, *Damascius*, *Synesius*, *Olympiodorus*, *Nicephorus*, and *Arnobius*: encreasing them *k* by his own account, to 324. and reducing them for the better perspicuity to certain general heads, put them forth, and Translated them into Latin, Anno 1593.

k Zor. pag. 4. b.

l Philos. barbar.

m Pag.

They were afterwards put forth in Latin by *l* *Otho Heurnius*, Anno 1619. under the Title of *The sincere Magical Oracles of Zoroaster King of Bactria, and Prince of the Magi*; but *Heurnius* under the pretence of *m* putting them into good Latin, as he calls it) and polishing them with a rougher File, hath patch'd up and corrupted what *Patricius* delivered faithfully and sincerely, endeavouring to put these Fragments into a continued Discourse, which in themselves are nothing coherent, but dispersed among several Authors.

Patricius indeed hath taken much Learned pains in the Collection of them; but with less Regard to their Measures and Numbers, and, (as from thence may be shown) sometimes of the Words themselves: nor is there any certain

means to redress this Omission by comparing them with the Authors, out of which he took them, (since few of those are extant, neither doth he, (as he professeth to have done) affix the Names of the Authors to the several Fragments, except to some few at the beginning; However, we shall give them here according to his Edition, that being the most perfect; together with such Additions as we meet withal elsewhere, and some conjectures to supply the defect we mentioned.

And whereas many of these Oracles are so broken and obscure, that they may at first sight seem rather Ridiculous than Weighty, yet he who shall consider, that as many of them as are explained by *Pletho*, *Pfellus*, and others, would without those Explications seem no less absurd than the rest, but being explained, disclose the Learning of the *Chaldeans* in a profound and extraordinary manner, will easily believe all the rest, even those which appear least intelligible) to be of the same kind, and consequently ought no more to have been omitted than any of the rest,

 Duitas enim apud hunc fedet, & intellectualibus *Proc. Dam.*
 fulget sectionibus.
 Et gubernare cuncta, & ordinare quodcunque
 non ordinatum.
 Toto enim mundo lucet Trias, cujus Monas est *Dam.*
 princeps.
 Principium omnis sectionis hic est ordo,
 In tria namque Mens dixit Patris secari omnia, *Proc.*
 Cujus voluntas annuit, & jam omnia facta fuere:
 In tria namque dixit Mens patris æterni,
 Mente omnia gubernans.
 Et apparuerunt in ipsa Virtus & Sapientia, *Dam.*
 Et Multifcia Veritas.
 Hinc fluit Triadis vultus ante essentiam,
 Non primam, sed eam quæ mensuratur.
 Principiis tribus hisce capias servire cuncta.

* * * *

Et fons fontium, & fontium cunctorum.
 Matrix continens cuncta.
 Indè affatim exilit generatio multivaria materia. *Proc.*
 Indè tractus prester exilis ignis flos,

Mundorum indens cavitatibus. Omnia namque
 indè.
 Incipit deorum tendere radios admirandos.

PATER ET MENS

Seipsum rapuit pater neque suæ
 Potentiæ mentali claudens proprium ignem. *Psel.*
 Non enim à paterno Principio imperfectum quid *Psel.*
 rotatur.
 Cuncta namque perfecit pater,
 Et menti tradidit secundæ,
 Quam primam vocat omnè genus hominum.
 Patrogenia lux, multum namque sola *Proc.*
 E partis robore decrepens mentis florem.
 Opera enim intelligens paterna mens è se genita,
 Cunctis infeminavit vinculum igni gravis amoris.
 Quo omnia maneant, tempus in interminatum
 amantia.
 Neque omnibus quæ patri mentaliter contexta
 monstret.
 Ut in amore maneant mundi elementa manentia.
 Habet ipsa intelligentia paternam mentem indere
 Omnibus fontibus & principatibus.
 Est enim finis paterni profundî, & fons menta-
 lium.
 Neque progressus est, sed manfit in paterno pro-
 fundo,
 Et in adyto, per Deo-nutrients silentium.
 Non enim in materiam, ignis trans primus
 Suam potentiam claudit operibus, sed mente.

Symbola

Σύμβολα γὰρ πατρικὸς νόος ἐσπέρη καὶ κόσμον.

Δαμ. Ὅς τὰ νοητὰ νοεῖ καὶ ἀφρατα καλλήνεται,
Ὁλοφύης μείσιμυς, καὶ ἀμέλειος.
Νῶ μὲν κατέχει τὰ νοητὰ, αἰθέρον δ' ἐπάγει κόσ-
μοις.
Νῶ μὲν κατέχει τὰ νοητὰ, ψυχῶν δ' ἐπάγει κόσ-
μοις.

Ν Ο Τ Σ, Ν Ο Η Τ Α,
καὶ νοερός.

Δαμ. Καὶ τὸ ἐνὸς νοῦ ὅν νοητὸν.
Περκ. Οὐ γὰρ ἀνδρὸς ὅτι νοητὸν· ἡ χεὶρ οὐκ ἔχει.

Τὰ μὲν ὅτι νοερός καὶ νοητὰ, ὅσα νοῶντα νοεῖται.

Τερπὴ ὅτι παρ' οὐρανὸν τὸ νοητὸν.
Μάνθανε τὸ νοητὸν ἐπεὶ νόος ἔξω ὑπάρχει.

Καὶ τὸ νῦν, ὅς τ' ἐμπύριον κόσμον ἄγει.
Νοῦ γὰρ νῦν ὅτιν οὐ κόσμος τεχνίτης πνεύς.
Οὐδ' ἡ ὑπερκόσμον· πατρικὸν βυθὸν ἔσε νοοῦντες.

Ἡ νοητὴ πάσης τμήσεως ἄγει.
Ἔστι γὰρ τι νοητὸν, ὃ χεὶρ σε νοεῖν νόος ἀνθεῖ.

Δαμ. Ἡ γὰρ ἐπεγκλίνη, ὡς ἀν' νοῦν, κακῆνο νοήση,
Ὡς τὶ νοῦν, ἡ καῖνον νοήσης.
Ἔστι γὰρ ἀλκήν ἀμφιφάσας δύναμις,
Νοερός ἐσθ' ἵστα τομαῖσι, ἡ δὴ χεὶρ
Σφοδρότητι νοεῖν τὸ νοητὸν ἐκείνο.
Ἀλλὰ νόος ταναῦ ταναῦ φλογί
Πάντα μέλει δὲ, πλὴν τὸ νοητὸν ἐκείνο.
Χεὶρ δὴ τὸ το νοῖσαι· ἡ γὰρ ἐπεγκλίνη

Σὸν νοῦν, κακῆνο νοήσης ἐκ ἀκλινῶς.
Ἀλλ' ἀγνὸν ἐπίστροφον ὀμμα,
Φέροντα σῆς ψυχῆς τείναι κενεὸν νόον
Ἔστι τὸ νοητὸν, ὅφρα μάθης τὸ νοητὸν·
Ἐπεὶ ἔξω νόος ὑπάρχει.
Τὸν ὅτι νοεῖ πᾶς νῦν· ὅτιν, ἡ γὰρ ἀνδρὸς
Νόος ὅτι νοητὸν, καὶ τὸ νοητὸν ἡ νῦν χεὶρ οὐκ ἔχει.

Τοῖς ὅτι πνεύς νοερός νοερός πνεύς ἄπαντα
Εἴκαθε δουλοδούλια, πατρὸς παθλιώδεις βελή.
Καὶ τὸ νοεῖν, αἰεὶ τε μὲν ἀόκνη σερφάλιγσι.

Πηγὰς τε καὶ ἀρχαὺς, δινεῖν, αἰεὶ τε μὲν ἀόκνη σερφάλι-
γι.

Ἀλλὰ δ' ὄνομα σεμνὸν ἀκοιμήτω σερφάλιγσι
Κόσμοις ἐνθρόνων, κρεπνὴν διὰ πατρὸς ἐνιπλῶ.
Τὸ δὲ νόον ἡ ζωογόνο· πηγὴ πειλέχεται ψυχῶν.

Καὶ ὁ ποιητής, ὅς αὐτὸν τεκλήνατο ἡ κόσμον.
Ὅς ἐν νόος ἐκθαρῶ πρῶτον.

Ἐσαμέν· πνεῖ πῦρ, συνδέσμων ὅφρα κερδῶν
Πηγὰς κερδῶν, ἐξ πνεύς ἀνθ' ἐπίχων.

Νοερός ἀσθ' ἵστα τομαῖς, ἔρωτ' δ' ἐνέπλησε τὰ
πάντα.

Τὰ ἀτύπωτα τυπῶται.

Σμήνεων ἐοικῆαι φέρονται, ῥηγνύμεναι

Κόσμος πρὸ σώμασι.

Ἄ νῦν λέγει, τὸ νοεῖν δὴ πρὸ λέγει.

Ἡ μὲν γὰρ δύναμις σὺν ἐκείνοις, νῦν δ' αὖτ' ἐκείνη.

Symbola enim paterna mens feminavit per mun-
dum

Quæ intelligibilia intelligit, & ineffabilia exor-
nat.

Dam.

Tota partitio, & impartibilis.

Mente quidem continet intelligibilia, sensum
verò inducit mundis.

Mente quidem continet intelligibilia, animam
verò inducit mundis.

MENS, INTELLIGIBILIA,
& Mentalia.

Et unius mentis intelligibilis.

Non enim finè intelligibili mens est: non seorsum
existit.

Dam.

Proc.

Quædam fanè sunt mentalia & intelligibilia, quæ-
cunque dùm intelligunt intelliguntur.

Cibus verò intelligenti est intelligibile.

Disce intelligibile, quandoquidem extra mentem
existit.

Et mentis, quæ Empyreum mundum ducit.

Mentis enim mens est quæ mundi est artifex ignei.

Qui supermundanum paternum profundum estis
intelligentes.

Intelligibilis omnis sectionis princeps est.

Est enim quoddam intelligibile, quod oportet te
intelligere mentis flore.

Vel enim inclines, ut mentem, & illud intellexeris.

Dam.

Ut aliquid intelligens, non illud intelliges.

Est enim roboris circumquaque lucidi potentia,

Mentalibus fulgens sectionibus, non fanè oportet

Vehementiâ intelligere intelligibile illud,

Sed mentis amplæ amplæ flammæ

Omnia metiente, præterquam intelligibile illud.

Opus ergò est hoc intelligere; nam si inclina-
veris

Mentem tuam, etiam illud intelliges non parùm.

Sed purum converte oculum,

Ferentem tuæ animæ tendere vacuam mentem

In intelligibile; ut discas intelligibile,

Quandoquidem extra mentem existit.

Deum hunc intelligit omnis mens, non enim finè

Mente est intelligibili, & intelligibile non finè
mente existit.

Ignis mentalis mentalibus præteribus cuncta

Cedunt fervientia, Patris persuasorio consilio.

Et intelligere, semperque manere impigrâ ver-
tigne.

Fronte & principii, vertere, semperque manere
impigrâ vertigine.

Sed nomen venerandum in somni vertigini

Mundis indens, terribiles ob patris minas.

Sub duabus mentibus vitigenius fons continetur
animarum.

Et facta, qui per se operans fabrefecit mundum.

Qui ex mente exiliit primus.

Indutus igne ignem, Vinculorum ut temperet

Fontanos crateras, sui ignis florem sustinens

Mentalibus fulget sectionibus, amoréque imple-
vit omnia.

Infigurata figurans.

Examinibus similes feruntur, perrumpentes

Per mundi corpora.

Quæ mens dicit, intelligendo fanè dicit.

Potentia quidem cum illis, Mens verò ab illâ.

ΙΤΝΓΕΣ, ΙΔΕΑΙ, ΑΡΧΑΙ.

Πολλαὶ μὲν αἶδε ἐπεμβαίνουσι φαεινοῖς κόσμοις.
Ἐκθρόσκουσαι, καὶ ἐν αἷς ἀκρότητες ἔασιν τρεῖς,
Ἐπὶ κείναις αὐταῖς ἀρχαῖς αὐλῶν.
Ἀρχαὶς, αἱ πατέρες ἔργα νοήσασαι νοητὰ

Αἰδητοῖς ἔργοις, καὶ σώμασιν ἀρεκάλυψεν.
Διὰ πόρθμοι ἐσῶτες φάναι πρὸ πατρὸς καὶ τῇ ὕλῃ.
Καὶ τὰ ἐμφανῆ μιμήματα ἧς ἀφανῶν ἐρξαζόμενοι.
Καὶ τ' ἀφανῆ εἰς τὴν ἐμφανῆ κοσμοποιίαν ἐγξέφοντες.

Νῦν πατέρες ἐρροίζησε, νοήσας ἀκμάδι βελῆ
Παμμόρφους ιδέας· πηγῆς δ' ὑπὸ μιᾷς ὑποπλάσσει.
Ἐξέδορον. πατέρεθ' ὅδε ἔλιν βελή τε τέλει τε.
Δι' ὧν συνάπτεται πρὸ πατρὸς, ἄλλω κατ' ἄλλω

Ζωῶν, ὑπὸ μευζομένων ὀχετῶν.
Ἄλλ' ἐμερῶσιν ἔσαν, νοεῶν πνεύμοις μοιρηθεῖσαι,
Εἰς ἄλλας νοεῖς· κόσμῳ δ' ἀναξ πολυμόρφῳ

Περύθηκεν νοεῶν τύπον ἀφθιτον, ὃ καὶ κόσμον
Ἰκνῶ ἐπεγόμενον μορφῆς κατ' ἃν κόσμῳ ἐφάνθη.

Παντοίας ιδέας κεχαισμένῳ, ὧν μία πηγὴ.
Ἐξ ἧς ῥοιζῶνται μεμερισμένοι ἄλλαι,
Ἀπλάτοι, ῥηγνύμενοι κόσμῳ πρὸ σώμασι.
Αἱ πρὸ κόλπους σμερδαλέες, σμίνεσιν ἐοικῶς,
Φορέονται τρεπῶσαι· πρὸ δ' ἀμφὶ ἄλλυδις ἄλλη.
Ἐννοιαὶ νοεῖς πηγῆς πατρικῆς ὑπὸ
Πολύ δευτρίῳ πνεύματι πνεύσας ἀνθῶν
Ἀκοιμήτῃ χεῖρ. ἀκμή ἀρχεγόνος ιδέας
Πρώτη πατέρος ἔβλυσε· τὰς δ' αὐτοθαλῆς πηγῇ.

Νοόμενα ἴσχυες πατέρεθ' ἐνοεῖσι καὶ αὐταῖς.
Βελῆς ἀφθέρητοις κινέμενα ὥς νοήσαι.

ΕΚΑΤΗ, ΣΥΝΟΧΗΣ, ΚΑΙ
Τελετάρχαι.

Ἐξ αὐτῶν δὲ πάντες ἐκθρόσκουσι
Ἀμείλικτοί τε κεραυνοὶ, καὶ πρησιερδόχοι κόλποι
Παμφορῆς ἀλκῆς πατρικῆς Ἐκάτης.
Καὶ ὑπεζωκὸς πνεύματι ἀνθῶν, ἢ δὲ κεφαλαῖον
Πνεῦμα πόλων, πνεύματι ἐπέκρημα.
Φερεῖν αὖ πρησιερσιν εἰς ἀκρότητας ἔδωκεν.
Ἐγκερῆσας ἀλκῆς ἰδίον μῦθον ἐν συνοχεύσιν.
Ὡς πῶς ἔχει κόσμῳ νοεῶν ἀνοχῆς ἀκαμπῆς.

Ὅτι ἐργάτης, ὅτι ἐκδότις ὅτι πνεύματι ζωνφόρον.
Ὅτι καὶ τὸ ζωογόνον πληροῖ ἢ Ἐκάτης κόλπον.
Καὶ ἐπὶ τοῖς συνοχεύσιν ἀλκῇ ζήδωρον πνεύματι
Μέγα δυναμώροιο.

Ἀλλὰ καὶ φερεῖ ἧς ἔργων εἰσὶ τὰ πατέρες.
Ἀφομοιοῖ δὲ ἑαυτὸν, ἐκείνῳ ἐπεγόμενον
Τὸν τύπον ἀειβάλλεσθαι ἧς εἰδῶτων.
Οἱ τελετάρχαι συνέληπται τοῖς συνοχεύσιν.
Τοῖς δὲ πνεύματι νοεῶν νοεῖς πρησιερσιν
Ἀπαντὰ ἐπαθε δουλεύοντα.
Ἀλλὰ καὶ ὑλάτοις ὅσα δουλεύει συνοχεύσιν.

Ἐσαμύνει πάντῳ ἀλκῇ φωτὸς κελεύειν.
Ἀλκῇ τειγλίχῳ, νοὶν ψυχῇ δ' ἐπλάσαντα.
Παντοίας δὲ σύνθημα βάλαν φρενί.
Μηδ' ἐπὶ τοῖς ἐμπνεύσις πορεύειν ὀχετοῖς,
Ἀλλὰ εἰς ἀρετὴν.
Οἱ δὲ τὰ ἄτομα, καὶ αἰδητὰ δημιουργοῖσι,
Καὶ σωματοειδῆ, καὶ κατεταγμένα εἰς ὕλην.

IYNGES, IDEÆ, PRINCIPIA,

Multæ quidem hæ scandunt lucidos mundos.
Infilientes, & in quibus summitates sunt tres.
Subjectum ipsis est principale pratum.
Principia ; quæ patris opera intelligentes intel-
ligibilia

Sensibilibus operibus, & corporibus revelarunt.
Transvectrices stantes dicere patri & materiæ.
Et manifesta imitamina latentium operantes.
Et latentia in manifestam Cosmopœiam inscri-
bentes.

Mens patris striduit, intelligens vigente consilio
Omniiformes Ideas. Fonte verò ab uno evolantes
Exilierunt. A patre enim erat consilium & finis.
Per quæ conjunguntur patri, per aliam atque
aliam

Vitam, à compartitis canalibus.
Sed partita sunt, mentali igne dispositæ,
In alias mentales : mundo namque rex multi-
formi

Proposuit mentalem typum incorruptibilem, non
per mundum

Vestigium promovens formæ per quæ mundus
apparuit.

Omnifariam ideis gratiosus, quarum unus fons.
Ex quo strident dispertitæ aliæ,

Immensæ, perumpentes mundi circa corpora :
Quæ per sinus immensos, examinibus similes,
Feruntur conversæ : circumque alibi alia.

Conceptiones mentales fonte, à paterno
Multum decerpentes ignis florem
Insomnis temporis. Vigor principigeniæ ideæ
Prima, è patris missa est : cujus per se florens
fons.

Intellecta Iynges à patre intelligunt & ipsæ.
Consiliis ineffabilibus moventur ut intelligant.

HECATE, SYNOCHES, ET
Teletarchæ.

Ex ipso enim omnes exiliunt
Amilictique fulminis, & presterocapaces sinus
Omnilucidæ vigoris patrogenii Hecates.
Et Hypezocus ignis flos, & fortis
Spiritus polorum, igneos trans.
Custodire presteribus suis summitates dedit.
Immiscens vigoris proprium robur in Synochis.
Quo mundus habeat mentales sustentatores in-
flexibiles.

Quia operatrix, quia largitrix est ignis vitiferi.
Quia & vitigenium implet Hecates sinum.
Et influit Synochis vigorem vitidonom ignis
Magni potentis.

Sed & Custodes operum sunt patris.
Assimilat enim se ipsum ; ille urgens
Typum induere idolorum.

Teletarchæ comprehensi sunt cum Synochis.
His verò ignis mentalis mentalibus presteribus
Omnia parent servientia.
Sed & quæcunque materialibus serviunt Syno-
chis.

Induti armorum vigorem luminis resonantis.
Vigore Triglich, mentem animamq; armantem.
Pervarium Synthema jacere ratiocinio.
Neque super incedere empyreis sparsim ca-
nalibus,

Sed collectim.
Hi verò individua, & sensibilia efficiunt,
Et corporiformia, & destinata in materiam.

ΨΥΧΗ, ΦΥΣΙΣ.

Ὅτι ψυχὴ πῦρ δυνάμει πατρὸς ἔσα φαινόν,
 Ἀθάνατος τε μένει, καὶ ζωὴς δεσπότις ὅτι·
 Καὶ ἔχει κόσμους πολλὰς πληθύνματα κόλπων.
 Νοῦ γὰρ μέμεμα πέλει, τὸ δὲ τεχθέν ἔχει τι σώματι·
 Μιγνυμένων δ' ὀχετῶν, πυρὸς ἀφ' οὗ ἐργα τεύσσει.
 Μετὰ δὲ πατρὸς διανοίας ψυχῆς, ἐγὼ, ναίω·
 Θερμὴ, ψυχῶσα τὰ πάντα, κατέθετο γὰρ
 Νῦν μὲν ἐν ψυχῇ, ψυχῶν δ' ἐν σώματι ὄργῳ.
 Ἡμέων ἐγλαβέθηκε πατρὸς ἀνδρῶν τε θεῶν τε.
 Ἀρδῶν ἐμψυχῶσα φάος, πῦρ, αἰθέρες, κόσμους.
 Συνοφίσταται γὰρ τὰ φυσικὰ ἔργα πρὸ νοεῶν φέγγει
 Τῇ πατρὶ· Ψυχὴ γὰρ ἡ κοσμήσασα τὴν μέγαν
 Οὐρανόν, καὶ κοσμήσα μὲν τῶν πατρὸς.
 Κέερα δὲ καὶ αὐτῆς ἐσήεικται ἄνω.
 Νώτοις δ' ἀμφὶ δεξιὰ φύσις ἀπλείθῃ ἠώρηται.
 Ἀρχεὶ δ' αὖ φύσις ἀκαμάτην κόσμων τε καὶ ἔργων·
 Οὐρανὸς ἔσσει, θεὸν δὲ δέμον ἄδριον καλασύρων·
 Καὶ ταχὺς ἡέλιος περὶ κέντρον, ὅπως ἐθαῖς ἔλθῃ.
 Μὴ φύσεως ἐμὲ λείψεις ἡμαρμήνιον ὄνομα τῆςδε.

ΚΟΣΜΟΣ.

Ὁ ποιητὴς δὲ αὐτεργῶν τεκμήνατο τὸν κόσμον.
 Καὶ τις πυρὸς ὄγκος ἔβη ἕτερος· τὰ δὲ πάντα
 Αὐτεργῶν, ἵνα ὥμα τὸ κοσμητὸν ἐκπολυπευθῇ.
 Κόσμος δ' ἐν ἐκδέλθῃ, καὶ μὴ φαίνεται ὑμνήσας.
 Τὸν ὅλον κόσμον ἐκ πυρὸς, καὶ ὕδατος, καὶ γῆς,
 Καὶ παντοτέρες αἰθέρος.
 Τὸν ἄρρητον, καὶ τὰ ῥητὰ συνδήματα τῶν κόσμων.
 Ἀλλῶν κατ' ἄλλῶν ζωῶν, δὲ μερῶν ἀφ' ὧν ὄχετῶν.
 Ἀνωθεν διήκοντες ἐπὶ τὸ κατ' ἑντικρυ
 Διὰ τῶν κέντρων τὴν γῆν, καὶ πᾶν μέσον, ἄλλον
 Πυρίοχον, ἔνθα κατὰ μέγεθος ὑδάτων ὄχετῶν.
 Ζωοποιεῖν πῦρ.
 Κέντρον ἐπισπέρχων ἑαυτὸν φωτὸς κελεύει.
 Πηγῶν ἄλλον, δὲ τὸ ἐμπύριον κόσμον ἄγει.
 Κέντρον ἀφ' οὗ πᾶσαι μέγας ἀν' τυχὸν ἴσαι ἔασι.
 Σύμβολα γὰρ πατρὸς νόος ἔσπειρε κατὰ κόσμον.
 Μέσον ἦν πατέρων ἐκάστης κέντρον φορεῖται.
 Νῦν γὰρ μέμεμα πέλει· τὸ δὲ τεχθέν ἔχει τι σώματι·

ΟΤΡΑΝΟΣ.

Ἐπτά γὰρ ἔξάρχουσιν πατρὸς εἰρεώματα κόσμων·
 Τὸν ἑρμῶν κυρτὴν σχήματι περικλείσας.
 Πῆξεν δὲ πολὺν ὅμιλον ἀστέρων ἀπλανῶν,
 Ζῶων δὲ πλανωμένων ὑφέστηκεν ἐπὶ ἄδα.
 Γῶν δ' ἐν μέσῳ τιθεῖς, ὕδωρ δ' ἐν γαίης κόλποις,
 Ἡέρι δ' ἀνωθεν τέτων.
 Πῆξεν δὲ καὶ πολὺν ὅμιλον ἀστέρων ἀπλανῶν.
 Μὴ τάσι ἐπιπόνῳ πονήσῃ.

ANIMA, NATURA.

Quoniam anima ignis potentiâ patris existens lucidus,
 Immortalisq; manet, & vitæ domina est:
 Et tenet mundi multas plenitudines finium.
 Mentis enim imitamen est, partum verò habet quid corporis.
 Mittis verò canalibus, ignis incorruptibilis opera efficiens.
 Post verò Paternas conceptiones anima, ego, habito:
 Calida, animans omnia, reposuit enim
 Mentem sanè in animâ, animam verò in corpore inertî.
 Nostri imposuit pater hominûmque Deûmque.
 Affatim animans lucem, ignem, æthera, mundos.
 Coexistunt namque naturalia opera mentali splendori
 Patris. Anima enim est quæ ornâvit magnum Cœlum, & quæ ornat simul cum patre.
 Cornua & ipsius firmata sunt sursum.
 Humeros verò circa Dæx natura immensa attollitur.
 Imperat rursus natura infatigabilis mundisque operibûsque:
 Cœlum ut currat sursum æternum trahens:
 Et celer sol circa centrum, ut assuetus veniat.
 Non naturæ inspicias fatale nomen ejus.

MUNDUS.

Factor qui per se operans fabrefecit mundum.
 Etenim quædam ignis moles erat altera: hæc Omnia
 Per se efficiens, ut corpus mundanum——
 Mundus ut manifestus, & non videatur membraneus.
 Totum mundum ex igne, & aquâ, & terrâ,
 Et omni-alente aere.
 Ineffabilia, & fabilia synthemata mundi.
 Aliam per aliam vitam, à partitis canalibus.
 Desuper permeantis in oppositum
 Per centrum terræ, & quintum medium, alium
 Igneum, ubi descendit usque ad materiales canales.
 Vitifer ignis.
 Centro incitans Seipsum lumine resonante.
 Fontanum alium, qui Empyreum mundum ducit.
 Centrum à quo omnes usque quo fortè æquales fuerint.
 Symbola enim paterna mens feminavit per mundum.
 Medium inter patres singulæ centrum fertur.
 Mentis enim imitamen est: quod verò partum est habet quid corporis.

COELUM.

Septem enim in moles formavit Pater firmamenta mundorum:
 Cœlum rotundâ figurâ circumcludens.
 Fixitque multum cœtum astrorum inerrantium,
 Animaliumque errantium constituit septenarium.
 Terram in medio posuit, aquamque in terræ finibus.
 Aeremque supra hæc.
 Fixitque multum cœtum astrorum inerrantium.
 Tensione, non laboriosâ malâ.

Πήξῃ ὃ πλάνῳ ἐκ ἐχέσῃ φέρεσθαι.
 Ἐπὶξῃ ὃ καὶ πολὺν ὁμίλον ἀσέρον ἀπλανῶν.
 Τὸ πῦρ περὶ τὸ πῦρ ἀναγκάσας.
 Πήξῃ πλάνῳ ἐκ ἐχέσῃ φέρεσθαι.
 Ἐξ αὐτοῦ ὑπέστησεν, ἑβδόμον ἡελίου,
 Μεσεμβολίτας πῦρ.
 Τὸ ἀτακτὸν αὐτῷ δὲ τὰ τοῖς ἀνακρεμάσας ζώναις.
 Τίτλει γὰρ ἡ θεὰ, ἡελίον τε μέγαν, καὶ λαμπρὸν σελεύων.
 Αἰθέρι, ἥλιε, πνεῦμα σελεύων ἀέρι· ἄγοι,
 Ἡλιακῶν τε κύκλων, καὶ μινυαίων καναχισμῶν,
 Κόλπων τε ἡερίων.
 Αἰθέρι μέλει, ἡελίε τε καὶ μινυῖ ἀρχεῖ, ἡ τε ἡέρι·
 Καὶ πάλιν αἶθερ, μινυαῖός τε δέξιμό, καὶ πόλι· ἡελίοιο.
 Συλλέγει αὐτὸν, λαμβάνουσα αἰθέρις μέλει,
 Ἡελίε τε, σελεύων τε, καὶ ὅσα ἡέρι συνέχοιται.
 Πῦρ περὶ βροχέτευμα, καὶ περὶ ταμίαις.
 Χαίται γὰρ ἐς ὅσον πεφυκότι φωτὶ βλέπονται,
 Ἐνθα Κέν·
 Ἡελί· παρὲς δὲ ἐπισκοπῆν πόλον ἀγνόν.
 Αἰθέριός τε δέξιμό, καὶ μινυῖ ἀτλή· ἐρμῇ,
 Ἡερί· τε πόλι.
 Ἡελί· τε μέγαν, καὶ λαμπρὸν σελεύων.

X P O N O Σ.

Θεὸν ἐκκόσμιον, αἰώνιον, ἀπέθαντον.
 Νέον, καὶ πρεσβύτην, Ἐλικοφθῆ.
 Καὶ πηγᾶν ἄλλον, ὃς ἔμπύειον κόσμον ἄγει.

Ψ Υ Χ Η, Σ Ω Μ Α, Α Ν Θ Ρ Ω Π Ο Σ.

Χρή σε πεινᾶν περὶ τὸ φαῖ· καὶ παρὲς αὐγῆς,
 Ἐνθα ἐπέμφοθι σοὶ ψυχῇ, πολὺν ἐναρμόνιον.

Ταῦτα πατὴρ ἐνόησε, βροτὸς δ' οἱ ἐψύχατο.

Σύμβολα γὰρ πατρικῆς νό· ἔσπερε ταῖς ψυχαῖς.
 Ἐρωτι βαθεῖ ἀναπλήσας τὴν ψυχῇ.
 Καλέσθαι γὰρ νῦν ἐν ψυχῇ, ἐν σώματι ὃ
 Ἰμέας ἐγκατέθηκε πατὴρ ἀνδρῶν τε θεῶν τε.
 Ἀσώματα μὲν ἔστι τὰ θεῖα πάντα.
 Σώματα δ' ἐν αὐτοῖς ὑμῶν ἐνεκεν ἐνδεδέσθαι.
 Μὴ δυναμῶς κατὰσχέειν ἀσώματος ἢ σώματος,
 Διὰ τὴν σώματικὴν, εἰς ἣν ἐνεκρυσταίνετε, φύσιν.

Ἐν ὃ θεῷ κῆναι περὶ ἑλκυσσάμεναι ἀκμαίαις.
 Ἐκ πατρὸς κατιόντες, ἀπ' ὧν ψυχῇ κατιόντων
 Ἐμπύειον δρέπειαι καρπῶν, λυχότερον ἀνθ·.

Διὸ καὶ νοήσασαι τὰ ἔργα τῶ πατρὸς
 Μοίρης ἐμαρτύρησεν τὸ πλεον ἐδύγουν ἀναδῆς.
 Κἄν γὰρ τὴν ψυχῇ ἴδης ἀπαλάσσαν,
 Ἄλλ' ἄλλῳ ἐνίστοι πατὴρ, ἐναείθμιον ἵνα.
 Ἡ μάλα δὲ κῆναι γε μακάριστα ἐξοχα πασέων
 Ψυχῶν, ποτὶ γὰρ ἀπ' ἐρενθῶν περὶ ἑλκυσσάμεναι.
 Κῆναι ὁλοκαί τε, καὶ ἐφατὰ νείματα ἔχουσαι.
 Ὅσας ἀπ' αἰγλήσει, ἀναξ, σέθεν, ἡ ὃ καὶ αὐτῶ
 Ἐκ Διὸς ἐξεγύοντο. Μίτη κρεῖσθαι ὑπ' ἀνάγκης
 Ἡγείδω ψυχῆς βάθ· ἄβροτον, ὁμοία δ' ἀρδῶν

Πάντα ἐκπέτασον ἀπ' αὐτοῦ.
 Μήτε κάτω νόσος εἰς τὴν μελαναυγέα κόσμον.

Sed fixione errorem non habente in motu.
 Fixitque multum coetum astrorum inerrantium.
 Ignem ad ignem cogens.
 Fixione errorem non habente in motu.
 Sex eos constituit, septimum Solis,
 In medium jaciens ignem.
 Inordinationem eorum bene-ordinatis suspendens
 zonis.
 Parturit enim Dea Solemque magnum, & splen-
 didam Lunam.
 Ether, Sol, spiritus Lunæ, aeris ductores,
 Solariumque circulorum, & lunarium est crepi-
 tum,
 Sinuumque aereorum.
 Etheris cantus, Solisque, & Lunæ canalium, &
 aeris.
 Et latus aer, lunarisque cursus, & polus Solis.
 Colligit ipsum, accipiens ætheris harmoniam,
 Solisq; Lunæque, & quæcunque aere continentur.
 Ignis ignis derivatio, & ignis pennis.
 Crines enim in acutum nato lumini conspiciun-
 tur,
 Ubi Saturnus.
 Sol afflatur intuitu polum purum.
 Etherisque cursus, & Lunæ ingens impetus,
 Aerique fluxus.
 Solemque magnum, & splendidam Lunam.

T E M P U S.

Deum mundanum, æternum, infinitum.
 Juvenem, & senem—
 Et fontanum aliud, quod empyreum mundum
 ducit.

A N I M A, C O R P U S, H O M O.

Oportet te festinare ad lucem & patris lumina,
 Unde missa est tibi anima, multam induta men-
 tem.
 Hæc pater mente concepit, mortalisque ei est
 animatus.
 Symbola enim paterna mens seminavit in animis
 Amore profundo replens animam.
 Reposuit enim mentem in animâ, in corpore verò
 Vos reposuit pater hominumque deumque.
 Incorporea quidem sunt divina omnia.
 Corpora verò in ipsis vestri causâ sunt alligata.
 Non potentes continere incorporeos corpora,
 Ob corpoream, in quam concentrati estis, natu-
 ram.
 Inque deo jacent faces trahentes validas.
 A patre descendentes, à quibus anima descenden-
 tibus
 Empyreos carpit fructus, animam alentem flo-
 rem.
 Ideoque mente concipientes opera patris
 Parcæ fatalis alam fugiunt inverecundam.
 Et si hanc animam videris redeuntem,
 At aliam imittit pater, ut in numero fit.
 Certè valde illæ sunt beatissimæ supra omnes
 Animas, ad terram à Cælo profusæ.
 Illæque divites, & ineffabilia stamina habentes.
 Quæcunque à lucente, ô rex, à te, vel ipso
 Jove sunt progenitæ. Miti validâ à necessitate
 Ducatur animæ profunditas immortalis oculis
 que affatim
 Omnes sursum extende.
 Nec deorsum pronus sis in nigricantem mun-
 dum.

Cui

ὦ βαθὺς αἰὲν ἄπυστος ὑπέστρωται τε, καὶ Ἄδης

Ἀμφικνεφής, ῥιπῶν, εἰδωλοχαρής, ἀνόητος,

Κρημνώδης, σκολίδς, πωρὲν βάθου αἰὲν ἐλίωων,

Ἀένυμφάων ἀφανὲς δέμας, ἀργὸν, ἄπνυμον.

Καὶ ὁ μισοφανὴς κόσμος, καὶ τὰ σκολιὰ ῥιπῶν
ἔφ' ὃν πολλοὶ καίασαί εἰσι.

Ζήτησον ὧδ' ἄδσον.

Δίξεο σὺ ψυχῆς ὀχετὸν, ὅθεν, ἢ τίνι τάξει

Σώματι τιθύσας, ὅπῃ τάξιν ἄφ' ἧς ἐρρύνης

Αὐθις ἀναστήσεις, ἱερῷ λόγῳ ἔργον ἐνώσας.

Μήτε κάτω νύκτις, κρημνός, καὶ γῆς ὑπόκειται,

Ἐπ' ἀπὸρρυ σύρων καὶ βαθμίδος· ἢν ὑπο

Δηνὴς ἀνάγκης θρόνος ὅςτι.

Μὴ σὺ αὖξανε τὴν εἰμαρμένην.

Ψυχὴ ἢ μερῶν θρόνον ἄγχει πῶς εἰς ἐαυτήν.

Οὐδὲν θνητὸν ἔχουσα, ὅλη θεόθεν μεριβάσκει.

Ἀρμονίαν αὐχὲ γὰρ, ὅφ' ἢ πέλε σῶμα βρόττον.

Ἐκλείνας πύεινον νῦν ἔργον ἐπ' ἐνσεβίης,

Ῥῶτον καὶ σῶμα σαώσεις.

Ἔστι καὶ εἰδὼλῳ μερὶς εἰς τόπον ἀμφιφάνου.

Παιτὸθεν ἀπλάσφ' ψυχῇ πυρὸς ἡνία τῶνον.

Ὁ πυριδαλπίης ἐννοια πρῶτῃσιν ἔχει τάξιν.

Τῷ πυρὶ γὰρ βροτὸς ἐμπελάσας θεόθεν φάος ἔξῃ.

Διθυόνοντι γὰρ βροτὸς κρεπτοὶ μάκαρες τελέουσι.

Αἱ ποῖναι μερῶν ἀγκυρεῖται.

Καὶ τὰ κακῆς ὕλης βλαστήματα χρεῖα, καὶ ἐσθλά.

Ἐλπίς τρεφέτω σε πυρὶος ἀγγελικῶ ἐν χώρῳ.

Ἀλλ' ἐκ εἰδέχεται κείνης τὸ θέλῃ παλαιοὺς νῦν,

Μέχεις αἰν' ἐξέλθῃ λήθης, καὶ ῥῆμα λάλησιν.

Μνήμην εἰσεμνήσθαι παλαιοῦ συνδήματός ἀγνῶ.

Τοῖς δ' διδασκτὸν φάος ἔδωκε γνῶσιμα λαβεῖν.

Τὰς δ' ὑπνώοντας εἰς ἐνεκάρπισεν ἀλκῆς.

Μὴ πείμα μολῶντες, μήτε βαδύνης τὸ ἐπίπεδον.

Μήτε τὸ τ' ὕλης σκύβαλον κρημνῷ καίασαί τις.

Μὴ ἐξάξῃς, ἵνα μὴ ἐξίσσας ἔχη τι.

Βίη ὅτι σῶμα λιπὸν ψυχῇ καθαρώταται.

Ψυχῆς ἐξωστήρες, ἀνάπνοισι, ἔυλυτοί εἰσι.

Λαίῃς ἐν λαγύσιν Ἐκάτης ἀρετῆς πέλε πηγὴ,

Ἐνδον ὅλη μέμνεσα, τὸ πάρεδνον ἢ περιῖστα.

ὦ τολμηρεστάτης φύσεως, ἀνθρώπου, τέχνασμα!

Μὴ τὰ πελάγια μέτρα γαίης ὑπὸ σὺν φρένα βάλλας,

Οὐ γὰρ ἀληθείης φυτὸν ἐνὶ χθονί.

Μήτε μέτρα μέτρα μελὶς κανόνας συναθροίξας,

Ἀιδίῳ βελῇ φέρεται, ἔχ' ἕνεκα σοῦ.

Μλωαῖον μὲν δρέμματα, καὶ ἀσέλιον περὶ πόδαμα

Μλωῖς ῥοῖζον ἔασον, αἰετρεχέι ἔργῳ ἀνάγκης

Ἀσέλιον περὶ πόδαμα, σέθεν χάειν ἐκ ἐλοχάδῃ.

Ἀιδεῖται ὀρνίθων θαρσὺς πλατὺς ἢ ποτ' ἀληθείης.

Οὐ θυσιῶν σπλάγχνων τ' ὅτομαι· τάδ' ἀδύρματα
πάντα,

Εμπροσθεν ἀπάτης σπείγματα· φεύγε σὺ ταῦτα

Μέλλων ἐνσεβίης ἱερὸν ὧδ' ἄδσον ἀνοίγῃν.

Cui profunditas semper infida substrata est, & Hades

Circumquaque caligans, squalidus, idolis gaudens, Amens,

Præcipitosus, tortuosus, cæcum profundum semper involvens,

Semper desponsus obscuram faciem, inertem, Spiritu-carentem.

Et Ofor luminis mundus, & tortuosi fluxus

A quibus vulgus attrahitur.

Quære paradisum.

Quære tu animæ canalem, unde, aut quo ordine

Corpori inservieris, in ordinem à quo effluxisti

Rursus restituas, sacro sermoni operam uniens.

Neque deorsum sis pronus, præcipitium in terrâ subest,

Septemvius trahens per gradus: quo sub

Horribile necessitatis Thronus est.

Ne tu augeas fatum.

Anima hominum Deum coget quodammodo in seipsam:

Nihil mortale habens, tota à Deo est ebria facta Harmonium resonat namque, sub quâ est corpus mortale.

Extendens igneam mentem ad opus pietatis,

Ex fluxile corpus servabis.

Est & idolo portio in loco circumlucente.

Undique infictâ animâ ignis habenas tende.

Ignem calens cogitatio primum habet ordinem.

Igni namque mortalis propinquans à Deo lumen habebit.

Immoranti enim mortali præstò Dii aderunt.

Pœnæ hominum sunt angores.

Et malæ materiæ germina utilia sunt, & bona.

Spes nutriat te ignea Angelicâ in regione.

Sed non recipit illius velle Paterna mens,

Donec non exeat, ex oblivione, & verbum loquatur.

Memoriam indens Paterni Synthematismis puri.

His quidem discibile lucis dedit notitiam suscipere.

Hos verò & somnolentos sui fructum dedit roboris.

Nè spiritum macules neque profundum fac superficiem.

Neque materiæ quisquiliis præcipitio relinquant.

Nè educas, nè exiens habeat quidpiam.

Vi corpus relinquentium animæ sunt purissimæ.

Animæ expulsores, respiratores, & faciles soluti sunt.

Sinistris in lumbis Hecates virtutis est fons,

Intus tota manens, virgineum non abiciens.

O audacissimæ naturæ, homo, artificium!

Neque ingentes mensuras terræ in tuam mentem pone,

Non enim veritatis planta est in terrâ.

Neque in mensuris mensuras Solis regulas congregans,

Æterno consilio fertur, non gratiâ tui.

Lunarem quidem cursum, & astreum progressum

Lunæ strepitum dimitte, semper currit operâ necessitatis

Astreus progressus, tui gratiâ non est partus.

Æthereus avium pes latus nunquam verus est.

Non sacrificia visceraque cupio: hæc sunt omnia ludi,

Mercatoriæ deceptionis firmamenta; fuge tu hæc

Si vis pietatis sacrum paradisum aperire.

Ubi

Ἐνδ' ἀρετῇ, σοφίᾳ τε, καὶ ἀνομίᾳ συνάγονται.

Σὸν γὰρ ἀγρίον θῆρες χθονὸς οἰκήσουσι.
Αὐτὰς δ' ἡ χθὼν καλῶει καὶ ἐς τέκνα μέχρεις.

ΔΑΙΜΟΝΕΣ, ΤΕΛΕΤΑΙ.

Ἡ φύσις παῖδα ἔχει τὰς δαίμονας ἀγνοῦς.
Καὶ τὰ κακῆς ὕλης βλαστήματα χρεῖα, καὶ ἐσθλά.
Ἀλλὰ ταῦτα ἐν ἀβάτοις σπηλοῖς διανοίας ἀνεκίττω.
Πῦρ ἱκελον σκυρτηδὸν ἐπ' ἡέρθ' οἶδμα τιταίνων,

Ἡ καὶ πῦρ ἀτύπωτον, ὅθεν φονὴν προθέουσιν,

Ἡ φῶς πλέσιον ἀμριγνύω, ροιζαῖον, ἐλιχθέν·

Ἀλλὰ καὶ ἵππον ἰδὲν φωτὸς πλέον ἀσεχέπλοντα,
Ἡ καὶ παῖδα τέοις νότοις ἐποχόμενον ἵππου,

Ἐμπυρον, ἢ χρυσῷ πεπυκασμένον, ἢ παλίγυμνον,
Ἡ καὶ τοξόνοστα, καὶ ἐσῶτα ἐπὶ νότοις.
Πολλάκις γὰρ λέξης μοι, ἀθρήσης πάντῃ λέοντα,
Οὔτε γὰρ ἐρῶνι κρυτὸς τότε φαίνεται ὄγκθ'·
Ἀσέρες δ' ἀάμπουσι, τὸ μύνης φῶς κεκάλυπται,
Χθὼν ἔχ' ἔσκηκε, βλέπειαί τε πάντα κεραυνοῖς.
Μὴ φύσεως καλέσης αὐτόπλεον ἀγαλμα,
Οὐ γὰρ χρὴ κέινυς σε βλέπειν πλεῖν σῶμα τελεσθῆ.

Ὅτε τὰς ψυχὰς δέλγοντες αἰετὶς τὴν τελετὴν ἀπά-
γουσι.

Ἐκ δ' ἄρα κόλπων γαίης θρώσκουσι χθόνιοι κύνες,
Οὐ ποτ' ἀληθεὲς σῶμα βροτῶν ἀνδρῶν δεικνύντες,

Ἐνέργειαι περὶ τὴν Ἑκατικὴν σφάλαρον.
Ὀνόματα βάρβαρα μή ποτ' ἀλλάξεις,
Εἰσὶ γὰρ ὀνόματα παρ' ἐκάστοις θεοσδόστα
Δύναμιν ἐν τελεταῖς ἀρρήτων ἔχοντα.
Ἡνίκα βλέψῃς μορφῆς ἄτερ ὀπίσθον πῦρ,
Δαμπόμῃον σκυρτηδὸν ἔλκε καὶ βένθεα κόσμῳ,

Καὶ πῦρ φωνῶν.

Ubi Virtus, sapientiâque, & bona lex congregan-
tur.

Tuum enim vas bestiarum terræ habitabunt.
Ipsas autem terrâ sepeliit ad filios usque.

DÆMONES, SACRIFICIA.

Natura suadet esse Dæmonas puros.

Et mala materiæ germina, utilia, & bonâ.

Sed hæc in abditis septs mentis evolvo.

Ignis simulacrum saltatim in aere in tumorem
extendens,

Vel etiam ignem infiguratum, unde vocem cur-
rentem,

Vel lumen abundans radians, streperum, convo-
lutum :

Sed & equum videre luce magis fulgurantem,

Vel etiam puerum suis humeris inequantem
equo,

Ignitum, vel auro distinctum, vel spoliatum,

Vel etiam sagittantem, & stantem super humeris.

Multoties si dixeris mihi, cernes omnia leonem,

Neque enim coelestis curvitas tunc apparet moles.

Astra non lucent, Lunæ lux opertum est,

Terra non stat, cernuntur verò cuncta fulminibus.

Neque naturæ voces per se visibile simulacrum,

Non enim oportet illos te spectare antequam
corpus Sacris purgetur.

Quando animas mulcentes semper à Sacris abdu-
cunt.

Ergo ex sinibus terræ exiliunt terrestres canes,
Nunquam verum corpus mortali homini mon-
strantes.

Operare circa Hecaticum turbinem.

Nomina barbara nunquam mutaveris,

Sunt enim nomina apud singulos à Deo data

Potentiam in Sacris ineffabilem habentia.

Quando videris formâ sine Sacrum ignem,

Collucentem saltatim totius per profundum
mundi,

Audi ignis vocem.

THE
ORACLES
OF
ZOROASTER;

Collected By
FRANCISCUS PATRICIUS.

MONAD. DYAD. TRIAD.

WHere the Paternal Monad is.
The Monad is enlarged, which generates
Two.
For the Dyad sits by him, and glitters with Intellectual Sections.
And to Govern all things; and to Order all things
not Ordered.
For in the whole World shineth the Triad, over
which the Monad Rules.
This Order is the beginning of all Section.
For the Mind of the Father said, that all things
be cut into three.
Whose Will assented, and then all things were divided.
For the Mind of the Eternal Father said into
three, Governing all things by Mind.
And there appeared in it (the Triad) Virtue and
Wisdom,
And Multifacient Verity.
This way floweth the Shape of the Triad, being
pre-existent.
Not the first (Essence) but where they are measured.
For thou must conceive that all things serve these
three Principles.
The first course is Sacred, but in the middle.
Another the third, aerial; which cherisheth the
Earth in Fire.
And Fountain of Fountains, and of all Fountains.
The Matrix containing all things.
Thence abundantly springs forth the Generation
of multivarious Matter.
Thence extracted a prester the flower of glowing
Fire,
Flashing into the Cavities of the World: for all
things from thence
Begin to extend downwards their admirable Beams

FATHER. MIND.

THe Father hath snatched away himself; neither
hath he shut up his own fire in his
Intellectual Power.
For the Father perfected all things, and delivered
them over to the second Mind,
Which the whole Race of Men call the first
Light begotten of the Father; for he alone
Having crop'd the Flower of the Mind from the
Fathers Vigour.
For the Paternal self-begotten Mind understanding [his] Work,
Sowed in all the fiery bond of Love,

That all things might continue loving for ever.
Neither those things which are intellectually context in the light of the Father in all things.
That being the Elements of the World they might persist in Love.
For it is the Bound of the paternal Depth, and the Fountain of the Intellectuals.
Neither went he forth, but abode in the paternal Depth,
And in the Adytum according to Divinely-nourished Silence.
For the Fire once above, shutteth not his Power into Matter by Actions, but by the Mind.
For the paternal Mind hath sowed Symbols thro' the World,
Which understandeth Intelligibles, and beautifieth ineffables.
Wholly Division and Indivisible.
By Mind he contains the Intelligibles, but introduceth Sense into the Worlds.
By Mind he contains the Intelligibles, but Introduceth Soul into the Worlds.

MIND. INTELLIGIBLES.
INTELLECTUALS.

And of the one Mind, the intelligible (Mind.)
For the Mind is not without the intelligible; it exists not without it.
These are Intellectuals, and Intelligibles, which being understood, understand.
For the Intelligible is the Aliment of the Intelligent.
Learn the Intelligible, since it exists beyond the Mind.
And of the Mind which moves the Empyrean Heaven.
For the Framer of the fiery World is the Mind of the Mind.
You who know certainly the supermundane paternal Depth.
The intelligible is predominant over all Section.
There is something Intelligible, which it behooves thee to understand with the flower of the Mind.
For if thou enclinest thy Mind, thou shalt understand this also;
Yet understanding something [of it] thou shalt not understand this wholly; for it is a Power Of Circumlucid Strength, glittering with Intellectual Sections (Rays).
But it behooves not to consider this intelligible with Vehemence of Intellection,
But with the ample flame of the ample Mind, which measureth all things,
Except this Intelligible: but it behooves to understand this.
For if thou enclinest thy Mind, thou shalt understand this also,
Not fixedly, but having a pure turning Eye [thou must]
Extend the empty mind of thy Soul towards the Intelligible,
That thou mayst learn the Intelligible, for it exists beyond the Mind.
But every mind understands this God; for the Mind is not
Without the Intelligible, neither is the Intelligible without the Mind.
To the Intellectual Presters of the Intellectual fire, all things

By

By yielding are subservient to the persuasive
Counsel of the Father.

And to understand, and always to remain in a rest-
less whirling.

But insinuating into Worlds the Venerable Name
in a sleepless Whirling.

Fountains and Principles; to turn, and always to
remain in a restless Whirling.

By reason of the terrible menace of the Father.

Under two Minds the Life generating Fountain
Souls is contained;

And the Maker, who self-operating framed the
World.

Who sprung first out of the Mind

Cloathing Fire with Fire, binding them together,
to mingle

The Fountaneous Craters, preserves the flower of
his own fire.

He glittereth with Intellectual Sections, and
filled all things with Love.

Like Swarms they are carried, being broken,
About the Bodies of the World.

That things unfashioned may be fashioned.

What the Mind speaks, it speaks by understand-
ing.

Power is with them, Mind is from Her.

JYNGES. IDEÆ'S. PRINCIPLES.

These being many ascend into the lucid Worlds.
Springing into them, and in which there are
three Tops.

Beneath them lies the chief of Immaterials.

Principles which have understood the intelligible
Works of the Father.

Disclosed them in sensible Works as in Bodies;

Being (as it were) the Ferry-men betwixt the Fa-
ther and Matter.

And producing manifest Images of unmanifest
things,

And inscribing unmanifest things in the manifest
frame of the World.

The Mind of the Father made a jarring Noise,
understanding by vigorous Counsel,

Omniform Idea's; and flying out of one Fountain
They sprung forth; for, from the Fathers was
the Counsel and End,

By which they are connected to the Father, by al-
ternate

Life from several Vehicles.

But they were divided, being by Intellectual fire
distributed

Into other Intellectuals: for the King did set be-
fore the multiform World

An Intellectual incorruptible Pattern; this Print
through the World he promoting, of whose form

According to which the World appeared

Beautified with all kind of Idea's, of which there
is one fountain,

Out of which come rushing forth others undistrib-
uted, being broken about the Bodies of the World,

which through the vast Recesses,
Like Swarms, are carried round about every way.

Intellectual Notions from the paternal Fountain
cropping the flower of Fire.

In the point of sleepless time, of this Primigeni-
ous Idea.

The first self-budding fountain of the Father budded.

Intelligent Jynges do (themselves) also understand
from the Father:

By unspeakable Councils, being moved so as to un-
derstand.

HECATE. SYNOCHES. TELETARCHS

For out of him spring all
Implacable Thunders, and the Prester-recei-
ving cavities

Of the Intirely-lucid strength of Father-begotten
Hecate.

And he who begirds (viz.) the flower of Fire, and
the strong

Spirit of the Poles fiery above.

He gave to his Presters that they should guard
the Tops.

Mingling the power of his own Strength in the
Synoches.

O how the World bath intellectual guides inflexible!

Because she is the Operatrix, because she is the
Dispensatrix of Life-giving fire.

Because also it fills the Life-producing Bosom of
Hecate.

And instils in the Synoches the enlivening strength
Of potent fire.

But they are guardians of the works of the Father.

For he disguises himself, professing

To be clothed with the Print of the Images.

The Teletarchs are comprehended with the Sy-
noches,

To these Intellectual Presters of intellectual fire,
All things are subservient.

But as many as serve the Material Synoches,
Having put on the compleatly Armed Vigour of

resounding Light.

With tripple strength fortifying the Soul and the
Mind.

To put into the Mind the Symbol of Variety.

And not to walk dispersedly on the Empyreal
Channels;

But stiffly
These frame Indivisibles, and sensibles,
And Corporiforms, and things destin'd to Matter

SOUL NATURE.

For the Soul being a bright fire, by the power
of the Father

Remains Immortal, and is Mistress of Life;

And possesseth many Complexions of the Cavities of
the World:

For it is in imitation of the Mind; but that which
is born hath something of the Body.

The Channels being intermixed, she performs the
Works of incorruptible Fire.

Next the paternal Conceptions I (the Soul) dwell;
Warm, heating all things; for he did put

The Mind in the Soul, the Soul in the dull Body.

Of us the Father of Gods and Men imposed,
Abundantly animating Light, Fire, Æther, Worlds.

For natural Works co-exist with the Intellectual
Light of the Father, for the Soul which adorn'd

the great
Heaven, and adorning with the Father.

But her Horns are fixed above,
But about the shoulders of the Goddess, immense

Nature is exalted.

Again, indefatigable Nature commands the Worlds
and Works.

That Heaven drawing an eternal course may run.

And the swift Sun might come about the Center
as he useth.

Look not into the fatal name of this Nature.

H h h h

T H E

THE WORLD.

THe Maker who operating by himself framed the World.

And there was another Bulk of fire,
By it self operating all things that the Body of
the World might be perfected,
That the World might be manifest and not seem
Membranous.

The whole World of Fire, and Water, and Earth,
And all-nourishing Æther,
The unexpressible and expressible Watch-words of
the World.

One Life by another from the distributed Channels
Passing from above to the opposite Part,
Through the Center of the Earth; and another
fifth Middle.:

Fiery Channel, where it descends to the material
Channels.

Life-bringing fire.

Stirring himself up with the Goad of resounding
Light.

Another fountainous, which guides the Empyrean
World.

The Center from which all (Lines) which way so-
ever are equal.

For the paternal Mind sowed Symbols through
the World.

For the Center of every one is carried betwixt the
Fathers.

For it is in imitation of the Mind, but that which
is born hath something of the Body.

HEAVEN.

For the Father congregated seven Firmaments
of the World;

Circumscribing Heaven in a round Figure,
He fixed a great company of inerratick Stars,
And he constituted a Septenary of erratick Ani-
mals.

Placing Earth in the middle, and Water in the
middle of the Earth.

The Air above these.

He fixed a great Company of inerratick Stars,
To be carri'd not by laborious and troublesome
Tension,

But by a settlement which hath no Error.

He fixed a great Company of inerratick Stars,
Forcing Fire to Fire,

To be carried by a settlement which hath not Error
He constituted them six; casting into the midst
The fire of the Sun,

Suspending their Disorder in well-ordered Lones.

For the Goddess brings forth the great Sun, and
the bright Moon.

O Æther, Son, Spirit, Guides of the Moon and
of the Air;

And of the solar Circles, and of the Monthly clash-
ings,

And of the Aerial Recesses.

The Melody of the Æther, and of the Passages of
the Sun, and Moon, and of the Air,

And the wide Air, and the Lunar Course, and the
Pole of the Sun.

Collecting it, and receiving the Melody of the Æ-
ther,

And of the Sun, and of the Moon, and of all that
are contained in the Air.

Fire, the Derivation of fire, and the Dispen-
ser of fire;

His Hair pointed is seen by his native Light;
Hence comes Saturn.

The Sun Assessor beholding the pure Pole;
And the Ætherial Course, and the vast Motion of
the Moon,

And the Aerial fluxions,
And the great Sun, and the bright Moon.

TIME.

THE Mundane God, Æternal, Infinite.
Young, and Old, of a Spiral form.
And another fountainous, who guides the Empy-
real Heaven.

SOUL BODY. MAN.

IT behoves thee to hasten to the Light, and to
the Beams of the Father;

From whence was sent to thee a Soul cloathed
with much Mind.

These things the Father conceived, and so the mor-
tal was animated.

For the paternal Mind sowed Symbols in Souls;
Replenishing the Soul with profound Love.

For the Father of Gods and Men placed the Mind
in the Soul;

And in the Body he established you.

For all Divine things are incorporeal.

But Bodies are bound in them for your sakes:

Incorporeals not being able to contain the bodies.

By reason of the Corporeal Nature in which you
are concentrated.

And they are in God, attracting strong flames.
Descending from the Father, from which descen-
ding the Soul

Crops of Empyrean fruits the Soul-nourishing
flower.

And therefore conceiving the Words of the Father
They avoid the audacious wing of fatal Destiny;

And though you see this Soul manumitted,
Yet the Father sends another to make up the
Number.

Certainly, these are superlatively blessed above all
Souls; they are sent forth from Heaven to Earth,

And those rich Souls which have unexpressible
fates;

As many of them (O King) as proceed from shi-
ning Thee, or from

Jove Himself, under the strong power of (his)
Thread.

Let the immortal Depth of thy Soul be predomi-
nant; but all thy eyes

Extend upward.

Stoop not down to the dark World,
Beneath which continually lies a faithless Depth;

and Hades

Dark all over, squallid, delighting in Images, un-
intelligible,

Precipititious, Craggy, a Depth; always Rolling,
Always espousing an opacous, idle-breathless Body,

And the Light-hating World, and the winding
currents,

By which many things are swallowed up.

Seek Paradise;

Seek thou the way of the Soul, whence or by what
Order

Having served the Body, to the same place from
which thou didst flow.

Thou maist rise up again, joyning Action to sacred
speech,

Stoop not down, for a Precipice lies below on the
Earth;

Drawing

Drawing through the Ladder which hath seven
 steps, Beneath which
 Is the Throne of Necessity.
 Enlarge not thou thy Destiny.
 The Soul of Man will in a manner clasp God to
 her self;
 Having nothing Mortal, she is wholly inebriated
 from God:
 For she boasts Harmony, in which the mortal Bo-
 dy exists.
 If thou extend the fiery Mind
 To the work of Piety, thou shalt preserve the
 flexible Body.
 There's a room for the Image also in the circumlu-
 cid place.
 Every way to the unfashioned Soul stretch the
 Reins of Fire.
 The Fire-glowing Cogitation hath the first Rank.
 For the Mortal approaching to the Fire, shall have
 Light from God.
 For to the slow Mortal the Gods are swift.
 The Furies are Stranglers of Men.
 The bourgeons, even of ill Matter, are profitable
 good.
 Let Hope nourish thee in the fiery Angelic Region.
 But the Paternal Mind accepts not her Will,
 Until she go out of Oblivion, and pronounce a
 Word, Inserting the remembrance of the pure
 paternal Symbol.
 To these he gave the docible character of Life to
 be Comprehended.
 Those that were asleep he made fruitful by his
 own strength.
 Defile not the Spirit nor deepen a Superficies.
 Leave not the Dross of Matter on a Precipice.
 Bring her not forth, lest going forth she have
 something.
 The Souls of those who quit the Body violently,
 are most pure.
 The ungirders of the Soul, which give her breath-
 ing, are easie to be loosed.
 In the side of sinister Hecate, there is a Fountain
 of Vertue;
 Which remains entire within, not omitting her
 Virginity.
 O Man the Machine of Boldest Nature!
 Subjett not to thy Mind the vast measures of the
 Earth; For the Plant of Truth is not upon Earth.
 Nor measure the Measures of the Sun, gathering
 together Canons;
 He is moved by the Eternal Will of the Father,
 not for thy sake.

Let alone the swift Course of the Moon: she runs
 ever by the impulse of Necessity.
 The Progression of the Stars was not brought
 forth for thy sake.
 The aetherial wide flight of Birds is not voracious,
 And the Dissections of Entrails and Victims all
 these are toys.
 The supports of gainful Cheats; fly thou these
 If thou intend to open the Sacred Paradise of Piety
 Where Virtue, Wisdom, and Equity, are assembled.
 For thy Vessel the Beasts of the Earth shall inhabit.
 These the Earth bewails, even to their Children.

DÆMONS. RITES.

Nature perswades there are pure Demons;
 The bourgeons, even all ill matter, are pro-
 fitable and good,
 But these things I revolve in the recluse Temples
 of my Mind,
 Extending the like Fire sparklingly into the spa-
 cious Air
 Or Fire unfigur'd, a Voice issuing forth.
 Or Fire abundant whizzing and winding about
 the Earth,
 But also to see a Horse more glittering than Light.
 Or a Boy on [thy] shoulders riding on a Horse,
 Fiery or adorned with Gold, or divested,
 Or shooting and standing on [thy] shoulders.
 If thou speak often to me, thou shalt see absolutely
 that which is spoken:
 For then neither appears the Celestial concave
 Bulk, nor do the Stars shine: The light of the
 Moon is covered,
 The Earth stands not still, but all things appear
 Thunder.
 Invoke not the self-conspicuous Image of Nature;
 For thou must not behold these before thy Body
 be initiated.
 When soothing Souls they always reduce them
 from these Mysteries.
 Certainly out of the Cavities of the Earth spring
 Terrestrial Dogs.
 Which shew no true sign to mortal Man.
 Labour about the Hecatick Strophalus.
 Never change Barbarous Names;
 For there are Names in every Nation given from
 God, which have an unspeakable power in Rites.
 When thou seest a Sacred Fire without Form,
 Shining flashingly through the depths of the World,
 Hear the Voice of Fire.

PLETHO

HIS

EXPOSITION

Of the more obscure Passages in
these ORACLES.

*Seek thou the way of the Soul, whence or by what Order.
Having served the Body, to the same Order from which thou didst flow.
Thou maist rise up again; joyning Action to Sacred Speech.]*

THe Magi that are Followers of Zoroaster, as also many others, hold, that the Humane Soul is immortal; and descended from above to serve the Mortal Body, that is, to operate therein for a certain time; and to animate, and adorn it to her power; and then returns to the place from which she came. And whereas there are many Mansions there for the Soul, one wholly bright, another wholly dark; others betwixt both partly bright, partly dark: The Soul being descended from that which is wholly bright, into the Body, if she perform her Office well, runs back into the same place; but if not well, she retires into worse Mansions, according to the things which she hath done in Life. The Oracle therefore saith, *Seek thou the Soul's Path*, or the way by which the Soul floweth into thee; or by what course (*viz.* of Life) having performed thy Charge toward the Body, thou may'st mount up to the same place from which thou didst flow down, *viz.* the same Track of the Soul, *joyning Action to Sacred Speech*. By Sacred Speech, he understands that which concerns Divine Worship; by *Action*, Divine Rites. The Oracle therefore saith, that to this Exaltation of the Soul, both Speech concerning Divine Worship (Prayers,) and Religious Rites (Sacrifices) are requisite.

*Stoop not down, for a Precipice lies below on the Earth,
Drawing through the Ladder which hath seven steps; beneath which
Is the Throne of Necessity.]*

He calls the Descension into wickedness, and misery, a Precipice; the Terrestrial and Mortal Body, the Earth: for by the Earth he understands mortal Nature, as by the Fire frequently the Divine; by the Place with seven Ways, he means Fate dependant on the Planets, beneath which there is seated a certain dire and unalterable Necessity: The Oracle therefore adviseth, that thou stoop not down towards the mortal Body, which being subject only to the Fate, which proceeds from the Planets, may be reckoned among those things which are at our Arbitrement: for thou wilt be unhappy

if thou stoop down wholly to the Body, and unfortunate and continually failing of thy Desires, in regard of the Necessity which is annexed to the Body.

For thy Vessel the Beasts of the Earth shall Inhabit.]

The Vessel of thy Soul, that is this mortal Body, shall be inhabited by Worms and other vile Creatures.

Enlarge not thou thy Destiny.]

Endeavour not to encrease thy Fate, or to do more than is given thee in charge, for thou wilt not be able.

For nothing proceeds from the Paternal Principality imperfect.]

For from the Paternal Power, which is that of the Supreme God, nothing proceedeth imperfect, so as thou thy self mightest compleat it; for all things proceeding from thence are perfect; as appears, in that they tend to the Perfection of the Universe.

*But the Paternal Mind accepts not her Will,
Until she go out of Oblivion, and pronounce a Word, Inserting the remembrance of the pure paternal Symbol.]*

The Paternal Mind, (*viz.* the Second God and ready maker of the Soul) admits not her Will or Desire until she come out of the Oblivion, which she contracted by Connexion with the Body; and until she speak a certain word, or conceive in her thoughts a certain Speech, calling to remembrance the Paternal Divine Symbol or Watch-word; this is the pursuit of the good which the Soul calling to remembrance hereby becomes most acceptable to her Maker.

*It behoves thee to hasten to the Light, and to the Beams of the Father:
From whence there was sent to thee a Soul endued with much Mind.]*

The Light and Splendor of the Father is that Mansion of the Soul which is circumlucid, from whence the Soul arrayed with much of the Mind was sent hither, wherefore we must hasten to return to the same Light.

These the Earth bewails, even to their own Children.]

Those who hasten not to the Light, from which their Soul was sent to them, the Earth or Mortal Nature bewails, for that they being sent hither to adorn her, not only not adorn her, but also blemish themselves by living wickedly; moreover the wickedness of the Parents is transmitted to the Children, corrupted by them through ill Education.

The ungirders of the Soul, which give her breathing, are easie to be loosed.]

The Reasons which expell the Soul from Wickedness, and give her breathing, are easie to

to be untied; and the Oblivion which keeps them, is easily put off.

*In the side of the sinister Bed there is a Fountain of Virtue:
Which remains entire within; not emitting her Virginity]*

In the left side of thy Bed, there is the Power or Fountain of Virtue, residing wholly within, and never casting off her Virginity, or Nature void of Passion: for there is always in us the power of Virtue without passion which cannot be put off; although her Energy or Activity may be interrupted: he saith the power of Virtue is placed on the left side, because her Activity is seated on the right: By the Bed is meant the Seat of the Soul, subject to her several Habits.

*The Soul of Man will, in a manner, clasp God to her self.
Having nothing Mortal, she is wholly inebriated from God;
For she boasts Harmony, in which the Mortal Body consists.]*

The Humane Soul will in a manner clasp God, and joyn him strictly to her self, (who is her continual Defence) by resembling him as much as we can possibly; having nothing mortal within her, she is wholly drenched in Divinity, or replenished with Divine Goods; for though she is fetter'd to this mortal Body, yet she glories in the Harmony or Union in which the Mortal Body exists; that is, she is not ashamed of it, but thinks well of her self for it; as being a cause, and affording to the Universe, that, as Mortals are united with Immortals in Man, so the Universe is adorned with one Harmony.

*Because the Soul being a bright fire by the power of the Father,
Remains Immortal, and is Mistress of Life,
And possesseth many completions of the cavities of the World.]*

The second God, who first before all other things proceeded from the Father and supreme God, these Oracles call all along, *The Power of the Father*, and his *intellectual Power*, and the *paternal Mind*. He saith therefore, that *the Soul procreated by this power of the Father, is a bright fire*; that is, a Divine and Intellectual Essence, and *persisteth immortal* through the Divinity of its Essence, and is *Mistress of Life*, viz. of her self, possessing Life which cannot be taken away from her, for, how can we be said to be Masters of such things, as may be taken from us, seeing the use of them is only allowed us? but of those things which cannot be taken from us, we are absolute Masters: The Soul according to her own Eternity, *possesseth many Rooms in the Receptacles of the World*, or divers places in the World, which according as she hath led Life past is allotted to every one.

Seek Paradise.]

The circumlucid Mansion of the Soul.

Defile not the Spirit, nor deepen a Superficies]

The followers of *Pythagoras* and *Plato* conceive the Soul to be a Substance not wholly separate from all Body, nor wholly inseparable; but partly separate, partly inseparable; separable potentially, but ever separate actually. For they assert three kinds of Forms, one wholly separate from matter, the Supercelestial Intelligences, another wholly inseparable from Matter, having a Substance not subsistent by it self but dependent on Matter; together with which Matter, which is sometimes dissolved by reason of its nature subject to Mutation, this kind of Soul is dissolved also and perisheth: this kind they hold to be wholly irrational. Betwixt these they place a middle kind, the rational Soul, differing from the Supercelestial Intelligences, for that it always co-exists with Matter; and from the irrational kind, for that it is not dependant on Matter; but, on the contrary, Matter is dependent on it, and it hath a proper substance potentially subsistent by it self; it is also indivisible, as well as the supercelestial Intelligences, and performing some works in some manner allyed to theirs, being it self also busied in the knowledge and contemplation of Beings even unto the supreme God; and for this reason is incorruptible. This kind of Soul is always co-existent with an Æthereal Body as its *Vehiculum*, which she by continual approximation maketh also Immortal: neither is this her *Vehiculum* inanimate in it self, but it is it self animated with the other species of the Soul, the irrational (which the Wise call the Image of the rational Soul) adorned with Phantasie and Sense, which seeth and hears it self whole through whole; and is furnished with all the Senses and with all the rest of the irrational Faculties of the Soul. Thus by the principal Faculty of this Body, Phantasie, the rational Soul is continually joyned to such a Body, and by such a Body sometimes the humane Soul is joyned with a mortal Body by a certain affinity of Nature, the whole being infolded in the whole enlivening Spirit of the Embryon. This *Vehiculum* it self being of the nature of a Spirit. The Damons Souls differ not much from the humane, only they are more noble and use more noble Vehicles. Moreover, they cannot be mingled with corruptible Nature. Likewise the Souls of the Stars are much better than the Damons, and use better Vehicles; are Bodies splendid by reason of the greatness of the operative faculty: These Doctrines concerning the Soul the *Magi*, followers of *Zoroaster*, seem to have used long before. Defile not this kind of Spirit of the Soul, saith the Oracle, nor deepen it being a superficies; he calls it superficies, not as if it had not a triple dimension, for it is a Body; but to signifie its extraordinary Rarity: nor make it become gross by accession of more matter to its Bulk: for this Spirit of the Soul becomes gross, if it declines too much towards the mortal Body.

There is a room for the Image also in the circumlucid place.]

He calls the Image of the Soul that part which being it self void of irrational, is joyned to the rational

rational part, and depends upon the Vehicle thereof: now he saith that this kind of Image hath a part in the circumlucid Region; for the Soul never layeth down the Vehicle adherent to her.

Leave not the dross of Matter on a Precipice.]

He calls the Mortal Body *the dross of Matter*, and exhorteth that we neglect it not being ill affected, but take care of it whilst it is in this life, to preserve it in Health as much as possible, and that it may be pure, and in all things else correspond with the Soul.

Carry not forth, lest going forth she have something.]

Carry not forth, meaning the Soul, out of the Mortal Body, *lest by going forth* thou incur some danger, implying as much as to carry her forth beyond the Laws of Nature.

If thou extend the fiery Mind to the work of Piety, thou shalt preserve the fluxible Body.]

Extending up thy Divine Mind to the Exercise of Piety or to Religious Rites, and thou shalt preserve the Mortal Body more sound by performing these.

Certainly out of the Cavities of the Earth spring Terrestrial Dogs, Which shew no true sign to Mortal Man.]

Sometimes to many initiated Persons there appear, whilst they are Sacrificing, some apparitions in the shape of Dogs, and several other Figures. Now the Oracle saith, that these *issue out of the Receptacles of the Earth*; that is, out of the terrestrial and mortal Body, and the irrational Passions planted in it, which are not yet sufficiently adorned with Reason; these are apparitions of the Passions of the Soul in performing Divine Rites: meer appearances having no substance, and therefore *not signifying anything true*.

Nature perswadeth that Demons are pure; The bourgeons, even of ill matter, are profitable and good.]

Nature or natural Reason *perswadeth that Demons are Sacred*, and that all things proceeding from God, who is in himself good, are *beneficial*; and the *very bloomings of ill Matter*, or the forms dependent upon Matter are such: also he calls Matter *ill*, not as to its substance, for how can the substance be bad, the bloomings whereof are beneficial and good? but for that it is ranked last among the substances, and is the least participant of good, which littleness of good is here exprest by the Word *ill*: now the Oracle means, that if the bloomings of ill Matter, *viz.* of the last of substances are good, much more are the Demons such, who are in an excellent Rank as partaking of rational Nature and being not mixed with mortal Nature.

The Furies are Stranglers of Men.]

The Furies or the Vindictive Demons clasp Men

close, or restrain and drive them from Vice and excite them to Vertue.

Let the immortal depth of the Soul be predominant; but all thy Eyes Extend quite upward.]

Let the *divine depth of thy Soul* govern and lift thou all thy Eyes or all thy knowing faculties upward.

O Man, the Machine of boldest Nature !

He calls Man the *Machine of boldest Nature* because he attempts great things.

If thou speak often to me, thou shalt see absolutely that which is spoken: For there neither appears the celestial concave bulk Nor to the Stars shine: the light of the Moon is covered, The Earth stands not still, but all things appear Thunder.]

The Oracle speaks as from God to an initiated Person. *If thou often speak to me*, or call me, *thou shalt see that which thou speakest*, *viz.* Me whom thou callest every where: for then thou shalt perceive nothing but *Thunder* all about, fire gliding up and down all over the World.

Call not on the self-conspicuous Image of Nature.]

Seek not to behold the self-seeing *Image of Nature*, *viz.* of the Nature of God, which is not visible to our Eyes: but those things which appear to initiated Persons, as Thunder, Lightning, and all else whatsoever, are only Symbols or Signs, not the *Nature of God*.

Every way to the unfashioned Soul stretch out the Reins of Fire.]

Draw unto thy self every way *the Reins of Fire*, which appear to thee when thou art Sacrificing, with a sincere Soul; *viz.* a simple, and not of various habits.

When thou seest a Sacred Fire, without Form, Shining flashingly through the depth of the World, Hear the voice of Fire.]

When thou beholdest the divine fire void of figure *brightly gliding up and down the World* and graciously smiling, listen to this Voice as bringing a most perfect *Præscience*.

The Paternal Mind hath implanted Symbols in Souls.]

The Paternal Mind, *viz.* the Sedulous Maker of the substance of the Soul, *hath ingrafted Symbols* or the Images of Intelligibles in Souls, by which every Soul possesseth in her self the reasons of Beings.

Learn the Intelligible, for as much it exists beyond the Mind.]

Learn the Intelligible, because it exists beyond *thy Mind*, *viz.* actually; for, tho' the Images of Intellectual

intellectual things are planted in thee by the Maker of All; yet they are but potentially in thy Soul; but it behoves thee to have actually the knowledge of the Intelligible.

There's a certain Intelligible which it behoves thee to comprehend with the flower of thy Mind.]

The Supream God, who is perfectly One, is not conceived after the same manner as other things, but *by the flower of the Mind*, that is, the Supream and Singular part of our Understanding.

For the Father perfected all things and delivered them over to the Second Mind, which the Nations of Men call the First.]

The Father perfected all things, viz. the Intelligible Species, (for they are absolute and perfect) and delivered them over to the second God, next him to rule and guide them: whence, if any thing be brought forth by this God, and formed after the likeness of Him, and the other Intelligible Substance, it proceeds from the Supream Father; This other God, *Men esteem the First*, that is, they who think him the Maker of the World, to whom there is none Superiour.

Intelligent Synges do themselves also understand from the Father; By unspeakable Counsels being moved so as to understand.]

He calls *Synges* the Intellectual Species which are conceived by the Father; they themselves also being conceptive, and exciting Conceptions or Notions, by unspeakable or unutterable Counsels: by Motion here is understood Intellection, not Transition, but simply the Habitude to Notions so as unspeakable Counsels is as much as unmoved, for speaking consists in Motion; the meaning is this, That these Species are immoveable

and have a habitude to Notions not transiently as the Soul.

Oh how the World hath Intellectual Guides inflexible.]

The most excellent of the Intelligible Species, and of those which are brought down by the Immortals in this Heaven, he calls *the Intellectual Guides of the World*; the Coryphaeus whom he conceives to be a God, which is the Second from the Father. The Oracle saying that *the World hath inflexible Guides*, means that it is incorruptible.

The Father hath snatched away himself; Neither hath he shut up his own Fire in his Intellectual Power.]

The Father hath made himself exempt from all others; not including himself neither in his own Intellectual Power, nor in the Second God who is next him; or limiting his own Fire his own Divinity; for it is absolutely ungenerate, and it self existing by it self, so that his Divinity is exempt from all others; neither is it communicable to any other, although it be loved of all: That he communicates not himself, is not out of Envy, but only by reason of the Impossibility of the thing.

The Father infuseth not Fear but Perswasion.]

The Father makes no impression of Fear, but infuseth Perswasion or Love; for he being extremely good, is not the cause of ill to any, so as to be dreadful; but is the cause of all good to all; whence he is loved of all.

These Oracles of Zoroaster many Eminent Persons have confirmed by following the like Opinions; especially the Pythagoreans and Platonists:

PSELLUS

HIS

EXPOSITION

of the ORACLES.

*There is a Room for the Image also
in the Circumlucid place.]*

IMages, εἰδωλα, with the Philosophers, are those things which are connatural to things more Excellent than themselves, and are worse than they; as the Mind is connatural to God, and the Rational Soul to the Mind, and Nature to the Rational Soul, and the Body to Nature, and Matter to the Body: The Image of God is the Mind; of the Mind, the Rational Soul; of the Rational Soul, the Irrational; of the Irrational, Nature; of Nature, the Body; of the Body, Matter. Here the *Chaldaick Oracle* calleth the Irrational Soul the Image of the Rational, for it is connatural to it in Man, and yet worse than it. It saith, moreover, that there is a part assigned to the Image in the circumlucid Region, that is to say, the Irrational Soul, which is the Image of the rational Soul, being purified by Virtues in this Life, after the dissolution of the humane Life, ascends to the place above the Moon, and receives its Lot in the *Circumlucid place*, that is, which shineth on every side, and is splendid throughout; for the place beneath the Moon is circumnebulous, that is, dark on every side: but the Lunary, partly Lucid, and partly Dark, that is, one half bright, the other half dark; but the place above the Moon is circumlucid or bright throughout. Now the Oracle saith, that the circumlucid Place, is not design'd only for the rational Soul, but for its Image also, or the irrational Soul is destin'd to the circumlucid place, when as it cometh out of the Body bright and pure, for the Græcian Doctrine asserting the irrational Soul to be Immortal, also exalts it up to the Elements under the Moon; but the *Chaldaick Oracle*, it being pure and unanimous with the rational Soul, seats it in this circumlucid Region above the Moon. These are the Doctrines of the *Chaldeans*.

Leave not the Dregs of Matter on a Precipice.]

By the *Dregs of Matter*, the Oracle understands the body of Man consisting of the four Elements, it speaks to the Disciple by way of Instruction and Exhortation, thus; not only raise up thy Soul to God, and procure that it may rise above the confusion of Life; but, if it be possible, leave not the Body wherewith thou art cloathed, (and which is *Dregs of Matter*, that is, a thing neglected and rejected, the sport of Matter) in the inferiour World: for this place, the Oracle calls a *Precipice*. Our Soul being darted down hither

from Heaven, as from a sublime place. It exhorteth therefore, that we refine the Body (which he understands by the dregs of Matter) by divine, or that, being stripped, we raise it up to the Æther; or that we be exalted by God to a place Immaterial and Incorporeal, or Corporeal but Æthereal or Coelestial, which *Elias* the *Tisbite* attained; and, before him, *Enoch*, being Translated from this Life into a more Divine Condition, not leaving the dregs of Matter, or their Body, in a Precipice; the Precipice is, as we said, the Terrestrial Region.

Bring not forth, lest going forth she have something.]

This Oracle is recited by *Plotinus* in his Book of the Education of the irrational Soul; it is an excellent and transcendent Exhortation. It adviseth, that a Man busie not himself about the *going forth of the Soul*, nor take care how it shall go out of the Body; but remit the Business of its Dissolution to the course of Nature; for, Anxiety and Sollicitude about the Solution of the Body, and the Education of the Soul out of it, draws away the Soul from better Cogitations, and busieth it in such cares that the Soul cannot be perfectly purified; for if Death come upon us at such time as we are busied about this Dissolution, the Soul goeth forth not quite free, but retaining something of a Passionate Life. Passion the Chaldean defines, a Man's sollicitous thinking of Death; for we ought not to think of any thing, but of the more excellent illuminations; neither concerning these ought we to be sollicitous: but resigning our selves to the Angelical and Diviner Powers, which raise us up and shutting up all the Organs of Sense in the Body and in the Soul also without distractive Cares and Sollicitudes, we must follow God who calls us.

Some interpret this Oracle more simply; *Bring it not out lest it go forth, having something*: that is, Anticipate not thy natural Death, altho' thou be wholly given up to Philosophy; for as yet thou hast not a compleat Expiation; So that if the Soul pass out of the Body by the way of Educating, it will go forth retaining something of Mortal Life: for if we Men are in the Body, as in a Prison, (as *Plato* saith) certainly no Man can kill himself, but must expect till God shall send a Necessity.

Subject not to thy Mind the vast Measures of the Earth;

For the Plant of Truth is not upon the Earth: Nor measure the Measures of the Sun, gathering together Canons:

He is moved by the Eternal Will of the Father, not for thy sake.

Let alone the swift course of the Moon: she runs ever by the impulse of Necessity.

The Progression of the Stars was not brought forth for thy sake.

The Ætherial broad-footed flight of Birds is not voracious.

And the Dissections of Entrails and Victims, all these are Toys.

The supports of gainful Cheats. Fly thou those, If thou intend to open the Sacred Paradise of Piety.

Piety. Where Virtue, Wisdom, and Equity are assembled.)

The Chaldean withdraws the Disciple from all Græcian Wisdom, and teacheth him to adhere only to God, *Subject not (saith he) to thy Mind the vast measures of the Earth; for the Plant of Truth is not on Earth;* that is, enquire not solicitously into the vast Measures of the Earth, as Geographers use to do, Measuring the Earth; for the Seed of Truth is not in the Earth. Nor *measure the measures of the Sun, gathering together Canons; he is moved by the Eternal Will of the Father, not for thy sake:* That is, busie not thy self about the Motion and Doctrine of the Stars, for they move not for thy sake, but are perpetually moved according to the Will of God; *Let alone the swift course of the Moon, she runs ever by the impulse of Necessity:* That is, enquire not anxiously the rolling motion of the Moon, for she runs not for thy sake, but is impelled by a greater necessity. *The Progression of the Stars was not brought forth for thy sake;* that is, the Leaders of the fixed Stars, and the Planets received not their Essence for thy sake. *The Æthereal broad-footed flight of Birds is not veracious;* that is, the Art concerning Birds flying in the Air, called Augury, observing their Flight, Notes, and Pearching, is not true. By *broad feet*, he means the walking or pace of the Foot, in respect of the extension of the Toes in the skin. *And the Dissections of Entrails and Victims, all these are Toys:* that is, the Art of Sacrificing, which enquireth after future Events, as well by Victims, as by inspection into the Entrails of Sacrificed Beasts, are merely Toys. *The supports of gainful Cheats: fly thou those,* that is, fraudulent acquisitions of gain. *If thou intend to open the Sacred Paradise of Piety, where Virtue, Wisdom, and Equity are assembled.* (Thou (saith he) who art under my Discipline, enquire not curiously after these things, if thou wouldst that the Sacred Paradise of Piety be open to thee. The Sacred Paradise of Piety, according to the Chaldeans, is not that which the Book of Moses describes, but the Meadow of sublimest Contemplations, in which there are several Trees of Vertues; and the Wood, (or Trunk) of knowledge, of good and evil, that is, Dijudicative Prudence which distinguisheth Good from Evil; likewise, the Tree of Life, that is, the Plant of Divine Illumination, which bringeth forth to the Soul the fruit of a more holy and better life; in this Paradise, therefore, grow Vertue, Wisdom, and Equity; Vertue is one in General, but hath many Species; Wisdom comprehendeth within it self all the Vertues, which the Divine Mind pronounceth, as only unspeakable.

Seek thou the way of the Soul, whence or by what Order

Having served the Body, to the same order from which thou didst flow,

Thou maist rise up again; joyning Action to Sacred Speech.)

That is, *Seek the Origin of the Soul*, from whence it was produced and served the Body, and how Men cherishing and raising it up by the

Exercise of Divine Rites, may reduce it to the place whence it came. *Uniting Action to Sacred Reason*, is to be understood thus. *Sacred Reason* (or discourse) in us is the Intellectual Life, or rather the supreme faculty of the Soul, which the Oracle elsewhere styles the Flower of the Mind; but this Sacred Reason cannot by its own guidance, aspire to the more sublime Institution, and to the comprehension of Divinity; the work of Piety leads it by the hand to God, by assistance of Illuminations from thence: but the Chaldean by the Telestick Science, perfects (or initiates), the Soul by the power of Materials here on Earth. To this Sacred Reason, saith he, when thou hast united Action, that is, joyned the work of Initiation to the Sacred Reason, or better Faculty of the Soul.

Our Theologist Gregory raiseth the Soul to the more Divine things by Reason and Contemplation: by Reason which is in us the best and most intellectual Faculty; by Contemplation, which is an Illumination coming from above: But Plato affirms, that we may comprehend the ungenerate Essence by Reason and Intellect. But the Chaldean saith, that there is no other means for us to arrive at God; but by strengthening the Vehiculum of the Soul by Material Rites; for it supposeth that the Soul is purified by Stones and Herbs, and Charms, and is rendred expedite for Assent.

Stoop not down; for a Precipice lies below on the Earth.

Drawing through the Ladder which hath seven steps, beneath which is the Throne of Necessity.)

The Oracle adviseth, the Soul which is next to God, that she adhere only to him with her whole Mind, and bend not downwards, for there is a great *Precipice* betwixt God and the Earth which draweth Souls down the *Ladder* which hath *seven Steps*: The *Ladder of seven Steps* signifies the Orbs of the seven Planets; if therefore the Soul decline, she is carried to the Earth through the seven Orbs: but that passage thro' the seven Circles leads her as by so many steps to the Throne of Necessity, whither, when the Soul arriveth, she is necessitated to suffer the terrestrial World.

Never change barbarous Names.)

That is, there are certain *Names* among all Nations delivered to them by God, which have an unspeakable Power in Divine Rites: change not these into the Greek Dialect; as *Seraphim* and *Cherubin*, and *Michael* and *Gabriel*: These in the Hebrew Dialect have an unspeakable Efficacy in Divine Rites; but changed into Greek Names, are ineffectual.

The World hath intellectual Guides inflexible.)

The Chaldeans assert Powers in the World, and call them (*Cosmogogi*) *Guides of the World*, for that they guide the World by provident Motions: These Powers the Oracles call *αὐτοχῆρας*, *Sustainers*, as sustaining the whole World. Un-

moveable implies their settled Power; sustentive, their Guardian-ship; these Powers they design only by the Cause and Immobility of the Worlds: There are also other Powers (*amiliēti*) implacable, as being firm and not to be converted towards these inferiour things, and cause that Souls be never allured with Affections.

Labour about the Hecatine Strophalus.]

The *Hecatine Strophalus* is a Golden Ball, in the midst whereof is a Sapphire; they fold about it a Leather-Thong; it is beset all over with Characters: thus whipping it about, they make their Invocations: these they use to call *Jynges*, whether it be round or triangular, or any other Figure; and whilst they are doing thus, they make Insignificant or Bruitish Cries, and lash the Air with their Whips. The Oracle adviseth to the performance of these Rites or such a Motion of the *Strophalus*, as having an expressible Power. It is called *Hecatine*, as being dedicated to *Hecate*: *Hecate* is a Goddess among the *Chaldeans*, having at her right side the Fountain of Virtues.

If thou speak often to me, thou shalt see absolutely that which is spoken.

For then neither appears the Celestial Concave Bulk, nor do the Stars shine; the light of the Moon is covered,

The Earth stands not still, but all things appear Thunder.]

The Lion is one of the twelve Signs of the Zodiack, and is called the House of the Sun, whose Fountain or the cause of his Lion-formed Constellation the *Chaldeans* calls *λέωνισχον*: now he saith, that amidst the Sacred Rites thou call this Fountain by its Name, thou shalt see nothing else in Heaven but the apparition of a Lion, neither will the *Concave Bulk*, or the Circumference of Heaven appear to thee, neither shall the Stars shine, even the Moon her self shall be covered, and all things shall be shaken; but this Lion-having Fountain takes not away the Essence of those, but their own predominating Existence hides their View.

Every way to the unfashioned Soul, extend the Reins of Fire.]

The Oracle calls the Soul *ἀπλάσων*, that is, without Form and Figure, or most simple, and most pure. Reins of Fire of such a Soul are the expeditious activity of the Theurgick Life, which raiseth up the Fiery Mind to the Divine Light: therefore by stretching the Reins of Fire to the inform Soul, he means, endeavour that all the Faculties consisting both in the Intellect, Cogitation, and Opinion, may receive Divine Illuminations suitable to themselves. This is the meaning of *stretch the Reins of Fire*; but Nature useth to fail, and busie it self in the second or worse Life.

Oh Man, the Machine of boldest Nature!]

Man is called a *Machine* as being framed by God with unspeakable Art: The Oracle likewise

calleth him *audacious Nature*, as being busied about excellent things, sometimes measuring the Course of the Stars, sometimes enquiring into the Orders of the supernaturl Powers; contemplating also the things which are far above the Coelestial Orb, and extending to discourse something of God. For these endeavours of the Mind in Disquisition proceed from an audacious Nature: he calls it boldness, not by way of Reproach, but to express the forwardness of Nature.

In the side of the sinister Hecate is a Fountain of much Vertue; which remains entire within, not emitting her Virginity.]

The *Chaldeans* esteem *Hecate* a Goddess, seated in the middle rank, and possessing as it were the Center of all the Powers; in her right parts they place the Fountain of Souls, in her left, the Fountain of Goods, or of *Vertues*; and they say, that the Fountain of Souls is prompt to Propagations, but the Fountain of Vertues continues within the bounds of its own Essence, and is as a Virgin incorrupted: this settledness and Immobility it receives from the power of the *Amiliēti*, the Implacables, is girt with a Virgin-Zone.

When thou seest a Sacred Fire without Form Shining flashily through the depths of the whole World, Hear the Voice of Fire.]

The Oracle speaks of *Divine Light*, seen by many Men, and adviseth, That if any one see such a Light in some Figure and Form, he apply not his Mind to it, nor esteem the Voice proceeding from thence to be true; but if he see this without any Figure or Form he shall not be deceived: and whatsoever Question he shall propose, the Answer will be most true, he calls this *εὐίεσιν* *Sacrosanct*, for that it is seen with a Beauty by Sacred Persons, and glides up and down pleasantly and graciously through the Depths of the World.

Invoke not the self-conspicuous Image of Nature.]

ἑαυτοψία, *Self-inspection*, is, when the initiated Person (or he who performs Divine Rites) seeth the Divine Lights: but if he who orders the Rites seeth an Apparition, this, in respect of the initiated Person is *ἐπεπρία*, *super-inspection*. The Image which is evoked at Sacred Rites, must be Intelligible and wholly seperate from Bodies: But the Form or Image of Nature is not every way intelligible: for Nature is for the most part an Administrative Faculty. Call not, saith he, in the Rites *the self-conspicuous Image of Nature*, for it will bring thee nothing along with it but only a crowd of the four Natural Elements.

Nature perswades that Demons are pure: The bourgeons even of ill matter are profitable and good.

Not that Nature her self perswades this, but that being called before her presence there floweth in a great Company of *Demons* and many *Damoniuous*

Dæmonius forms of several shapes appear raised up out of all the Elements, compounded and shaped from all the parts of the Lunar Course, and many times appearing pleasant and gracious, they make shew of an Apparition of some good to the initiated Person.

*The Soul of Man will in a manner clasp God to her self.
Having nothing Mortal she is wholly inebriated from God.
For she boasts Harmony, in which the mortal body exists.]*

He saith that the Soul *forceth*, (for that is the meaning of *ἀναγκάζει*) the Divine Fire into her self, through Immortality and Purity, for then she is *wholly inebriated*, that is, she is replenished with the more excellent Life and Illumination, and exists as it were out of her self: the Oracle saith to her, *boast of Harmony*; that is, Glory in the obscure and unintelligible Harmony by which thou art tied together in Arithmetical and Musical Proportions: for under this unintelligible Harmony even the Mortal and compounded Body is composed, having its compositions derived from thence.

*Let the Immortal depth of the Soul be predominant, but all thy Eyes
Extend upward.]*

The *depth of the Soul* is her three-fold powers; the intellectual, the intelligent, the opinionative. Her Eyes are the three-fold cognoscitive operations of these; for the Eye is the Symbol of Knowledge, as Life is of Appetite. Open therefore, saith he, the immortal depth of the Soul, and extend thy cognoscitive Powers upwards, and even thy own self (to use our own Expression) *transfer to the Lord*.

Defile not the Spirit, nor deep not a Superficies.

The *Chaldeans* cloath the Soul with two Garments: one they call Spiritual, woven for it by the sensible World; the other Luci-form, tenuous and intangible, which is here termed *Superficies*: *Defile not*, saith he, the Spiritual Garment of thy Soul with impurity; neither cause its Superficies to grow deep by certain material additions: but preserve both in their own Natures, one pure, the other undipt.

Seek Paradise.]

The *Chaldaick Paradise* is the whole Chorus of Divine Powers about the Father, and the fiery Beauties of the creative Fountains: The opening thereof by Piety is the participation of the Goods; the flaming Sword is the implacable Power which withstands those that approach it unworthily; to such Persons it is shut, for they are not capable of its felicity. To the Pious it is open: To this place tend all the Theurgick Vertues.

This Vessel the Beasts of the Earth shall inhabit.]

The *Vessel* is the compounded mixture of the

Soul, the Beasts of the Earth are the Dæmons which rove about the Earth: our life therefore being full of Passions shall be inhabited by such Beasts: for such kinds are essentiated in Passions, and have a material Seat and Order. Wherefore such as are addicted to Passions are glued to them by assimilation, for they attract what is like them, having a motive-faculty from the Passions.

If thou extend the fiery Mind to the work of Piety, thou shalt preserve the fluxible Body.]

That is, *If thou extend thy illuminated Mind upwards, and the work of fire to the works of Piety*, (the works of Piety, with the *Chaldeans*, are the Methods of Rites,) thou shalt not only render the Soul unvanquishable by Passions, but shalt also preserve thy Body the more healthful; for this ordinarily is the effect of Divine Illuminations, *viz.* to consume the Matter of the Body, and to establish Health, that it be not seized either by Passion or Diseases.

*Certainly out of the Cavities of the Earth spring
terrestrial Dogs,
Which shew no true sign to mortal Man.]*

The Speech is of material Dæmons: These he calls *Dogs*, for that they are Executioners of Souls; *Terrestrial*, for that they fall from Heaven, and are rolled about the Earth. These, saith he, being removed far from the Beatitude of Divine Life, and destitute of Intellectual Contemplation, cannot pre-signifie Futures; whence all that they say or show is false, and not solid: for they know Beings *μορφολικῶς*, by their out-sides; but, that which knoweth figures *μερικῶς*, particularly, useth Notions indivisible and not figured.

*For the Father perfected all things, and deliver'd them over to the second
Mind, which all Nations of Men call the first.]*

The first *Father of the Triad*, having made the Universal Frame, deliver'd it over to the *Mind*; which Mind the whole Race of Mankind (being ignorant of the paternal Excellency) call the *first God*: but our Doctrine holds the contrary, *viz.* that the first Mind, the Son of the Great Father, made and perfected every Creature; for the Father, in the Book of *Moses*, declareth to the Son the *Idæa* of the production of Creatures, but the Son himself is the Maker of the Work.]

The Furies or Stranglers of Men.]

(*Ἀναγωγοὶ ἄγγελοι*) The reductive Angels reduce Souls to them, drawing them from general things; but the *Furies* (*ποινῶν*) being the Tormentors of the Natures which are dispersed, and envious of humane Souls, entangle them in material Passions; and as it were strangle them: and not only torture such as are full of Passions, but even those that are converted towards the immaterial Essence, for these also coming into Matter and into Generation, stand in need of such purification; for we see many Persons even of those who live holily and purely, fall into unexpected Miseries.

The Paternal Mind hath implanted Symbols in Souls.]

As the *Mosaick* Book saith, that Man was formed after the Image of God; so the *Chaldean* saith, that the Maker and Father of the World sowed Symbols of his Essence in the Souls thereof. For out of the paternal Seed, not only Souls, but all superiour Orders sprung. But in Incorporeal substances there is one kind of signs, viz. incorporeal, and individual; in the World, there are other Signs and Symbols, the unspeakable properties of God, which are far more Excellent than the Vertues themselves.

The Souls of those who quit the Body violently are most pure.]

Whosoever shall take this saying rightly, will find that it contradicts not our Doctrine; for the Crowned Martyrs who in time of persecution leave their Bodies by a violent End, purify and perfect their Souls: but this is not that which the *Chaldean* means. He praiseth all violent Death, because the Soul, which leaveth the Body with Trouble, abhors this Life, and hateth conversation with the Body, and, rejoicing, flyeth up to the things above; but those Souls which forsake this Life, their Bodies being naturally dissolved by sickness, do regret its propension and inclination to the Body.

Because the Soul being a bright Fire, by the Power of the Father Remains immortal, and is Mistress of Life, And possesseth many Completions of the Cavities of the World.]

The Soul being an immaterial and incorporeal Fire, exempt from all compounds, and from the material Body, is immortal; for nothing material or dark is commixed with her, neither is she compounded, so as that she may be resolved into those things of which she consists; but she is the Mistress of Life, enlightning the Dead with Life, she hath the Complements of many Recesses, that is, susceptible of the Government of Matter, for she is enabled according to her different Vertues to dwell in different Zones of the World.

The Father infuseth not Fear, but instead of persuasion.]

That is, the Divine Nature is not stern and full of Indignation, but sweet and calm; whence it doth not cause Fear in the Natures subjected to it, but attracts all things by persuasion and graciousness; for if it were formidable and minacious, every Order of Beings would have been dissolved; none of them being able to endure his Power. And this Doctrine, is in part esteemed true amongst us, for God is a Light, and a Fire consuming the wicked; The Menaces and affrightings of God are the Intermision of the Divine Goodness towards us, by reason of our ill management of our Affairs.

The Father hath snatched away himself: Neither hath he shut up his own fire in his Intellectual fire.]

The meaning of which Oracle, is this, The God of all things, who is also termed Father, hath made himself Incomprehensible, not only to the first and second Natures, and to our Souls, but even to his own Power; for the Father, saith he, hath snatch'd himself away from every Nature: But this Doctrine is not Orthodox; for with us the Father is known in the Son, as the Son in the Father, and the Son is the Definition of the Father, and the Divine supernatural World.

For the intelligible is something, which it behooves thee to comprehend with the flower of the mind.]

The Soul hath a power correspondent to every thing that is conceivable by the Mind; As to Sensibles, Sense; to Cogitables, Cogitation; to Intelligibles, Mind. Now the *Chaldean* saith, that although God is an Intelligible, yet he is not Comprehensible by the Mind, but only by the Flower of the Mind. The Flower of the Mind is the (*εἰσὶν*) singular power of the Soul: since therefore, God is properly one, endeavour not to comprehend him by the Mind, but by the singular power: for that which is first one, can only be apprehended by that which is one in us, and not either by cogitation or Mind.

The ungirders of the Soul which give her breathing are easie to be loosed.]

Lest any one should say, I would free my Soul from my Body, but I cannot; the Oracle tells us, that the Powers, which thrust the Soul out of the natural Body, and give her breathing, as it were, from the toil and trouble of the Body, are easily loosed; that is, these Faculties are free and not restrained by any Nature, and able to set the Body at Liberty generously from corporeal Bonds.

It behooves thee to hasten to the Light, and to the Beams of the Father; From whence was sent to thee a Soul clothed with much Mind.]

Seeing that the Soul hath not its Being from Seed, neither consists of corporeal mixtures but had its Essence from God above; therefore she ought to turn towards Him, and to make her return to the Divine Light: for she came down clothed with much Mind; that is, she was furnished by the Maker and Father, with many Remembrances of the Divine sayings, when she came hither, whence she should endeavour to return by the same Remembrances.

All things are produced out of one Fire.]

This is a true Doctrine, conformable to our Religion; for all Beings, as well intelligible, as sensible, received their Essence from God above, and are converted to God alone; those which have Being only Essentially; those which have Being

Being and Life, Essentially and Vitally; those which have Being, and Life and Mind, Essentially, and Vitally, and Intellectually. From One therefore *all things came*, and to One is their return: This Oracle is not to be condemned, but is full of our Doctrine.

What the Mind speaks, it speaks by Intellection.]

When (saith he) thou shalt hear an articulate Voice, Thundering from above out of Heaven, think not that the Angel or God who sends forth that Voice, did articulate it after our manner Enunciatively; but that He, according to his own Nature, conceived it only inarticulately: but thou, according to thy own Impotence, hearest the Notion syllabically and enuntiatively. For as God heareth our Voice not vocally, so Man receiveth the Notions of God vocally, every one according to the operation of his Nature.

These the Earth bewails, even to their Children.]

It is meant of *Atheists*, that God extends his Vengeance even to their Posterity: for the Oracle, to express the Torments which they shall receive under the Earth, saith, *It howls beneath for them*: that is, the Place under the Earth bellows to them, and roareth like a Lion. Whence *Proclus* also saith, The composition of Souls that are of Affinity with one another, is of like Nature; and those which are not yet loosed from the Bands of Nature, are entangled and detained by like Passions. These therefore must fulfil all Punishments, and since by Natural Affinity they are infected with Pollutions, must again be cleansed from them.

Enlarge not thy Destiny,]

The wisest of the Greeks call Nature or rather the Completion of the Illuminations which the Nature of Beings receiveth (*ἐμαρμένον*) Fate. Providence is an immediate Beneficence from God. But Fate is that which Governs all our Affairs, by the concatenation of Beings. We are Subjects to Providence, when we act Intellectually; to Fate, when Corporeally. Encrease not therefore, saith he, thy Fate, nor endeavour to surmount it, but commit thy self wholly to the Government of God.

For nothing proceeds from the paternal Principality imperfect.]

The Father (saith he) produceth all things perfect and self-sufficient according to their Order, but the Imbecillity and Remission of the things produced sometimes causeth a Defect and Imperfection; but the Father calleth back again that defect to Perfection; and converts it to its Self-sufficiency. Like this, is that which *James* the Brother of our Lord pronounceth in the beginning of his Epistle, *Every perfect Gift cometh down from above, from the Father of Lights*. For nothing proceeds Imperfect from the Perfect, and especially when we chance to be ready to receive that which is primarily distilled from him.

But the Paternal Mind accepts her not until she come forth.]

The Paternal Mind doth not admit the Impulsions of the desires of the Soul, before she hath excluded the forgetfulness of the Riches which she received from the most bountiful Father, and called back to her Memory the Sacred Watchwords which she received from him, and pronounce the good Speech imprinting in her remembrance the Symbols of the Father who begot her. For the Soul consists of Sacred Words and Divine Symbols, of which those proceed from the Sacred Species, these from the Divine Monads; and we are (*εἰκόνες*) Images of the Sacred Essences, but (*ἑτάσματα*) Statues of the unknown Symbols. Moreover we must know that every Soul differs from another Soul specifically, and that there are as several Species of Souls as there are Souls.

When thou seest the Terrestrial Demon approach, Sacrifice the Stone Mnisiuris, using Invocation.]

The Demons that are near the Earth are by Nature lying, as being far off from the Divine knowledge, and filled with dark Matter. Now if you would have any true discourse from these, prepare an Altar, and *Sacrifice the Stone Mnisiuris*: this Stone hath the power of evoking the other greater Demon, who, invisibly approaching to the material Demon, will pronounce the true solution of demands, which he transmits to the demandant. The Oracle joyneth the evocative Name with the Sacrificing of the Stone. The Chaldeans assert some Demons good, others ill; but our Religion defines them to be all ill, as having by a premeditated defection exchanged good for ill.

Learn the Intelligible, forasmuch as it exists beyond the Mind.]

For though all things are comprehended by the Mind, yet God the first Intelligible exists *without* or *beyond the Mind*. This *without* you must not understand distantly, nor according to intellectual alternity, but according to the intelligible excess alone, and the propriety of the existence, it being without, or beyond all Mind, whereby the superessential is manifested. For the first intelligible Mind is Essence, beyond which is the Self-intelligible. Besides there is God, who is beyond the Intelligible, and Self-intelligible: for we assert the Divinity to be neither intelligible nor self-intelligible, it being more excellent than all Speech and Notion, so as that it is wholly unintelligible, and unexpressible, and more to be Honoured by Silence, than Reverenced by wonderful Expressions. For it is more Sublime than to be Reverenced, Spoken, and Conceived.

Intelligent Fynges do themselves also understand from the Father, By unspeakable Counsels being moved so as to understand.]

Fynges are certain (Vertues or) Powers, next the

the Paternal Depth, consisting of three Triads. These understand according to the Paternal Mind, which containeth their Cause solely in himself. Now the Counsels of the Father in regard of their intelligible Sublimity, are not vocal; but the Intellectual Marks of abstract things, though understood by Secondaries (or Inferiours) are understood as without speaking, and as it were abstracted from Intelligible Productions. For as the Conceptions of Souls, they understand Intellectual Orders, yet understand them as Immutable: So the Acts of the Intellectuals understanding the Intellectual Signs, understand them as not a vocal subsisting in unknown Existences.

CONJECTURES

Upon the Greek Text of the

ORACLES.

WHO it was that rendred these Oracles in Greek is (as we said) uncertain; much more certain is it that they were all composed in Hexameter Verse: though they are sometimes cited indistinctly and abruptly by *Patricius*, seeming wholly irreconcilable with Poetick Numbers; yet that the greater part of them are Hexameters, none can deny; and who-soever shall look more cautiously upon the rest, will find Prints enough, by which they may be traced and demonstrated to have been of the same kind, though confounded in the manner of Citations, sometimes by the Authors out of which *Patricius* took them, sometimes by *Patricius* himself, who was far more diligent to Collect and Digest, than Curious to Distinguish them, or to regard their Numbers: which Defect we shall endeavour, in some measure, to supply.

ΜΟΝΑΣ, ΔΥΑΣ, ΚΑΙ ΤΡΙΑΣ.

"Ὅπως παλαικὴ μονὰς ὄντι.]

The latter part of the Hexameter, — ὅπως παλαικὴ μονὰς ὄντι. as is that also which immediately follows,

— Ταναὴ [ἔστι] μονὰς, ἢ δύο θυνῶ.

and the next,

— Δυὰς [γδ] πῶς τῶδε κἀνήσται. That which follows is cited again by it self afterward.

Καὶ τὸ κυβερνῶν]

This seems to be a loose Citation of two several Hemistichs, with reference to the Phrase (infinitively) not to the Verse.

Ἀρχὴ πάσης τμήσεως ἢ ὅ ἢ τάξις]

Read, perhaps,

Ἀρχὴ τοι πάσης τήσεως, ἥδε ὅ τάξις.

Οὐ τὸ θέλει κατένευσε, καὶ ἥδη πάντα ἐτίτμητο.]

The Verse requires — πάντ' ἐτίτμητο.

Εἰς τέλα γδ ἔπε νῆς παλῆς.]

Before,

Εἰς τέλα γδ νῆς ἔπε παλῆς.

Καὶ ἐφάνησαν ἐν αὐτῇ ἢ τ' ἀρετή.]

Perhaps [κ]

— ἐφάνησαν ἐν αὐτῇ

ἢ τ' ἀρετὴ σοφίη τε, καὶ ἡ πολυφρον ἀτρέκεια.

Ἰερὸς πρῶτος δρόμος, ἐν δ' ἄρα μέσῳ]

Read μέσῳ.

Καὶ πηγὴ πηγῶν.]

Perhaps,

Καὶ πηγὴ πηγῶν, μήτεα συνέχουσα τὰ πάντα.

The rest being a Gloss.

Ἐνθεν ἀρδῶ.

It should be Ἐνθ' ἀρδῶ.

Ἐνθεν συρόμενος πρηνὴς ἀμυδρῶ πνεύματι ἀνθῶ.]

Proclus reads ἀμυδρῶ in Theolog.

ΠΑΤΗΡ ΚΑΙ ΝΟΤΣ.

Ἐαυτὸν ὁ πατὴρ ἤρπασεν, ἔδ' ἐν ἑῷ.]

Pletho reads,

Οὐδ' ἐν ἑῷ δύναμις νοερά κλείσας ἑδῖον πῦρ.

Πάντα γδ ἔξετέλεσε.]

Pletho,

Πάντα γδ ἔξετέλεσε πατὴρ, καὶ Νῶ παρέδωκε

Δωτέρῳ, ὃν πρῶτον κληῖζέαι (perhaps κληῖζετο)

πᾶν γῶν ἀνδρῶν.

Πολὺ γδ μόνῳ.]

Distinguish,

— πολὺ γδ μόνῳ ἐκ παλῆς ἀλκῆς]

Δρεψάμενος νόα ἀνθῶ.

Πᾶσιν ἐπέσχετο] ἐπέσχετο. and afterwards, ἔσχετο καὶ κόσμον.

Μήτε πᾶσι τὰ παλῆς νοεράς ὑφασμένη φέγγει.]

Perhaps,

Μήτεα πᾶσι παλῆς, ἔσχε.

Ἐχει τὸ νοεῖν παλῆς καὶ νῦν ἐκδιδόναι.]

Perhaps,

— ἔχει τὸ νοεῖν παλῆς καὶ νῦν

Ἐκδιδόναι πᾶσαισιν (ὁμῶς) πηγῶς τε καὶ ἀρχαῖς.

Οὐ γδ εἰς ὕλην, πῦρ ἐπέκθηνα τὸ πρῶτον]

Distinguish,

— εἰς ὕλην

Πῦρ ἐπέκθηνα τὸ πρῶτον εἰς δύναμιν καὶ ἀκλῆς

Ἐργοις, εἰς δὲ νόον]

Νῶ μὲν κατέχει.]

Distinguish,

— νῶ μὲν κατέχει τὰ νοητὰ,

Ἀἰσθησιν δ' ἐπάγει κόσμοις]

ΝΟΤΣ, ΝΟΗΤΑ, ΚΑΙ ΝΟΕΡΑ.

Οὐ γδ ἀνδρὸς νόον ὄντι νοητῶ καὶ χεῖς ὑπάρχει.]

Afterwards cited thus,

Οὐ γδ ἀνδρὸς νόον ὄντι νοητῶ, καὶ τὸ νοητὸν

Οὐ νῦν χεῖς ὑπάρχει.

Μάνθανε τὸ νοητὸν.]

Afterwards,

Ἐφρα μάθης τὸ νοητὸν]

Νῦν γδ νῦν ὄντι ὁ κόσμος τεχνίτης πνεύματι.]

Distinguish,

— νῦν γδ νῦν ὄντι ὁ κόσμος

Τεχνίτης πνεύματι]

Ἐστὶ γὰρ τι νοητὸν] Ἐστὶν.

ἢ γδ ἐπεγκλίνη, ὡς αὖ νῦν.]

Read and distinguish,

ἢ γδ ἐπεγκλίνη, σὺν νῦν, καὶ κείνο νοήσῃ

Ὡς τι νοῦν, καὶ κείνο νοήσῃς] ἔστι γδ ἀλκῆς

Ἀμφιφᾶς δύναμις νοεράς ἐπέκθηνα τομαῖσι.

Οὐ δὲ χεῖς ἐφ' ὅσοντι νοῦν τὸ νοητὸν ἐκείνο,

Ἀλλὰ νόα ταγαῖ ταγαῖ φλογί, πάντα μελέσῃ

Πάλω

Πάλω τὸ νοητὸν ἐκείνο· χρεώ δὴ τὸτο νοῆσαι.

Ἡ γὰρ ἐπεγκλίτης σὸν νῦν, καὶ κείνο νοήσης

ὅκ ἀτενῶς, ἀλλ' ἀγνὸν ἐπίστροφον ὄμμα, φέ-
ρουσα.

Τῆς ψυχῆς τείναι κενεὸν νόον εἰς τὸ νοητὸν.

Ὁφρα μάθης τὸ νοητὸν, ἐπεὶ νόος ἔξω ὑπάσχει.

And presently after,

ἔ γὰρ ἀνὰ νόον ἐστὶ νοητὸν, καὶ τὸ νοητὸν

οὐ γὰρ χωρεῖς ὑπάσχει.

Ι Τ Γ Γ Ε Σ, Ι Δ Ε Α Ι, Α Ρ Χ Α Ι.

Πολλαὶ μὲν.

Distinguish,

πολλαὶ δὲ ἐπεμβαίνουσι φαινοῖς

κόσμοις, ἐνθρόνισσαι, ἐν αἷς ἀκρότητες ἔασαι
Τρεῖς.

Νῦν πατέρους ἐρροίζητε.]

cited elsewhere by *Patricius* clearly, without
[Δι' ὧν συνάπτεται τῷ πατέρει, ἀλλὰ κατ' ἄλ-
λῳ ζωῷ, ὑπὸ μεμερισμένων ὀχετῶν.] which be-
long to some other place,

Ἐξ ἧς ροιζῶνται.]

Distinguish,

μεμερισμέναι ἄλλαι,

ῥηγνύμεναι κόσμους καὶ σώμασι. αἱ καὶ κόλποις

Σμερδαλέας, σμικρῶσιν ἐοικῆσαι, φορέονται.

Πολὺ δὲ τῶν μὲν πνεύς ἀνθῶν.]

Distinguish,

πολὺ

Δεσπτόμεναι πνεύς ἀνθῶν ἀκοιμήτε χεῖν.

ἀκμή

Ἀρχεγόνου ιδέας πρώτη πατέρους ἔβλυσε. τὰς δὲ
αὐτοθαλῆς πηγῇ.

ΕΚΑΤΗ, ΣΥΝΟΧΕΙΣ, ΤΕΛΕΤΑΡΧΑΙ.

Ἐξ αὐτῶν γὰρ πάντες ἐνθρόνισται.]

Distinguish, ἀμείλιχοί τε κεραυνοί,

καὶ πρηστειρόχοι κόλποι παμφεγγέθ' ἀλκῆς

Πατερῶν ἑκάτης· καὶ ὑπεζωκῶς πνεύς ἀνθῶν.

Ἡ δὲ κεφαλαῖον πνεῦμα πόλων, πνεύων ἐπέκρινται.

Ὅτι καὶ τὸ ζωογόνον.]

Distinguish,

τῆς ἑκάτης κόλπον· καὶ ἐπὶ ῥέει τοῖς συνοχεύσιν

Ἀλλὰ ζείδωρον πνεύς μέγα δυναμώοιο.

Ἀλλὰ καὶ φρουρεῖ.]

Distinguish,

Ἐργων εἰσὶ πατέρους. ἀφομοιοῖ γὰρ ἑαυτὸν,

Κεῖνθ' ἐπεγγόμηνθ'.

Παντοῖα δὲ σύνδημα βάλλειν.]

Distinguish,

Παντοῖα δὲ σύνδημα βαλλεῖν φρενὶ, μὴ δ' ἐπ-

φοίῃν

Ἐμπνεύοις σπορεῖδω ὀχετοῖς, ἀλλὰ σιβαρηδόν.

Ψ Τ Χ Η, Φ Τ Σ Ι Σ.

Ὅτι ψυχῇ.]

Pletho, Ὅτι.

Μετὰ δὲ πατερικῆς διανοίας.]

Distinguish,

μετὰ δὲ πατερικῆς διανοίας,

Ψυχῇ, ἐγὼ, ναίω, θερμοψυχῶσα τὰ πάντα.

Μὴ φύσεως ἐμβλέψας.]

Proclus in Theolog.

Μὴ φύσιν ἐμβλεψῆς, εἰμαρμένον ἄνομα τῆς δε.

What follows under the Title of Ο Τ Ρ Α Ν Ο Σ
is very confused, the same Fragments being
often repeated.

Ψ Τ Χ Η, Σ Ω Μ Α, Α Ν Θ Ρ Ω Π Ο Σ.

Most of these are perfect, being put forth by
Pletho and Psellus.

Δίξο σὺ ψυχῆς ὀχετὸν, ὅθεν, ἢ τίνι τάξῃ

Σώματι διήλθας (so Pletho) ἐπὶ τάξιν ἀφ' ἧς
ἐρρύθης

(read ἐρρύθης.)

Αὐθις, &c.

The rest may be corrected by the Edition of
Pletho and Psellus.
